This was the Vice-roy of *Patan*; he gave me a large account of the State of the Court and Kingdom; the Intereſts, Characters, and Pretentions of the ſeveral Grandees that were concern'd in the Government. He did not ſpare the Vices of the Courtiers, but made keen Reflections upon them all; giving me all the Cautions in the World about ſtanding upon my guard, and ſeeing and hearing with my own Eyes and Ears (as far as was poſſible) while I ſtaid in this Court. He ſpoke with great Reverence and Piety of our Saviour Jeſus Chriſt, commending his Laws and Doctrine, and expreſſing a high value for both. I found no Man in *India* capable of giving ſo agreeable an Entertainment as he, in pleaſant and profitable Diſcourſe; for he perfectly well knew the Laws and Cuſtoms of the Country, the Humours and Tempers of all People; and had gone through the Reigns of three Princes with glory, having been Favourite to every one of them. He had very often invited me to his Houſe, and at laſt his more than ordinary importunities brought me to ſee him; and there I may ſay I had large Proofs how Noble, Hoſpitable and Courteous a Perſon my Hoſt was. I could not defend my ſelf from a liberal Preſent that he would needs make me, and the rather becauſe 'twas the Product of his own Government, in which a great deal of it is made. It was a parcel of the pureſt Loaf-Sugar, each of which Loaves weigh'd about 50 *l.* and the whole Cargo conſiſted of a hundred ſuch.

A greedy covetous Perſon might have made ſome Profit of the Converſation of this Generous, Open-hearted Man; Decency wou'd not allow my Acceptance of what elſe he wou'd have given me; but he reſolv'd to be reveng'd another way, and ſend a fit Perſon into *England* to Complement, and carry his Reſpects to my King. The place where he receiv'd and entertain'd me, was not his own Houſe (which he did not think pompous enough for the occaſion), but one of the King's Mohols, which he had borrowed for that purpoſe, as he might by his Great Intereſt with his Prince, any Palace in the Kingdom. I had not his Company at Dinner, any farther than juſt to eat Bread and Salt together, in Token of a firm Union and Friendſhip. He and his Great Men ſat at one Carpet, and I and my Company at another; for we being Chriſtians, and they *Mahometans*, their Religious Cuſtoms oblige them to this ſort of ſeparation.

This Perſon, beſides his Government of *Patan* (where he was Vice-Roy) was Lord of four Cities in *Bengala*; and for all together, he gave the King eleven Leckies of Rupies, all the Profits elſe being entirely his own, in the Diſpoſal of which he had an Abſolute Royal Authority, as indeed in moſt Caſes all over his Government. Beſides this, he had a Penſion of a thouſand Rupies a Day, and ſome ſmaller Governments and Places up and down in the Country: All which, how great ſoever it may ſeem, he aſſur'd me, that there were a great number that had double his Revenues, and above twenty that had the ſame.

* All things of this kind, and others relating to the Hiſtory of the Country, will be found in the next *Chapter*

But as to all theſe * things he had given a very full and exact Account of them in the Hiſtory of the Country during the late Reigns, compos'd by himſelf, and containing moſtly Matters of his own Obſervation and Experience.

Amongſt other things that paſs'd, he aſſur'd me, the King had a great kindneſs for me; and as a Mark of his particular Favour, had order'd *Aſaph Can* to ſend me his Picture, which I ſhould wear for his ſake. This Picture I receiv'd at my next going to Court, from the King's own hand as it were; for as ſoon as I came in ſight, he preſently call'd for't, and reach'd it out to *Aſaph Can* to deliver it me. And becauſe 'tis the Cuſtom at the receiving any of theſe Preſents, for the Party to kneel down and knock the Ground with his Head, (from which ſort of Reverences I had obtain'd Leave at firſt to be excus'd) he order'd that Miniſter not to demand any thing of that nature from me; which yet his ill Nature would have done, and ſome of the other Courtiers call'd aloud upon me to perform the accuſtom'd Ceremonies; but the King himſelf interpos'd, and ſaid poſitively, they ſhould not be urged upon me. The Gift was not worth above 30 *l.* in all, and yet 'twas five times better than what he commonly gives to his Nobles, when he would make any of them ſenſible of his greateſt Eſteem and Good Will. Theirs are commonly little Medals of Gold faſtned on to a Chain of four or five Inches long, and if they will have any Garniture for it of Pearls, or Jewels, they muſt adorn it at their own Charges.

The Embaſſador honour'd with the *Mogul's* Picture.

That beſtowed on me was ſet in a Gold Frame, had a Chain of the ſame to come about my Neck, and was beautified with ſome ſmall Pearl.

Painting is an Art in which this Prince is mightily delighted; he loves to ſee a curious Piece, and will diſcourſe of it with Skill and Judgment. And 'tis certain, that his own Country can, and does, furniſh him with Entertainments of this kind, and ſuch as a curious Fancy may be well enough pleas'd with.

Good Painters in *India*.

I could not have thought, that *India* had produc'd Artiſts ſo skilful and ingenious, as I have ſeen by ſome Pieces which His Majeſty ſhew'd me. A Picture which I preſented him, and was very confident no Workman in that Country could have tolerably imitated, was done with ſo much Art and Exactneſs, that I was puzzel'd to diſtinguiſh my own Original from thoſe Copies which were taken from it. The *Mogul* was mightily pleas'd with this, and boaſted of his Mens Skill to a high degree; he reckon'd it a kind of a Victory, and in a pleaſant way triumph'd over me accordingly. A great deal of Jeſt, and diverting Rallery, paſs'd upon this occaſion; but the Concluſion of it was, that I was to pay the Painter for his Work; and the King muſt needs know too what I intended to give him: Which matter was well enough made up betwixt us, and the Prince and the Painter both pleas'd.

So ſtrongly did his Fancy work this way, that not long after he ſent for me in great haſte to Court, and that out of my Bed too, tho' the Buſineſs was nothing but to ſhew him a Picture which ſome Body had told him, I had by me, and was worth his ſight: I roſe and carried it, and found him at that time of Night, ſitting in a very formal manner upon a little Throne, and ſo dreſs'd with Diamonds and Rubies, that there was no looking at him for the Luſtre of his Jewels. But the Beauty of my Picture ſhock'd him worſe than all his Glory cou'd have done the moſt vulgar Spectator. He ask'd, Whether ever ſo Divine a Creature lived, and that Copy had any Original in Nature to anſwer to it, or was only the meer Product of the Painter's Imagination? When I aſſured him, the living Original was well known to me, and vaſtly ſuperiour to the Picture in all Points of Perfection, his Admiration was proportionally heightned; and he then deſired that I would beſtow that wonderful Piece upon him, which he would look upon (he ſaid) as the moſt valuable Jewel he was Maſter of. A particular Obligation made me at firſt excuſe the parting with it, which I did in ſuch a manner as no way diſguſted him; but he continuing to preſs me, I freely reſigned it to him, as a Token of the profound Reſpect I had for His Majeſty, in parting with a thing ſo very dear and valuable to me. But the Prince (who ſeem'd rather to have done this to try me, than out of any real deſign to get the Picture) heartily accepted of my intended kindneſs, and refus'd to take it from me; only ſaid, His Painters ſhould take Copies of it, which his Queens ſhould wear, in Memory of ſo excellent a Beauty as the Original was.

September.

The ſucceeding Day being his Birth-Day, himſelf, and all his Nobles, were very merry upon it: I was invited to the Ceremony too; and drinking his Health in a Noble Cup of Gold, ſet with Emraulds, Turquoiſes, and Rubies, he intreated me, when I had drunk the Wine, to accept of the Cup as his Preſent.

Solemnities of the *Mogul's* Birth-Day.

There were ſeveral Chargers of Rubies, and Almonds made in Gold and Silver, which were brought in, and thrown amongſt the Nobles, and them that ſtood about him. The King had Sport enough to ſee them ſcramble for them, which they did with a great deal of earneſtneſs; but as there were ſeveral in the Company that thought fit to forbear, and not tumble on the Ground for thoſe Toys, ſo I ſtood amongſt that number, and contented my ſelf with beholding the Sport. His Majeſty appear'd in all the height of Pomp and Richneſs of Dreſs that Day, and his Elephants were ſet out in all their moſt glorious Furniture too: They all paſs'd before him in great Order, and bowed very handſomely to him as they march'd along; which (all things conſider'd) I thought one of the fineſt and moſt agreeable Sights that Day afforded.

The falſe Dealing of *Aſaph Can.*

At this time (having an opportunity) I moved *Aſaph Can* for the Diſpatch of our Privileges, which had been ſo long promis'd, and ſo unconſcionably delayed; telling him, If he wou'd not ſtir in the matter, I would immediately apply my ſelf to the King. He was very unwilling I ſhould do this; and aſſured me, I needed not trouble my ſelf ſo far, for the King had given Orders about it already; and it had been actually done and ſent to me, but that theſe Solemnities of his Birth-Day had taken them off from Buſineſs.

But theſe fair Words were only intended to keep me quiet, and prevent my carrying the Matter before the King again: This Miniſter never deſigned my Buſineſs ſhould be done by the King's immediate Orders, but reſolved to make me depend wholly upon the Prince, which he knew I was very backward (and with good Reaſon) to do. For after all this pretence, he had the Confidence to ſend me word, That he would procure nothing at all from the King, that any way concern'd that Prince's Government, as our *Surat* Affairs did; but that I ought to expect all from the Prince's Good Nature, whoſe Authority was great enough to grant Firmans ſufficient for our purpoſe.

The Embaſſador applies to the Prince.

In this Perplexity I reſolved, for once, to try the Prince, and endeavour as much as could be to procure his Favour by a ſeeming entire Dependance upon him. And as an Introduction to the Concluſion of my Grand Affair, I propos'd to perfect a ſubordinate one, that related to our preſent uſe at *Surat*, for the Fleet that was now expected. I ſent in to his Secretary ſome certain Clauſes, which I deſired might be put into the Firman that was to be drawn up upon this occaſion; and quickly after went to wait upon his Highneſs, and to ſee the Succeſs of my Buſineſs. The Prince order'd his Secretary to give me the Firman, which upon peruſing I found ſhort and defective, ſeveral important things being left out, at leaſt very much alter'd and diſguis'd in the Expreſſion: Upon which Account I ſent it back again, with a Reſolution forthwith to depart the Country, and of prohibiting the landing any of our *Engliſh* Goods. But the Secretary very earneſtly perſwaded me to the contrary, and deſired me but to gratifie the Prince's Humour a little in that one point of depending upon him, and craving the amendment of all at his hands; and I ſhould certainly find him at laſt a far better Friend than I expected. Beſides, he expounded the Firman in ſuch a manner to me, that it appear'd quite another thing; with his Conſtruction it bore my Sence very well, and when handſomely tranſlated (and as he ſaid, according to their true meaning) ſpoke the Language I deſir'd.

The Prince's Firman received. *October.*

I depended the more upon his Repreſentation of it, becauſe he had univerſally the Character of an honeſt and diſintereſted Man, and (to my own knowledge) no Lover of Bribes; which is a very rare and high degree of Vertue in this Court. I took the Firman therefore, and was at preſent well ſatisfied to have gained this Point.

The Buſineſs of the *Decan* Wars hung yet in ſuſpence, and this mighty Monarch's Arms did not proſper in that Country. Sultan *Peruiſe* was now come from his Charge, and advancing near the Court, hoped to have had the Favour of kiſſing his Father's Hands: This the Old Prince had granted, had it not been for *Normahal*, who was employed undoubtedly by Sultan *Caroon*, and that Faction, to divert the King from ſhewing this Kindneſs to his Elder Brother.

An Inſtance of the arbitrary Power, and abſolute Government of a Woman.

The Charms of that Woman (which could work him into any ſort of Compliance), prevail'd with him at this time, to deny his Preſence to a Son that deſerv'd it; and to command him to a far diſtant Poſt.

Like ſome abject Slave, that could procure nothing but by humble Entreaties, ſo did this great Prince on his bended Knees beg the Liberty of ſeeing his Son; but the imperious Woman wou'd not grant his Requeſt; ſhe proudly check'd the Motions of his yearning Bowels, and commanded him in ſpite of Nature, to ſend his Son away.

Now Sultan *Caroon*'s way to the Wars of *Decan* was plain and open before him; and he propos'd to himſelf to obtain a great deal of Glory by it. But the Great General in thoſe parts, *viz. Chan Canna*, was ſo much againſt it, that he ſent the King a Letter to forbear ſending that Prince to command there; and rather (if one of his Sons muſt be in play) to order his youngeſt to undertake that Poſt.

The Cauſe of the ill Succeſs of the Wars in *Decan*.

Now the King had as much mind to have *Chan Canna* away from the *Decan* Wars, as that General had to keep Sultan *Caroon* out. For in plain Terms, he was ſuſpected of a treacherous Correſpondence with the Enemy; and 'twas confidently aſſerted, that he had a Penſion from the King of *Decan*: No wonder then that the War ſucceeded no better, and that the vaſt Armies of the *Mogul* had not yet beaten the *Decanees* out of the Field; but on the contrary, were continually inſulted by them. The King was partly ſenſible of this, and therefore commanded him to come to Court: But he was ſo politick and civil to himſelf, as to deſire his Majeſty's Excuſe; he had no mind to be poyſon'd, or have his Head cut off; and going to Court in his Circumſtances, had very probably been going to Execution.

Upon this the King reſolv'd to ſend his Son Sultan *Caroon*, and to countenance his Reception, determin'd to follow himſelf with another great Army. But the ſubtle *Chan Canna*, that ſaw this Storm a coming, and knew where the force of it would light, endeavour'd by an Artifice to divert it, and ſo prevent the Danger that threatned him. He perſwaded the *Decanees* (who were entirely at his Service), to ſend Embaſſadors to the *Mogul*, to deſire a Peace, or at leaſt a Ceſſation of Arms for ſome time. But this Trick would not take; and the Embaſſadors (tho' they offer'd very advantageous Terms) cou'd not bring their Buſineſs to bear. For the *Mogul* turn'd them over for an Anſwer to his haughty ambitious Son, with whom alone he had left the Power of Peace and War: And the Prince abſolutely rejected their Propoſals, telling them, He would enter into no Treaty till he had appear'd in the Field, at the Head of his Armies.

The *Mogul*'s Eldeſt Son moſt acceptable to the Country.

All the Country dreaded the Effects of this Prince's violent aſpiring Temper; the King himſelf could not but ſee it too, and yet hardly dared to controul him. His two elder Sons were diſcontented, as well at the Father's Eaſineſs and Indulgence, as at the factious uſurping Practices of this Son; and all Men expected that the Feuds and Animoſities between theſe Brothers, would involve the Country in the greateſt Confuſion, whenever the Old Prince went off the Stage. The Wiſer Part very well foreſaw, that the beſt way to prevent theſe Calamities, would be to ſecure and eſtabliſh his Eldeſt Sons Title to the Crown, before he left it himſelf. For this Prince was ſo much the Darling and Deſire of all the People in general, (and it ſeems juſtly ſo for his admirable Vertues) that in caſe any of his Brothers ſhou'd endeavour to diſturb him, or ſtand in Competition with him, his Intereſt in the Hearts of the People was ſo good and great everywhere, that no oppoſite Faction would be able to ſtand before him.

This Noble Prince (Sultan *Curſeroon*) was at this time, and had been a good while, under his Father's Diſpleaſure) at leaſt under the external appearances of it; for 'twas thought the *Mogul* loved him deeply in his Heart, tho' he fancied the Brightneſs of his Vertues, and Illuſtrious Actions, did render his own Glory leſs conſpicuous, and therefore condemn'd him to a Life of Solitude and Confinement.

But 'tis certain the People did not adore and love him more, than Sultan *Caroon*, and all that Party, hated, maligned him, and contrived his Ruine: But before I mention the Deſigns and Intrigues carried on by them againſt this Prince, I muſt digreſs a little into the firſt part of his Story, and thoſe Circumſtances in his Grandfather's Reign, that made way for ſome of theſe Scenes that appear'd in *India* at my being there.

The Story of Sultan *Curſeroon*, and his Father, this *Mogul*.

When *Ecbar Sha*, the Father of the preſent *Mogul*, was buſily employed in the *Decan* Wars, this Son of his took that opportunity to attempt the Dethroning of his Father, and fixing the Crown Imperial upon his own Head. The Old Prince, upon the News, quickly brought his Victorious Army from conquering Foreign Adverſaries, to chaſtiſe this domeſtick and more dangerous Enemy, that was now ready to ſeize the Caſtle of *Agra*, and make himſelf Maſter of all his Treaſures. Being come pretty near him, he ſent him word, That he ſhould take his choice, either immediately to lay down his Arms, and throw himſelf upon his Mercy; or elſe prepare for a Battel, and leave Matters to be determin'd by the Chance of War. The Prince accepted the former of theſe Propoſals, thinking it ſafer to truſt his Father's Mercy, than to ſtand a Trial with his well-known Valour, and therefore without any more adoe, humbled himſelf at his Feet; and ſo (after ſome Diſgraces, and a ſhort Impriſonment) was reſtor'd again, at the Importunities of his Mother and Siſters. But 'tis to be noted, that while he was thus up in Arms againſt his Father, the Old King, to puniſh him for his Rebellion, diſinherited him, and proclaim'd Sultan *Curſeroon*, his Eldeſt Grandſon, Heir Apparent of his Empire. 'Twas but a few Months after all theſe Tumults were quieted, that *Ecbar Sha* paid the appointed Debt to Nature, and by Dying gave Life to new and worſe Troubles than thoſe he had ſo lately compos'd. For then his * Son (the preſent King) not at all regarding his Father's former Act againſt him, reſolved to be his Heir, and by main force thruſt himſelf into the Throne; poſſeſſing himſelf at the ſame time of all the Royal Treaſures, and the Strong-places of the Kingdom.

On the other hand, Sultan *Curſeroon* preſuming upon the Title conferr'd on him by his Grandfather, took up Arms to maintain his Right; and flying to *Labor*, gather'd an Army there, and was proclaim'd King. His Father very quickly ſerved him as before he had been ſerved himſelf; ſent a Power after him to reduce him to his Duty, which the Valiant Prince as ſoon gave Battel to, and entirely routed. But freſh Armies ſtill pouring in upon him, and his Father himſelf marching towards him with another very great one, the Prince's Men were quite tir'd out, and were able to hold the Field no longer.

The unfortunate Prince himſelf fled away with a few Horſe towards *Cabul*, and ſo for *Tartary*; which if he had reach'd, his Father would have been put to ſome trouble to have recover'd him again. But in his Way being to paſs a River, his Over-eagerneſs to get out of the reach of his Enemies that purſued him, made him ſo liberal in his Promiſes of Rewards to the Water-man, that he was ſuſpected and diſcover'd: His Gold betray'd him, and told that he was the Prince. The Water-man having ſmelt out who he was, in the middle of the Channel, leap'd out of the Boat, and ſwimming to the oppoſite ſide, went and inform'd the Governour of the adjoyning Town what a Paſſenger he had in his Boat. This was very grateful News to that baſe Officer, who hop'd to raiſe his own Fortunes by the Ruines of the Prince; and to do his Father the moſt endearing Service poſſible, by bringing back his Fugitive Son (and the Diſturber of his Peace) a Priſoner to him. So he came down to the Water-ſide with a Troop of Horſe, and there ſaluted the Prince with all the Humility in the World, complemented him with the Title of King, and invited him to Repoſe at his Houſe: But after all, the Villain having him in his Power, lock'd him up, and put a ſtrong Guard upon him, and then ſent Tydings to the King of the Noble Action he had perform'd.

---

* Some call him by the Name of *Selim*, others by that of *Gihangier*.

The Prince from hence was carried bound and chain'd upon an Elephant to his Father, who treated him with leſs of the Mildneſs belonging to that Character, than the Scorn and Revenge of an angry inſulting Conquerour. All his Soldiers and Adherents, that encouraged or ſupported this Riſing of his, were executed with an exemplary Severity. As for the Prince himſelf, the Report went, that his Eyes were put out in the place, where the laſt Battel was fought; but the truth of the matter was, that he was blindfolded with a Napkin, which his Father ſet his own Seal upon, and ſo ſent him away Priſoner to the Caſtle of *Agra*.

This was the Original of the Controverſie between the *Great Mogul* and his Son; this the Cauſe of his preſent Diſcountenance, and conſequently (conſidering how he was loved) of the Diſcontent and Sorrow of the whole Country.

But his envious Brother, Sultan *Caroon*, with his Faction, thought the King had dealt too mildly with him, in condemning him only to a bare Impriſonment; and therefore (looking upon him as the Grand Obſtacle in the way of their ambitious Deſigns) reſtleſly purſued and plotted his Deſtruction.

The Plots carried on againſt Sultan *Curſeroon*.

He was at preſent the King's Priſoner; but they vigorouſly endeavour'd to make him theirs; and what they wou'd have done with him, could they have got him into their hands, is eaſily to be imagined. They knew they could not proſper, if Sultan *Curſeroon* (the Glory of the Nation, the Delight of the Nobility and the Soldiers) lived; his Life would be a continual Check to their wicked Practices and Deſigns, and in time might prove the Puniſhment of them too), and therefore he muſt die; he muſt be diſpatch'd out of the way, that they may do their Work without fear or diſturbance.

Aſaph Can, and *Normahal*, were both deep in this Plot, and there was ſome Reaſon for't too; for beſides the near relation of Ill Nature and Vicious Qualities, in which Sultan *Caroon* and *Aſaph Can*, were ſtrictly united to one another; there was a Bond of Affinity between them, the Prince having married his Daughter. So that his Intereſt and Ambition, which both prompted him, to take all poſſible Meaſures for the fixing of his Son-in-Law upon the Throne of *India*, did conſequently engage him againſt the Life of the brave Sultan *Curſeroon*: As for *Normahal*, the Reaſon of her Concern is evident; 'tis enough to ſay, that ſhe was *Aſaph Can*'s Siſter, and an Enemy to Vertue and Goodneſs.

Aſaph Can, &c. addreſs the King for the keeping of his Eldeſt Son.

Theſe pious Plotters having perfected their whole Deſign amongſt themſelves, began to attempt the King for the Delivery of Sultan *Curſeroon* to their keeping. And firſt of all *Normahal* (his Witch) comes upon him with her Enchantments; ſhe uſes all the Arts of a Woman to ſoften him to her Will; ſhe ſighs and melts into Tears before him, caſts a dying languiſhing Look upon him, and ſeems to be overwhelmed with Grief and Sorrow. She fears His Majeſty's Life and Perſon are expos'd; that Sultan *Curſeroon*, tho' a Priſoner, has not loſt all his aſpiring Thoughts, nor learn'd from his Afflictions, that Leſſon of Duty and Loyal Regard to a Father, that ſhe cou'd wiſh: And this puts her into an exceſſive Paſſion, ſhe can't enjoy her ſelf with all the Glory of her State, nor command an eaſie Thought, while His Majeſty (who is dearer than all to her) appears to be in any danger.

The King eaſily underſtood the Drift and Deſign of all this; but yet ſince ſhe did not expreſs her ſelf plainly, he was contented to be thought ignorant of her meaning at that time; had it come to a downright Requeſt, perhaps his Conſtancy had been ſhaken.

This Attempt not ſucceeding, *Aſaph Can*, and his Father, (a Man ſo like him in Temper and Qualities, that one might ſafely have ſworn him a Chip of that precious Block) theſe undertook to make the next. And they went another way to work: Theſe Gentlemen were poſſeſſed with Sentiments of extream kindneſs and tenderneſs for Sultan *Curſeroon*; they ſtudied his Honour and Safety, and therefore told the King, 'Twould be far more agreeable for him to be put into the hands of a Brother that loved him, where he might live like himſelf, than to be left in the Cuſtody of an ordinary Jailor, or to have an inferiour Guard ſet upon him. For Sultan *Caroon* to be his Keeper (who to be ſure wou'd uſe him well) this wou'd make his Impriſonment eaſie to him; whereas his preſent baſer Confinement, did but fill him with black melancholy Thoughts, and cheriſh Principles of Diſcontent and Revenge.

The King happen'd to be very drunk at this time, and was ſo far from thinking, that he could hardly ſpeak; and ſo between ſleeping and waking he gave his Conſent to what they deſired; which for all he knew at that time, might have been the cutting off his own Head: But they knew his Condition at that time, and their Buſineſs requir'd Drunkenneſs or Diſtraction for the doing of it. But however having the Shadow of an Authority for their Proceedings, away they went with a ſtrong Guard to demand the Prince of his preſent Keeper; a certain Raja, a Resboot, to whom the King had committed him. But he like an honeſt and courageous Man, refus'd to deliver him into their hands; he urged, the King had given him the Charge of his Son, and he would die in the Defence of his Truſt, before any other Perſon but the King ſhould take him away again. This Reſolution and Faithfulneſs of his was highly commended by the King afterwards; and he charged him to hold it on, and take no Notice of any other Commands that ſhould pretend to contradict his firſt Orders.

The Prince's Keeper refuſes to ſurrender him.

But notwithſtanding this Baulk, the other Party proſecuted their Deſign with freſh Vigour, and ſtrong Importunities. They told the King ſo many fine Stories, and urged him with ſo many Arguments, (which the eaſie Prince never was at the pains to examine the ſtrength of) that at laſt he gave effectual Orders for the Reſignation of him: The brave Raja, his Keeper, with his Soldiers, were diſcharged, and the Guard of that Cut-throat Faction took poſſeſſion of him.

He is reſign'd to them, and all the Country provok'd at it.

This put the Court into an Univerſal Mourning and Murmuring too, at the Folly and Dotage of the King, the Ladies of the Seraglio were all in Tears, and the Prince's Siſters ſwore they wou'd keep him Company in Death, for that they reckon'd wou'd quickly be his Fate. The King ſent to pacifie theſe diſcontented Ladies, and thought *Normahal* the fitteſt for that work; but they curs'd and threatned her, and refuſed with all the Indignation in the World, to ſee a Perſon, whom they knew to have been ſo deep in the Plot againſt Sultan *Curſeroon*. 'Tis not eaſie to imagine the Confuſions and Stirs that were conſequent upon this Event; the Stories that were told, the Reports rais'd and ſpread about, eſpecially amongſt the common People, who as they are always full of Noiſe and Tumult, and put into a Ferment by the leaſt Breath of Wind that blows upon them, ſo they were now remarkably ſo, and no ſtormy Sea was ever more unruly.

A *Perſian* Embaſſador.

But to divert them a little in this Juncture, there comes a *Perſian* Embaſſador to Court, with a moſt glorious and ſplendid Equipage, and as rich Preſents for the King; ſome ſaid he came to mediate a Peace for the *Decanees*, the Conqueſt of whom would be a conſiderable Enlargement of the *Mogul*'s Power and Dominion, and conſequently render him a more formidable Neighbour to the *Perſian* King. But many believe 'tis for a Supply of Money for carrying on the War againſt the *Turk*; and 'tis not the firſt time the *Perſian* has borrowed here; the inexhauſtible Treaſures of *Agra*, &c. have been often ſet open to him, and afforded him large and liberal Recruits. This is the more probable, conſidering the humble and ſubmiſſive Carriage of this Embaſſador, and that extremity of cringing flattering Reſpect he pays to the *Great Mogul*; to the Diſhonour of his Character, the Offence of his Nation in this Court, and to be ſure (without having private particular Inſtructions) to the affronting of his Maſter. He proſtrates himſelf upon the Ground, as before a Deity, knocks the Earth with his Head, as if he would beat his way in; and is even Religiouſly Devout in all his Poſtures and Ceremonies that relate to the King. Yet the King carries it with a great deal of State and Diſtance towards him; he only made a ſmall Motion with his Body, at the Reception of the King of *Perſia*'s Letter, and ſaid no more, but, *How does my Brother?* He allows him but an inferiour place in his Preſence, a World of Nobles and Officers ſtanding above him, tho' the *Perſian* takes it all without diſpute or murmuring; in that he carries it like a Man that knows his Prince's Occaſions and Neceſſities, and the *Great Mogul* uſes him like a Borrower.

November. Sultan *Caroon* goes to the Wars.

Sultan *Caroon*, about this time, began to ſet forwards towards the Army: Before his going he had promis'd me in the King's Preſence, and that of a great Aſſembly of Courtiers too, That all my *Surat* Buſineſs ſhould be done, and Content given me to the full.

But this kindneſs was not ſo much the effect of any Good Will in himſelf, as of the Power of the new Preſents that were coming; for our *Engliſh* Ships were got into *Swally* Road, and the Prince was in hopes of being ſhortly gratified.

There were the King's Orders too (as well as the Prince's Engagement), That all the Goods and Preſents that were to be brought from *Surat* hither, ſhould not be opened nor examined by the way, but paſs undiſturbed to my hands; as alſo, no Cuſtom or Duty to be exacted for any of them: The Demonſtration of the Prince's Honour and Truth in the performance of all which, will be added in its place.

There

The King's Progreſs.

There had been a Talk a good while, that the King and Court would remove and go a Progreſs ; and now that troubleſome time came on. The Tents were pitch'd abroad for their Reception, the Elephants, Horſes, and all ſorts of Carriages ready in ſuch abundance, that one would have fancied it almoſt the remove of a whole Nation.

The King it ſeems loves to take his Pleaſure this way ; not to confine himſelf to any one certain place of abode, but to fix his Court here and there, as he pleaſes, rambling up and down, and enjoying the Delights of his Country.

All Foreign Miniſters, and Embaſſadors of Princes, are obliged to bear him Company, beſides Trades-men and Artificers of all ſorts. The King loves to march with a vaſt multitude after him ; and if they are not diſpoſed to follow, he orders the * *Leskar*, where they were laſt, to be burnt, and ſo fires them out of their Tents.

* This movable Court is call'd the *Leskar*.

'Tis indeed a noble and a delightful Figure that the *Leskar* makes, when 'tis all fix'd in order ; when it has the advantage of a pleaſant Situation, and the Spectator of a free and open Proſpect. I thought it a greater Rarity than any City in *India*, I had the opportunity of ſeeing ; for beſides that, 'tis of a larger Compaſs than perhaps moſt Cities are (except thoſe of the very firſt Rank and Character), 'tis alſo erected and finiſh'd in ſo very ſmall a time, by the multitude of Hands that are at work, that it looks like a kind of Creation, and mightily encreaſes the pleaſure of contemplating it. To ſee a vaſt empty Plain, that ſhews nothing but the ordinary wild Appearances of Nature, in a few Hours transform'd into a regular, uniform, beautiful City ; to ſee it divided into Streets, adorn'd and cover'd over with the ſplendid Pavilions of Princes and Courtiers, and all this Glory riſe up in a few Moments, and dazzle the Eyes of a Spectator of a ſudden ; this excites a more delightful wonder, than to have ſeen the ſame thing advancing leiſurely and by degrees to that perfection.

Deſcription of the *Leskar*, and the Conveniences of it.

And I took notice, that this particular *Leskar* was begun, ſet up, and finiſh'd, in four Hours ſpace, tho' 'twas done with very great order and exactneſs, and was full twenty *Engliſh* Miles in Circuit, and ſome ways near ſix Mile long. All the Shops, and other Apartments of Tradesmen were ſo diſtinguiſh'd by Rule, that every Man, all over the *Leskar*, knew where to go readily for the ſupply of his Wants. Every Artificer, and every Man of Quality, knows his Ground, what Compaſs, of which ſide, and how far from the King he muſt pitch his Tent. The Royal Pavilion is erected in the Centre of all, and no Man raiſes his nearer to it, than the diſtance of a Musket-ſhot, every way round about.

The King, in theſe Progreſſes, relaxes his Thoughts and Cares of Publick Buſineſs, in great meaſure : In the *Leskar* he beſtows many of thoſe Hours upon Sports and Diverſions, that are ſpent in State-Affairs when he is in his Palace. Here he hunts and hawks, and ſwims about in his Barges upon the fine Rivers and Ponds that lie in his way, inſtead of paſſing Judgment upon Criminals, and hearing the Diſputes of his wrangling factious Noblemen. In ſhort, tho' in *Agra* or *Labor*, he may appear with more of the rich Pomp and Magnificence of a King ; yet here he enjoys more of the Pleaſure of his Greatneſs, and ſits far more eaſie than upon his ſublime Imperial Throne.

An odd Cuſtom.

The *Perſian* Embaſſador, and my ſelf, were put to no ſmall Trouble and Charge, to accommodate our ſelves with Conveniences for keeping Company in this March. For the *Leskar* at *Aſmere* (from whence the Remove was) was fired by the King's Order, and in the Hurry Carriages were ſo ſcarce and difficult to be got, that we were left behind for ſome Days, in all the Diſtreſs that a ruinous (and almoſt emptied) place cou'd be ſuppos'd to be the occaſion of to us. The *Perſian* ſcolded and brawl'd moſt bitterly to be left ſo ; but there was no Remedy but Patience ; nay, he fought and beat about him like a Madman ; but all would not do ; every Body was buſily employ'd to provide for themſelves, and we that were Embaſſadors muſt do ſo too, or elſe reſolve to ſtay behind : However, we made ſhift to ſet out at laſt, and in a few Days overtook the King, who march'd but ſlowly on.

December.

One thing happen'd at the King's ſetting out, that procur'd wonder to all Men ; tho' it gave as much Pleaſure to all the true Lovers of the King and their Country, as it did Vexation and Diſappointment to the wicked deſigning Faction of the Court. This was the taking Sultan *Curſeroon* out of the hands of his cruel Jailor.

Sultan *Curſeroon* fetch'd out of Priſon by the King his Father.

The King, when he came by the Houſe where he was Priſoner, order'd his Coach to ſtop at the Door, and ſent for the Prince down ; and then commanded him to aſcend one of the Royal Elephants, and ride along by him. The Joy of the People was rais'd to the higheſt pitch, and the King procur'd himſelf a great deal of Praiſe, and many good Wiſhes and Prayers by this Action.

'Twas indeed high time to fetch him away, if he lov'd him, and deſired the continuance of his, for the Wretches about him were endeavouring to put their Plots againſt it in execution.

'Tis ſaid, that ſome Ruffians belonging to Sultan *Caroon*, his Brother, had attempted to get into his Apartment to murther him ; but the faithful Porter refus'd them entrance, and ſtood upon his Guard. The Queen-Mother went and gave Information of this to the King ; which 'tis probable did alarm him, and put him upon taking this Courſe to ſave the Life of his moſt valuable (and I think moſt beloved) Son.

But there was another paſſage Introductory to this Delivery, which gave the King a very fit occaſion to manifeſt at once his own Authority, as well as Fatherly Affection to Sultan *Curſeroon*. *Aſaph Can* had been lately to ſee this Prince his Priſoner ; but carried it very rudely to him, preſſing boiſterouſly into his Preſence, and doing no manner of Reverence as was decent and due to the Eldeſt Son of his Sovereign. Some ſay, that he attempted to pick a Quarrel with him, and knowing the Prince's brave and generous Courage, that ſcorn'd to put up an Indignity, endeavour'd to provoke him to draw ; either with a Deſign to call in his Ruffians to revenge it, or elſe to have a Story to tell the King, that his Son was wholly ungovernable, and drew his Sword to kill his Keepers, and ſo make his eſcape. But the Prince by his Patience and Prudence ſpoil'd the Deſign ; he deſpis'd that ſordid inſolent Perſon, and kept his Sword in his Scabbard, only he got a Friend to acquaint the King with the Saucineſs of *Aſaph Can*.

The Great *Mogul* enquires about his Son, and rattles *Aſaph Can* ſoundly.

The next time the King ſaw this honeſt Man, (and 'twas before the whole Court too) he ask'd him, When he viſited his Charge laſt ? What he ſaid to him ? And what Reſpect he ſhewed him, when he approach'd him ? Theſe ſtartling Queſtions confounded the guilty Man, and put him quite out of Countenance : He found the King was made acquainted with his Carriage, and therefore was forc'd to confeſs the main of the Story, only varniſhing it a little with a plauſible Lye or two, to make it as eaſie as might be on his own ſide. But the King told him for his Comfort, He wou'd make him know Sultan *Curſeroon* to be (as his moſt beloved Son and intended Heir), ſo alſo his Lord and Prince ; and tho' what was paſt ſhould be forgiven, yet if ever he was guilty of any Irreverence for the future, he would make his Son trample him under his Feet.

This was a plain Diſcovery of the King's Mind, whatever his former Actions had ſignified to the World ; and 'twas as manifeſt a proof that all his paſt Severities to this excellent Son, were a kind of Violence to himſelf, and the meer effect of the over-ruling Charms of his imperious *Normahal*.

The Court went on in their Progreſs, and travell'd over Woods and Mountains, and rough imperious Ways, that made the Journey far more a Toil and a Burden than a Pleaſure, which it appear'd at firſt to be deſigned for. Abundance of Horſes and Camels periſh'd, Coaches, Carts, and Tents, were torn and ſpoil'd, and the whole *Leskar* was put into confuſion. The King's Women were ſadly fatigued with the Difficulties of the way, and like to be left in the Woods a great many of them, the Beaſts that ſerv'd them being quite debilitated for want of Meat and Water in thoſe barren places.

But to qualifie this, it muſt be granted that ſome parts of the way we paſs'd were ſurprizingly pleaſant and charming ; and the lovely Groves, Fountains, Wells, and Ponds, that lay about us, made it a Journey through Paradiſe.

We came to one very pleaſant Town call'd *Caleada*, ſeated upon the River *Sepra*, and anciently the Seat of the old Kings of *Mandoa*. One of theſe Kings formerly uſed to take a deal of pleaſure in ſitting a Drinking by this River-ſide ; and it happen'd that when he was drunk one time, he tumbled into the Water, and being not at all able to help himſelf in that Condition, he very fairly ſunk down to the bottom. But a certain courageous Slave of his, and a notable Diver, loth to ſee his Sovereign thus become a Banquet to the Fiſhes, threw himſelf in, and dived after him, and brought him up again. When the King was come to himſelf, and this remarkable piece of Service the Slave had done him was related to him ; for a Reward, he commanded both his Hands to be cut off, telling him, 'Twas his juſt deſert, for preſuming (a ſordid Slave as he was) to touch the Sacred Body of his Sovereign.

Not long after the King (who could not take a fair warning) was at his old Trade of drinking at the Water-ſide again, and had then only his Wife with him : And having the ſame Fortune as before, to be very drunk, and fall in; the good Woman truly e'en let him dive for't, and never attempted to pull him out, tho' ſhe cou'd have done it without the leaſt difficulty or trouble: And when ſhe was ask'd the Reaſon, Why ſhe wou'd not ſave him? ſhe told them, She had no mind to loſe her Fingers: She remembred the laſt Bout, when the Slave had his Hands cut off, for doing the ſame thing, and ſhe did not know but the ſame reward might to fall her ſhare too, and therefore was unwilling to put it to the Venture. 'Tis probable the Good Wife went upon this Principle, that the Loſs ought rather to be avoided, that could never be repaired again: Now tho' ſhe might eaſily get another Husband, yet ſhe could never be ſupplied with another pair of Hands.

Ill News from *Decan.*

'Twas diſcover'd by that time we had been abroad ſome Days, that this Progreſs was not undertaken meerly for a Diverſion as it uſed to be, but that the King intended to move ſome part of the way towards Sultan *Caroon*'s Camp, the more to frighten the *Decanees* with the Noiſe of his coming, as alſo to keep his own unquiet Army the better in order.

February. The Prince ſtops the Preſents.

This was the effect of the Counſel of *Normahal* and *Aſaph Can*, who perſwaded him his going out would certainly be attended with theſe good Conſequences. But it happen'd all wrong; for News came that the *Decanees* were reſolved to fight, and lay ready upon the Borders with a very ſtrong Army to entertain his whenever they ſhould think fit to move that way; alſo, that Sultan *Caroon* was advanc'd but a little ſpace with his Forces, and notwithſtanding all his bouncing at Court, was terribly afraid both of the *Decanees* and of *Chanchanna*, which were ſorry deſpicable Enemies to him before. Upon this Account the ſame Counſellors now adviſed the King not to proceed with his firſt Deſign, but to direct his Courſe to *Agra*, and turn the Progreſs into a Hunting Match: The *Decans* they thought would not make His Majeſty good ſport at this time, at leaſt not ſo good and diverting as the Wild Beaſts of the Foreſt would.

But worſe News than this (to me) came quickly after; which was, that the Prince contrary to his Fathers Command, and all his own ſolemn Engagements, had ſtopt and intercepted all the Preſents and Goods that were to come to Court. This was meerly to ſatisfie his own Covetous Deſire of chuſing firſt, and getting the beſt things into his own Hands; which (beſides the Affront offer'd by it to the King of *England*, my Maſter, to have the Tokens of his Reſpect and Good Will, thus rudely ſiez'd and forc'd away;) was alſo a great piece of ill breeding to his own Father in pretending to ſerve himſelf firſt, and not leaving his Betters the Liberty of Choice. However after he had made ſure of them, he writes a Letter to the King to tell him what he had done; that is, he minc'd the Matter, and told a Story of ſome Goods he had ſtop'd, out of a Deſire to ſatisfy his curioſity in buying ſome Toys that he fancied; but he ſaid not a Word of the Preſents (the principal part of the Cargo) either out of ſhame, or fear, or ill deſign. I could not think of paſſing by this very uncivil Treatment without Complaints to the King, and thoſe loud ones too. In times paſt I had by all the fair and ſoft Methods, imaginable attempted to win the Prince's Favour, and never was able effectually to oblige him; but now 'twas neceſſary to put an end to that Courtſhip, and neglect his Friendſhip for the future. I muſt appeal to the King for Juſtice againſt him, and conſequently (in all probability) loſe him for ever; and ſince 'twas certain that I muſt loſe him, I thought it better to do it for ſomething, and with ſome noiſe and ſtir too, than either to be diſhonourably ſilent, or in a faint and fearful manner to proſecute ſuch an Affair.

The Embaſſadour goes to the King and complains.

I went to the King with a fix'd Reſolution to complain of the Prince's Action; when he, who gueſſed what my Buſineſs was, began and prevented me telling me (in ſhort) he had heard how his Son had intercepted the Goods and Preſents, but he would order it ſo that nothing ſhould be opened or ſearched by him; and beſides, forthwith would ſend his Royal Command to him for the Diſcharge and Surrender of them into the Hands of our own People. This was done the ſame Night, and 'twas all the Satisfaction for the Injury I could then procure; for the King quickly after fell to drinking, and (when he was pretty far gone) to talking of Religion; tho', by the way, neither of the three Prophets he talked of would have allowed him the Liberty he then took, and his Drunkenneſs was condemn'd by the Laws, both of *Moſes*, *Mahomet*, and *Jeſus Chriſt*. But this Prince when he was in that Condition was generally very full of Pious Diſcourſe; he would tumble into a Diſpute of Religion, and hold it out till mid-night; and then farewell to all Buſineſs for that time (tho' ever ſo weighty and neceſſary to be debated) for when once he was got into that Vein, there was no turning of him out; nothing to be done till the Wine and the Devout Fit had both left him. Sometimes his Humours would be comical and ludicrous, he would act a Merry Andrews part more than any thing elſe, and do things fitter for a Player than a King: The Wine would make him exert a thouſand ſeveral Paſſions, according to the Images which his heated Fancy preſented in that Commotion; ſometimes 'twas all Blood and Revenge, at other times Mirth and Jolity, Charity and Compaſſion, Grief and Sadneſs, now laugh, and then cry like a Child, and then drown his Care and Sorrow in another Cup, and ſo on, with a nauſeous Gallimaufry of Paſſions and Diſcourſes till the beſt part of the Night was ſpent. I was often obliged to ſee and hear more of this than was grateful; if my Buſineſs made me attend him, his importunity would keep me there; for he is vaſtly fond of Company in thoſe Humours, and there is no deliverance from him, till kind ſleep comes and cloſes up his Eyes.

The *Mogul's* Humours in his Liquor.

The King ſerves himſelf out of the Cargo.

After ſome time the Cargo was brought up from *Surat*, and the King (tho' he had reprov'd his Son for ſo doing) was pleas'd to take it immediately into his own Hands. Such was his Curioſity and Fond Deſire to ſee the Preſents my King had ſent him, yet he cou'd not ſtay to let me have the opening and ſorting of them, and to bring them to him in a little order. So he took his choice of ſome things that pleas'd him extreamly well, and then ſent for me to tell me what he had done, which he did with a World of Excuſes, begging my Pardon, and offering to refund whatſoever I demanded. But as I was far from any Deſign of being ſo exact and ſcrupulous as that came to, ſo I only ſignified to him that I thought it a little hard to be debarr'd of the Liberty of making my own Prince's Preſents; that as they were intended for his Majeſty, ſo it was very free for him to keep them, and I had no other Demand to make, but only for the Reſtoration of ſome of the Merchants Goods, (which being amongſt) were taken with the reſt. This he readily promis'd to do, and gave immediate order about making ſatisfaction to me in that Particular; and over and above this in the General, he gave me the Word of a King, that I ſhould have punctual Juſtice done me in all points whatſoever: My whole Affair happily concluded, and my ſelf return'd back to the King my Maſter with Honour and Satisfaction..

March, A.D. 1617. The *Mogul's* deſire of *Engliſh* Maſtiffs, &c.

Theſe were charming Promiſes, and I wanted but to ſee them well performed, which the King made me believe ſhould be without all doubt; he only requir'd a certain Promiſe on my part, the Performance of which he told me would be as pleaſing to him, as the other would be to me. This was to procure him ſome of our *Engliſh Maſtiffs*, and the tall *Iriſh Grey-Hounds*, which he ſeem'd moſt paſſionately to deſire; and farther, to get him ſome of our *Engliſh* Embroideries, for ſeveral things the Patterns of which he would ſend me in. The latter part I could undertake to promiſe, but the former relating to the Dogs was very uncertain, and no Man could warrant their Lives for ſo long a Voyage; but I told him: they ſhould be ſent, and if they died by the way, their Skins and Bones ſhould be preſerved for him (ſince he deſir'd it) and this ſhould be my diſcharge with his Majeſty; which he willingly agreed to. After all this favour and familiarity it may appear ſomething ſtrange that the *Great Mogul* ſhould ſo eaſily (as he did) entertain any ill ſuſpicious Thoughts of me and my Nation. 'Tis true, a Prince can't have his Eyes too open upon his own Affairs, nor be too nice and curious in looking about him, that the many Forreigners he admits into his Country don't make any hurtful Encroachments upon him. But as I am ſure the *Engliſh* had ever been very free from any Deſigns of this nature, ſo I was the more ſurpriz'd at his Jealouſie, in that this Prince himſelf had often ſpoke a good Word for us, and been our Nations Patron and Defender (as it were) againſt the ſlanderous Charges and malicious Suggeſtions of our Enemies at Court. And to do him Juſtice I believe had been ſo ſtill, even in this caſe alſo, had it not been for the violent Perſwaſions of the Prince Sultan *Caroon*, and ſome Colour for his Suſpicion, which the Folly and imprudent Conduct of our own People gave him.

There had been ſome kind of ſquabble amongſt them at *Surat* (the riſe and cauſe of which is not very clear) and to pacify this Tumult, our Ships landed Two hundred of their Muſqueteers, and commanded them to march towards the Town. Some of the Mariners (perhaps Drunk, or it may be only in a meer Bravado, thinking no harm, nor having no deſign) cried out that the *Engliſh* were going to take *Surat*; a very likely ſtory, that 200 Men ſhould be ſo mad as to attempt a fortified Town that was able preſently to furniſh out a thouſand Horſe, and as many Shot, and beſides had the guard of a River,

The imprudence of the *Engliſh* in landing a Body of Men.

River, which muſt be paſſed, and that a handful of Men might with eaſe defend themſelves againſt a numerous Army. But however it gave an alarm, and a great many were ſuch Fools as to believe the *Engliſh* had a real deſign upon the place. Eſpecially this being the Prince's Government, and he ſo particular a hater of our Nation as he was; 'twas hotly urged againſt us by him and his party, and the Affront aggravated to the King, with all the cunning ſpite and rancour in the World. Beſides there was a flying Report at the ſame time that we had taken *Goa*, and that a vaſt Fleet was preparing in *England*; all which concurring, did almoſt effectually perſwade the good eaſie Prince that we had ſome ill Deſign upon him. Yet he diſcovered nothing of his Mind in plain Terms to me; notwithſtanding which, I found my ſelf under the ſame preſſing Obligation to take all Opportunities to remove thoſe groundleſs Jealouſies, and to bring him to the ſame favourable Thoughts that he uſed (or at leaſt pretended) to have for us.

Perſian Embaſſadour goes away in diſcontent.

But in all theſe Circumſtances of Trouble, I fared much better than the *Perſian* Embaſſadour, who after all his Pompous Entrance, his coſtly Preſents, his baſe and ſervile Courtſhip, went off in Diſgrace and Diſcontent. He could not fadge in his Buſineſs, nor work this Court into any humour of ſatisfying his Maſters Deſires. Never did any Prince and the Embaſſadour of another manage it ſo to each other at parting, as the *Great Mogul* and this *Perſian* did. There was perfect huckſtering between them, and they were reſolved on both ſides, as not to be beholding to each other, ſo alſo that neither ſide ſhould get a Penny by the other. The *Mogul* had all the King of *Perſia*'s Preſents appraiſed, and paid down the Embaſſadour the Money for them, and at the ſame time ſent him in a Bill of Fare, which he made to be bated out of the Sum. He reckoned him even for Plumbs and Musk-Melons, and made him pay for his common Liquor; there was an *Item* for Pins and Plantains too, but an Elephant and a Hawk or two riſe up very high. And for many of theſe Commodities the *Perſian* had far better have gone to Market and ſerv'd himſelf as he ſaw fit, than have taken them at the King's Rates, and ſtood to the mercy of a Court Reckoning. For as the King gave too low for what he had of the *Perſian*, ſo he made the *Perſian* pay ſauce for what he had from him; but there was a Pet between them, the *Perſian* was grown touchy and peeviſh at his ill uſage, and the King was reſolved to plague him for't. So away he went in a mighty huff (as he very well might) without the formality of an Audience of leave one may be ſure; indeed without taking leave of any Body, or ſo much as excuſing that Omiſſion; only he ſent to compliment me, and aſſured me he would make ſatisfaction for not coming himſelf, by double Civilities to my Countrymen in *Perſia*. A great deal of time paſs'd away after this to little purpoſe or profit; I attended the Court, but by the means of one intrieguing Perſon or other could do little or no Buſineſs.

The Pride and Security of this Court, that dared thus affront ſo great a Monarch as the King of *Perſia*.

Auguſt.

Happy Days now began to ſhine upon Sultan *Curſeroon* and his compleat Reſtoration was quickly expected: 'Twill be happy for this Country and all Chriſtians that Trade hither if he comes to wear the imperial Crown; for as his other Vertues will make him an indulgent Father to the one, ſo his large Charity and very favourable Opinion of Chriſtianity will render him a kind Friend and Protectour of the other. His unnatural Brother had lately been ploting againſt his Life; but 'twas ſeaſonably diſcover'd, and the barbarous Prince ſent for up to Court; not that the King intended to puniſh him, for he dares not, ſince he is *Normahal*'s Favourite; but he'll call him away from the Army where he is hated of all Men, and does more harm than good. An Enemy will never be heartily beaten by a diſcontented Army, nor an Army be otherwiſe than ſo, under a General they abhor.

September.

When the King's Birth-day came on, the ſolemnity of his weighing in a pair of Scales was performed, according to the old and annual Cuſtom. The Baſons of Nuts and Almonds and ſeveral ſorts of Fruits made in Silver were thrown among the Nobles too; but when his Majeſty ſaw I did not ſcramble like the reſt, he reach'd out a Baſon full himſelf and pour'd into my Cloak; all put together did not amount to five Pound, but the Nobles did not leave me forty Shillings worth, for they preſently fell a ſnatching, and got the better part of what I had away.

There is a prodigious ſhew of Riches, Liberality, and Charity to the Poor that Day; but (at laſt) what is flung away is very inconſiderable.

The next time I went to Court I made a motion to the King about our Debts: I preſented the Merchants humble Petition to him, which he caus'd to be read aloud with the Names of the Debtors, Sureties and the ſeveral Sums that were owing. Upon this ſome Difficulty aroſe, for ſome were Dead, others Strangers, and others Inſolvent; and therefore the King told me that the Merchants Accompts appear'd to him to be very arbitrary and ill ſtated; and as they had ſet down Debts at their own pleaſure, without giving him any demonſtration of their Honeſty and Juſtice, by bringing a Bill of their lading before-hand, ſo there was no Reaſon (in caſe of Death or Inſufficiency) why the Money ſhould be expected from him. However for this once (he ſaid) he would ſtand by us, and order the Money to be paid; but for the future if the *Engliſh* truſted his Servants with their Goods without acquainting him, they ſhould ſtand by the loſs themſelves. Otherwiſe when their Commodities came to Court, let them firſt of all bring him of all, and then he would ſerve himſelf, and diſpoſe of the reſt to others that ſhould take them off; and then if any of thoſe Perſons fail'd, he would ſee we ſhould not be loſers. And this is the Method that the *Perſian* Merchants take, as I have ſeen ſeveral inſtances of it at this Court. The reſult of the Buſineſs was, that the King call'd in a certain Courtier, and commanded him to ſummon all the Debtors together, and by fair or fool means oblige them to pay.

The Embaſſadour moves for the Debts.

October.

But this ill deſigning Perſon, partly by tedious delays and partly by his (at laſt) poſitive refuſing to do Juſtice, provoked me again to apply my ſelf to the King. Before I did this, I had received tidings of the arrival of ſome freſh Ships at the Bar of *Surat*, which gave me an encouragement to be bold at Court, ſince News of that nature is always very acceptable to the King; ſo I carried an Abſtract of the Lading along with me (according to the late Order) and began to ſollicit my Affair; and finding the King in a good patient gentle Humour, pull'd out my Petition that craved the Payment of the Debts. The King did not mind it when I held it out; and 'twas happy for thoſe tardy Miniſters that he did not, for that ſawcy neglect of his Orders would have produced a terrible ſtorm. That Perſon who was order'd to inſpect the payment of the Debts, came in an agony up to *Aſaph Can*, and begged him to hinder me from complaining; he ſaw his Danger, and found himſelf at the very brink of the Pit, and one jog more had puſh'd him in; and upon their faithful Promiſe of doing the Buſineſs, immediately I agreed to carry matters no farther at that time; but this put them into ſuch a Fright, that they preſently ſet about it, and ſiez'd ſome of the Debtors the ſame Night. Amongſt the ſeveral particulars of Goods coming up, I had ſome Ropes of very fine Pearl, beſides a ſingle one very large and rich; but of theſe I ſaid not a Word in publick, intending to oblige ſome Friend in private with a good pennyworth in them, and ſo make them ſerve for the more effectual promoting my Deſigns. The King indeed asked for Jewels, and I told him they were dear Commodities in *England*; but as *Aſaph Can* preſſed earneſtly to know what rarities I had, I gave him a private ſign, which he very eaſily underſtood, and ſo diverted him from that Diſcourſe.

Orders taken about Payments.

The Embaſſadours Method of gaining *Aſaph Can* and all that party.

Upon the King's riſing we withdrew together, and ſettled all the Particulars of the Bill of Lading, tranſlating the Abſtract into *Perſian*, and making it ready to be preſented to the King. But (as the principal part of my Deſign) I told him how it was in my power to oblige him with thoſe choice rarities of Pearl, which I had yet entirely conceal'd, even from the Prince and King themſelves, and ſhould come into no Hands but his own, provided I ſhould be ſecure of his utmoſt Aſſiſtance in the diſpatch of my Buſineſs. 'Tis a wonder to ſee how any Charms of this nature work upon People of greedy covetous Minds; how they will command all their Paſſions and Principles, and transform them into the moſt different Creatures in the World. By this one Propoſal of the Pearl, I had gotten as large an Intereſt in *Aſaph Can* as I could deſire; all his Enmity and ill Deſigns were vaniſh'd in a moment, and he was changed into the moſt diligent and zealous Friend imaginable. There was no piece of that Service he would ſtick at performing for us; he would procure me a perfect Reconciliation with the Prince, the powerful *Normahal* ſhould be our Nations Friend too, and ſuch a method be eſtabliſh'd for the ſafety and ſucceſs of all our Affairs, as ſhould leave me no farther occaſion of trouble and complaint. Such is the Power of Gain, and the ſtrange force of an eager Appetite that way, when a Man indulges and ſuffers it to govern him.

This Perſon upon a ſordid Hope of buying ſome Toys to Advantage (and perhaps of ſome other collateral Profit) was my Humble Servant, even to flattery, and to the betraying the Secrets of the Prince his Son-in-Law. However by this means I was ſure of him, and he had in a manner made him mine for ever; he could not betray me before he had the Pearl for fear of miſſing it, nor afterwards for fear of betraying himſelf, ſo that I reckoned I had made a purchaſe of him. And together with him I bought the Friendſhip of all the reſt of that party; his The oppoſite party turn'd about. Father and *Normahal* came like Paper and Packthread in to the Bargain as it were, for he himſelf was the main purchaſe. They all ſolicited my Affair, and pleaded with the King on my behalf, and if the Prince laid any rub in their way, they made bold to oppoſe him, and that with ſome heat too.

There was a mighty change now in the Face of our *November.* Affairs at Court; *Aſaph Can* our Agent, and *Normahal* the Protectreſs of our Merchants paſſage to Court. The Prince too was turned about by the influence and perſwaſion of *Aſaph Can*; he look'd after our Debts with great care and concern, granted a Firman very effectual in all points for our preſent eaſe at *Surat*, and over and *December.* above (at my motion) promiſed one for *Bengala*, a thing which he would never before hear of. When the Preſents came the King and the Prince had their ſeveral ſhares to their ſatisfaction; *Normahal* was gratified too for her protection, and *Aſaph Can* was raviſh'd with the Pearl. *January.* The Merchants that came to Court were civilly entertained by the King, and effectual Orders were taken for paying of all the *Surat* Debts; the Prince commanded it to be cut off from his Manſibders Wages, and at the ſame time ſtrictly charged all his new Officers to uſe us as Friends.

I had nothing now to do, but to attend the delivery of my Firmans to me, which were order'd to be drawn up in the moſt ample and particular manner by the Secretaries, who had received the Kings and Princes Inſtructions for that purpoſe.

Here Sir *Thomas Roe*'s Account breaks off, and his Journal does not bring us to the leaſt reſult of thoſe matters. We don't know how he parted from thence, and how cloſely and ſincerely his new gain'd Friends adhered to his Intereſt But 'tis next to certain that all ended happily, and according to his Deſires, ſince the Stile of the *Great Mogul*'s Letter to our King (which was brought by him) ſeems to promiſe all that Favour, which he had been ſoliciting with the toil and vexation of ſo many Months at that Court.

The King's Letters ſent to *Selim Shag*, the *Great Mogol*, in the Year 1614. by Sir *Thomas Roe.*

JAMES, by the Grace of Almighty God, the Creator of Heaven and Earth, King of Great Britain, France, *and* Ireland, *Defender of the Chriſtian Faith, &c.*

To the high and mighty Monarch the Great Mogol, *King of the Oriental* Indies, *of* Candahar, *of* Chiſmer *and* Corazon, *&c. Greeting.*

We having notice of your great Favour towards Us and Our Subjects, by Your Great Firman *to all Your Captains of Rivers, and Officers of Your Cuſtoms, for the entertainment of Our loving Subjects the* Engliſh *Nation with all kind Reſpect, at what time ſoever they ſhall arrive at any of the Ports within Your Dominions, and that they may have quiet Trade and Commerce without any kind of hinderance or moleſtation, &c. As by the Articles concluded by* Suc Suff *Governour of the* Guzerats, *in Your Name, with Our loving Subject Captain* Thomas Beſt *appeareth: Have thought it meet to ſend unto You Our Embaſſadour, which may more fully and at large handle and treat of ſuch Matters as are fit to be conſidered of, concerning that good and friendly Correſpondence, which is ſo lately begun between Us; and which will without doubt redound to the Honour and Utility of both Nations. In which Conſideration, and for the furthering of ſuch laudable Commerce, We have made choice of Sir* Thomas Roe *Knight, one of the principal Gentlemen of Our Court, to whom we have given Commiſſion under Our Great Seal of* England, *together with Directions and Inſtructions further to treat of ſuch Matters as may be for the continuance and increaſe of the Utility and Profit of each others Subjects: to whom We pray You to give Favour and Credit in whatſoever He ſhall move or propound towards the eſtabliſhing and enlarging of the ſame. And for Confirmation of Our Good Inclination and Well-wiſhing towards You, We pray You to accept in good part the Preſent, which Our ſaid Embaſſadour will deliver unto You, and ſo do commit you to the merciful Protection of Almighty God.*

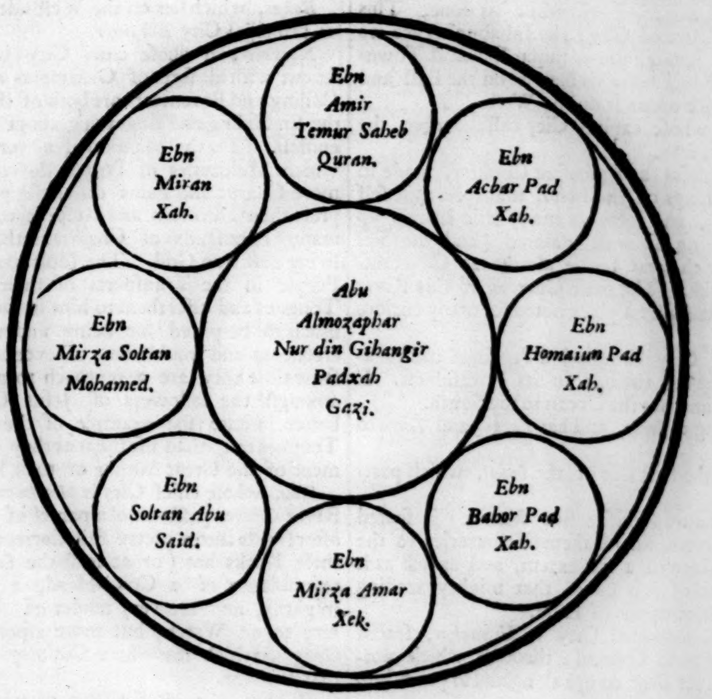
A Copy of the Grand *Mogol's* Letter to the King.

UNto a King rightly deſcended from his Anceſtors, bred in Military Affairs, and cloathed with Honour and Juſtice, A Commander worthy of all command, ſtrong and conſtant in Religion, which the great Prophet Chriſt did teach, King JAMES, whoſe Love hath bred ſuch impreſſion in my Thoughts, as ſhall never be forgotten, but as the ſmell of Amber, or as a Garden of fragrant Flowers, whoſe Beauty and Odour is ſtill increaſing, ſo be aſſured my Love ſhall grow and increaſe with yours.

YOur Letter which you ſent me in the behalf of your Merchants, I have received, whereby I reſt ſatisfied in Your tender Love towards me; and deſire You not to take it ill, for not having writ unto You heretofore; for this my preſent Letter, I ſend to renew Our Loves, and herewith do certify You, that I have ſent forth my Firmaunds *thruogh all my Countries to this effect, That if any* Engliſh *Ships or Merchants ſhall arrive in any of my Ports, my People ſhall permit and ſuffer them to do what they will, freely, in their Merchandizing Cauſes, aiding and aſſiſting them in all Occaſions of Injuries that ſhall be offered them, and that the leaſt cauſe of Diſcourteſie be not done unto them; as alſo, that they be as free and freer than my own People. And as now and formerly I have received from You divers Tokens of Your Love; ſo I deſire your Mindfulneſs of me by ſome Novelties from Your Country, as an Argument of Friendſhip between Us; for ſuch is the Cuſtom of Princes here.*

As for your Merchants, I have given expreſs Orders through all my Country, to ſuffer them to ſell, buy, tranſport, and carry awvy at their pleaſures, without the let or hindrance of any Perſon whatſoever, all ſuch Goods and Merchandize, or other things, as they ſhall deſire to buy, and let this my Letter as fully ſatisfie You in the deſired Peace and Love, as if my own Son had been the Meſſenger to ratifie the ſame. And if any in my Country not fearing God, nor obeying their King, or any other void of Religion, ſhould endeavour or be an Inſtrument to break this league of Friendſhip; I would ſend my Son Sultan Caroon, *a Souldier approved in the Wars, to cut him off, that no Obſtacle may hinder the continuance and increaſing of Our Affections.*

The Deſcription of the Great Mogul's *Seal.*



This Seal contains his Genealogie from *Tamerlane,* as he is pleas'd to reckon it himſelf. 'Twas made only of Silver, and ſent along with the Letter (unſealed) to the King; for the *Mogul* was in a diſtreſs when he had writ his Letter, whereabouts he ſhould ſet his Seal; if under he ſhould diſparage himſelf, if over he might affront the King; as the ſureſt way therefore, he reſolved to fix it neither under nor over, but to ſend it to the King of *England,* to clap it where he thought beſt himſelf.

The middle and largeſt Circle contains his own Name, and all the ſurrounding ones are thoſe of his Eight Anceſtours, in a direct deſcent from *Tamerlane,* who is in the uppermoſt of all.

CHAP. XXXI.

An Account of the Mogul's *Country, and the moſt uſeful and remarkable Things relating to it. Extracted from Sir* Thomas Row's, *Mr.* Terry's *(his Chaplains) and the Obſervations of ſome others who lived there.*

We will begin with the Diviſion and Dimenſions of this mighty Empire; ſee what parts it conſiſts of, and the Boundaries that are ſet to it's greatneſs. In which Diſcourſe we muſt take notice that the Account here given is ſuch as agreed to the ſtate of the Country at that time, that our Authors liv'd and convers'd in it. We know it is not the ſame now that 'twas then; the *Great Mogul* is Lord of more Ground, and has enlarg'd his Territories ſince that time. But we don't here meddle with any of thoſe Modern Acquiſitions, but draw the Lines of the Empire as it was in that more Ancient State.

The Diviſion of the Country and its Provinces.

This premiſ'd; we are told that it contains Thirty ſeven large Provinces; one may call them Kingdoms, for anciently they were ſo, each glorying in a particular Monarch of its own. Each large enough too, to ſatisfie the Deſires of a Prince not extraordinarily ambitious of Sovereignty; a Prince of that happy conſtitution of Mind (that ſome we read of have been bleſſed with) to be contented with the ſhare which Nature and Providence have allowed him, and live free from all thoſe unjuſt and intemperate Paſſions which render ſo many Princes the Plagues and Torments of their Neighbours.

The Names of theſe Provinces (as well as the other particulars relating to them) were taken out of the *Great Moguls* own Records, and not from the uncertain Reports of any of the People; ſo that one may depend upon having a juſt and true Account in this caſe.

We ſhall go over them in the order they deliver'd them to us.

Candahar, a fair Province that lies North Weſt from *Agra;* bordering upon *Perſia,* to which it once belonged. The chief City bears the ſame name, and is very well known to the Merchants. *Candahar.*

Cabul, the Name both of the chief City and Province. It borders upon *Tartary,* and is the moſt Northern part of the *Mogul*'s Dominions. The River *Nilob* has it's Origin here, from whence running Southerly it diſcharges it ſelf into the *Indus.* *Cabul.*

Multan, that lies Southerly from *Cabul* and *Candahar,* and to the Weſt joins upon *Perſia.* 'Tis famed for excellent Bows and Arrows, and all the other Provinces of *India* do allow it the preheminence in this Art. The Bows are made of Horn, and the Arrows of ſmall Canes or Reeds; both very neatly contrived and ſet off with rich Paint or Varniſh. *Multan.*

Hajacan,

jacan.

Hajacar, the Country of the *Baluches*, a People of good Courage and a very martial Diſpoſition. They do both look like Men and dare fight like Men; they are not as a great many ſorts of People in the *Mogul*'s Dominions, that have the Spirit of a Mouſe lodged in a brave Heroick Body; great hulking Fellows (big enough almoſt to ſwallow a common Adverſary) that will be kick'd or thraſh'd and ſtand ſtill while 'tis done. This Province has no celebrated City; the Inhabitants are it's greateſt Glory, and enough too without ſplendid Towns and Caſtles. The River *Indus* waſhes it on the Eaſt and *Lar* a *Perſian* Province meets it on the Weſt.

Buckar.

Buckar, through whoſe capital City call'd *Suckar*, the noble *Indus* makes its way.

Tatta.

Tatta, a very fruitful and pleaſant Country. made ſo partly by the branchings of the *Indus*, that ſpreads it ſelf into various Circlets, and forms as many little Iſlands up and down which being ſo well watered (and the Soil happy too) are as rich and fertile almoſt as Covetouſneſs it ſelf could wiſh. The main Current of this River meets with the Sea at *Sindee* a place noted for many curious Handicrafts.

Soret.

Soret, (the chief City *Janagar*) a Province comparatively ſmall, but makes amends in its Fruitfulneſs. It lies upon *Guzurat*, and has the Ocean to the South.

Jeſſulmure.

Jeſſulmure, joining to *Soret*, and has *Buckar* and *Tatta* to the Weſt of it.

Attack.

Attack, lying on the Eaſt ſide of the *Indus*, which parts it from *Hajacar*.

Peniab.

Peniab (which name ſignifies five Waters) is ſeated amongſt ſo many Rivers, all of them Tributaries to the *Indus*. It is a Province of a vaſt extent, and as rich as it is large; the Capital of it is *Lahor*, that mighty trading City and Northern Metropolis of *India*.

Chiſhmere.

Chiſhmere, whoſe principal City is *Siranakar*, ſeated upon very Mountainous Ground; through which notwithſtanding the River *Bhat* creeps along, and ſo pours into the Sea.

Banchiſh.

Banchiſh (the Chief City *Biſhur*) it lies Eaſt, and ſomething Southerly from *Chiſhmere*, and is ſeparated from it by the *Indus*.

Jangapore.

Jangapore, it ſtretches along upon the River *Kaul*, one of the five that water the Province of *Peniab*.

Jenba.

Jenba, it lies to the Eaſt of *Peniab*.

Delly.

Delly, is the central Province of this great Empire, and ſhews a City of the ſame name, which yet in ſpite of all its Ruines and the Injuries of time will force the admiration of a Spectator. The old *Indian* Princes lie interr'd here a vaſt number of them, and ſo are moſt of the preſent Emperour's Family. The Ceremony of the Coronation is ſtill performed here, and muſt be ſo by the Laws of the Country; the *Mogul* may wear his Crown where he pleaſes, but here it muſt be firſt ſet on. Mr *Coryat* found a ſtately Marble Pillar at this place, with an old and almoſt defaced Greek Inſcription upon it; which he believes to have been erected by *Alexander* in memory of his Victory over *Porus*, who gave the Conqueror hereabouts ſo briſk a Reception, and plied him ſo cloſe, as made him ſay, *tandem par animo meo Juveni periculum*, he had at laſt met with a Danger big enough for him.

Quintus Curtius.

(And we know that *India* afforded him another Danger too (before he left it) that was not only great enough, but very like to have proved too great for him: Witneſs that Town of the *Malli* where he ſo narrowly ſcaped the laſt effects of the juſt fury of the Beſieged; when he had thrown himſelf off from the Wall amongſt them, and ſupported himſelf againſt the Trunk of a Tree, till his *Macedonians* (in the very nick of time) came in to preſerve him). The River *Gemini* riſes at this place, and afterwards paſſing thro' *Agra* runs into the *Ganges*.

Bando.

Bando, it borders the Province of *Agra* to the Weſt.

Malua.

Malua, a very fruitful Province, whoſe chief City is *Rantipore*.

Chitor.
See Sir Tho. Row's Account.

Chitor, a very ancient and great Kingdom, its chief City (of the ſame name) now involved in the miſerable fate of many other great and ſtately places that have paſt their time of flouriſhing.

Guzurat.

Guzurat, a very goodly, large and rich Kingdom; its Capital City is *Amadanas*, tho' *Cambaya*, *Brodera*, *Baroch*, and *Surat* (not much ſhort of the former) do all ſtand in the ſame Territory. It has ſeveral fine Rivers, as that of *Cambaya* (falſly ſuppoſed by ſome to be the *Indus*) the *Narbedah* which paſſes by *Baroch*, and the *Taplee* by *Surat*.

Chandis.

Chandis, whoſe chief City is *Brampore*, a large and populous place.

Berar.

Berar, the chief City *Shaphore*; theſe two laſt are the Southern bounds of the Empire.

Narvar.

Narvar, the chief City *Gebud*, watered by a River that much enriches it, and diſcharges it ſelf into the *Ganges*.

Gwaliar.

Gwaliar, in the Capital City of which, the *Mogul* has a vaſt Treaſure of Gold and Silver, and a ſtrong Caſtle for the keeping of conſiderable Priſoners.

Agra.

Agra, the Province and City are both pretty well known.

Sanbat.

Sanbat, parted by the River *Gemini* from the Province of *Narvar*.

Bakar.

Bakar, which lies on the Weſt ſide of the *Ganges*, and its principal City *Bikaneer*.

Nagracot.

Nagracot, in whoſe chief City is a Temple as richly ſet out with all ſorts of Ornaments as any in *India*; the Ceiling and Pavements are both of the pureſt Silver, and the Emboſſing and Engraving about the whole is almoſt endleſs. 'Tis the Manſion of a very celebrated Idol to which Multitudes of People do reſort; with ſo much more Charge and Pains do theſe poor blind *Indians* expreſs their Devotion and Reſpect to a dead Image, than many Thouſands of Chriſtians think fit to do to the living and true God. The Idols name is *Matta*, and the People in the Tranſports of their Zeal, cut out their Tongues and offer them to him in ſacrifice; they are very much to be pitied for being under the Bondage of ſo erroneous and troubleſome a Devotion as this is; but at the ſame time they are a reproach to multitudes that ſtand amongſt the followers of Jeſus Chriſt, who had far better imitate the example of the *Indians*, and cut their Tongues out, than uſe them as they do to the diſparagement of the Great Author of their Religion.

Siba.

Siba, whoſe chief City is *Hardward*, where the famous River *Ganges* paſſes thro' a parcel of Rocks, and quickly after ſwells into a pretty full Current. The Principal of theſe Rocks has (or at leaſt the *Indians* fancy ſo) the reſemblance of a Cows-Head, a Creature they love mightily, and are very tender of. They aſcribe a Divinity to all Waters, but more eſpecially to that of the *Ganges*, which the whole Country therefore viſits upon that account.

Kakares.

Kakares, the chief Cities of which are *Dekalee* and *Purhola*. 'Tis a large Province but very Mountainous ſeparated from *Tartary* by part of *Caucaſus*; and is one of the Northern boundaries of the Empire.

Gor.

Gor, a very uneven hilly Country; the River *Serſilly* (that communicates with the *Ganges*) has its Head in it.

Pitan.

Pitan, watered by the River *Canda*, which falls into the *Ganges* in the Confines of it.

Kanduana.

Kanduana, whoſe chief City is *Karbakatenka*; the River *Serſilly* parts it from *Pitan*. This Province and *Gor* are the North Eaſt Limits of this *Monarchy*.

Patna.

Patna, which is bounded by the *Ganges* on the Weſt, and the *Serſilly* on the Eaſt; it is a very rich and fertile Province.

Jeſuat.

Jeſuat, whoſe chief City is *Rajapore*; it lies Eaſt of *Patna*.

Mevat.

Mevat, the chief City *Narnel*; a rough mountainous Country.

Udeſſa.

Udeſſa, the principal City *Jekanat*; it is the moſt remote Eaſtern part of the Empire.

Bengala.

And laſtly *Bengala*, which well deſerves the Title of a Kingdom, for the large extent of it. It contains two great Provinces, *Purb* and *Patan*, the one lying on the Eaſt and the other on the Weſt of *Ganges*. 'Tis bounded to the South by the Gulph of the ſame name, into which the *Ganges* (parted into four great Streams) pours out its Water, after it has run more than 1500 Miles out right in the *Mogul*'s Territories. The chief Cities are *Regamahal* and *Dakaka*; there are abundance of fine Ports and Havens in this Country, and 'tis bleſſed with all the moſt profitable and uſeful Bounties of Nature.

Dimenſions of the whole.

And now for the Dimenſions of the whole in one piece, 'tis reckon'd by our Travellers to be from N. W. to S. W. above Two thouſand *Engliſh* Miles, from N. E. to S. W. about One thouſand five hundred Miles, and from North to South, about One thouſand four hundred. A fine ſpot of Ground for one Man to be Maſter of; and yet as great as 'tis, not big enough to ſatisfie the craving Deſires of its Monarch. This part of *India* is not ſufficient for him, but he muſt have *Decan*, *Malabar*, and *Coromandel* too; and that ſuppoſed, he would be as mad for *China* on the one ſide and *Perſia* on the other; then *Turky* would lie in his way, and *Europe* be a tempting bait to him, and then he would never ſleep quietly for thinking upon *Africa* and *America*. What are the bounds of Covetouſneſs and Ambition? and where is it that enflamed Appetite quenches its own Fires, and begins to grow cool and temperate? Certainly 'tis not within the Limits of this World: Had an ambitious Prince the whole Earth at his command, he would (like *Alexander*) repine and grumble that there was not more ſuch within his reach; and undoubtedly were there a Contrivance for the conveying an Army thro' the Air, the conqueſt of the Moon would be next attempted, and then woe be to *Mars* and *Jupiter*, and the reſt of the Planets.

The temper of the Country, the nature of the Soil, and all its Products.

What the Temper of the Air in this Country is, may be eaſily gueſſed from its ſituation in ſome meaſure; one may expect violent heats in a Poſition ſo near the Sun's way, and thoſe that live in *India* don't find their Expectations of this nature fruſtrated.

Their Rains are neither ſo common nor ſo uncertain as they are in many parts of the World; a Man can hardly be wet with a Shower except at one particular ſeaſon of the Year, and then he may every Day (more or leſs) for three Months together. Theſe general Rains begin about the time that the Sun comes to the Northern Tropick, and ſo continue till his return back to the line. They are uſually uſhered in with fearful ſtorms of Thunder and Lightning, and as theſe are the beginning ſo they are alſo the concluſion of the rainy Seaſon. The reſt of the Year a refreſhing Dew (that falls very plentifully) ſerves inſtead of Rain; this does a little cool and comfort the Earth, yet by that time the nine Months are filled up, the Ground grows horribly dry and parch'd, and all the Greens languiſh for a Shower. There is at that time ſomething of the dead and barren proſpect of the Deſert *Arabia*; heaps of Duſt and Sand, and torrified Plants and Animals; but when the Rains come on there's preſently a wonderful alteration, every thing revives and ſhoots up, and the Fields appear in their genuine Summer Colours.

Ploughing and Sowing.

They Till their Ground with Oxen and Foot-ploughs; their Seed time is in *May* and the beginning of *June*, and their Harveſt in *November* and *December* (the moſt temperate Months of the Year). And tho' the Ground has been hardning ſo long as it has by the mighty heat, yet they can work it without difficulty when they come to Plough; for the Mould is fat and rich, and its own goodneſs diſpoſes it to yield to the Plough, tho' there has been no Rain to ſoften and prepare it. There's very little incloſ'd Land in this Country, except ſometimes juſt by Towns or Villages, otherwiſe it lies all open.

Hay and Corn.

They cut their Graſs as they have occaſion for it, either green or wither'd; but they don't Mow it and make Hay as we do in *England*. The Corn is extreamly rank, and grows as thick and cloſe as ever the Land can bear it; and one may paſs ſeveral hundreds of Acres together without ſeeing the leaſt ſpot that's thin and poor. Their ſorts are Wheat, Barley, and Rice, with ſome others we don't know the names of; the Wheat is plumper and whiter than ours, and makes a fine well reliſh'd Bread; and that which the common People make of another ſort of courſer Grain is both toothſome and wholſome, and very hearty.

With their Bread they have excellent good Butter too, tho' not of the conſiſtence of ours, but more fluid like an Oil, for the heat of the Climate will never allow them to bring their Cream to any other Temper.

Plants, and Fruits, and Trees.

All the uſeful Garden Roots and Plants are common in this Country, as Carrots, Potatoes, Onions, Garlick, and ſeveral ſorts of Sallet Herbs. Ginger grows almoſt every where about, and Sugar Canes are no rarity at all; they ſow Tobacco in vaſt plenty, and ſmoak it as much. But their way of taking it is ſomething odd and ſtrange, tho' perhaps they don't fire their Mouths by it ſo much as we do; for they take a little narrow necked Pot (that has an open round top, and a Spout coming out of the Belly on't) and fill it with Water up to the lower part of the Spout; then they lay their Tobacco looſe in the top of the Pot, and upon it a Coal of Fire, and ſo with a Reed or Cane of an Ell long (which is inſerted into the Spout) they draw the Smoak into their Mouths. They ſay it is much more cool and wholſome to do it thus, than as the *Europeans* do, ſince all the Smoak falls upon the ſurface of the Water before it paſſes into the Cane. The Tobacco of this Country is thought to be as good (in the Plant) as any in the World, but they han't the Art of dreſſing and ordering it (to make it rich and ſtrong) as they have in the *Weſt-Indies*. The greateſt defect as to Vegetables ſeems to be in Flowers, which for a great part are but like ſo many painted Weeds; they pleaſe the Eye with fine Colours, but give the Smell little or no entertainment at all. The Roſes and ſome few kinds more are fragrant; one of the principal of which is a white Flower like the *Spaniſh Jeſſamin*, a thing of a moſt grateful and pleaſing Scent, and affords them that fine Oyl, with which they are continually perfuming themſelves, and makes very ſweet Company. Beſides theſe for a Perfume they have Lign-Aloes, and that neither ſcarce nor of the meaneſt ſort.

As for Fruits the Country ſhews a very great variety; Dates, Figs, Grapes, Prunello's, Almonds, Pomegranates, Pomecitrons, Oranges and Limons; but theſe latter are not ſo good here as in other places. Here are Coco's too, and that excellent Plumb called the Mirabolan, the uſe and goodneſs of which we very well know in *England*. The Plantans grow in cluſters (many times) they are long and like a ſlender Cucumber, very Yellow when ripe, and taſte like a *Norwich* Pear, but much better.

The Muſkmelons and Water-melons are ſo well ripen'd and digeſted a Fruit in this warm Climate, that they may be freely eaten without fear of any of thoſe hurtful effects that may follow a plentiful uſe of them in a colder Country. The Pulp of the Fruit is ſpongy and tender, of a Colour mixt with Red and White, and contains in the inner part of it a very pleaſant cooling Liquor. The *Mango* Trees are as large and ſtately as our Wallnut-trees, and the Fruit in ſhape and colour like our Apricocks, but much bigger; they roul them about in their Hands for a while when they are ripe, and then ſuck out the inſide, which by that time is become like the Pap of a roaſted Apple, and highly grateful to the pallet.

But the *Annana's* are eſteem'd the choiceſt of all their Fruits, and have (tho' a very delicious) yet ſo compounded a taſte with them, that a Man while he eats them may imagine he is eating ſeveral fine things together; they ſay it reſembles a mixture of Strawberries, Claret, Roſe-water and Sugar.

Beſides theſe there's the * Tamarind Tree (which is known well enough) and the Tree that yields the Liquor call'd the Toddie, which is from thence call'd the Toddie-tree. This Tree has a very ſoft ſpongie Parenchyma; it grows ſtraight and tall and without Boughs to the very top, but there ſpreads out into tender Branches, in ſhape like thoſe that ſhoot out at the Root of our large rank Artichoaks, but much bigger and longer. 'Tis not ſo big about but it may be eaſily claſp'd in a Man's Arms, and tho' it has no Boughs to give any aſſiſtance to a Climber, yet the Country People will mount it with an incredible eaſe and celerity; but this they do by the Advantage that the roughneſs and cruſtineſs of the Bark gives them, which proves ſome ſmall ſtay to their Feet. They make an Inciſion in the top Branches, and receive the Liquor that diſtils in Gourds ſet under for that purpoſe: This without any farther preparation, is the Toddie ſo much talked of and uſed in this Country, and upon which they fix ſo many good Characters. In ſhort, 'tis a fine Wine, and a good Medicine; if it be drunk freſh from the Tree in the Morning 'tis a very pleaſing inoffenſive Liquor; but if kept till the heat of the Day, the Sun alters it wonderfully; robs it of its fine taſte, does not exhale the Spirit of it, and leave it flat and vapid, but actuates the Spirits it has, and renders them much more violent and intoxicating. The Seamen love it beſt in this condition, becauſe it makes them quickly drunk; but all that don't drink for that purpoſe take it in the Morning, and then 'tis as ſmooth as new White-Wine, but much more fine and clear.

* There's ſome account of the *Tamarind* Trees in Mr. *Davis's* and Captain *Downton's* firſt Voyages.

The Vertues of it are, to provoke Urine, and give relief in the Stone; that is, it lenifies and in ſome meaſure aſſwages the Pain; but thoſe that have tried it, don't tell us of any farther influence of it, in removing the Cauſe or preventing the growth of the Miſchief for the future.

For the *Indico*, ſee Mr. *Finch's* Relation. *Lib.* 3. There's ſomething of the Cotton in Mr. *Candiſh's* Voyage, *Lib.* 1. But this is more full and compleat.

The Plant from whence the Indico is made grows very plentifully about in many parts of the Country; and the Cotton Trees are no leſs common. They ſow vaſt quantities of Ground with the Seed of it, and make very great profit. The Plant grows up like a ſmall Roſe-Buſh, and bears a yellow Bloſſom; when theſe are fallen off, the Cods appear, and grow to the bigneſs of a Mans Thumb, the Matter within which is at firſt Yellow, moiſt and ſoft. As they ripen and grow bigger, they burſt, and the included Matter then appears like Wool, and is fit for gathering. Amongſt that Wool they find the Seeds ſafely wrapt up; but there's no need of ſowing preſently and going to raiſe a ſet of freſh Trees, for the old ones will hold on bearing their Wool for three or four Years together.

The Spreading Tree.

There is one Tree more that deſerves to be mentioned, tho' we cannot procure the Name of it, but that it may not wholly go without one, one may call it the Spreading-Tree. Out of the great Arms of it ſhoot forth various little Sprigs, which growing downwards reach the Ground at laſt, and there root themſelves firmly, proving a very ſtrong ſupport to thoſe mighty Boughs that ſent them out. Thus the Tree ſpreads it ſelf round into a vaſt Compaſs, and forms a kind of a Pavilion, capable of entertaining ſeveral hundreds of Men under the ſhade and ſhelter of it.

This is a very good Convenience for Travellers, and 'tis the better in that 'tis always ready, and in a good condition to afford them a Protection from the heat at any time, ſince the Trees in theſe parts are hardly ever ſtrip'd of their green Furniture all the Year round. And by report there's need enough of ſuch Retreats as theſe are from the Sun's violence in *India*, even at that ſeaſon of the Year, when many other places would be glad to feel him a little more. For they tell us that the Sun's Meridian ſtrength and heat in the coldeſt Day there, is as troubleſome as that of the hotteſt Day in *England*; except at the times when the great Rains fall, when the Air is conſequently in a good meaſure clear'd of the hot ſulphurous Vapours, and loaded with others of a contrary nature. A ſoft gentle Wind, reflects from the parch'd Earth, with a heat that raiſes bliſters upon the Faces of People not uſed to the Climate; 'tis like the Breath of a burning Furnace; and were not thoſe ſcorching Whiffs tempered with certain cool Breezes that blow ſometimes, Foreigners that have always breathed the freſh Air of other Countries, could never long hold out breathing this. Our Travellers tell us, that for a Man to go out in the heat of the Day, is to run the hazzard of being ſtewed almoſt, and that they are fain to wear their Cloaths as thin and ſlight as 'tis conſiſtent with decency to do. Yet are there very ſudden precipitate alterations of the Weather from one extream to another, even in the moſt calm and temperate Months: And when at Noon a Man is ready to melt, and a fine Shirt upon his Back is a burden, the mid-night following the Ice is about his Tent, and he would be glad of a good Rugg to cover him. In either of theſe Reſpects, a thick fence of Trees is a good Convenience for a Traveller abroad in a wide and an open Country. And Nature has admirably well conſulted this in the raiſing ſuch a Tree as this lately deſcribed; 'tis as good as building ſo many Inns upon the Road; nay, in ſome reſpects better, ſince theſe will entertain more Paſſengers, and a Man's at no charge nor trouble for a Lodging.

To conclude this Account of the vegetables, we may obſerve that very few or ſcarce any of thoſe Trees that are ſo common with us in *England*, are ſeen in this Country; yet have they very ſtrong and ſufficient Timber-trees fit for any uſes we can pretend to put ours to.

The Accounts of Drugs and Minerals is but ſhort, tho' no doubt this rare Country is able to entertain an inquiſitive and curious Perſon, with varieties enough of this kind.

Several fine ſcented Gums there are, and together with them good ſtore of Gum Lac, of which they make their hard Wax.

There's a great deal of *Caſſia* likewiſe growing in Canes and Bezoar Stones, which they take out of the Maws of a ſort of Goats. When they obſerve thoſe Creatures to grow very lean (which is a Diagnoſtick of the growth of that Stone in their Ventricles) they preſently kill them, and take out the precious Cauſe of that Conſnmption. Theſe Goats are moſt numerous upon the Mountains of *Lar* in the *Perſian* Territories.

Of the living Creatures. But there is a much leſs diverſity in reſpect of the Animals (tho' *India* has rarities to ſhew us too) for here one may ſee vaſt numbers of thoſe Creatures that our own Country preſents us with every Day.

Beaſts. Their Beefs have a great bunch that grows betwixt their Shoulders, and their Fleſh is much whiter than that of ours.

The Sheep differ from ours more by their great bob Tails they have than any thing elſe; their Wool is ordinary and courſe, but their Fleſh far from being ſo.

Cows, Goats, Sheep, &c. Goats and all ſorts of Deer are very common amongſt them; the Deer are no where incloſ'd in Parks, but enjoy their full Liberty as other Creatures do, and are every Man's Game that can take them.

The Buffalo has ſomething ſingular in it, and 'tis a ſtranger to our parts. 'Tis a large Beaſt, and has a very thick, ſmooth Skin, wholly without Hair; it gives a very good Milk, but the Fleſh of it (tho' it ſomething reſembles Beef) yet is neither ſo pleaſant nor ſo wholſome.

Antelopes, Elks, &c. Here are Elks and Antilopes too, which are very ſtrong and fierce Creatures.

Monkeys, Apes and Baboons are almoſt as common as Dogs and Cats with us; they live moſtly about in the Woods, where they are a terrible plague to the little Birds that build in the Trees, by deſtroying all their Neſts and young Ones that lie within their reach. But the Birds are generally hard enough for them; for they build their Neſts in the very utmoſt Twigs of the Boughs, which are ſtrong enough to ſupport things ſo very ſmall and light, but are too fine and tender for any Monkey to pretend to tread them.

For carrying of Burthens and other ſlaviſh Work, they uſe Aſſes, Mules, Camels and Dromedaries, which are all Natives of this Country. Cammels, Dromedaries, &c.

The Dromedary (with his long Legs) rids Ground apace, and travels a vaſt way in a Day: They are hardy, ſtrong, patient of Labour, hunger and thirſt, extreamly ſwift and briſk in their Motion; and therefore very proper for a quick March, or to give an unexpected aſſault to ſome remote place, which would be beyond the ſtrength of any Horſe to reach in ſuch a determin'd time. *Ecbar Sha* made a remarkable uſe of them in his Wars in *Guzurat*, and 'twas owing to the ſwiftneſs of his Dromedaries, that he made ſo quick a Diſpatch in the conqueſt of that Country. For marching in nine Days (with them) from *Agra* to *Amadavar*, he was upon the Backs of the *Guzurats* before they imagin'd he had been ſet out, which Surprize ſo confounded them, that they loſt the Battle and their Liberty, and the Country from that time became a Province of the *Indian-Mogul* Empire.

The Camel deſerves the Title of the moſt abſolute Slave of any Beaſt in the World, for he is fond of his Burthen; he cries and moans at Night (when 'tis taken off) in a very doleful manner, and ſeems to be as much pleaſed in the Morning when 'tis laid on again. (There's hardly any Creature like him throughout all nature, unleſs it be a Man of lewd vicious habits, that ſits with as much eaſe under the heavieſt Oppreſſions, and counts an attempt to free him an injury).

The Horſe is a Creature here in great eſteem, and therefore reſerved for the nobleſt Services. They are only for War, or Pleaſure, or meer Pomp and State; they live as eaſily as any of their kind in the World, and the Horſes of ſome Countries are no better than Peaſantry to them. They are brave generous Creatures, high metled, curiouſly made, and as well managed by the Natives. For their Colours, ſome are Raven black, many white and finely dappled, a great number pied and ſpotted all over, and others of more bright and gaudy Colours. But if Nature has not given them a Colour to their Riders fancy, they'll make it what they have a mind to by the helps of Art; they'll tinge and colour the Legs, Belly and Breaſt of them, ſo that a Horſe looks as if he came out of a Diers Vatt. Their Hair is very ſhort and ſoft, and lies ſmooth and ſleek upon them, and they are ſo well kept that they ſhine again. Their main Provender is a ſort of Grain they call Donna, round, and ſomewhat bigger than our *Engliſh* Tares; they boil it and mingle it with courſe Sugar and Butter, and ſo make it up into Balls, which they thruſt into their Mouths. This is downright craming of Horſes, and managing them as we do Turkies; 'tis a wonder they don't ſhut them up in Coops too, and let them lodge as well as feed like Poultry. And the truth on't is, they don't tie down their Horſes Heads with Haulters (as we do) when they ſtand in the Stable, but give them their Liberty, or at moſt faſten a Rope on to their hinder Feet, and we know Poultry are often tied by the Legs. But after all it muſt be ſaid that Horſes are no where better allow'd and more dainty look'd to than here; for every individual Horſe has his Man to dreſs and wait upon him; which is better attendance than many an honeſt Man can pretend to, who has neither Horſe nor Man to be his Servant. Horſes.

But the Quadrupeds of moſt fame and wonder in this Country are the Rhinocerots and the Elephants. The former are not very common, and therefore more admired. They are very large ſquare Beaſts, much bigger than any *Engliſh* Ox of the largeſt ſize. Their Skin (which is thick, tough and without Hair) lies in great folds like Armour upon their Necks, Breaſts, and Backs. They have ſhort but very ſtrong Horns (planted upon firm Bones) that lie over their Noſtrils, and are recurve, growing upwards towards the top of their Heads. Each Rhinoceros is fortified with one of thoſe Horns, which renders them ſo terrible, that moſt of your other Creatures void them as much as they can. They make certain Cups of theſe Horns, which are reported to communicate a Medicinal Vertue to the Liquor that ſtands ſome time in them. Rhinoceros.

The Elephant requires a larger ſtory, as a Creature much better known, and in far greater uſe; but being become now ſo familiar and well known to the World as 'tis, the particular Deſcription of it may be omitted, to make the more room for other Obſervations concerning it. Their ſtature is reckon'd to be from nine or ten to fourteen or fifteen Foot in height, and with all this mighty bulk they can't be imagin'd to move very faſt; they do at beſt rather walk than pace, but make amends for their Elephant.

ſlowneſs, in their ſure and true going, for they never fall nor ſtumble.

The Females go twelve Months with their Young: 'Tis thirty Years before they come to their full growth, and they live the uſual Age of a Man.

They are the moſt governable and eaſily managed Creatures in the World; as a mighty Ship is turn'd about by the force of a ſmall Helm, ſo are theſe vaſt Frames determin'd in their Motions by a mean and deſpicable power. The Governour uſes only a ſmall Rod of Steel made ſharp and crooked at the end like a Hook; upon the leaſt twitch or pull, with which the Creature diſpoſes himſelf to Obedience. A Boy of twelve Years old may do this Office, and rule the biggeſt Elephant in *India*, provided it be not in their Madding-time; that is, when the Males grow hot with deſire of the Females.

This Fit laſts for ſome Days, and then they come to good Temper again; but while 'tis upon them, they play the Devil at that rate, that two or three Troops of Horſe is little enough to keep one of them in order. They ſtrike any thing that comes in their way, but their Keepers; and what they ſtrike they beat to Pummice, or cruſh the Bones of, be it Man, Horſe, Aſs, or Camel. They drive all the Town before them, when they break looſe in their mad Fit; the People run helter ſkelter, and tumble over one another, to avoid the Tread of the angry Monſter: And 'tis better to do ſo, tho' a Man gets a broken Head or Shin by it, than to be kick'd to Death by an Elephant. The only way they have to ſtop them in their Career, is, to fire a Train of Gunpowder about their Ears; this puts them into a Fright, and when they ſee the Flaſh, they'll ſtand ſtill and tremble.

All the while this Heat is upon them, they ſweat prodigiouſly, and ſtink at that rate, that a Pig-ſty is a Perfume to it; They ſay, 'tis like the rank and filthy Scent of a Boar that's a fatting, but as much worſe than that, as the Boar is leſs than the Elephant. To prevent all Miſchiefs that may be done by them in their Fury, as ſoon as ever they begin to grow diſorderly, they are fetter'd with ſtrong Chains to the Bodies of great Trees; but ſometimes the Frenzy is too ſtrong for the Iron, and the Beaſt, in ſpite of all, takes his Ramble.

But to go on with their good and commendable Qualities: There's hardly any Creature ſo much admired for his Sence, ſo docible, (and if the application of that term to a Beaſt may be allowed) ſo underſtanding as the Elephant is: All the Stories reported of them, are, perhaps, no more to be believ'd, than thoſe that are told of Foxes and Monkeys, which ſome People have made as wiſe as the moſt accompliſh'd Politicians of the Country. But there are ſome Paſſages remarkable, and odd enough (taken from the Obſervation of our Authors, and the certain and conſtant Reports of credible Perſons in the Country) that are ſufficient to juſtifie that Character of ſtrange Sence and Apprehenſion, which is commonly fix'd upon this Creature. Thus they tell us, that an Elephant will deport and manage himſelf towards another Perſon, according to the private Inſtructions given him by his Keeper. If he order him to fright a Man, the Elephant will march up to him with a ſeeming Fury, as if he meant to tread him in pieces, and when he is at him, do him no harm at all. If he be bid abuſe or affront a Man, he'll take Water up in his Trunk, and ſpout it out upon him, or Dirt perhaps, and daſh it in his Face. So alſo they are extreamly ſenſible of any Kindneſs done them, and nicely remember the Perſons that have at any time obliged them, by making much of them, or giving them Victuals.

Relations of Elephants.

At *Aſmere* (where the *Great Mogol* then reſided), there was one of his Elephants that uſed to be frequently lead through the Market, and commonly as he paſſed along, a certain Herb-woman that had a Stall there, uſed to give him a Bunch of green Herbs: It happen'd one time, that this Elephant being in his Heats, broke looſe from his Keepers, and took his way through the Market; all the People endeavouring to ſecure themſelves from him, by flying and hiding as well as they could. Amongſt the reſt this Herb-woman ran away too, and being in a great Hurry and Fright, left her young Child behind her upon the Stall. The Elephant was not ſo mad, but he ſtopp'd at the place where he uſed to have his Bunch of Herbs, and ſeeing the Child lie there, he takes it tenderly up in his Trunk, and goes and lays it down (without the leaſt harm in the World) upon a Stall of a neighbouring Houſe: When he had done this ſober Action, and thus expreſs'd his Gratitude to his Benefactor, away he went in his mad Courſe as before.

And if at any time they are miſus'd, and receive Injuries, they are as implacably prejudiced againſt thoſe Perſons that have affronted them, and ſure to revenge it, if ever they have a fair opportunity. One of them did in this formal manner, lay, and execute a Plot to be revenged of his Governour that had abus'd him.

Being upon a Journey, it ſeems, the Man was laid down to ſleep, but was poſted ſo out of the Elephant's reach, that he could not ſtrike him either with his Trunk or Teeth. However, having ſome green Canes by him, he takes one of them, and having ſplit it with his Trunk a conſiderable way, he reaches out that end of it that was ſplit, and twiſting the Man's Hair pretty ſecurely in it, by that means he dragg'd him down to him: What he did with him, is eaſie to be imagin'd, the Elephant did not play that Trick for nothing. And 'tis a very common thing for theſe Creatures to be taught and managed ſo, as to take up young Children in their Trunks, toſs and ſwing them about, and then ſet them down again, with as much Care and Tenderneſs as their Mothers could have done. The *Great Mogol* once made his own Son, a young Prince of ſeven Years old, be thus toſs'd about by one of his managed Elephants, and after the little Prince, the Children of ſeveral of his Nobles that were there preſent, and none receiv'd the leaſt Injury imaginable. From all which Inſtances (tho' a great many more may be collected up and down), a Man will ſee Reaſon enough to fall out with a *Carteſian*, with whom all theſe Creatures are ſo many Pieces of meer Clockwork, and their Actions the Effects purely of Wheel and Spring, as 'tis in common artificial Machines.

Such a Story is evidently too vain and frivolous to deſerve a ſerious Refutation; however, as long as there are any Animals alive, it will not want innumerable ones, and the *Carteſians*, by converſing with Nature, and obſerving the Actions of Animals, may eaſily convert themſelves to more reaſonable Opinions, and together with Wheel and Spring, learn to acknowledge alſo the Influence and Preſence of a more noble and ſteddy Principle in the Government and Determination of theſe Creatures Motions.

The Elephants having ſuch mighty Carkaſſes, are not to be maintain'd with a little, eſpecially if they are well kept (as all the *Mogol's* are), 'tis very chargeable: There's none of them that are called the Royal Elephants, of which there is Three hundred, but eat him 70 Roupies a piece (a Day) in Grain, Butter, and Sugar; but they can't ſpend upon a Maſter that's better able to afford it. Take them out of their mad Fits, and they are not found to have Vigour and Courage proportional to their huge Bulk. An *Engliſh* Maſtiff boldly aſſaulted one of them, faſtned upon his Trunk, and the Elephant having ſwung him up and down a great while, at laſt threw him to a conſiderable diſtance from him, and was very glad to be rid of him ſo: This was one of the Dogs that was preſented to the *Great Mogol* by the *Engliſh* Merchants; and when this Story was told him, he was exceedingly pleas'd at it; the Dogs were entertain'd, and lived at a mighty rate, they were carried up and down with him in Palankees, had each of them four Men to attend them, and to fan away the Flies; and the *Mogol* had a Pair of Silver Tongs made on purpoſe, that he might feed them with his own hand.

To conclude the Account of this Animal, it is confidently affirmed of them by all their Keepers, that they will never uſe their Females in the preſence of any Spectator, and that in all thoſe Natural Actions they are ſo reſerved and cloſe, that they will not endure any to be near them, while they are about them: A ſtrange Inſtance of Modeſty in a Brute, and as remarkable as any of their Qualities that are known to us.

Lyons, Tygers, &c.

As for other Animals, our Accounts are not ſo particular: There are Lions and Tygers, Wolves, and Jackals, ſome of which do often ramble about in the Night-time viſiting the Tents of Travellers, and ſtealing away their Sheep and Goats: Nay, in Towns that are near great Woods, they'll come into the very Yards of the Houſes, leap a Wall, and carry off their Prey cleverly along with them.

More than this, they very commonly hunt under Ground for Prey as well as above it, the Dead can't reſt in their Graves for them, but (unleſs they are buried very deep) they'll remove them into another Sepulchre, their own hungry Bellies.

The Rats, in ſome old Towns, are very troubleſome, and in their proportion as ravenous as the Lions. Our *Engliſh-men* complain, that ſome of them were bitten as they lay in their Beds; that the Rats would fall a nibbling their Toes, or the Tips of their Ears, or ſometimes the Tops of their Noſes, or any part that lay expoſed to them. In the mean time, to be ſure, they could not ſleep very ſound, while all this Miſchief was a doing; for otherwiſe 'twould make a Man ſtare pretty ſufficiently to wake in the Morning, and miſs two or three Toes, or find his

Ears gone, when he was ſure all was ſafe and well at his going to Bed.

Inſects, &c.

The other Troublers of their Repoſe are the Flies, the Muſquetoons, and the Chinches, ſome of which by Day, and the others by Night, do exerciſe the Patience of Men, whoſe Lot is caſt in this Country. The former are a ſort of Gnats, and the latter are like Tikes, and are the worſe Plague of the two by far; for they bite while they are alive, and ſtink naſtily when they are dead; ſo that a Man had better endure the Torment of their biting, than have the Poyſon of their foul ſtench.

The Scorpions are the moſt dangerous and terrible of all, and they creep into their Houſes very much, when the rainy Seaſons come on. The little Inſtrument they do the Miſchief with is very ſharp, hard, and crooked, like the Talon of a Hawk, they don't thruſt it in and out of their Bodies, as ſome other Creatures do their Stings, but it always appears in their Tails ready mounted, to give the fatal prick. The Remedy they uſe, is an Oyl of Scorpions; or if they can catch the Scorpion it ſelf that gave the Wound, they bruiſe it, and apply it to the part: This, if preſently done, ſeldome fails of giving Relief.

The Lizards run very commonly about their Houſes too, but theſe are very harmleſs Creatures, and may be allowed for Domeſticks well enough.

Thus we have taken a ſhort View of Nature in *India*; we ſhall now paſs to Matters of Civil and Political Conſideration.

The Trade, &c. For which ſee Capt. *Saris's* Account of the Trade of the *Eaſt-Indies* and others up & down.

And firſt as for the Trade of the Country, we ſhall have no need to inſiſt long upon that, the Voyages of this Book will give a very ſufficient Account of it. We may ſee by them, what the Merchants have done, what Commodities they have carried thither, and brought back from thence. In general, 'tis enough to ſay, that the moſt ſtaple Commodities of the Empire, are Indico and Cotton-Wool. They draw all their Spices from the ſame places that we fetch ours, from *Java*, *Sumatra*, the *Banda* and *Molucca* Iſles: For *Indoſtan*, as rich as 'tis, wants good ſtore of Clove, Nutmeg, and Cinamon-Trees. A little Silk they have amongſt them, which their own Country produces, but the greateſt Quantities are brought from *Perſia* and *Georgia*, which are capable of furniſhing the whole World with that Commodity.

Their beſt outward Trade is to *Moha* in the *Red Sea*, whither a Ship of an extraordinary great Burden goes from *Surat* once a Year conſtantly. The main Commodities vented there, are Cotton-Wool, and Cotton-Cloth, white and ſtain'd; and their Returns are moſt commonly all (or the moſt part) in Money, Gold, and Silver, to the Value of 200000 *l.* at a time.

The Coyn. See Captain *Peyton's* Second Voyage.

Their common Coyn is Roupies, and Mamoodies, both of Silver, but different in their Values; the former being between Two Shillings and Two Shillings and Six-pence, and the latter about Twelve-pence; but both of them are made in Halves, and ſome few in Quarters; ſo that Three-pence is the leaſt Piece of Silver current in the Country, and very few of them to be ſeen. The Silver Coyn is made either round or ſquare, but all ſo thick, that it never breaks or wears out; 'tis beſides very fine and pure too, having nothing of Allay: Upon this account, even in the *Spaniſh* Money it ſelf (which is the pureſt of all *Europe*), there is ſome loſs.

They have ſome Gold Coyn too, and that extraordinarily good, and Pieces of very great value; but theſe very ſeldom come abroad. All Foreign Coyn and Bullion, when it comes into theſe parts, is preſently melted down and refined, and being new coyn'd, has the *Mogol's* Stamp (which is his Name and Titles, in *Perſian* Characters) ſet upon it. All People are very welcome, that will bring their Bullion or Money in hither, and carry away their Merchandice for it; but 'tis a Crime not eaſily forgiven, to tranſport any Quantity of Money from hence.

Markets, or Bazars.

In all the great Towns they keep two Markets every Day; the firſt in the Morning a little before Sun-riſing, and for about an Hour after: And the ſecond, when the Sun is as low in the Evening. 'Twould be impoſſible for ſuch Crowds of People as frequent theſe Markets, to come together without ſweltering, and almoſt ſtifling one another in the Heat of the Day: And therefore they take the Cool of the Morning and Evening to do Buſineſs in, and paſs the ſcorching Hours of the Day in their Houſes, or ſome ſhady Retreats in their Gardens, where they ſleep and enjoy the Pleaſures that Nature has afforded them.

The People, &c. Their Colour, Dreſs, &c.

The Natives of this Country, are, for the generality, a handſome and well-made People. Their Complexion is Olive, or a ſad Tawny; and tho' this be not beautiful in *Europe*, yet 'tis in *India*, where Nature has made it their Colour. They don't envy the *Europeans* their white and fair Skins, nor think thoſe People ſo charming that look like Alabaſter, in compariſon to themſelves: For they ſay, all Leprous People are white, 'tis the Colour of that foul Diſtemper, and they don't care for't upon that ſcore.

There are very few crooked deform'd People amongſt them; hardly ſuch a thing as a Hunch-back to be ſeen all over *India*, a Man of undue Size, or irregular Proportions.

Their Hair is very black, but ſtreight, and not at all like that of the *Africans*: The *Mahometans* wear no Hair upon their Chins, but that on their upper Lips they ſuffer to grow as long as 'twill. And to preſerve the Colour of it, they uſe very much Black Lead Combs, which do their Buſineſs effectually, 'till Old Age begins to thruſt out Grey Hairs; Hairs that in ſpite of all the Black Lead Combs, will ſhew their Colour, and tell them 'tis in vain to uſe thoſe Arts any longer. Then they quit the uſe of the Razor, and let all the Hair of their Faces grow to its full length: But thoſe that do this, are either very Old Men, or ſome of the Prieſts, that fancy a Sacredneſs in a long Beard, and think they ſpeak with more Authority to the People, when they blow their Words out through a Thicket of overgrown Hairs. The *Mahometan Indians* too ſhave all the Hair off from their Heads, one Lock only excepted, which is left upon the Crown; and that is for the Prophet to take hold of at the Day of Judgment, and drag them up to Paradiſe by. The Heathen part (call'd Hindoes) not expecting to be pull'd up in that manner, leave no Lock at all upon the Crown, nor no where elſe, but ſhave all off: So that where-ever their Paradiſe lies, and however they get to it, they think to be fetch'd in a civiller way than that the *Mahometans* talk of.

Shaving being ſo conſtant and frequent a Practice amongſt them, there are conſequently a great number of Barbers, who make their Buſineſs and Province ſomething larger than our *European* Barbers do. In ſhort, they trim a Man from Head to Foot, pare off all his Superfluities; not only his Hair, but his Nails upon Fingers and Toes, and cut his Corns too. They carry a Steel Speculum always about with them, which is as large as a Trencher, and ſomething gibbous, and being well poliſh'd, ſerves almoſt as well as a common Looking-Glaſs; only 'tis certain, that the Convexity of it ſomething deforms the Image, and may poſſibly ſhew a Man an uglier Face than he really has. When they meet a Man that they think needs trimming, they don't ask him, Whether he will pleaſe to be ſhaved or no? But without any more adoe, whip their Glaſſes out of their Pockets, and ſhew him his Face: This they think is a better way to perſwade a Man to come into their Hands, than to make a Leg, and ask to be ſet a-work.

Their Habits, both Men and Women.

The Dreſs and Habit of this Country is uniform and invariable; they always keep to the ſame Mode; the higheſt Lord, and the pooreſt Peaſant, have their Cloaths made the ſame way. The former perhaps appears in his rich Silks or Embroideries, and the latter in ſome coarſe Stuff; but as for the Faſhion, the Lord and the Country-man are both upon a Level, and the one is as Genteel as the other.

Their Garb is a Coat that ſits cloſe and tight to their Bodies, and reaches to (or below) their Knees: Under this they have another ſhorter, and laſtly a ſort of Breeches like the *Iriſh* Trouſes, that come down to their Ankles, and ruffle upon the Small of the Leg. The Grandees make their braveſt Apparel of Silks, Taffata's, or Cloths of Gold and Silver; but moſt commonly fine white Callico Lawn is the wear. Their Head-Covering is ſome fine Cloth (perhaps as their Quality is, embroider'd or flouriſh'd with Silk, Gold, or Silver) wreath'd ſeveral times about, the Ends of which are ſometimes fringed, and diſpoſed ſo as to hang in ſight. About their Waſtes they wear a Girdle that comes twice about, of the ſame Stuff, and adorn'd with a Fringe. Our *Engliſh* Scarlet Broad Cloth is a thing they mightily admire, and abundance of the Great Men make it their upper Garment; but the heat and thickneſs of it will not allow it to be worn in the hot Country but in the cooleſt Weather, and that in the cooleſt part of the Day too.

As for the Womens Dreſs, 'tis not ſo eaſie to give an exact Account of that, ſince (unleſs they are either lewd or poor) they are not ſeen abroad, and no Stranger has the Privilege of ſeeing them at home.

Since the Females of Quality then (whoſe Dreſs is to be ſuppos'd the Perfection of the Country in that kind) are thus retired and out of the way; we muſt turn our Eyes to the Vulgar, and ſee in what manner their Cloaths are hung on, and what they are. And here 'tis ſaid of them, that they dreſs almoſt like the Men; they wear Coats, and it ſeems Breeches too, which moſt Women would be glad to do as well as they. But the *Indian* Women wear them in the literal Sence univerſally, and abundance of them do it in the Metaphorical to ſome purpoſe; but this it ſeems is a Court Faſhion, and the *Great Mogul*'s beloved *Normahal* ſets them an example. Over their Heads they caſt a Callico Veil, which covers their other Garments, and will hardly ſuffer their Breeches to be ſeen. They bore their Ears not only in the flaps, but all round about, for the conveniency of hanging a multitude of Pendants in them; their Noſtrils are pierced too to receive a Ring or two that muſt be hung there; and upon their Wriſts and the ſmall of their Legs they wear others fitted to thoſe parts: All theſe Ornaments are of Gold, Silver, Braſs or Iron, according to their Ability.

Their Temper and Qualities, &c.

But to go from the outward to the inward Dreſs, the Temper and Qualities of their Minds. They are a People of a ſtrong and quick Apprehenſion, ready Wits, and very great Fancy and Ingenuity in all manner of fine Works.

This, their delicate ſtain'd Cloths, their Silks, their Cotton Carpets of ſo many mingled Colours; in ſhort, all their flower'd Works in Silk, Gold and Silver, are plentiful Evidences of. Then they make all ſorts of Cabinets, Boxes, Standiſhes, Trunks, &c, with that exquiſite Skill and Fancy, that they deſerve to be reckon'd amongſt the Maſter Work-men of the World in all theſe Reſpects.

Their Ingenuity, and rare Works.

They'll inlay (with Elephants Tooth, Mother of Pearl, Ebony, Tortoiſe-ſhell, or Wire) any thing that is capable of being wrought upon; they work abundance of Cups out of Agate, Cornelian and other fine Stones; poliſh and cut all manner of Jewels, and underſtand the value of them as well when they have done. They know how to buy and ſell all thoſe nice ticklish Commodities, and he that gets the better of them in a Bargain muſt be a very cunning Man indeed. Then in all the Arts of Colouring, Limning, Varniſhing, Dying, they are Seconds to no People whatſoever. Faces they do admirably well; and will draw any thing immediately, either from the Life or another Copy; however 'tis all done to the Life, and he that ſees their Pictures, will eaſily know the Originals.

Civility to Strangers.

With all this Wit and Towardlineſs, there goes along (at leaſt as to the major part) a good ſhare of obliging Humour and carriage.

They are civil and courteous enough to Strangers; and thoſe that won't wrong and affront them, may ſit as ſecure and eaſie there, as under their own Vines and Fig-trees. 'Tis true there are ſome of another kidney to be met with ſometimes, troops of Thieves that go robbing and ſpoiling up and down, and obſerve no Law but that of enriching themſelves by the plunder of others; but we are now diſcourſing of the People, not of the Vermin of the Country; into the Catalogue of which all ſuch Creatures are to be brought as are hurtful and injurious to Mankind. Take the People that you converſe with almoſt any where in the Empire, and you'll find them (very few excepted) ſuch as won't diſturb your repoſe if you don't firſt diſturb theirs. Many of them are very patient, gentle, and good natur'd too, and will take Affronts tho' they won't give them.

An Inſtance of Patience.

There was a remarkable Inſtance of this in a very great Man, (no leſs than the Governour of *Surat*'s Brother) and one that had Power enough to have puniſh'd, if he had been revengefully diſpos'd. This great Perſon was riding in State thro' the Street at *Surat*, when up comes to him an *Engliſh* Cook, that belong'd to Sir *Thomas Row*, ſtaggering drunk, and forc'd to reſt upon his own Sword to preſerve himſelf from tumbling. His firſt Salutation was, Now you Heathen Dog! to which, when the Noble-man only replied, *Caca-ta, Caca-ta*, What ſayeſt thou? The Cook endeavour'd to tell him by his Sword (ſince he was too drunk to talk much himſelf) making a ſound blow at him. One would have thought the Retinue of this great Perſon, ſhould have dreſt the inſolent Cook at ſuch a rate, as would have ſpoil'd his making Sauces and dreſſing Dinners for the time to come. However he was only ſiez'd and confin'd, till word was ſent to the Embaſſadour; and tho' the Honourable Perſon freely reſigned him to the utmoſt Puniſhment they thought fit to inflict upon him, yet he was preſently ſent home again, without any farther harm done him. Now the Queſtion is, Which was the Heathen Dog of theſe two? the reviling drunken *Engliſh* Man, or the ſober temperate *Indian*, that govern'd his own Paſſions under ſo unreaſonable an Abuſe?

Submiſſion to their Superiours.

'Tis a farther juſt Commendation of theſe People, that they are generally poſſeſs'd with Principles of a moſt profound Reſpect and Veneration for their Superiours. They adore their Prince, and keep his Laws with a moſt Religious Zeal and Conſtancy. All inferiour Magiſtrates have the like Reſpect in proportion amongſt them; and even in the ſmalleſt Government (private Families) the Word of the Maſter is a Law, which is obeyed by all his Servants without diſpute or grumbling.

Cowardlineſs.

But after all is ſaid, they are (for the greateſt part) a timorous, cowardly and mean ſpirited People. They had rather by half eat than quarrel, and quarrel than fight; and they will ſometimes give one another ſuch ſcurvy Language (as would not go off without Blood amongſt People of more Mettle) and yet neither ſtrike a ſtroke nor offer to draw all the while. 'Tis common with them to ſtand ſcolding in their Armour, and with all their Weapons about them; and if one has Courage to take another by the Throat and collar him, he's a mighty Souldier for this, and the Spectators preſently cry out *Sha-Abbas*; by this they mean, 'tis a Noble Action, and as well done as *Sha-Abbas* himſelf could have done it; that famous *Perſian* King, whoſe Valour is the Matter of a Proverb in this Country. And the *Great Mogul* himſelf uſed to ſay, that one *Portugueze* would beat three of his *Indians*, and one *Engliſh* Man three *Portugueze*; ſo that according to the Prince's computation, the *Engliſh* Valour is to the *Indian* as nine to one. But this is not to be taken as univerſally true, and without all exception, throughout the whole Empire. For within the Bounds of it are the *Baloches*, which are *Mahometans*, the *Patans* in *Bengala*, and the *Resboots*, a Sect of the *Pagan Indians*, which are Men of Noble Spirits and Reſolution, and will look any Adverſary or Danger in the Face. Theſe are made uſe of as Guards and Convoys upon all Occaſions, in which Offices they are wonderfully diligent and faithful, and will die upon the ſpot before they'll deſert their Charge. They ſerve at very low and reaſonable rates, demanding no more than five Shillings a Month for a Man; and if you pay them theſe Wages duly and punctually, if you have occaſion for any of their Lives, and can't be ſecur'd by other means, they'll freely part with them in your Service. And beſides, they are generally of ſuch juſt Principles too, that if they have their Pay before-hand, and ſhould happen to be afterwards warn'd to provide themſelves other Maſters; they will ſerve out their appointed time, and you cannot get them to leave you, before they have performed their Bargain. But then you muſt be ſure to keep touch with them, and pay them their Hire, preciſely at a Day, for otherwiſe they'll give you warning to provide your ſelves with other Servants.

The Valour, Truſtineſs, &c.

A pleaſant Story of a *Reſboot*.

Thus it happen'd to ſome of Sir *Thomas Row*'s Company, upon a Journey to Court; their Money was gone, and a certain *Resboot* that attended them left them upon the Road, becauſe he ſaw their Stock was juſt out, and it would not laſt to pay him punctually upon his Day. But however before he went away, he goes to take his leave of the Camel, that was his peculiar Charge, and made a Speech to him to this purpoſe, That he had tended and led him thus long, and been a very kind and faithful Governour to him (as he knew very well) but now his Maſters Money fail'd, and he muſt be gone; but he prayed God to bleſs him for the remaining part of the Journey, and ſend him ſome other Governour to look after him that might be as careful and good to him as he had been. Had the Camel had the Gift of Underſtanding and Speech, there's no doubt but he would have ſaid *Amen* to this Prayer, being ſo much for his good; but however the *Indian*, when he had concluded it, went off, and would not ſtay with them, tho' they were to have a freſh Return of Money in two Days.

Their Scrupulous Care in preſerving the Lives of Animals.

Another thing very obſervable in the Temper and Humour of this People is, their ſtrange tenderneſs of the Lives of all ſorts of Animals; and it may be, 'tis the beſt way to excuſe their cowardlineſs to account for't from hence, that 'tis a Principle amongſt them not to ſhed Blood. 'Tis true this Humour does not ſpread in the extremity of it all round the Country, but lies moſtly among the *Hindoes* or Heathen part, of which there are various Sects and Subdiviſions; yet they are all in general tenderer of their living Creatures here, than in moſt places beſides.

But the ſcrupulous Sect of them is nice and ſcrupulous indeed. They can't bear to ſee a Flie ſo much as haunted and perſecuted by another Perſon; but for their own parts, they'll let them crawl into their Mouths rather than kill them. They may bite and ſting them, but they'll not be provoked to be their Murderers. So far from that, that they'll pay Redemption Money for them, and buy the Lives of theſe vexatious Animals, at any time when they are in danger.

The *Engliſh* Boys have got many a Penny in Ranſoms for Flies, and Tikes, and Muſquetoons; for the Hindoes go upon a moſt merciful Principle, and know that if they were Flies themſelves, they ſhould not be willing to be ſqueez'd to death between the cruel Fingers of the Boys. (Tho' by the way, if a Man would give a looſe to his humour he might quickly ſpend an Eſtate at it, and ſtarve and beggar his own Family, by ſaving the Lives of Inſects, that will plague him when he has done) Oh! how would the Emperor *Domitian* (that celebrated Fly-catcher) have been loved by theſe People? or had the *Romans* been as tender-hearted as the *Indians* are, what good Earnings might he have made on't, by ſaving many Thouſands of innocent Lives, that have been barbarouſly ſacrificed in his Cloſet? But then 'tis not only theſe little fluttering Animals that the *Hindoes* are ſo kind to, but all others tho' ever ſo noxious and offenſive; they are mild and gentle to the very worſt upon the Face of the Earth, and won't deſtroy a Creature that may poſſibly, either poiſon or devour them. But if they are harmleſs and inoffenſive ones, they do all that can be for their Eaſe and Comfort; and therefore 'tis confidently reported, that the *Banyans* do build Hoſpitals for them, where they place all their feeble, lame, diſeaſed Animals, and uſe means to recover them to Health and Strength again. And 'tis pity thoſe Rerſons that reported this, had not gone a little a farther, and told us too, what Salary the *Banyans* allow to the Governour, and Phyſician in ordinary, to one of thoſe beaſtly Hoſpitals. This would have been ſomething particular; but ſince it is denied us, we'll leave the matter as it is; the Founders of thoſe Buildings and the Doctors too, to the Thanks of the miſerable Patients that are lodged there.

Their Religion, &c.

We will now conſider the State of Religion in the Country.

It has been obſcurely hinted before upon another Occaſion, that the Inhabitants are of two ſorts, *Mahometans* and pure *Pagans*.

The former are by far the leſs number, but they are the more conſiderable Perſons; for this is the Court Religion, and not only the Prince himſelf, but almoſt all the Grandees throughout the Country are of it, at leaſt thoſe that are in places of the higheſt Dignity and Truſt.

As for the Doctrine of *Mahomet*, it came into the Country with this race of Emperours. In *Tamerlane's* time, and ſo all along till the Conqueſt, the Religion was entirely *Pagan*, and there were as many ſorts of Deities in vogue, as there were petty Princes that had their ſhares in this huge Empire. Not but that the ſame Superſtitions continue ſtill in being amongſt the *Resboots*, and the various Sects of the *Hindoes*; but at that time there was nothing elſe, 'twas all pure *Paganiſm*; there was no party amongſt them that profeſs'd the Knowledge and Worſhip of one Supreme Being (without the corruption of Images and Inferiour Deities) as the *Mahometans* do. 'Tis needleſs to go to deſcribing their Religion at large; 'tis enough to ſay that they are *Mahometans*, and that they believe and practiſe as others of that way do. The main difference is, that they are not ſuch ſtiff, rigid *Mahometans* as ſome others in the World are: Any Perſon has the liberty not only to profeſs his own Religion, but alſo to maintain it by Argument againſt theirs. This would coſt a Man his life amongſt the *Turks*, *Moors*, or *Arabs*, who will ſooner by half ſtab a Chriſtian than enter into a Diſpute with him. But the *Indians* are more cool and free in their Tempers and Principles; they will maintain the Doctrine of *Mahomet*, but at the ſame time they'll give another Man leave to defend that of *Jeſus Chriſt*.

Story of *Tom. Coryat*.

Tom Coryat had once a pretty warm Diſpute with one of the *Molla's*, or Prieſts; and the Queſtion that lay betwixt them was, which of the two was the Muſſulman, that is, the True Believer. And after a great many Words ſpent on both ſides, our Country-man *Coryat* ended the Diſpute with this witty diſtinction; that he himſelf was the Orthodox-Muſſulman, and the Prieſt was the Pſeudodox-Muſſulman; that is, he was the True True Believer, and the other was the Falſe True Believer; a finer and ſubtiler diſtinction than ever was coin'd in any *Mahometan* School in *India*. The ſame Perſon did at another time as remarkably diſcover his Zeal for Chriſtianity, as now he did his happy Talent in deciding Controverſies; but what Prudence he demonſtrated by it all the World may judge. For as the *Molla's* were one Day (according to the Cuſtom) calling the People to their Devotion from the high Turrets of the Moſques, bawling out *La Alla illa Alla Muhammed Reſululla*; *Coryat* gets up upon the top of ſome very high Houſe juſt over againſt them, and ſcreams out (in a Tongue that they very well underſtood) *La Alla illa Alla Hazaret Eeſa Reſululla*, There is no God but one God, and the Lord Jeſus is the Prophet of God; beſides this, he told them *Mahomet* was an Impoſtor, and all their Religion a meer lye and a cheat, and abundance more to the ſame purpoſe, which the Zeal of this Orthodox-Muſſulman then dictated to him. Now, had this mad trick been plaid in any other part of *Aſia*, he had died with all the torments that could have been invented; but the milder *Indians* paſſed it by, and beſides *Coryat* had the happineſs to be thought mad by ſome of them, and upon all theſe Accounts they let him alone.

The *Moguls* no ſtench *Mahometans*.

But then beſides, the Princes of this Country (tho' they have been *Mahometans*) have yet perhaps ſome of them, been the looſeſt and moſt careleſs in their Principles of any of that Sect that ever were in the World. They have not ſcrupled to oppoſe and contradict *Mahomet* himſelf, to pretend to ſtand in competition with him, for the Honour of the Prophetſhip, and inveſt themſelves with the ſame Character. Thus *Ecbar Sha* finding himſelf as great a Prince as *Mahomet*, ſet up for as good a Prophet too, and made himſelf the Head of a party. And his Son *Selim Sha* propagated his Fathers Hereſie with vigour, nay, carried it higher than ever he did; for whereas he pretended but to ſtand upon a Level with *Mahomet*, the other rais'd himſelf above him; the Father was a good, but the Son would needs be a better Prophet, and thereupon he made a new Law according to his own fancy, containing the Doctrines of *Moſes*, *Jeſus*, *Mahomet*, and the *Bramins* jumbled all together. And he had his Diſciples too (at leaſt ſome that to flatter him called themſelves ſo) and was very glad at any time when any Company about him would run a diviſion againſt *Mahomet*, tho' 'twas ever obſerv'd, that he never either ſpoke himſelf or countenanc'd in any other, an indecent Word of our Bleſſed Saviour.

'Tis more obſervable ſtill (and a greater Argument of their coolneſs in the *Mahometan* Religion) that the two Princes lately mention'd have given conſiderable Encouragements to Chriſtianity. Not ſo much out of Love to that, as to Novelty, to pleaſe their own Fancies, and ſhew their Authority.

Jeſuits fetch'd into *India*.

The famous Jeſuit *Xavierius* was fetch'd from *Goa* to *Agra*, in *A. D.* 1596. on purpoſe to argue the Doctrines of the Chriſtian Religion, before *Ecbar* (then Reigning) and the *Mahometan Mollas*. That Jeſuit ſpoke the *Perſian* and *Indoſtan* Tongues perfectly well (which was a wonderful Advantage to him) and as much a Papiſt as he was, he managed that point like a Chriſtian, and to the Honour of the Author of his Religion. The *Molla's* were able to make no Exceptions againſt that noble Scheme of the Chriſtian Religion, which *Xavierius* preſented them with. He demonſtrated the perfect reaſonableneſs of it, from the Perfections of God, and the Nature and lapſed Condition of Man; making it out in the firſt place by clear and undeniable Proofs, that the Human Nature could not poſſibly have come out of the Creators finiſhing Hand, with all thoſe ſtains and blemiſhes that are now ſo conſpicuous in it; from whence the Father inferr'd Man's degeneration from his primitive Integrity, and the neceſſity (conſequently) of a Redemption. Then he demonſtrated from all the Characters both of the Perſon, Doctrine, and Miracles of Jeſus, that as he was the great Meſſenger of God, and qualified to be the Redeemer of Mankind; ſo the World never ſaw any beſides himſelf that could, without the higheſt Blaſphemy, pretend to be ſo. In ſhort that Prince not only heard *Xavierious* patiently from one end of his Argument to the other, but kept him at his Court (to preach the ſame Doctrine to him) for a Year and a half.

But at laſt he gave him leave to return to *Goe*, and told him he would ſend for him ſome other time, to hear him reaſon again upon thoſe matters; but that time never came, and the Prince here put a ſtop to his Enquiries into the Chriſtian Religion. The good Father however had this Honour, to have born a Teſtimony to the Name of Jeſus, before the greateſt King upon the Earth.

One thing by the way is remarkable enough in this *Ecbar Sha*, whether before or after his acquaintance with *Xavierius* is not certain. And that is, that when 'twas told at the Court, that the *Portugueze* had hanged the *Alcoran* about an Aſſes Neck, and ſo whipp'd him about the Streets of *Ormus* in contempt of the *Mahometans*; and the old Empreſs his Mother came in a great rage, and demanded of him that our Bible might be treated in like manner at *Agra*; the Prince replied, No, tho' the *Portugueze* had done very ill in what they had done, yet Religion muſt not ſuffer for their Crime, and the Bible being an innocent Book, was not to be diſgraced becauſe the *Alcoran* had been ſo.

Liberties granted to the *Jeſuits* in *India*.

Sha Selim his Son and Succeſſour, has not leſs countenanc'd Chriſtianity than he did, (but all things conſider'd) a great deal more. For ſeveral Jeſuits having ſetled there, he gave them free leave to make as many Converts as they could, declaring at the ſame time that no Man ſhould loſe his Favour by becoming a Chriſtian. The truth on't is, he does not greatly care what Religion his Subjects are, ſo they are true and loyal to him; but then Chriſtianity ſetting ſo ſtrong a guard upon the Honour and Rights of Princes as it does, 'tis no wonder that a Prince that knew any thing of its tenderneſs in all thoſe points, ſhould be willing to have his Subjects made Chriſtians. And 'tis known of this Prince that he has prais'd and rewarded the Conſtancy of thoſe in their Chriſtian Profeſſion, whom neither Threatnings nor Promiſes could remove from it, when he made uſe of thoſe methods for trials ſake. But if he found any Man play tricks with that or any other Religion, uſe it to ſerve a turn, or as a ſhooing Horn to any ſecular Intereſt, he would certainly puniſh him if he were within his reach. He hated Hypocriſie in his Subjects, and could not endure to ſee any of them half Fiſh and half Fleſh, tho' he himſelf was reducible to no predicament; being neither *Chriſtian*, *Mahometan*, nor *Heathen*, but a *quid Compoſitum* of them all; if any thing was Maſter in him above the reſt, it was the Atheiſt. Yet would this Prince ſometimes as ſtrenuouſly defend the Chriſtian Religion by Argument in publick, as the moſt zealous Prince in Chriſtendom could have done; as he did particularly when Father *Corſi* (a *Florentine* Jeſuit, and a Man of better Principles than the moſt of his Order then in *India*) was ſo hard put upon by Sultan *Caroon* in his preſence.

The Jeſuits Chapel it ſeems having been accidentally fired, and all the Furniture conſumed, a certain wooden Crucifix only happen'd to ſcape the rage of the Flame. The King (who uſed this Perſon very familiarly) ſent for him (or he went himſelf) to Court, where he told the ſtory of the Preſervation of his Crucifix. Now tho' this had been buzz'd about for a great Miracle, yet the Jeſuit had more Senſe than to uſe ſuch a poor thing as an Argument to prove his Religion by; for he ingenuouſly told Sir *Thomas Row* by what means the thing came to be preſerved, and it ſeems there muſt have been a Miracle almoſt to have deſtroyed it. However Sultan *Caroon* (a violent hater of all Chriſtians) took up the matter and fell a bantering the Jeſuit upon't, and told him that he and all the Company would be Baptized, if he would throw his Crucifix into a Fire there before the King's Face, and yield to be burnt himſelf if the Fire did not conſume it. But when the Jeſuit refuſed this unreaſonable Trial, the Prince laſh'd at his Religion ſeverely, and ſpoke horrid irreverent things of the Author of it; and then 'twas that the King took him up, and argued from our Saviours Miracles, that he was the greateſt of Prophets that ever appear'd in the World, and expos'd the *Mahometan* Saints (in compariſon with him) as a Company of dreaming, inſipid, empty Pretenders.

Their Religious Rites, and ſeveral ſorts of Religious Perſons.

Now after this is obſerved concerning the *Indian Mahometans*, the general Latitude and Eaſineſs of their Principles, which is their main diſtinguiſhing Character, their Rites and Ceremonies may be learnt from the reſt of the *Mahometan* World. They perform Pilgrimages, undergo bodily Labours and Severities, Pray five times a Day, waſh before they begin their Devotion, and are Circumcized.

Their Sabbath is on our Friday; their Ramadam or Lent commences the firſt New Noon in *September*, and holds the whole Moon out; the laſt Day of which they ſpend in Morning for their deceaſed Friends, and ſet up great Lights all about their Houſes, upon the expiring of which, the Ceremony ends, and they fall to their Entertainments.

They have alſo their Derviſes and Recluſes, that retire from the World, and give themſelves to a Life of Contemplation and Prayer; theſe chuſe the top of ſome high Hill, ſome ſnug place in a Wood, or natural Grotto for their Reſidence; and here they live like *Nebuchadnezzar*, with overgrown Hair and Nails, and feed like him too upon the wild Products of the Earth.

Their Mendicants, or begging Saints take a little more care of themſelves; for they live in the out skirts of the great Towns and Cities, where they are within the reach of better Entertainment; theſe ſleep all Night in the aſhes of thoſe Fires they make by Day, and take a Pride (for it can't be a pleaſure) in having their naked Bodies appear all over beſmear'd with them. They often take ſome ſtrange intoxicating thing or other, which makes them talk wildly, and like diſtracted Men; and then the common People croud about them and ſay, they are inſpired and have the Gift of Prophecy: Mad-Men it ſeems are Prophets in *India*, as on the other hand, Prophets are no better than Mad-Men in *Europe*. The *Mandees* (as they call them) ſlaſh and cut themſelves like the Prieſts of *Baal*; they make horrible Wounds and Gaps in their Bodies, to provoke the Compaſſion and Charity, or Wonder and Admiration of the common People; but they ſhould ſerve them as *Plato* adviſ'd about *Diogenes*, ſtanding up to the Ears in cold Water, let them alone and take no notice of them, and they'll quickly learn to forbear thoſe Severities themſelves.

Their Pilgrims and Votaries torment themſelves (little leſs than the former) with their tedious Journeys, ſcorching their naked Feet in the Sand; they are all cover'd with blew Mantles, which is their Mourning Colour in thoſe parts, and the never-failing badge of a Pilgrim; they travel a vaſt number of Miles in thoſe horrid burning ways, to viſit the Sepulchres of their famous Saints; and when they come thither they are as wiſe as they were before, but they think themſelves wiſer, and the vulgar are ſuch fools as to think ſo too.

Their M[illegible]riages.

In the matters of *Marriage*, they take all the Liberty and Latitude that the Diſciples of *Mahomet* in other parts of the World do. The Prophet by his Law permits them to have four Wives, and other Women as many as their Eſtates and Circumſtances in the World will allow of. And they moſt of them go to the utmoſt Bounds of the Law, take their four Wives, tho' they are not able to keep one.

An *Indian* Servant of Sir *Thomas Row*'s would needs go out one Day to be Married (forſooth) and yet he had three Wives at the ſame time(with a good ſtock of Children)and but five Shillings a Month to maintain them all. This is drawing Bills upon God Almighty, without any Warrant or Encouragement to believe they ſhall ever be paid.

Their Marriage Rites are perform'd with much ſolemnity amongſt them, and when they are over, they make as great a ſhew in the Streets; the Man with his Friends mount a-Horſe-back, and the Woman with hers go into Coaches, and the Proceſſion is led on with Drums and Wind-Muſick.

Their Children are ſaid to be bred up very hardily in their tendereſt infancy; and the Mothers to have as eaſie times on't, being deliver'd one Day, and abroad the next taking the Air.

The Fire of Jealouſie burns as furiouſly here, as in any part of the *Mahometan* World; and a Father or a Brother is hardly permitted to ſee his own Fleſh and blood, except in the Company of her Husband. Thoſe that have moſt Wives and Women, are commonly the moſt Jealous.(So the Miſer that has the moſt and fulleſt Bags by him is the moſt ſordid and covetous). Married Women that diſhonour their Husbands Beds, and unmarried ones too that loſe their Chaſtity, are condemn'd to the ſevereſt Puniſhments; and rather than they ſhall go without it, their own neareſt Relations will be their Executioners, and do the bloody Work themſelves. Notwithſtanding this, there are loſe Women enough to be found; they are publickly to be rated, and have leave given them to keep lewd Houſes as many as can. But before they begin to practiſe, their Names are enroll'd in a Liſt, that it may be known who belongs to the modeſt chaſte Society, and who does not. Some of the finer and more poliſh'd of theſe publick Women, are often brought before the *Great Mogul*, to divert him with their Amorous Songs and Leſſons upon ſome Muſical Inſtrument, which is moſt commonly a Timbrel.

The *Hindoes* obſerve ſome Rules in their Marriages, very different from thoſe of the *Mahometans*. They marry every one into his own Tribe, Trade and Profeſſion, and preſerve all their ſeveral Sects unmixt, by forbidding thoſe promiſcuous Alliances that the others permit without any ſcruple. Thus the Son of a *Bramen* marries a *Bramens* Daughter, a Merchant looks for a Wife amongſt thoſe of his own buſineſs, and a Plough-man's Daughter for a Husband amongſt them that Till the Ground. They content themſelves each Man with his ſingle Wife, and think the *Mahometans* very extravagant for having four; and then their Wives live much better with them too, for they have liberty to go abroad when and where they pleaſe, they ſee other Faces beſides their Husbands, and ſomething more of the World than a Chamber. But 'tis very odd, that their Marriages commence ſo very early as they do, and that they join Children together at ſix or ſeven Years old, which alſo conſumate their Marriage at fourteen or fifteen. Tho' 'tis probable the main Reaſon of this is, their Law of Marrying into their own Tribe; for by this means they have leſs variety of choice, and ſo are bound to ſnap a good Match when 'tis offer'd them. In their Marriage Shows they uſe no Coaches, but both Bride and Bridegroom ride on Horſe-back; and very often each of the Couple is ſo young, that ſome are appointed to walk by their

Horſes

lence and injuſtice for any to pretend to debar them of it. Horſes ſides to keep them from tumbling down. Their Cloaths are ſtuck all over ſo very cloſe with the choice Flowers of the Country, that there's hardly any thing elſe to be ſeen, and it makes them both look like a couple of Noſegays ſtuck upright upon the Horſes back.

Their Funerals.

Theſe are the main Differences of their Marriages: Now as to their Funerals there is ſtill as much more.

The *Mahometans* firſt waſh and purifie their dead Bodies, and then decently interr them in Sepulchres. They bury none at all in their Moſques (for that's a prophanation of them) but in certain places devoted to that uſe, near ſome Tank or Pond, ſome fine Spring or Fountain, where they have Monuments erected in their life times, with a great deal of Art and Coſt. The Truth on't is, theſe are ſome of their moſt Noble and Pompous Buildings that they have amongſt them; they are ſome of them ſquare, ſome ſix ſome eight corner'd, delicately vaulted, ſometimes ſupported by rows of Pillars, and encompaſs'd with Doors on every ſide. Near them they build little Moſques for Divine Service, and all round about they plant Fruit (and other pleaſant) Trees. The moſt famous of this kind, is that which was begun by *Ecbar Sha*, and finiſhed by his Son *Sha Selim*, who afterwards was laid there himſelf. It is three fourths of a Mile ſquare, and has a Spire in the midſt that has ſeven diſtinct Taperings, each of which runs a conſiderable height, and in the top of all is the immediate Receptacle of the Body.

Ecbar's Sepulchre.

There's a ſtately Palace that ſtands cloſe by it; the Gardens of which (walled with Marble) run up towards the Sepulchre, and both together take in the compaſs of three Miles. In ſhort all the *Engliſh* Men that have ſeen it, ſay 'tis a truly Royal and Auguſt Building; it ſtands at *Secandra* a Village three Miles from *Agra*.

Cuſtom at the Prince's Funerals.

Now we are ſpeaking of the Prince's his Grave, 'tis not out of the way to take notice of an odd Solemnity that proceeds at his Funeral. The Dead Prince being laid in State in his Monument, the Prince that ſucceeds him, with all the Nobility in a full body come thither. Then are there all manner of Proviſions brought, the fineſt Meats and richeſt Liquors, and the Company entertain themſelves with both to the higheſt degree. The living Prince ſits at his Table, enriching his own Carkaſs, and preparing a Noble Banquet for the Worms; in the place where at the ſame time they are feaſting upon the (once as much pamper'd) Carcaſe of his Predeceſſor. In the Sepulchres of their Holy Men (of which there are abundance in *India*) there are Lamps continually burning, and certain Devout Perſons appointed to maintain thoſe Lights, and are allowed good Penſions for that purpoſe.

As for the *Hindoes*, they commit none of their dead Bodies to the Ground, but all to the Flames, and throw their Aſhes into a River, if they have that convenience near them. Some ſmall Portions of them indeed are preſerv'd by the neareſt Relations in Memory of the deceaſed; but the main part is diſpos'd of to the Water, by the reſt that aſſiſt at the Ceremony.

Women burnt with their Husbands.

This burning of the dead Bodies was the Ancient Cuſtom of *India*, as well as of other Nations; but the burning of living ones too at the ſame time ſeems to be more peculiar to this Country. This is an Immutable Cuſtom amongſt the *Hindoes*; the Women accompany the dead Bodies of their Husbands not only to the Funeral Pile, but aſcend it together with the Corps, and conſume in the ſame Flames. It is indeed their own free choice ſo to do; if they don't go of their own accord there's no body will drag them to the Fire and compel them to burn; but then there's Shame and Diſgrace that attends them (eſpecially if they have liv'd long with their Husbands) their Widowhood is a reproach, and their very neareſt Friends contemn and neglect them. They cut their Hair, and live retired from all Converſation, being to all the reſt about them as ſo many ſtrange Creatures dropt down from another Planet. For the moſt part therefore they chuſe rather to burn than to live in ſuch Circumſtances; and by this means they think they die with a Reputation of the higheſt Modeſty and Love, when they eſteem the Torments of ſo cruel a Death more eaſie and tolerable, than the pain of living without their Husbands. And a great many of them do it moſt certainly out of an exceſs of Love and pure wearineſs of Life; tho' 'tis probable enough, that there are others who would live could they have another Husband, and not die but to void ſhame. But there's no ſecond Husband allowed here; and ſome perhaps may think burning a leſs Miſery and Puniſhment than living without one. But however, anciently the *Indian* Women did value this Liberty at ſo high a rate, and eſteem it ſo much their Rite and Privilege, that they look'd upon it as violence and injuſtice for any to pretend to debar them of it. And whether they have in theſe modern times maintain'd it with ſo much Severity in their own Principles as of old, is uncertain; but this is ſure that *Sha Selim* began to make ſome Innovations upon them, and put in for a ſhare in the diſpoſal of their Lives as well as themſelves. In his time none went to the Fire at *Agra* (or any thing near where he was) but what came and petition'd him for't; juſt as if they had craved ſome very great Favour at his Hands. And that Prince would uſe all the Arts of Perſwaſion imaginable to move them to preſerve their own Lives, and be contented to ſtay a little longer in the World, tho' generally 'twas all in vain; the inexcuſable Creatures would reject all the tempting offers he made them, and ſtubbornly maintain'd their Reſolution to die. In this caſe when nothing will do, he gives them leave to diſpoſe of themſelves as they think fit; and ſo away they go to the Pile with all the briskneſs and gaity of a Bride, to the joyful celebration of her Nuptials.

Their Diet and Cookery.

We have now ſeen ſeveral of their Religious Rites and Ceremonies, with the moſt obſervable of their Cuſtoms that fall under that Denomination: Let us proceed to look into their Domeſtick and Civil Affairs, and ſee what Rules they obſerve in thoſe matters.

And firſt of all for their Diet; here the Difference of Opinions makes a Difference in Cookery amongſt them, and their Religion is to be known by their Eating. The *Mahometans* are very ſparing as to any thing of Fleſh, they ſeldom make a Meal of it; but they never touch any part of a Swine, for the *Alcoran* has pronounced it an abomination. A ſmall matter of Kid, or Veniſon, or Hens they will venture upon; this they ſtew with Onions, Spices, Herbs, and Roots, and make a very palatable Diſh of it. But their main ſtanding food is Rice, which they dreſs with green Ginger, Pepper, and Butter, and feed as heartily on it as we upon our beſt and moſt nice Diſhes. Beſides this at their great Entertainments, they bring in all ſorts of Jellies, Sallads, Preſerves, Candies, Raiſins of the Sun, Almonds, and Prunella's; and for ſomething of more ſubſtance than any of theſe, the Fleſh of Hens mix'd with Almonds, and the Flower of Rice, all beat very well together, and then ſweetned and perfum'd with Sugar-candy, Roſe-water, and Ambergrice.

Their Bread likewiſe are Cakes of the fineſt Wheat-flower, done up with Almonds and Sugar-candy, ſometimes ſcented and ſometimes not.

They drink little beſides Water at their Tables, whatever they do in their Retirements.

The *Hindoes* feed differently, according to their various Sects.

The *Banyans* will eat nothing of Animal food; and therefore confine themſelves altogether to vegetable Proviſions and things made of them. Others of them again will eat Fiſh, but nothing elſe that has Life.

Some of the *Resboots* contradict them all, and eat Swines fleſh heartily; others perhaps won't eat juſt that, but the fleſh of ſome other Animal they like better. But in general, all the *Hindoes* abſtain from Beef; that Animal is ſacred with them, and they pay the *Great Mogul* ſo much a Year for their Redemption out of the hands of the Butchers and other People that would kill them.

To conclude, as they are (of all ſorts) moſt commonly ſober and temperate in the uſe of their Tables, and obſerve the due meaſures of eating and drinking; ſo they always bring the Scruples of their Religion along with them, and as loyal as they are, would not obey their own Prince if he commanded them to eat any forbidden Food.

Their way of Saluting each other.

Theſe People in their Salutations never uncover their Heads as the *Europeans* do; they bow their Bodies, and lay their Right-hand on their Breaſt as they paſs along, beſtowing abundance of good Wiſhes upon the Perſon they ſalute. Many of the Eaſtern People think our pulling off Hats to one another a moſt abſurd and ridiculous way of Complimenting; the *Turks* when they would curſe their Enemies effectually, wiſh their Souls after death as little Reſt as a Chriſtians Hat has, becauſe that never ſtands ſtill (they ſay) but is continually pulling off and putting on. But whatever Notion the Turks have of their Paradiſe, certainly either extream is inconſiſtent with the felicity of it; a dull torpid Reſt is as bad as perpetual Motion; and to lie as ſtill as a *Turks* Turbant, would not be leſs tireſome than to move as much as a Chriſtians Hat.

When the common inferiour People ſalute thoſe of quality, they lay their Right-hand upon the Ground, and then upon their Heads; ſometimes they fall down on their Knees and bow their Heads very low; but this degree of very Humble Reverence, is only to thoſe of the higheſt Dignity. When intimate Friends careſs one another (or at leaſt when they would any of them expreſs the ſincereſt mutual Reſpect) they take one another by the Beard, or (where there is none to be taken) the Chin, and cry *Bobba*, or *Bii*; that is, Father or Brother, according as their Age is. And this (like many other of their Cuſtoms), appears to be very ancient, and of a long ſtanding in the World: The Jews did formerly ſalute in this manner, and Sacred Writ gives us ſome Inſtances of it. Theſe are the Geſtures in uſe amongſt them; their common Forms of Speech are various. The moſt ordinary and frequent is the *Sallam*; *Sallam Allecum*, and *Allecum Sallam*; which is the Reply to the former, and both is as much as, *I wiſh you well*. Sometimes as they paſs along it is, *I wiſh you the Prayers of the Poor*; or, *May one Good after another come to you every Day*: But the Complements of inferiour People to thoſe they have a dependance upon, is, *I eat your Bread and your Salt*; or, *I am your Creature, and at your diſpoſe*.

Their Buildings.

We will now take a View of their Houſes and Buildings. In general, their common Buildings are not extreamly fine and beautiful; they don't affect to make ſuch a Show with ſtately Houſes, as the *Italians*, and other *Europeans* do. 'Tis true, there are Publick Edifices in *India*, as glorious perhaps as any of the kind in the World; but a good part of their Towns and Cities, are but meanly built, and as poorly adorn'd. And one Reaſon why they are no more ſolicitous about fine Houſes, may be, becauſe they live out of them one part of the Year, and take up in Tents and Pavilions, erected here and there in the open Fields, for the Pleaſures of Hunting, and taking the cool Air. The moſt of their private Houſes don't mount above two Story high, and are built with flat Roofs and Terraces, upon which they ſit airing themſelves Morning and Evening, when the Sun (below their Horizon) gives them an opportunity of ſo doing.

In their upper Rooms too, they have abundance of Doors all about them, and Lights made in the Walls, which are always free and open to let in the Air upon them.

As for Glaſs-Windows, there's no ſuch thing known amongſt them; neither have they any Chimneys in their Houſes, becauſe they have little or no uſe for Fire; they don't need it to warm them, for the Sun does that ſufficiently; and there is ſo little a part of their ordinary Fare that needs Fire to dreſs it, that 'tis not worth while to make a Chimney for't; and therefore, if at any time they have an occaſion, they make a ſmall Fire without Doors, againſt ſome Stone-Wall, or Bank of Earth, as far from their Habitations as they can with convenience.

Their Materials for Building, are Timber, Brick, and Stone; ſometimes (as in the Vaults and Arches of their Moſques and Sepulchres), with Marble of divers kinds and colours, and here the Work is coſtly and ſtately too. In many places they plant great ſtore of Trees about their Houſes, which keep them cool and ſhady, tho' it ſpoils the Proſpect where the Buildings are any thing neat and worth a ſeeing: Thus at *Amadavar* (a large and populous City, and built all of Brick), the Trees ſtand ſo thick and cloſe, that a Man wou'd rather think he were entring a Wood than a City. And then in all trading Towns and Cities joyning on to the Houſes are certain Sheds or Stalls, where they make a ſhow of their Commodities, and ſell at thoſe parts of the Day that they are not at the publick Market.

Thus much for the outſide; but before we go quite away, we may take a ſhort View of Things within Doors. And this indeed can be but ſhort; becauſe there is generally but a ſmall matter to be look'd upon. Their Rooms are not adorn'd with fine Hangings, furniſh'd with Chairs, Stools, Beds, and Couches; they paint their Walls neatly, and that ſerves inſtead of Tapeſtry, and ſpread rich Carpets upon the Floor, which is both Bed, Table, Chair, and Stool to them. Some of them perhaps will lie upon a hard Quilt, or elſe a low thing (they call a Cott) like a Bedſtead, and bottom'd with Cotton-Cloth; a great many of which are made to be mov'd up and down with Ropes, that their Servants may rock them to ſleep in them. But where-ever they lie, they lie without Pillow or Bolſter, ſtretch'd out at full length, and level with the Horizon; without any thing of Covering too, but a thin Callico Veil ſpread all over them, ſo that they look like ſo many dead Corps laid out ready for the Funeral Rites. The moſt remarkable of their Publick Buildings for Civil Uſe and Service, are the Serraies for the Entertainment of Paſſengers, and the Tanks or Ponds. Theſe Tanks are cut out in ſome very low places, to take in a good parcel of Water at the time the Rains fall, for the Service of the neighbouring populous places, when the dry Seaſon comes upon them. They are ſome of them very large and deep, a Mile and more in compaſs, ſurrounded with good Stone-Walls, furniſh'd with Steps to go down into them, and well paved at the bottom. They are cleans'd every Year before the Rains begin, and then they are fill'd for all the ſucceeding part of the Year, and the People out of theſe may have a Supply till the Rains come about again. In their Gardens likewiſe they have very uſually Tanks of a leſſer ſize for the Pleaſures of Bathing and Swimming, and theſe are fed with Water convey'd through certain Canals, from Wells that are in ſome of the more elevated Ground of their Gardens. And here indeed is the heighth of all the Pleaſure that belongs to them; here they have delicate Fruits, fine Shades, ſweet cool Water, airy Walks and Bowers, and a charming Proſpect of wild Nature (and Art together) that is far beyond all the Pomp and Splendour of a Palace.

Their Sports and Recreations.

And tho' here one might well imagine them to have Diverſion enough, yet they find other Recreations beſides thoſe their ſweet Gardens afford them: Hunting and Hawking are very common Sports amongſt them, having (beſides other wilder Game) Hares and Deer enough for the one, and plenty of Partridge, Ducks, Quails, Pigeons, (and moſt ſorts of Fowl), for the other of thoſe Paſtimes. 'Tis obſerv'd of the Hunting-Dogs of this Country (which are of a make like our Greyhounds, but much leſs), that they never open when they are in purſuit of any Game.

They have alſo Leopards, that they breed up for Sport, and ride abroad with for that purpoſe; theſe are wonderful nimble Creatures, and will leap a prodigious way, in which manner 'tis that they always ſeize their Prey; they don't run, but jump upon the Animal they have in chaſe; and if they once do that, they make a ſure Priſoner on't, be it what it will, and there's no jumping away again out of their Clutches.

Another of their Recreations is the taking of Wild-Fowl that uſe the Water. They take one of thoſe Fowl dead, and go into the Water with it, and hold it upright, as if 'twere alive and ſwimming; but they themſelves lie all under Water, and have nothing but juſt their Head in ſight: Then they make a Noiſe exactly like the Natural Tone of that Fowl, which brings the reſt in a great Flock about them, and ſo they catch them by the Legs, and pull them down under Water, by which means they are made tame enough.

At other times they divert themſelves with riding their fine managed Elephants and Horſes; with ſhooting with their Guns, Bows and Arrows, and this they do with great Skill and Dexterity; they are ſomething long a taking their Aim, but they ſhoot true, and ſeldom miſs the Mark.

Some People of Quality, and others that are for more State and Show in their Diverſions, go about airing themſelves in their Coaches and Palankees. The Palankees are made almoſt like a Couch or Pallat-Bed, ſheltred with a fine Canopy, and long enough for a Man to lie at full ſtretch in them; and in this poſture do the Grandees place themſelves in them, and ſo are carried about upon Mens Shoulders. Their Coaches have only two Wheels, the top and back of them is cover'd, but the forepart and ſides always open; unleſs they carry Women, in which caſe they are made up very cloſe. They will hold four People without Crowding; but two may lie in Quilts at full length in them (as they often do in their Journeys), For the drawing of them along, they uſe only the Service of Oxen (one Pair to a Coach), and theſe have their Horns neatly tipp'd with Silver, and a Collar of large Bells of the ſame Metal about their Necks. Their Harneſs is only a ſmall Cord that goes through the Partition of their Noſtrils, and ſo up between their Horns into the Coachman's Hand, who by this means guides them as eaſily and ſurely as with the ſtrongeſt Reins of Leather. Theſe Oxen being admirably well fed (as they always are) well ſhod too, will carry them twenty Mile in a little time: They are train'd up to the Work, and by continual Uſe and Exerciſe 'tis as natural to them as to our Horſes.

What ſort of Soldiers theſe People (the moſt part of them) make, we have hinted before; but we have not yet ſeen how they are accoutred: Now they are admirably well provided for the War, tho' not at all fit for't, their Furniture is incomparably beyond their Courage. To ſee what a terrible Figure they make a Horſeback with ſuch a Load of Weapons as they carry, would incline a Perſon (unacquainted with them), to think their very Aſpect would get them a Victory. But their Character at beſt, is but to make a furious Onſet, and then retire as haſtily: To advance briskly, and ſtand one Shock, and then if their Enemies don't run, to put an end to the Diſpute by running themſelves.

Their Weapons.

They have all ſorts of Weapons that can almoſt be thought of, but had they fewer, 'twould be more than they uſe; they are like their Womens Noſe-Jewels and Pendants, hung on for Ornament and Show more than

Service. To the complete dreſſing of a Soldier, there goes a Bow and Quiver of Arrows, a Sword and Buckler, a ſhort Launce, a Faulchion, Fire-Arms, and what not?

For Martial Muſick they have Kettle-Drums, and a ſort of Wind-Muſick, that makes a moſt harſh frightful Noiſe; which if it would but ſcare away their Enemies, would be a conſiderable help to them.

Their greateſt Strength and Security lies in their Elephants: For theſe, with the Guns upon their Backs, do as much Execution as all the Soldiers beſides. The War-Elephants carry each of them one of theſe Guns faſtned in a ſtrong Frame of Wood, in which alſo is form'd a place for the Gunner; who ſits faſt enough there), till ſome unlucky Shot from the Enemy comes, and beats Elephant, Caſtle, and Gunner, all down together. Theſe Pieces are about five Foot long, and throw a Bullet about the bigneſs of a Tennis-Ball.

Their ſtrength of Soldiery.

As for the vaſt Numbers of Men this Country is able to ſet out in an Army, it may be eaſily imagin'd from the large Dimenſions of it; he that conſiders how many ſpacious Provinces the *Great Mogul* is Maſter of, will quickly conclude that he is capable of making a formidable appearance in the Field. And yet his great Numbers would ſignifie little, had he not better Soldiers in Pay than the greateſt part of his own Natural Subjects are; but he is ſo wiſe as to take in *Perſians* and *Tartars*, ſome of the beſt Horſemen in the World, and that will charge through any thing that lies in their way. Theſe do all the hot Service in his Wars, and could he have enough of them, his Neighbour-Princes would ſtand in more awe of him than they do. But he holds none of the beſt Correſpondences with thoſe two mighty Countries that border upon him (*Perſia* and *Tartary*) they are both very jealous of his growing Power and Greatneſs, and therefore in Policy will not contribute to the increaſe of it.

The *Perſian* ſometimes courts him (when he wants Money), and eſpecially when he is engaged in a War with the Turk; then he careſſes the *Great Mogul*, to make ſure of his Neutrality (at leaſt), if not of his Aſſiſtance; for 'twould be a dangerous thing to live between two ſuch potent Enemies as they are, and be diſtreſſed by both of them together.

As for the *Tartars*, they neither court nor value him, but ſtand upon their Guard, and keep their Country to themſelves; they neither converſe with him, nor ſend Embaſſadors to him, tho' he calls himſelf, the Succeſſor of *Tamerlane*, the mighty Founder of their Empire: Perhaps they don't think him ſo (tho' his Family was originally *Tartarian*), and won't give that Title, where they believe their Emperors high Blood is not to be found. But now upon theſe Accounts, his Supplies of Soldiers from *Perſia* and *Tartary*, cannot be very large; they muſt be moſtly a ſort of Deſerters, ſuch as come away by ſtealth from their own Native Countrys, and upon the allurement of Noble Pay: Their reſpective Princes (the jealous *Tartars* at leaſt for certain), would never ſend their own brave Troops to increaſe the ſtrength of a mighty Neighbour, that is already but too formidable to them.

The Language, Learning, &c.

The Genuine Language of this Country, (*viz.* the *Indoſtan*) has ſome affinity with the *Perſian* and *Arabick*; but is reckoned by ſome the ſmoother and ſofter Tongue, and far more eaſie to be pronounc'd. 'Tis very ſignificant and comprehenſive, and gives the Speaker the advantage of expreſſing his Mind in a little time, and a few words. The Alphabet is very different from either of the foremention'd Languages; and they write as we do, from the Left Hand to the Right. As good a Tongue as it is, the King, and the whole Court, ſpeak the *Perſian*; but the *Arabick* is the Learned and Sacred Language amongſt them, upon the account of the *Alcoran* written therein. As for *Latin* and *Greek* they know nothing of them, and next to nothing of all the old Writers ſo much celebrated in theſe Parts of the World.

Something they have heard of *Ariſtotle* and *Avicen*, and the Learned Men amongſt them pretend to ſome Acquaintance with their Writings. *Avicen* 'tis ſaid was born at *Samarchand* (the Birth-place of the Great *Tamerlane*), and ſo in compariſon was their near Neighbour: As for *Ariſtotle*, tho' he was Tutor to the Conquerour of the Country, yet he hardly brought his Maſters Books along with him hither: So that their Acquaintance with thoſe Authors (*Ariſtotle* eſpecially), was a conſequent upon the mighty ſpreading of the *Arabick* Tongue abroad in the World, when ſo great a part of it became *Mahometan*, and that Language was receiv'd together with the Religion. Learning we know flouriſh'd conſiderably under divers of *Mahomet's* Succeſſors, and abundance of the *Arabians* open'd the way for thoſe parts of the World to converſe with the old *Greek* Philoſophers and Mathematicians, and bringing their Writings into their own Language, and beſtowing large Comments upon them. *Ariſtotle* (as well as *Euclid*, *Ptolemy*, and others) had this Honour done him by the *Arabians*, to be made to ſpeak *Arabick*, the Univerſal Language of the *Mahometan* World; when the Reputation of his own Native *Greek* was ſunk, and could have carried him but a little way. Thus 'twas that he came into theſe parts; tho' the *Indian* Doctors know but little of him, and han't taken the Pains to write quite ſo many Folio's of Comments upon him, as the Popiſh Schoolmen have done.

Neither has Phyſick got much more ground in the Country than Philoſophy: There are very few that apply themſelves to that Study, becauſe the People generally think a Doctor worſe than a Diſtemper; counting the former certain Death, whereas the latter by it ſelf gives them a chance for their Lives. In all the formidable Diſeaſes that rage there (Peſtilence, Calentures, burning Fevers, &c.) very few make any uſe of a Phyſician, but perhaps preſcribe ſome ſlight thing themſelves, and leave the reſt to the Conduct of Nature. Their beſt and moſt conſtant Phyſick is to faſt luſtily, and ſtarve away the Diſtemper; if this (and ſometimes breathing a Vein) won't do, they give up the Caſe as incurable, and expect their Fate.

But they have abundantly more Skill and Knowledge in Judicial Aſtrology; that Noble Science, that ſtands upon ſuch ſure and certain Principles, and is all over Demonſtration: In which, both parts of a Contradiction may appear equally clear and probable, and when one Man predicts an Event, another may turn his Prediction upſide down, ſay it all backwards, and yet ſpeak as much Truth and Sence as the former. There is a good Stock of Profeſſors of this profound ſort of Learning amongſt the *Indians*; Men that will preach Scientifically upon Weather, Fortunes, and Conſtitutions, and ſettle the Point of the Dominion of the Planets over all the Parts of the Body, as confidently as if God Almighty had written their Names there.

Theſe have the Fortune to be in more Repute there, than they are generally in the Chriſtian World; for the *Great Mogul* will undertake no Buſineſs of Conſequence, till the College of Aſtrologers has been ſet to Conjuring upon't.

Thus the Grand Seignior too, in the weighty Matters of Faith and Religion, conſults the Venerable Mufti, and makes him give his Opinion; but if his Verdict does not ſuit the Prince's Humour, upon Second Thoughts, he can bring in a contrary one, and juſtifie it to be true by the Alcoran: And if the *Mogul* were but poſitive, he might rule the Judgment of his Aſtrologers, as well as the *Turk* the Conſcience of his Mufti. The Planets, no doubt, with good Scolding and Huffing, would be as tame and manageable things as the Alcoran. However, to do the Celeſtial Science juſtice, it muſt be own'd there are ſome Theorems belonging to't, that are moſt certainly true; nay, ſuch as carry their own Light and Evidence along with them: For inſtance, 'tis clear and certain, that all Cuckolds are under the Dominion of *Aries* or *Taurus*; 'tis no matter which of them, for the Signature of the Horns is an undeniable demonſtration.

And *Mercury* has as evident a Title to the Fortune-tellers, and Aſtrologers; becauſe Men born under that Planet, are always very honeſt, and never Cheat nor tell Lies.

But to proceed in the Account of the Sciences in *India*; beſides theſe Horoſcopers, and preſaging People, they have another ſort amongſt them, that are very near a-kin to them, and theſe are the Legerdemain-Men, Hocus Pocus's, and Mountebanks; they are all to be thrown into the ſame Family with the former, ſince they are all equally Jugglers. Theſe Fellows will teach Snakes and Vipers to dance to the Tunes they play, and get Money by ſhewing that ſport to the People. You ſhall ſee them ſet three or four broad Wicker-Baskets down upon the Ground, with nothing at all in the World in them, (at leaſt if your own Eyes are to be credited after a Search), and preſently cloſe them up before your Face, and then pulling off the Covers of them, ſhew them full of Turtle-Doves, or ſome other living Creatures, that one would think too big to be ever conceal'd by any ſlight whatſoever. Then they'll whirl thoſe Baskets round (cover'd as they are) and the Doves are gone out of ſight; but how or which way, none but the Hocus Pocus himſelf can tell.

And we are now come to the top of the Learning of this Country, having reach'd Aſtrology, and Legerdemain; we muſt deſcend therefore from theſe Heights to Matters of a leſs ſublime Nature and Conſideration.

The Inhabitants, as they are divided in their Principles and Religion, ſo from thence ſprings a Difference in their

Com-

Their Account of Time, *&c.*

Computation of Time. The *Mahometans* (according to the eſtabliſh'd Practice of their Sect) begin their Year with the Tenth of *March*, when the Aſtrologers tell them the *Sun* enters *Aries*. The *Hindoes* (proceeding upon toher Reaſons) reckon their Year, from the firſt Day of the ſame Month; ſo that there is ten Days difference in counting betwixt them.

The *Mahometans* again divide their Year into thirteen Moons, and 'tis according to this Diviſion that they date Letters, Payments, and all Accounts belonging to Trade. But as for the Hindoes, they ſeem rather to make twelve Months of the Year than thirteen Moons, except perhaps that they may upon occaſion alter their Computation when they deal with the *Mahometans* that uſe another Stile. But neither Hindoes, nor *Mahometans*, have any Clocks or Sun-Dials amongſt them, to give them a true and regular Account how the Time paſſes. Indeed, as for Sun-Dials, 'tis no ſuch great wonder, ſince there's no Aſtronomy in the whole Country, nor none that cultivate any of thoſe Sciences: But that ſo ingenious a People as the *Indians* are, ſo full of neat and fine Devices in other Matters, ſhould have nothing like a Clock, is ſomething ſtrange. They divide the Day into Four, and the Night into as many parts, and each of theſe Quarters they ſubdivide into Eight parts more; and for the Meaſure of theſe Parts of Time, they uſe the moſt ancient Device of a parcel of Water dropping out of one Veſſel into another; and then a Man ſtands always by to fill the Veſſel as often as 'tis emptied, and to ſtrike with a Hammer upon a Braſs or Copper-pan, to let them know the number of the Pores or Grees that have paſs'd, that is, the Fourth or Eighth Parts before-mention'd. What a Bungle of an Invention is this, inſtead of a Clock? And what a wonder is it, that a People that have Fancy enough to think of ſo many pretty things as they have ſhewn the World, ſhould never by a better Contrivance remove this Scandal to their Ingenuity.

Policy and Government of the Country.

The Conſtitution of the Government in this Country, is much the ſame that 'tis in all the Eaſtern Nations; abſolute and arbitrary; and the Repoſitory of their Laws the ſame, the Breaſt of the Ruling Monarch. There are certain Cuſtoms, which Antiquity, and the General Practice of the Country, have in a manner given the Force and Authority of Laws to; but the Prince's Power ſets him above them all, and they are liable to the ſame Alterations that his Will and Humour is. There's nothing of a ſolemn written Law, or ſtated Platform of Government to be found; every Prince that mounts the Throne with a *Sic volo, ſic jubeo*, tells what Laws ſhall be during his Reign. And the long Sword the Monarchs of this Country wear, will juſtifie them in this way of proceeding; 'tis in vain for any Man to be uneaſie or diſcontented, or pretend to diſpute the Reaſonableneſs of the Prince's Will, when the Prince carries ſuch a powerful compelling Reaſon by his ſide, that will preſently cut down all the Rebellious Logick of his Subjects.

For the ordinary Adminiſtration of Juſtice, there are two ſorts of Judges appointed; the one for Civil, and the other for Criminal Caſes; and theſe never intermeddle with the proper Affairs of each other's Provinces, nor mix or exchange Works.

The *Mogul's* adminiſtring Juſtice in Perſon.

But the Prince very frequently ſets his own Hand to this Affair, and acts the part of a Judge himſelf: For this purpoſe, at a ſet-time every Day, he repairs to the Great Council-Hall, or ſome Place where he ſhews himſelf in publick to the People; and places himſelf in his Throne, all his Nobles ſtanding in Ranks about him, according to their reſpective Degrees. And here he hears Cauſes, determines Controverſies, does Juſtice, and orders Diſpatches of Publick Buſineſs. His meaneſt Subjects have free and eaſie Acceſs to him; they are patiently heard whatever Complaints they have to make; and as ſurely righted in any Caſe of Injuſtice or Oppreſſion, tho' the Criminal be the greateſt Man in the Empire. And it muſt be own'd, that the Government in this reſpect is highly commendable, for its exceeding Mildneſs and Eaſineſs, towards all ſorts of griev'd and burden'd Perſons.

If a Man finds himſelf oppreſs'd, he has no more to do, but to go away to his Prince, and demand Juſtice. Here's no need of courting Miniſters of State, of ſneaking and cringing to this and the other Great Man; nor of feeing and bribing corrupt Officers to bring on a Cauſe, and procure a Man his Right. There's no need of a Golden Key to open the Doors of Courts, and the Mouths of Advocates: Juſtice has ſet, and keeps every Door wide open, that all the Wrong'd and Injured may go in; an empty Purſe is not refus'd nor ſhut out, nor Poverty Browbeaten and deſpis'd. The Plaintiff, whatever he be, may introduce himſelf to the King's Speech and Preſence, by giving the appointed Notice of his Buſineſs. He need but go and pull a Rope, and ſet the Golden Bells a chiming, which as ſoon as ever the King hears, the Perſon that gave the Alarm is ſent for in; and his Caſe is no ſooner told than conſider'd, nor conſider'd and weigh'd than Right is done, and the Burden taken off. A Cauſe does not hang in ſuſpence here for five or ſix Months together, nor is it toſs'd about from one Court to another, while the hungry Managers are doing their own Buſineſs, thriving upon the Effects of it. If a Man's Cauſe be but juſt, he is ſure to come to a ſudden and ſpeedy end of his Trouble.

And in Capital Caſes Juſtice ſurprizes the Offender as ſoon, and is as quick in proceeding to Execution, as it is on the other ſide, in aſſerting and ſecuring the Rights of the Oppreſſed.

Very few Malefactors lie a Night in Priſon, but none lie more; if a Man be brought before his Judge in the Morning, he is infallibly clear'd or executed before Night: As ſoon as the Fact is proved, the Puniſhment is inflicted; if Stripes or Whipping, 'tis done upon the ſpot; but if Death, he is lead away to the Bazar, and ſuffers immediately. Now this round and quick Juſtice helps to keep the People wonderfully in awe, and they are not ſo forward to commit thoſe very heinous Crimes, the Stains of which they know they muſt preſently waſh away with their Blood.

Their Executions.

Murder and Theft are always puniſh'd with Death, and what ſort of Death too the Judge pleaſes: Sometimes 'tis Hanging, Beheading, Impaling, to be torn by Lions, or cruſh'd by Elephants, or ſtung to Death by venomous Creatures.

This latter Death the *Great Mogul* condemn'd a certain Parricide to, and had Execution done in his own Preſence, when Sir *Tho. Row* was at his Court. The wretched Creature was ſtripp'd ſtark naked, and the Mountebank having provok'd one of his huge Snakes, applied it to his Thigh, about which it preſently twiſted it ſelf, and faſtning upon his Groin, bit him there, the Blood immediately following; another was fix'd upon the outſide of his other Thigh, and bit him there likewiſe, after which two Wounds he kept upon his Legs for near a Quarter of an Hour, and then drop'd, tho' the Snakes were taken from him before he fell. His whole Body ſwell'd extreamly, and while his Sence continued, he cried out of a Fire that raged in every part; but by that time half an Hour more was expired, he himſelf did ſo, and had his Flame quench'd by cold Death.

In all Caſes of Suits, Debts, Contracts, and other Diſputes of Right between Man and Man, the obnoxious Party is arreſted by the Judges Officers, and brought to the Bar together with his Sureties, (if there be any in the Caſe) and there he is under a neceſſity of giving ſpeedy and ſufficient Satisfaction: The Priſon, and a heavy Load of Irons is his Fate if he does not, and ſometimes inſolvent Debtors, with their whole Families, are ſold for Slaves to pay the Creditors.

Policies uſed by the *Great Mogul* in his Government.

'Tis a piece of Policy conſtantly practiſed by the Monarchs of this Country, to remove and ſhift their Governours pretty often from one place to another. Very few ſtay in one place longer than a Year, tho' they have all the Qualifications that can be to recommend them, and diſcharge their Truſt ever ſo acceptably. This is to prevent their growing great and popular, and the Diſturbances that might poſſibly ariſe, from the Peoples exceſſive doating upon, and fondneſs for their Governours: Tho' the greateſt part of them behave themſelves ſo, that the Prince need not break his Reſt, nor fear a Rebellion for their ſakes.

Cuſtom of receiving the Noblemen that have been abroad.

When they are any of them diſpatch'd to Governments abroad, 'tis a Cuſtom with them not to cut their Hair till they come to Court again; and therefore upon their return, the King as ſoon as he ſees them, bids them cut their Hair. And thoſe that have been in places of Great Truſt and Conſequence, which they have diſcharged with Honour and Integrity, are receiv'd at Court with a vaſt deal of Ceremony, and the World is made to know at that time, how highly they are in their Sovereign's Favour. The whole Court is ſummon'd together upon the occaſion: The Prince in his Throne, and the reſt of the Nobles in their reſpective ſtations, are ready to bid him Welcome. Then comes the happy Favourite, led in by ſome of the greateſt Officers of the Empire; and having proſtrated himſelf once at the outward Rails, he repeats the ſame Reverence twice more, in his approach to the King. Being near, he is commanded to come up the ſeven Steps of the Throne, within the reach of his Prince's Embraces, who then takes him in his Arms, and hugs him with a charming familiarity before the whole Aſſembly. After this Careſs is over, and ſome words perhaps ſpoken in his Commendation; he goes down again, and takes his appointed place among the reſt of the Grandees.

On the other hand, if a Man has been tardy in the diſcharge of his Office, and comes to Court in Diſgrace, eſpecially if any very popular Crimes are laid to his charge; his Eyes are entertain'd with Frowns and ſcornful Looks, and his Ears fill'd with the Noiſe and Clamor of the People calling out for Juſtice againſt him as he paſſes along. He comes into his Prince's Preſence, to hear the Reproaches which his Crime deſerves, and ſtays there no longer than till a definitive Sentence (whatever it be) is paſs'd upon him. And 'tis well for thoſe that either manage their Buſineſs ſo as not to let things come to this paſs, or elſe by the Intereſt of a ſtrong Party at Court, can divert the Prince from a too ſevere Inſpection into their Conduct: For as the Government is horribly rigorous in all Caſes of Untruſtineſs and Diſregard to the Prince's Intereſt (which are the greateſt Crimes here, as well as in other places), ſo it often proceeds without any thing of clear proof of Matter of Fact, and takes away a Man's Life upon a meer ſuſpicion or conjecture.

The Dependance of all upon the Prince.

All the Subjects of this Empire depend immediately upon the Prince for what they poſſeſs and enjoy. There's no ſuch thing as Land of Inheritance, Property, and Succeſſion to an Eſtate; every Man is a Tenant at Will, and holds all upon the precarious uncertain Title of Humour and Pleaſure.

When a Noble-man, Vice-Roy, or Tributary dies, 'tis very common for all his Treaſure and Goods to be ſeiz'd; and if the King pleaſes to allow any part to the Son, or neareſt Relations, 'tis a Favour; otherwiſe it goes into his own Coffers, and he himſelf is the Heir. This is always the way of dealing with Penſioners, and all that receive Court-Pay; the King lends them Money for their Life-time, and pays himſelf when they die, Intereſt and Principal together. Nay, many times, a Man outlives his Fortune and good Circumſtances in the World; for if he be faulty and negligent, or grows popular and ſuſpected, his Eſtate to be ſure goes for't, and he ſaves his Head, by the loſs of his Lands.

A good Maſs of Wealth too, or a fat profitable Living is a dangerous thing under theſe arbitrary Princes; 'tis ten to one, if ſome Fault ben't diſcover'd in the Conduct of ſuch a Perſon; ſome occaſion ſtarted for his remove, or pretence found to purge him a little of his Superfluities. Rich Lands and Livings do often go away thus out of the Hands of thoſe that are plac'd in them, when the King finds they thrive there; for what's good for the Subjects, is good for the Prince, and what makes them rich, won't make him poor.

If any Man has a Jewel of conſiderable ſize, beauty, or fineneſs, he is obliged upon pain of Death to give Notice at Court, that the King may have the refuſal of it. And there is hardly any valuable Stone in the whole Country, but what by means of this ſevere Law, comes into his hands. He keeps Guard every-where, and has Spies upon all Mens Trade and Dealings, ſo that 'tis next to impoſſible any thing ſhou'd ſcape him. But then he is as abſolute in his Bargains, as he is in every thing elſe, and gives juſt what he thinks fit; and that is moſt commonly about a third part of the intrinſick value.

Now this being the State of Affairs in the Country, the Prince thus arbitrary and rigorous in the exerciſe of a boundleſs Prerogative, theſe two things do unavoidably follow upon it. Firſt of all, a deal of baſe ſervile Flattery in his Subjects; they admire his worſt and fouleſt Actions, praiſe his ſillieſt and moſt impertinent Speeches; he can neither do nor ſay any thing, but what they'll trace out the Footſteps of ſome excellent Vertue in. Another Conſequence is, That all they that are in good profitable places, do live as faſt as ever they can, while they are in them. They ſpend freely, and enjoy themſelves to the utmoſt height of their Incomes; they know the Prince takes all at laſt, and therefore endeavour to leave him as little as they can. As much as they flatter and adore him, they won't live meanly and ſordidly for his ſake: For to what purpoſe would it be to rake and ſcrape, to ſave ſo many Servants Wages, or bate ſo many Diſhes of Meat at their Tables, and all to make up a bigger Purſe for him? They had better by far take their Shares (as they do, without mincing the matter), and ſo reſign the reſt when they can hold it no longer. To hoard and lay up for a Family has ſome Comfort in't; but to do it for a covetous Prince, that will perhaps ſtarve thoſe that are left behind, is a very dull and heartleſs Work.

The Nobility and their Titles.

The Nobility in this Country have their ſeveral diſtinguiſhing Titles of Honour, as in other places. The moſt ſublime of all (compatible with the Condition of a Subject), is that of Sultan; but this belongs only to the King's Sons: As his Daughters have the Titles of Sultana's. The next to this is Nabob, which may be as much as Duke. Then Channa and Chan, a Lord. To which we may add other Titles of Honour, as that of Mirza for a General, Omra for a Captain, or ſome inferiour Commander, and the like. But the main thing by which the Great Men in this Country are diſtinguiſh'd, is the Number of Horſe which they have under their Command. The higheſt number of all is 12000, and there are but four in the whole Empire that have ſo many. Others have leſs and leſs, in proportion to their Quality, Merits, or the King's Favour; the leaſt and loweſt of all, is he that commands twenty Horſe, who perhaps is no more than an Omra, or ſome common Gentleman. Now theſe Perſons are all comprehended under the general Title of Manſibdars, that is, Men of Lordſhips, or Livings, becauſe they have all of them certain Livings aſſigned them; out of the Revenues of which they are obliged to maintain and furniſh out (upon occaſion) their ſeveral Quota's of Horſe. And by this means an Army of 200000 Horſe is got together in a trice, and that without any great matter of hurry and trouble; for every Commander knows what proportion is expected from him; and not only ſo, but alſo where to go and raiſe his Men, who are maintain'd out of his Lordſhip, and ready at an Hour's warning.

The Manſibdars.

This Policy is much the ſame with that of the Turks in their Timariots, who out of certain Lands allotted to them, maintain every one ſo many Horſe (as theſe *Indian* Manſibdars do). And theſe Men live nobly out of their Lordſhips, eſpecially thoſe whoſe Numbers of Horſe riſe high, and their Lands conſequently large in proportion; ſome of them of 6 or 8000 Horſe, are ſaid to make it worth no leſs than 70 or 80000 *l. per Annum*; and thoſe that are higher have above 100000; upon which account we need not ſcruple ſaying, that the *Indian* Manſibdars of the firſt Rank, are the richeſt Subjects in the whole World.

But by what was obſerv'd before, the Money in this Country does not lie ſtill; there's a conſtant and never-failing Circulation of theſe Golden Streams, they run from the Country to the Manſibdars, and from them directly away, into the vaſt Ocean of the *Mogul*'s Treaſuries.

And now after all this Diſcourſe of the Country, and the People; before we leave it, we muſt take a ſhort View of the Prince and his Court, and the Cuſtoms peculiar thereto.

The *Mogul* himſelf, and his Riches.

That this Monarch is to be rank'd amongſt the very greateſt of the Univerſe, will be granted without difficulty, if we conſider how much Ground he is Lord of, and the vaſt Riches that Nature, Fortune, Policy, and Trade, do all pour in upon him. The Dimenſions of his Country are conſider'd already; and ſome of thoſe Fountains of his Wealth touch'd upon too. We have ſeen how the Policy of his Government contributes to his growth in this reſpect, ſince that makes him Maſter of all the Treaſures of his richeſt Subjects. Trade alſo brings him in the Coin and Commodities of Foreign Nations, and all Moneys that come in here, are buried here, being never ſuffer'd to be carried out again. Succeſs and Fortune in his Wars, have ſtill enlarg'd his Treaſures together with his Territories; his Victorious Arms carrying all before them in *Decan*, and the adjoyning Countries, bring him in all the Riches of thoſe parts; and 'tis very well known, that no part of the World is more extravagantly rich in the richeſt of Jewels, as well as of Metals (Diamonds and Gold), than that Portion of the *Indian* Continent. And what Nature contributes, is not leſs than any of the former. No Country perhaps in the World is more nobly endowed than his; there's no where a more fertile luxuriant Soil, a happier State and Conſtitution of the Earth, than in the moſt conſiderable parts of his Dominions. And beſides that Fruitfulneſs of it that more immediately ſerves the Conveniencies of Human Life; there are few (if any) that go beyond it, in all thoſe Productions that anſwer the ends of Pomp and Ornament. The Funds of Gold and Silver that lie under Ground, are almoſt innumerable and inexhauſtible: And Jewels are Natives of this Country too, as well as of thoſe that the Fortune of War has made tributary to it.

But to deſcend a little more to particulars, and that from the Accounts of his Revenues, and other Riches that are regiſtred in the Caſtle of *Agra*. The Income of his Crown-Lands is reckon'd to amount to 50 Crous of Roupies *per Annum*. Now every Crou is 100 Lecks, and every Leck is 100000 Roupies; and taking the loweſt value of a Roupie at 2 *s.* of our Money, this comes to a Sum that will enable a Man to live pretty comfortably in the World, and keep a tolerably genteel and handſome Table.

But then the Treaſures in Jewels and Money that lie dead by him, are no leſs ſurpriſing than the former: He has ſeven fair Caſtles that are peculiarly deſigned to be the Receptacles of them; and what theſe contain is hardly known exactly to any but himſelf, and the Guardians of them.

So many Crous of all ſorts of Gold and Silver Coin, ſo many * Batmans of Diamonds, Emeraulds, Rubies and Pearl; the Jewels of the leſs valuable kinds, lying by in heaps without number or meaſure. Then his Pearls and Jewels that are in Chains and Ropes, Cups form'd out of ſolid pieces of Precious Stone, Diſhes, Baſons, Beakers of maſſie Gold; in ſhort all ſorts of Furniture for a Palace, for Horſes for Elephants, and for Men; either all entire, or as far as the nature of the thing will admit, of the pureſt Gold, and bedeck'd with the fineſt Gems of *India* and other parts. To reckon up all the Varieties of his coſtly things, and the Sum of that vaſt Maſs of Wealth he is poſſeſſed of, a Man had need viſit the ſeven Caſtles, and be in fee with the Keepers for a ſight of all.

* Note the Batman is 55 pound of our Weight.

The *Mogul's* Attendance.

This Prince's Attendance is very large and ſtately, and every way proportionable to the reſt of his Greatneſs.

When he goes a Progreſs there is a 100000 Souldiers for a Guard; then all the Slaves and Servants of the Grandees, his own inferiour Officers and Waiters, with the mighty train of Attendants on his Women (which always compoſe a part of the *Leskar*) all put together make up very near 200000. The Guard that is immediately about his Perſon, are a ſort of Horſe-men call'd Haddies, to the number of about five or ſix thouſand; beſides which, the meaneſt of his Houſhold Servants, thoſe that are in the Gardens, Kitchin, Stables, and Armorie, are reckon'd 36000; and they have their Monthly Pay out of the Treaſury from three to ten Rupies a piece.

His living Creatures that are kept about him.

After all (as a part of the Court too) we ought not to forget the other Animals that belong to it, which are kept there partly for Uſe and Service, and partly for Sport and Pleaſure.

There are ſome thouſands of ſinging Birds, that are maintain'd for the ſake of their Muſick; and as many that are for Game and Prey.

Of Beaſts wild and tame, there are Deer, Buffalos, Dogs, Ounces, Camels, Dromedaries, Elephants, Lions, &c. But the moſt remarkable of all are his Elephants, of which he keeps ſeveral Thouſands, but 300 of them particularly are ſtil'd the Royal Elephants; they are call'd ſo becauſe the King rides upon them, but their Splendid Furniture and Noble Feeding would give them that Title without the other Reaſon. Now from this Account 'tis manifeſt that the *Great Mogul's* daily expences cannot be ſmall and inconſiderable. Here is a large and numerous Family; and ſo many Bellies of Beaſts and Men will not be filled with a little. And therefore if his Domeſtick Accounts be fairly ſtated, and the Officers don't cheat him in their long Bills, he ſpends every Day within the Limits of his Court (taking in the Seraglio of the Women too) the Sum of 80000 Rupies.

His Diviſion of the Day.

This Great Prince divides his Day into ſeveral parts, to each of which he allots its peculiar Buſineſs and Employment. As ſoon as the Day breaks he riſes to the Devotion; Religion is his Breakfaſt, whatever impure Meals he makes afterwards. After this he goes forth to receive the Salamets and Good Morrows of the People, that croud about his Lodgings in vaſt multitudes; which Ceremony ended he retires into a Dormitory, and repoſes himſelf till his dining time comes. His time after Dinner is divided between his Women and his publick Sports, the one or both of which entertains him till three or four of the Clock; at which time he begins to think of doing Buſineſs, and obeying the Call of Affairs of State. But 'tis a part of his daily work too to ſurvey his Wealth, and tumble over all his rich things. His whole mighty Stock is divided into 360 parts, each of which are viewed by him in their order, and ſo that parcel which he ſees to Day, he ſees not again till this time Twelve-Month. *Selim Sha* was ſo exact at this, and by often reviewing had gotten ſo perfect a Knowledge of all his Moveables, that the leaſt trifle could not be wanting, but he would preſently find out the Loſs.

He once miſs'd a little *China* Cup (amongſt all the thouſands of that ſort of Utenſils that he had by him) and finding 'twas broke, he call'd for the Noble-man that had the Charge on't, and having drubb'd him to death almoſt, ſent him away into *China* to look another. And not only ſo, but commanded him never to preſume to ſee his Face, till he had found out the fellow on't, wherever he went for't, and whatever it coſt him. Here was a Man baniſh'd from Court, depriv'd of his Prince's Favour, very near crippled, and engaged in fourteen or fifteen Months travel, and all for a *China* Cup; a plain Proof enough how little theſe haughty Monarches value the Happineſs, Life or Limbs of a Man, in compariſon with any thing that pleaſes their own unreaſonable Humour. After publick Buſineſs, the *Mogul* fills up his Day, partly with Devotion, and partly with Sports and Entertainments. He Prays, and Drinks, ſees his Elephants fight, looks over his Beaſts wild and tame, and makes up the number himſelf. He pours in good Liquors, and chaws Opium till the World runs round with him apace, and then he ſays and does a multitude of fine things, which are all recorded by the Scribes that ſit about him. Theſe Pen-men put down every thing that is acted or ſpoken by him, drunk or ſober; all his Viſits to his Women, and even thoſe to the Neceſſary —— are ſet down; a noble piece of Chronology, a very ſweet and cleanly Hiſtory! But ſuch is the Cuſtom of the Country, and theſe *Indian* Monarchs will have their Lives exactly written; and 'tis pity but they ſhould, ſince they are ſo fond of it; tho' the ſucceeding Princes will hardly want the Examples of thoſe that went before them, to inſtigate them to the practice of ſeveral of thoſe things that are recorded.

Feaſts obſerved with the greateſt Solemnity at Court.

There are two Feaſts eſpecially, which this Prince and Court obſerve with very great Solemnity; the one at the coming in of the New Year, which laſts about 18 Days, thro' all which time the Court appears in its utmoſt Splendour and Glory.

That of the New-Year.

In ſome ſpacious open place there's a Tent pitched, which with the Screens that are rais'd about it, takes up at leaſt two Acres in Compaſs. How wonderful this Tent is both inſide and outſide for Beauty and Riches, 'tis in vain to pretend to deſcribe; 'tis enough to ſay 'tis furniſhed that Day for the extraordinary Entertainment of the *Great Mogul*. Round about this (and the Appurtenances of it) are pitch'd the Tents of the Grandees, which take up five or ſix Acres more, and altogether caſt ſuch a dazling luſtre, that a Man would almoſt expect to find celeſtial Inhabitants in Manſions ſo Bright and Glorious, tho' one quarter of an Hours ſtay in their Company, would make him that thought ſo, ſenſible of his Miſtake. Here the King roves about from one Tent to another, guided only by Appetite, Luſt, and Pleaſure; he finds in every one of them Sumptuous Feaſting, and Noble Preſents, which every Noble-man makes him upon this Occaſion. And tho' 'tis true that all his Gifts are praiſed and valued, that he may know in what proportion to return to the Makers of them; yet his Appraiſers, who know his Avaritious Humour, ſet all at half Rates, ſo that inſtead of rewarding like a King, he ſqueezes by this means a vaſt deal of Wealth out of his Nobility.

That of his Birth-day.

The ſecond ſolemn Feaſt is that of his Birth-day, which comes about four Months after the former, and is obſerved with as much State and Pomp. But this is a more chargeable time to the Nobles than the former; for now their Preſents are doubled, being made to the King and his Mother too, and then they have no recompence neither. The Royal Purſe is faſt tied up, and the Soil they caſt their Seed into ſwallows up all, and returns no crop. But the Prince is charitable to the Poor at this time, and this is a cheaper Vertue than Liberality; 'tis eaſier to give an Alms to a Beggar, than a truly Royal Largeſs to a Man of Figure and quality. Now his Charity to the Poor is thus meaſur'd out by the help of the Balance. There's a very large pair of Golden Scales provided, in one of which he ſits himſelf, and the other is fill'd with Gold, Silver, ſome precious Stones, but more Corn and Grain than Jewels by far. This is all heap'd in till his Body is exactly Ballanc'd, and then the Sum is divided amongſt the Poor. Now perhaps here is ſometimes the value of 10 or 12000 pound; but then his Preſents from the Nobility amount to ten times as much; ſo that to ſpeak the Truth, it is not ſo much his Charity as theirs, 'tis the Nobility and not the Prince that are at the Charge of filling the Pockets of the Poor that Day. However 'tis plain, that a Prince of a luſty, thriving habit of Body, is a conſiderable Bleſſing to the Poor of this Country. 'Tis no matter what his Head is, or any thing elſe that's in't; Brains weigh but light, and fine Politicks will do little good in a Scale; 'tis a large Belly, and huge maſſie Bones well cloathed with Fleſh that are the beſt qualifications of a Prince, for theſe Charity-People. How much they are concerned to pray for his Health, is eaſie to imagine, and what a prejudice a Conſumption would be to them, as well as Danger to himſelf. This Prince is ſure of his Poor Subjects Good Wiſhes in this Reſpect, which is better than the caſe of ſome others in the World, who are ſo little loved as to have none upon any Account.

'Tis needleſs to enter into any particular Diſcourſe of the many ſtately Titles the *Mogul* aſſumes to himſelf, and the great Names he calls himſelf by. 'Tis enough to ſay that the beſt part of the Habitable World is his, in his own imagination. And therefore he has no good Opinion of, nor no kindneſs for the Geography of the Weſtern World, that gives him no more compaſs upon the Globe. He ſeem'd to be mightily diſappointed at the proſpect of his own Country, which Sir *Thomas Row* ſhewed him in *Mercator*'s Maps; he found it too narrow abundantly to anſwer his own great Idea of it, and therefore gave back the Book again (tho' 'twas preſented him) as a Man affronted at the rudeneſs of the Geographer, that had allowed him ſo little room. He told the Embaſſadour he did not underſtand that Book, and therefore ſince he did, and valued it too, he would not rob him of ſuch a Jewel; but the main thing was, that the World was not made according to his fancy. The *Chineſe* will have their Country in the very middle of the Globe, and the *Mogul* will have his all over it; and ſo to compliment theſe People, we muſt make a new ſort of a World, which will be as abſolutely imaginary as that in the Moon. But this Prince moſt of all Prides himſelf in the Title of *Tamerlanes* Succeſſour, upon the ſcore of whoſe Conqueſts, he calls himſelf ſometimes (as the *Tartars* do *Tamerlane*) the Lord of the *Lorners*, and Conquerour of the Univerſe. And upon this account it was, that when the *Great Turk*'s Embaſſadour had an Audience of Leave, ask'd him what Meſſage he ſhould carry to his Maſter: Tell him (ſays the *Mogul*) that he is my Slave, for my Anceſtor *Tamerlane* carried his in Chains. There was Pride and Rudeneſs enough in this Anſwer; but had the *Turk* been a little nearer him with 100000 *Janizaries*, he muſt have given civiller and ſofter Language. *Selymus* the firſt, at the head of thoſe brave Troops, that beat the *Egyptian Mamalukes*, would not have taken ſuch a Meſſage from him; we know he carried an Army into *Perſia*, and upon ſuch an Affront, 'tis probable, might have viſited *India* too; which had he done, there's no doubt but that old ſtain upon the Honour of the *Ottoman* Houſe would have been wip'd off, and *Tamerlanes* Fortune reverſed.

But as for this Princes deriving his Pedigree from *Tamerlane*, it appears to be a dark and doubtful thing; he has not made it out clearly to the World, and the Ill Underſtanding between the *Tartars* and him, is no great ſign of ſuch a Relation.

CHAP. XXXII.

The fifth Voyage ſet out upon the Joint-Stock of the Faſt-India *Company, with the following Ships; the* James Royal *of 1000 Tun, the* Anne Royal *of 900, the* New-Years Gift *of 800, the* Bull *of 400, the* Bee *of 150* Martin Pring *Chief Commander: Taken out of his and ſome of the Maſters Journals.*

March, A.D. 1616.
April, A.D. 1617.
Tornadoes.

WE ſet ſail all together out of the *Downs* being (if Wind and Weather gave leave) to keep Company as far as the Coaſt of *India*. In this Courſe having made the Lat. of 6 Degr. or thereabouts, the ruffling Tornadoes began to exerciſe us; and we were e'en ready to paſs the Line, and ſtep out into the other Hemiſphere, before we got out of the reach of thoſe furious Blaſts; in 30 Min. N. L. they were quiet, and we heard no more of them. But the Fogs and dark Weather ſome time after did us that miſchief which all the terrible Winds had not done, in loſing us the Company of our *Admiral* and *Vice-Admiral*, and obliging us to go on towards *India* by our ſelves.

Water very white.

'Twas no ſmall matter of Wonder to us in the way to ſee the Sea all about us appear pale and white, without any viſible cauſe of ſuch an Alteration; one might have imagin'd the *Alvues* at that time, a vaſt great Cheeſe-vat, and the Ship to have been ſailing in Whey inſtead of Salt-Water, it carried ſuch a milky appearance along with it. The Air and Skie at the ſame time look'd white and hazy, without doubt the effect of the Reflections from the Surface of the Water ſo diſpos'd and colour'd.

Auguſt.

We had paſs'd the *Comora* Iſlands before we were entertain'd with this Phenomenon, and the ſame Day that we ſaw this at Night, we made at noon 4 Degr. 44 Min. S. Lat. and as near as we could reckon 53 Degr. 5 Min. Lon. which is all we can ſay towards the Deſcription of that part of the Globe where it happened, we being then out in the open Sea. It continued thus the ſpace of the Evening and the whole Night, and we could find no ground nor bottom where we had this change of Water. We obſerved too that it held on and continued with a Current that then affected us, and as we went out of that colour'd Water, we went out of the Power of the Current too; the Current therefore was ſome way or other (probably) concerned in it, but how or which way, is not of ſo eaſie a Determination.

September.

The Monſon that now waſted and ſpent apace, would not allow us to call at *Socotora*, which therefore we paſs'd and made the beſt haſt we could to *Surat*. Yet we found time to do our ſelves a Kindneſs by the way, and a piece of Service to the *Great Mogol*; the former in taking a *Portugueze* Prize laden with Elephants Teeth, and the latter by ſaving a Noble Ship belonging to the Queen *Mother* of *India*, from two Men of War of our own Nation that purſued her. She had a rich lading of Silver (at leaſt 29 Tun, ſome ſay vaſtly more) which we ſecur'd her in the poſſeſſion of, by putting an end to the Chaſe, and bringing her (together with both her Purſuers) ſafe into *Swally* Road.

All the Ships meet again in *Swally* Road.
October.

We had not been here long before our *Admiral* and *Vice-Admiral* came in too, ſo that now all Fears were vaniſh'd on both ſides.

A good quantity of Coral of our own briuging, and Elephants Teeth out of the *Portugueze* Prize were quickly landed and ſent up to *Surat*, in order to begin the Trade. And now there came to an Anchor at the Bar 20 Sail of Frigats from *Goa*, being ſent by the Vice-roy to range the Coaſt, and make ſome Diſcoveries of us, and ſo to go on for *Cambeya*, to waſt the *Caſalle*.

November.

They did not offer to make the leaſt attempt upon us, ſo that we proceeded in the landing of our Commodities, Coral, Elephants Teeth, Cloth, Tin, Wine, and Strong Waters, together with the whole Cargo of Preſents.

January.
The *Bee's* Voyage to *Jaſques.*

This Month our Ship the *Bee* was diſpatch'd for *Jaſques*, upon the Coaſt of *Perſia*; ſhe carried ſome Merchants along with her, who were there to be landed with their Wares, and ſo go up into the Country as far as *Moguſtan*. A way had been opened into this Country before, and the Country had procur'd the King of *Perſia*'s Firmans for liberty of Trade at that place or any other in his Dominions.

When ſhe came back from *Jaſques*, ſhe gave us this Account of her Voyage. That the Governour gave them a very kind Welcome, and carried it in all points conformably to the purport and tenour of his Maſters Firman. That the Merchants had a very free and quiet Paſſage wherever they went, and proſpect of making ſo good Buſineſs of it in time at *Moguſtan*, that they believ'd it would turn to as much Account there as in any place in *India* it ſelf.

Water was extreamly ſcarce about *Jaſques*; they had none but what the Clouds ſupplied them with, and thoſe Supplies came down but very ſeldom neither.

January is the time in which they lay in a ſtock for the whole ſucceeding Year; then they fill all their Ciſterns and Cellars, and are as buſie with their Water, as ſome are with their Wine at the time of vintage. In that Month it rains conſtantly for a Week or more without intermiſſion, and perhaps a little in *December*, but their main dependance is on the *January* Showers, in which they have their ſtated Allowance, and that meaſure of this Grand Neceſſity of Life, which a Wiſe Providence ſees convenient for them. But having it thus but once a

Year, they are forc'd to drink it with all the Advantages of its foulneſs, rank taſte, and ſometimes Worms bred in it, which after ſo long keeping is not ſtrange, tho' undoubtedly very diſagreeable, eſpecially to thoſe who have been us'd to better Liquors in other places and are forc'd to take up with that at *Jaſques*. 'Twas ſo bad in all theſe Reſpects, that our Men were forc'd to take ſome courſe to purifie it before they could drink it, and yet 'tis a good Commodity in the Country, and goes off for four Shillings a Tun. *Jaſques* has a fair Bay belonging to it; there runs no ſtream, but it flows a Fathom with the Spring, and at other times three or four Foot. They obſerved a little Fiſher Town adjoining, to be in 25 Degr. 35 Min. N. L. and 10 Degr. 40 Min. Lon. from the Cape of *Diu*, and the var. to be 19 Degr. 20 Min. from N. to Weſt. This is the Sum of the Account the *Bee* gave us at her return from the *Jaſques* Voyage.

March.
* This Voyage comes afterwards by it ſelf.
April, A. D. 1611.
Set ſail from *Swally*.
Light Skirmiſh with the *Portugueze* Fleet.

She being come back, the *Ann* * *Royal* our Vice-Admiral was ſent away for the *Red-Sea*, and we all ſet out from *Swally* Road for *Bantam* and other parts. By the way we came in ſight of the *Portugueze Molucca* Fleet, being 27 Sail, Merchant-Men and Men of War, and Gallies of *Goa*. We exchanged a few Guns with one another; but they quickly grew weary and got away from us beyond our purſuit, and to make the more haſt in doing ſo, they were obliged in part to unlade ſome of their Veſſels, and throw Cheſts, Boxes, and other heavy things over board.

As we coaſted along by *Calecut*, the *Samorin* ſent off a Boat to deſire a Conference, but we were gone too far out of reach to attend him at that time.

We came to an Anchor in *Brinnion* Bay, a place of good Refreſhment for Hens, Cocoes, Goats, Fiſh, and excellent freſh Water, which comes clear and pure out of a Rock.

People of *Brinnion*.
Some of the Ships went away for *Sumatra*, while the General went for *Bantam*, to which place they came afterwards, and followed him from thence to *Jacatra*, and ſo came to *Bantam* with him again.

But the Inhabitants are as bad as their Proviſions are good, a perfidious, impoſing, unfaithful People, who ſeem to value no Promiſes nor Contracts, nor will be held by any Bonds if they have an opportunity and force enough to break them. This we had ſufficient Proof of in their dealing with us; for at our coming we had made the Governour a conſiderable Preſent, beſides 70 Rials of Eight in dry Money for liberty of Watering, which he very fairly promis'd and ſeem'd as well pleas'd. But truly being ſecure of his pay, and reſolved if poſſible to mend himſelf ſtill, he came down with a Force of ſeven or eight hundred Men to drive us away from the Spring, demanding more Money, without which we ſhould have no Water. But as it happened we had guarded the Spring pretty well, and were in a Condition to maintain the work we were about, againſt the violence of this rude and unjuſt Governour; and this was done partly for fear of any perfidious Practices of the *Indians* in poiſoning or otherways abuſing the Water, tricks that a Man is always to be aware of in theſe Eaſtern Countries.

June.
Protectour of *Bantam*'s injuſtice.

When we came to *Bantam*, we found an unhappy Difference ariſen between one of our *Engliſh* Captains and the great *Pangran* or Protector of the Kingdom. The Right of the Cauſe certainly lay on the Captain's ſide, and the *Pangran* was unjuſt and partial in pretending to quarrel upon thoſe Terms that he did. The Buſineſs was, that the *Chineſe* being pretty deeply in debt to our Men, the Captain had arreſted one of their Junks, in order to bring them to make payment, which ſort of violent Courſes a Man cannot ſometimes avoid taking with ſuch ſhufling People as they are, unleſs he reſolves to ſubmit to all their Knaveries. But this Method of proceeding was highly diſpleaſing to the *Pangran*, and provoked him to that degree, that he ſeem'd utterly uncapable of being perſwaded and argued into a better Temper, refuſing to hear what was to be reaſonably alledged in juſtification of the Fact; and tho' we labour'd all that could be to compoſe the Matter, and made a formal offer of redelivering the Junk upon condition of doing us juſtice (which at firſt he alſo paſs'd his Word to perform) yet he flew off afterwards, and as if fond of an Opportunity of quarreling, would hear nothing in order to the putting an end to it.

September.
Agreement with the King of *Jacatra*.

We left theſe Matters in the ſame ill poſture at *Bantam* that we found them, and ſet ſail from thence towards *Jacatra*. The King of this place being pretty well diſpoſed to favour our Buſineſs, we agreed with him to this effect. That we would pay him 700 Rials of Eight *per Ann.* for the liberty of a free Importation and Exportation of all manner of Commodities, and 1500 down for a piece of Ground to build a publick Houſe for our Factory upon.

By Letters come to us here from the *Moluccas*, we had notice of the hard uſage of our *Engliſh* in thoſe Iſlands by the *Dutch*; they would ſcarce allow them Proviſions to keep Life and Soul together, and upon every Report of the coming of any of our Ships, they were preſently laid in Irons.

October.

But we had not long after the comfortable Tidings of the ſudden coming of a Remedy to cure thoſe Diſorders in a Fleet of ſix good *Engliſh* Ships, under the Command of Sir *Tho. Dale*.

November.
The *Sun* (Admiral) loſt.
December.

Our Buſineſs diſpatch'd at *Jacatra*, we went back again to *Bantam*. Having ſpent ſome little time here, the expected Fleet came from *England*, which together with ours and ſome others that were here at the ſame time, made in all to the number of thirteen brave Sail. And inſtead of that it had been fourteen, had not the brave *Sun*, the Admiral of this new-come Fleet miſcarried by the way. She was wreck'd at the Iſland *Engano*, a good part of her Company drown'd, and others murder'd aſhoar by the barbarous Inhabitants of that Iſland, and the reſt brought in a very miſerable condition to the Fleet. It being certain that the *Dutch* and we were ſhortly to decide our Quarrel by a Fight, we had amongſt other Preparations made for it, that neceſſary one of a Day of Faſting and Prayer, ſtrictly obſerved thro' the whole Fleet; and for a prelude to the ſucceeding Action, we quickly after took a conſiderable Ship of theirs. But the *Dutch* lying with their Fleet now about *Jacatra*, it was reſolved in a Council of War, that a part of ours ſhould forthwith ſail thither in order to the beating them away. Accordingly we went on with eleven ſail, and came to an Anchor by *Hector* Iſland, the *Dutch* Ships being at the ſame time within ſight in the Bay of *Jacatra*. And tho' we were now ſo near one another, yet we could not order matters ſo as to bring it to a Battle immediately; the *Dutch* by their ſhifting and winding about, plainly diſcovering they had no great mind to engage, and we were fain in a manner to purſue them, before we could obtain the end we came for.

Horrible confuſion, when the *Sun* and *Moon* fell together by the ears.

However at laſt we came up with them, and the Admiral began the Fight with theirs, our *Moon* and their *Sun*, the reſt coming on in their order: The Fight continued for 3 Hours, in which time we ſpent 1200 great Shot upon them, and ſo left them for that Night. And in ſhort they order'd their buſineſs ſo, that we left them for altogether; for they made all the Sail they could before us, and we had only the Honour of purſuing them thro' the Bay of *Jacatra*, which we did to the Eaſt points of it. Here we all came to Anchor; and now they had recourſe to the fatal policy of a Fireſhip, having been able to do no good with their great Guns; they ſet one of thoſe Flaming Machines a driving towards us, but we happily avoided the Miſchief, having warning enough to get out of her way. So alſo did thoſe that ſent her get out of ours; and tho' we ſet a Spie upon them to obſerve their Motions, yet we did not think it at this time neceſſary to follow them any farther. Now the Reaſon that urged us to this ſo ſpeedy an attempt upon the *Dutch*, was an unpardonable outrage of theirs committed at *Jacatra* juſt before.

Inſolence of the *Dutch* at *Jacatra*.

'Tis evident that conſidering the Injuries we had received from them, we were not the Aggreſſours, or guilty of any unjuſt Action in taking that Ship of theirs a little before the Fight. But yet as if they had never given us any manner of Provocation to proceed in that manner with them, to revenge the Loſs of that Ship, they immediately ſiez'd two of our Merchants at *Jacatra*, and laid them in Chains in a place expos'd to publick view. And not contented to have carried the Affront thus high, they proceeded to heighten it yet farther, adding ſeveral other Violences of a far more miſchievous nature than that. They plaid their great Guns upon our building, ſet fire to it, and burnt it to the Ground. They fired into the Town, making a horrid havock in the *Javan* quarter, but the *Chineſe* quarter they beat quite down, and left it an abſolute heap of ruins. They kill'd abundance of People, but eſpecially of the *Javans*; and 'tis very likely that they deſign'd the King himſelf ſhould fare no better than the reſt, for they fired into his Palace, and that's no ſign that they meant him well. Upon this extravagant Provocation, that Prince rouz'd up himſelf to chaſtiſe them in the beſt manner he could; and 'twas high time to do it, for the next ſhot elſe might perhaps have made him uncapable of doing it for ever. He played his Ordnance upon that Fort, and had ſeveral skirmiſhes with them; but after all, tho' a briſk Man, and good Souldier for an *Indian*, yet was not able (with his Furniture at leaſt) to manage ſo tough and ſtubborn an Adverſary as the *Dutch*. He therefore ſent Meſſengers to *Bantam* to deſire our aſſiſtance, in taming the Pride and Strength of that Adverſary, that had not ſpar'd to inſult him in his very Palace, and almoſt beat down his Capital City about his Ears. 'Twas upon this account that we hurried away to *Jacatra*, and call'd upon the *Dutch* to prepare for a Battle ſo ſoon; that Prince was our Friend and Allie, and beſides our own particular Wrongs, the Injuries he had ſuſtain'd were great enough to engage us to puniſh thoſe that had done them.

January. Meaſures taken for carrying on the War againſt the *Dutch* at *Jacatra.*

After this, Sir *Tho. Dale* went aſhoar to ſee the King of *Jacatra*, and to confer about the farther proſecution of the War againſt them. The King was very deſirous to have them quite beat out from thence, and to ſee their Fort demoliſh'd; which if we would contribute our Aſſiſtance towards, he would make us all the Allowances for the Advantages of our Trade in his Country that we could reaſonably Deſire. So it was concluded that ſome Ammunition ſhould be landed out of the Fleet for this purpoſe, and that Sir *Tho. Dale* the Admiral ſhould be there in the Road with eight Sail, to countenance the Buſineſs as there was occaſion. As for our ſelves it was determin'd that we ſhould go away for the *Streights* of *Sunda*, with ſix Ships to endeavour to catch the *Dutch* Fleet there. But there was no Game to be found at that time, ſo that after a little beating up and down to no purpoſe, we put into *Bantam* Road. Here we had news that (in the time of our abſence) the *Dutch* had made a Propoſal for the Surrender of their Fort at *Jacatra*. Their proud Stomach was ſo far come down, that they were willing to quit the place upon condition of a quiet departure with bag ahd baggage, and the conveniency of a Ship to carry them to the Coaſt of *Coromandel*.

Capt. *Pring* goes for the Streights of *Sunda*; and then to *Bantam*. *February.*

But this Agreement was rendered ineffectual in great meaſure by the baſe dealing of the *Pangran* of *Bantam*; he loved neither the *Dutch* nor Us, and as little car'd that any thing ſhould be done towards the compoſing Matters betwixt us.

The baſe dealing of the Pangran of *Bantam.*

He had a mind too to get the Caſtle of *Jacatra* deliver'd into his own hands, and ſent to the *Dutch* privately to make a Surrender of it to him, together with their Ammunition, Money, and Goods; but he was much miſtaken in his Men, and the *Dutch* were not ſo eaſie either to be commanded or wheedled out of their Pretentions. But upon the Account of this and ſome other Ill Proceedings of his, we thought it neceſſary to make him ſenſible that we looked upon our ſelves highly affronted by him, and therefore made all our Factors and Merchants, with all their Effects to remove from the Town and come aboard the Fleet. While this was a doing the *Pangran* (as if the moſt juſt and harmleſs Man in the World) ſent to know the Reaſon of ſo ſudden a Remove, profeſſing he had given us no cauſe to leave the Country in that manner; but tho' this was manifeſt falſhood and diſſimulation all over, yet that he might have no ſhadow of an Excuſe or Pretence left him for not doing us juſtice, we drew up a Remonſtrance, containing all the Particulars of Wrongs and Grievances the *Engliſh* laid to his Charge, and ſent it to him for his farther conſideration. News being brought hither that four *Dutch* Ships were come to an Anchor in the Mouth of the *Streights* of *Sunda*, I ſail'd out of this Road with four of the Fleet under my Command, to give them a meeting there. We quickly obtain'd a ſight of them, and made towards them with a Speed that ſpoke for us; we were not a little glad to have found them. And they to affront us the more effectually, and let us underſtand how deſpicable we were in their Eyes, careleſly plied to and again with their top Sails half Maſt down, as if they were there in expectation of us, and waited till we came. We were no ſooner within ſhot, but their Admiral came up and bid us welcome with a whole broad ſide; and it will pretty eaſily appear that we were no tat all behind hand with them in Civilities of that nature, ſince they run away within two Hours time, and left us the open Sea to our ſelves. And which made it much the more pleaſant, the Admiral (that came on with all the Triumph and inſolent Bravado of a *Spaniard*) was the firſt that turn'd tail, and gave the example of cowardice to all the reſt of the Fleet. We purſued them till Night; but tho' they fought worſe, yet they ſail'd better (at leaſt ſwifter) than we, having beſides the Advantages of their far nimbler Ships, a good degree of Fear and Fright to hurrie them along; and there's nothing in the whole World that flies faſter than Fear, nor does any Man make more haſt than he that runs away from a ſound beating. But as it often happens, that an eager and over haſty flight from one Miſchief, is an unlucky running into another, ſo it had very near been the caſe of theſe *Dutch* Ships; Sir *Tho. Dale* not long after got within ſight of them, and if a Tempeſt had not interpos'd, they had been forc'd to another-guiſe Trial than the former was.

Capt. *Pring* goes after the *Dutch* a ſecond time. *March.*

Fight with the *Dutch* near *Palambam* Point, on the Coaſt of *Sumatra.*

April. A.D. 1619.

After this Action we returned to *Bantam*, and our whole Power of Shipping (that was hereabouts) once more came all together at this place. The Buſineſs to be conſulted was, about putting in execution the Orders of the *Eaſt-India* Company, for appropriating the *Chineſe* Goods to their own uſe in conſideration of the Debts they owed. And it came to this unanimous Reſolution, that unleſs the young King of *Bantam* would throw that Ill Miniſter the *Pangran* out of his place, the Commiſſion ſhould forthwith be executed; but in caſe of that Compliance the *Chineſe* ſhould have their Junks reſtored, and be forborn ſomething longer. The Matter brought to this head, we began to think of doing buſineſs in other parts; and ſet ſail in the firſt place for the Coaſt of *Coromandel*. Being near this Coaſt, our Ships were hardly able to come up to one another, by reaſon of the ſtrong W. S. W. Winds, and the Currents continually ſetting to the E.N.E. The Beach alſo was ſo lofty on the ſhoar, that there was no venturing towards it with any of our Boats.

May. Go for *Coromandel.*

June.

At laſt we conſider'd of a certain Bay upon this Coaſt in about 17 Degr. and about five Leagues to the Eaſt ſide of *Naſſapore*, where there was very commodious riding for a Weſterly Monſon, which was the only thing we now deſired, ſeeing there was no hope of recovering *Maſſulipatan*, the Winds and Tides being both againſt us. Holding on our Courſe thitherwards, having made (by Judgment) about nine Leagues, we found the Land to lie away N. & N. & by W. which gave ſome hopes of a good Road.

By this point of Land there comes out a great River, the Stream of which has rais'd a conſiderable Riſe or Shoal off the ſharp of the point, extending it ſelf half a Mile into the Sea, which makes the ſmoother road about the point, for you may bring the ſaid Shoal, S. S. W. and ride in ſix Fathom and a half, ozie Ground two Mile off the Land that's neareſt you.

Cape *Comfort.*

July.

Vingeron.

About two Leagues to the North ſide from this Point (which for diſtinctions ſake we call Cape *Comfort*) iſſues out another branch of the former River, which makes the head land it ſelf an Iſland, and off the Mouth of this River lies a long ridge of Sand, which is quite dry at low Water. The next point of Land to the North ſide of Cape *Comfort* is diſtant about three Leagues and a third from it, and to the Eaſt ſide of this laſt point you have another Sandy Shoal: As for the var. about the Cape, we make it to be 12 Degr. little more or leſs. While we lay here up and down upon the Coaſt, we had ſome Communication with the Country, getting good ſtore of Proviſions aboard, as Sheep, Hens, and Goats, of which latter we had near 300. The chief Town towards the Sea in this part was *Vingeron*, which I went to ſee, leaving the Fleet for ſome Days: I went by Barge to the Town of *Coranga*, and thence up the River for *Vingeron*, at both which places I met with an Entertainment no way to be complained of. The Governour of *Vingeron* received me with all his *Indian* Muſick, liked my Viſit very well, but the Preſent I brought him much better; ſo well, that after I was gone a-Ship-board again, he would needs come and pay me Viſit, which I knew was nothing but to Fiſh for another Preſent.

August. Death of Sir *Tho. Dale.*

Here we had news of the Death of Sir *Thomas Dale*, our late worthy Admiral; he was got before us with a part of the Fleet to *Maſſulipatan*, and died at that place: and how good News ſoever this would be to the *Dutch*, whoſe inſolence he had already chaſtized in part, it was very uncomfortable to us, who had reaſon to expect ſome farther humbling of them from the Valour and Conduct of ſo able a Commander.

September.

Come to *Maſſulipatan.*

It may be worth the while to obſerve that of the River of *Naſſapore*, we found the Current to ſet S. S. E. by Day, and N. N. E. by Night; we rode then about three Leagues S. S.W. from the Bar of *Naſſapore*, and had at the ſame time near 20 Fathom Water. When we came to *Maſſulipatan*, we found that part of the Fleet there which Sir *Tho. Dale* had brought; and now that and this joining together, thought fit to call me to ſucceed him in his late Charge of the ſupreme Command of the United Fleets. Here ſeveral Merchants that were to reſide in the Country, were ſet aſhoar, and fixed in their reſpective places; the State of the Companies Affairs was alſo at large conſidered and examined, and proper meaſures agreed on for promoting them to the beſt Advantage.

December. *January.*

* We ſet ſail from hence for the Coaſt of *Sumatra*, and near that Iſland had the luck to meet with a conſiderable Addition to our Strength, which was three *Engliſh* Ships more, which there came up to us. But they inform'd us at the ſame time that our Forces in theſe parts were much leſs than we imagin'd, and that by the loſs of five Ships of ours lately taken by the *Dutch* upon this Coaſt, and two more thought to be in very great Danger, if not actually loſt, they having ſent out a ſtrong Fleet to ſurprize them. This News was ſtartling; and ſo many Ships being already become a Prey to them, the remainder

was

* The Admiral diſcourſes here of the Shoals and Sands about *Ticoo* and the other parts of the Coaſt of *Sumatra* on that ſide, b you have a material things of th kind in th General D rections fo *Eaſt India* Voyages, Mr. Davis *Vade Mecum.*

was to be more warily preſerved ; and our Strength at preſent under a declenſion not (but upon very valuable Conſiderations) to be any way farther expoſed.

February. March. Trade for Rice and Oil.

Our Dealings upon the Iſland at this time, were chiefly for Oyl, and Rice, and Coco's: We took in 12 Hogſheads of Oyl at one time, and more of the ſame Commodity at another, together with 12 or 1300 Sacks of moſt excellent Rice, 16000 Cocoes, beſides Goats and other Proviſions. This came all from *Priaman, Pedang*, and *Cattaringe*.

From *Sumatra* we held our Courſe for *Bantam*, hearing by the way that there was 15 Sail of *Dutch* beſtowed between that place and *Jacatra*. 'Twas uncertain whether they would attack us or no, but 'twas certain that as matters now ſtood, we intended not to fight, unleſs a very urgent Neceſſity compell'd us to it. But going on with theſe Reſolutions towards *Bantam*, we met with a Ship of our own juſt come from *England* (a Meſſenger of very happy Tidings) that put an end to all Cares and Proviſions about matters of that kind, by aſſuring us that a Peace was concluded betwixt us and them. And before we could get to *Bantam*, 'twas demonſtrated to us by the *Dutch* themſelves; we light of their whole Fleet coming from *Jacatra* to meet us, and give us the Joy of the new made Peace.

April, A. D. 1620.

The *Engliſh* and *Dutch* Fleets ſalute each other with their Ordnance.

This was a wonderful alteration in a very little time ; we uſed to meet for other purpoſes than this of Careſſing and Complementing one another. Now the Great Guns were diſcharged upon a more civil and pleaſing account than lately they were, and tho' we made as much Noiſe and Smoke on both ſides as they, yet the Salutation was far more friendly and agreeable. Thus we ſail'd together with no little Triumph into *Bantam* Road, and all the *Indians* that ſaw us perſecuting each other to the laſt extremity, were now the admiring Witneſſes of our happy Reconciliation.

The Pangran at *Bantam* enraged at the Peace.

But nothing could be a greater Mortification to the Ill-natur'd Protector, than this Union was ; his Choler was ſo ſtirr'd at it, that he could neither hear the Relation of it with any degree of Temper, nor return a Civil Anſwer to thoſe that made it : What with his Rudeneſs, and what with his Paſſion, he paſs'd it off without any farther notice, than only a raving Queſtion, Why would the *Engliſh* be Friends with the *Dutch ?* He would ſay nothing in anſwer to our deſires of making a fair and amicable concluſion of the Matters in diſpute betwixt us ; and had he ever had any juſt and generous Principles, the Heights of his preſent Tranſport would have prevented the exerting of them.

If he were capable of any true Love to his Country, or could be ſo far a Man of Honour, as a fear or jealouſie of its welfare amounted to, one would fancy he ſuſpected ſome Plot upon his Country, from the united Counſels and Intereſts of the *Dutch* and us ; that now we would fall upon *Bantam* to rights, and having no Wars between our ſelves, would employ our Forces in making new Conqueſts.

'Tis true, this might be an uneaſie Thought ; for he might be ſure in that Caſe he ſhould loſe his Protectorſhip ; and if we came to be Maſters of *Bantam*, we ſhould not ſuffer ſuch a Knave as he to ſit at the Helm, and manage the Affairs of the Country.

But as for our ſelves, tho' we had no deſign that any way tended to the publick or his own private prejudice, yet we could have wiſh'd the King of *Bantam* a better Miniſter of State, and have been glad, if he would have exerted his own Royal Authority, in laying aſide a Perſon ſo unfit for Publick Truſt as he was. But there was no Remedy at preſent, the *Pangran* continued in the ſame ſurly diſcontented Humour ; and the laſt time we ſent to treat about the Buſineſs, he denied the Meſſengers the Liberty of coming aſhore.

I was obliged once more to leave theſe Affairs in the ſame perplexed and unſettled poſture that I found them in, being now bound for *Japan :* I took this * Voyage with two Ships only, ſome others being to take a turn thither afterwards, which were now engaged another way.

As for the Obſervations relating to Sea-Affairs in this Courſe, the Mariners may take theſe few Memorials along with them.

Of all that whole Row of Iſlands that extends it ſelf Weſtward from the Bay of *Jacatra*, the moſt Weſtermoſt is *Pulo Antikero*, diſtant from *Pulo Tunda* 8 Leagues, to the N. N. E. ½ E. The Depth between the two Iſlands is from 16 to 26, and ſo falling again from 26 to 12 Fathom, Ozy Ground. *Pulo Kero* lies from *Antikero* 6 Leagues to the N. N. E. neareſt. All along from *Pulo Peniang*, to *Pulo Antikero*, the Current ſets us to the Weſtward pretty ſtrongly ; after that we had an eaſie, tho' an odd ſort of a Current too, that did run almoſt upon all Points of the Compaſs every 24 Hours.

By an Obſervation of the Sun's Meridian Altitude, we made the Ship to be in 4 Degr. 45 Min. S. L. when we had *Pulo Kero* 9 Leagues from us, bearing S. ½ W. and by another at Night upon the Croſiers, we made 4 Degr. 40 Min. S. L. when the ſame place was by eſtimation S. by W. from us 13 Leagues. The S. E. end, or point of the Iſle *Banca*, bearing N. by E. ½ E. at 2 ½ Leagues diſtance, we made the Ship in 3 Degr. 8 Min. S. L. by an Obſervation of the Sun, from whence the Latitudes of thoſe places may be determined. Between this Point of *Banca*, and the Iſle of *Borneo*, the Sea is full of Iſlands, and it appearing a deſperate Attempt to venture at a paſſage between thoſe Iſlands and the aforeſaid Point of *Banca*, becauſe of the Shoalings we had met with, we endeavour'd to paſs by the Streights of *Banca* ; but here the matter was little mended, and we found the Shoalding as dangerous, if not more than before.

Places between *Bantam* and *Patane*.

The greater Iſland of *Linga* *, we place near the Equator in 1 Degr. S. or thereabouts, and *Pulo Tingaron* in 4 Degr. 50 Min. N. L.

The Iſles *Pulo Rowdon*, are at leaſt thirteen or fourteen in number, great and ſmall ; they are high Land, and a fair Depth from one end to the other on all the Eaſtern ſide ; and as we are inform'd, there's a very good Channel between them and the Main.

Off from the Point call'd the *Gurnets-Head*, the Land runs away W. N. W. and W. by N. to the very entrance of the Road of *Patane*, and is low Land all along, and loweſt of all at the Point of the Road, and you have a fair Depth too till you come thither, but there you muſt give a good birth, becauſe of a Shoal that lies half way over to the Weſtern Shore : Therefore you muſt not borrow too near it, till you have the Shoaling of the Weſtern Shore, and there you ſhall find the ſofteſt Ground. From *Pulo Tingaron* to *Patane*, you have very high Land up in the Country, and as low all along by the Water's ſide, with a ſandy Strand, at leaſt twenty Leagues to the Southward of the Point of *Patane*, and how much farther we know not ; but this we are ſure of by Experience. At *Patane* we had excellent good Refreſhment, and were ſingularly obliged to the kindneſs of the *Dutch* at that place, in furniſhing us with part of our Neceſſaries, in order to a more quick diſpatch : We had been forc'd to wait longer, if their Courteſie had not freed us from that Inconvenience. We were obliged to buy at this place Oyl and Dammar for the trimming of our Ships (which we intended to do at *Japan*), thoſe Materials being very dear there.

Places between *Patane* and the Coaſt of *China*, &c.

As you go from *Patane* to the Head of *Cambodia*, you have a Rock that lies dangerouſly in that paſſage, and juſt ſhews it ſelf above Water : To know whereabout it is, you may obſerve that the high Land over *Gurnets-Head*, bearing S. S. W. ½ W. 13 Leagues off, and the low Point of *Patane* Road about 18, then the Rock will bear N. N. E. ½ E. a League off, and as for the Latitude of it, we make it to ſtand in about 7 Degr. 20 Min. N. Along from *Patane* Road you have (after you have made ſeven or eight Fathom) the Depth regularly increaſing by two ſtill, as far as 24 Fathom, till you are in ſight of the Rock, and about two Leagues from it 25 Fathom Ozy.

The Iſle *Pulo Hube* is thus to be known ; at firſt you ſee a riſing of the Land with one round Hill, then as you come nearer you ſee another ſhoulder of high Land riſing in Hammocks, but not above two thirds as high as the Hill, yet all one continued piece with it ; then you have a proſpect of a ſmaller round Iſland about the height of the Hammocky Land, and which lies cloſe aboard the greater Iſle. This leſſer Iſle has to the Eaſtward of it a long Rock like the Hull of a Gally.

By obſervation *Pulo Condor* lies in 8 Degr. 42 Min. N. Lat. and all along (at leaſt for the moſt part) from *Patane*, till we were in ſight of this Iſland, we had the Wind at S. S. W. and from *Pulo Condor*, till we were within kenn of the Coaſt of *Cambodia*, we had a Current ſetting E. by N.

The Latitude of Cape *Ceſſier* upon that Coaſt, may be determin'd by this Obſervation, that when at Noon we made 10 Degr. 42 Min. N. L. the Cape did at the ſame time bear W. N. W. ½ W. about ſix Leagues from us. So by a like Obſervation the Latitude of Cape *Varelle* is fix'd ; for when we made 13 Degr. 13 Min. N. L. at Noon, this Cape bore W. S. W. 8 Leagues off. The *Chineſe* call it Cape *Jentam*, which in their Language ſignifies a Chimny, becauſe it has a ſharp Hammock riſing up upon the top of a Hill, much like a Chimney upon a Houſe. The Latitude of the Iſle *Aynam* may be ſettled in like manner, by comparing theſe Obſervations of the Courſe for two

---

* The Account of this Voyage is a bare Journal of the Ships Motions, Soundings, Anchorings, and the like, without any thing of uſe or curioſity, but what is briefly here put together, as is contain'd in Mr. *Davis's* Directions for the *East-India* Voyages.

* One of the Iſlands of *Linga* is placed in *Davis's* Rules, juſt under the Equator.

ſeveral Days, viz. This Day Iſle *Aynam* bears N. W. by N. twelve Leagues by the next Day at Noon, we have gone N. E. by E. 22 Leagues, and here we find our Lat. 18 Degr. ', from whence the Latitude of *Aynam* may be inferr'd.

Between this Iſland and that call'd the *Morocco Saddle*, a Current ſetting to the Northward moſtly affected us. We give the latter Iſland the Name of the *Morocco Saddle*, upon the account of a certain deep Swamp upon the top of it, which in ſome meaſure juſtifies the Compariſon: It lies in 21 Degr. 45 Min. N. L. and has various Iſlands about it, almoſt at every Point of the Compaſs.

Places towards the Coaſt of *China* and *Japan*.

The *Scorpion's Heart* lies in 22 Degr. 35 Min. N. L. little more or leſs; and that of the high Land of *Logoſſe* may be determin'd by this Obſervation, that when we made by the Sun's Altitude, 23 Degr. 6 Min. N. L. the high Land of *Logoſſe* at the ſame time bore N. W. by N. 11 Leagues diſtance. So alſo that of the Northern Point of the Iſle *Formoſa*, which bore E. S. E. ten Leagues off, when we made the Ship in 25 Degr. 40 Min. N. L. From hence to the Coaſt of *Japan*, the Current was almoſt continually E. N. E. or moſt certainly ſome Point between the N. and the E.

I ſhall offer the Sailors no more now of theſe Obſervations, but one upon the Coaſt of *Japan* it ſelf, helping to ſettle the Latitudes of the great Sound of *Langaſaque*, and of the S. E. part of the Iſle *Goto*; namely, that when the former bore E. nine Leagues, and the latter W. by N. ten Leagues, and at the ſame time we made the Ship in 32 Degr. 40 Min. N. L.

July.

We had not been long in the Port of *Firando*, before ſeveral others of our *Engliſh* Ships came in thither likewiſe. We had the ſame kind Welcome that others of our Nation had met with here before; and the King of *Crats* Iſland came aboard the *James Royal*, mightily admiring and rejoycing to ſee an *Engliſh* Ship of that ſtate and bigneſs; and asking, Whether that were one of our Frigats? By all which we ſuſpected, that ſome People at that place that bore us no Good Will, had given a very pitiful Account of our Shipping, and made them believe we were Maſters of none beyond the ſize of Frigats. Here the *Dutch* and we joyn'd together in all our Conſultations for the common Intereſt and Advantage of both, and being now as it were one People, Deputies were choſen, two of each ſide, to manage the Affairs at Court, and carry the Preſents to the Emperor. We ſeem'd alſo to be equal Sharers in the Reſpect and Favour of the King of *Firando*, who inviting both Parties to a Solemn Entertainment, made the firſt Diſh of each Courſe be preſented to the *Dutch* and us.

Union of the *Engliſh* and *Dutch* in *Japan*.

Auguſt.

* See the Letters from *Japan*, and Capt. *Saris's* Voyage, for an Account of theſe Tuffons.

* The horrible Tuffons, which are frequent hereabouts, did our Fleet ſome damage; one Ship was ſunk down to rights, and others endanger'd, tho' happily brought off afterwards. The Effects of theſe tempeſtuous Blaſts are oftentimes as fatal, as the coming of them is ſudden and ſurprizing; when they are violent to extremity, they bear down all before them, and 'tis in vain to attempt the delivering of a Ship, or any thing from their Fury.

December.

Our Deputies (return'd from Court) gave us an Account of the good Succeſs of their Undertaking: The Emperor was kind and favourable, and their Buſineſs came to its deſired iſſue. To ſee this, was all that we now waited for, and therefore our Ships being here careen'd, and fitted for the Sea, we ſet Sail again for *Bantam*; in which paſſage we ſhall preſent the Sailor with one Obſervation only, and that is of the Iſles of *Pulo Tayro*, between the Iſles of *Banca* and *Borneo*. This is a Cluſter of ſeven or eight Iſlands and Rocks mix'd together, the longeſt Tract of them runs N. N. W. and S. S. E. the Northermoſt of all being every way the largeſt and moſt conſiderable.

From this Northermoſt Iſland to *Pulo Pan*, the Courſe lies N. W. ½ W. nine Leagues, and all about it good Depths. The Southermoſt of the ſame Iſlands, we conclude we may place in 1 Degr. 16 Min. S. L. For when we made the Ship in that very Latitude, that Iſland then bore due E. of us.

January. Come to *Bantam*, and go away to *Jacatra*.

When we came to *Bantam*, we found a *French* Ship there, to whom the Pangran had granted Trade; and the matter had been ſo agreed between this *French-man*, the *Dutch*, and our *Engliſh*, to preſerve Peace and Quietneſs on all ſides, that they were to ſhare the Pepper in Thirds amongſt them. But our Lading being ready for us at *Jacatra*, we went thither to take it in after a very ſhort ſtay here.

Our Ships that had been employ'd about thoſe parts, while we were at *Japan*, gave a very bad Character of *Cracatow*, for a ſickly infectious place, which partly kill'd, partly ſpoil'd and diſabled the beſt part of all the Men that went thither. The *Royal James* was laden here with Pepper, Silk, and Cloves; ſome Quantities of Benjamin we had too aboard her, but the main of the Cargo was the aforeſaid Commodities.

Sail for *England*.

This Diſpatch made, we were now bound for *England*, carrying along with us a far more valuable thing than all our Lading amounted to, the Satisfaction and Advantage of a happy Peace, with an Adverſary who had been not a little troubleſome to us in thoſe Parts of the World. 'Twas in our power to let our Country know, when we came home, that the *Dutch* had been civil and friendly to us abroad.

Come home, *September*, *A. D.* 1621.

APPENDIX to CHAP. XXXIII.

Containing the Reſult of the Voyage made to Moha, *in the* Red Sea, *by the* Anne Royal, *a Ship belonging to Admiral* Pring's *Fleet, under the Command of Capt.* Andrew Shilling. *Extracted out of Mr.* Hoynes's *Journal*.

March, *A. D.* 1617.

IN the former Voyage we ſaw this Ship taking leave of the reſt of her Company, and ſailing alone towards the *Red Sea*; 'tis requiſite now that we make ſome enquiry after her, and ſee how ſhe fares in that part of the World amongſt the *Turks* and *Arabs*, who had formerly been ſo very rude to ſome of her Country. She had, it ſeems, a ſafe and conſiderably quick Voyage, between the Coaſt of *India*, and the *Arabian*, making it not more than four Weeks between *Swally* Road, and that of *Moba* upon the *Red Sea*.

April, *A. D.* 1618. Arrive at *Moba*.

The Jealouſie of a Revenge upon Sir *H. Middleton's* Account, ſtill poſſeſs'd the Turks, and they fear'd this Ship to be a Man of War.

When they were come in here, and had fix'd themſelves at an Anchor, immediately a Boat was ſent out from the Governour to demand their Country, Deſigns, and Pretenſions there; which Demands when they had ſatisfied, they gave the Town the uſual Salutation with ſome Pieces of Ordnance. The Governour took this in ſo good part, that he diſpatch'd a Perſon of better Figure to bid them Welcome in his Name, and at the ſame time a liberal Preſent of Fleſh and Fruits; but ſtill deſired more complete Satisfaction as to their Buſineſs and Intent in coming thither, as alſo to ſee ſome of them aſhore. Our *Engliſh* (as they had Reaſon for't) were no leſs jealous and tender of their Safety, than the Turks of the Quiet and Security of their Town; and therefore ſent the Governour word, That tho' they came purely upon a Deſign of Trade, yet they ſhould not expoſe themſelves aſhore, without ſufficient Pledges for their Security.

This the Governour quickly agreed to ſatisfie them in, and accordingly, with another Preſent, ſent two Perſons of good Quality to remain as Hoſtages a Shipboard, and promiſe of good Entertainment to them that came aſhore.

The Merchants go aſhore.

The two chief Merchants, with their Interpreters, landed preſently, and were receiv'd by a vaſt Crowd of People and Officers that waited for their Arrival; the former only to gaze upon them, and the latter to perform the Ceremony of bidding them Welcome. The Aga was likewiſe ready to receive them in his Palace, and appear'd in no ſmall State as to his Dreſs, Attendance, and all the Particulars of his Furniture, and, by their Relation, carried it with much good Breeding, Civility, and Heartineſs, towards them; but a Turk is a myſterious Creature, and the Aga for all his Complements is not to be pronounc'd an honeſt Man, till we have the Merchants

Experi-

* Sir *Tho. Row*, who gave thoſe Orders, and was principally the Cauſe of this third Attempt on a Trade at *Moha*.

The Aga's kind uſage of them

Experience to prove him to be ſo. In the whole Story of their Buſineſs and Deſign in coming into thoſe parts, nothing was ſo obliging to him, as their aſſuring him, they had Orders from the *Engliſh* * Embaſſador in *India*, to ſcour all thoſe Seas, and protect the Ports of the Country (and the *Indian* Ships that traded thither) from the Inſolencies of Pirates of what Nation ſoever : And that they had lately done a piece of Juſtice of this kind, upon two Ships of their own Country, which were going to plunder a rich Ship of *India* ; the truth of which the *Guzurat* Merchants would ſhortly confirm to him, who had not been able to come this Year, if they had not had the Promiſe of an *Engliſh* Guard at their return. This made the Aga ſay to his Company, The *Engliſh* were a Civil and Friendly Nation : That they ſhould live perfectly ſecure and eaſie in this Country, and enjoy all the Liberties they had at others of the Grand Seignior's Ports, and have the laſt degree of Aſſurance for all this, in his own, and the Baſſa's Firman.

But he was deſirous to know of the Merchants, Why they were ſo ſhy and fearful of him at firſt, and would not come aſhore without Pledges left in their room ? In reply to which, when they mention'd the former Violences offer'd to Sir *H. Middleton* and his Company, he told them, That Aga was indeed a very ill Man, and had been diſgrac'd according to his deſerts ; but now they ſhould be aſſur'd of another ſort of Entertainment ; for which he gave them the moſt ſolemn Oath a Turk can take, by the Beard and Whiskers of the Prophet. And farther, that none might be ignorant of the Friendly Treatment deſigned for the *Engliſh* at that place, he would have their Liberties openly proclaim'd before the whole Town ; by which Method all excuſe and pretence for any Act of Diſcourteſie or Injuſtice, ſhould be wholly taken away. Our Merchants deliver'd him the Captain's Preſent (which he took very kindly, and with many Thanks), and ſo went away from him to the Scrivano's Houſe. This Perſon was almoſt as great a Man in *Moha*, as the Aga himſelf, both upon the account of the Port and State he liv'd in, the Figure of Authority he bore there, and the main ſtroke he had in the management of all Publick Buſineſs. 'Twas neceſſary upon all theſe Accounts to ſecure his Countenance and Friendſhip in carrying on their Deſigns ; for tho' there was no danger of his open contradicting the Aga's Orders, yet a ſecret Grudge or Diſtaſte in ſuch a Perſon, might have done a miſchief ; and 'tis the beſt way, not to let any Great Man have cauſe to think himſelf neglected or deſpiſed.

The Scrivano ſides with the *Engliſh* too.

The Scrivano quickly promis'd to undertake the Protection of their Affair, and eſpous'd their Intereſt with the ſame Zeal and Heartineſs the Aga did ; which was a great Point gain'd ; for while he held their Friend, they were ſure to hold the Aga faſt, this latter being entirely guided in all his Counſels by the former. Now all was clear and open before them, and the next Buſineſs was to provide a convenient Houſe in the Town for the Reception of their Goods, and their own ſettled Abode. They were under no Apprehenſions of Fear, as to any rude Uſage or Aſſault in walking the Streets ; for beſides, that the People appear'd civil and courteous , and their ſerene Countenances expreſs'd a well-pleaſedneſs with them, they had the mighty Protection of the Aga's Oath, and the Sacred Hairs of *Mahomet* to appeal to in that caſe.

* See ſomething of it as to other Particulars in Sir *H. Mid.* Voyage.

Deſcription of the Town.

As for the * Town it ſelf, they tell us, they have ſcarce met with any comparable to it, for the cleanlineſs, neatneſs, and decent management of it. There's no ſuch thing as Dirt or Filth to be ſeen in any of the Streets ; every thing of that kind being thrown into a certain common Receptacle which is conſtantly ſcoured by the Sea, and proves no offence to the Town. Every Man's Door is ſwept and water'd Morning and Evening, the Ground lies perfectly ſmooth and level, ſo that the Streets appear rather like ſo many Bowling-Alleys, than places that are expos'd to the daily tramplings of Men and Horſes. The Houſes are all flat-roofed, built moſtly of Brick and Stone , and handſomely cover'd over with Plaiſter of Paris ; they are not generally above two Story high, but that defect is made up by good Terraces at top, where they have pleaſant Summer-Houſes built of Mats and Canes. In theſe they paſs away the Night, and the firſt Quarter of the Day ; here they have the freſh Air, and a lovely cooling Breeze from the Sea, with which when they are well fann'd, they are prepar'd to go through the ſcorching heat of the remaining part of the Day.

This ſeems to be the greateſt Burden, Foreigners (uſed to milder Climates) have to bear at this place ; 'tis ſo extravagantly hot, that 'tis hard to endure the lighteſt Cloathing ; yea, even a Shirt upon one's Back, after the cool Breathings of the Morning are over, and the Sun has recover'd any conſiderable height.

The Trade of this Town is very conſiderable, and ſo is the number of Trades-men and Merchants, that inhabit or frequent it ; the Shops are neatly built, and well contriv'd, and in every one of them you have an Epitomy of the Decency and good Order of the Town. There's a fair Market well furniſhed and ſupplied out of the Country ; and for their plenty of Proviſion, 'tis ſufficient to ſay, that *Moha* is ſeated in the *Happy Arabia*.

Their Strength at this place is not great, and they rely more upon their Soldiers, than they do upon their Ordnance, or any ſort of Fortification. There's commonly 200 quarter'd in the Town, and a Body of 500 more that lies a little upin the Country, within call, upon any occaſion.

The Aga to go away from *Moha*.

Our Merchants having thus ſeen the Town, went to take their Leaves of the Aga and Scrivano, before they went aboard again. And as it happen'd, this was a taking leave in another ſence than they intended, or thought of ; for this Aga was in a few Days to remove from that Government, and quit his place to another, who was as ſoon expected. However, he aſſur'd them, they ſhould find his Succeſſor in all things as kind and careful of their Intereſts as he was, to whoſe Favour and Good Management, he would bequeath them and their Affairs, and doubted not but they would confeſs the change was for the better.

Scrivano feaſts aboard the Ship.

This was the firſt ſtep of the Negotiation, which was happily and ſucceſsfully made ; and they being return'd the Turkiſh Pledges were diſcharg'd in honourable ſort. Theſe Perſons lik'd their Entertainment ſo well, that others were willing to come and make the Experiment, that could not pretend they were ſent for Pledges ; the Scrivano himſelf did not ſcruple to put himſelf into their hands, thinking too well of the *Engliſh* to be afraid of any Treachery from them. He brought part of the Materials for a good Feaſt along with him, but left all the Scruples of his Religion behind him ; he indulged his Genius to the height, confounded all his Prophets Diſtinctions of allow'd and forbidden things, and laid the Alcoran a ſoaking in Sack and Strong-waters.

While they rode at Anchor about this place, they tell us of a violent Storm of Thunder and Wind off from the Shore, that brought Clouds of Duſt and Sand a Shipboard upon them, tho' they were then better than a League from the Land.

The Merchants wait upon the new Aga.

The new Aga was quickly come to enter upon his Government at *Moha*, our *Engliſh* Ship paying him the Civility of her Guns at his arrival : This he took extreamly well, and ſent for the Merchants aſhore out of hand, returning the ſame Pledges that were before. Here they had all the ſame Complements over again, that his Predeceſſor had made them, the ſame ſolemn Aſſurances of Peace and Friendſhip, and quiet Trade ; and now the Honour of *Mahomet*'s Beard was pawn'd a ſecond time for the performance of the Covenants. But of how valuable a Conſideration ſoever this might be amongſt the Turks, our *Engliſh-men* thought it a very poor Security, and therefore they were ſo free as to deſire ſomething elſe beſides his Oath ; their Buſineſs muſt ſtand upon a ſurer Foundation than that, ſince they had not that Opinion of his Prophet, and his Beard, that he had himſelf, tho' they did not preſume to tell the Aga ſo much. However they inſiſted upon a Security that might give a complete Satiſfaction both to themſelves and their Country ; and this he as freely promiſed, telling them they ſhould have his own, and the Baſſa's Firman. This was all that could be deſired, and the Merchants let him know, they were fully contented.

The Turks Account of the Outrages offer'd to Sir *H. Mid.*

The Aga's good Humour bringing on a very free and familiar Diſcourſe, and amongſt other things, Sir *H. Middleton*'s Name being mention'd, they took the liberty to ask the Aga, the Reaſon of thoſe Proceedings , and what pretence the Turks had for ſo unparallel'd a piece of Treachery as was then committed. He replied to this, That the Viſier Baſſa that then govern'd the Country, was by his own cruel and bloody Nature, diſpos'd enough to ſuch Actions as thoſe, but that he had hardly perhaps gone ſo far as he did, if the Turks and *Arabs* by their Complaints of the *Engliſh*, had not added Spurs to his furious Temper, and puſh'd him on : For they reported, That our Men were guilty of all the lewd, indecorous Actions that could poſſibly be thought of, and violated the Orders and Laws of the Place (as well as thoſe of good Manners) in ſo extravagant a degree, that the People could bear with them no longer. That in their Debauches they would quarrel and fight with the Inhabitants ; force themſelves into their Houſes, and purſue their Women before their Faces ; affront their Religion (as they eſteem it), profane their Churches, by going and piſſing againſt the Walls and Gates of them. This was the Charge brought in againſt them, which if true, the *Engliſh* may bluſh while Infidels accuſe them of ſuch Crimes. One wou'd think ſuch Men were weary of their Lives, and wanted to be knock'd on the Head ; or at leaſt that they had loſt their Underſtanding together with their Modeſty.

What People are ſo jealous of their Women as the Turks ? And who are ſo tender in all thoſe Points as they ? How ſevere and ſharp a Revenge have they many times taken, for the ſmalleſt appearance of Familiarity ; for a Word, for a Glance, for a Sign, or even without any real occaſion, when their own invincible Jealouſie has prompted them to it ? And could it be imagin'd, that they wou'd be quiet and idle Spectators of ſuch Actions as theſe ? That they would endure Strangers to force themſelves into the Apartments of their Women, when they would as ſoon ſee them dead, as ſee them in any Company beſides their own ? Patience in ſuch a Caſe is not to be expected any where, except in a Country of tame, eaſie, contented Cuckolds ; much leſs is it to be expected from a Turk, that is, a Man made up of Choler, Jealouſie, and Hatred to the Chriſtian Name.

And ſo for piſſing againſt their Church-Walls, and Doors : It had been perhaps a leſs Provocation, to have ſet Fire to them in another Sence, or planted a Battery of great Guns, and beat them down to the Ground ; for this might have been the deſtruction of them, but would not have polluted or defil'd them, as the other Courſe did in the Turks Opinions. And 'tis no matter how abſurd and fooliſh thoſe Opinions are in themſelves, for if they are once firmly perſwaded in their Minds that 'tis ſo, there ought to be as much Caution us'd, as if they were ever ſo well grounded and juſtifiable ; beſides, 'tis a very great breach of Good Manners, and the Common Rights and Privileges of Mankind, to aſſault the Religion of any People, or expoſe any thing to ſcorn and contempt, that they eſteem ſacred, tho' at the ſame time their Judgments may need better Information.

Upon what Accounts 'tis likely the Turks Accuſations might be falſe.

But after all this, 'tis to be hoped, that our *Engliſh-men* might be belyed by the *Turks* and *Arabs* in great meaſure ; and that tho' ſome part of the Charge might be true, ſome of the moſt odious Particulars of it might be falſe. For (not to mention the Care and good Government of Sir *H. Middleton*) why were not theſe Crimes objected at firſt ? Why was not Sir *H. Middleton* told when he was brought in Chains before the Aga, that 'twas for the lewd Actions of his Company, that he and they were ſo ſeverely handled ? The Aga and the Baſſa had need of all the pretences in the World, to give a colour to that barbarous Action, and make it appear juſt, or at leaſt plauſible : And was it poſſible they could have a fairer and fuller Charge than this ? Or that they ſhould neglect it, and not reproach the *Engliſh* with theſe Villanies ? It looks as if the Charge was not then made, but had been patch'd up afterwards to ſerve a turn ; they were then in a hurry, and had not time for a formal Proceſs ; but after the Execution was over, they had leiſure to find out the Crimes, and draw up an Indictment accordingly. And 'tis a ſign, that there was more of the Injuſtice and Treachery of the Turks in it than they are willing to own, ſince that wicked Baſſa was quickly after ſent for to *Conſtantinople*, to anſwer thoſe Proceedings to the Emperor ; and 'tis certain, that it coſt him (at leaſt) his Place and Preferments, and that he was condemn'd to a Life of diſgrace and obſcurity. However, ſince our Merchants themſelves do not ſcruple to own, the *Engliſh* were guilty of ſome Diſorders there ; thoſe diſmal Conſequences, together with what has been alledg'd, may ſerve to deter all that go into thoſe parts, from any ſuch irregular Practices amongſt the revengeful Turks and Arabs.

This Aga the ſame that abus'd Sir *H. Mid.*

By the way, 'twas a pretty odd Circumſtance, that the Merchants ſhould be all this while diſcourſing with that very Man that had before captivated Sir *H. Middleton*, and treated their Country-men like Dogs ; that the new Aga ſhould be the old Knave that had done all that miſchief. Yet 'twas really ſo, as they found afterwards ; 'twas the ſame Man, tho' the Scrivano ſolemnly denied it, and being a ſtrange Face to them, they could not have known him, if the Aga's own honeſt Confeſſion had not aſſur'd them on't afterwards. He that was then as rough and fierce as any Beaſt of Prey, was now as mild and as gentle as a Lamb ; his ſtern Carriage was all laid aſide, and ſome Correction ('tis probable) had taught him better Manners and Deportment. He had the good Fortune to come off upon eaſier Terms than his old Maſter the Baſſa ; but that's the advantage of the little Villains, they can pretend to be employ'd and ſet a-work, and ſo ſlip their own Necks out of the Collar, while the Great Ones go to pot.

Their Agreement with the Scrivano.

But to the more important Concerns of their Trade and Buſineſs : The Agreement made with the Scrivano for Cuſtom, was Three in the Hundred for all Goods, both imported and exported, which was pretended much more favourable than what was commonly allow'd ; and then for Gold and Silver, and all Money in general, to pay none.

And now the Firmans were drawn up with all the diſpatch imaginable, and in a General Aſſembly of the Merchants of the Town, the Aga himſelf publiſh'd the Liberties granted to the *Engliſh*.

The Copies of theſe Firmans are here ſubjoyn'd as they were taken out of the Original *Arabick*.

A Faithful and perfect Firman, given by the Grace of God, to the worthy Captain of the Engliſh, Andrew Shilling, *to the Merchants, and to all ſuch as are come with him at this preſent ; and to all the Nation of the* Engliſh, *which ſhall come to this Port hereafter : For their good Uſage, and friendly Entertainment by the Grace of God, and by the Faith we have in our Holy Prophet* Mahomet ; *with the Licence of our Great Lord and King, to whom the Great God of the World give long Life : By the Fidelity, Truth, and Authority of the great Vizier of* Sinan, Mahomet Baſſa ; *whom the great God give ſtrength and Power in his Kingdom : And by the faithfulneſs, and true meaning, and command of me* Raiab Aga, *now Governour of the Town of* Mocha ; *to be given to the Great Nation of the* Engliſh, *with all faithfulneſs.*

Mahomet *Baſſa.*
Raiab *Aga.*

I The Governour Raiab Aga, *do give Liberty and Licence to the* Engliſh *Nation, to come hither to this Port, to receive Friendly Entertainment, to bring aſhoar their Goods, to buy and ſell with all freedom ; to carry ſuch Goods as they buy aboard, without lett or hinderance : And have made Contract with them, that for all Goods they land, they ſhall pay Three by the Hundred, not in ready Money, but in Goods ; and for what they carry away aboard, ſo it be Merchandice, and not Proviſion for their Ship, as Victuals, or ſuch like, that they ſhall pay ready Money at Three by the Hundred likewiſe, neither more nor leſs, but as it is contracted by our Agreement. That no Inhabitants of this Town, nor People of the Country, neither* Turk *nor* Arab, *ſhall injure them ; but they ſhall have their Liberty to their Contents. And that this my Firman and Contract is given them with a good Heart, and true meaning to ſee it performed, I witneſs the Truth before the moſt high God, and our Holy Prophet.*

Signed with my *Chop*, the Fourteenth * Day of *May*,
in the Year of our Prophet *Mahomet* 1027.

* Either the difference is from their different Computation or that the Seal was deferred to this Day.

The Baſſa of *Sinan*'s Firman.

IN the Name of GOD. *This Letter written with the Word of Truth of the moſt high* GOD : *To all Nations, Governours, and Officers, over the People under my Government :* GOD *keep you all.*

Know ye, That we have given our faithful Firman unto the Hands of Seignior Andrew Shilling, *Captain of the* Engliſh, Joſeph Salbank, *his Companion ; and to their Friend,* Edward Heynes, *Merchant ; which are come to the Port of* Mocha, *for them to go and come with their Ships to the ſaid Port, and there to buy and ſell all manner of Merchandice freely, and with all content. And we do further give them by virtue of this our Firman in the Faith of the Great* GOD, *and our holy Prophet* Mahomet ; *in the Faith of our Great Lord, whom* GOD *preſerve ; and in the Faith of Our Self, Governour of the Province and City of* Sinan ; *free Licence for to ſell and buy there, here, and in all other of our Ports, and Towns of Trade within our Government, as freely and quietly, without injury, let, or moleſtation, as any of the Traders and Merchants which come to that Port of* Mocha, *or any other, of what Nation ſoever. And do conſent and agree with them, to pay for Cuſtom of ſuch Goods as they bring, Three by the Hundred, and for what they buy and carry forth, Three by the Hundred likewiſe. And do promiſe and ſwear, in the true way of an Oath, to keep our Word with them in this Agreement ; and give you all hereby to know, that they ſhall pay neither more nor leſs. And further, That they ſhall receive neither injury, hurt, nor danger, nor any diſcontent given them, either to their Perſons or Goods, but they and their Nation ſhall have, as from their firſt Ship that came to this Kingdom, now this, ſo ever to the laſt Ship, that ſhall arrive hereafter, the like Friendly Entertainment, and Good Uſage, as we have commanded to be given them at this preſent. And that this is my faithful meaning, this our Firman which comes to your Hands ſhall be a Witneſs of the Truth.*

Written and Signed with my Royal *Chop*, from our
Court of *Sinan*, this Eighteenth Day of *July*, in the
Year of our Prophet *Mahomet* 1027.

The

The Copy of the Governour of *Moha*'s Firman, given to Mr. *Salbank*, for good Uſage in his way to *Sinan*, is this.

IN the Name of the Great GOD. *This Letter of Commandment in the Name of our great Lord (whom* G O D *keep) to all People, Governours of Towns and Cities. Know ye, that it is our Will and Commandment, That when the Bearer hereof,* Joſeph Salbank, *or any of his People, or any of the Nation of the* Engliſh, *come to your Places of Government, you uſe them, him, and all whomſoever, friendly, and with all Courteſies: That you make them pay for Victuals, or other Neceſſaries, no more than ordinary; but rather make Proviſion for them, and aſſiſt them. And for what Goods they ſhall carry away, or bring up into the City of* Sinan, *you ſhall take no Duties of them, as is the Cuſtom to other Men, but let them paſs free, doing them neither wrong nor injury. Wherefore, all you to whom this Letter or Command ſhall come, which I have given into his hand, I command you all, in the Name of the* Baſſa, *(whom* G O D *bleſs) to ſee this performed with all diligence.*

Given at *Mocha*, the Twentieth of *June*, A. 1027. of our Prophet *Mahomet*.

Mr. *Salbank* went to *Sinan*, for the Baſſa's Firman.

This latter Firman, as appears by the Contents of it, was given to Mr. *Salbank*, for his Security in his Journey to *Sinan*; his Buſineſs thither, was to receive from the Baſſa's own Hand, that Firman of his which was inſerted before, and to make ſome convincing Trial of the mighty Favour and Kindneſs which the Aga pretended he had for the *Engliſh*. And it ſeems all his Entertainment, both upon the Road, and at *Sinan* too, did very well correſpond with the Aga's Pretenſions. At his entrance into any Town of note, he was always met by a Party of Soldiers that came out to be his Guard to the Governours of thoſe places, by whom he was receiv'd with all imaginable Courteſie.

His Reception at *Sinan* was ſomething more pompous, a brave Troop of Horſe being diſpatch'd to meet him about a Mile out of Town, and a Houſe very richly furniſh'd, made ready for his Entertainment. He was firſt of all careſs'd by the principal Xeriff, and the Baſſa's Treaſurer, and after two Days reſt, had Audience of the Baſſa himſelf.

Good Sale of *Engliſh* Cloth likely about *Sinan*.

According to his Report our *Engliſh* Cloth would prove a good Commodity at *Sinan*, and the adjoyning Country. One Reaſon for which is, the ſevere Cold of the Climate, which pinches the Inhabitants for eight or nine Months; the Summer is hardly a Summer hereabouts, and under the warmeſt Rays of the Sun (he ſays) a Man might very well have endured a Furr-Gown.

But beſides this, there is a large Court at *Sinan*, and no leſs than 40 or 50000 gallant Turks belonging to it; to which add the ſeveral Armies that lie up and down in the Country, either employ'd in reducing the petty *Arab* Kings, or elſe in guarding the Turkiſh Pretenſions from their Incurſions. Theſe do all wear either high-priz'd *Venetian* Cloths, or quilted Cotton Coats, and *Indian* Pintadoes for want of good Cloth; and no doubt but our *Engliſh* ones would anſwer all the purpoſes of the *Venetian* and the *Indian*, and be very agreeable to thoſe Soldiers in their Marches through the Weather, and cold Nights Lodgings in the open Field.

In that time that this *Engliſh* Ship lay at *Moha*, the Grand Seignior, Sultan *Achmet* died, ſeveral Ceremonies being perform'd upon that occaſion in the Grand Moſque of that place: But the new Sultan was pleas'd to confirm both the Baſſa and Aga in their reſpective Places and Offices for ſeven Years longer; ſo that the *Engliſh* Trade in thoſe parts, as it had its beginning, was alſo to have its growth and progreſs under the Influences of their Government.

Upon the whole, the Turks continued fair, juſt, and civil to the laſt; they made good to a Punctilio whatever they pretended to, and did in ſome meaſure attone for former Abuſes, by the Honeſty and Obligingneſs of their preſent Deportment; tho' at the ſame time 'tis poſſible fear might have ſome ſtroke in the matter too; for the *Engliſh* were able to command and force their own Trade, and ſpoil the Turks when they pleas'd: And 'twas matter of fact, that ſome Ships had paſs'd by *Moha*, and went to *Gudda*, the Port of *Mecca*, for fear of falling into the hands of ſo much dreaded an Adverſary, and the *Mallabars* would not come in neither, but ſtay'd at *Aden*, till the *Engliſh* had given them their Paſs for Security, and good Uſage.

But the Effects were very agreeable, let the Cauſe be what it will; and if the Turks can't be juſt and true out of Conſcience, and love to Vertue, let them be ſo out of fear of power and puniſhment. They loſe the Honour of acting from a Noble Principle; but other People need not loſe the Profits of a Commerce with them upon that account.

Our Ship having done this conſiderable Service for her Country in the *Red Sea*, ſail'd away from *Moha* for the Coaſt of *India* again.

CHAP. XXXIV.

An Account of all the Proceedings between the Engliſh *and the* Dutch, *with reference to the* Banda *Affairs: Together with the ſeveral Grounds of the Pretenſions of both Parties, and the Controverſies happening thereupon. Taken out of the Journals and Letters written upon that Subject, by Mr.* Spurway, *Mr.* Courthop, *Mr.* Hayes, *and ſome others.*

AT the very beginning of this Account, we find the Relaters got out into the Eaſt-Indies; *We have no Information of the Adventures of the firſt part of the Voyage thither, but only the Events that happen'd there, without any manner of introductory Circumſtances. As we therefore find them at this diſtance, we muſt begin where they do, and take the Story in that form and length that they deliver it to us in.*

December, A.D. 1616. Go to *Macaſſar*.

HAving diſpatch'd all Affairs at *Bantam*, we remov'd from thence to *Macaſſar* (with our two Ships the *Swan* and the *Defence*) where we expected to take in 100 Quoynes of Rice. The King of this place was, and had been a long time a moſt inveterate Enemy to the *Dutch*; he would not allow any one of them ſo much as to land upon his Country, and thoſe that fell into his hands at any time were ſure never to get out again. The reaſon of this Hatred was the ſeveral Wrongs which the People of the Iſland had receiv'd from them; they had ſeiz'd and captivated ſome of the Natives, and amongſt the reſt the King of *Macaſſar*'s Sabandar, a Man of great Note and Figure in the Country; for which Affronts he vowed a ſevere Revenge, whenever he had an opportunity to take it. And ſeveral others of the petty Kings of the *Celebes* joyn'd with him in this Deſign, as having been Fellow-Sufferers and Partners with him in the Injury; they all threatned the *Dutch*, and it was their wiſeſt Courſe to keep out of the way. But notwithſtanding this, they muſt venture and try their Fortune at *Macaſſar*, and that in an abrupt intruding way too; when their Circumſtances required a great deal of application and fair means to be us'd to introduce them with any ſafety amongſt that People again.

Kings of the Iſland Enemies to the Dutch.

A

December.

A large Ship of theirs comes to an Anchor, and ſends her Skiff well mann'd aſhore, the Company of which came directly up to our Houſe. The *Macaſſars* were preſently gather'd about them, and would have hack'd them without any farther Ceremony, had not we calm'd the Fury of that Mobb for a little time, and got the Men ſecur'd under an *Engliſh* Guard, till we went to give Notice to the King. This we did, that he might not be jealous of us, and ſuſpect any treacherous concern of ours with the *Hollanders* in this Attempt.

The *Engliſh* ſave the Lives of the *Dutch*.

The King of *Macaſſar*, and ſome of his Confederates, came down immediately with 2000 Men; and here the *Dutch* had infallibly been executed after the moſt rigorous manner, if we had not ſtood their Friends, and interceeded for their deliverance. The King, at our intreaty, gave them their Lives and Liberty to return to their Ship; but 'twas partly becauſe he deſpis'd ſo poor and trifling a Revenge, and intended to diſcharge a heavier Blow (when he did ſtrike the *Dutch*, than that came to.

But this warning, it ſeems, was not ſufficient to perſwade them to keep out of danger; for the next Day they were at the ſame work again, coming on with their Boat to the Shore, tho' they ſaw an Army of enraged Enemies ready to oppoſe them. The King having now loſt all his Patience, to ſee himſelf thus affronted again, ſent out ſome of his *Macaſſars* in their Praws to intercept them, who did their Buſineſs effectually, got between them and their Ship, boarded them, and cut off every Man of them.

We were at this time commanded to keep cloſe within Doors; by which we plainly found, that there was ſome Jealouſie of a Correſpondence between us and the *Dutch* in this Deſign. And what they ſhould make this unaccountable Attempt for, unleſs to render us ſuſpected amongſt the *Macaſſars*, and ſo overthrow our Intereſt there, is not eaſie to imagine.

We ſet ſail from hence for *Poolaroon*, and had part of the way the Company of this *Dutch* Ship; we were forc'd to relieve them at Sea with our Proviſions, as well as we had done at Land with our Intereſt; and for the reward of all, they reported of us, that we were the cauſe of their Mens being kill'd at *Macaſſar*.

Come to *Poolaroon*.

* See Capt. *Elkington's* Relation, in Capt. *Downton's* laſt Voyage, *Lib.* 4.

Our great Buſineſs at *Poolaroon*, was, to treat with the Inhabitants, about the ſurrender of that, and the other Iſlands, into the hands of His Majeſty of *England*. * This was what the *Bandaneſe* themſelves had voluntarily offer'd; they were never put upon't by the *Engliſh*, but 'twas entirely their own motion: But ſince they had long courted us to it, we came now to make a formal Acceptance of their Offer, if we found them ſtill in the ſame mind.

All the Orankayes of the Iſlands being met together to conſult upon this Affair; that we might proceed the more ſafely and regularly, we firſt of all demanded, Whether ever they had made any Contract with the *Dutch*, or given them any Ground for Pretenſions to thoſe Iſlands? To this they replied, That there never had been any ſuch thing; that the *Dutch* were their mortal Enemies, never had been, nor never ſhould be their choſen Maſters.

Banda Iſles deliver'd up to the *Engliſh*.

We then put the Queſtion, Whether they did unanimouſly, willingly, and without all deceit, and ſecret reſerves, ſurrender thoſe Iſlands to the uſe of the King's Majeſty of *England*, would ſtand by the Reſignation, and maintain what they had done? To this they anſwer'd in the affirmative, with one Conſent, declaring they deſir'd nothing more, than to be reckon'd a part of the *Engliſh* Empire.

So the Buſineſs was concluded, the Writings drawn, and ſolemnly deliver'd into our hands; and in Token of their Subjection, a Turf of Earth, and a Nutmeg-Tree preſented at the ſame time; which Ceremony alſo was to be yearly renew'd.

We on our parts were obliged to furniſh them with Rice, Cloth, and other Commodities, to aſſiſt them with our Shipping upon occaſion, and treat all their Enemies as our own.

The Copies of the ſeveral Surrenders are here ſubjoyn'd, as they were tranſlated out of the Original *Malayan* into *Engliſh*, by ſome of our own Country-men.

The Contents of the Surrender of the Iſlands of *Pooloway*, and *Poolaroon*, in *Banda*, to His Majeſty.

This was tranſlated by *Robert Hayes*, the Second ſent out of the *Indies* ſo tranſlated, the third by *Robert Hayes*.

THis Writing is for the Agreement between all the Orankayes of Pooloway, *and* Poolaroon *alſo, and the* Engliſh, *in manner as followeth: That whereas in the time that* Pooloway *was not yet ſurprized by the* Hollanders, *the People of* Pooloway, *and* Poolaroon, *had ſurrendred the two foreſaid Iſlands unto the King of* England, *and had given ground to* Richard Hunt, *Merchant there, with all ſetting up the King of* England *his Flag upon the Caſtle of* Pooloway, *and ſhooting off three Pieces of Ordnance in Token of the Covenant of the Men of* Pooloway *and* Poolaroon, *between the* Engliſh *and them, when they did ſurrender the two foreſaid Iſlands to the King of* England, *and had given ground to the* Engliſh, *being done before the ſurprize of* Pooloway, *eight Days: And after that, it was taken by the* Hollanders. *And whereas at that time, there were but two* Engliſh-men *upon* Pooloway, *of weak defence, who being not able to do the Country any good, went away to* Poolaroon, *together with the Men of* Pooloway, *in one ſmall Praw, who had brought away with them Earth and Writings for the eſtabliſhing of Covenants betwixt them and the Men of* Poolaroon: *Therefore now the two foreſaid Iſlands are in the hands of the King of* England *only, according to our ſurrender. But whereas at this time through the Aſſaults of the* Hollanders, Pooloway *is fallen into their hands and poſſeſſion, if it ſhall pleaſe His Majeſty to recover it unto himſelf again, he ſhall do therein nought but Juſtice, becauſe the Inhabitants thereof have abſolutely ſurrendred it unto him: And if his Majeſty's pleaſure be to the contrary, let it be as ſhall ſeem beſt in his Highneſs Judgment. But this is ſure, that we the Men of* Pooloway *and* Poolaroon, *have ſurrendred the two foreſaid Iſlands unto His Majeſty's Power, and cannot go from, or revolt our Word again even to the laſt day, and having linked our ſelves with the* Engliſh *in one Bond to live and die together. Furthermore, all the Men of* Pooloway, *and* Poolaroon, *do covenant, to ſend every Year to the King of* England, *a Branch of Nutmegs, in Token of their Deſigns, deſiring that this Offer of all the Orankayes of* Pooloway *and* Poolaroon, *being once offered out of their true Love unto the King of* England, *be not had in oblivion or rejected.*

And whereas King James, *by the Grace of God is King of* England, Scotland, France, *and* Ireland, *is alſo now by the Mercy of God King of* Pooloway *and* Poolaroon. *Moreover, we do all of us make an Agreement, that the Commodities in the two foreſaid Iſlands, namely, Mace and Nutmegs, we cannot, nor will ſell to any other Nation, but only to the King of* England *his Subjects, according to the true meaning of our Covenants, and ſurrendring of the two aforeſaid Iſlands to His Majeſty, with all that is (in) them to be ſolely at his diſpoſing, which is and ſhall be the Reaſon that we cannot trade with any others. And whereas all the Orankayas of the two foreſaid Iſlands have made this Agreement, let it be credited that it was not made in madneſs, or looſely, as the breathing of the Wind, but becauſe it was concluded upon in their Hearts, they cannot revolt or ſwerve from the ſame again. Moreover, all we together do deſire of His Majeſty, that ſuch things as are not fitting in our Religion, as unreverent Uſage of Women, maintaining of Swine in our Country, forceable taking away of Mens Goods, miſuſing of our Men, or any ſuch-like that are excepted againſt in our Laws, that they be not put in practice, being out of our Uſe and Cuſtom, that they may not prove a Blemiſh unto our Religion, and that we may receive no occaſion to deal unkindly with the* Engliſh. *Furthermore, if any* Engliſh-man *will become of our Religion, we will accept of him upon Counſel: Or if any of our People will become a Chriſtian, he ſhall be ſo likewiſe upon like Counſel, deſiring this Promiſe that ſuch things be not done in ſuch manner as may breed diſcontent betwixt us and the* Engliſh, *which we do very earneſtly deſire of His Majeſty. Finally, at this time all the Orankayes of* Pooloway *and* Poolaroon, *do again make a Covenant with* Nathaniel Courthop, *Captain of the two Ships riding here,* Sophon Cozocke, *and* Thomas Spurway, *giving Ground, and ſurrendring the two foreſaid Iſlands unto the King of* England, *being already partly in the hands of* Nathaniel Courthop, Sophon Cozocke, *and* Thomas Spurway, *and that not only now, but as being done long ſince, when Captain* Caſtleton *went from* Pooloway *with four Ships, all the Orankayes of the two foreſaid Iſlands, having agreed with* Richard Hunt, *Merchant of* Pooloway, *withal, having ſet the King of* England *his Flag upon the Caſtle of* Pooloway, *and ſhot off two Pieces of Ordnance, in Token of the Covenant between the Orankayes of* Pooloway, *and* Poolaroon, *and the* Engliſh: *And as it hath been done heretofore, ſo at this time we do renew it with* Nathaniel Courthop, Sophon Cozocke, *and* Thomas Spurway.

The Surrender of *Roſinging* and *Wayre* to his Majeſty.

THis Writing is for the Agreement between all the Orankayes *of the Country of* Wayre, *and of the Iſland of* Roſinging, *and the* Engliſh *Nation in manner as followeth,* viz. *That whereas, in the time that the Country of* Banda *was in trouble, by reaſon of their Enemies, ſo that they were no longer able to withſtand them, they therefore agreed with* Nathaniel Courthop, Sophonie Cozock, *and* Thomas Spurway; *thus much in effect, that is, that they do ſurrender the Country of* Wayre, *and the Iſland of* Roſinging, *unto the King of* England, *in reſpect that they are not able any more to ſtand for themſelves againſt their Enemies; that now the ſaid Country of* Wayre, *and the Iſland of* Roſinging *is only in the Power of the King of* England. *And whereas the Agreement is once made, we the aforeſaid* Orankayes *cannot in our Conſciences diſſolve it again, but that it ſhall laſt for ever, until the laſt Day of doom: And that the* Engliſh *ſhall be as the Men of the Country of* Wayre *in all Privileges. Furthermore, the Men of the aforeſaid Country of* Wayre, *and the Iſland of* Roſinging, *do promiſe and agree to ſend unto the King of* England *one branch of Nutmegs, as a Token of their foreſaid Agreement of all us the aforeſaid* Orankayes; *on condition that the ſaid Token of our Agreement be not out of memory nor diſſolved, nor we diſ-eſteemed. And we do wiſh that Almighty God would vouchſafe to give Proſperity to the King of* England, Scotland, France, *and* Ireland; *and now by the Grace and Mercy of God, the King of the Country of* Wayre, *and the Iſland of* Roſinging, *and that more, we will ſtoop to no other King or Potentate, but only unto His Majeſty; and after Him to all His Poſterity. Furthermore as concerning our Trade, we do all truly agree, not to ſell any of the Nuts or Mace, which the aforeſaid Countries do afford to any other but only to the King of* England, *his Subjects, becauſe we have wholly unto him ſurrendered the aforeſaid two Countries of* Wayre *and* Roſinging, *with all that therein is, or whatſoever it doth, or ſhall yield, it is the King of* England's *own; and this ſhall ſtand for a Reaſon that we cannot trade with any other Nation. Moreover, we intreat the King's Majeſty of* England *in earneſt manner, that ſuch things as are not befitting to our Religion, as unmannerly uſage of our Women, maintaining of Swine in our Country, beating and abuſing of our Men, or taking away of them perforce againſt their Wills, as if they were their own Slaves, or any other ſuch like Attempts, that are held unbeſeeming in our Laws (we ſay) that we do entreat his Highneſs that none of theſe or ſuch like be put in practiſe by his Subjects, becauſe they are things diſallowable in our Laws, and ſo being committed, will redound to the overthrow thereof; and we thereby might be forced to deal unkindly with the* Engliſh *therefore. Moreover, if any of the* Engliſh *hereafter ſhall have an Affection to be Circumciſed, and become as one of us, it ſhall be done upon ſufficient Counſel between the reſt of the* Engliſh *and Us, or if any of us will become a Chriſtian in that Cauſe, the like Counſel ſhall be held, and this ſhall not be done for any Miſdemeanour of the party willing ſo to turn; becauſe that may breed a Diſſenſion between the* Engliſh *and us. And whereas this Agreement was made in the Preſence, and by the Conſent of the King and* Sabandar *of* Wayre, *the* Sabandar *of* Roſinging, Emmon Hattib, *and all the reſt of the* Orankayes, *of the Countries of* Wayre, *and the Iſlands of* Roſinging: *This ſhall be for a Teſtimony that it is not done in madneſs, or in the manner of the breathing of Wind; but that it was alſo as well Thought in our Hearts, as ſpoken with our Mouths, and therefore we cannot, nor will go from it again, but that it ſhall ſo ſtand until the diſſolution of the World; Neither ſhall there any Doubts riſe in our Hearts of any other, but that we the Men of* Wayre *and* Roſinging, *are only the King's Majeſties of* England's *Subjects; and if any trouble hereafter do happen in the foreſaid Countries, we will be contented as well to die, as to live together with the* Engliſh, *becauſe we will be ſubject to one King, and this ſhall ſtand for a Reaſon, that any being in league with us, ſhall alſo be in league with the* Engliſh, & percontra, *he that is near the* Engliſh, *ſhall be near Us, becauſe we will by no means again divorce our ſelves one from the other. Finally, at the time this Agreement was made, all the* Orankayes *of* Pooloway *and* Poolaroone *were Witneſſes thereunto; all the* Orankayes *of* Pooloway *and* Roſinging *have unto the aforeſaid Premiſſes ſet their Hands.*

The King of *Wayre*.
The *Sabandar* of *Wayre*.
Emmon of *Wayre*.
The *Sabandar* of *Roſinging*.
Emmon of *Roſinging*.
Hattib of *Roſinging*.

The *Bandaneſe* and we now looked on each other as intimate Friends and fellow Subjects; our Religion and Cuſtoms did not agree together, but we had our Reſerves on both ſides in all theſe Reſpects, and could enjoy thoſe Liberties apart from each other, which we could not ſhare in common betwixt us.

Proviſion was made that we might be firmly united in our Civil Concerns, tho' our other Intereſts were not to be mixed together. This Buſineſs was farther ſolemnized with the Diſcharge of our Great Guns, and the ſetting up the *Engliſh* Colours in the Iſlands, and now they were made *Engliſh* as much as 'twas poſſible for them to be, without an Encroachment upon their Privileges. But we were like very ſpeedily to be put upon the Defence of our new Territories; the *Dutch* would not give their Conſent to this Bargain, and pretended to diſpute both the point of Title and Poſſeſſion too.

The *Dutch* prepare to diſturb them.

The firſt touch was only a Bravado in coming up to *Poolaroon*, and hanging out a bloody Streamer, telling us thereby what we muſt expect from them, and that bloody doings would follow upon our Settlement there. However having given us this warning we fell to fortifying the Iſland as well as we could, raiſing two Forts, which we called by the Names of our Ships then there, the *Swan* and the *Defence*. The *Swan* Fort ſtands advantageouſly, commands the Road at pleaſure to the Eaſtern ſide, where all the beſt riding is for the Weſterly Monſon. Shortly after this they came with three mighty Ships into the Road, and lay at an Anchor cloſe by ours; this obliged us to diſpatch a Meſſenger to them to know their Pretentions, and to offer them a little friendly Advice. 'Tis to be confeſs'd that our Commiſſion ordered us to ſend the *Dutch* word immediately upon the Surrender, that they might not pretend ignorance of our Right, and come there to moleſt us as they had formerly done; and this Letter lay by us ready written, but we knew not how to convey it, for neither the *Engliſh* nor *Bandaneſe* cared to go near them, for fear of being made Priſoners. But 'twas well enough as 'twas; and now they were come themſelves for't, we could eaſily put it into their Hands. The Letter was delivered to their Chief Commander, and the Copy of the Surrender ſhewn, and at the ſame time they were demanded whether ever the Iſland of *Poolaroon* was reſigned to them. They could not ſay that any ſuch Delivery was ever made nor deny the Evidence and Truth of this Surrender now made to us. We farther adviſed them to reſtore us the Poſſeſſion of the Iſland of *Pooloway*, which was as much his Majeſties of *England*'s Right as any of the other Iſlands of *Banda*, now under his Command, and not leave the matter to be determined by a bloody War, according to the intent of their Colours. And laſtly, we told them their time was limited to ſix Glaſſes, and they muſt be gone out of the Road when they were run, or elſe the *Bandaneſe* would fire upon them; and indeed they would have done it at the very firſt ſight of the Ships if we had not made them forbear. They would fain have protracted the time, and ſtaid till next Day, but when that was denied, deſired till mid-night, but the Guns were ready mounted upon the Shoar, and the impatient *Bandaneſe* would not permit them to lie at Anchor long; they love them much at the ſame rate that the People of *Macaſſar* do, and were it in their Power, they would do them the ſame kindneſſes.

The *Engliſh* fortify. *January*.

Conference between the *Dutch* and *Engliſh*.

We were ſince informed that they came with a deſign to betray us, or beat us out of the Road, and they had made the Attempt, but they ſaw our Strength aſhoar, the Forts well provided, and the Gunners ready to give fire upon the leaſt ſign from the Ships. It had been well for us if in this difficult Circumſtance we had taken a more nice care to preſerve our ſelves from Danger and Inconveniencies; but the raſhneſs and wilfulneſs of ſome amongſt us, was a very great prejudice to us, and tended mightily to the laying of us open to the Power of the *Dutch*.

The *Swan* loſt.

One of our Maſters wanting Water, would needs go over to *Wayre* upon *Lantore* ſide, there to ſupply himſelf; this was not only contrary to the Opinion of the reſt, but to the Minds of the *Bandaneſe* too, who fearing ſome Injury from the *Dutch*, offer'd rather to fetch the Water in their own Praws. But good Councel and kind Offers ſignified nothing; ſo they went and watered, and coming back again were taken by the *Dutch*; our *Swan* had not above 20 able Men in her, and the *Dutch* Ship at leaſt 160, freſh, ſtout Souldiers, juſt drawn out of the Caſtles of *Nero* and *Pooloway*. They carried her preſently away to *Nero*, with a vaſt deal of Inſolence, Triumph, and Boaſting; and had they ſunk a whole Fleet of *Engliſh*, they could not fairly have made more noiſe. They ſhewed the tattered Ship to the *Bandaneſe* as a Tro-

February. *Egregiam vero laudem ac Spolia ampla refertis!*

phee of their Victory, and bid them ſee by this how much mightier by Sea, their King of *Holland* was, than him of *England*. A very good Concluſion, and well drawn from the Premiſſes, becauſe 160 *Dutch* had beat 30 *Engliſh*, half of which were Cripples. St. *George* of *England* too might be a very good Champion for all this, and not turned a Child or a Coward (as the *Dutch* ſaid he was) tho' his Banners were not victorious at this time.

Upon the News of this Loſs, we preſently ſent over to *Nero* to demand the Reaſon of their taking the Ship, and detaining Men and Goods; but could get no other Anſwer from them, but that time ſhould bring it to light; yet to add to the Civility, they concluded with a threatning, to come and drive us from *Poolarcon* in a very little time. Many ſuch comfortable Meſſages as theſe they ſent us; and were continually letting off their Cannon at *Nero* and *Pooloway*, to ſtrike a terrour into us; but ſtill they did nothing, and we hoped for the benefit of the old Proverb, That threatned People live long. Yet ſince they were ſo free as to tell us their minds in this plain and open manner, and we had no reaſon but to take their Words, and conclude they ſpoke truth in the caſe; we ſet our ſelves to make all things as ready for their Entertainment as might be, whenever they ſhould think fit to make a Viſit at *Poolarocn*. There was a little Iſland lying cloſe by, that was of very great concern to well be ſecured and fortified by us. It was wholly deſtitute of Inhabitants, and no way fit to be made a dwelling place of, being all over-run with Trees and Buſhes; but 'twas of conſiderable uſe in time of War, and a Fort erected there would command the whole Road.

March. The *Engliſh* Fortify upon the little Iſland hard by *Poolaroon*, which is called *Ney-ſacky*.

The *Dutch* were ſenſible of this Advantage, and were dabling thereabouts in order to get the Iſland into their own hands; which had they done, we had as good have quitted *Poolaroon* to them too, for our Ships going in or out, muſt ſtill have been under the command of their Ordnance. With two or three good ſhot therefore we obliged them to deſiſt from that Attempt, and make way for us to come thither our ſelves; and we fortified the place ſo far, that we believed we ſhould be capable of giving them ſome Diſturbance if they pretended to make an Attack upon *Poolaroon*. But what good will all the Care and Prudent Foreſight in the World do, where Treachery is at work to undermine and render all ineffectual.

This was our Misfortune; our own Men prov'd Knaves and Villains to us, and did what in them lay to overwhelm us with an inevitable ruine.

We had loſt one Ship before, by the raſh and headſtrong management of her Maſter, and now we loſt the ſecond by a treacherous Combination of the Mariners.

The *Defence* loſt too.

Theſe Villains laid their Heads together, and either cut the Cables, or let the Ship drive; but however 'twas, they went away to *Nero*, and got under the Protection of the Caſtle. Some of them preſently landed, and went boaſting to the *Dutch* of the worthy Exploit they had done, and were e'en ready to go together by the Ears, about the Principal Share in the Honour of it; they could not agree who was the greateſt Rogue of the Company, and had been forwardeſt to betray the Intereſt of his Country.

Beſides, they were ſo impudent as to carry a Kan of Wine aſhoar to drink the *Hollanders* Health, and 'tis probable Confuſion to us at *Poolaroon* at the ſame time.

Their falſe Sea-men diſcover them.

The *Dutch* examined them ſtrictly, and there was no need of a Rack to make them confeſs the Secrets of our Affairs; they pour'd out all they knew without the leaſt regret, and laid us open as far as 'twas poſſible we ſhould be diſcover'd. This heightned the Pride and Inſolence of the *Dutch*, and made them ten times more noiſy than before; they threatned us bitterly, even when they ſaw our Strength, but their Inſults were intolerable now they knew our weakneſs, and in what part they could moſt ſenſibly injure us. But this was like to produce a worſe Effect in making the *Bandaneſe* grow jealous of us; this Action to them ſmelt of Treachery and Deſign, and they believed we were all in a Plot to bring their Mortal Enemies the *Dutch* in upon them.

Bandaneſe jealous of them.

'Twas a wonder they had not broke out into a General Mutinie, and while the Ferment of the Suſpicion work'd and inflamed them, given it vent by ſome ſudden and deſperate Riſing upon us. The fiery, revengeful Temper of the *Indians* ſeldom allows ſober Arguing, Deliberating, and Examining Matters in ſuch Caſes as theſe, where their Liberties are threatned. They are generally for making as quick Work as poſſible in their own Defence; let who's will ſtand to debate the point *pro* and *con*, if they ſee a Proceeding that has an ill Aſpect towards them; they'll put a ſtop to it as ſoon as may be, by involving all that have a hand in it in a certain Deſtruction.

We have reaſon to ſet this down amongſt the other Favours of Providence to us, and think it not a little happy to have eſcaped ſo diſmal a tumult as this might have rais'd. We made a ſhift to quiet the diſturbed Minds of the *Bandaneſe*, and convinced them that what they thought to be our Treachery, was meer misfortune, and a Loſs we bitterly reſented. Matters ſtanding thus between the *Dutch* and us, there were ſome Attempts and Motions made on both ſides towards the bringing them into a better poſture. And after ſeveral to no purpoſe, the method taken at laſt was, that we upon the receiving valuable Pledges from them, ſent over a Commiſſioner in a Gally of theirs to *Nero*, to diſcourſe the point there with their General. This appear'd the moſt probable way of ending the Difference if ever it would be ended, which yet we ſaw little hopes of by the Succeſs of this Conference. For the *Dutch* carried it extreamly ſtiff and high, and were no way diſpos'd to come to a friendly Concluſion; but upon ſuch terms as we eſteem'd baſe and diſhonourable, and muſt have abus'd our Truſt to have ſubmitted to. Our Ship, and Goods, and Men could not be reſtored but upon the Surrender of *Poolaroon* into their hands; that is in order to the recovering a ſmaller Right we muſt yield to do an unpardonable Wrong; we muſt be Traytors to our King and Country, violate ſolemn Leagues and Engagements, ſacrifice the Lives and Liberties of the *Bandaneſe*, and leave all at their Mercy, or elſe we muſt have no Peace nor Juſtice done us. A very fine Propoſal; 'twas hardly conſiſtent with Modeſty to make it, but it would have been much leſs conſiſtent with Honeſty to Embrace it. Should not we have been truſty, loyal Subjects thus to give away the Juſt Rights of our Prince? What thanks ſhould we have deſerved from the *Engliſh* Nation, and thoſe that had repos'd a Confidence in us, by betraying a Noble Trade, with all the Advantages of it, into the Hands of ſuch as were every where encroaching upon them? And could the *Bandaneſe* ever have forgiven us for deſerting them at this rate, when they had ſo entirely reſigned us the Command of their Country, and caſt themſelves upon the *Engliſh* Protection? What could be Ingratitude if this were grateful or baſe, and ungenerous if this Action could paſs? But then 'twas not to be imagined that any People would ever receive us after this infamous Surrender; and if we courted a Settlement any where, we might expect the *Indians* to reproach us with the Buſineſs of *Banda*, and tell us, We would ſtay with them, but till the *Dutch* came to frighten us away. Certainly they muſt think we were prodigiouſly fond of their Favour, or in ſome ſtrange need of it to bid thus high for't; to barter away Conſcience, Reputation, Loyalty and Gratitude all at once, only for that, without any other Conſideration or Advantage. But at the ſame time they laid ſome things to the Charge of the *Engliſh* that were as untrue as this Propoſal was unreaſonable. For Inſtance, that we had ſometimes worn their Colours in our Ships, and particularly that Sir *Henry Middleton* did ſo in the *Red-Sea*. But our Commiſſioner was very able to anſwer and refute this Charge, being all that time aboard that very Ship which they pretended to have thus abuſed them, and affirming that to his certain Knowledge no ſuch thing was done. Beſides, which is the leaſt Abuſe of the two, for *Engliſh* Men to wear the *Dutch* Colours, or for *Dutch* Men to wear the *Engliſh* Name, and go abroad in the World under that Notion? The Colours are eaſily taken down again, but the Name is not ſo eaſily forgotten, eſpecially if any ill thing be done to faſten the Remembrance of it.

April. *A. D.* 1617. Conference with the *Dutch* at *Nero*.

Their Accuſations and unjuſt Demands.

False Pretence of the King of *England's* Letters.

In the laſt place to juſtifie their Proceedings hitherto, they did not ſtick to aſſert that they had the King of *England*'s Letters that empower'd them to ſieze any *Engliſh* Ships they found to the Eaſt ſide of *Celebes*. And if this were ſo, their Action was juſt, and the Quarrel at an end; but they could not fairly expect that we ſhould take their words for it, giving us no Demonſtration of the Truth on't, by the ſight of the Letters. We could do no leſs than offer upon the Peruſal of thoſe Letters to ſit ſtill for the future, and make no farther Demands of Satisfaction from them; and they in juſtice could do no leſs than produce them too, that the Point in Diſpute might have received its full and final Determination thereby. But this they abſolutely refuſed to do, and we as abſolutely concluded 'twas becauſe they could not; for there were ſo many Reaſons of Advantage on their ſide for the doing of it, that 'tis a clear Caſe, and needs no farther degree of Evidence.

Now is not this putting out falſe Colours in a worſe Senſe than that they accuſed us of? What, pretend a Prince's Hand for an Excuſe to abuſe and cheat his Subjects? Make him an Enemy to his own Trading People abroad, and boaſt of his Authority to plunder them? This is a fine Compliment to a Prince, and deſerves to be in another way animadverted upon. We believe the *Dutch* Nation it ſelf would be far from allowing their People abroad in Inſolencies of this nature, and are totally ignorant of a world of their unjuſt and rude Dealings with us and the Natives of the Countries where they trade.

Well, here now was the reſult of the Conference; the Matter reſted juſt where it did at firſt; the *Dutch* and we were upon the ſame terms, and we had as good have let this Ceremony alone. The Truth on't is, as far as appears, they ſeem to ſit ſecure and eaſie enough in their own Minds let it go how 'twill; and if the Breach be not made up here, they make no doubt (as they pretend) of avoiding all the ill Conſequences of it by their powerful Intereſt in *England*.

Dutch pretend Friends in England.

They tell us they can make as good Friends at Court as the *Eaſt-India* Company, and with a Golden Engine will overturn all the ſtrongeſt Preparations that are made againſt them. They put a World of Confidence in the Power of their Rials of Eight; and queſtion not finding Men amongſt us, that can be baſe and ſordid enough to take their Fees, and be retained againſt the Cauſe and Intereſt of their own Country. This Noiſe muſt be made undoubtedly to damp and diſcourage our Reſolution of ſeeking the Redreſs of all theſe Grievances at home; but as this is too childiſh a Contrivance for them ever to think to ſtop our Mouths by; ſo we hope to find their other Pretences as vain and deceitful, and all *Engliſh* Men for ever invincible by their Money as well as by their Force.

In this poſture of Affairs we concluded a party of us ſhould go for *Bantam*, as well to adviſe about our future Proceedings, as to give an Account to our Preſident there of what was paſt, and to carry the Surrenders of the *Banda* Iſlands. Beſides our own Company, ſome of the Principal *Bandaneſe* went too, to perform the Ceremony of delivering the Earth, and Fruits of the ſaid Iſlands, in token of Subjection.

Like to be taken by the Dutch in going to Bantam.

We had a very hard matter to eſcape the *Dutch* in this Voyage, a great Ship of theirs purſued us eagerly, and had certainly fetched us up, had not we rowed extreamly hard, and took ſhelter at *Botun*. The King of that place ſtood our Friend in this Diſtreſs, provided ſecure Lodgings for our ſelves, and a private Stowage for our Goods, and laid us up as cloſe as we could deſire. We were hardly gotten into our Shelters, but the *Dutch* landed, and came to the King to enquire after us, and the more effectually to diſpoſe him to what they ſhould farther demand, made him a Preſent three times the value of what we had given juſt before. 'Tis to be noted that the *Dutch* were not certain what we were, for tho' they had given us a Leaſe for ſome time, yet they were never near enough to make a Diſcovery; beſides we had only a little *Bandan* Praw, and ſo could not be betrayed by our Colours. The King of *Botun* humour'd the Buſineſs well enough, carrying it to the *Dutch* as if he had taken in a parcel of diſtreſſed Strangers, People he knew little about, and could give no ſatisfactory Account of. But this ſlender Pretence would not do with the *Dutch*, and perhaps they had ſome Jealouſie who the Strangers were; however to aſſure themſelves, they reſolved to ſtay ſome Days and watch us, that ſo either coming in or going out they might ſieze the Prey. In ſhort they ſtayed ſo many Days, that we were quite weary of being pounded up ſo, and contrived how to trick them and give them the ſlip. We left the old Praw, we came in riding where ſhe did at firſt, and having got a new one ready on the backſide of the Iſland, the King's Servants conducted us with all our Baggage in ſafety aboard her; and how long the the *Dutch* ſtaid waiting upon the empty Praw we cannot tell.

King of Botun their Friend.

May. *Come to Bantam.* *June.*

At *Macaſſar* (where we put in by the way) we exchanged this new little Veſſel for one of our own Ships trading there, and took into her 180 Suckets of Mace, bought at the ſame place.

From hence we got to *Bantam*, without any farther Danger or Diſturbance. Here the old quarrel went on between the *Dutch* and Us. We did not looſe our Enemies, or leave them all behind us, by coming away from *Poolaroon*, but found a party here ready to entertain us. One Day it came to a downright Skirmiſh in the open Market; ſcolding and railing would not ſerve that time to give a ſufficient Vent to the Paſſion on both ſides; ill Language would draw no Blood, and therefore Swords and Clubs were call'd in to do it. By degrees the whole Poſſe of both Houſes were engaged, the Slaves came in amongſt the reſt, and fought as well as the Maſters. The reſult of it was, that we drove them before us to their own Houſe; we ſaw them ſafe within the Walls, which was as far as we could keep them Company. No great Miſchief was done on either ſide, tho' ſome Lives loſt on both; but they filled the Town with the noiſe of the horrible Execution they would do upon us, and they did their utmoſt to be as good as their word, lying in wait for us with their Fire-arms in all places of Secrecy and Advantage. Thus hot and violent was the fewd betwixt us, and ſo outragiouſly angry were they that we would not quit the Poſſeſſion of the *Banda* Iſlands to them. They might (had they acted reaſonably) have forborn the making ſuch a Demand; and conſider'd that we with more Juſtice and Conſcience could challenge them to ſurrender the Iſle of *Pooloway* to us, which is one of the *Banda* Society too. The King of *England*'s Right to that, is as indiſputable as to any of the reſt, if at leaſt 'twas in the power of the natural Poſſeſſours of the ſame, to confer that Right by a formal Reſignation, as no body doubts but 'twas. And 'tis moſt clear that they actually did ſo, by the plain and poſitive Mention of *Pooloway* in the Copy of the Surrender as well as of *Poolaroon*; that Paper largely aſſerts His Majeſty's Right, ſuppoſes the Foundation of a preceding Grant of the Iſland to him, and adds a new and freſh Acknowledgment of his juſt Title to it. Beſides 'tis matter of Fact as notorious as can be, that the Iſland was put into the Hands of the *Engliſh*, with all the Formalities of a ſtrict Surrender, and that they kept it till the injurious Force of the *Dutch* deprived them of it. The World knows well enough too how contumeliouſly they treated the *Engliſh* there; as if it had not been enough to have expelled them, without uſing them at the ſame time more like the Deſpicableſt of Beaſts than Men or Chriſtians. 'Twas very hard meaſure therefore, after all this injurious Treatment, to be hectored and threatned becauſe we would not tamely ſubmit to more Injuries; and 'twas a very good Argument why we ſhould ſurrender *Poolaroon*, that they had cheated our King of *Pooloway* before.

Dutch and Engliſh fight at Bantam.

Dutch prove their Title to Banda from their taking the King of Ternate's Son Priſoner.

But one ground of their Pretence to the Iſlands of *Banda* is diverting enough, and a very good Inſtance it affords of juſt and fair Reaſoning. They argue their Right from this, that the King of *Ternate*'s Son was once their Priſoner. Now to make the Conſequence of this Argument appear Juſt and Natural, clear and compulſive of the Aſſent of any diſintereſted Mans mind, we believe will take them up more time than the compleat Conqueſt of thoſe Iſlands would do. Eſpecially if we take in the whole of their Aſſertion, and bring the *Molucca's* into the Account; for they affirm that by this Action they procured a Title to all theſe Iſlands, both the *Molucca's* and the *Banda's* too. But was the King of *Ternate*'s Son a fair Priſoner of War, or pick'd up by chance and ſnapt as a Prize? Was he the Priſoner of a juſt and righteous War too, or inſtead of a juſt War, was it meer Violence and Depredation? For this Queſtion is to be put to a Chriſtian People, who may be expected to have ſome regard to Right and Wrong, to Juſt and Unjuſt in their Proceedings. But if all this were ſo, it does not preſently appear that they were *ipſo facto*, the rightful Sovereigns of the Country. The King's Son was made a Priſoner, but the Kingdom it ſelf had not loſt its Liberty; did they make an abſolute conqueſt of it? Did they wreſt the Power out of the Natives hand, and poſſeſs themſelves of it entirely? Did victorious Arms force the *Ternatees* to lie at their Mercy, and leave all at their diſpoſal? If not, 'tis hard to conceive how the Misfortune of the Prince, ſhould entail ſlavery and ſubjection upon the People. Beſides the Throne was not vacant, the Father was alive tho' the Son was a Priſoner; and 'twas in his Power to ſettle the point of the Succeſſion as he pleaſed, and find other Heirs to the Crown beſides the *Dutch*. Might not the *Engliſh* have pleaded as good a Title from the offer the King of *Ternate* made of his Country to Queen *Elizabeth* by Sir *Francis Drake*; and the King of *Tydore* have made the ſame Challenge too upon the Death of the Prince of *Ternate*, whom his Son killed in Battle? But then a Right to *Ternate* allowed upon an Hypotheſis, a Right to all the *Molucca's* wont handſomly nor fairly follow from thence; for *Tydore* is one of thoſe Iſlands, and a conſiderable one too, but no Subject to *Ternate*, but her Rival in Power and Empire; and if ſhe did once wear the Yoke of that Iſland, when it was in its flouriſhing ſtate, the *Dutch* muſt examine the Grounds and Cauſes of the Revolt, to be ſure that *Ternate* has yet a juſt Title to her Obedience, before they pretend any upon this Account.

See Sir *Francis Drake's Voyage*. *Lib.* 1. and Capt. *Saris's Lib.* 2.

But the Conſequence as to the *Banda's* lies yet infinitely more in the dark. The King of *Ternate* had nothing to do here, no more than the *Dutch* had to do there, upon their being poſſeſſed of the Royal Captive. Theſe Iſlands are near a-kin to the *Dutch* in their Civil Policy; they are all free States, up to the Ears in popular Notions and Principles, and can reliſh no Government but a Democracy. They have their Sabandars and Orankayes, or Governing Miniſters and Noble Men amongſt them, but all ſtands upon the Baſis of the Peoples Authority, who maintain the Liberties of their Conſtitution with all the Chaſtity imaginable, and are entirely their own Lords and Law-givers. Now indeed they call the King of *England* Sovereign, but they ſtiffly deny that the King of *Ternate* has any reaſon to expect or demand that Title from them; nay, he himſelf in the * enumeration of his Titles, never pretends to call himſelf King of the Iſlands of *Banda*. From all which put together 'tis apparent that the *Dutch* did but trifle in pretending a Right to theſe Iſlands, upon that Principle they then went upon. Upon the whole; the Trade of theſe Iſlands is very rich and inviting, and 'tis a matter of very great importance to have our Intereſt here well guarded and maintained. Could we get *Pooloway* into our hands, we ſhould have more ſweet and ſenſible Proofs of the goodneſs of this Spice Trade; thoſe that know it ſay 'tis a Paradiſe, and the *Dutch*, the preſent Poſſeſſours, affirm 'tis as good to them as *Scotland* is to our King. The Compariſon is a little ſawcy, tho' we know well enough that *Pooloway* has the bleſſing of Spice Trees, which *Scotland* has not. However if we can keep the others and enjoy them quietly, they'll furniſh Mace and Nutmegs not only ſufficient for *England*, but alſo to drive a Trade with to *Surat*, and other parts of the Indies. Our great Buſineſs in order hereunto, next to the maintaining a good Force, is to ſupply them well with Cloth and Rice, Salt, Pepper, and other Neceſſaries they want; they are ſo deſirous of theſe things, eſpecially Cloth and Rice, that had we had three times as much as we now brought, we ſhould have found vent for it all without the leaſt difficulty. The People of *Lantore* and *Roſinging*, and other places, come over to *Poolaroon* with their Mace and Nutmegs in great numbers, and bring it in ſo faſt, that there is no fear of a conſtant and certain Trade, if we do but furniſh them as faſt with thoſe other Commodities. As for the Rice we bring them, tho' *Macaſſar* is able to ſupply that, yet we muſt find ſome place that will do it at lower rates; and 'tis certain we can have what Rice we will from *Japan*, at half the price that we can at *Macaſſar*; the Voyage is longer 'tis true, but then the Advantage is conſiderable. Your *Macaſſar* Gold alſo, which goes at *Bantam* but for 2*s* 4*d* or 2*s* 6*d* the Maſs, goes at *Banda* as current as Rials of Eight, and at the ſame rate too.

* This will come after in another place.

Profitable Trade at the *Banda* Iſlands.

Together with the Encouragements of this good Trade, we had our Loſſes and Misfortunes another way: A Praw nobly laden with the Spice of this Country was caſt away in her Voyage to *Bantam*; ſhe had 3366 Cattees of Mace aboard her, which would have been worth as good as 500000 pound in *England*.

February.

The *Dutch* took two more of our * Ships too, and carried them into *Nero* Road, wearing our Colours under their Ship Sterns in a moſt diſgraceful manner. This Loſs was the greater upon the Account of the Lading they had, which would have fitted the *Bandaneſe* to the life; 200 Quoyn of Rice and upwards, 34 Bales of Cloth, beſides 600 Jars of Rack and other Proviſions. They were hampered with their Lading, and much overmatched in number; beſides, that the *Dutch* Ships were light and free, and every way ready for the Service of ſuch an Occaſion.

* The *Solomon* and the *Attendance.*
March.
A. D. 1618.

The *Bandaneſe* that were in this Action ſignalized themſelves at a very great rate; they were thorough hearty Enemies to the *Dutch*, and being ſo, fought with ſo good a will, that our Men ſay if they had been upon plain Ground, and to fight it out fairly with Swords, they make no queſtion but that the *Dutch* muſt have all yielded or died for't. Our poor Sea-men brought Priſoners to *Nero* had a miſerable uneaſie life of it there; but 'twas the Fate of ſome of them to be diſpoſed of in other places up and down, as *Amboyna* and the *Moluccas*, or wherever their rigorous Maſters were pleaſed to ſend them. Yet one of the *Dutch* Commanders expreſs'd a great deal of Humanity and Kindneſs to thoſe forlorn wretches, for which we did not fail to make him the due Acknowledgement of our moſt hearty thanks; the ſame Perſon alſo would be ſo civil as to ſtrike his Main-top-ſail as he paſſed by our Fort, upon *Neylackey* Iſland by *Poolaroon*.

Dutch aſſault *Lantore.*
April.
A. D. 1619.

The *Dutch* who had ſome time before been tampering with the People of *Lantore* to come in amongſt them by fair means, not ſucceeding that way had now recourſe to Arms in order to the forcing it. But the *Lantorees* (who had conſulted us before-hand about the point of their Defence) were not to be managed that way neither. The Enemy landed 500 Men upon them, but they ſtood ſo tightly to their Buſineſs, that the others were obliged to retire back again to their Ships. The next touch they had with them, the *Lantore* Men handled them to better Advantage ſtill: The *Dutch* muſt needs come and give the Iſlanders a Challenge, which they accepting of, mann'd out a couple of Praws and ſo went to it, two Praws to four; the event of which Skirmiſh was, that the *Lantorees* took one of their Praws, killed all the Men, and purſued the reſt home to *Pooloway*. Theſe little Succeſſes put them mightily in heart, and the *Dutch* were Adverſaries that grew every Day into more and more contempt with them. Theſe People, tho' belonging to the *Banda* Iſlands, and very well diſpoſed to ſubmit to the *Engliſh* Power after the example of their Neighbours, had not yet made an actual Surrender. For as was hinted before each of theſe Iſlands, is a free independant State in point of Government, and tho' they unite in their common Intereſts, yet they all ſtand upon their particular Foundations.

June.

But now they propoſed to ſurrender too, and agreed that their Sabander ſhould be empower'd to come over to us and conclude the Buſineſs; but the Articles required ſome time to be weighed and debated on both ſides, before the finiſhing ſtroke could be given to this Affair. In the mean time things began to grow ſtrait with us at *Poolaroon*; we wanted Men, Money, and all things neceſſary to encourage our new Beginnings there, and give Heart and Spirit to the *Bandaneſe* in their dependance upon us. We were forced to put off Goods to procure common Proviſions for houſe keeping, and to take up Money at 50 *per Cent.* Intereſt. Our Friends at *Bantam* were guilty of an unpardonable Neglect of us in ſuch Circumſtances, to our very great Diſreputation, and the manifeſt hazzard of the whole *Engliſh* Intereſt in theſe places. They would ſend us encouraging Letters and bid us rub out another Year when Supplies would certainly come; but in the mean time theſe Good Words would not defend the Forts and fill the Souldiers Bellies; and as for the point of rubbing, we had rubbed ſo long till we had rubb'd off the Skin, and if we continued doing ſo much longer, ſhould rub to the bare Bone. 'Twas not ſo eaſie a matter as they might imagine to weather the point here, with the *Dutch* attacking us on the one ſide and the *Bandaneſe* beſieging us with unwearied Importunities for Supplies on the other; and by the way it muſt be ſaid, that if that People had not had a truly loyal Reſpect to our King and Country, they would never have born the Diſappointment ſo long, but have ſought out ſome other Protectours. The Affair of *Lantore* was now revived, and brought to its deſired Perfection. The People of that Iſland demanded Arms and Aſſiſtance of us, and upon the performance of that Condition, made a formal Surrender of the place to his Majeſty of *England*.

Engliſh at *Bantam* not careful of their Intereſt at *Poolaroon.*
April.

October.
A. D. 1620.
Capt. *Courthop* Principal at *Poolaroon*, was killed by the *Dutch* coming back from the receiving this Surrender.

The Copy of it is here ſubjoin'd as 'twas delivered to us by the Sabandar and *Orankayes* of that Iſland.

Tranſlation of the Surrender of Lantore, *Cont. in the Paper* N D.

In the Year of the Prophet *Mahomed* 1028, in the tenth Day of the Moon *Mabarran*, being *Saturday*, the Year is called *Aleph*. And in the Year of *Jeſus*, 1620, in the Month of *November* the 24th Day.

This is the Writing of the Agreement of the Sabandar of Lantore, *and the Captain of* Lantore, *and all the Orankayes within the Country of* Lantore, *with* Robert Hayes, *after the loſs of Captain* Courthop; *That we of* Lantore *do ſurrender the Land of* Lantore *unto the King's Majeſty of* England *with all that is therein: So that all the Nuts and Mace within the Country of* Lantore, *we promiſe to ſell to no other People, other than to the Subjects of the King's Majeſty of* England *only. Furthermore, we the Orankayes of* Lantore, *do promiſe every Year to ſend to the King's Majeſty of* England *a bough of a Nutmeg-tree, for the acknowledging the Homage of us the Men of* Lantore, *to the King's Majeſty of* England. *To the intent that this Agreement of Surrender betwixt Us be not forgotten, to the end of the World:*

And to the intent there be no difference or falling out betwixt us. Furthermore, we do crave of His Majeſty of England, *concerning ſuch things as do not agree with our Religion, that they may not be done in the Country of* Banda, *to the end that ſuch things being reſtrained, there be no offence given between the* Bandaneſes *and the* Engliſh-men: *As to enforce our Women, our Wives or Daughter, or to ſtrike any of us, or violently to take any thing from us, or to let Swine looſe in our Country, or any ſuch-like thing as doth not agree with our Religion. Theſe things we only except (becauſe thoſe things tend to the deſtroying of our Religion) to the intent there be no falling out betwixt the* Bandaneſes *and the* Engliſh, *unto the end of the World. And whereas it pleaſeth God, that* James *is King of* England, Scotland, France, *and* Ireland; *ſo now alſo he is King of the Country of* Banda: *So then the Country of* Banda *is in Subjection to no other King than to the King's Majeſty of* England *only in this World, excepting our Religion. For our Religion of* Iſlam *doth not agree with the Chriſtian Religion, neither doth the Chriſtian Religion agree with our Religion of* Iſlam; *and this is the purport of our Agreement. Further, if it ſhall happen any* Engliſh *to run to us, or any* Banda-man *to run to the* Engliſh, *it may not be tolerated without the conſent of the chief of the* Engliſh, *and us of* Banda; *becauſe ſuch things are contrary to our Religion, and tend only to falling out, and Brabbles betwixt the* Banda-men, *and the* Engliſh-men. *At this time we were together in Conſultation, all the Orankayes of* Lantore, *and the Orankayes of* Labetacke, *and the Orankayes of* Nero Pooloway, *and* Poolaroone, *and have put to our Hands, and this is the intent of this Writing.*

Sabandar Lantore.
Sabandar Ratoo.

November.

Dutch Packet taken.

After this, there happen'd an Accident that brought about the Redemption of ſome of our Men, that were then Slaves to the *Dutch*, and that in a manner lucky enough: 'Twas our Fortune to take a *Dutch* Intelligencer, that was going with her Packet of Advice between *Amboina* and *Banda*. By theſe Letters we underſtood (tho' we could not perfectly underſtand all, for want of their Language), that the *Dutch* and the *Engliſh* Nations were well enough agreed at home, and that there was a likelihood of ſomething being done, in order to put an end to the Differences of all the contending Parties abroad. The uſe that we made of this Intelligence, was to let the *Dutch* know what Buſineſs was a-foot between our reſpective Countries, and therefore to caution them not to proceed in thoſe unjuſt and rigorous Courſes they had hitherto taken, leaſt the Noiſe of our Brawls and Squabbles here, put a ſtop to thoſe hopeful Beginnings of a Reconciliation at home. And this produc'd a ſeeming yielding to Peace and Friendly Correſpondence; they were mighty tractable upon't, for a little time, and agreed with us for the Redemption of ſome of the Priſoners. But alas, they could not hold their good Humour long, but quickly laid aſide the Maſk of pretended Friendſhip, which indeed ſeem'd to be put on only to deceive us the more effectually.

Dutch ſecretly practiſe with the *Lantore* Men. *December.*

They began firſt to practiſe with the *Lantorees* for Trade; but they were ſo honeſt as to give them a flat denial of any intercourſe with them upon that account, as alſo to acquaint us with the Endeavours of the *Hollanders*, to inſinuate themſelves in amongſt them. After this they came to violent Methods, and thought to ſcare them into a compliance; but the Men of *Lantore* made a brisk Defence, took no Blows but what they repaid with Intereſt, ſo that the *Dutch* hitherto got as little ground upon them by fighting, as they had before by wheedling. 'Twas very much their Buſineſs and Deſign to effect a Rupture between the *Bandaneſe* and us, at leaſt to poſſeſs their Minds with Suſpicions of our Fidelity towards them, as the readieſt way to make the deſired Breach. Thus they wou'd come ſometimes within the very reach of our Ordnance, as if they were ſatisfied we would not hurt them: And when they were at any time purſu'd by the *Banda* Praws, in their danger they would hang out a White Flag to us, as much as to ſay, the *Engliſh* will call you off, and deliver us out of your Hands.

But yet that Plot did not take, and the *Bandaneſe* miſtruſted us never the more for thoſe little Tricks of our Adverſaries. They had now plaid ſmall Game thus long, and had won nothing conſiderable upon us: But being fully reſolv'd not to part Stakes, nor make any other Concluſion of the Matter, than by ſweeping all entirely away; they at laſt made the Attempt, which prov'd the Ruine of us and our Intereſt in theſe Iſlands for ever.

A mighty Force of Men and Shipping were got together, and the better to colour the Deſign, the *Dutch* General ſent us word, That he was preparing for an Enterprize, that tended to the mutual Good of us both. This was a beginning that agreed very well with the latter end; a Lye was a good Introduction enough to Treachery and Injuſtice; and before People were plunder'd and forc'd out of their Right, 'twas a proper Method to abuſe them, and tell them a plauſible Story. He would have been glad too (he pretended) of our aſſiſtance in this worthy Deſign that was going on; but ſeeing we were low, and had no Forces to joyn with him, he would take all the trouble upon himſelf, and act alone.

Dutch prepare for the Conqueſt of the *Banda* Iſles.

Some Intelligence we had from *Amboina*, aſſur'd us, that theſe Preparations of the *Dutch* were ſome way or other levell'd at us; and that which way ſoever the Storm threatned to go, 'twould drive at laſt upon ſome of the Iſlands of *Banda*. Which we quickly found too true; tho' at the ſame time 'twas the very perfection of Villany to put on ſuch a Vizor for the doing of what they did, and 'tis a Queſtion, whether all the Rabble of Heatheniſh People in the World, can furniſh ſuch another Maſter-piece as this was.

February. They come to *Lantore.*

They began with *Lantore*, coming before the Iſland with a Fleet of ſixteen ſtrong Ships: They knew very well that this place was ſurrendred to the uſe of the King of *England*, and that we had actually ſettled a Factory there.

* Capt. *Hayes*, who ſucceeded Capt. *Courthop* in his Charge.

As ſoon as we at *Poolaroon* heard of the Force come up before *Lantore*, our * Captain ſent to the *Dutch* General, deſiring him in Civil Terms to forbear any Acts of Hoſtility at that place, becauſe 'twas well known to be the King of *England*'s Property. But he having read the Letter, and expreſs'd his contempt of it, and ſpent a little time in threatning and railing at the *Engliſh*; without any more adoe landed his Men, and fell upon the *Lantorees*. Their Power being ſo great, the Diſpute was quickly at an end; the Natives were abſolutely routed, retired to their Shelters in the Fields and Woods, and left the Iſland to the Command of the Conquerors. The *Dutch* ſack'd and fir'd the Town, plunder'd our Factory, took away all the Cloth, Money, and Spice there, belonging to the *Eaſt-India* Company; 23400 *l.* Weight of Mace, and 120000 Weight of Nutmegs fell into their Hands. Our Factors there preſent were ſtripp'd, bound, beaten, tumbled over the Town-Wall, dragg'd along the Streets with Fetters about their Necks, and afterwards laid faſt in Chains. They were not ſo kind as to execute them outright, living being then a far greater Puniſhment than dying.

Lantore thus had its Fate, and that of all Fates the moſt dreaded by it; to fall into the Hands of the *Dutch*: Such was their rooted Averſion to them, that perhaps had they had their choice, they would as ſoon have accepted of an Earthquake, to ſwallow them up, as them that did. But we were all to go one after another, and *Poolaroon* was laid out for the next Morſel the hungry Adverſary would catch at.

March. They threaten *Poolaroon*,

We endeavour'd to prevent this, by freſh Applications to the *Dutch* General at *Nero*, having already heard, that our Doom was paſs'd, and Execution wou'd quickly follow, if our own voluntary Surrender of the place did not prevent it: But this we could never think of ſubmitting to; tho' we could not hold it out, yet to reſign had been baſe and criminal, but to be driven out by main Force, would be only our misfortune.

They come with a Fleet to *Poolaroon*.

The *Dutch* General ſeem'd to make ſtrange of any ſuch Deſign, as coming to beat us from *Poolaroon*; he had ſo much Modeſty and Shame as to ſcruple the owning it, and ſo little as to put it immediately in practice. For our Agent was hardly return'd, but the *Dutch* Fleet preſented it ſelf before the Iſland, and ſent their Summons to the People to ſurrender it.

The *Bandaneſe* were in a terrible Conſternation, and knew not what Courſe to take in this extremity: All the Plagues of War were threatned by the *Dutch*, on the one ſide; and yet they knew not how to burſt the Bonds that held them to us on the other. As for our parts, we were reduc'd to ſo low and bare a Condition, that we were no way capable of preventing their Ruine and our own; we had no tolerable Force to oppoſe the *Dutch* with, and Juſtice and Right cou'd not defend us from them. This the *Bandaneſe* ſaw perfectly well, and therefore eaſily concluded, that Matters were too far gone ever to be retriev'd; yet to amuſe the *Dutch* they told them, That they had made a ſolemn Surrender of the Iſlands to us and therefore being now out of their power to diſpoſe of, they muſt agree that Point with us as well as they could. But as this was but an excuſe to ſave themſelves from doing an unjuſt and an ungrateful Work, ſo the others took it as ſuch; and therefore peremptorily demanded the Surrender from them, nothing leſs than which ſhould be their Deliverance from the like Tragedies acted amongſt them, that were lately at *Lantore*. And this being the point, they concluded they had no way but to yield to the preſent neceſſity, and for once ſave their Perſons and Country from an otherwiſe unavoidable Ruine, by giving over-again to the *Dutch*, what they had given to us before.

Poolaroon reſign'd to them. *May*, *A. D.* 1621.

This was done, and the Articles of the new Agreement were much of the ſame nature with thoſe of the old, only this added (which we never impos'd upon them) that they ſhould pay Tenths to the Prince of the Country. Before this Conſummation of the Buſineſs, our Colours were pull'd down, and theirs ſet up in their room; our Ordnance thrown off from the Rock where they were planted, and all carried away by them. The *Bandaneſe* were all diſarm'd, and their Walls demoliſh'd, and every thing done that tended to the holding of them faſt down under thoſe ſervile Chains that were made ready for them. And they had Reaſon enough to make ſure of them in this manner, and keep their Hands cloſe tied, for their Spirits were ſufficiently exaſperated before, and this uſage to be ſure had not ſweetned them. What bold and ſevere Strokes of Revenge then would they make, if ever they had an opportunity by getting looſe again? If they would have cut the Throats of all the *Dutch-men* in the *Indies*, had they had them in their power, while they thought them but plotting upon their Liberties, what would they do for ſeizing their Country, enſlaving their Perſons, and ſwallowing up their Trade, and ſo many flaming Outrages of all ſorts as had been committed upon them? Eſpecially the *Lantorees* had a large Reckoning to make with them, if ever the time ſerv'd for that purpoſe: Here the *Dutch* made the fouleſt Work, and embrued their Hands in more Blood than any where. They cut 44 of the principal Orankayes in pieces, laid all the conſiderable Men in Irons, and ſeiz'd their Children for Hoſtages: And as if this was not enough for their Security, commanded all the other *Bandaneſe* that had given them any aſſiſtance, to be brought Priſoners, with their Wives and Children, aboard their Ships. But the poor People thinking by this, that they were either to be all murder'd, as their Orankayes had been, or elſe ſold away for Slaves into ſome Foreign Parts; they all agreed together, to fly from Deſtruction if they could, and ſo retired into the Mountains, and other wild Refuges, and there fortified themſelves as well as they were able. The *Dutch* for this fell upon them without Mercy, and cut off and took Priſoners to the number of 1200: Thoſe that were ſo unhappy as to miſs the ſtroke of the Sword, that had given a Deliverance to ſo many of their Fellows, were ſent away to *Jacatra*, and other places, to wear out a miſerable Life in Slavery.

Their Cruelties at *Lantore*

This was the direful Concluſion of the *Banda* Affair: All which Miſchief might have been prevented, and our own Honour and Intereſt preſerv'd, as well as the Lives and Liberties of the *Bandaneſe*, if timely Supplies had been tranſmitted to us: Such a degree of ſtupid negligence is wholly unaccountable, and hardly ever pardonable. And now we might bid *Poolaroon*, and the Spice-Trade Adieu, and go find another People to ſurrender their Iſland, and put us in poſſeſſion of their Mace and Nutmegs where we cou'd. And were it ſo, the *Dutch* who got this chiefly by means of the great care and diligence of our *Engliſh* Friends, might alſo by the ſame Method as eaſily get the next.

Engliſh take their leave of *Poolaroon*.

CHAP. XXXV.

An Account of a Voyage from Surat *to* Achen, Bantam, *and other Parts of the* Eaſt-Indies, *with the* Dragon *and the* Expedition. *Perform'd by* W. Hore, *and written by him in a Letter to the* Eaſt-India *Company*.

February, *A. D.* 1618. Go to *Dabul*.

IT having been before agreed on in a General Conſult, that we ſhould put in at *Dabul*, to try the Diſpoſitions of that People to a Trade with us; in purſuance of that Deſign, we came to an Anchor in the Road of that Town. The Governour quickly ſent out a Boat to learn who and what we were, upon the return of which with their Informations, two Perſons of Note were diſpatch'd to us with Orders to hear our Captain's Propoſals. Theſe Men ſtaid aboard as Pledges, and two of our Merchants upon that Security went aſhore to tranſact Matters there.

The chief Men of the Town expreſs'd a great deal of ſatisfaction at the arrival of our Ships, and as much deſire to have a Trade with us, which they pretended they had long waited for: And therefore propos'd that a Factory ſhould be immediately ſettled there, or at leaſt that the Ships ſhould ride in the Port, till the principal Governour (then abſent) had given his Reſolution in the Caſe, without which they could not abſolutely conclude.

Dabullers excuſe themſelves from preſent Trade

But notwithſtanding all theſe fine words, the *Dabullers* did not convince us by their actual forwardneſs to deal, that they were ſo ſtrongly inclin'd that way as they pretended. They promis'd to perform mighty things hereafter, but were not diſpos'd to do any thing at preſent; they wou'd ſome other time trade for Broad Cloth, Lead, and other *Engliſh* Commodities, but we could not perſwade them to take off any now.

We had a Ship in our Company that was able to have furniſh'd them, and came indeed on purpoſe to put off ſome of her Commodities to the *Dabullers*, but they would not help to lighten her Burthen at all, and ſo ſhe purſued her Voyage to the *Red Sea*, whither ſhe was at firſt bound. It was deſign'd at our coming hither, that the *Dabullers* ſhould no longer impoſe upon us with theſe empty pretences to trade, while they did nothing at all in purſuance of the Deſign of our coming to them, and therefore that now they ſhould be forc'd to do Buſineſs, and make it in ſome meaſure worth our while to attend them; but they bought their own quiet for this Year, by a good Sum of fair Promiſes to be better another, and ſo we let them alone at preſent, and ſent Advices to *Surat*, that the next Year's Fleet might deal with them accordingly.

Beſides, we had a Reckoning with them upon another ſcore, which was their abuſing one of our Factors that came thither to recover a Debt, and forceably taking the Debtor out of his hands; People at *Surat* very confidently told this Story of the *Dabullers*, but ſince they as confidently denied it, and we could not prove it, we carried the matter no higher than a bare Charge at this time.

Go to *Battachala*. *March*.

We ſail'd away from hence to *Battachala*, upon the ſame Coaſt below *Goa*. This was the Fruit of an Invitation too; and the *Mallabars* that gave it, pretended to do it in the Name of their King, and to be ſent by him for that purpoſe. There were two Frigats of that Country that came and put themſelves into our Service at *Swally* Road, and told us, That their King would be glad of our Trade for his Pepper; which was no inconſiderable Quantity, but would amount yearly to a good Lading for two of our beſt Ships. But when we came thither, we quickly found an Entertainment too cold to anſwer ſutably the warmth and earneſtneſs of the Invitation. The Commodity was but indifferent, the Price unconſcionable, and the King himſelf ſeem'd to have no great Mind to have us for Cuſtomers, but rather to keep it for the *Portugueze*. They held it up hard at 50 Rials of Eight *per* Candee, which is 500 *l.* Weight, and at the very loweſt would not let it come under 47. We thought we had been call'd to the buying ſome good Bargains, not to be banter'd at this rate in our Prices, and have the Money ſqueez'd out of our Pockets by ſuch Methods as thoſe were; but ſince 'twas ſo, that we muſt not only ſubmit to this Extortion if we traded, but take it as a Favour too, we reſolved to lie under no ſuch Obligations, and ſo left them to their deſired Cuſtomers the *Portugueze*.

High Price of Pepper.

We proceeded in our Voyage towards *Calecut*: Here was a Debt of ſome Years ſtanding to be recover'd, and a proſpect of buying Pepper at eaſier rates. But as it happen'd, the Samorine was at that time at *Panana*, ſome twelve Leagues to the South of *Calecut*, whither we went to him.

Come to Panana in the Samorine of *Calecut's* Country.

Our Captain went aſhore, with a good Guard of Shot, to deliver the King's Letter and Preſent; the Samorine acknowledged the Debt, but ſince we could not determine the exact Sum, it was agreed that Payment ſhould be deferr'd, till all the Accounts of that matter were more narrowly look'd over, and the Perſons there reſident had given in their Informations.

Samorine's Propoſals about Pepper.

As for preſent dealing with him, he offer'd to ſell his Pepper at 30 Rials of Eight *per* Candee, free of all Charges, and the Candee at that place was 502 *l.* Neat: This was accepted by the Captain, upon condition of ſome previous inſpection of the Commodity, by thoſe that were to be Judges of the Goodneſs of it; which Office was aſſigned to my ſelf, and one more. But the next Morning when we came, thinking to go about this Buſineſs with all the haſte imaginable, we were denied the ſight of the Pepper, and without expreſs Orders from the Samorine, there was nothing to be done. Upon which Baulk going away to Court to ſpeak with him himſelf, he was far more inquiſitive about the Captain's coming aſhore again (which was a thing foreign to the Buſineſs in hand), than careful to give us any juſt and reaſonable account of the meaning of theſe Proceedings. We aſſur'd him, that the Captain would not ſtir aſhore, till we had done our appointed Work of viewing the Pepper; that his Buſineſs would be only to conſummate the Bargain, and bring the Money, and conſequently depended upon our diſpatch. But all the Springs of Buſineſs were out of order in this Country at this time, and nothing would ſucceed, tho' ever ſo fairly attempted.

His unfair Dealing with them.

The Samorine would not give way to our meddling with the Spice, but ſent us back to wait at his Merchants Houſe, till he either came to us himſelf, or ſent farther Orders. Here he abus'd us with obliging us to an idle and fruitleſs attendance, neither ſending, nor coming, nor giving us any manner of Information what he intended to do.

This forc'd us to a ſecond Walk to the Court, to as little purpoſe as the former; for here he had his Tumblers and Morrice-Dancers about him, and minded their Tricks more than his own and our Concerns: In ſhort, he whil'd away the time by ſo many trifling ſhuffling Methods, that we boldly demanded of him at laſt, to put us out of this ſuſpence, and come to ſome certain Reſolution, that we might know what we had to truſt to. This Alarm awaken'd him, and we were deſired to move into a withdrawing Room, to hear his Reſolutions in private. Here he told us, he had ſeveral Points of important Buſineſs to diſcuſs with the Captain, if he would give his Preſence aſhore; but they were ſome of them of that nature as requir'd retirement, and muſt be manag'd apart from the Crowd; and therefore he had provided a fine Retreating-place, a little way up in the Country, where the Captain and he could enjoy themſelves, and do their Buſineſs without diſturbance.

A ſuſpicious Propoſal.

In anſwer to this, I told him flatly, That unleſs I might have the liberty to ſee the place firſt, I would not adviſe the Captain's landing: This he refus'd at firſt to permit, but upon ſecond thoughts afterwards granted, commanding one of his Slaves to ſhew it me. And the truth of it is, 'twas a place very fit for the execution of a treacherous Deſign; 'twas as good a Convenience for an Ambuſcade as could be; in a word, 'twas a very fine Trap.

But intending to prevent my Captain's being catch'd in it, at my return I expreſs'd my diſlike of the Situation of the place; as being lonely, and ſurrounded with Woods, and ſo diſcouraged as much as was adviſable the Deſign of meeting there.

The Samorine was very ſilent and dull upon the diſappointment, and having now play'd his beſt and higheſt Card, was at a ſtand in his Game: However, when he had made us retire again, he thought fit to diſſemble no longer, but told us all the Reaſons of the ſtop that had hitherto been upon our Buſineſs. He confeſs'd, that the Pepper he had promis'd us was not his own, but the Merchants; and that he could not let it go at the Price firſt propos'd: That at 40 Rials *per* Candee we ſhould have it, and not under; and if other Merchants would ſell under, he would give them leave ſo to do; if not, he would furniſh us himſelf at that rate. As for the Money we had owing at *Calecut*, he would ſee us paid, when we could certifie him poſitively how much, and for what 'twas due.

The Samorine falls back from his Propoſal about the Pepper.

This was a very pretty Story, and the prettier too, becauſe 'twas told in *Portugueze*, which the Samorine could never ſpeak, till now he had an abſolute neceſſity for't. And thus we got all out at laſt; and after a World of little ſhifts and windings this way and that way, the plain truth was told us (as he ſaid), which might have been done in as few words at firſt.

Having our Errand, we took leave and return'd to the Ship; but the Captain ſent him this Meſſage by one of his own Servants, That the *Engliſh* ſhould largely pay themſelves all their Scores out of his Ships, in what part of the World ſoever they met them. Here was the third Baulk upon our Trade this Seaſon; and hitherto we ſucceeded, as if all this Coaſt of *India* was in a League together to cheat and abuſe us.

The Captains Meſſage to the Samorine.

'Twas time now to repair to ſome other parts of the *Indies*, where our time would be beſtow'd to better purpoſe. Our Ships parted Company when we had doubled the Cape *Comorin*, and 'twas my Lot to ſail to *Tecoo*. And I will only ſay (ſince no Buſineſs of any ſignificancy was done), that I made three or four Voyages between that place and *Bantam*.

April, A. D. 1619. Their danger about the Shoals of *Tecoo*.

One of them had very near prov'd fatal to us; for a dreadful Storm in a very dark Night, forc'd us clever over the Shoals of *Tecoo*; a danger a Man would have trembled at in fair Weather, and at Noon-day. The Thunder and Lightning was extremely violent at the ſame time, and a flaſh ſtruck one of our Men perfectly dumb and lame; 'twas very ſlowly that his Speech return'd to him again, and that very imperfectly too; but the uſe of all his Limbs was gone; he complain'd of a dead numbneſs in every part, and had he been all over Paralytick, he could not have been more unſerviceable to himſelf than he was.

Dealing at *Tecoo*.

After ſome time ſpent, I had Notice that there was Buſineſs ready for us at *Tecoo*; that the *Dragon* had gotten a Lading of more than 1300 Bahars of Pepper, and 1500 more lay unbought at *Achen*. The Vice-King of *Tecoo* appear'd very willing to forward the Trade when we came, and promis'd as ſoon as he had ſeen his Sovereign the King of *Achen*'s Letters, and the Muſters of our Goods, that they ſhould begin to weigh. So the Letters being brought aſhore, Proclamation was made of our Licence to Trade, and Notice given to the Country about, who had now Liberty to bring in their Commodities. The Goods we landed were moſtly your *Surat* Wares, Cainkeens, blue Selas, *&c.* And the Price was concluded in proportion to their ſeveral Values, 50 Selas, 35 Cainkeens, 16 blue Byronns, 32 Red Selas, Baftas 8, 10, and 12 Pieces for a Bahar of Pepper; and this valued according to the Rates in ready Money, was as much as 20 Rials *per* Bahar. The Cuſtom was, not to be paid in kind, but at the rate of 14 in the 100 in Rials of Eight, for all Goods we landed. This was a hard Condition, and very imprudently yielded to by former Dealers here; but now it has prevail'd ſo long, that there's no hopes of bringing them to more reaſonable Terms.

July.

Treacherous denying of Bargains at *Tecoo*.

The Merchants now waited for the King to begin the Trade, according to the way of the Country; but truly, when it came to the point, he would not ſtand to the former Contract. He would not ſell himſelf under 40 Cainkeens, and 60 Blue Selas *per* Bahar; but he gave us leave to buy at the former Rates of others, if they would ſell ſo.

He had better have ſaid poſitively, that there ſhould be no Trade but upon his Terms, and publickly forbid the People to weigh; for tho' there would have been in this the ſame degree of Wrong and Injuſtice, yet the Diſſimulation (which ever aggravates the Knavery) had been away. His offer of giving the People the Liberty to Trade, before he began, was all a ſham and a trick; and 'twas as much as bidding and unbidding them at the ſame time: For he knew perfectly well, that no Man dar'd to weigh an Ounce of Pepper before him; no, tho' the Commodity wou'd have periſh'd in their hands, they dared not attempt the Sale, till his Example had given them an Authority to do it: To make that pretence therefore of turning us over to them, was to trifle and play upon us, and add an Affront to the former Act of Injuſtice. But we were under a neceſſity of ſubmitting to this Impoſition at this Juncture, having loſt a great deal of time already, and our Trade any where elſe uncertain.

Auguſt. Theft at *Tecoo*, and a ſtrange Proceſs for the diſcovering a Rogue.

The King himſelf having play'd us this foul play, 'twas no wonder that the People ſhould take the ſame liberty too, or a worſe, and this was our Caſe; all the difference was, that he cheated us with a little more Ceremony, and they in the coarſe and rude way of Thieves and Houſe-breakers.

'Tis true they did us no great damage, tho' they broke into one of our Warehouſes, and rummaged about; I mean, they carried off nothing of value, but they murder'd one of our Men that lay in the room. They made the Attempt three ſeveral times that Night, and 'twas as dreadful Weather perhaps as ever was ſeen: And why they ſhould chuſe ſuch a Night as that, is not eaſie to be conceiv'd, unleſs they thought the loud Cracks of Thunder would give them an opportunity to pick the Locks without danger of being heard. But to tell Stories of the thieviſh Tricks of the *Tecoans*, is to blazon a Character ſufficiently well known in the World already; I ſhall only therefore mention a Circumſtance conſequent upon this Diſturbance we had from them, becauſe there is ſomething in it pretty odd and ſingular.

We being all alarm'd and rais'd upon the Outcry of Murder in the Houſe, preſently ſent to call in the Waiters to our aſſiſtance; theſe were Men that were appointed to keep Guard every Night, at ſome little diſtance from the Houſe. But however it came about, there was none of them to be found at their Poſt at that time, nor there was no diſcovery to be made of any ſuſpicious Perſon in all the lurking Holes thereabout. The Noiſe of the Murder quickly came to the King's Ear, and brought him to us; he promis'd us Juſtice, and to do his utmoſt to find out the Villains that had thus injur'd us. But one of our Company propos'd, that the Waiters ſhould be nicely examin'd about this matter, ſince by their abſence from their accuſtom'd place of Duty, they had given ground for ſuſpicion, that they were either the Authors, or at leaſt Abettors of this Miſchief. This the King commanded to be done, and they were all made one after another to touch the dead Body; that being a Method ſome People are apt to preſume upon, for the diſcovery of a Murderer. (Why ſhould it not be as good for the diſcovery of other Villains too; and the ſtollen Goods leap away from the hand of the Thief, as well as a dead Body bleed at the touch of the Murderer?) Well! all theſe People ſtrok'd the Corps, and no Blood came; and could any thing demonſtrate their Innocence more convincingly than this? Was it not apparent that their Conſciences were clear and unſtain'd in the caſe, ſince a Miracle was not wrought to condemn them, and the ſtagnating Blood of the dead Man did not fly out in their Faces? But 'twas found at laſt, that all the Number had not paſs'd the Trial, and there was one ſtill behind that pretended to be very ſick a Bed, and was not able to come. This Fellow was ſent for, and fain to be brought upon Mens Shoulders; but all the Company condemn'd him for the Rogue as ſoon as he appear'd, there were ſo many Characters of Guilt in his Face. He was terribly confounded at touching the Corps, and all his Actions and Anſwers beſpoke him to be hared to the laſt degree. There was no Blood however came from the dead Body; but if the coming of ſomething elſe from the living Body had been a ſign of guilt, 'tis probable if they had look'd, they would have found him not very innocent and pure.

The King, and all the reſt, obſerving the Confuſion he was in, confidently perſwaded themſelves he was the Perſon they look'd for; and therefore, tho' he had ſcap'd this way, yet his Innocence ſhould be tried too by the Laws of the Country.

The Method is, for a Pot of Oyl to be ſet over the Fire, and when 'tis boiling hot, there's a Ball of Braſs thrown into it; here the ſuſpected Perſon is to come, and thruſting his naked Arm into this ſcalding Liquor, muſt fetch out the Ball; and if nothing of burn or ſcald appears upon his Skin, he is acquitted of the Fact laid to his charge; but if there be any Impreſſion made, they take it for granted he is guilty. A moſt irregular and barbarous way of proceeding to determine matter of fact; 'twould be as juſt and fair to throw a Man into a Den of hungry Lions, and pronounce him guilty or not guilty, according as they eat him up, or let him alone. But the Fellow was entirely willing to ſubmit himſelf to this ſort of Trial, and offer'd to put himſelf into the hands of the Executioner, if he did not come off clear. And in ſhort, he drew his Arm out of the Cauldron of boiling Oil, as unblemiſh'd, and perfectly free from injury as it would have been had he put it into cold Water: This we were all Witneſſes to, being all perfectly awake, and our Senſes, no way that we know of, impos'd upon. After the Experiment was over, all his Sickneſs and Lameneſs was over too, he was as briſk and luſty as the beſt of them; which ſudden change prov'd the former Illneſs counterfeit, and confirm'd all the Company in their evil Opinion of him.

They muſt trade now for ready Money.

This Affair being ended, the King made another Propoſal to us, about the farther proſecution of the Trade. The People were deſirous now of ready Money for their Pepper, and weary of Cloth; beſides the Junks from *Argir* were daily expected with great ſtore of that Commodity for himſelf (who always forces the People to take it off), and a little ready Money before-hand from us, would diſpoſe them to a brisker Trade with him. This was all Self-intereſt, and courting us to fall in with him in promoting that deſign; but there being a great deal of Pepper ſtill brought in, and our Trading-time but ſhort, and almoſt expir'd, we agreed with him at 22 Rials *per* Bahar. And to make us more eaſie and ſecure in our being here for the time to come, the King gave us liberty to do all that was needful in our own defence; to ſeize, impriſon, or fire upon thoſe that came to offer us any violence as we ſhould ſee fit.

October.

Our whole Story hitherto has been little elſe, but a continued Series of Croſſes, Diſappointments, Injuries, and Abuſes; and when one would have hop'd for a fairer Day, and ſome little reſpite from haunting Troubles and Misfortunes, they broke in with more violence upon us, and what was light perplexity before, was now downright Tragedy: For now at one ſtroke the *Dutch* made themſelves Maſters of four of our brave Ships, ſetting out of this Port of *Tecoo*: Some of them were ready laded to their hands too, but all ſo encumbred that they were not capable of fighting. * She that ſhould have been a Guard to the reſt, was far from being able to defend her ſelf, all her Decks were clogg'd, and her Guns ſtowed up with Lumber to that degree, that 'twas not poſſible to uſe them in the greateſt extremity. With thoſe few Ordnance that were clear, ſhe maintain'd the Fight for a little time, but 'twas impoſſible to hold out long with all that Burden and Unweildineſs, againſt ſix ſubſtantial Ships of the Enemy.

Dutch take four Ships from the *Engliſh*.

* This was the *Dragon*.

The other three ſeeing her Fate, yielded themſelves without exchanging a Gun; perhaps 'twould have been to no purpoſe to have fired, but to yield ſo tamely and quietly, was not according to the uſual manner of the *Engliſh*. Had the worthy * Captain (who loſt his Life by this Action) been better adviſ'd, and according even to his own firſt Reſolution, kept his great Ship clear for the Service of a Man of War, the *Dutch* perhaps had not had this Triumph, nor we endured the miſerable Conſequences of it. But we were abſolutely trepann'd, and cheated into their hands; they had taken in their Colours, by which we ſhould have diſcover'd them, and the Captain judging them to be Sir *Tho. Dale*'s Fleet, that was to be at *Tecoo* about this time, we were got in ſo near with them, that 'twas too late to think of drawing off again.

* Capt. *Bonner*

The cruel uſage of our Men by the *Dutch*.

The *Dutch* were ſo charitable to our Men (then their Priſoners) as to lay them in Irons upon the Gratings all Night long, and that in the moſt tempeſtuous Weather for Rain, Thunder, and Lightning, that had been known for a long time in thoſe parts, without any reſpect to ſick, weary, or wounded, the loſs of many of whoſe Lives teſtified the Barbarity of that Night's Entertainment. All that were left alive they turn'd aſhore the next Morning, with ſuch ſorry Rags upon their Backs as they were pleas'd to allow them; theſe were to the number of 300 Men, and had not the Infidels expreſs'd more Kindneſs and Bowels than thoſe Chriſtians had done, the whole Company had periſh'd in the laſt Extremities of Miſery. But the Compaſſion of the *Tecoans* towards us in this diſtreſs, does deſerve our Acknowledgment. The King conſtantly viſited the Captain, and brought him the beſt Dainties of the Court, till his incurable Wounds ſet him out of the reach of all earthly Succours: They kept a continual Market for Victuals at the Door of our Houſe, and ſold us all manner of Proviſions at much eaſier Rates than before: Beſides this, leaſt the *Dutch* ſhould land and attempt any thing upon us, we had a Guard of a thouſand Men well arm'd about us all the time their Ships ſtay'd there. So that we may ſay they have (at the loweſt value of this Action), aton'd for former Injuries; and left us without Demands upon them, if not their Debtors.

The kindneſs of the *Tecoans*.

Our ſhatter'd Company here were not long after happily diſpos'd of, and diſpers'd up and down in a little Fleet of *Engliſh* that came in hither.

November.

As for my own particular, I ſet ſail for *England* in one of our feeble crazy Ships, which if the Winds and Waves did not uſe very kindly and tenderly, would hardly allow us what Nature crav'd, but oblig'd us to endure much pain that way, till we reach'd the Bay of *Soldania*. Here we got in a ſupply of Fiſh; but loſt a part of our Men by an Outrage of the Natives; nothing of that kind having ever till now been attempted upon the *Engliſh*. They us'd to be very gentle and harmleſs in their Carriage to us; but ſomething or other had ſtirr'd their Choler, ſome ill People had done them an injury, and we unhappily came to bear their Revenge for't. From hence I had a proſperous Voyage to *England*; having had little of that nature before, in the whole Courſe of this Viſit to the *Eaſt-Indies*.

Soldanians kill eight of their Men.

February. *A. D.* 1619

CHAP.

Chap. XXXV.

A Declaration put forth by the Dutch, *containing the Account they give of the Differences between the* Engliſh *and themſelves, and the Grounds of their Pretenſions to, as well as their Proceedings at the Iſlands of* Banda. *To which are added ſome brief Animadverſions upon it.*

IN the former Chapters we have heard our Merchants and Factors abroad making divers heavy Complaints of the *Dutch*. A terrible Out-cry there has been of Injuſtice and Oppreſſion, of Treachery and Barbarity; in ſhort of ſo many Breaches of the Laws of Right Reaſon, Good Manners, and Chriſtian Charity, that the Buſineſs requires to be more diligently looked into. Now as our own People have told their Story at large, and repreſented the Matter as they thought fit and juſt, ſo we muſt hear what the other party has to ſay, and what account they give of things for their own Juſtification. 'Tis but fair and equal to allow them all the ſcope that can be to make their own Defence; and 'tis every whit as free for them to Anſwer an Accuſation, as 'tis for the others to bring it in againſt them. This is a Privilege that all Mankind have an indiſputable right to, and to deny it at any time (except in a Matter that carries its own Light and Evidence along with it) is to fix a Blot of Suſpicion upon the Charge, and render the Truth of it doubtful to all unbyaſſed, impartial People.

That this therefore may be done with as much advantage as can be deſired, we ſhall offer a Copy of their own Declaration, which fully expreſſes their mind in this Buſineſs, and was intended by them for a compleat Anſwer to all the material Particulars urged againſt them, with reference to the *Banda* Affairs.

It was Printed in *Dutch* at *Amſterdam*, *A. D.* 1622, and is faithfully tranſlated from the Original.

The *Dutch*'s Declaration, giving an Account of what paſs'd in the Iſlands of *Banda*, in the Year of our Lord, 1621.

The Dutch Declaration.

ALL *the Iſlands of* Banda, *from the tenth of* Auguſt 1609, *by a ſpecial Treaty and Agreement made with the Orankayes, or Magiſtrates of the foreſaid Iſlands, were put under the Protection of the high and mighty, the States General of the united Provinces, on condition to defend them from the* Portugal, *and other their Enemies, provided that they of the ſaid Iſlands, are bound to deliver unto the Fort called* Naſſau, *or unto the Committees of the ſaid Company, all their Fruits or Spices at a certain price, and ſo forth, as by the ſaid Treaty of Agreement more at large appeareth. Theſe Articles of Agreement, being for a time by them performed, were afterwards broken and violated, as well in keeping back, and with-holding the ſaid Fruits and Spices, which they were tied to deliver to the* Netherlands *Company; as alſo enforcing and robbing their Ware-houſes, and contrary to Solemn Treaty and Promiſe, murthering at ſundry times and places, divers of the principal Officers, Committees and Servants of the ſaid* Netherlands *Company, in taking away divers ſmall Ship Proviſion, their open invading of the Places and Countries, withſtood alſo lately under the Subjection of the High and Mighty the States General, and in conquering the Inhabitants thereof, whom with a ſtrong Hand they forced from being Chriſtians to become* Moors *again, or thoſe which withſtood or gain-ſaid them, they ſold as Slaves, and in committing all kind of perverſe Wickedneſs and Treachery: during which Paſſages and Doings, there was again certain Contracts on the aforeſaid Conditions agreed upon, with the ſaid* Bandaneſes, *as in* May, *in the Year* 1616, *by one of the* Netherlands *Commanders called* Lam, *and by their Governour General* Laurence Reall, *in the Year* 1617, *which indeed were ſhortly after broken and violated by the* Bandaneſes, *and that through the animating by the* Engliſh, *who did openly aid and aſſiſt the foreſaid Iſlands, and maintained them in warrage, the* Netherlands *Company with Victuals, and Munition, great Ordnance, Men and Ships, thereby to with-hold from us the Fruits and Spices, which the* Bandaneſes *were tied to deliver. In this wilfulneſs the* Bandaneſes *continued, till in* June, 1620. *Till that at* Jacatra *was publiſhed both amongſt the* Engliſh *and the* Netherlands *Fleet, then riding there in the Road, the Treaty concluded and agreed upon, between his moſt excellent Majeſty, the King of* Great Britain, *and the High and Mighty Lords the States General, for to reconcile upon certain Conditions, the* Engliſh *and* Netherlands Eaſt-India *Companies.*

The which Treaty, and by conference of handling concerning the Molucca's, Amboyna, *and* Banda, *all Diſputes and Differences between the* Engliſh *and the* Netherlands *Company, concerning the ſame, were to that time aboliſhed, and a general Force of Ships of War was ordained between them, for the Defence of both Companies in their Rights, and the commerce which they had obtained in the* Indies.

The Reduction of the wilful Bandaneſes *unto the* Netherlands *Camp, was hindred a Year or two (through the actual Proceedings which the* Engliſh *in* Banda *it ſelf, ſince the Year* 1616, *and afterwards in the Year* 1618, *about the Coaſt of* Java, *and whole* India *thro) by open hoſtility did attempt: whereby the aforeſaid* Bandaneſes *being encouraged and made bolder, did withdraw themſelves wholly from under the Subjection of the Caſtle of* Naſſaw, *doing unto us and ours all Wrong and Hoſtility, and with-holding from us their Fruits (to ſay) Nutmegs and Mace, which they did not only ſell unto the* Engliſh, *and to the* Indians, *but alſo to the* Portugals, *who are both their and our Enemies, with whom they ſeek to make nearer Alliance of Friendſhip, as already in the great Iſland named* Banda, *were come fifty or threeſcore* Portugals, *who by ſome more aſſiſtance, conſidering the natural force of the ſaid Iſland, would have been ſufficient to have deprived both the* Engliſh *and the* Netherlands *Company of the Rights therein, and the Fruits thereof, without hope hereafter to have any redreſs.*

In regard of thoſe Inconveniencies, after the Publication of the Contract that was made, the General of the Netherland *Company, in the Common-Council for defence, (conſiſting of* Engliſhmen *and* Netherlanders) *propounded the neceſſity of the taking of* Banda, *as alſo the redreſſing and aſſuring of thoſe Quarters, and of the Trade in* Amboyna *and* Molucca's, *to the which end, both the Companies according to the Contract were bound together, to uſe all the force and power that he could, for the Preſervation of the places, as much as concerned the Trade, for both the Companies. And it appeareth by the Act made by thoſe of the ſaid Council for Defence, bearing date the firſt of January,* 1621, ſtylo novo, *that the* Engliſh *Committees there declared, that the neceſſities of the Buſineſs was well known unto them; as alſo that they are very willing together with us, to do ſome common Exploit; but for that as then, they wanted both Power and Means of Men and Ships, that they could not for that time furniſh any thing towards the ſame: Whereupon the* Netherlands *Governour General declared, that with the particular Power of the* Netherland *Company, he would take the ſame in hand, and effect it in ſuch manner, as God ſhould be pleaſed to proſper his Proceedings.*

And to that end, upon the thirteenth of January, the Governour General went from Jacatra *to* Amboyna, *where he arrived upon the fourteenth of* February, *and from thence went to* Banda, [illegible] *Caſtle of* Naſſaw, *lying in the Iſland* Nero, *upon the ſeven and twentieth of* February, 1621. *In the mean time, one of the* Engliſh *Council for defence, that had been at* Jacatra *upon the firſt of* January, 1621, *and was Privy to the Contract made, lying then in* Amboyna, *when the Governour General went from thence to* Banda; *ſent Letters in our own Ships to the* Engliſhmen, *lying in the ſmall Iſland* Poolaroon, *and made known and diſcovered unto theſe of* Banda, *in what manner the General of the* Netherland *Company, intended to aſſail the great Iſland of* Banda: *and when the ſaid Governour General was come to the Fort of* Naſſaw *in* Banda, *he underſtood that the* Engliſhmen *in* Poolaroon, *had aided them of the Town of* Lantore *in the great Iſland of* Banda, *with four Pieces of great Ordnance; and that if they had had longer time, that the entrance of the General of the* Netherlands *Army into* Lantore *Haven, ſhould have been let and withſtood by a great Battery. As alſo that ſome*

Engliſhmen *in* Lantore, *aſſiſted thoſe of* Banda, *ours, and (according to the Contract) their Enemies, both with Counſel and Force, encouraging them with their Preſence, and notwithſtanding that the ſaid General required the ſaid* Engliſhmen *of* Lantore *to leave the Town, for the Cauſes and Reaſons aforeſaid, as alſo for that they themſelves, according to the Contract and Order made by the Council of Defence, before that time might not buy any Fruit in* Moluccas, Amboyna, *and* Banda, *as after the Publication of the Contract they may do, and that only together, and in common places with the* Netherlanders, *yet ſome few of them ſtayed ſtill with them of* Banda *our common Enemies. Notwithſtanding alſo that the Governour General proteſted, that he was not therein to be blamed, if by that means any hurt were done unto them, being among and with our common Enemies, from whom they ſhould and ought to have ſeparated themſelves.*

Firſt, the Governour General determin'd to aſſail the great Iſland of Banda *on the South ſide, (by ſome called* Lantore, *becauſe the Principal Town is ſo called) by Land in a place called* Luchny, *and to that end cauſed the Ship called the* Hart *to Anchor thereabouts, which lay not long there but it was ſhot at by an* Engliſh *piece of Ordnance, whereby our Men were forced to tow the ſaid Ship with a Galley from the ſhoar, and to leave two Anchors and two Cables behind them, or elſe it had been in great danger of ſinking or burning, our Men aſſuring us, that an* Engliſh *Gunner had ſhot at them, and that they perfectly deſcried and ſaw him, although the* Engliſhmen *ſeem to deny it.*

Whereby altering of their firſt Purpoſe, the General of the Netherlands *reſolved to land upon the inward part of the Iſland of* Banda, *there to encamp themſelves, and then to go up upon the Hills, and there to plant their Ordnance, and to that end upon the eighth of* March, 1621, *landed with ſeventeen Companies between* Comber *and* Ortatten, *they marched along the ſhoar ſide, within the reach of three Pieces of great* Ordnance *lent them by the* Engliſhmen, *and not long before planted there, whereby if they had marched forward many of our Men had been ſlain, and ſo we ſhould have found no place there to encamp our ſelves, but the Enemy from the Hills would have domineered over us, no Man knowing what counſel to give, whereby we might get up upon the Hills. The way whereon above 3 Years before we had been, being all entrenched, whereupon the General determined to enter again into his Ship with the whole Army, to take another courſe. They of* Banda *not once purſuing after us, but with flouting and mocking let us go, and ſo thinking thereby, that they had gotten the upper hand of us, moſt part of them brought their Wives and Children again into* Lantore. *After theſe two Enterprizes, partly hindred by the* Engliſh *Ordnance, were in that manner croſt, the General for a third Reſolution, determined to aſſail the great Iſland of* Banda *on both ſides, that is, on the inner ſide of the Land with ſix Companies, and on the South ſide with ten Companies. That they on the inner ſide ſhould land an Hour before the others ſhould land, by that means to draw the Enemy forth, and ſo to make place on the other ſide, while a Company of choſen Men ſhould land on the North ſide, to climb up upon the Hills, and others in other places of the Land ſhould alſo be in a readineſs, being three hundred and thirty Perſons, whereof one hundred and fifty were Muſqueteers, appointed for the manning and aſſuring of thirty Boats, which the ſaid Company would bring on the South ſide of the Iſland.*

This was effected upon the eleventh of March, *and accordingly ſix Companies by break of Day, went on Land between* Comber *and* Ortatten. *Captain* Voghel *with certain choſen Souldiers marching forward, who climbing up upon the Hills, found ſuch reſiſtance, that all their Pouder being ſpent, they were in great danger to be ſpoiled, but being well followed and ſeconded by the reſt, the Enemy was forced to retire : and while this skirmiſh continued, the other ten Companies landing out of the ſaid thirty Boats, went on ſhoar upon the South ſide of* Banda, *in a ſmall Bay, ſome with Ladders, and others without, climbing up upon the Cliffs ; and being gotten up, they marched to the back ſide of* Lantore, *without any reſiſtance, but only thoſe that ſet upon the firſt Troops, being ſome ten or twenty Muſqueteers, by whom one of our Men was ſlain, and four or five hurt, whereby* Lantore *was taken on the South ſide by the ſaid ten Companies, while the other five Companies skirmiſhed with thoſe of* Banda *upon the Hills, and as ſoon as* Lantore *was taken, thoſe of* Madiangi, Luchny, Ortatten, *and* Sammer, *preſently forſook their Towns in the ſaid Iſland. When they of* Banda *ſaw the aforeſaid thirty Boats, they thought we would have ſailed round about the Land, as we had done three times before, whereupon making no reckoning of our landing, they were ſuddenly ſurprized by break of day.*

As ſoon as Lantore *with the reſt of the places aforeſaid were won, the reſt of them of* Banda, *namely* Slamma, Comber, Owendender, Wayer, *and thoſe of the Iſlands of* Roſinging, *and* Poolaroon, *made compoſition with us, which we granted upon condition, that they ſhould break down their Forts and Walls, and give us their Shot, Pieces and Muskets, &c. Which by them being done, all of them together, according to their Contract and Promiſes, yielded to hold their Countries and Lands of the Lords the general States of the united* Netherland *Provinces, promiſing to do whatſoever they ſhould be commanded, and acknowledge the ſaid Lords the general States for their Soveraigns, notwithſtanding their former Oaths taken unto any others.*

Thoſe of Lantore *and others being firſt overcome and vanquiſhed, and that ſaved themſelves among others of* Banda, *alſo asked Pardon and ſought for Peace, which was granted unto them upon the condition aforeſaid, though they hardly held the ſame, and ſecretly ſought to begin a new Rebellion, and were commanded by the General to ſhew themſelves all together upon the Strand, that they might be appointed in ſome other convenient place to live as fellow Citizens freely together, without the loſs of their Goods which they then had. Whereunto ſome of them obeyed, but the greateſt part fled upon the high Mountains in the great Iſland of* Banda, *to whom alſo many other Towns reſorted, and ſlew a* Netherland *Merchant, one other, and a Boy, where they were encloſed and hindred from Victuals by our Men. By this means all the Towns and Places in* Banda *were won, and made ſure, only* Poolaroon, *which was not medled withal, becauſe they of* Banda *therein behaved themſelves peaceably, for the Aid, or rather the Service of thoſe of* Poolaroon. *The* Engliſhmen *planted nine Pieces of Ordnance upon a ſmall Iſland in* Poolaroon, *having intrenched the ſame: and when thoſe of* Poolaroon, *according to the Compoſition, were to yield up their Arms, and diſarm themſelves, as they willingly did ; yet our General did not once ſpeak of thoſe nine Pieces of Ordnance ſtanding in the ſaid ſmall Iſland, becauſe the* Engliſhmen *ſhould have no cauſe to make any queſtion, that our Men had done any thing againſt their Fort or Men.*

The Engliſh *Commander,* Humphry Fitz-Herbert, *with his Ship called the* Exchange, *lying before the Caſtle of* Amboina, *and having intelligence of the General of the* Netherlands *Victory in* Banda, *ſhot off fourteen Pieces of Ordnance for joy thereof.*

This that is formerly declared, is the true ſtate and proceedings of that, which hath been done now lately, and before in the Iſland of Banda, *wherein nothing hath been done, but that which (according to the Law of Nations, and the aforeſaid Contract, made, and promiſed to be holden, and without any wrong done to the Liberties of the* Engliſh *Company, agreed upon with the Company of the* Netherland *) might and ought to have been done.*

Animadverſions upon the ſame.

IN theſe Terms have the *Dutch* made their Defence; and ſumming it all up together briefly, it amounts to as much as pleading not Guilty. 'Tis a poſitive denial of the Truth of the Charge as far as it pretends any thing of Violence and Injuſtice; nay, they don't only deny and defend, but recriminate too. They reproach their Accuſers with their own Guilt and Miſdemeanours, and make thoſe that cried out for Juſtice, the far more unjuſt and capable Perſons themſelves. This is the old way of the World in all matters of Burthen and Accuſation ; very few have Goodneſs and Modeſty enough to plead guilty in a Caſe of an odious nature, tho' the Truth of the Charge be ever ſo freely voted in the inward Sence of their own Minds.

The common Practice is either with one bold ſtroke to deny and ſcratch all out ; or elſe by ſome handſome well-contrived Interpretations, to work matters about till they will bear a favourable Conſtruction, and all the odiouſneſs of them be expounded and interpreted quite away. And then 'tis a ſolemn Artifice too, to accuſe the Accuſers, to make Paſs for Paſs with them, and anſwer one Indictment with another. This is a mighty help where Innocence is wanting ; 'tis the only way to avoid blame and cenſure thus to puzzle the Cauſe, and involve it in ſuch confuſion, that no body may be able to judge who's in the right and who in the wrong. Men and Boys practiſe this method both alike, and ſo do whole Nations too : 'Twas not I but you, you began firſt, and if I did do this, yet what you did was ten times worſe, and ſo the Buſineſs goes round, and the Charge is toſſed about from one to another. There's bawling and accuſation on every ſide, but not guilt to be found of any ſide ; each party is in the right, tho' they flatly contradict one another; and no body tells a lye, tho' all inconſiſtent Methods pretend to the Truth.

We do not aſſert that 'tis thus in this particular caſe between the *Dutch* and Us ; but this at leaſt is certain, that according to the common rates of Integrity and Ingenuity in this World, ſuch dealing is to be expected, and by thoſe meaſures, if they were really guilty they would do ſo.

We ſhall only conſider ſome Paſſages in their Declaration, and without any thing of unfair Repreſentation or invidious Reflection ; ſhew how far they are conſiſtent with Reaſon and Truth, and Matter of Fact. They affirm, that the *Banda* Iſles were deliver'd over to them by a ſpecial Treaty and Agreement in *Auguſt*, *A. D.* 1609. But the Queſtion is, which of the two muſt be believ'd in this caſe, the *Bandaneſe* themſelves, or the *Dutch*; they ſtiffly deny any ſuch ſurrender of their Iſlands to them, and reckon it a very great abuſe for the *Dutch* to ſay ſo. A Peace indeed there was made that Year, this they own, but not a word of the ſurrender; we charged them with it before we finiſh'd our Agreement with them, and they all ſtood in it, that there was no ſuch thing.

But ſuppoſe this were admitted for Matter of Fact, take it thus at large, and in this general Notion, and it won't ſignifie much towards the proving their juſt Title to theſe Iſlands. One Man is not preſently to be concluded a lawful and fair Poſſeſſor of another Man's Right upon this Conſideration barely, that the Owner reſign'd it to him. A Traveller delivers up his Money to a Thief upon the Road, that preſents a Piſtol to his Breaſt; but the Thief does not come honeſtly by it for all that, and has a far juſter Title to the Gallows than to the Man's Purſe. Or ſhould he by Threatnings and Ill Uſage compel the Traveller to come into Articles for the payment of ſo much Money to him another time, whether the latter would lie under any Obligation in point of Conſcience or no, to be as good as his Word; the former deſerves to be hang'd notwithſtanding the Agreement. And if one People intrude themſelves into the Country of another, and then by continual Moleſtations and Encroachments upon the Privileges of that People, prepare them to embrace any Propoſal that offers them Peace and a Quiet Life, they can't pretend to act fairly and juſtly in poſſeſſing themſelves of all thoſe Advantages that this Conſtraint upon the Natives Liberty gives them. They are uneaſie, and have no way to help themſelves, and to avoid farther Plagues and Troubles, perhaps reſign their Country to the more powerful Intruders: But does not this come up pretty near to the Caſe of the Highway-men? And are not there the ſame Characters of Wrong and Violence upon one Action as upon the other? Now 'tis impoſſible the *Dutch* ſhould ever deny this, that they came and took the Town of *Nero*, and built a Fort there to keep all the People in awe about them: But the Buſineſs is, did they come upon the Invitation of the *Bandaneſe*, and did they build their Fort with their Conſent? The World will hardly ever believe, that the *Bandaneſe* would give way to ſuch a manifeſt Invaſion of their Liberties, or have ſuffer'd (if there had been any way to prevent it) a Foreign Power to come in and clap a Bridle upon them, by the means of which they might be managed, and turn'd about at pleaſure. However, 'twill be expected, that they ſhew ſome Contract or Commiſſion to that purpoſe; for ſuch things as theſe, upon which the Fortune of a Country depends, are not generally tranſacted by Word of Mouth only, but with ſomething more of formality by interchanged Writings. 'Till this be done, they muſt excuſe us if we believe the making thoſe Fortifications to be directly contrary to the mind of the *Bandaneſe*, and in plain Terms, an unjuſtifiable Encroachment upon them.

Now if after they had thus planted themſelves by main Strength or Policy in the Country, they become the Oppreſſors of it; if they teeze and diſtreſs the Inhabitants till they are weary of their Lives, and ſo make a Surrender in their own defence, and becauſe they can hold out no longer; this gets them indeed the poſſeſſion, but the Sacred Rules of Juſtice and right Reaſon are violated. 'Tis granted, here is eleven Points of the Law, but the twelfth and chiefeſt of all is wanting; here's no good Title. And 'tis unqueſtionably certain, that the *Bandaneſe* were thus haraſs'd and perplex'd by the *Dutch*; for when their Fort was finiſh'd, they ſet out all their Forces, and took the Town of *Labetacca*, and quickly after attempted *Slamnia* in like manner, where they were repuls'd with conſiderable loſs.

But when all's ſaid and done, the State of the Caſe is otherwiſe; and the Iſles of *Banda* were not ſurrendred to them at all. 'Tis true, that they might think they would be ſo, and the *Bandaneſe* pretended to do it; but 'twas all a piece of Mockery, and a Deſign to draw them into a Snare, that they might have their full Revenge. For when the *Dutch* Admiral, and a large Train of other Commanders came to a Conference with them in the Woods upon that Subject, the enraged *Bandaneſe*, having them now ſafe in their Pound, fell upon them to rights, and cut them all to pieces. They never intended any other Agreement but this, nor no Surrender but that of the Lives of the *Dutch* to their Mercy. We'll eaſily allow it to be a horrid Inſtance of Treachery and Barbarity, but then they were provok'd to a high degree, and the Conſideration of their many Injuries and Oppreſſions, will in ſome meaſure alleviate and ſoften the matter on the ſide of the *Bandaneſe*. Here then the Buſineſs reſts; and if no more were ſaid, this is ſufficient to ſhew, that the *Dutch* have but trifled in their Declaration. Theſe Iſlands were never put into their hands, all the adjoyning Countries are Witneſſes, that the *Bandaneſe* cut the Cords of that pretended Agreement aſunder with their Swords, and by maſſacring all the chief of the *Dutch* Commanders, left indeed hardly any Body of Figure or Note to agree withal. Why then ſhould the World read ſuch Lines as the two firſt in their Declaration are, that affirm a ſolemn ſurrender? How far is this from that Ingenuity and Vertuous Simplicity, that may be expected from a People of ſo eminent a Character in the Chriſtian World?

What Puniſhment they owe the *Bandaneſe*, for the Outrage committed upon their Officers, is another point; but to ſay the Country was delivered up to them, is an Injury both to them, and all Mankind in general, becauſe 'tis impoſing a manifeſt Falſhood inſtead of a Truth upon their belief. But before we drop the Buſineſs, we would take the liberty to put a few Queſtions to them, and that upon the bottom of ſome free Conceſſions of their own in the Declaration.

Since the Articles of Agreement between the *Bandaneſe* and them, are not fairly produc'd as they ought to be, and as thoſe between the *Engliſh* and that People were, what Motives can the World have to believe any ſuch thing, when the Carriage of the Natives towards them is duly conſider'd? What Agreement, where nothing but War and Violence, and all the Effects of an implacable Hatred appears? The *Bandaneſe* were never eaſie nor quiet with them by their own acknowledgment, they were always either plotting, or practiſing ſome Hoſtilities or other. By all their Motions and Strugglings 'twas plain, that they labour'd under a Burthen that was horribly oppreſſive to them, and which they wanted but Force and Power to throw off. They were all the while like the Lion in the Net, tumbling and toſſing about for Liberty, fretting and raving at the Bonds that held them, which if they could have gnawn aſunder they would. Is there in all this any ſign of a voluntary Submiſſion, or a free Surrender? On the other hand, 'tis a ſign, and a ſhrewd one too, that the *Bandaneſe* were either over-awed and terrified into a Compliance with them; or elſe that the *Dutch* carried it extreamly ill amongſt them, to put them into this violent ferment. And to juſtifie this conſequence, they may pleaſe to conſider, that they behav'd themſelves quite at another rate to the *Engliſh*. There was no plotting and caballing to cut them off, no Incivility was ever offer'd, nor an *Engliſhman* ſo much as affronted upon the Iſlands. We had all their Spice without any thing of difficulty or diſpute, we planted our Ordnance there, built and fortified without controul. In ſhort, there never was the leaſt Feud or Diſcontent, and tho' our Religion were different, yet that Point was ſettled; and perhaps never did Chriſtians and Mahometans live more amicably together. Now ſince we came in upon a good Foundation, and liv'd at this eaſie rate with the Natives, 'tis highly probable, that if they had ſtood upon the ſame juſt and fair bottom with us, they would have had as good Entertainment. Such Violences as were offer'd them, would have naturally follow'd upon an Uſurpation of the Peoples Rights and Privileges; ſuppoſe ſuch foregoing Injuries as thoſe, and ſuch Inſtances of Revenge as thoſe, would be the genuine Conſequences of them, amongſt a People that had any ſhare of Spirit, and were not fond of their Chains. And ſince theſe things did actually come to paſs, we muſt believe that to be the Cauſe till a more juſt one is aſſign'd: However, if there were no Encroachment, there muſt be irregular Conduct in the Caſe, they violated the Laws of Juſtice and Good Manners amongſt them; or elſe, why ſhould they, more than we, be ſingled out for the Marks of all the Fury and flaming Indignation of that People? So that the Buſineſs ſtill bears much to the ſame Point as before; for if there was an Agreement, it was by their own Conceſſion violated over and over: But the very ſame People were juſt and punctual to the *Engliſh* for ſeveral Years together; never flinch'd from what they pretended to, never broke their Word, never cut and ſhuffled in any reſpect with us, wherefore we crave their pardon, if we conclude, that without ſufficient Provocation the *Bandaneſe* would never have been falſe and cruel to them.

And certainly, they ought to produce very good Teſtimonies of the Agreeableneſs and Regularity of their Converſation amongſt that People; for the Effects of their deadly Averſion to them are ſo apparent, that the World can't forbear reſolving upon't, that the cauſe of it muſt be ſome very ill treatment. If it proceeded meerly from a cruel Humour, from a baſe and barbarous Diſpoſition, let the truth be told, that they may have the infamy of it; if 'twas a juſt Revenge, let our Neighbours the *Dutch* candidly acknowledge their own Miſdoings: In ſhort, it muſt be from one of theſe two Principles, unleſs they run to Notions of Sympathy and Antipathy, and ſay that the *Bandaneſe* have an unaccountable Averſion to them, as ſome People have to Cats.

There are ſome other Conſiderations that will very greatly add to the force of this Reaſoning, if they are joyn'd with it, the Sence of which may be taken thus all together: That thoſe Agreements with the *Bandaneſe* were divers times violated, and as often renew'd, that they came off and on again, and things were reſtor'd to the ſame Condition as before, after ſeveral Interruptions and Confuſions. If we are talking here not of late Agreements for ordinary Trade, but the ſolemn Surrender of a Country, who has ſo much power over his Underſtanding, as to diſpoſe it to believe theſe things? What, would that People with all the Indignation and Diſdain imaginable, throw off an abhorr'd Yoke, and then tamely put it on again themſelves? Did they groan under it as ſuch an inſupportable Burden, and make ſo many violent Efforts to get free; and when they had their Liberty, would they proſtitute it again to a Power, which they all along reckon'd arbitrary and tyrannical? How many degrees beyond a common Madneſs muſt this be? They muſt certainly be bewitch'd, and there's no ſolving the Buſineſs without bringing in the Power of the Black Art to account for't.

As for the Buſineſs of Trade, 'tis poſſible they might do and undo the Bargain ſeveral times; tho' by the way we are clear in't, that the *Dutch* never had any more of that neither, than what they got by downright Compulſion. But that they ſhould reſign their Country, and for ſuch Reaſons (as they did) withdraw that Surrender, and then make a freſh one, and this two or three times over; is a thing that cramps the Underſtanding of a Man with ſo much difficulty and contradiction, that it muſt be paſs'd off without any farther Notice. Now upon the whole, which is the injur'd Party, and who has moſt Reaſon to complain? The *Engliſh* were in a fair and legal manner poſſeſs'd of theſe Iſlands, (if at leaſt the free and voluntary Surrender of the Inhabitants can make it ſo), and the *Dutch* by unjuſtifiable Fraud and Violence forc'd them out.

Had the Natives a Power to diſpoſe of their own Country in that manner or no? If they had, the Declaration ſhould have been ſuppreſs'd, becauſe upon this ſuppoſition 'tis a Publick Defence of a notorious Piece of Injuſtice: If they had not, then ſome antecedent Obligations to the *Dutch* muſt hinder them; but the Declaration it ſelf affirms, that all the Treaties were then broken off, and the *Bandaneſe* had quitted all Concerns with them for the ſpace of eleven Years. Was there any Obligation then without a Treaty, or any Act of Injuſtice where there was no Obligation? And had there ever been an Obligation (which the others deny with all the Solemnity in the World), it had been cancell'd to all intents and purpoſes by the Breaches made by the *Dutch* themſelves. For no People can be ſuppos'd to give themſelves up to another for eternal Slaves, to be us'd well or ill at diſcretion, and have all their Fortune and Happineſs depend entirely upon the capricious Humour of thoſe they let in amongſt them. Therefore if the *Bandaneſe* found themſelves griev'd, they might ſeek Relief and Protection ſomewhere elſe; and if the *Dutch* broke the Original Contract, they forfeited their Intereſt in that People, and left them at liberty to diſpoſe of themſelves as they thought fit.

There is one thing more touch'd in the Declaration, which is by no means to be totally omitted; our Reputation is nearly concern'd in't, and to paſs it off without Notice, might in ſome Peoples Judgments be eſteem'd a tacite acknowledgment of the truth of the Charge. They ſay we animated the *Bandaneſe* in their Oppoſition and ill Deſigns, and blew up the riſing Flame of Contention between the *Dutch* and them. That we aſſiſted them with our Counſels, Purſes, and Ammunition, and put them into a Condition to maintain a War for their undoing. This is a very untoward Character; tho' they well know, that they have not ſcrupled any thing of that kind to us many a time before this. There are ſo many ill Principles that go to the Conſtitution of an Incendiary, there's ſo much Vice, filthy Nature and Temper in it, that no Body can be too much concern'd to clear themſelves from ſuch an imputation. We are therefore obliged to ſay (and that with all imaginable aſſurance), that this is as true as 'twas, that the *Bandaneſe* ſurrendred their Country to them; as true as their Title to thoſe Iſlands was juſt and good, and that the King of *England* gave them a Commiſſion to ſeize all our Ships they found beyond the *Celebes*. The Charge ought to be particularly explain'd and made good, and not deliver'd thus at random, and in general terms.

When the *Bandaneſe* had deliver'd up their Iſlands into our hands, and made themſelves equally the Subjects of our King with our ſelves, we did moſt certainly take them into our Protection, and furniſh them with what was neceſſary both for their Support, Trade, and Defence, againſt all Powers that ſhould pretend to invade them. This was the Tenour of our Agreement with them: And would any People in the World have acted otherwiſe, or have forborn a neceſſary Care and Proviſion for thoſe that had entirely committed themſelves to their keeping? But does this Action deſerve to be branded with all thoſe odious Characters of Treachery, Conſpiracy, and Caballing againſt them? Is it the ſame thing to give the *Bandaneſe* the juſt Protection of *Engliſh* Subjects, and to ſet them upon the *Dutch* to cut their Throats? 'Tis true, they were their Enemies (and with good reaſon too): But what then? They were our Friends, and of the ſame Body with us, and we were not obliged to deſert and turn them off, becauſe the *Dutch* and they could not underſtand one another rightly.

But they have not taken the right end of the Argument, nor made the ſtrongeſt Thruſt, in urging this upon us. They ſhould not have blam'd us for aſſiſting the *Bandaneſe* after the Surrender, but for taking the Surrender it ſelf at their hands. If there be any wrong done to the *Dutch*, it was in our accepting that Donation of the Iſland which they pretend to have been their Right: We had been ſcandalouſly weak and fooliſh, if we had not ſtood by them after we had made an Agreement with them. And if the ſtreſs of the matter be brought to reſt here, the Controverſie will quickly be decided in all thoſe Minds that receive what we have offer'd for Matter of Fact, which it is as certainly as ever it was certain that the *Dutch* and the *Engliſh* contended about the Iſles of *Banda*.

We have now done, and ſaid all that we think the Declaration deſerves to have ſaid to it: We ſhall only make one concluding ſtroke; which we muſt do to deal impartially by our ſelves and them. 'Tis to add the Relation of a certain Prieſt of *Poolaroon*, an Eye-witneſs to theſe Tranſactions, in which he gives, in a few Lines, his Sence of the Original of the Conteſts between the *Dutch* and the *Bandaneſe*. 'Twas given by him in the *Malayan* Tongue, and tranſlated from thence into ours, by Mr. *Hayes*, our laſt Captain at that Iſland, before the fatal Concluſion of our Affairs there. The Prieſt ſeems to ſpeak honeſtly and impartially on both ſides, and we hope the World will not ſuſpect any unfair dealing of ours in the Tranſlation of it.

The Relation of the Prieſt of *Poolaroon*, touching the Beginnings and Occaſions of Quarrels betwixt the *Dutch* and *Bandaneſes*, written in the *Malayan* Language with his own Hand, in a very fair *Arabick* Letter, and the Sence rendred to me in *Engliſh*, by Mr. *Rob. Hayes*.

This is the beginning of Contentions betwixt the Hollanders *and the* Bandaneſes. *Two* Hollanders *ran from them, and turned* Slammes *or* Mahometans, *and in the Prieſts Houſe at* Nero *were ſlain by three* Hollanders; *which in Revenge were ſlain by the Natives, who ſtaid not there, but in the Fury ſlew other three* Hollanders. *This was ill done of them, to add a double Revenge. Soon after the General of the* Hollanders *came thither with thirteen Ships, and demanded Satisfaction for the Slaughter of his Country-men. The* Bandaneſes *offered Diet (that is, the wonted Satisfaction there uſed for Man-ſlaughter, in Money), for thoſe laſt three. But the General anſwered, That he came not now to demand Satisfaction, but to make Peace and League with them, which was done. The next Year came another* Holland *General,* Peter Williamſon Verhuef, *with fifteen Ships into the Haven of* Nero, *and asked leave to ſet up a Fort at* Taniung Ratoo, *or* Ponit Ratoo, *which the* Bandaneſes *granted; but then he refuſed it, and demanded leave to erect a Fort in another place at* Taniung Minangis, *which they refuſed. But he coming before the Caſtle of* Nero, *with his Ship and Ordnance, terrified the Inhabitants, which fled away, and he poſſeſſed the Caſtle, and fortified there. Then did the* Bandaneſes *ſubtilly diſſemble Friendſhip, and ſlew the General, and fifteen Captains, with others, about one hundred Men in all.*

CHAP. XXXVI

A Voyage to Surat, *in* India, *and* Jaſques, *in the Gulph of* Perſia; *ſet forth by the Company, with four new Ships; the* London *of* 800 *Tun, the* Hart *of* 500, *the* Roebuck *of* 300, *the* Eagle *of* 280. * *Captain* Andrew Shilling, *Chief Commander. Taken out of the Journal of Mr.* Rich. Swann, *Maſter of the* Roebuck.

* The ſame Perſon that perform'd the laſt Voyage to *Moha*. See the Index.

February, *A. D.* 1619. May, *A. D.* 1620. WE ſet ſail from *Tilbury Hope*, with this new Fleet, and all the way from the *Downs* to 8 Degr. N. Lat. we might have carried a top-Gallant-Sail, but hereabouts the Tornadoes began to blow upon us.

In paſſing the Equinoctial the Winds and Current gave us ſome diſturbance, and obliged us to croſs it more to the Weſt ſide than we intended. 'Tis impoſſible upon this Element always to chuſe our own way; we are at the diſpoſe of the Winds, and can't help going where they command.

July. King *James* his Title proclaimed at *Soldania*. At the Bay of *Soldania*, beſides the uſual buſineſs of Refreſhment, we had a Work of another nature to do: We made here a ſolemn Publication of his Majeſty's Title to the Country, and erected his Mount in Token of it.

Having paſſed the Cape of *Good Hope* a little way, we were horribly labour'd with the meeting the N. W. and S. E. Oceans; the Sea run ſo upon heaps, and was ruffled at that rate, that our Ships were put to the utmoſt trial of their Strength, to work their way through. We cut the Line a ſecond time, and brought the North Pole about the Horizon again; and here from 1 Degr. to 5 Degr. 32 Min. we were every Day hindred 11 or 12 Min. by a Southern Current; and this oppoſition of the Current laſted for four or five Days together.

Octob. After we had made ſix Degr. N. Lat. we ſaw for a great while (and that every Day) great numbers of Butter-flies, and ſeveral ſorts of Land Fowl, as Caſtrels, Quails, Martins, but which was pretty odd, no ſort of Sea Fowl at all.

Come to *Dabul*. We went away firſt for the Coaſt of *Dabul*: Here we ſtaid till our Men ſufficiently well refreſh'd and recover'd; and our two Ships deſigned for *Jaſques* were compleatly ready for that Voyage.

November. When this was done, they went (as they were bound) for *Perſia*, and we with the other two (the *London* and the *Roebuck*) for *Swally* Road. We had not been long at this place, before we heard that the *Portugueze* had prepared for the Surpriſal of our Ships diſpatched for *Jaſques*; that they lay waiting for their coming, and would in all probability ſnap them, if ſome meaſures were not taken for their reſcue. Our only way was to go after them, and be their Deliverers our ſelves; for the Enemy might have been too hard for them with their great Galleons, and the *Hart* and *Eagle* (as ſwift as they were) not able to have made their eſcape from them.

Go for *Jaſques*. This was agreed and concluded on; and accordingly we ſet ſail from *Jaſques*, taking in our paſſage a *Portugueze* Prize laden with Dates and Raiſins, but principally with *Arabian* Horſes, which were tranſporting from *Muſcat* to *Chaul*.

December. As we proceeded farther upon this Deſign, we met our own Ships coming back to us in *India*, finding the ſtrength of the *Portugueſe* ſo conſiderable, that they dared not ſtand the brunt of an Encounter with them. But being now all met, we turned about again, imagining our united Force ſufficient to graple with theirs; and as they lay there to hinder and deſtroy our *Perſian* Trade, we were under an obligation to do our beſt to beat them away.

Fight with the *Portugueze*. When we came up with them, we found their Fleet conſiſted of four Galleons, two Galleots, and about ten Frigats more lay attending them with Supplies of Men and Ammunition at the Eaſtern end of *Jaſques* Road. After the two Fleets had once ſeen one another, the Action quickly begun; we knew on both ſides that we did not meet there for a bare Interview, and to gaze upon each others Ships. The Fight continued nine Hours without intermiſſion, and perhaps had gone on as many more, had not the dark Night interpoſed and parted us. We can't be poſitive what Injury their Fleet ſuſtain'd with loſs of Men, only this we know, their Vice-Admiral dropp'd, and about 40 Men out of their *Admiral*, that is, *Portugueze*, for they never reckon *Moors* and *Indians* into the number of their Men, nor account it any Loſs to loſe them by thouſands. Their Admiral was certainly raked thro' and thro' with all our broad-ſides, and how the unweildy thing did to hold up her Head in that crazy condition to which ſhe was reduc'd, is ſomething ſtrange; but the Frigats lay by and were ready to aſſiſt in a time of extremity.

Our own Loſſes were leſs than could reaſonably have been hoped for in work ſo hot and tight as this was, and for ſo long together too. Our Rigging was pretty much damaged, but the Ships brought away their Carkaſſes ſound and in good caſe. We had three or four Arms broke, and one Skull beat in pieces with a Cannon Shot, and a fragment of that Skull did almoſt as much miſchief as the Bullet it ſelf, by ſtriking out the Eye of another that ſtood near. But what was this to be the fruit of ſo long fighting, and how many batter'd Skulls and Carkaſſes would one rather have expected to have ſeen in that time?

Here was an Interval now of four or five Days, in which ſpace of time the *Portugueze* had many fair Opportunities to have made a ſecond Trial, but they had not yet quite forgot the firſt; the Winds blew fair and invited them to come down upon us; but they paſs'd off that Kindneſs, and deſired to be excuſed.

This ſpare time we thought fit to improve as diligently as we could, and ſince we were not to fight, began to do buſineſs.

They land their Goods at *Jaſques*. We made towards *Jaſques* Road, and landed the Companies Goods and Money there, which was the Prize that the *Portugueze* wanted and came for, and now to their mortification, ſtood by and ſaw ſafely deliver'd aſhoar. A few days after this, they had a Supply of Men and Ammunition from *Ormus*, and then were bold enough to advance towards us a ſecond time. But yet managed themſelves ſo with the advantage of the Wind, that they kept at a fair diſtance from us, and we with all our labouring could not (for a good while) bear up to them. Such ſudden contrary guſts of Wind would meet and drive us back when we attempted it, that ſome of our Blacks cried out the *Portugueze* had brought a Witch from *Ormus* to ſerve them with Wind; if 'twas ſo, the Charm expired by degrees, and the Wind would be commanded by that Gentleman no longer, for at laſt it ſerved our purpoſe, and brought us up to the Teeth of them. A ſecond Fight. Yet after we were engaged, it calm'd all of a ſudden, and ſo two of our Ships that lay neareſt the Enemy were forced to bear the heavieſt burthen of the Action for ſome time; but by the unparallell'd Diligence and Reſolution of our Men, the other two that lay behind were brought into play, and fairly delivered their whole broad-ſides upon the *Portugueze* Galleons. And certainly had the Succeſs in all points been anſwerable to the Noble Heat and Courage of our Men, no part of that Fleet had ever ſeen *Ormus* or any other Port any more. They managed the Buſineſs with wonderful Bravery and Reſolution, went extravagantly high in courting a compleat Victory; but the *Portugueze* out-did them in Skill and Artful Conduct, and gave large Proofs of their good Abilities in that Days Service.

The *Portugueze* flie for't. However it came to this iſſue, that they cut their Cables, and drove away with the Tide till they were out of our reach; their Skill was ſo great that they ſaw they muſt be ruined if they ſtaid there any longer, and therefore took that courſe for their Security. Nay, to make the greater haſt, their Frigats were employed to tow them along; and 'twas a pretty ſight to ſee thoſe huge Ships now drawn away all torn and mangled, with tatter'd

Sails and broken Maſts, and all their Rigging in ſuch a pickle, that a Day or two before were ſo finely trimmed with Flags and Pendants, and came flouriſhing on with their ſets of Muſick. 'Tis always the way of that People to come to a Sea-fight with us, with ſo much Preſumption and inſolent Security of Victory before-hand, and it ever fadges with them accordingly; for they know well enough they are always beaten, and never come on ſo proudly and ſcornfully, * but they go off again as poorly and diſgracefully. But they will be Conquerours one way or other, if not in reality after a Battle, yet in imagination before it begins; tho' this is ſomething an odd way of triumphing, and no People will be jealous of their Glory, nor envy them the Fame of ſuch Victories as theſe.

* Witneſs Capt. *Beſt*, Capt. *Dounton* and others for this.

Admiral *Shilling* dies of his Wounds, and is ſucceeded by Capt. *Blith*.

As for our ſelves this time, our Loſs was greater than theirs, tho' we fairly had the Victory. Not that they killed us more Men, or ſpoiled us more Ships than we did them, for as to all theſe things we came off at a very cheap and eaſie rate. But our worthy Admiral, who expos'd himſelf to all Dangers as much as any common Sailor did, received a Wound in this Fight, of which he afterwards died; as his Life was Brave and Honourable, ſo his Death was Pious and moſt Chriſtian like, which happening before we could get away from *Jaſques*, we were forc'd to celebrate his Funeral there upon the ſpot.

Having diſpatch'd all Affairs at *Jaſques*, we ſet ſail from thence for *Surat*, and as in our coming hither 'twas our fortune to take a *Portugueze* Prize, ſo we had the ſame Adventure in our returning back; ſhe was no rich Ship at all, nor had any thing of lading, but entirely deſign'd for the War, and to guard the *Portugueze* Merchants from the *Mallabars*, and being capable of doing us ſome conſiderable Service, we diſmiſſed her Company and detain'd her.

February.

March.

As ſoon as we came to *Surat*, we began to take in Goods apace. But here ſome Differences and Diſcontents ariſe, by the perverſeneſs and ill humour of the Governour of *Vlpare*. We could not procure a Supply of Proviſions for the Ships, nor Liberty for the free and unreſtrain'd paſſage of Carts, with Goods forth and back aſhore; by means of which no Cotton Wool could come down to us, till we were pretty far on with a Lading. Had we ſtood ſtill, and diſcover'd our ſelves fearful of attempting to redreſs theſe Grievances, the ill-minded Governour would have trampled yet farther upon us, and our Fleet might have been ſtarv'd, as well as our Trade hinder'd. And therefore at once to ſet all theſe things to rights, we ſent down a Ship to keep Guard upon a Junk belonging to the Mogul, and to prevent her taking in any more Lading, till we were ſatisfied, and had the uſual Liberties allow'd us. This produc'd the deſired effect, and the Governour of *Surat* taking the Cauſe into ſerious conſideration, revok'd theſe injurious Orders, and gave it under his Hand, That all our Wants ſhould be ſupplied, and the Burdens we complain'd of effectually removed.

They ſet a Guard upon the *Mogul's* Junk.

Decans rob the Caffila.

So we were obliged to reſolve upon the ſame Method with reference to the King of *Decan*. The Caffila that went to and from *Agra*, was robb'd by the *Decan* Army, and in order to the getting reſtitution made, 'twas determin'd, that the Ships of that Prince ſhould be arreſted where-ever we met them, and kept in ſafe Cuſtody, till he had done us Juſtice. And the truth on't is, there's no doing amongſt theſe People, without taking ſome ſuch Courſes with them ſometimes, when their Actions are very unjuſt and extravagant: For whereas by this they are kept in due awe, and taught to obſerve ſome Decorum in their Carriage for the future; ſo by a total neglect of their Inſolence, the Vice will grow and ſtrengthen it ſelf in them, and become ſo tyrannical and troubleſome at laſt, that there will be no dealing with them, but in the way of a ſcandalous Submiſſion, and baſe cringing to their Humour.

Fleet divided.

April, *A. D.* 1621.

July.

After this we took two Ships more from the *Portugueze*, one of which was conſiderable, and had a good Lading of Rice.

And now our Fleet parted Company, ſome going for *Achen* and *Bantam*; others (with more Company) for *Jaſques* and the *Red Sea*; the reſt of us (which were two Ships beſides the Admiral) ſet ſail for *England*, being alſo to put in upon the Coaſt of *Arabia* in our return. This we did at the Iſle of *Mazira*, where we ſtaid till the Fury of the Monſon was a little over; the Admiral in the mean time lying at *Soar*, a Town ſeven Leagues within Cape *Roſalgate*.

Mazira Bay

Mazira has a very curious Bay, where you have clean Ground, a faſt black ozy Sand, and may ride in what Depth you will, from five to twelve Fathom. You have a cold, hungry, healthful Air there, but a tumbling boiſterous Sea for your Ships; freſh Water enough to be had out of the Pits, but not eaſie to get aboard, except at the ſtated Landing place. Proviſions are ſcarce here, and there's nothing but a few Goats and Lambs to be had in truck for ſome of your Cannekeens.

Soar Road.

There's a vaſt deal of difference between the Road of *Soar*, and this of *Mazira*; for as this is cold and ſtormy, and the Temper of the Air ſuch, that a Man eats with an Appetite, ſo at *Soar* 'tis always calm and clear, the Air hot and ſultry, and whatever inclination it gives to liberal Drinking, it allows little or none to Eating.

From hence we ſail'd away for the Bay of *Soldania*, our ſtated place both for Refreſhment and Intelligence too: For here of courſe we hide Letters for one another, containing Accounts of our Voyages and Affairs; theſe, when they are written, we bury in ſome cunning places known and agreed upon amongſt our ſelves. Both theſe neceſſary Works we did at this place; which done, we ſet ſail for *England*, having an eaſie and ſafe Voyage on't, till we came to an Anchor in the *Downs*.

June.

A. D. 1622.

A ſhort Account of the Paſſages and Ways of Communication between Muſcovy *and* Perſia, *with ſome other things relating to the Trade of theſe Countries. Taken out of a Letter directed to the* Eaſt-India *Company, from Mr.* Hobbs, *one of their Factors in* Perſia.

Dated from *Mina*, *December* the 13th, *A. D.* 1620.

THis Perſon it ſeems made a Journey from the Capital City of the one of theſe great Empires to that of the other; from *Muſco* to *Spahawn*. And however it came about it took up full five Months, before he could accompliſh it; tho' he reckons the beginning of his Journey from *Teraſlane* in *Muſcovy*, and not from *Muſco* it ſelf. He ſays indeed that it may be done in much leſs time than this, perhaps in 11 or 12 Weeks with eaſe, if there be no conſiderable Lets in the way; but what thoſe Lets are, he does not particularly deſcribe, and therefore 'tis to no purpoſe to gueſs at them. But he mentions three ways of Communication between *Muſcovy* and *Perſia*, which may be worth the Merchants while to take notice of. The firſt is to ſet out from *Teraſlane*, and to come down to *Aſtracan*, at the Mouth of the *Volga*, from thence by Water into ſome part of *Turkie*, bordering upon the *Caſpian* Sea, where the *Grand Seignior*'s Convoy is to be gotten for as far as *Derbent* and *Shomakee*; from thence to go with the *Caffila* for *Ardenil* and *Casbin*, and ſo as they pleaſe afterwards to *Spahawn*. The next way is to take the firſt Paſſage that can be gotten at *Aſtracan*, and ſo croſs the *Caſpian* for *Leygoints*, which is a League from *Lagor*, and ſeven from *Reſht* a place remarkable for the Silk Trade: This he ſays may be done in 18 or 20 Days, and then from *Reſht* to *Spahawn*, will be but 16 Days Journey. He prefers this as the ſhorteſt and eaſieſt Paſſage, and the way too is always open from *Aſtracan* in the Months of *July*, *Auguſt*, and *September*. But then here muſt be the lucky hit of a favourable Wind for paſſing the *Caſpian*; and beſides 'tis dull ſailing with theſe Veſſels of *Guilan*, with which he propoſes to perform it; for they uſe nothing of

Ways of paſſing from *Muſcovy* to *Perſia*.

a Compaſs, but direct their Courſe altogether by the Aſſiſtance of the *Luminaries*, and then in dark, cloudy weather, when they can't appear, What becomes of the Voyage? The third Method is a Project for the ſpeedieſt Conveyance of Letters, between *Muſco* and *Spahawn*. He ſays they muſt be brought by the *Czar*'s Poſt as far as *Aſtracan*, from whence they may go either by Land or Sea to *Spahawn*; if by the former, then to be diſpatched immediately to the Governour of *Shomakee*, and ſo be put up in his Male, if by the latter, then to go to *Guilan*, and ſo to *Reſht*, and be ſent away by the Governour of that place to the *Engliſh* at *Spahawn*.

Trade in thoſe parts.

After this we have ſome ſhort Accounts of matters of Trade. The great Buſineſs begins at *Aſtracan*, at the arrival of the Boats, which is in *June*; then the *Perſians* bring in their Dyed Silks, Dorogoes, Calicoes, and other *Perſian* Stuffs, which they ſell by retail, and the way of Barter.

The Commodities they return are Cloth, Sables, Martens, Red Hides, Horſe-Skins, old *Ruſſian* Money, which they buy at 44 and 46*d. per* Roble for exchange. And the ſame Commodities are tranſported by the *Ruſſians* too, tho' they make very little of it; and Mr. *Hobbs* affirms, that our Trade well followed in thoſe parts will entirely overthrow theirs.

In his Paſſage upon the *Volga*, he ſaw their way of taking the Sturgeons, with which that famous River abounds. They pail in the River from Bank to Bank, and ſo effectually ſtop up the Fiſhes way, that they can't avoid falling into their Weers.

Caviare and Iſinglaſs.

The Caviare is made of the Row of that Fiſh, laid in Salt for 14 or 15 Days; then they waſh all the Salt clean off, and put up the Rows (thus prepar'd) with the Fat of the ſame. The very fat Sturgeons have a yellow Row, which they put up as it is without any farther preparation; but this he ſays utterly ſpoils all the reſt it lies near, and much prejudices the Salt of the Caviare at the Markets. The Iſinglaſs is made of a certain String taken out of the Back of the Sturgeon.

Places for Silk.

As for the Great Places for the Silk Trade, he tells us they lie moſt of them near the *Caſpian* Sea. There's *Reſht*, *Peomin*, *Sheft*, and *Leygon*, in the Province of *Guilan*, the fartheſt of which is not more than eight Leagues from the Ports.

At theſe places the King of *Perſia*'s Silk is peculiarly made; but then beſides theſe, in *Mezendroan* is a Plantation for the ſame Commodity, which furniſhes a good Quantity annually. Upon the whole he urges how conveniently theſe places lie, for the eaſie tranſportation of Silk into *Muſcovy*. Here they may be ſhipp'd without any farther trouble upon the *Caſpian*, and ſo brought up the *Volga* as far as we pleaſe, if Liberty be but procured from the *Czar* for that purpoſe. And how much there is of facility and ſhortneſs in this way beyond the common method of carrying them three Miles Journey by Land before they reach the Port, there needs no Light to diſcover. Beſides that it is moſt certain that a great deal of Money, as well as Pains is ſaved by this Compendium, ſince the way that is the moſt tedious and troubleſome, is always, and muſt be, the moſt chargeable too.

Mr *Hobbs* for a Concluſion tells us, that our *Perſian* Trade (then in its Infancy) had ſeveral Enemies plotting againſt it to make it as ſhort liv'd as poſſible; the *Turks*, *Arabs*, *Armenians*, and *Portugueze*, the latter of which were as diligent to defame and blaſt the Reputation of the Nation, as to undermine its Trade. But theſe are no new nor ſtrange things; all ſorts of Enemies will hinder a Peoples thriving if they can, but very rude and ill bred ones will rail and rave in to the bargain.

CHAP. XXXVII.

An Account of ſome things Hiſtorical and Civil, relating to the great Empire of Japan, *taken out of ſome later Letters of Mr.* Richard Cock, Engliſh *Factor at* * Firando, *and Mr* Arthur Hatch *Miniſter, who alſo lived in the Country ſome time.*

* Mr *Cock*'s Letter bore date, *Decem.* 31. *A. D.* 1622. Mr. *Hatch*'s *Nov.* 25. *A. D* 1623.

IN ſome former Accounts of the Affairs of this Country, we had intelligence of the diſmal Stirs and Convulſions, Wars and Perſecutions with which it was oppreſſed. The genuine Heir of this vaſt Empire was ſtrugling for his Right, and the Uſurper (poſſeſs'd of the Throne) endeavouring with all his Power to overturn him.

* See Mr. *Cock*'s former Letters.

* How that diſpute ended between theſe two contending Parties, was there related; but the other and the latter parts of the Story of the Country (as far as it went while our *Engliſhmen* were there) are now to come in. *Ogſhoſamma* having the good Fortune to get the better of the Young Prince, and ſee him (tho' not ſecurely laid up in a Priſon under Ground, yet) driven to fly to ſome obſcure corners for ſhelter; returned with a great deal of Pomp and Triumph to *Surunga*. Here he bleſs'd his kind Deliverers, the Idols of Wood and Stone; which he believed to have given him this mighty Succeſs, becauſe he had been zealous in perſecuting the Chriſtians. But theſe Triumphs laſted not long, and the vain glorious Emperour (the ſucceeding Year) was conquered himſelf by a more powerful and inexorable Adverſary. *Ogſhe-ſamma* died; and of many Sons which he left behind him, choſe out perhaps the unworthieſt for his Succeſſour. His Eldeſt Son (a Prince of great Valour) was quite put by, by his Special Command; the main Reaſon of which was, that he had loſt his Noſe by the Foul-Diſeaſe.

* This was he that rais'd that direful Perſecution, an Account of which is given in Mr. *Cock*'s other Letters before.

A great Conſpiracy in *Japan*.

The * New Prince had not enjoy'd his Crown many Years, before he was diſturb'd by one of the horrideſt Conſpiracies that ever was form'd in that Country. No leſs than nine of the Vice-Kings, and thoſe the richeſt, and ſtrongeſt, and beſt Souldiers in the Empire, joyn'd their Strength and Counſels together to dethrone him; and managed their Buſineſs ſo cunningly too, that the Emperor could never diſcover the Plot, till he found it too ripe and well grown to bear the common Methods of Suppreſſion. The Party was too formidable, and the Men too great to be threatned and hector'd like a Company of ordinary Rebels; and they had ſo much force of their ſide too, that 'twas very doubtful whether they could be beaten into their Duty and Allegiance again or no. Upon this Account (they tell us) the Emperor *Shonga-Samma* was enclined rather to uſe gentle Methods, and 'twas thought he would ſooner compound with them, than endeavour to reduce them by force of Arms. All or moſt of theſe petty Kings were Men of vaſt Revenues, and if they had a mind to rebel, had Money enough to bear them out in't. The Head of them (who was alſo the Emperors Kins-man) was reckon'd worth 200 *Mangoca's* of Rice, *per Ann.* which one of our *Engliſh* Men computed at 1875000 pound Sterling; and ſeveral others of them not much leſs. [The *Mangoca* contains 10000 Goca's, each Goca is 100 Ganta's, and every Ganta about three Ale Pints *Engliſh* Meaſure.] Of theſe Petty or Vice-Kings, there are in all about 65 ſmall Princes if compar'd with the Great Emperor their Sovereign, but conſiderable enough if conſider'd with reſpect to the State and Royalty they themſelves live in.

The Eſtates of the *Japoneſe* Princes in Rice.

Way to prevent Treaſons and Rebellions.

'Tis a Policy always practiſed by the Emperours to keep either theſe Princes themſelves, or ſome of their neareſt Relations at Court. The deſign of this is, to have always a Security for their Fidelity and Obedience; for if they rebel, their Friends at Court are immediately commanded to cut their Bellies, which nothing can poſſibly prevent, but their return to their Duty, and Submiſſion to the Emperor's Mercy. Or if the Prince himſelf remain at Court, and his Vaſſals in the mean time (tho' without his Knowledge or Inſtigation) take up Arms, the Emperor bids him be his own Executioner, and will make him be ſo, unleſs he preſently write to his Mutineers and prevail with them to be quiet again. But many Examples have ſhewn, that this piece of Policy is not ſo effectual a Guard upon the Emperor's Quiet and Repoſe, as it might be imagin'd it would be; witneſs particularly that deſperate Conſpiracy juſt now mention'd.

Another Policy.

The Emperors do endeavour alſo by another Method to ſecure themſelves and their State in Peace, and that is, by drawing off as much as they can from the Power and Riches of theſe inferiour Princes. As they are many of them very rich, ſo their Sovereigns take all the Care they can, they don't grow too faſt. When their Fleeces are large and heavy, they deliver them from the Burden, and ſhear them well by Taxes and Tributes, and a multitude of Duties. They make them build Caſtles and Fortifications all which are to ſerve the Emperor, but their own muſt be neglected, and they are not ſuffer'd (at leaſt without a great deal of ſuſpicion) any way to fortifie themſelves. Then the Cuſtom of the Country is ſuch, that all the Princes, and Great Men muſt make very large and noble Preſents to the Emperor, and that frequently too; by which means one wou'd think their Coffers ſhould be pretty well drein'd, and they themſelves kept very low and ſhort of Money; unleſs extraordinary Frugality otherways (a Vertue the *Japoneſe* Nobility are little addicted to) prevented that inconvenience. Their Humour being brave and generous, they preſent their Prince at an extravagant rate, and even contend to outdoe one another in the Coſtlineſs and Magnificence of their Gifts. But 'tis all ſo much juſt thrown away, for there's nothing of return or requital on the Emperor's part; while they load him with Silver, Gold, and the moſt precious Commodities imaginable, he gives them perhaps a Kerrimoon, or Coat, which Mark of his Favour and Acceptance, is all their Reward. This is indeed the direct way to be very rich himſelf, and to make them very poor, both which it ſeems are equally the Emperor of *Japan*'s Deſign; tho' notwithſtanding all theſe Artifices, he cannot ſo eaſily accompliſh the latter neither.

The Nobility give rich Gifts to the Emperor.

The Riches of the Emperor.

'Tis ſaid of this Prince, that not only his Coffers, but much larger Receptacles than they, are fill'd with Gold and Silver; that he has whole Storehouſes cram'd with Coyn and Bullion, and amongſt the reſt ſome Balls of maſſy Gold, of that weight and magnitude, that fifteen or ſixteen Men are ſcarce able to bear one of them: Theſe were brought to Court from the famous Caſtle of *Ozaca*.

His Privy Council.

The Emperor's Privy Council conſiſts of no more than five Members, Men for their Wiſdom, Fidelity, Policy, and Vigilance, pick'd out of all Princes of the Empire, and are commonly as acute and dextrous in managing State-Affairs, as the beſt States-men in Chriſtendom can ſhew. No Cauſe comes before the Emperor, but what theſe approve of, for none either ſpeaks or preſents a Petition himſelf; the Buſineſs, whatever it be, is brought to and left with them, and it is wholly in their power either to promote it, or keep it for ever from the Emperor's knowledge.

Upon this account it ſeems, that this Prince's Affairs and State, ſtand upon a very ticklish uncertain bottom, and whatever other good Politicks the *Japoneſe* have, this Piece appears to be none of the beſt and wiſeſt: For all reſts upon the Foundation of the Honeſty and Prudence of five Men, who may eaſilier be ſuppos'd to be deceiv'd, or tainted with Diſloyal Principles, than 500, or 50: A Plot lies ſafer in the Breaſts of a ſmall number, than a great one; the Advice of many wiſe Men is preferrable to that of a few, and in the multitude of Counſellors there is certainly moſt ſafety. But it ſeems they think otherwiſe in *Japan*.

Large Caſtles.

The moſt ſtately Caſtles of this Country, (at leaſt thoſe known to our Travellers) are thoſe of *Ozaca*, *Surunga*, *Eddo*, *Crates*, and *Falcata*, of all which that of *Ozaca* is, or was the moſt conſiderable, both for its Largeneſs, Strength, Riches, and magnificent Buildings. Thoſe of *Crates* and *Falcata* are each two Miles in circumference, and both (as well as the reſt) well walled and moated, and furniſhed with a large Storehouſe of Rice. The principal Nobility of the Empire have Houſes within theſe Caſtle Walls, whither they retire, either at their own, or the Emperor's pleaſure.

A fine Wood.

At *Falcata* there is a Wood of Pines about three Mile ſquare, which is all Summer-long ſwept and kept ſo clean and neat, that you ſhall hardly ſee a Twig, Bough, or Leaf, any where under the Trees; and then all the Pines ſtand ſo cloſe together, that a Man may refreſh himſelf there in the hotteſt Weather at all Hours of the Day, without any offence from the Sun's Beams. In the Center of the Grove ſtands a ſtately Temple moſt richly adorn'd, with gilded Images, and Varieties of fine carved Works.

Printing and Alphabets.

The *Japoneſe* (beſides the Art of Writing), have that alſo of Printing amongſt them, and for how many Ages no Body can tell. They have ſeven ſeveral Alphabets, and in each of them 48 Letters, and yet with all theſe they can't truly write or pronounce many of our *European* Names. There are ſome Letters they cannot get the true pronunciation of, as *H*, *B*, *T*, and ſome others; as the *Chineſe* (they ſay) if their Lives lay on't, cannot truly pronounce *D*.

Cuſtom of altering their Names.

They have an odd Cuſtom amongſt them of altering their Names, in which they ſeem to differ from the Practice of all Nations of the World. Every Perſon has the Liberty of changing his Name three times, in Childhood, in Riper Years, and in Old Age: But ſome do it oftner, quit their old Names, and aſſume new ones as they ſee fit, in which caſe they generally Complement ſome petty King or Nobleman, with whom they are in Favour, by taking the ſame Name.

The *Japoneſe* obſerve no conſtant ſtated Sabbath, but ſeveral Feaſt-days, according to the Moon, as the 1ſt, the 15th, the 28th: On theſe Days they go to Church, viſit the Sepulchres of the Dead, and uſe abundance of apiſh ridiculous Ceremonies.

Solemn Days.

The 9th Day of the Moon, throughout the whole Year, they hold accurſed, and therefore they won't undertake or begin any Work of conſequence that Day. They obſerve a very ſtrict Faſt on that Day of the Month on which their Father or Mother died; and as much as they love, and as heartily as they eat Fleſh of other Days, they won't touch any ſort of Animal Food on that mournful Day.

CHAP. XXXVIII.

A Voyage perform'd by Mr. Ralph Fitch, *Merchant of* London, *to* Ormus, *and from thence through the whole* Eaſt-Indies. *Written by himſelf.*

A. D. 1583.

I Set ſail *A. D.* 1583, in the good Ship the *Tyger* of *London*, ſet forth at the principal Charges of the Worſhipful Sir *Edward Osborn*, Kt. and Mr. *Richard Stape*, Merchants and Citizens of the ſaid place, in Company with Mr. *John Newberry*, Merchant, and ſome other *Engliſh-men*.

Tripoly.

Aleppo.

Being come to *Tripoly*, in *Syria*, after ſome ſtay there, we took the way for *Aleppo*, which we went in ſeven Days, with the Caravan.

Birra.

From thence (having good Company) we travell'd to *Birra*, which is two Days and half's Journey with Camels; it is a little Town, but very well ſerv'd with all ſorts of Proviſion, and the River *Euphrates* runs juſt by the Walls of it. Here we bought a Boat, and agreed with ſome Watermen to carry us along the River, intending to go for *Babylon*. Theſe Boats are and can be but for one ſingle Voyage, becauſe the Stream runs ſo quick downwards, that there's no returning that way again. And therefore when we come to a little Town called *Felugia*, we always ſell our Boat, and for a very ſmall matter too; for that which coſts us 50 at *Birra*, we put off again for 7 or 8 at *Felugia*.

Felugia, where they ſell their Boats in the way to Babylon.

It is not ſafe to go with one Boat alone, but to have another (at leaſt) in Company for a Relief, in caſe of a Diſtreſs, that may happen: For if the Boat breaks (which is no difficult thing to ſuppoſe), the Paſſengers will find it a very hard matter to ſave themſelves and their Goods from the thieviſh *Arabians*, that are always waiting for

Prey

Watching againſt the *Arabs.*

Prey along the Banks of the River. And for the ſame Reaſon in the Night-time, when the Boats are made faſt, 'tis highly neceſſary to keep a ſtrict Watch, without which a Company is eaſily ſurpriz'd by thoſe diligent and wakeful Robbers. They come ſwimming about the Boats and fetch off the Goods with a deal of Art and Subtlety; to prevent which, there's nothing better than to be well furniſh'd with Guns (which they ſtand in great awe of) provided you keep awake to uſe them.

It is ſixteen Days Journey from *Birra* to *Felugia*, and as you paſs along the *Euphrates* thitherwards there are divers places where you pay Cuſtom to a certain Prince of the *Arabs*, that is Lord of a great Tract of Ground thereabout, and has divers Villages upon the River.

Babylon.

Felugia, where you unlade your Goods from *Birra*, is a little Village, from whence you go in a Day to *Babylon*. This is a Town of no very great Dimenſions, but of great Trade, and mighty populous; 'tis in the high Road to *Perſia*, *Turkey*, and *Arabia*; and from thence Caravans ſet out for theſe and ſeveral other places. There come good ſtore of Proviſions hither down the River *Tygris* from *Armenia*; they bring them upon Rafts made of Goat-skins, blown full of Wind, and ſo Boards laid over them, upon which their Goods are laid; then when they have unladed at *Babylon*, they open their Skins, and carry them home pack'd up upon Camels, to ſerve another time.

Its Supply of Proviſions.

A Bridge of Boats

Oppoſite to *Babylon* ſtands a very fair Village, from whence you paſs to the Town upon a long Bridge of Boats, which is held by a great Iron Chain faſtned on either ſide the River. When any Boats are to paſs up or down the River, they remove ſome of the Boats out of the Line, and ſo make a Gap for them, which they afterwards cloſe up again as before.

Tower of *Babel.*

The old Tower of *Babel* ſtood on this ſide the *Tygris* towards *Arabia*, about ſeven or eight Miles from the Town, upon a large and open Plain betwixt that River and *Euphrates*. The Interpretation of the Name is very viſible all about it, in the confus'd and ruinous heaps that appear there; it lies like a little Mountain, without form or ſhape; it was made of Bricks dried in the Sun, and certain Canes and Leaves of the Palm-Tree laid between the Bricks. There's nothing of any entrance or paſſage into it to be ſeen now, the falling Ruines having ſtopt up all that long agoe.

Boiling Pitch iſſuing out of the Earth.

Travelling along the *Euphrates*, about two Days Journey from *Babylon*, we came to a place call'd *Ait*, in a Field near which is a mighty Chaſm in the Earth, from whence there is a continued Eructation of Smoke and boiling Pitch, the Torrents of which run abroad into the neighbouring Plain to a conſiderable diſtance. The *Moors* call this the Mouth of Hell; but for all that, the Country People uſe the Pitch that boyls out of it, without any fear or ſcruple; they daub their Boats with it two or three Inches thick, and find it ſecures them admirably well from the Water.

Baſora.

When the *Tygris* is well repleniſh'd with Water, you may go from *Babylon* to *Baſora* in eight or nine Days, otherwiſe the paſſage will be longer. *Baſora* was formerly ſubject to the *Arabians*, but now to the *Turk*, tho' there are many of the *Baſorians* which all that Power cannot ſubdue, nor drive out of their Strong-holds in the Iſles of the *Euphrates*. They are a Thieviſh Vagabond ſort of People, having no fix'd and ſettled Dwellings, but roving up and down from one place to another, 'tis probable, where they have moſt opportunity to ſteal. They wear long blue Gowns; and their Wives have their Ears and Noſes full of Silver and Copper Rings, as others of this latter alſo about their Legs. The Town ſtands near the *Perſian* Gulf, and has the advantage of a great Trade of Spices and Drugs that come from *Ormus*. There's alſo great ſtore of Wheat, Rice, and Dates, growing thereabouts, with which they ſerve *Babylon*, *Ormus*, and all the parts of *India*.

The Veſſels that uſe to go from *Baſora* to *Ormus*, are many of them very ſlight and ill-made things, and leak Water abundantly. They are made of Boards faſtned together with a kind of Thread made of the Husk of the Coco, and certain Canes, or Straw-leaves ſowed upon the Seams of the Boards, which is the cauſe they let in the Water ſo.

In one of theſe ungainly Ships we ſail'd from *Baſora* to * *Ormus*, paſſing many Iſlands; and amongſt the reſt the Iſle *Baharem*, ſo much celebrated for the fine Orient Pearl.

* An Account of *Ormus*, as much as this Author gives of it, you have before in Mr. Salbank's Voyage.

The King of *Ormus* (at this time) was a *Moor*, choſen by the *Portugueze*, and altogether govern'd by them. The Women of this place are ſome of the moſt extravagant perhaps in the whole Eaſtern World, for the gaudineſs and multitude of their Ornaments. All parts of them almoſt, are beſet with Jewels, Rings, or Locks of Gold and Silver; their Noſes, Ears, Necks, Arms, and Legs; and beſides all (as if the other was not enough), a long Bar of Gold hanging on one ſide of their Noſes. Their Ears are ſo extended and widened, with the weight of the things they hang in them, that a Man may thruſt three of his Fingers into them. In ſhort, they are very valuable Creatures as they are dreſs'd, and half as much Vertue and Goodneſs as they have Gold and Silver about them wou'd make them very excellent indeed.

Made Priſoners by the *Portugueze.*

This place prov'd very unfortunate to us; for here quickly after our arrival we were ſeiz'd by the *Portugueze*, and ſent Priſoners for *Goa* to the Vice-Roy there. In this Voyage we paſs'd by *Diu*, *Daman*, *Chaul*, and other places on the Coaſt of *India* belonging to the *Portugueze*.

Trade at *Chaul.*

Chaul is as it were two Towns, one belonging to the *Portugueze*, the other to the *Moors*. That of the *Portugueze* is neareſt the Sea, commands the Bay, and is walled about: A little above that ſtands the *Moors* Town, govern'd by a King of their own. Here's vaſt Traffick for all ſorts of Spices, Silks, Drugs, Sandals, Elephants Teeth, *China*-Work, and Sugar made of the Nut * *Gagare*.

* The Coco.

The moſt Trade indeed for Corn and Rice in theſe parts, is at *Daman*, *Balaim*, and *Tana*; which three places are upon the Coaſt between *Diu* and *Chaul*; but 'tis to this latter that the greateſt number of Ships come from *Ormus*, the *Red Sea*, and all parts of *India*.

We came at laſt to * *Goa*, the place of our intended Miſery and Impriſonment. Here is the great Rendezvous of the *Portugueze* Nation, their beſt Strength both for Men and Ships, and the place where a Man may ſee a freſh Fleet of them every Year. They come for the moſt part in *September*, and having ſtaid forty or fifty Days, go then to *Cochin*, where they lade their Pepper for *Portugal*. The Town ſtands in the Dominions of an *Indian* Prince who lies up in the Country ſix or ſeven Days Journey, and his chief City is *Biſapour*.

* You have a Deſcription of the Town in Mr. Salbank's Voyage.

November. A. D. 1584.

At our arrival there, we were examin'd before the Juſtice, and becauſe they could prove nothing upon us, and were reſolv'd to make us guilty of ſome Crime or other, they made Spies of us, and ſo ſent us to Priſon. And in that Condition we continued for about a Month, when the favour was granted us of coming out, and being only Priſoners at large in the Town, upon the proviſion of good Sureties. Theſe a certain *Engliſh* Jeſuit was ſo kind as to look out for us, who being bound we came out, and paid them in our Money (the Sum of 2140 Duckets) to preſerve them harmleſs. But five Months being now ſpent, and the *Portugueze* able to prove nothing againſt us, we demanded our Liberty, and the Repayment of the Money from the Sureties. But theſe honeſt Men, inſtead of refunding, demanded more Money of us, when we addreſs'd the Vice-Roy, and moved to have Juſtice done us. In this Caſe, all our Comfort was a very ſharp and threatning Anſwer, That they had not done with us yet; they ſhould find out other things againſt us, and would ſift us after a ſeverer manner before 'twas long: That is, they would put us into the Inquiſition, where any thing may be found out againſt any Man, and all Men (eſpecially thoſe that have Money) are throughly ſifted indeed. Finding therefore this to be the Caſe, and being told, that we ſhou'd certainly have the Strappado in a little time, we reſolv'd to avoid all theſe Miſchiefs by running away. This Deſign we accordingly put in execution, and being got over the River, we proceeded in a very uncertain and dangerous ſort of Ramble, neither knowing the way our ſelves, nor daring to truſt any Guide to ſhew us.

They make their eſcape. *April*, A. D. 1585.

Bellargan.

The firſt Town we came to was *Bellargan*, where there's a great Market kept for Diamonds, Rubies, Saphires, and other precious Stones.

Biſapour.

From hence we went to *Biſapour*, a very large Town, and as rich as large; the Houſes high, fair, and built of Stone. The Inhabitants are moſtly Idolaters, and their Idols (which are very numerous) ſtanding about in the Woods, of as many Forms and Shapes, as the Beaſts and Fowl that dwell there.

Golconda.

Golconda (which we viſited next) is a fine agreeable Town, the Houſes built of Brick and Timber; it has very good freſh Water, and will entertain you with Varieties of pleaſant Fruits. The Inhabitants, both Men and Women, wear only a Cloth bound about their middles, which as the Cuſtom of their Country makes decent, ſo the Heat of the Climate renders as convenient. This Country, *Biſapour*, and *Decan*, are the moſt famous for plenty of Diamonds of the Old Water. All along this Continent the Land is very good and fruitful.

Servidore.

From *Golconda* we went to *Servidore*, the King of which has the Title of *The King of Bread*; and the Fineneſs and Fertility of his Country will allow it him. The Houſes of the Town are all thatch'd and built of Lome, too mean by far for the Character of the Noble Region they ſtand in. The Inhabitants are a mixture of Moors and Gentiles, but the Religion of both is much the ſame.

Barrampore.

The next places we came at were *Bellapore*, and *Barrampore*. This latter Town is built much after the ſame manner with *Servidore* ; but both it and the Country about it are very populous.

In their Winter, which is in *June*, *July*, and *Auguſt*, there's no paſſing the Streets but with Horſes, the Waters be ſo high.

They make here great ſtore of Cotton Cloth, and Painted Cloth of Cotton Wool, with which they ſupply other parts, and are themſelves as plentifully ſupplied by Nature with vaſt Quantities of Corn and Rice. Their Money is a thick round piece of Silver, of the Value of 20 *d.*

They marry Boys and Girls of ſix or eight Years old together, and make them conſummate the Marriage by lying together at ten. The Reaſon they give for this, is, becauſe if a Man happens to die, his Wife is obliged by the Cuſtom of the Country to burn her ſelf at his Funeral, and ſo both the Parents go away together : Now if they leave any young Children behind them, they reckon they are expos'd to all the Hazards and Difficulties of the World, having neither Father nor Mother to take care of them. But now by theſe Marriages they ſee their Children provided for in their own Life-time, here's a Father or a Mother-in-Law (if not both) provided againſt a time of neceſſity, ſo that if the Natural Parents die, there are ſome others left in their room and place to take care of the Children. Theſe young Brides and Bridegrooms are carried through the Streets on Horſeback very finely trimm'd, with Muſick and Dancing before them, to make up the Solemnity, after which they fall to Banquetting, and between that and Dancing, ſpend the reſt of the Night.

From hence we proſecuted our Journey into the Country of the Great Mogul, through the beſt part of which we paſs'd * ; and at *Fetipore* I parted with my *Engliſh* Company : Mr. *Newberry* being bound for *Labor*, and from thence for *Perſia* and *Conſtantinople* ; and Mr. *Leeds* the Jeweller being entred into the Service of the Great Mogul, who gave him a Houſe, Horſe, Slaves, and beſides a good Salary. Thus they diſpos'd of themſelves ; and I for my part went away for *Sattagam* in *Bengala*, in the Company of 180 Boats loaden with Salt, Opium, Lead, Carpets, and divers other Commodities, down the River *Jemini*, which runs into the *Ganges* at a certain place call'd *Prague*.

* We omit his Journal of his Travels through this Country, ſince it has nothing but what has been obſerv'd before.

Indian Mendicants.

The Country adjacent abounds with Partridge, Swans, Geeſe, Cranes, Turtle-Doves, Tigers, and a worſe ſort of Beaſts than they ; a parcel of idle Mendicants, lazy begging Fellows, that wou'd be reckon'd (and are eſteem'd) Religious Men, and get a good Living by the pious Fraud. To rivet this Notion into the Peoples Minds more firmly, under the pretext of Religious Mortification, they abandon all natural and neceſſary Care of their own Bodies. One of them which I ſaw, was an abſolute Monſter, and one might well have queſtion'd, whether he was of the Human Kind or no. He was quite naked, and affected to be ſo, his Beard was vaſtly long, and with the Hair of his Head he cover'd the obſcene parts. The Nails of ſome of his Fingers were full two Inches in length, and if he lived, muſt grow to be five times as long (for he would ſuffer nothing to be taken from him)and by that time, with thoſe Talons,he would be ableto diſpute his Living with the Tigres. He would not ſpeak a word to any that ask'd him, but he had them by him, that did both beg and anſwer Queſtions for him ; all that he did himſelf, was only to lay his Hand upon his Breaſt, and bow his Body a little. The common People have a mighty Veneration for theſe ſort of Men, which are Saints in their eſteem, as any thing indeed that plays the Buffoon, that looks ſourly and demurely, or rough and horrid, very eaſily gets that Character amongſt them : A barbarous Countenance, overgrown Nails, and long ſhaggy Hair, does better than a good Stock of Piety and Vertue.

But to leave them ; the Country along the *Ganges*, from *Prague*, is univerſally fruitful and populous, and has the Bleſſing of exceeding ſweet and pleaſant Water. The Inhabitants of theſe parts, for the moſt part, keep their Faces very cloſe ſhaven, but the Hair of their Heads very long, except ſome which be ſhaven all round the Crown, on which part alone the Hair is entirely preſerved.

Bannaras.

The next Town we came at was *Bannaras*, a large place, and of great Trade for Cotton Cloth, and Saſhes for the Moors. The Superſtition and Idolatry of the *Indians*, is here at the heighth ; here they have the greateſt Numbers and Varieties of Images, and the Ceremonies of the Bramens are the moſt nicely obſerv'd and practis'd : That is, not only juſt at this particular place, but this part of the Country along the Banks of the *Ganges*, which celebrated River is conſtantly viſited by multitudes of devout Pilgrims and Travellers. And this Town of *Bannaras*, for its ſhare, receives vaſt numbers of them, that come to waſh and pray, and perform their other accuſtom'd Rites in the River. They go into the Water very early in the Morning, by Break of Day, if not before. By the River's ſide there ſit ſeveral old Bramens at their Devotion, which give the People that paſs by them three or four Straws, which they take and hold between their Fingers when they waſh. Others of theſe Prieſts mark the devout People in the Foreheads ; for which piece of Service they have a Largeſs in Rice, Barley, or Money, given them when the others come out of the Water. When they are in, they waſh themſelves all over, and pray ; they lade up Water with both hands, and turn themſelves about and then drink, and this they repeat three times.

The Religious Ceremonies of the *Indians*, at the River Ganges.

After theſe Ceremonies in the Water, they go and make their Offerings to the Idols, at which time the old Prieſts mutter certain Prayers, which they believe to be a moſt effectual Conſecration of their Sacrifices. Some of them will waſh a place upon the Earth that is their full length, and then lie down and pray, with their Arms and Legs extended ; after which they riſe up and lie down, and kiſs the Ground ſeveral times ſucceſſively, and every time they do it, they make a Score on the Ground with their Finger, to know when their Meaſure is fill'd up.

Others of them perform moſt of their Religious Buſineſſes over certain Pots, to the number of fifteen, or ſixteen ſmall and great, in which they make ſome odd mixtures (what they know beſt)and ring a little Bell every time they put the things together. They make a Watry Circle about the Pots, and utter ſeveral Prayers over them ; and when all this is finiſhed, they go away to the Images, and lay their Offerings at their Feet like the reſt.

There's abundance of fair and handſome Houſes erected upon the Banks of the River, all of which are repleniſh'd with thoſe Images which theſe poor People pay their Devotion ſo ſuperſtitiouſly to. Amongſt the reſt there's a particular ſort of Image (which they call *Ada*) ſtanding up and down in ſeveral places, and a deform'd Figure it is, having four Hands with great ugly Claws. Before this (as well as the others), they pour out Water upon great carved Stones, and throw thereupon Rice, Wheat, Barly, and ſome other things.

Idol *Ada*.

They have moreover a great place built of Stone, made like a Well, with Steps to go down, the Water of which is very foul and putrid, and that by reaſon of the great Quantities of Herbs and Flowers, which all the Votaries that come thither caſt into it, and lie ſtinking and corrupting there. They reckon it a mighty Purification to waſh themſelves in this naſty Well; for they ſay, the Deity himſelf once waſh'd there, and made it holy. Upon this account there's always abundance of People crowding into it, and picking up the Sand that lies at the bottom of it, which they eſteem a very Sacred Thing too, and preſerve accordingly.

The great Well, whic they eſteem ſo ſacred.

But 'tis more unaccountably ridiculous ſtill, that theſe People ſhould treat their Idols (which they very well know to be but dead unactive Matter), as ſo many things ſenſible of Pain and Pleaſure ; which they do, by making ſome of the Attendants ſit by them in the hot Weather, to breath the cool Air upon them with a Fan. And theſe Men, when they ſee any Company coming towards them, ring a little Bell that hangs by them ; for which they are paid with the Eleemoſinary Gifts of the Pilgrims, and other Religious that viſit thoſe Houſes. But all that enter in, muſt firſt pull off their Shooes, ſuch an Opinion they have of the Sanctity of thoſe places where their Idols ſtand. They keep Lamps continually burning before them, which makes the Appearance more awful, and affords ſome help to the Imagination, if not the Devotion of the People that come thither.

The Bra

The Bramens of theſe parts do moſt of their Religious (and Domeſtick Buſineſſes too) naked ; they pray in the Water naked, dreſs their Food (which is only Vegetable), and eat it naked ; upon which account they well deſerve the Title that the Wiſe Men of this Country anciently had, and are *Gymnoſophiſts*, in the ſtricteſt and propereſt Sence of that Word. They take a Pride in marking themſelves with a certain Yellow Powder, which they rub about their Foreheads, Ears, and Throats ; and they go about the Streets with a Box of it in their Hands, with which they frequently mark other People they meet.

Their Women too do the ſame to themſelves, when they come down to the River to waſh, and perform the other accuſtomed Ceremonies. They come in pretty large Bodies together, and are very Merry and Jovial at this time; for as they come with a Song in their Mouths, ſo they go away with the ſame, and no body can charge them with a dull heavy hearted Devotion.

They allow Polygamy amongſt them, and every Man may have ſeven Wives; their Daughters alſo marry very young, and they look out for Husbands for them at ten Years of Age.

Their way of Salutation when they meet one another, is, to lift their Hands up to their Heads, and repeat the Word *Rame* twice or thrice.

Other Cuſtoms of the People.

The Funeral Rites are the ſame hereabouts that they are in other parts of *India*; the dead Bodies are burnt, and the Women ſacrifice themſelves upon the ſame Pile; if they refuſe to do it, their Heads are ſhaven, and no body minds them for ever afterwards.

Funerals and Marriages.

But the Ceremony **of their** Marriages is as fooliſh and idle as it could well **have** been made with Study and Contrivance. Indeed it affords a very lively and ſenſible Emblem of the Union between a Man and his Wife; for here they don't think it ſufficient to make them ſolemnly joyn Hands, but they tie * them together by their Cloaths. The Man, the Woman, and a *Bramen* Prieſt, a Cow and a Calf, go down together into the Water. Here the *Bramen* ſpreads a large Cloth upon the Cows Back, and then takes her by the end of the Tail, ſpeaking certain Words at the ſame time. The Man and the Woman lay their Hands there alſo by the Prieſts; and thus one Hand of each being engaged, with the other they take up Water in a Braſs Pot, and pour it out upon the Cows Tail, ſo that it runs thro' all their Hands. After this, the loving Couple are faſtned together by their Cloaths, and then they walk round about the Cow and the Calf, and ſo go out of the Water. When the Ceremony is ended, the *Bramen* has the Cow and the Calf for his Fee, and they give Alms to the Poor, that are always about them upon ſuch Occaſions. Neither do they forget Devotion any more than Charity; for they go and proſtrate themſelves before their Idols, kiſs the Ground ſeveral times, make their Offerings to them, with which the whole Scene concludes, and they go home to their Houſes.

* The *Mexicans* us'd this Ceremony of old too.

And their way of managing the Sick is not leſs odd than that of their marrying thoſe that are Well. If a Perſon be dangerouſly ill, they carry him and lay him before their Idols all night, which is the laſt Experiment they make for life. If they don't mend upon this, their Friends come and ſit by them and ſhed a few Tears upon the Occaſion, and then ſet them a ſailing upon the River in a little Raft made of Reeds. A good quick Method of curing Diſtempers to drown the Patient.

Habits and Dreſs.

The People in general go without Cloaths, and have no Covering but a Cloth about their middle. The Women have their Ears, Arms and Necks deck'd with Rings of Silver, Copper, Tin, and Ivory, with Amber and Agats; and as the *Bramens* Wives mark themſelves with Yellow, ſo theſe Affect to do it with ſtreaks of Red quite croſs the Forehead, and ſo up to the Crown. But in Winter the Men wear quilted Cotton Gowns, and quilted Caps, in the Faſhion of a Morter, with a ſlit to look out at, and ſo tyed down beneath their Ears.

Patenaw.

From *Bannares* I proceeded down the *Ganges* to *Patenaw*, a very long and a great Town, but the Houſes mean and ill built, made of Earth and covered with Straw, yet the Streets large and ſpacious. This Voyage was very pleaſant, for we paſs'd abundance of fine Towns, and had a fruitful Country all about us. I obſerved ſeveral mighty Rivers that enter the *Ganges*, ſome of them near as big as the *Ganges* it ſelf; which make it to be of ſuch a vaſt breadth, ſo broad, that in a time of great rain you cannot ſee from one ſide to the other. The Country is horribly peſter'd with Thieves, which like the *Arabs*, ſhift up and down for Spoil and fix no where.

Breadth of the *Ganges* in the Rains.

The Women are trick'd up with Ornaments of Silver and Copper, much like thoſe of *Bannaras*, and they can wear no Shooes they load their Toes with ſo many of thoſe Rings.

Gold found at *Patenaw*.

The Town of *Patenaw* has a good Trade for Cotton, Cotton Cloth, Sugar, Opium, and other Commodities, which they carry from hence to *India* and *Bengala*. But it has a greater name for the Gold they find there. They dig deep Pits in the Ground, and taking out ſome quantities of the Earth, they waſh it in Bowls, by which means they light upon the Gold: Theſe Pits are brick'd round about to keep the Earth from falling in and mixing with the Precious Duſt.

Tanda.

From *Patenaw* I proceeded to *Tanda*, in the Country of *Goureu*. Both this and *Patenaw* were formerly Kingdoms of themſelves, but have of late Years followed the Fortune of other Provinces of *India*, and bowed to the Scepter of the victorious *Mogul*, *Ecbar-Sha*. Here's mighty Trade alſo for Cotton and Cotton-Cloth. The Inhabitants are all Gentiles, and go naked, except a Cloth before.

The adjacent Country is well repleniſh'd with wild Fowl, and a little more than ſhould be, with wild Beaſts too, ſuch as Tigers, wild Buffles, &c. *Tanda* is ſituated a League from the *Ganges*, that is, from the preſent Current of that River; for formerly the River overflowing its Banks by means of great Rains, carried it ſelf conſiderably farther up into the Country, and laid ſeveral Villages under Water. But 'tis all dry and paſſable now where the *Ganges* uſed to run in former times, ſo that tho' *Tanda* were not removed from the River, yet the River has removed it ſelf farther from *Tanda*.

I made five Months of it in my paſſage from *Agra*, down the Rivers *Gemini* and *Ganges* to *Bengala*, but it may be done in much leſs time than that.

Couche.

Cacchegate.

From *Bengala* I travel'd into the Country of *Couche*, which lies 25 Days Journey North from *Tanda*, and not far from *Cauchin China*. The Port is called *Cacchegate*. The Country is all ſet with Bamboes, or Canes made ſharp at both ends, and ſo driven into the Earth; and they can let the Water in and drown it above knee deep, ſo that neither Horſe nor Man ſhall eaſily paſs. Their Cuſtom is alſo to poiſon all the Waters whenever they are engaged in any Wars.

Trade and Manners.

Their Trade lies chiefly in Musk, Silk, and Cotton Cloth; and their ſmall Current Money is * Almonds, which they eat almoſt as often as they receive. Nature has provided a Purſe for this ſort of Money, into which the ſlippery Fingers of no Thief or Pick-pocket can enter.

* In *Mexico* they uſed the Fruit *Cacao*, which is like an Almond for Money.

They have hereabouts all that Compaſſion and Tenderneſs for all ſorts of Animals, that we find in the *Mogul's* Country and other parts of *India*. They give Meat to the little crawling Ants; and tho' thoſe Wiſe and Induſtrious Creatures never fail to make Proviſion for themſelves, yet they think themſelves obliged to take care of them too, and add to their Stores. I returned back from hence to *Hugeli* in *Bengala*, a place in the Hands of the *Portugueze*, a League from *Sattagan*, and in 23 Degrees N. Lat. The *Portugueze* call it *Porto Piquena*, and not far from it to the S. W. is a Haven called *Porto Angeli*, ſeated in the Country of *Orixa*; to which comes every Year good ſtore of Ships out of *India*, and the adjacent Iſlands, and lade from thence great quantities of Rice, Cloth made of Cotton-Wooll, long Pepper, Sugar, Butter, and other Proviſions.

Hugeli.

Porto Angeli.

Orixa.

Orixa, is ſix Days Journey S. W. from *Sattagan* (which is a City of the *Moors*, a large and plentiful place) 'twas once a Kingdom of it ſelf, but in proceſs of time was conquered by the King of *Patan*, its Neighbour, and wreſted from him by the ſtrong Arm of *Ecbar Sha*. There's abundance of Rice here and Cotton Cloth, as alſo of another ſort of Cloth made of a Graſs, which they call Yerva, and is like a Silk; it makes a very good Cloth, and a great deal of it goes for *India* and other places.

In *Bengala* there is a great Market every day at one place or other, and they have a ſort of open Boats, they uſe to convey their Goods by water in, that are of a mighty burthen, and row with 24 or 26 Oars.

Eſteem of the River *Ganges*.

Such is the Opinion the People of this Country have of the admirable Vertue of the River *Ganges*, that tho' they have ever ſo good and pleaſant Water hard by them, they'll chooſe rather to go a great way to fetch that of *Ganges*. And if they have not enough to drink, they'll ſprinkle a little upon themſelves, and then all's well with them.

Tippara.

From *Sattagan* I travell'd by the Country of the King of *Tippara* or *Porto Grande*, with whom the *Mogores* (or *Mogen*) have almoſt continual Wars. Thoſe *Mogores* of *Arracan* are much Superiour in Force to the King of *Tippara*, ſo that *Porto Grande* is often in ſubjection to the King of *Arracan*.

Bottanter, a great Northern Region.

There is a Country about four Days Journey from *Couche* (before mentioned) called *Bottanter*, and the Chief City *Bottia*; it takes in a mighty compaſs of Ground, as much as will require three Months time to travel. There are vaſt high Mountains in it, and one of them particularly raiſes up its Head ſo high, that a Man may ſee it perfectly when he is ſix Days Journey from it. Upon theſe Mountains dwell a ſort of People that have Ears of a full ſpan in Length, which is much the ſame ſize with thoſe of the Inhabitants of *Couche*; and probably both from the ſame cauſe, namely, the Tricks the Parents play with them, to extend and draw them out when they are young, which is known to be the Practice in *Couche*. There is a great reſort of Merchants hither, from *China*, from *Muſcovy* and *Tartary*, who come to buy Musk, Silk, Agats, Pepper, and Saffron like that of *Perſia*. The Northern Merchants by their Dreſs and Habit, tell the World how cold a Climate 'tis they come from. They are all cloſe wrapt up in woolen Cloth, their Legs guarded with Hoſe and Boots, and warm Caps upon their Heads.

Reports of the Northern Merchants.

They report their Country affords excellent Horſes, tho' very ſmall, and Kine they have too in great abundance; ſome Men amongſt them keep 600 Horſes and Kine about them.

Their ſole Diet is Milk and Fleſh; their way of trading to buy and ſell by Scores upon the Ground. They cut the Tails of their Kine, and ſell them at very great Rates, becauſe they are a Commodity mightily in requeſt, and all the People eſteem them highly. The Hair of them is a Yard long, and the Rump above a ſpan; and the uſe they chiefly put them to is to hang them for Ornaments upon the Heads of their Elephants.

The Inhabitants are an active lively People, and mighty ſwift Runners. This Account thoſe Northern Merchants gave of the Countries from whence they came.

Bacola.

From *Porto Grande* (or *Chategan*) in *Bengala*, I came to *Bacola*, the King of which place was a good temper'd Hoſpitable Man, and wonderfully pleaſed with our European Invention of Guns, to ſhoot with, which was his principal Exerciſe and Delight. His Country is large and fruitful, yielding great ſtore of Rice, Silk and Cotton-Cloth. The Inhabitants have no Cloaths nor Covering, but a Cloth about their middles; but the Women here wear Silver and Copper Rings as plentifully almoſt as any where. *Bacola* is a Town handſome and ſtately enough, the Streets large and open, and the Houſes fair and very high built.

Serrepore.

My next Stage was to *Serrepore*, upon the Banks of the *Ganges*, a place famous for the Cotton Cloth made there. They are all hereabouts Rebels againſt the *Great Mogul*, or rather ſtand up in defence of their Juſt Liberties, which that Potent Adverſary endeavours to ſwallow up. They skulk up and down in the Iſlands of the *Ganges* (which are very numerous) and all the Forces of the *Mogul* can't beat them out from thoſe ſhelters.

Sinnergan.

About ſix Leagues from *Serrepore*, ſtands a Town called *Sinnergan*, which bears the Bell from all other places in *India*, for good and fine Cotton Cloth. For buildings, 'tis much inferiour to the former; low Houſes, covered with Straw, and Mats hung round the Walls, and before the Door to keep out the Tigers and Foxes.

The People dreſs like them at *Bacola*; they live altogether upon Milk, Rice, and Fruits, neither touching any Fleſh nor killing any Beaſt. Yet many of them are very rich; and the King of this place is a Sovereign to the reſt of the Kings round about him. All Chriſtians are very welcome to him, and meet with friendly Entertainment from him. This Country ſerves *Ceylon*, *Pegu*, *Malacca*, *Sumatra*, and other parts with Rice and Cotton Cloth.

From *Serrepore* I ſet ſail down the *Ganges* for *Pegu*, which is 90 Leagues diſtant from *Bengala*.

November. A. D. 1586. Bar of Negrais.

After many Difficulties we entred the Bar of *Negran*, which is a very good one, and where you have four Fathom Water in the ſhalloweſt part; 'tis ten Days Voyage by the Rivers from this Bar to the City of *Pegu*.

Coſmin.

In the ſpace of three Days we came to *Coſmin*, a pretty Town, delightfully ſituated, and as well ſerved with all ſorts of Conveniencies. All the Houſes ſtand aloft upon Poſts or Frames of Wood, ſo that they mount up to them by the help of Ladders, and thoſe long ones too. The Reaſon of this is, the Country is ſo peſter'd with Tigers, they are ſo numerous and withal ſo very fierce and ravenous, that the Inhabitants are forced to elevate their Habitations thus, to keep themſelves out of the reach of thoſe Hungry Creatures. Had their Houſes the ordinary Situation, the Tigres (the only Viſiters they dread) would have an Opportunity of looking in too often upon them.

Abating this Inconvenience 'tis an agreeable place enough; 'tis very well ſerv'd with all Neceſſaries from the circumjacent Fertile Country, and abounds particularly in Fruits, as Coco's, Figs, Oranges, and ſeveral others beſides.

We go from *Coſmin* to *Pegu* in Paroes or Boats, in which the Water-men keep their whole Families; and as they get their living by the Water, ſo they moſtly ſpend their Lives upon it.

Medon.

Paſſing along the Rivers, we came to *Medon*, another pretty Town, and vaſtly ſtock'd with theſe Paroes. They keep their Markets here upon the Water, having their Goods aboard their Paroes; and to keep them from the ſcorching heat of the Sun, every Paroe is guarded with a large Tembrella or Sombrero, made of Coco and Fig Leaves.

Markets kept upon the Water.

Dela. Houſes for the Elephants.

The next Town we came to was *Dela*, which has a fair Port to the Sea, from whence go ſeveral Ships for *Malacca*, the *Red-Sea*, and other parts. Here are 18 or 20 very great and long Houſes, where they keep and tame abundance of Elephants for the King of *Pegu*; for they catch the wild Elephants in the Woods thereabouts.

Cirion.

From hence we proceeded to *Cirion*, which is a handſome Town, and has a good Port, whither abundance of Ships come from other parts of the *Indies* and the *Red-Sea*; and here 'tis that they ſtop and diſcharge, ſending up their Goods by Boat to *Pegu*.

Macao.

The next place we came to was *Macao*, where we left our Boats, and taking ſome Delingeges (which are a ſort of Carriages made of Cords and Cloth quilted, and carried between three or four Men) we came the ſame Day to *Pegu*. This is a very large, ſtrong and mighty City, and well deſerving its Character of an imperial one. 'Tis compaſſed about with firm Stone-walls, and Ditches too, that are both wide and deep. It's divided into two Cities, the Old and the New.

Pegu. The Deſcription of it.

Old-City.

In the Old are all the Merchants of ſtrange Countries, and many of them alſo that belong to this; and here it is that all the Trade is driven. It has very large Suburbs about it, but the Houſes are built of Bamboe Canes and cover'd with Straw; ſo that Fires are as miſchievous here as they are frequent, for 'tis very often that 4 or 500 of theſe are laid in Aſhes in a very little time. But there's this Convenience, that to every dwelling Houſe thus ſtately built, you have a good Brick Ware-houſe for your Merchandize, without which there would be no ſafe living at this place.

New-City.

In the New-City is the King and the Court with all the Nobility and Gentry. It's a very great and populous City of it ſelf, built ſquare, defended with handſome ſubſtantial Walls, and a Ditch that is not only full of Water, but has abundance of Crocodiles in it too; which may be a pretty good Guard; for an Adverſary that ſhould come to paſs this Ditch, would be in danger of being ſnapt by them. It has 20 Stone-Gates; 5 for every ſide of the Square; and (beſides theſe) abundance of Watch Towers upon the Walls, built of Wood, and very pompouſly gilt with Gold. The Streets are the faireſt that ever I ſaw any where, as ſtrait and even as a Line, and of ſuch a breadth, that 12 Men may very well ride a breaſt thro' them. The Houſes here are all of Timber and cover'd with Tiles, and before every Door is ſet a Palm Tree; ſo that 'tis a pleaſant Wood, and a ſtately City together; 'tis ſo cool and ſhady, that under the ſhelter of theſe Palms a Man may walk without any trouble from the Sun all the Day long. The Palace is in the midſt of this City, and 'tis wall'd and ditch'd about. The Buildings are all Wood, but every where gilt at a moſt extravagant rate; eſpecially the Front, which for Gilding and Carving exceeds all the reſt: And the Temple where the King goes to his Devotion, is more rich and ſplendid than this.

King of Pegu's Elephants.

Within the firſt Gate of the Palace is a very large Room, on both ſides of which are Houſes for the King's Elephants. It is ſaid that he has above 5000 of theſe Elephants that are for Martial Service, beſides a great number of others that are not taught to fight.

The White ones.

Amongſt all theſe he has four White ones, which are extraordinary Rarities, and there's no other Prince known to have them but himſelf; or if there were any of his Neighbours that had ſuch a Beaſt, he would make War upon them rather than not have it. Such is the eſteem that this Monarch has for an Elephant of this Colour, that he brings this in amongſt the reſt of his Titles; To be King of the White Elephants is as big and lofty a one with him as any other that he aſſumes. And becauſe no other Prince about him muſt wear this Glorious Title but himſelf, therefore none muſt keep a White Elephant tho' Nature gave it them; but muſt ſend it to him, or if not, his Armies muſt fetch it away.

When theſe Creatures are brought before the King, all the Merchants in the City are commanded to attend and come and ſee them; and at the ſame time are obliged to make a Preſent of half a Ducat a piece. This amounts to a good Sum; and the King gets Money by ſhewing his White Elephants.

Their Management.

To ſee how theſe Creatures live and are attended, and in what pomp they march along, would ſurprize a Man with the greateſt wonder. Their Houſes are ſplendidly gilt and ſo are the Silver Veſſels out of which they are fed. When they go to the River to be waſhed (which they do every Day conſtantly) there's ſix or eight Men to bear up a Canopy of Cloth of Gold or Silk over them, and as many or more that march with Drums and Muſical Inſtruments before them; and when they come out of the Water, their Feet are waſhed in great Silver Baſons by ſome Perſon of Quality, whoſe office it is to do them that piece of Service.

Black Elephants.

He has alſo ſeveral Black Elephants, but they are not near ſuch Favourites as the white ones are, tho' they are very large ſtately Beaſts, many of them nine Cubits high. About a Mile from *Pegu* in a great Grove or Wood, is the King's Houſe or Trap for taking the Wild Elephants. This they do chiefly by the help of ſome tame ones they carry with them for that purpoſe, commonly a Female, which the wild Males will very eaſily follow. The Hunts-men drive the Wild one near the Lodge, where he is to be impriſoned, and there in ſome ſtrait and narrow path he finds the Female; after they are met, they drive on the Female into the way that leads into the Lodge, the Door of which being open, ſhe enters, and the Male (fond of her Company) along with her. And then he is a ſure Priſoner; for upon their entrance, the Door immediately claps down, and all is faſt and cloſe about them. The Female they quickly after get out again, and leave the Male all alone in his Confinement, who they ſay takes it very hainouſly to be ſo tricked out of his Liberty, and afterwards robb'd of an agreeable Companion, with whom he was eaſie and quiet. But now upon this Loſs he makes pityful Moans, and changes his Grief at laſt into Rage and Fury; he runs himſelf for very madneſs againſt the Walls, and breaks his Teeth many time in the Encounter. Beſides this, they teaze and prick him with ſharp Canes, keep him three or four Days without Meat or Drink; after all which Mortifications, they at laſt bring him Victuals and a Female to pleaſe him, by which means he is perſwaded to be tame.

Manner of taking Wild Elephants.

This King's beſt Force conſiſts in his Elephants, tho' he is able to raiſe prodigious Armies of Men too. At my being there he mached againſt the King of *Siam* with a Body of 300000 Men, and 5000 Elephants. All theſe Creatures that are for the Wars have Caſtles of Wood upon their Backs, in which are placed certain Souldiers that fight with Guns, Bows and Arrows, Darts, and other Weapons.

The Power and State of the King of Pegu.

The King ſits abroad in open view twice every Day, partly for State, and partly to do Publick Juſtice. The Nobles ſit on each ſide him at a good diſtance, and without them ſtand the Guard which are very numerous. Thoſe that the King will honour with his Converſe come to him in this manner; they kneel down, heave their Hands up to their Heads, and put their Heads to the Ground three times, at their entrance, in the midd-way, and at their approach to his Majeſty. If he like them they ſit within three or four Paces of him, and he talks with them; but if not, they remove to a farther diſtance.

Receiving Petitions.

All Petitioners and thoſe that come to him for Juſtice, are wholly ſilent before him; they ſay nothing, but preſent him their Matters in writing. What they have to impart to him, is written with the point of an Iron upon the Leaves of ſome Tree, which are a full Ell in length, and two Inches broad, and doubled alſo.

No Man comes without a Preſent, which notwithſtanding is not always accepted. For if the King likes the Buſineſs, he takes the Gift; if not, he returns it together with his denial of the Sute.

Going abroad.

This Prince never goes abroad but with a very numerous Attendance both of Guards and Noble-men. Sometimes he rides in a Caſtle (upon an Elephant) which is vaſtly rich and ſplendid; ſometimes he is carried upon a great Frame, like a Horſe-litter, upon 16 or 18 Mens Shoulders. This Frame has a little Houſe upon it, covered over head, but open on the ſides, all over gilded and ſet with Rubies and Sapphires.

His Riches.

Such Coſt is nothing to ſo rich a Prince as he is, that has inexhauſtible Mines both of Gold and Silver, and Jewels too in his own Dominions. Rubies, Sapphires and Spinelles are Natives of his Country; and he can command what quantities of them he pleaſes, out of thoſe Treaſuries where bountiful Nature has hoarded them up for him.

Caplan is a place from whence theſe rare Stones are brought; it is ſix Days Journey from *Ava* in the Kingdom of *Pegu*. There are ſeveral high Hills out of which they dig them; but none are permitted to come to the Pits but juſt the Work-men themſelves.

• Juſt by the Palace there's a Building which is the receptacle of a moſt wonderful Treaſure, which this Prince does not mind much becauſe 'tis ſo near him. It ſtands open ('tho with a good Guard) for all Comers to ſee; being placed in a great Wall'd Court, which has two Gates, but thoſe never ſhut in the Day-time. The King of *Pegu* with all his Treaſures has a good round Family of his own to maintain; ſeveral hundreds of Women of Pleaſure, and between 80 and 100 Children begotten by himſelf upon them; but twice as many more would neither make him a poor Prince, nor them live beneath their true Character and Dignity.

The People and their Manners.

The People of this Country have a Fancy that ſets them mightily againſt wearing of Beards, they pluck the Hairs by the Roots from their Faces with little Pincers made for that purpoſe. Some of them will let a few Hairs grow together in one part of their Faces or other, and pull out all the reſt. They wonder at a Man that wears a Beard, and look on him as if they thought him either a very frightful or ridiculous Creature.

Wear no beards.

Blacken their Teeth.

And that Trick they have of colouring their Teeth Black is odd enough, and the reaſon why they do it not leſs Idle and Fooliſh. For Dogs Teeth they ſay are white, and that they may not reſemble them they'll make theirs black; but no doubt but ſome Dogs in their Country together with White Teeth have Black Hair, upon which account (to avoid the reſemblance) they ought to colour theirs White. Inſtead of this, they make ſome parts of their Bodies blacker by the help of Art, than Nature has made them; pricking the Skin, and laying on ſomething that gives it a deep and laſting Black. But it muſt be confeſs'd that this is a Mark peculiar to the King's Kindred or Country Men; the Prince himſelf is a *Brama*, and all the *Bramas* diſtinguiſh themſelves thus, and none but they.

Wear Balls in the Privy Parts.

The Cuſtom which the Men have of faſtning little Balls of Silver, Braſs or Lead into the Pudenda is not leſs ſtrange than any of the former. They make an Inciſion and ſo put them in, one on the one ſide and another on the other; tho' there are many of them that wear three of theſe Globes upon the Part. Married Men (as the Report goes in the Country) put in one every time they have a Child, till it comes to three, and then they ſtop and go no farther. The leaſt ſize of the Balls is as big as a ſmall Walnut, and the greateſt will match a little Hens Egg: The King and the Nobles wear them of Silver, finely gilt, and made ſo as to ring and make a noiſe; the poorer ſort have theirs of Lead, which give but little or no ſound at all. The King often beſtows ſome that he has worn himſelf upon his Noblemen, which is a very great favour, and they eſteem them mightily after he has uſed them. 'Tis no doubt a great deal of Pain and trouble they put themſelves to to do this; but they ſay they can heal the Wound that's made, and make all whole and well again in ſeven or eight Days time. This Cuſtom was introduc'd by way of Prevention and Remedy againſt unnatural Luſt; 'twas deſigned to be a Reſtraint upon the Male Sex from abuſing one another. They themſelves know beſt what Uſe and Service it is to them in that reſpect; but 'tis very well known that they can take the Balls out of the part and put them in again at pleaſure. However, all thoſe Countries it ſeems were formerly infamous to extremity for the Practice of this Abomination; the Women were almoſt wholly laid by, and conſequently every place by Degrees grew thin of People. As Death ſwept away the Old Generation, no care was taken for the riſing up of a New one, and ſo they dwindled away; till the miſchievous Effects of their Crime were ſo apparent, that for Civil and Political Reaſons they began to think of a Remedy.

There is a Law of an ancient Date amongſt them, that regulates the Womens Dreſs, and limits the quantity of Stuff they ſhall put into their Garments. And this Law has been ſo nigardly to them, that they have hardly ſo much as decency requires; their Cloaths are ſo ſtrait, that they ſhew one ſide bare above the Knee as they go along the Streets.

Way of deciding Law Sutes.

When the *Peguezę* have a Suit of Law amongſt them that's any thing doubtful and intricate, they bring it to an iſſue by this quick method of Deciſion. The contending Parties (with their Judges or Arbitrators on both ſides) go down to a River, and where they find a good depth of Water, they leap in and dive to the bottom. And thus the Buſineſs is determined; for he that holds it out the longeſt under Water, carries the day. Which method of ending long and difficult Cauſes, ſhould it be uſed and practiſed in other Countries; thoſe that manage them might e'en leap into the Water too, and ſtay there for good and all.

Trade and Merchandize.

As for the Trade of this Country; the other parts of *India* do furniſh but few Commodities comparatively that ſerve here. Thoſe that are moſt in requeſt are the Opium of *Cambeya*; the painted Cloth of St. *Tomme* or *Maſulipatan*, and the white Cloth of *Bengala*. They bring hither alſo yearly good ſtore of Cotton-Yarn, dyed red with the Root they call Saia, which gives a very durable Colour; this ſells very well, and goes off in great quantities amongſt the *Peguеſe*. The Ships from *Bengala* and the *Coromandel* Coaſt, come to *Coſmin* and the Bar of *Nigrais*. To *Martavan* a Sea Port in this ſome Kingdom, come Ships from *Malacca* laden with Sandal, Porcelane, and other *China* Wares, with Camphire from *Borneo*, and Pepper from *Sumatra*. To the Port of *Cirion* come the Ships from *Mecca* with Woolen Cloth, Scarlets, Velvets, Opium, and ſuch like.

Brokers.

There are in *Pegu* a ſtated number of Brokers (eight in all) which are bound to ſell your Goods for you at the intrinſick Value, and you give them for their Pains two in the Hundred. They are bound alſo to make your Debts good to you, becauſe you ſell your Merchandcie upon their Words. If they don't pay you at their Day, you may take them home to your Houſe and keep them Priſoners; and after that, you may proceed (by the Allowance of the Law) to farther Extremities: You may take their Wives and Chilnren and bind them in the Sun (as ſo many Sacrifices) at your Door.

Products.

The proper Merchandice of *Pegu* (I mean its own natural Products) are Gold, Silver, Rubies, Sapphires, Spinelles, Musk, Benjamin, Frankincenſe, long Pepper, Tin, Lead, Copper, Lacca (of which they make hard Wax) Rice and Wine made of the ſame, and ſome Sugar. But of this latter Commodity there would be ſo much more than there is, if it were not that their Elephants conſumed ſuch a vaſt number of the Sugar Canes; but they devour abundance of them, and have not a more pleaſing agreeable Food to them than theſe are.

Money.

The Current Money in theſe parts is a ſort of Braſs which they call *Gauza*; as for Gold and Silver they are purely Commodities, and are ſometimes worth more and ſometimes leſs, as other Wares are. This Braſs Money goes by a Weight which they call Biza, and that amounts to ſomething leſs than half a Crown in our Money.

Temples and Idols.

The *Peguеſe* build mighty pompous Temples for their Idols; they ſpare no Coſt nor Labour, to make all the Edifices devoted to ſuch a Uſe, as Bright and Noble as they can.

Their Varella's or Temples are built round like a Sugar Loaf, ſome are as high as an ordinary Church, very broad beneath, many of them a quarter of a Mile in Compaſs. They beſtow their Gold at a moſt prodigal rate upon them, they being all of them gilded in the higher and more eminent parts; but many of them are done all over from top to bottom, ſo that there's nothing ſcarce but a Golden Face that appears. Then every ten or twelve Years they are new Gilt, becauſe in that ſpace of time the Rain and the Weather have pretty much impair'd the Beauty of them; for it is to be noted, that they ſtand expoſs'd, being all open abroad. Were it not for this conſtant Conſumption of it, Gold would be a very cheap thing in *Pegu*; but the Idols devour this, as the Elephants do the Sugar Canes; and between them both, they make both comparatively dear. The Images (which have theſe glorious Manſions for their reſidence) are not leſs ſumptuouſly deck'd and gilded than they; the Work-man beſtows his beſt Art and Skill to render them ſo much the more the Objects of their blind Worſhippers Devotion.

Rich Pagods.

Of the more private ſort of Temples (and which ſeem to be rather the King's Peculiar, or ſome Appendages to the Court) there are four that are extraordinary for the Images they contain.

In the firſt is the Effigies of a King at full length, all of maſſie Gold, with a Crown of the ſame upon his Head, richly ſet with Jewels; and about him ſtands four Children, all made of the ſame precious Metal.

In the Second, is the Effigies of a Man in Silver vaſtly great, and as high as an ordinary Houſe, which may be gueſſed (without meaſuring) from the proportion of his Foot, which is the full length of a Man; he is made ſitting, and has a rich Crown upon his Head like the former.

In the Third, you have one of Braſs, bigger and larger than the former, but Crown'd like them.

And in the Fourth, another of Braſs, but bigger than all the reſt, and crown'd as they were.

In another Court not far from this, ſtand four others of Copper, all Humane Forms and Marvellous Great; they were made in the place where they ſtand, for they are ſo bulky and ponderous, that they are not to be moved up and down. Theſe ſtand in four Houſes too, which are magnificently gilt, as they alſo are themſelves all, except their Heads.

* *Dogonne*, a great Temple for Pilgrims.

But the moſt celebrated publick Temple or Varella, is that which they call * *Dogonne*, about two Days Journey from the City of *Pegu*. 'Tis to this that the *Pegueze* perform their Grand Pilgrimage, and here they celebrate a Solemn Feaſt; at which time there is ſuch a vaſt crowd of People always going and coming, that there is hardly any paſſing for them by Water or Land. All the Characters of Beauty, Pomp and Coſtlineſs that a thing of this Nature may be ſuppoſed to have (in their way of Adorning) this has. Its ſituation is very high, and there are four ways that lead to it, which are all along ſet with Fruit Trees, ſo that a Man may walk two Mile an end in a lovely ſhade.

Preaching Place.

Hard by it is another ſtately Structure deſigned for the Tallipoies or Prieſts to Preach in. This Houſe is 55 Paces in length, has three great Walks in it, and 40 large gilt Pillars that ſtand between the Walks; it opens on all ſides with rows of ſmaller Pillars, which are likewiſe richly waſhed with Gold. As for the Building it ſelf, it's all over Gilt both within and without. Beſides this, there are ſeveral other Houſes for the Tallipoies to exerciſe their Gifts in, which are full of Images both of Men and Women, and thoſe not a little adorned and embelliſhed. Laſtly, there are other Houſes built round about for the Entertainment of the Pilgrims that come thither; theſe devout Men are not left to take up their Lodgings upon the bare Ground, but that their Religion may be eaſie (and not tireſome) they have comfortable Receptacles provided for them.

The Tallipoies.

There are abundance of theſe Tallipoies in *Pegu*, and by all that I can learn of them, they are mighty ſtrict, zealous and diligent Men in their Functions. They preach warmly againſt the Vices of the People, and great numbers go to them for Inſtructions in matters relating to their Superſtition. They are conſulted by the People generally in the Temples; the party repairs thither, and at the Door waſhes his Feet out of a Veſſel of Water, which ſtands there for that purpoſe; then he enters in, lifting up his Hands to his Head twice, firſt to the Prieſt and then to the Sun, and ſo he ſits down. The Tallipoies live altogether upon the Benefice and Charity of the People; they go about with a great Pot of Earth tyed croſs their Shoulders, and ſo viſit the good Houſes, and get Rice, Fiſh and Herbs, which is all their living. They don't beg nor ſo much as once open their Mouths to ask for any thing, but they make very broad ſigns, for they ſtand at the Door and ſhew their Pot, which the good natur'd People fill without any more ado. Nay many times when they are a Preaching, their kind Auditors come and carry them Preſents into the Pulpit; not that they interrupt themſelves in their Diſcourſe to take what the others give, but a certain Perſon does it for them, who ſits by them for that purpoſe. They ſay it becomes them, and 'tis their Duty to live this Eleemoſynarie Life, and they ought to content themſelves with it; in which Notion if they are not greatly miſtaken, 'tis certain the Religious in other parts of the World think them to be ſo.

Their Living.

Admiſſion into the Society.

They admit none to take Orders and be of the Society, till they are better than twenty Years of Age, the moſt part of which time they muſt have ſpent at School. When they would be initiated, they come before the Rowli or Principal Tallipoie (who is always one of the moſt learned amongſt them) and he tries their Abilities firſt of all by a ſolemn Diſpute in which he oppoſes, and after that by an Examination. Then he enquires of them whether they are contented to leave their Friends, to abandon the Company of Women, and take upon them the Habit of a Tallipoie (which is indeed ſo baſe and beggarly, that 'tis of it ſelf alone no little degree of Mortification for a Man to ſubmit to it) they wear only a thin brown cloth next their Skin, and upon their Shoulders another of Yellow, doubled many times, both which are faſtened to them with a broad Girdle; about their Necks hangs a Skin by a String, which is a ſort of a Portable Cuſhion to them, for they uſe only that to ſit upon; their Heads, Feet and right Arms are quite bare, and there's nothing elſe belongs to them but a Sombrero to ſcreen them from the Sun in Summer, and the Rain in Winter. To be ſo dreſſed and to be ſo maintain'd as the Tallipoies are, ſhould be (one would think) Exerciſe enough for ſelf-denial, without abandoning the other Comforts of Life; but they muſt endure all thoſe Severities, or keep out of the ſacred venerable Order; to come in to which, is an Honour that (to ſpeak the Truth) ſeems to be very dear bought.

But thoſe that can get the Victory over themſelves, and govern the Appetites of frail Nature ſo far as to throw off all the Enjoyments of the World at once; that have courage enough to anſwer the Rowli with a bold Affirmative, and tell him they are contented to do what he ask'd; theſe Perſons are received with the greateſt Triumph into the Society. They are firſt carried about the

Streets on Horſeback, with Drums and Pipes beating and ſounding before them, and at the ſame time are very handſomely dreſt; it being the laſt time they muſt ever be ſo, and this is to tell the World, that they are now going to put off all that external Pomp and Bravery.

A few Days after this they are carried upon a thing like a Horſe-litter, upon ten or twelve Mens Shoulders, with Pipes and Drums as before; but now all their Friends attend them too, and beſides they appear in the Habit of Tallipoies. Thus they are accompanied to their Cells, and left to a Life of Beggarly Devotion for the future.

Their Houſes and Feaſts.

The Tallipoies live for the moſt part out of the Cities and Towns, planting themſelves by the Highway-ſide, and amongſt the Woods and Thickets; their Houſes are little things erected upon ſix or eight Poſts, and they mount them with a Ladder of twelve or fourteen Rounds. I don't find that they are much for Society, but every one of them has his ſeparate Houſe, and dwells by himſelf. Theſe Prieſts regulate their ſeveral Feaſts by the Moon's Age, and when 'tis New Moon, they keep their greateſt and moſt ſolemn one. Then the People ſend Rice, and other things, to that Church to which they belong; and all the Tallipoies that belong to the ſame too, meet together, and eat the Good Things which the People ſend them in.

I can't but obſerve, that the Prieſts in other parts of *India*, mix much more Ceremony and Foppiſh Superſtition with their Religion than theſe in *Pegu*. Theſe don't ſeem to intend ſo much the amuſing of the People, and bringing their Faith and Underſtanding into ſuch abſolute Subjection to their Humour as many of the reſt do: They are a plain, poor, mortified ſort of Wretches; all their Spiritual Buſineſs is only to preach to the People, and their Temporal to get their own Livings.

Pleaſant Country.

Having been at *Pegu* ſome time, I departed from that pleaſant City to *Jamahey*, which is 25 Days Journey N. E. from *Pegu*, and ſtands in the Country of the *Langeianneis*, or (as we call them) the *Jangomeſe*. In this Journey I croſs'd ſeveral fruitful and very delightful Countries, water'd with fine Rivers, ſhaded with Woods, and thoſe repleniſh'd with wild Buffles and Elephants.

Jamahey.

Jamahey is a Town of very conſiderable bigneſs, the Houſes are all built of Stone, the Streets large and wide, and all very well peopled. The People here are quite uncover'd at both ends, Head and Feet are bare, but the middle Region has a Cloth about it. The Men are ſtrong and well made, and the Women fairer than thoſe of *Pegu*. In all this Country they have no Wheat; Rice is their principal Grain, of which they make a ſort of Cakes. Of all other Proviſions they have vaſt plenty; they are ſo full that they neglect the milking of their Buffles, a thing they do in all other places.

Merchandice.

Benjamin and Copper are the Commodities of the Country; but the *Chineſe* Merchants (great Numbers of whom come to *Jamahey*) bring Musk, Gold, Silver, and other Merchandice of their Country.

Cuſtoms about ſick People.

When theſe People are ſick, they make a Vow of an Offering of Meat, in caſe they recover; and ſome of the Tallipoies ſit by them every Night, and ſing to pleaſe and pacifie the angry Power that has hurt them. If the Sick recovers, all his Friends meet together, and divert themſelves with Feaſting, Dancing, and Muſick; while they are dancing and playing, they hoot and hollow as loud as they can, which they ſay drives away the Ill Thing that has done them miſchief; and if a filthy Noiſe would do it, perhaps that may.

Their Funerals.

If the Party dies, he is carried upon a great Tower-like Frame, with a Covering of Canes gilt; this is brought by fourteen or ſixteen Men (with a Proceſſion of Pipes and Drums, and all his Friends and Neighbours) to a place without the Town, and there the Body is burnt. From hence they return to the Houſe of the Deceaſed, and banquet there for two Days; they make a Feaſt always ſucceed a Funeral; judging it convenient after ſo low a depreſſion, to give their Spirits ſomething of an elevation, and carry off the black Thoughts of the Grave. At the end of this Two-Days Feaſt, the Widow, with all her Neighbours, go to the Place of Burning, and gather up thoſe Relicks of the Bones they can find; then they ſit down a while and ſhed ſome Tears over the Aſhes of the Deceas'd, and ſo e'en go home again, and put an end to Sorrow.

Women not burnt with their Huſbands.

This is better behalf than going to burn for Company with a dead Husband, and the Women hereabouts are ſo wiſe as to think ſo; they are not ambitious of that Glory that the other *Indians* of their Sex are, nor don't think it enough to pay them for the loſs of their dear Lives, to have it ſaid after they are gone, They were paſſionately fond of their Husbands, and aſcended the Funeral Pile with a Boon-Grace, and a Noble Courage. The utmoſt expreſſion of Grief and Mourning us'd by Relations for each other, is to ſhave their Heads; and this beſpeaks them to be Mourners indeed; for they value their Hair at a very great rate.

Having now finiſh'd my preſent Concerns in theſe Countries, I prepar'd for a Voyage into ſome other parts of the *Indies*: And firſt I went from *Pegu* to *Malacca*, paſſing in the way by the Iſle *Tani*, famous for Quantities of Tin that ſerve all *India*.

Malacca, and its Trade.

At *Malacca*, (when I was there) the *Portugueze* had a Caſtle hard by the Sea, but the Country all round the Town yielded no Subjection to them, but belong'd entirely to the *Maleyans*: Theſe are a proud haughty People, have no Covering but a Cloth about the Waſte, and a Roll of the ſame round their Heads. Hither come many Ships from *China*, the *Molucca's*, *Banda*, *Timor*, and the *Java's*, which bring Spices, Drugs, Diamonds, and other Stones.

The *Portugueze* Captain of *Malacca* makes good Profits of the Trade into ſeveral of theſe Iſlands, ſince no Ships go without his Licence; and that brings him in large Sums of Money every Year.

Portugueze Trade to *Japan* and *China*.

When the *Portugueze* go from *Macao* in *China* to *Japan*, they carry along with them White Silk, Gold, Musk, and Porcelanes, and they bring from thence nothing but Silver. They have a great Carrack that goes thither yearly, and returns back with a Treaſure of 600000 Cruſadoes; and all this *Japoneſe* Silver, with one third part as much more, they as conſtantly lay out in *China* to their very great advantage, upon thoſe ſame, and other Commodities, which they tranſport from thence to *Japan*. The *Chineſe* are generally pretty jealous of them, and won't truſt them too far, tho' they correſpond and trade with them.

When they come to *Lauton*, in *China*, their time of ſtay there is limited to ſuch a number of Days, which expired, they muſt pack up and be gone. When they enter the Gate of the City, they muſt alſo enter their Names in a Book; and as they go out at Night, they muſt raze them out again; I ſay as they go out, for the *Chineſe* won't truſt them in Town all Night, but ſend them to their Boats. If any of them ſhould ſtay after their appointed time is out, they'll certainly make them ſtay a while longer againſt their Wills; and in that Caſe they don't ſend them to lodge in their Boats without the Walls, but let them lie within in a good ſtrong Priſon. Theſe Riſques do they run for the advantage of that Trade, notwithſtanding which they don't think fit to forſake it.

Amongſt the *Malaccans*, I obſerv'd, that a Man may keep as many Concubines as ever he will or is able to do, but he muſt have but one Woman to give the Name of Wife to.

Laban Iſle.

Laban is an Iſland among the *Java* Iſles from whence come the Diamonds of the New Water. They find them in the Rivers, for the King will not ſuffer them to dig the Rock.

Jamba. Diamonds.

Jamba is another of thoſe Iſlands too, which affords thoſe valuable Stones; and out of one of the Rivers the Prince of the place draws a conſtant Supply of Gold. It is a kind of a little Hill, or Maſs of Earth, which is richly impregnated with the Oar of that Metal; as they cut it away, ſo Nature fills it up again, and furniſhes a freſh ſtore. They ſay, it's viſible but once a Year, and that is when the Water is low, in or about the Month of *April*.

Bima Iſle.

In *Bima* (another of thoſe Iſlands amongſt the *Javans*) the Laws of Domeſtick Order obſerved every-where elſe, are quite inverted, and the Men and Women change Buſineſs and Condition. For here the latter ſlave and toil, and do all the hard Labour that rightfully belongs to the other Sex; while the former ſit ſtill at home, keep Houſe, and nurſe the Children, or when they pleaſe, go abroad, and take their pleaſure. But I don't find the Example to be contagious, or that any other of the *Indian* Women are ſuch eaſie Fools as thoſe of *Bima*.

April, *A. D.* 1588. *September*. *November*. *February*.

Having ſpent ſome time about theſe parts, I return'd from *Malacca* to *Martavan*, and ſo to *Pegu*, where I ſtaid the ſecond time) ſome five or ſix Months; and then went to *Coſmin*, where I embark'd for *Bengala*. This Voyage was both dangerous and tedious too, by reaſon of contrary Winds, and bad Weather, that we met with; but having happily ſurmounted all theſe Difficulties, we at laſt reach'd our deſired Port in that Country. Here I was obliged to ſtay for paſſage at leaſt three Months longer, which having procured, I ſhipp'd my ſelf for *Cochin*.

In this Voyage we ſuffer'd grievous Extremities for want of freſh Water; for we were abundance of us in Company, the Weather was very hot too, and we were often becalm'd. We were not reliev'd till we reach'd the

Iſle

March, A. D. 1589. Iſle of *Ceylon*, at which place we ſtaid ſome Days, till we had better furniſh'd our ſelves for the remaining part of our Voyage.

Ceylon Iſle. The Fruitfulneſs of this Iſland, renders it very fit to be made a Refreſhing-place, but the Wars between the Natives and the *Portugueze*, did at this time make Proviſions dear.

The King was endeavouring to ſtarve them in their Caſtle of *Colombo*; he had cut off all manner of Relief by Land, but not having a Fleet, could not prevent them of a Supply by Sea, which they got every Year from *Bengala*. He had an Army of 100000 Men, and a great Train of Elephants before *Colombo*; but his Soldiers naked as to any defenſive Arms; and for offenſive ones, beſides Darts and Arrows, they had Muskets, with which they ſhoot very well.

No Horſes. Small Elephants and People. They have no Horſes in all the Country, and their Elephants are of a much ſmaller Race than thoſe in *Pegu*; but yet the *Ceyloners* ſay, that theirs are the beſt in the World for Mettle and Courage, and that none of the huge monſtrous Elephants of other parts, dare encounter their little ones. The People themſelves too, both Men and Women, are generally of a very ſmall ſize; but I ſcarce think they are the beſt Soldiers in the World, and their Character for Mettle and Spirit hardly comes up to that of their Elephants.

The Country is very well known to have the Reputation of producing the beſt Cinamon, Rubies, Sapphires, and Spinelles, in the World; as for theſe Jewels the King won't let his Subjects dig for them, leſt his Enemies ſhould know of them, and ſo drive him out of his Country for the ſake of that Treaſure. But that Care and Caution is now to be ſure inſignificant, and comes too late (whatever good it might have done formerly), for the *Portugueze*, in coming to ſettle themſelves there, ſhew'd they apprehended there was ſomething elſe to be found at *Ceylon*, beſides Cockle-ſhells and Pebble-ſtones. Theſe People (at leaſt thoſe that live about the Coaſts) content themſelves with very mean and ſorry Houſes, made of the Branches of the Palm, and cover'd over with Leaves of the ſame. They are blacker than moſt of the *Indians*, and derive their Stock from the *Chingalayes*, which they ſay are the beſt of all the *Malabars*.

Broad Ears. To have a very broad flapping Ear, is a Mark of great Honour amongſt them; and ſome of them are therefore very honourable Perſons, having Ears (in proportion) more like Elephants than Men.

Their Habit and Dreſs is ſumm'd up in the one particular of a Cloth about their middles; the King himſelf wears no more, only a fine Cloth wreath'd about his Head, and which alſo ties up his long Hair.

Having made a ſhort ſtay here, we proceeded in our Voyage, and doubled the Cape *Comori*, between which, and the main Land of *Negapatan*, they fiſh for Pearls:
Pearl Fiſhery. They get good Quantities every Year, ſo as to ſerve the nearer parts of *India* pretty plentifully with them; but theſe Pearl have not that right Orient Luſtre that thoſe of *Baharem* have in the *Perſian* Gulf.

After Cape *Comori* we paſs'd by *Coulam*, which is a Fort of the *Portugueze*, from whence comes good ſtore of Pepper into *Portugal*; and here 'tis that they often lade one of their Carracks. Thus paſſing the Coaſt, we at laſt arrived at *Cochin*, where we found a great ſcarcity of
Cochin. Scarcity of Proviſions and Water. Proviſions; for here grows neither Rice, nor any other Corn, and what they have (the greateſt part at leaſt) comes from *Bengala*. They are as badly furniſhed for Water too, for the River that ſupplies them with good Water is at a conſiderable diſtance, and the reſt that lies near them is very bad: The want of this Neceſſary makes abundance of diſeaſed ſcabby People amongſt them, ſome of them are like Lepers, others have their Legs ſwollen as big as a Man's Waſte, and others ſo debilitated as not to be able to creep along.

The *Cochiners* differ much from the other *Malabars*, and are ſaid to be of the Race of the *Naires* of *Calecut*. They have their Heads mightily repleniſh'd with Hair, which they bind up with a String, and leave a Wadd of conſiderable bigneſs appearing without the Band. They are very tall ſtrong Men, good at ſhooting with a Long-Bow (which is their beſt Weapon), but unskilful in the Management of Fire-Arms: They have only a few Calivers amongſt them, and theſe they handle very badly.

Theſe People have as large Ears as thoſe of *Ceylon*, and they wear them always full of Rings ſet with Pearl, and valuable Stones: Their Habit and Complexion needs no diſtinct and peculiar Deſcription.

The King of this place has ſeveral Palaces and Houſes of Pleaſure, but they are none of them large and ſtately: He removes up and down with a ſmall Guard, from one of them to the other, and never ſtays in a place above five or ſix Days.

There's abundance of Pepper, and coarſe Cinamon, that grows in this Country, and no ſmall number of Coco-Trees, the Fruit of which ſerves the People for Proviſion, and the Leaves for Covering for their Houſe.

About twelve Leagues from *Cochin* begins the Territory of the King of *Calecut*, and runs up almoſt as far as *Goa*. The *Naires* which are Subjects of this Prince, and a ſort of *Malabars*, are ever at War with the *Portugueze*, tho' the King himſelf be always at Peace with them. They range all the Coaſt from *Ceylon* to *Goa*, going four or five Parowes together, in each of which are fifty or ſixty Men; they are very nimble dextrous Fellows in boarding a Veſſel, and make the Experiment very frequently upon *Portugueze* Ships and Boats. When they come to complain to the King of the Injury his *Malabars* have done them, he anſwers, That he did not ſend them out; but however true that be, his Majeſty can't ſay that he does not know of it, or connive at it, without telling a Lye. How the *Malabars* deal with the *Portugueze*.

For want of paſſage, I ſtaid in *Cochin* near eight Months, *November.* from whence (having obtain'd it) I went to *Goa*, and ſo to *Chaul*, which is 160 Leagues from *Cochin*; it being 100 from *Cochin* to *Goa*, and 60 more from *Goa* to *Chaul*. Here I made Proviſion for a Voyage into *Europe*, in the ſpace of 23 Days that I continued at this place.

I went from *Chaul* in a Ship bound for *Ormus*, at The Author travels homewards. which place I ſtaid 50 Days for a Paſſage to *Balſora*; from *Goa* to *Ormus* I reckon 400 Leagues.

Having reached *Balſora*, to get from thence to *Babylon* by Water was ſomething difficult, and our Boat was fain to be halled by Men with mighty ſtrong Ropes for the moſt part of the way up the River.

From *Babylon* I came by Land to *Moſul* (a near Neighbour to the old *Nineve*, now all in deſpicable Ruines) and ſeated hard by the River *Tigris*.

From hence to *Merdin* in *Armenia*; and ſo to *Orfa*, a very fair Town, and celebrated for a goodly Fountain it ſhews, which is full of Fiſh. The *Moors* of this place have abundance of Notions and Opinions about *Abraham* peculiar to themſelves; they ſay he lived here, and ſo being upon the ſame Spot, the Remembrance of that Patriarch is more freſh amongſt them, which leads them into many trivial Diſputes and Notions about him.

From this place I went to *Bir*, and paſs'd the *Euphrates* there, and ſo travelled to *Aleppo*, where I ſtayed ſome Months for Company, and then came to *Tripoli*. Here I had the Happineſs to meet with *Engliſh* Shipping, which Opportunity I greedily embrac'd to return to my Native Country, and did ſo at laſt, under the Conduct of a favourable Providence, after the many Difficulties of ſo tedious a Voyage. *April. A. D. 1591.*

Hitherto we have chiefly conſider'd the Performances of our own Nation in the Eaſtern Parts of the World: And if at any time we have taken a ſhort View of the Actions or Affairs of other People, it has been only by the way, as we have follow'd the Engliſh *in their Buſineſs and Concerns. Let ſo much as is paſt therefore ſuffice, for the Account of the Original, Progreſs, and Improvement of our* Indian Trade. *Let us ſtop here for a while; and leaving the* Engliſh Affairs *advanc'd to this degree of happy Thriving and Succeſs; divert to the Story of our Neighbours the* Dutch, *which deſerves to be known as well as ours. They have viſited the remoteſt Parts of the World as well as we, planted themſelves in ſeveral Foreign Countries, and gotten a mighty Trade into their Hands: Divers* Indian *Princes are their Confederates and Allies, and ſome are their Subjects too; the rich Treaſures of Spices are in their keeping and poſſeſſion; the Cloves, Nutmegs, and Mace, of the* Molucca's *and* Banda's, *are a part of the Furniture of their* Indian Garden. *We will now therefore enquire into the Original of all this Greatneſs, and ſee by what Steps the* Dutch *advanc'd to ſuch a height of Power and Fame: The Structure is wonderful, and has ſurpriz'd the whole World with its Beauty and Magnificence; it may be worth the while to ſee how the happy Builders rais'd it, and made it ſo glorious as now it appears. In order to this, we ſhall begin with the very Beginnings of their* Indian Navigations; *bring them out of* Europe *perfect Strangers into thoſe Eaſtern Countries, and ſee by what means they procur'd their after intimate Acquaintance with them. And whatſoever is here related as Matter of Fact, is taken either out of their own Journals, or the Writings of ſome Hiſtorians that have handled their Affairs.*

CHAP.

CHAP. XXXIX.

The firſt Voyage perform'd by the Dutch *to the* Eaſt-Indies, *with four Ships, the* Maurice, *the* Holland, *the* Amſterdam, *and a Pinnace;* Bernard Hejink, *chief Commander.*

* See the Hiſt. *Amſtelod. Joh. Iſac. Pont.* Lib. 2 Chap. 18 and 24. And *Diarium Nautic.* in *Ind. Orient. apud Joh. Janſon. Arnhemienſ.*

The Occaſion of the *Dutch's* firſt ſeeking an *Indian* Trade. See alſo for this Prefat. in 8. part. *Ind. Orient.*

THE *Dutch* * having thrown off the Yoke of *Spain* in the time of *Philip* the II, were for many Years after oppreſs'd with heavy Wars; their former Maſters endeavouring with their utmoſt Skill and Force, to reduce them to the ſame ſtate of Subjection again. Notwithſtanding this, their Ships in the mean time traded upon the Coaſts of *Spain* and *Portugal* without reſtraint; the *Spaniards* made ſome profit of that Commerce, and ſo for a while did not ſcruple to permit it.

But at laſt that Liberty was taken away; the Counſel of *Spain* adviſed the King to humble them, by ſtopping their Ships, and cutting off their Trade in all places of his Dominions, which accordingly was practiſed with the utmoſt Severity; ſeveral of the Merchants being ſiez'd and clapt into the Gallies, and their Goods and Effects all confiſcated. Had the *Spaniards* known before-hand what would have been the Conſequence of theſe violent Proceedings againſt the *Dutch*, they would undoubtedly have let them alone; and out of ſpite to them, as well as Politick Regard to their own Intereſts, ſuffer'd them to trade freely upon their Coaſts. For had they been quiet and eaſie here, they had not (ſo ſoon at leaſt) thought of a foreign Trade; but being oppreſt and thrown out of all Buſineſs in *Europe*, they reſolved to find ſomething to do in remoter Countries. They were certainly as much in the Right of it, to take that courſe, as the *Spaniards* were in the Wrong to put them upon it. For the World was wide enough to afford choice of places for Traffick and Settlement; and if the *Spaniards* would not, there were other People perhaps that would bid them welcome to ſuch a Correſpondence. But what a plague did the *Spaniards* bring upon themſelves by ſending the *Dutch* to look abroad for Trade? How often have they maul'd the *Portugueze* and them, broke in upon their Plantations, ſwept away their Profits, and given all along a mortifying Check to their exorbitant Power and Greatneſs? They have fully paid all the ſcores in the *Indies*, that were contracted in *Europe*, and beſides added ſo much over and above, that the *Spaniards* perhaps had better have given them the other ten Provinces of the *Netherlands*, than ever have run ſo deeply into their Debt. But thus does it many times come to paſs, That proud Oppreſſours make way for their own Fall and Puniſhment, and while they are contriving to overturn the Fortunes of others, do but ſpoil their own, and give their Adverſaries greater Advantages againſt them.

City of *Amſterdam* begins.

The firſt that ſet up for the carrying on this Deſign of an *Indian* Correſpondence, was the City of *Amſterdam*; the States and Prince *Maurice* conſenting thereto; they furniſh'd out a Fleet of eight Ships, four of which were to go by the uſual way of the Cape of *Good Hope*, and the others to attempt the North paſſage.

* See for this the Tomes of E. I. *Caſpar Enſ. Gu. Artuſ. Meranus* in Lib. 8. of his Works.

As for the * Succeſs of thoſe that went upon the Diſcovery of the Northern Paſſage, we ſhall omit all Particulars of that kind in this place, being at preſent confined to their other Voyages.

* *April*, A. D. 1595.

Thoſe that went by the ſafer and commoner way of the Cape of *Good Hope*, were theſe four, The *Maurice*, the *Holland*, the *Amſterdam*, and the *Good Pinnace*. They had in all aboard them 249 Men; the whole Charge amounted to 290000 Florens, of which 100000 was in ready Money and Merchandice. Thus provided they ſet ſail from the *Teſſel**; and how or by what means ſoever they came to make ſo long a Voyage of it, whether by Trade and Buſineſs in the way, or the unavoidable reſtraints of bad weather; but it was more than a Year before they got up to the Coaſt of *India*. A great deal however is to be allowed upon the account of the newneſs of the Voyage to them; 'twas the firſt attempt, and they were not then ſo well acquainted (as now) with all the Difficulties and Dangers of the Paſſage. The Accounts don't tell us neither of any remarkable thing that occurr'd in the way; what Entertainment the Natives gave them at the Cape of *Good Hope* and at the Iſlands of St. *Laurence*, or what Obſervations they made upon thoſe or other Countries they refreſh'd at.

The *Indian* Diſcovery was their great Buſineſs, and they ſeemed to be ſo full of this, that all others were too little and trival to be minded, till this were brought to ſome Perfection.

* *May.* A. D. 1596. * *June.*

When they were come to * the Iſland of *Sumatra*, they made a ſhort ſtay there, and then went * on for the Streights of *Sunde*, where the *Portugueze* came from *Bantam* to give them a Viſit. There's no doubt in the World but they came upon an ill and treacherous Deſign, tho' they did nothing now that diſcover'd it, beſides this pretence of Kindneſs which they made. People of a ſurly, imperious, ſpiteful Temper, are always to be ſuſpected when they fawn and flatter; their Compliments forebode miſchief to them that receive them; they are unfortunate Tokens, and a wiſe Man when he ſees them will be immediately upon his guard. The *Dutch* had now a fair warning to look to themſelves if they were diſpoſed to take it, ſince the *Portugueze*, who were at that time Subjects to *Spain*, could not be imagined to come out of pure kindneſs to ſee them, who being lately broken off from that Crown, came now to undermine them in their *Indian* Trade, and beſides were curſed Hereticks in to the bargain. And 'twas not long before they were fully ſatisfied that the *Portugueze* were actually conſpiring their ruin, and came for nothing elſe but to make Obſervations in order to the more effectual accompliſhment of their Deſign. This Information they had from no leſs a Perſon than the Protectour or Vice-King of *Bantam*, a deceitful intriguing Man himſelf, and of ſufficient Judgment and Experience in Plots, to be able to give a good gueſs in any point of that nature. This Perſon came aboard one of their Ships, where Prince *Maurice's* Letters (which were written both in *Arabick* and *Portugueze*) were read to him. And it ſeems matters went ſo far that the *Dutch* and he came to ſome formal Agreement, and Writings were deliver'd on both ſides, with the ſolemn Confirmation of Oaths and Promiſes, which how far they were kept or violated, the after Circumſtances will diſcover. But yet that the particular account of the pernicious Deſigns of the *Portugueze* againſt them (which they had from the Vice-roy) may be the better underſtood, we muſt by the way enter a little into the Character of a certain Perſon, who was nearly concerned in the Buſineſs too. This was one *Raja Duina*, or *Cæſar* as the *Portugueze* called him; the Titular King of *Bantam*, and no more than ſo. His Father indeed was Lord of all the Country, governed and managed the Great Iſland of *Java* at his pleaſure; but this Son falling in with the *Portugueze*, and marrying a *Portugueze* Wife, the People of *Bantam* rejected him, and would not ſtoop to his Authority. Beſides this, he lived a good while at *Malacca* amongſt that People, and carried it all along with ſo much particular Favour and Good Will towards them, that the *Bandaneſe* concluded him to be tinctur'd with ſuch Principles, as would render him wholly unfit for their Government, and therefore put him by.

Portugueze plot their Deſtruction.

Agreement between the *Dutch* and the Protector of *Bantam*.

Cæſar or *Raja Duina* K. of *Bantam*.

July.

Yet for all this, he was treated like a King by a great many; and ſome of the petty Kings themſelves, that paid Homage to *Bantam*, would ſpeak to him with all thoſe Geſtures of Aoration and profound Humility, that are uſual in thoſe parts when they addreſs the Sovereign.

Now the Deſign was laid thus, that *Cæſar* ſhould invite all the Chief of the *Dutch* aſhoar to a Feaſt, and the *Portugueze* in the mean time with a good power of Men, ſhould ſieze the Ships, then left as it were without a Guard; and as for the dividing the Spoil betwixt them, they had agreed that *Cæſar* ſhould have all the valuable Plunder, and the *Portugueze* upon the Payment of 3000 Ducats, ſhould have the Ships put into their own hands. A handſome Contrivance enough; but the Difficulty was, to draw the *Dutch* aſhoar, and make them leave their Ships in a careleſs manner. If they did not leave them naked and expos'd, the Plot would have miſcarried and come to nothing; if they did ſo, they deſerved to be ruined; and meet with no pity in all the Misfortunes conſequent upon the Surprizal. But there's no need of arguing one way or another about the Plot, ſince (as we hinted) the *Dutch* had notice of it, and ſo ſpoil'd all the intended Sport.

The *Dutch* try to work upon *Cæſar.*

Now this *Cæſar* being ſo entirely a Tool for the *Portugueze* to work with, and a very ſerviceable one too in carrying on that which now lay upon hand; 'twas a piece of good Policy to gain this Perſon over to their Intereſt if poſſible; at leaſt to ſweeten him a little with ſome good Preſents, that if he could not be made their Friend, yet he might be leſs an Enemy than he was before. He had been once aboard their Ships and well entertain'd; but now they thought fit to add to that former Civility, a Preſent of Armour, with ſome other valuable things, which they ſent him.

The Humour of the *Javans* is ſordid enough to be or do any thing for a little profit; they are Friends not where Vertue and Juſtice, or Principles of true Honour do engage them to be ſo; but where the Charms of Gain do invite them, and their hungry covetous Deſires may be ſatisfied.

Cæſar was ready to give his treacherous Invitation to the *Dutch*, to trepan them into a fatal Snare; but when the Preſent came he was another Man, he was won over to a very good Opinion of them, and began to blame the unjuſt Proceedings of the *Portugueze.*

The Deceits of the Protector.

After this he went away to *Jacatra*, and left the *Dutch* to deal with the Protector at *Bantam.* And things were brought to this iſſue, that the *Dutch* had liberty to trade there, and a Publick Houſe was taken for a Repoſitory of all their Goods, with all other neceſſary Preparations, in order to the Settlement of a Factory. Yet after the Agreement made, did the falſe-hearted Protector turn and wind, and uſe all the Artifices imaginable to undoe the Buſineſs, and fruſtrate their Deſigns. He complain'd of *Cæſar*, but was in all probability by far the worſe Knave of the two himſelf; a Man that diſcovers the Plots of other Adverſaries, that he may plot himſelf with the leſs danger of ſuſpicion, is a double Villain. But he did not content himſelf with meer caballing againſt them, and laying ſecret Obſtacles and Rubs in their way, but ſhortly after iſſued out a Proclamation forbidding the People to trade with them. Nay, the *Dutch* were now told too by ſome that had more kindneſs for them, that all their Ships would be aſſaulted, and without they look'd very well to their Buſineſs, ſeiz'd and taken too. This News made them retire aboard as faſt as they could, to prevent the Danger that threatned; but they could not all get off clear, ſome of them being intercepted in their Retreat, and kept Priſoners there in Town. When they ſent to demand their Men, the Protector refus'd to deliver them; upon which they immediately begun to batter the Town, and took three of their Junks in part of ſatisfaction.

Wars between the *Dutch* and *Bantameſe.*

But their poor Countrymen that were Priſoners, were in extream danger of their Lives, whiles they lay thundering upon the Walls with their great Guns, and ſpoiling all about them. They were juſt upon the point of being hanged, having Ropes about their Necks for that purpoſe, and were all to be tuck'd up out of hand, if their Friends aboard did not lie ſtill with their Guns, and forbear any farther Aſſaults upon the Town. And upon this Conſideration the *Dutch* did deſiſt, and a ſort of Truce was made for ſome Days; but the Flame broke out again when that time was expired, and raged with more violence for the ſpace of a Month after. And now hanging was too good for the *Dutch* that were aſhore; they were appointed to ſome more cruel Fate; but what that ſhould be, was not eaſie for their enraged Enemies to agree upon amongſt themſelves. There were ſo many different Opinions about the Method and Manner of their Execution, every ones Invention being employ'd to make it as barbarous as could be; that by this means they got a Reprieve till another Peace was concluded.

Had the Paſſions of their Adverſaries been more cool and calm, they had all died for't, and the Peace had come too late; but their wild ungovern'd Fury tranſported them at that rate, that they could not command Thoughts great enough to anſwer the greatneſs of their Indignation, and ſo loſt their opportunity of expreſſing it. A very rare as well as an odd thing, for Mens Lives to be ſav'd thus by the exceſs of Cruelty in their Adverſaries; for buſie deſigning Rage, to do the Work of Mercy and Good Nature, and by the heights of Study and Contrivance, to diſappoint it ſelf. But thus 'twas, a ſeaſonable Peace interven'd again, and the Victims who liv'd only till the Bloody Ceremonies of the Sacrifice were adjuſted, eſcap'd once more their horrid Fate.

Uncertainty of Affairs at *Bantam.*

The *Portugueze* were very much nettled and diſturb'd at this Peace which the *Bantameſe* had made with the *Dutch*, and therefore they ſent a Diſpatch from *Malacca* to perſwade them to violate the late Agreement, and declare War againſt them a third time. 'Tis ſaid alſo, that the *Portugueſe* Agent offer'd 10000 Rials to have the *Dutch* deliver'd into his hands; or for the *Bantameſe* publickly to deny them Trade in their Country, which they would. The Offer was too tempting for thoſe baſe-minded People to be able to withſtand it, ſo they forbid the *Dutch* all manner of Dealing and Concerns amongſt them, and they in Revenge of this perfidious Breach of Covenants, fell to taking of their Junks, and ſo puniſh'd them that way.

But the *Portugueze*, it ſeems (however it came about) thought the *Bantameſe* had not plaid the Knave enough with the *Dutch*, for the Money they gave them; they had given a great Rate, and they expected the Villainy ſhould have been anſwerable. Theſe Men were mighty ſtrict and punctual in obſerving the Laws of Commutative Juſtice, when they were buying other Mens Lives and Properties, or treating about the Price of their Deſtruction. Here they would not bate a Farthing, but have their Bargain to the utmoſt rigour fulfilled, and in caſe of a failure make the *Bantameſe* worſe Villains for cheating them, than they were for ſetting them on to break all thoſe ſolemn Leagues and Covenants. They were ſo concern'd about the ill beſtowing of their Money, that they fell to downright Scolding with the Protector about it, and very hot Words paſs'd on both ſides; ſuch as intriguing Knaves, when they fall out about the pious Deſigns they are carrying on, uſe to give another. In ſhort, the *Portugueze* were reſolv'd to have Satisfaction, and ſince the *Bantameſe* would not give it, they took it themſelves, by ſeizing ſeveral of the *China* Junks that traded there.

Portugueze and *Bantam* fall out.

Protector's Revenge upon them.

But the Protector was even with them before 'twas long; for tho' he cunningly diſſembled his Paſſion and Deſign of Revenge, yet the Flame was preſerv'd in its utmoſt ſtrength in his own Breaſt, and broke out (as a fit Occaſion ſerv'd), ending in no leſs than the total Ruine of the *Portugueze* Intereſt in this place. He got a good Fleet together, and came upon the *Portugueze* Galleys before they were aware, killing all the Men, and dividing the Spoil of the Fleet amongſt his Soldiers.

The *Portugueze* now were forc'd to contain themſelves within the Bounds of *Malacca*, their laſt Retreat, and only Defence hereabouts; *Bantam* was rid of them, and they were like to domineer there no more.

The *Dutch* after theſe Events, went away to *Jacatra*, where they were receiv'd with great kindneſs, and had free permiſſion to furniſh themſelves with all ſorts of Neceſſaries they wanted.

Spice-Trade at *Tuban* and *Cydaia.*

From hence they ſail'd to *Tuban* and *Cydaia*, at which places they traded for Cloves and Nutmegs. Theſe People, if civil and kind at firſt, were yet afterwards ſoured by the *Bantameſe* and *Portugueze*; they aſſaulted the *Dutch* Ships, but to their own great prejudice, loſing near 200 of their Men.

Treachery of the People of *Cydaia* and *Madura.*

Things went much after the ſame manner at *Madura* too, whither they came next. The King of that place had leave to come aboard them, provided he came with a ſmall number of his Attendants; but he deſigning ſomething elſe beſides a Viſit, and bringing a little Army along with him, was kill'd in the Action, with moſt of his Men, and his young Son taken Priſoner.

At the City of *Balambuan*, they heard of the Admirals *Drake* and *Candiſh*, which had been there ſome Years before.

There were Wars at this time between the King of *Paſſaruan*, a *Mahometan*; and him of *Balambuan*, a *Pagan*; both theſe places being upon the ſame Iſle of *Java*; and *Balambuan* moſt remote in the Eaſtern Corner of the Iſle, as *Bantam* is in the Weſtern.

Baly Iſle.

Baly is a conſiderable Iſland, parted by a narrow Streight from the Eaſtern point of *Java*. The People altogether Heathens, and that Religion that is amongſt them, lies entirely in the Hands of the Bramens, in whoſe Diſcipline the King is always brought up, and is, as it were, one of their Order. And conſequently, according to the Principles of that Sect, they abſtain from all Animal Food; but they allow themſelves more Liberty in another Point than the *Javan* Bramens do, for they enjoy the Pleaſures of Matrimony, which the other do not. But then they are confin'd to one ſingle Marriage, by the Laws of their Society; and if the Wife dies, the Husband muſt be contented to live a mournful Widower all the reſt of his Days: He muſt take his Leave of Matrimony for ever, at leaſt he muſt have no more Wives in that Body; but after the Tranſmigration, 'tis poſſible he may come down again and marry in another, and that's as good. Nay, who knows, but the very ſame Couple may meet together again, and be Man and Wife, I know not how many times over; which if they ſhould, tho' the Souls be the

The Bramens of *Baly*

ſame,

Their Marriages and Holy-days.

ſame, yet the Bodies (they believe) are different, and ſo there's variety ſtill, and perhaps all that may be deſired. But the heavieſt part of the Burden lies upon the poor Woman; if they die firſt, their Husbands are condemn'd to live unmarried; but if their Husbands die firſt, they are condemn'd to burn, or be buried alive along with them: The latter ſeems to be the Fate of the Bramens Wives, and the former that of the Peoples in general: So that here's Reaſon enough for them on both ſides, to pray for one another's Lives; the Man perhaps may be fond of the Comforts of the married State, and ſo his Wife's Life is a great Bleſſing to him; and the Woman, 'tis probable, is willing to live and have her ſhare of them, and other Enjoyments too; and therefore muſt needs be a very tender and careful Nurſe to her Husband, and do all that lies in her power to pleaſe and cheriſh him, and make his Life eaſie to him, that he may weather out the Point as long as 'tis poſſible. She is obliged to attend the Work of ſpinning that Thread with all the Art and Nice Application ſhe can; to run it out to the utmoſt length, and draw it as fine as may be, without danger of breaking; for as long as this laſts, ſhe laſts; and when the Good Man goes, ſhe can't ſtay long behind him: And if ſhe does not die of her own accord for Grief, the Country will make her do't upon another account, for there's no long-liv'd Widows amongſt them, nor no Women ever ſuffer'd to tell their ſecond Husbands how kind and obliging their firſt uſed to be to them. As for their other Rites, we have little account of them: Only they ſay, that every Seventh Day is ſacred with them, and devoted to the ſolemn Exerciſes of their Religion, beſides which they obſerve ſeveral others as Feſtivals and Holy-Days, in the compaſs of the Year.

The King of this Iſland is repreſented as a very potent Prince, able to bring into the Field 300000 Foot, and 100000 Horſe; and very rich too, as it ſhou'd ſeem by this, that the Furniture of his Table was all ſolid Gold. He came to the Shore to ſee the *Dutch* Fleets, in a Chariot drawn with Buffals, himſelf being Driver too, holding the Whip and Reins in his own Hand. His Troops that attended him, were arm'd with Spears, Flame-form'd Criſes, Bows made of Canes with poyſon'd Arrows. They are People of a black dull Complexion, like the *Javans* their Neighbours, little concern'd about any thing of Trade; or if they are, they deal for nothing but Cotton Cloth. The Iſland is no more than twelve *German* Miles in compaſs, a Spot incredibly ſmall, conſidering the Report of the vaſt Armies it produces: But as little as 'tis, 'tis a very rich and fertile Soil, luxuriant in its Productions, and excellently well water'd.

The *Dutch* obſerv'd, that the *Banyans* who were here, wore a certain Stone of the bigneſs of an Egg about their Necks; 'tis perforated in one part, and out of the Hole hang down three Threads, which they ſay is an Emblem of the Supreme Divinity.

They began their Voyage out of theſe Parts, for *Europe* again, in *February, A. D.* 1596. and concluded it before the middle of *Auguſt, A. D.* 1597.

Thus was that Correſpondence between them and the *Eaſt-Indies* begun, which afterwards became ſo familiar and full of profit to them.

Chap. XL.

An Account of the Second Voyage made by the Dutch *to the* Eaſt-Indies, *with Eight Ships, the* Holland, *the* Zeland, *the* Frieſland, *the* Guelderland, *the* Utrecht, *the* Overyſſel, *the* Maurice, *the* Amſterdam: *Containing in all 560 Men.* James Neccius *Admiral, and* Wibrand Warwick *Vice-Admiral.*

THO' the Reſult of the former Voyage was little better than loſs of Men, Money, and Time; yet the *Dutch* not at all diſcouraged with their poor Succeſs, no ſooner ſaw the firſt Ships return, but they ſent out theſe to make a Second Trial. And here we have, as it were, the whole Republick, ſailing away at once to the *Eaſt-Indies.* Here's the Prince, and the Provinces, the Stadtholder, and the States themſelves; Prince *Maurice, Holland, Zeland,* and the reſt, all upon the march together. 'Tis as if they were going to make a new Settlement abroad, and deſign'd to have the *Low Countries* in *Aſia*, as well as in *Europe.* But we'll follow them, and ſee what they do.

May, A. D. 1598. Dutch Fleet parted at the Cape of *Good Hope.*

Having ſet Sail from the *Texel*, they kept Company together as far as the Cape of *Good Hope:* But there partly by foul Weather, and their own ill Conduct, they were parted. Some of them held their way to the Iſle St. *Mary*, and the reſt to the Iſle *De Cerne*, call'd by them *Maurice* Iſle, in Complement to the Prince of that Name. This Iſland they commend highly for its excellent Trees, Palms, and Ebony, black, red, and yellow; for its Air and Soil, the Animals it produces, as divers ſorts of Fowl, but eſpecially the Tortoiſes, which do here grow to ſuch a bigneſs as is almoſt incredible. They ſay, that they are, ſome of them, big enough to carry four Men upon their Backs, and that ten Men may ſit all together in the hollow of the Shell. 'Tis a wonder they did not make uſe of ſome of theſe fine Shells inſtead of Boats, to wait upon their Ships; for 'tis a far more compendious (as well as a leſs chargeable) way of making Boats and Skiffs, to kill a few Tortoiſes, and take off the Shells, than to go to building of them the common way.

Large Tortoiſes at *Maurice Iſle*, near St. *Laurence*. *Commier.*

Dutch agree for Trade at *Bantam.*

Thoſe Ships of the *Dutch* that went to the Iſle St. *Mary*, got firſt to *Bantam*, and having made their way by Preſents, to the young King and Protector, quickly procur'd a Grant for full Liberty of Trade. Whether 'twas the ſame Protector or no, that was before, is uncertain; however, the *Dutch* were now more kindly us'd, and the *Bantameſe* and they mighty Friends together.

By that time they had been here a Month, the other part of the Fleet came in too; but ſadly weather-beaten and diſtreſs'd, and ſeveral of their Company dead: And now ſo many Ships being come together upon the *Bantameſe*, the Price of Pepper was rais'd. The *Dutch* quickly procur'd four of their Ships to be laden with Pepper, which were forthwith diſpatch'd home: The reſt reſolved to viſit the *Molucca* Iſles; and *Neccius* being return'd to *Holland, Warwick* was Admiral in his room.

January.

The *Molucca* Fleet in their way, put in at *Tuban*, another Town of *Java*, and at the Iſle *Madure*, upon the ſame Coaſt Northward. That Iſland abounds in Rice, which is the moſt conſiderable of its Products; the People for the moſt part live upon Spoil and Robbery. This the *Dutch* found by their own ſad Experience; for having landed ſome Men here to enquire after Proviſions, they were ſeiz'd and captivated by theſe barbarous People, as were alſo thoſe whom they ſent to look after them. And tho' they had made them Priſoners in this unjuſt and violent way, yet they had the Impudence to ask a prodigious Sum for their Ranſome, ſo that the *Dutch* were forc'd to ſet a conſiderable Force of Men aſhore, to try to recover them by another Method.

Madure Iſle, and the Villany of that People to the *Dutch.*

February.

Their old Friends the *Portugueze* headed the *Indians*, and a hot Skirmiſh there was between them, but in the midſt of the Fight there happen'd a Storm to riſe, which obliged the *Dutch* to give over in ſome confuſion, and retreat towards their Ships to look after them.

This gave the Enemy an advantage to do them ſome miſchief, that otherwiſe perhaps they would not have done; ſo that they came off with a conſiderable loſs, and after all were forced to pay 2000 Rials of Eight in Money and Goods, for the Redemption of their Men.

Trade at *Amboina.*

From hence they ſail'd to *Amboina*, but becauſe there was not Trade ſufficient for all four Ships, therefore two of them went away to *Banda*. Thoſe at *Amboina* met with Cloves, Oranges, Limons, Citrons, Coco's, Banana's, and Sugar-Canes there; and agreed for a kind of a Factory amongſt them. The Inhabitants were a poor ſimple ſort of People, very ignorant and unpoliſh'd in their Manners; their Weapons were only long Pikes, with a Hook at one end, their Boats made in the form of a Dragon, the Head at the Prow, and the Tail in the Stern, and adorn'd with ſeveral Streamers.

At *Banda.* *March, April,* &c. *A. D.* 1599.

As for thoſe at the *Banda* Iſles, they had the ſame Succeſs in their Affairs, as the others had at *Amboina*; they came to an Agreement for Trade, and took a Houſe for their Merchandize; and here they were pretty buſie in buying and ſelling for the ſpace of two or three Months. They found nothing of a King, or Kingly Power, any where in all theſe Iſlands; they were govern'd by their own * States, or Orankayes, who directed and preſided in all Matters of Publick Conſequence, and ſeem'd to have no further Power than that came to, to act in ſuch a manner for the Good of the Community.

* See *Iſac. Pontani Hiſt. Amſtelodam.* lib. 2 c. 15. And alſo, *Pars* 5. *Ind. Oriental. Reg. nullum agnoſcunt, ſed ſuis inſtitutis viventes ad ſeniorumCœtus, ubi conſultatione opus eſt, res referunt.* So ſays *Pontanus.*

The People are all *Mahometans*, and very devout and preciſe ones; full of Zeal and Strictneſs in their way, beginning no Buſineſs of any ſort whatſoever, till they have prayed for the Succeſs of it; in which reſpect they are a ſhame to a great part of the Chriſtian World, that have a much-leſs Sence of Religion than this amounts to. They were involved at this time (and had been a good while before) in bitter Contentions and Wars amongſt themſelves; *Labetack*, *Comber*, and *Wayre*, held together; on the other ſide, *Nera*, *Poolaway*, and *Poolaroon*, were all in a League. They were horridly ſet againſt one another, and fought with a ſtrange degree of eagerneſs and inveterate ſpleen; making a deal of loud Noiſe and Triumph, whenever they maſſacred one another, and got a parcel of Heads to ſhew of either ſide. And yet all theſe Bloody Doings was only for the cutting down a few Trees in the Territory of *Nera*, by the Men of *Labetack*; this was the Original of the Quarrel; a very great thing indeed, for ſix or ſeven Towns to fall together by the Ears about, and ſpoil and tear one another at ſuch a rate, as if the Furies had poſſeſs'd them all.

'Twas perhaps a ſmall Encroachment upon the Privileges of the People of *Nera*; but a Civil War was the ready way to lay them open to a Foreign Power, that would make greater Encroachments upon them all, than this came to. Had not the Mouſe and the Frog been buſie a fighting, they might have avoided the hungry Adverſary that waited to ſwallow them both up.

Theſe Iſlands are eſteem'd very healthy, and People live to a great Age in them; that of 130 Years is not uncommon amongſt them, and their Old Age is not over-run with Diſtempers neither.

Their Character for the production of Spices is very well known; and here the Work of dreſſing the Mace and the Nutmegs, always falls to the ſhare of the Women.

From hence the two *Dutch* Ships ſet Sail again for *Bantam*, and from thence for *Holland*. But the other two that were at *Amboina*, after two Months ſtay there, went to the *Molucca's*.

Two of the Ships go home. *July.* And the others to the *Molucca's.* *January.*

At *Ternate* they procur'd a Trade and Factory; that Prince was kind and favourable to them, and ready to yield to all their fair and reaſonable Propoſals. Theſe alſo having ſettled their Factory here, ſail'd (after the others) to *Bantam*, and from thence for *Holland*, having no Buſineſs now to detain them any longer in the *Indies*. Their Ships were all richly laden with Spice, and they had made a happy Voyage of it, and 'twas now time to go home and ſhew their Country (expecting their return) the Fruits of their profitable Labours abroad.

The two former Ships came ſafe into the *Texel* in *April*, *A. D.* 1600; and theſe latter ones followed them with the like Succeſs the ſame Year.

A. D. 1600.

CHAP. XLI.

An Account of the farther Progreſs of the Dutch Eaſt-Indian *Trade, in ſeveral Attempts made by them for that purpoſe.*

THIS Correſpondence between *Holland* and the *East-Indies* being once ſet afoot, 'twas proſecuted by the *Dutch* with a Vigour anſwerable to the Greatneſs of their Hopes and Expectations from it. They had not Patience to ſtay till the laſt Fleet came home; but before they could hear the happy Tidings of their Succeſs, ſent out another upon the ſame Deſign. * This conſiſted of three good Ships, under the Command of *Stephen van Hagen*.

* *May, A. D.* 1599.

Beſides this, the four Ships of the former Fleet, that made ſo quick a Diſpatch at *Bantam*, and went homewards from thence, under the Command of Admiral *Neccius*, were preſently made to begin another Voyage; they did but juſt unlade as it were, and then put out to Sea again.

All this while there was but one Company that took upon them the Management of theſe *Indian* Affairs; and that was the Company of *Amſterdam*, or of the Province of *Holland*.

New Companies in *Holland.*

But now another ſtarted up, the Buſineſs grew profitable, and was upon the thriving Hand, and more were willing to put in for a ſhare on't. This was a Company of *Amſterdammers*, and *Brabanters* joyn'd together: They * ſet out a Fleet of four Ships, under the Conduct of Admiral *Bott*; which after two Years return'd with a very rich Cargo.

* *December. A. D.* 1599.

The ſame Society alſo prepared * two Ships more, to which the former Company added ſix others all going out, under the Command of the aforeſaid *Neccius*, and making a very happy and proſperous Voyage.

* *A. D.* 1600.

Again, beſides all theſe, the very next Year *, 13 Ships more ſet Sail from *Amſterdam*, under the Command of three Admirals, *James Heemskirk*, *John Grenior*, and *Wolphard Herminius*: Theſe were met and encountred by a *Spaniſh* Armado, conſiſting of the like number of Ships; but how the *Dutch* came off in that Action, we have no particular Account in theſe Voyages that are now before us.

* *A. D.* 1601. *April.*

What Succeſs they had at *Achen*, is related in a former Book *; 'tis reckon'd the *Portugueze* procur'd them that Entertainment by the ill Reports they made of them to the King of *Achen*. However, that Prince did afterwards treat them at a better rate, and proceeded ſo far in a friendly Correſpondence with them, as to ſend his Embaſſadors into *Holland* to Prince *Maurice*; one of which died at *Middleborough*, and lies buried there, having an Epitaph on his Tomb, that ſhews his Name and Quality. The Commanders to whom the King of *Achen* was thus Civil, were *Lawrence Bicker*, with four Ships of *Zeland*, and Admiral *George Spilberg*, one of the famous *Dutch* Circum-Navigators. What was perform'd by each of thoſe forementioned Perſons, we ſhall enter upon the enquiry into by and by; but we muſt firſt of all take Notice of a very neceſſary ſtep, in order to the more proſperous Management of theſe Affairs, and that was the Union of all the Stocks and Companies. For whereas by the diverſity of theſe Trading Parties amongſt them, there were ſo many private and particular Intereſts to be regarded, that the Publick Good could not be ſo zealouſly and regularly purſued as otherwiſe; it was concluded, and accordingly proclaim'd, That all theſe ſeveral Societies ſhould form themſelves into one Body, and laying all their Stocks together, ſhould have the ſole diſpoſal of the *Eaſt-India* Trade, for the ſpace of 21 Years. And they agreed alſo upon theſe Terms, with reference to the Diviſion of the Charge of all new Fleets amongſt themſelves, that ſhould hereafter be ſet out, *viz.* that *Amſterdam* ſhould bear a half part; *Middleborough* one fourth; *Delft*, *Rotterdam*, *Enchuſen*, and *Hoorn*, each a ſixteenth part. The Sum of the Common Stock brought into the Treaſury, amounted to more than Six Millions of Florins: And upon this Foundation of united Counſels and Purſes, they proceeded to carry on a very thriving and profitable Trade. The Accounts we have of their particular Managements abroad, are not very perſpicuouſly nor methodically given; but yet ſo much we may be able to pick out of them, as

* See Dutch firſt Voyage. Lib. 2.

All the Companies united.

may ſerve to inform us of the mighty Progreſs the *Dutch* made both in advancing their own Intereſt and Trade, and deſtroying that of the *Spaniards* and *Portugueze*.

Harminius relieves *Bantam.*

Wolphard Harminius had five Ships of the *Amſterdam* Fleet under his command. This Perſon being in the Streights of *Sunde*, was informed there by a *Chineſe* Junk, that the Town of *Bantam* was cloſely beſieged by an Armado of *Portugueze*, conſiſting of eight great Ships and twenty Frigats. They came thither pretending to force the *Bandaneſe* to promiſe them to have no dealings with the *Dutch*, and if they would not oblige themſelves to that, they ſhould be puniſhed for their Refuſal with all the Plagues of War.

Portugueze forced from *Bantam.*

Harminius upon this News ſail'd away to *Bantam*, fell upon the *Portugueze*, and routed the whole Armado; he ſunk and took a great many of them, and ſome the Enemies ſet fire to themſelves; in ſhort a very ſmall number eſcaped, and thoſe that did hurried away in a horrible Fright and Confuſion.

The Cruelties at *Amboina.*

Theſe ſcatter'd Remainders of the Fleet (ſince they could not have their Wills at *Bantam*) ſet themſelves to do all the miſchief imaginable at other places. At *Amboina* they ſlaughter'd the poor innocent Natives, cut down their Clove Trees, and committed all manner of barbarous Hoſtilities, and all out of revenge and malice to the *Dutch*, whoſe Trade they were bent every where to hinder. The *Bantameſe* were very thankful to *Harminius* for his timely Aſſiſtance, as they had very good reaſon to be; neither was it without reaſon that the *Dutch* interpoſed in that manner, ſince the Sufferings of the *Bantameſe* were chiefly upon their account, and by caſting off their Friendſhip and Alliance they might have put an end to all their own Danger and Diſtreſs. *Harminius* having received all the Compliments of the *Bantameſe* upon this account, took his leave and went away for the *Molucca* and *Banda* Iſlands. And now this part of the Fleet was divided, two Ships being bound for the former, and three for the latter of theſe Iſlands. Thoſe that went to *Ternate* got a good lading there, and then ſail'd to *Banda* to their Companions. At *Banda* they found their Factory in good caſe, and a ſufficient quantity of Mace and Nutmegs ready for them, with which they preſently furniſhed three of their Ships and diſpatched them home; the other two ſtaid there till the Cloves were ripe.

Harminius goes to the *Molucca's* and *Banda's.*

A noble *Portugueze* Prize taken by *Heemskirk.*

James Heemskirk, that commanded another part of the *Amſterdam* Fleet, performed his moſt conſiderable piece of Service, in the taking of a ſplendid *Portugueze* Ship. She was of 1400 Tun burthen, and had 800 Perſons aboard her; ſhe was laden with Silk, Sugar, Musk, Cotton, Tintinago, and ſo many rich Commodities, that ſhe was worth ſeveral Millions of Florens to them. According to the uſual hectoring way of that People, at the firſt ſight of the *Dutch* Ships ſhe hung out a bloody Flag, threatning them all with Death and Confuſion; but ſhe quickly changed her Colours and put out the white Flag of Peace; a few ſhot from the *Dutch* humbled her, and made her cry out *Miſericordia*. *Heemskirk* returned home in *A. D.* 1604.

Spilbergen at the Iſland of *Ceylon.*

The very ſame Year alſo returned Admiral *Spilbergen* mentioned before. The moſt of his Concerns lay at the Iſland of *Ceylon*, of which we have this following brief Account. He was firſt of all honourably received and entertained by the King of *Batecoli*, who vouchſafed him Liberty of Trade, and after ſeveral other Favours, ſent him away in a very friendly manner to the King of *Cande*, who deſired his Company. This Prince order'd a noble retinue to attend him in his Journey thither; his Elephants were ſent out together with his Guard, and a coſtly Litter for the Admiral himſelf to be carried in. This King of *Cande* being mention'd, we muſt digreſs a little into his Story, which may deſerve our conſideration. The *Portugueze* amongſt other parts of the *Eaſt-Indies* had ſeated themſelves alſo in this Iſland of *Ceylon*, where they had their ſtrong Fort of *Colombo*, and enjoyed Quiet and Friendſhip with the Kings of the Country. In this Fort of *Colombo*, the preſent King of *Cande* had his Education, they had made a Chriſtian of him, and Baptiz'd him by the Name of *Don John de Auſtria*.

Sent for to *Cande.*

The Story of the King of *Cande.*

Upon the Death of *Darma* the old King, this *Fimala* (for that was his Name) by the help of his party in the Iſland ſtept into the Throne, and preſently arm'd againſt the *Portugueze*, and expell'd them the Country. The late King *Darma* had a Daughter living ſtill, whom the *Portugueze* likwiſe had the breeding of, and her they reſolved to marry to the Governour of *Malacca*, and ſo driving out *Fimala*, put the Government into their Hands. Accordingly they brought this young Princeſs with a Potent Army to *Cande*; and now *Fimala* was forc'd to retire and hide himſelf in the Woods, where yet he placed his Forces ſo advantageouſly, that he bitterly diſtreſſed the *Portugueze*, and cut off all manner of Proviſion from the City. *Lopez* the new-made King, ſeeing he was like to be ſtarved in the City, reſolved to ſtay no longer there, but go out and leave all to the hazard of one ſet Battel; if he carried the Day, the Diſtreſs was at an end, and the Country clear of all Adverſaries before him; if not, a Noble Death, or Fortunate eſcape into ſome place of more freedom, would ſtill change this direful Scene. And 'twas by the latter of theſe two Methods that he was relieved; he loſt the Victory and his Life together, * and *Fimala* the Conqueror poſſeſſes himſelf at once of the young Princeſs and the Throne again.

* *A. D.* 1590. *Portugueze* overthrown at *Ceylon.*

She was but nine or ten Years old, when by *Fimala*'s Victory and Marriage with her, ſhe came to the Inheritance of her Fathers Crown; as for the *Portugueze*, the whole Power of the Kingdom of *Cande* was employed againſt them, and all Endeavours uſed to accompliſh their compleat Expulſion from the Iſland. 'Tis to be noted that *Darma* the Father of this young Princeſs, and *Fimala*'s Predeceſſour in the Throne of *Cande*, was not originally King of that place, but of *Sitebagne*, which is about 15 Leagues from *Cande*. 'Twas the Succeſs of his Arms that brought him in there, not the Right of Succeſſion, or the Peoples Choice; he drove the lawful King of *Cande* out, who fled with all his Children for Refuge to the *Portugueze*, and left the Victorious *Darma* for a while, to enjoy the Fruits of his Violence and Injuſtice. But he was at laſt routed out by the People, who were far from being eaſie under his Government; and therefore ſerved him the ſame ſawce that he had ſerved their rightful Prince, forcing him to taſte the Pleaſures of Rebellion, Treaſon, and Baniſhment, and to try how 'twas, for a Man that had a Crown upon his Head, to have it pulled off again in a rude and forcible manner. By this means was a way opened for *Fimala* the Son of the exiled King, to come into his Fathers Royal Seat at *Cande*; the Death of the Uſurper *Darma* did him that Juſtice, and brought him to the Poſſeſſion of his deſired Glory.

Spilbergen's Entertainment at *Cande.*

Spilbergen being come to *Cande* to wait upon this Prince, was the next Day after his arrival ſent for to Court. The King was very well pleaſed with the Preſents he made him, but ſeemed to be much more taken with the Company of him and his European Attendants, who appear'd to be ſuch a ſort of People as he little expected to ſee. For he was under an Apprehenſion that there was no Nation of Whites, but the *Portugueze* alone, his moſt deteſted Enemies, and therefore lay under a very pleaſing Surprize to find the *Dutch* of that Complexion as well as they.

The Furniture of his Palace was after the *Portugueze* Faſhion, for having had his Education amongſt them, he ſtill retained ſome of their Cuſtoms: Thus the Rooms were furniſhed with Chairs, and Stools, and Tables, adorned with rich Arras Hangings and other things of the like nature, that had far more of the *European* than the *Indian* mode in them.

When they came to diſcourſe of the matter of Trade, the King ſhewed an uncommon degree of forwardneſs and willingneſs to promote that Deſign; and (whether 'twas a Compliment or no) he told *Spilbergen* that himſelf and his Queen and all his Nobles would be ready to carry Stones and Mortar for the building of a Fort when and wherever Prince *Maurice* and the States pleaſed.

Burns the *Portugueze* Ships.

And to fix the King more effectually in this good Humour and favourable Opinion of the *Dutch*, *Spilbergen* went out one Day and took three *Portugueze* Ships, burning them when he had done, and bringing all the Men home Priſoners to the King. This did his Buſineſs, and if the King had not been diſpoſed to be kind before, 'twas enough to have made him ſo: A Sacrifice of his Enemies that had once, and would again beat his Crown from his Head. What could be more agreeable and procure more Favour for him that offer'd it? This Prince was mightily delighted with Muſick, and when the Admiral found his Inclination to lie pretty ſtrongly that way, he preſented him with a couple of Muſicians, one of whom came to very good Fortune by this means, for the Charms of his Muſick perſwaded the King to make him a Secretary of State; this was a very fine Poſt for a Fidler, and Preferment enough to have made a Man Muſical that was not ſo before. But farther, to ſhew his Eſteem and Opinion of the *Dutch*, the King ſet himſelf to learn that Language, and would needs have his Kingdom called by the Name of *New Holland*.

Account of *Ceylon.*

The Account we have of this Country is very ſhort and imperfect. The whole Iſland is divided into ſeven Kingdoms, but how much *Fimela* the King of *Cande*'s Territories do take in is not certain; only this we are told, that he poſſeſſes all that Kingdom, of which *Colombo* is the Capital City, a few Forts excepted, out of which he is not yet able to drive the *Portugueze*.

The Iſland is 250 Miles from N. to S. and 140 broad, 'tis a noble fertile Spot, abounds in delicate odoriferous Plants, Cinnamon Trees, the moſt and beſt in the whole World, and which is more than all, choice Jewels of ſeveral ſorts.

A great Carbuncle brought from *Ceylon*.

Spilbergen brought both Cinnamon and precious Stones from thence, and amongſt theſe a Pyropus or Carbuncle of a prodigious ſize, weighing full 400 Carots; one ſo big as which hardly *Europe* had ever ſeen before. Thus we have ſeen the Reſult of *Spilbergen*'s Management at *Ceylon*, an Iſland little known to the *European* World; we muſt now ſee what was performed by other Commanders of the *Dutch* Fleets in other places where their Concerns lay.

* *March A. D.* 1602.

Admiral *James Neccius* ſet ſail with the Ships under his Command for *Bantam*, where after a Voyage of ſome nine Months or better they arrived in * ſafety. The Governour of this place (according to the good Underſtanding now eſtabliſhed between them and the *Dutch*) gave them Information of the Deſigns the *Portugueze* were carrying on againſt them.

King of *Tuban* and the *Portugueze* arm themſelves againſt the *Dutch*.

The King of *Tuban* (a Town upon the Iſland of *Java*) was of a *Portugueze* extraction, and having join'd with his Country-men in their Plot of extirpating the *Dutch* Intereſt there, had ſent to *Bantam* to ask leave to attack the *Dutch* in that Harbour, for which purpoſe they had a Fleet of 40 Ships that lay ready at *Jecatra*. What Anſwer was given we do not know; tho' 'tis probable a peremptory Refuſal to admit of any ſuch Hoſtilities againſt the *Dutch* there; however *Neccius* did not ſtay to ſee the event of it, but went away for the *Moluccas*.

Portugueze reports of the *Dutch*.

At *Ternate* he heard how the *Portugueze* had befriended his Nation in a good Character, repreſenting them to the People as a parcel of Thieves, Sodomites, and in all reſpects the worſt and moſt leud ſort of Men, which they did they alledged out of kindneſs to the King of *Ternate*, becauſe they would not have him impoſed upon by ſuch a ſort of People. Beſides this here was a report of a diſmal Tragedy acted by them upon a Company of **Dutch** Men, whoſe Ships they had betrayed; upon all which Accounts, *Neccius* ſailed away to **Tidore** to take ſome part of his revenge upon them.

They rout the *Dutch*.

But his Succeſs was not anſwerable to the Juſtneſs of his Cauſe, or at leaſt the Greatneſs of that particular Provocation, for he came off with the worſt on't in the Encounter, and beſides the Loſs of ſome of his Company and his own Wounds, was obliged to leave the inſulting Enemy to make their utmoſt Boaſt upon his Flight.

King of *Ternate*'s Title.

They by the way here give us an Account of the King of *Ternate*'s Titles, and all the Dominions he pretends to; they tell us he calls himſelf King of *Ternate*, *Machian*, *Motir*, *Amboina*, *Gilolo*, and of the *Celebes*, tho' he poſſeſſes nothing there; alſo of *Mindanao*, *Sokens*, *Menos*, and other Iſlands. But all the while here's nothing of the *Banda* Iſlands; we don't find the King of *Ternate* pretends any Soveraignty there, and there's no reaſon to believe that Title would be ſuppreſs'd if it had ever been aſſumed by him; and therefore that more modern Pretence of the *Dutch* to the *Banda* Iſlands upon the King of *Ternate*'s account proves it ſelf to be vain and idle, and the Makers of it to be ſhrewdly put to it to find out ſome Reaſon for their unjuſt Claim.

Neccius now beaten away from the *Moluccas* went to ſeek his Fortune in other places.

Coyo one of the *Philippine* Iſlands.

He came firſt to *Coyo*, one of the *Philippine* Iſlands tributary to the *Spaniards*, where he met with kind Entertainment from the Natives.

After that they came to *Mendare* not far from the Bay of *Manilla*, where they were horribly endanger'd for eight Days together amongſt the Rocks.

From hence they ſail'd towards the Coaſt of *China*, and had ſight of one of the Cluſter of Iſlands, that lies before *Cauton*.

Cauton and *Macao* on the *Chineſe* Coaſt.

When they were by their own reckoning 12 or 15 Leagues from *Macao*, they ventured to proceed three or four Leagues farther, and ſaw a parcel of Buildings at the Foot of a Hill, and ſeveral Boats in the adjoining Water with whole Families in them, Men, Women, and Children. None of theſe People would come aboard them, but when they enquired of them about *Macao*, they pointed to the Mountain; but the *Dutch* not believing *Macao* to be ſo near, ſet ſome of their Men aſhoar; which not returning, they ſent out more in their Boats to enquire after them, but in ſhort they were all ſtopp'd and detained Priſoners, and now the *Dutch* found by dear bought Experience, that the place they were come to was *Macao*. There was no remedy to be had at all in this caſe: their Men were out of their reach, and they had not ſtrength enough to attempt the Recovery of them by Arms; ſo they were forced to ſubmit to this unjuſt Violence, and go away quiet and contented, till they were in fitter Circumſtances to take their Revenge.

Some of them made Priſoners at *Macao*.

After this they beat about upon the Coaſt of *Cauchin-China*, and having paſt ſeveral conſiderable Dangers by Rocks and Shelves, and other formidable things, they came to *Quami*. Here they found nothing but Woods and Deſarts, and the footings of ſome Wild Beaſts; No Inhabitants appeared, nor any Refreſhment that might tempt a Company of weather-beaten Seamen to ſtay there; ſo they ſailed from hence to *Auarella Talca*, in 11 Degr. 30 Min. This place was almoſt as bad as the other, only not quite ſo barren; they came out into an open Field, beſet all round with comely Trees, where they ſaw good ſtore of Birds, and Buffals too, that were diſperſed up and down a feeding, but they could not lay hands of any of them to ſupply their Neceſſities. They found the Track of ſome Carriages, as alſo the Footings of ſome Men in ſeveral places, which they followed as far as they could, till they were led out into wild rambling Woods, where all was loſt and confounded again. So that 'tis probable theſe People had no fixed and certain Dwellings, but wandred about the Country, ſettling ſometimes in one ſpot of it and ſometimes in another, according as the Paſturage or other Conveniencies ſerved them.

Quami a barren place.

Auarella Talca.

A ſtrange Fruit found there.

But the Fruitfulneſs of this Country (ſuch as 'twas) was a worſe Plague to the *Dutch* in its Effects, than the Barrenneſs of it could poſſibly have been. For here was a Fruit, the eating of which, made them all downright mad for a time. All their Faculties were ſtrangely darkned and diſturb'd, the Harmony and regular Temper of their Minds ſpoil'd and vitiated, their Fancies ſo debauched, that they did nothing but form a parcel of wild extravagant Images, and preſent them in ſuch ſtrong and lively Colours too, that all appear'd as if 'twas real. Every Man was a Viſionary in his own way, and according to his own proper Humour and Diſpoſition. One ſaw and converſed with Angels, another had ſome of the Black Regiment about him, a third cried out of Serpents, and other formidable Creatures, and another of ſome other thing that his confuſed diſtracted Imagination preſented at that time. Theſe Phanaticks muſt ſure make very pretty Company together, while every Man was telling his own Story, and exerting thoſe Paſſions, with their ſeveral Apprehenſions of the Objects that were preſented excited in them. No doubt there was a great deal of variety in that kind, and as much noiſe and buſtle too amongſt them; for thoſe that fanſied the Devil by them, could not but run away from him, and the reſt that were encompaſſed with venomous Beaſts to be ſure did not ſtand ſtill. Any Man that ſhould have come and found them in this Condition (not ſuſpecting it to be the Effect of ſuch a Cauſe as 'twas) muſt have thought *Auarella Talca* to be either a Receptacle of mad People, or at leaſt to be haunted with ſomething worſe. How they came to be ſober again they don't tell us, whether by the uſe of any ſort of Remedies, or whether the Diſtemper went off of it ſelf. They don't give us neither any deſcription of this Fruit, or the Tree, or Shrub that bears it, that other People might learn how to know and avoid it; all which is ſo very groſs a Neglect (that becauſe 'tis more Charity to impute it to Diſtraction than to Ill Nature) wee'll ſuppoſe they did not recover the true Uſe of their Wits as long as they were there, but carried the Relicks of the Madneſs away with them.

Dutch have a Factory at *Patane*.

The next place they came to was *Patane*; and here (whether mad or ſober) they found very kind Entertainment, and had the Grant of a Factory from the Queen of this place. They heard here likewiſe that their Men taken at *Macao* were moſt of them executed and ſent Priſoners to *Goa*; for 'twas the *Portugueze* had ſerv'd them that trick, tho' they ſuſpected the *Chineſe* to have ſome hand in it.

At *Patane* they tell us are uſed the *Malayan*, *Chineſe*, and *Siameſe* Languages; the *Malayan* ſomething reſembling the *Arabick*, the *Siameſe* like *European* Characters, the *Chineſe* much more intricate than either, and to be read from the right-hand downwards, wherein it agrees with the *Japoneſe**.

* See Capt. *Saris*'s Voyage.

Patane, its Cuſtoms and Products.

The Laws of this Country are very ſevere in caſe of Adultery, puniſhing any Treſpaſs of that kind with certain Death. The Offenders are in one reſpect their own Judges, for they condemn themſelves to what Death they pleaſe; and their Parents are their Executioners, and have it hereby in their Power to make their Sufferings as eaſie and favourable as they can be. Tho' 'tis a cruel Law to the Parents that obliges them to do this Office to their own Children; if the Principles of natural Affection and Tenderneſs are any thing ſtrong in them, they muſt offer horrible Violence to themſelves, and endure more Pain and Miſery than thoſe whom they execute.

But as rigid and ſtrict as the Law is againſt Adultery, it tolerates Fornication with a great deal of eaſe and patience. There's nothing of this nature look'd after or regarded; 'tis no Crime in the Country, nay, 'tis an eſtabliſhed Cuſtom amongſt them, for every Man this way to take his full liberty. Common Women are offer'd to Strangers that come hither to do their houſhold Work by Day, and other Offices at Night, to dreſs their Victuals, make their Beds, and when they have done, to lie in them. The *Dutch* ſo highly commend their Entertainment at this place, that 'twould make one gueſs theſe *Patan* Doctreſſes had the management of ſome of them; and by the gentle agreeable Methods of their Art, might help to cure them of their Diſtraction.

They report one thing of the *Siameſe* that looks very odd and ſtrange; which is, that they wear two or three Silver Balls faſtned into the Fleſh of the *Pudenda*, and theſe are ſometimes as big as a Tennis Ball; this they obſerved at *Patane*.

The Country about this place they ſay is very fruitful and Pleaſant. The Woods are ſtored with wild Beaſts, and Fowl; their Turtles are adorned with fine colour'd Feathers like Parrots, their Geeſe and Ducks lay them Eggs twice a Day.

Manner of catching Elephants.

One of the moſt common ſorts of Beaſts amongſt them is the Elephant; they make the Tame ones help to catch the Wild, by turning them out into the Woods, where they preſently begin a Battle with them; and ſo when both are cloſely engaged and faſtned together by the Teeth, the Men that lie near at hand, provided with Ropes, make the Wild ones Priſoners.

This is the laſt Account we have of the Affairs or Obſervations of theſe *Dutch* Ships, which we may ſuppoſe from hence to have ſet ſail for *Holland*.

A brave Fleet of 14 Sail, to be ſent into divers parts.

To go on yet farther with the Endeavours of this Nation at a Foreign Trade, we ſhall conſider the Fleet ſet out under the Command of *Wilrand Warwick* Admiral, and *Sebalt de Weert*, Vice-Admiral. It conſiſted of 14 Ships, the *Maurice* of 400 Tun, the *Holland* 350, the *Naſſaw* 340, the *Sun* 280, the *Moon* 250, the *Star* 180, the *Parrot* a Pinnace of 25, all theſe by the Merchants of *Amſterdam*; then three Ships of *Zeland*, one of 400 Tun, the *Fluſhing* 250, the *Gooſe* 140; two Ships by the *Enchuſeners*, the *Hedge* 220, the *Virgin* 175; two Ships of *Rotterdam*, the *Eraſmus* 250, the *Rotterdam* 80. 'Twas determined that ſome of theſe Ships ſhould go to *Achen* and *Ceylon*, ſome to the *Moluccas*, ſome to *China*, and laſtly others to their old Friends the *Bantameſe*. The *Zelanders* began the Voyage, ſetting out three Months before the reſt of the Fleet; the others followed in *June*, 1602, reaching *Achen* the ſucceeding *March*, where they found the Ships of *Zeland*. They that were appointed for *Ceylon*, left the reſt to their future Good Fortunes, after ſome time of ſtay there, and went away themſelves for that Iſland. 'Twas *De Weert*, the Vice-Admiral's Province to go thither; and thoſe that conſider the Circumſtances of *Spilbergen*'s Entertainment at that place, will eaſily grant, that his Country-men had reaſon enough to hope for Succeſs and Good Treatment.

June, A. D. 1602.

De Weert's Reception at *Cande*.

When this Perſon came to *Cande*, he was received into the City with no leſs than Kingly Pomp and Triumph; the Souldiers and Citizens made a Lane for him to paſs half a Mile long, and all the while the great Guns were roaring, the martial Muſick ſounding, and the People hollowing, ſo that 'twas impoſſible for one Man to hear another ſpeak. Being come to the Palace, he found the King ready to receive him, before whom when he fell down on his Knees according to the Cuſtom, he was preſently taken up in a very gentle manner, and deſired to hear the King's Queſtions, which were concerning his Country, and Buſineſs in the Iſland of *Ceylon*. *De Weert* quickly ſatisfied theſe Demands, eſpecially the former, by pointing to Prince *Maurice*'s Picture that hung there, which *Spilbergen* had given the King, telling him he belong'd to the Country that was governed by that Prince. And they all expreſſed a great deal of Satisfaction at hearing him ſay ſo, for they were in ſome doubt of him, and had placed that Picture there on purpoſe to try if he knew it, and by that means to find out ſomething of the truth of *Spilbergens* Relation.

But the King enquired next, how he durſt adventure ſo far into the Country of his own accord, without any thing of a Pledge or Aſſurance for his ſafe Return; but *De Weert*, who did not pretend to ſuſpect the King's Generoſity and Kindneſs to the *Dutch*, and knowing his perfect hatred to the *Portugueze*, made him ſenſible how ſecure he thought himſelf in his Majeſties Dominions, without any of thoſe Formalities.

King of *Ceylon*'s Propoſal to *Weert* for a War with the *Portugueze*.

This Return pleaſed the King, and he expreſſed a great deal of Indignation againſt the *Portugueze*; nay, ſome-time after in a private Conference, he told *De Weert*, that if the *Dutch* with their Ships would undertake to prevent the coming of Supplies from *Goe*, he would fall upon the *Portugueze* here in *Ceylon* with an Army of 20000 Men. And for the Reward of this piece of Service, he would give them all the Caſtles and Forts he took in that War, and beſides, all the Trade of the Iſland ſhould be turn'd over into their Hands. *De Weert* received ſeveral Tokens of this Prince's Favour to himſelf in particular, amongſt the reſt a noble Bowl of Gold, which he made his young Daughter drink to him in, and afterwards preſent him with; and at his going away gave him 25 Quintals of Cinnamon, and 16 of Pepper, and a very honourable Convoy to his Ships. At parting too he told him, that if his Son the Prince were old enough, he would ſend him into *Holland* to have his Education in Martial Diſcipline under Prince *Maurice*; and thus *De Weert* went away from *Ceylon* with every whit as much Good Fortune as *Spilbergen* had done before him, both as to the Publick and his own private Advantages.

From hence he ſailed back again to *Achen*, where he told theſe Propoſals of the King of *Cande* to his Country-Men, and earneſtly perſwaded them to ſtrike in with the preſent favourable Opportunity of driving the *Portugueze* out of that Iſland. The King of *Achen* was mightily pleaſed with the Project too, and encouraged the *Dutch* by all the Motives in the World to ſet upon it out of hand, and not loſe any time in a Buſineſs of ſuch a Conſequence.

A Fleet of *Dutch* go to *Ceylon*.

So after ſome Conſultation amongſt themſelves, they concluded it ſhould be ſo, and a Fleet be preſently ſent out to aſſiſt the King of *Cande* in his Deſign. Accordingly ſix Ships of War with a Pinnace were diſpatched; along with which went an Embaſſadour of the King of *Achen*'s for *Cande*, to ſpur on that Prince in his preſent Undertaking againſt the *Portugueze*. The *Dutch* being landed marched with their Forces to *Matecalo*, the King of which place was civil to them all other ways, only he would not ſell them any Beeves or Buffals for Proviſion, which they extreamly wanted; and this not out of any Enmity or Ill Will, but from a Scruple of his Religion, which forbid the eating of any of thoſe Creatures. And in that caſe the *Dutch* ought to have complied; and (as ſo plentiful a place would eaſily have ſupplied them with other Neceſſaries that might have ſerved) ſo they ſhould rather have been contented with meaner Refreſhments, than gone to affront the Laws and Religion of the Country, by making uſe of their Cattel for that purpoſe. But ſome of them it ſeems did this; they got ſome Kine and killed them, which made a terrible uproar amongſt the Natives, and as highly incenſed the King when it came to his Ear. He told them 'twas a worſe outrage than ever the *Portugueze* had committed amongſt them, and that it would not be born there; and 'twas a long time before they could perſwade him (with all their Promiſes of better Conduct for the future) to mediate between the People and them, and calm their fury. However at laſt with much ado 'twas done, and the King and People both ſeemingly quieted; but 'twas a dangerous Enterpriſe, and the *Dutch*, who knew how tender they were in that point, ought not to have tried their Patience in that manner, nor run ſuch a riſque as they did by provoking them. 'Tis true, the reaſon of this Prohibition is as ſilly and ridiculous as any thing can be; the Natives won't have their Cattel killed, that the Souls of them may be kept out of Hell, whither they believe they will go, if they are diſpatch'd in a violent manner; but others that believe this to be ever ſo fooliſh, in Prudence are not to go upon their own Hypotheſis of the Impertinence of this, and the Reaſonableneſs of the contrary, and ſo ſlaughter the Cattle becauſe they know they have either no Souls to looſe, or none that will be damn'd: for whether they have or no, the other party is certainly perſwaded of the truth of it, and therefore will as certainly look upon thoſe that ſhed the Blood of them, to have done all the ſame Injury that they could be imagined to have done, if the Opinion of the future ſtate of thoſe Creatures were ever ſo well grounded.

The People enraged at the *Dutch* for killing their Kine.

The King of *Cande* having now encamped with his Army at *Manacrawari*, ſent to the *Dutch* here at *Matecalo*, to come round with their Ships to *Punto de Galle*, which he intended firſt of all to lay ſiege to. The *Dutch* accordingly

Dutch take four good *Portugueze* Ships.

ingly put out to Sea, to keep Guard that way, while the King diſtreſs'd the Enemy aſhore. And tho' no Ships of War came from *Goa*, to be a Prey at this time to the *Dutch* Fleet, yet ſome other good Ships of theirs came within their reach, four of which they took; and this more to gratifie the King of *Cande*, than for any real Profit the Lading of them was capable of affording.

They ſent away two of theſe Ships with all the Priſoners in them; but whether they ſold them their Liberty, or exchanged them only for *Dutch* Priſoners, is uncertain; however, this Action highly diſpleas'd the King of *Cande*, who 'tis poſſible expected they ſhould have been all ſent to him, tho' we find no ſuch Condition brought into the Agreement.

Quickly after this, the Vice Admiral *Weert* landed with a Party of 200 Men, to have ſome Conference with the King, and at his Requeſt ſent back the beſt part of his Men to the Ships again, while himſelf only with a ſmall Retinue, attended the King's Pleaſure. Happy had it been for them, if they had all gone back, or ſtaid together, to have made the better Oppoſition to the Violence that was ready to aſſault them. In a word, the King of *Cande* murther'd the Vice-Admiral, with all or moſt of his Company: An Action as vile and barbarous, as 'tis unaccountable, and the Reaſon of it uncertain.

De Weert and his Men cut off by the K. of *Cande*.

Whether the killing of the Cattle ſtuck yet in their Stomachs or no, and this Sacrifice of Men went for that of Beaſts; or whether 'twere only in Revenge of the Diſmiſſion of the *Portugueze* Priſoners; upon either of which Accounts 'twas highly unjuſt, and the *Dutch* deſerv'd no ſuch Treatment at his hands.

Some ſay, that *De Weert*, in his Diſcourſe with the King, forgot the due Meaſures of Reſpect owing to his Character, and carried it with ſomething of Inſolence (at leaſt unbecoming Boldneſs) towards him.

Others ſay, that the King ſuſpected ſome treacherous Deſign, and was apprehenſive that a Plot was laid to betray him, and carry him off in their Ships; and ſo took this courſe as well to prevent his own Captivity, as to puniſh thoſe that had preſum'd to contrive it.

Which of all theſe Stories is the true one, is uncertain; but this laſt does not ſeem very probable: For if the *Dutch* had taken the King Priſoner, it muſt be ſuppos'd to be in order to the poſſeſſing themſelves of his Kingdom. Now had they form'd any ſuch unjuſt Deſign as that, there had been eaſier and leſs chargeable Methods to have accompliſh'd it than this. For this Action to be ſure would exaſperate the Natives to the laſt degree, and make them take up Arms with one Conſent all over the Iſland, againſt ſuch Invaders; ſo that the *Dutch* could not be conceiv'd to come in, but upon the Foundation of an abſolute Conqueſt, nor ſit quietly there till they had reduc'd all into complete Subjection. But had they improv'd the Favour of that Prince, as they might have done, upon his permiſſion of their Settlement in the Iſland, they might have encroach'd and got ground upon him by degrees; and while they ſate ſhrowded under the Protection of his Wings, have taken any fit Opportunities to work him out, and fix themſelves in the ſure and certain poſſeſſion of his Country. And by ſuch a gradual proceeding the People had been much leſs alarm'd and rouz'd up to ſtand in their own defence: Perhaps they might have been won over by ſome Artifices proper to be uſed on ſuch occaſions; and by this means the Buſineſs had been done, and yet all the Danger and Expence of the Method of Conqueſt avoided.

K. of *Cande* writes to the *Dutch* about carrying on the War.

As for the King himſelf, he preſently ſent word to the *Dutch* Fleet what he had done to their Commander; and that that he alledged in his own Juſtification was, That *De Weert* had behaved himſelf very rudely in his preſence, and pretended in a very poſitive manner to offer him Terms, which he muſt accept, or refuſe, at his peril. But as for their parts, the King promis'd to confirm all that was formerly agreed upon, and to be the ſame in his Carriage towards them as he was before, provided they would perform their part, and help him to take the Forts of the *Portugueze*. But the *Dutch* excus'd themſelves, not caring to put any farther Truſt in a Prince that had ſo deceiv'd them: He muſt now go on with his War by himſelf for them, and make the beſt of his Undertaking againſt the *Portugueze*; who to be ſure were not a little glad that the King had obliged them ſo far in breaking with the *Dutch*.

Dutch go from *Ceylon*.

From hence they went back to *Achen* again, and then to *Darue*, an Iſland near *Sumatra*: While they lay hereabout, they took divers *Portugueze* Prizes; and when that Sport was over, they ſail'd to *Macaſſar*. And now they had no fix'd Trade to take them up, and ſo did nothing but wander about: For from hence they went to *Jor*, and there they aſſiſted that King againſt the *Portugueze*.

This Service being over, they viſited *Patane* (a place well known to ſome of their Countrymen, that were cured of their Madneſs there), and from thence to *Bantam*, and ſo home.

Thus have we ſeen the laſt iſſue of their *Ceylon* Affairs; the unhappy Concluſion that follow'd the moſt fortunate and favourable Beginnings that ever were in the World: The Acquaintance was but of a little ſtanding; but 'twas well improv'd for the time, and promis'd very great things, but perhaps no greater than would have been perform'd, if their good Luck had not had this ſad and ſudden Turn given to it. But thus uncertainly, and without warning, does the Scene change in this World; and ſo impoſſible is it for any Perſon, or People, to keep their Station, when the Critical Moment of their Deſtiny comes on.

CHAP. XLII.

An Account of the reſt of the Dutch *Voyages, down to the time of their firſt Pretenſions to Sovereignty and Property, at the* Banda *Iſlands.*

December. *A. D.* 1603.

WE are yet to proceed ſome Removes farther, in our Enquiry into the Progreſs of the *Dutch Eaſt-Indian* Trade. *A. D.* 1603, in *December*, a Fleet of twelve Ships ſet ſail under the Command of *Stephen Verhagen*. Having doubled the Cape of *Good Hope*, inſtead of ſailing directly towards the *Eaſt-Indies*, they went along the Coaſt of *Africk*, and made up to *Mozambique*, which place they had propos'd to aſſault. Here they came to an Anchor cloſe by the Caſtle, and in ſpite of all the *Portugueze* Forces, took ſeveral of their Ships that lay about the Harbour. But the Grand Deſign of all did not ſucceed; the *Portugueze* were too well fortified there, to be beat out at that time; and the *Dutch*, with all their Skill and utmoſt Endeavours, could not accompliſh any thing conſiderable towards the diſpoſſeſſing of them.

Dutch attempt the taking of *Mozambique*.

September, *A. D.* 1604.

They met with the like Diſappointment too when they came with their Fleet before *Goa*; the Enemy was ready to receive them, and had made ſuch Proviſion againſt their coming, that nothing was in Prudence to be attempted. All things were in ſuch order, that it look'd as if the Deſign had been diſcover'd in *Europe*, and Notice had been given from thence to them at *Goa*, that they were to expect a Viſit from the *Dutch*.

October.

They agree with the K. of *Calecut*.

Thus baffled and fruſtrated of their Hopes, they ſail'd from thence down the *Malabar* Coaſt, putting in at *Cananor* and *Calecut*, in the Samorine's Dominions. They treated with this Prince about Trade, and came to an Agreement with him, which was drawn up in Writing, and ratified with all the uſual Solemnities.

Upon this Coaſt they had a Fight with the *Portugueze*; but ſuch a one, as 'tis probable, the little advantage, or elſe the great loſs gotten by it, might incline them to forbear giving any particular Accounts to the World of that matter.

November.

From hence ſome of them went to *Cambeya*, and the reſt to *Cochin*; they attempted nothing at this place neither; and if they had laid any Plot for the ſurprize of it, they did not think fit to try to put it in execution; 'tis likely for the ſame Reaſon, that they forbore doing ſo at *Goa*.

January.

Their next Viſit was to *Bantam* (a place where they were ſure of Trade and Reception), and from thence to *Amboina* *, the Conqueſt of which latter place was the Crown-

* See the Account of this in Sir *H. Middleton's* firſt Voyage, *Lib.* 2.

Crowning Work of all the Voyage hitherto. The *Portugueze* had not the good Luck to be handſomely provided for them here; or if they were, Fortune and favourable Succeſs were wanting; for they were obliged to go out, and leave the Victorious *Dutch* their places.

May, *A. D.* 1605.

When this Action was over, the Admiral, *Veer Hagen*, went away to the *Banda* Iſles; but five Ships of the Fleet were diſpatch'd to *Tydore*. There was more Work to be done at that place againſt the *Portugueze*, and Fortune that had fawn'd upon them at *Amboina*, had given them encouragement to hope for the continuance of her kindneſs at the *Molucca's*. And ſhe did not deceive them, nor their flattering Hopes draw them into a Snare, but to more noble and ſplendid Triumphs. All things now ſeem'd to conſpire for their Felicity and Glory, and the aggrandizing (as much as was poſſible) the Intereſt and Character they had already gotten in thoſe parts of the World. The *Portugueze* made a brave and bold Reſiſtance at *Tydore*, deſpis'd the Summons the *Dutch* ſent them to ſurrender, and laugh'd at the talk of a White Flag.

Dutch win the Caſtle of *Tydore*.

But there is a time when all the Valour, Caution, and good Conduct in the World will prove fruitleſs and inſignificant: Vertue and Bravery muſt yield to the unalterable Laws of Fate, as well as Impotence and Cowardice, and the Party that bids ever ſo fair for Victory and Succeſs, is often run down by another that has no Title at all to it. 'Twas ſo with the Defendants in this preſent Buſineſs, they deſerv'd perhaps to have carried the Day, and kept their Poſt; but the *Dutch* were ſo lucky as to get both from them. They fought well; but that's no Guard againſt unforeſeen, and unthought of Accidents, Courage may keep an Enemy out of the Gates, but 'twon't keep a Fort or a Caſtle from being blown up, where a Firebrand falls amongſt a parcel of Gunpowder. 'Twas this that ruin'd the *Portugueze*; they were not ſo much beat out, as blown out of the Caſtle of *Tydore*; indeed, a good part of the Caſtle it ſelf, and of the Men too, were both blown away; and to be ſure this would put an end to the Siege. In ſhort, this Stroke was the Confuſion of their whole Affairs at the *Molucca's*, they had now no footing in any Iſland all thereabout, but at *Solor* only.

K. of *Ternate* ties up the Hands of him of *Tydore*, that he can't help the *Portug.*

The King of *Tydore* ſtood by and ſaw this Tragedy; but could do nothing towards the prevention of the miſerable Concluſion of it: For his old Friend, the King of *Ternate* (who aſſiſted the *Hollanders* in the Enterprize) was ready with a Fleet of fourteen Coracoras, and near 2000 Men, to have fallen upon him, if he had ſtirr'd in the matter.

Thus the Intereſt of *Holland* advanc'd and riſe, and that of *Spain* and *Portugal* went down in theſe Parts of the World. 'Tis true, the King of *Spain* was horribly nettled at it, and made ſeveral ſevere Decrees againſt the *Dutch* this Year, and ſtrict Prohibitions of all Trade and Dealing with them, in every part of his Dominions: But what ſignified all that Noiſe and Raving? And to what purpoſe is it to ſtorm and threaten, without power to execute? The more the Fox was curs'd, the better he thrives; and the good Fortune of the *Dutch* increas'd upon them, while the Court of *Spain* was praying for their Succeſs the backward way. For 'twas but the ſame * Year, that they ſent out a Fleet under Admiral *Matlief*, who was commanded by the States to bring as many of the *Indian* Princes, as was poſſible, into the Grand Confederacy againſt the *Portugueze*, that their Deſign againſt *Malacca* might be carried on with all deſirable Advantages. And here how far they diſtreſs'd the *Portugueze*, and what Spoil they made of them, has been already related in another * place.

* *A.D.* 1605.

* See Mr. [illegible] Relation, *Lib.* 2.

In ſome of the following Years too, they traded at *Japan* with great Succeſs; the Emperor gave them Encouragement, and leave to ſettle a Factory there; and 'tis reported, that they brought from thence in one Voyage, no leſs than 40 Tun of Gold. Theſe *Japan* Voyages we have but little Account of, and therefore they muſt be thus briefly paſs'd over.

Next to *Matlief*, with his Fleet of twelve Ships, went out * the Admiral, *Paul van Carle*, with eight more; and he was * quickly followed by *Verheuf*, with a Fleet of thirteen Sail. Both theſe Commanders attack'd the *Portugueze* at *Mozambique*, tho' the latter (*Verheuf*) did it with the moſt Succeſs. He forc'd them to leave the Town, and ſhut up themſelves in the Caſtle, but that was impregnable, and would not yield to his fierceſt Aſſaults. But he inſulted them afterwards ſhamefully at *Goa*, and did them a vaſt deal of Miſchief all along the *Malabar* Coaſt; taking ſeveral of their Ships, burning others, and killing many of their choice and prime Officers.

* *A.D.* 1606.

* *A.D.* 1607.

He had better Luck than *Van Carle* too, in his Concerns with the Samorine of *Calecut*; for they were then at the Charge of a Preſent to that Prince; but could not come aſhore to him, by reaſon of the ſtrong Guard of *Portugueze* Gallies that then lay there; beſides, they were not certain of being ſecure from Treachery. But *Verheuf* found the Coaſt clear, and had all the Entertainment in the World; the Samorine ſent out his Men a Hunting on purpoſe, and preſented the *Dutch* with forty great Boars.

From hence they went and viſited the King of *Jor*, their Friend and Ally; and having done the like to them at *Bantam*, they ſail'd * away to the *Banda* Iſles. Here *Verheuf* having ſummon'd the Orankayes, or States of the Iſles together, read Prince *Maurice*'s Letters to them, in which 'twas deſired, That the *Dutch* might have Liberty to erect a Fort or Caſtle amongſt them; not at all with any Deſign to encroach upon them, but to ſecure the Iſlands from the daring Attempts of the *Portugueze*, who might be expected to come thither and viſit them.

* *A.D.* 1607.

The original of the great Controverſie between the *Dutch* & the *Bandaneſe*.

This Propoſal ſet them all in an Uprore; and had it not been for the Terror of the Ships with their great Guns, they had then cut their Throats for making it. However they ſtifled their Reſentments at preſent, and having conſulted amongſt themſelves, gave anſwer, That *Verheuf* ſhould go aboard again now; but after three Days were paſs'd, they would come to a poſitive Concluſion. And they concluded in the Negative with one Voice and Conſent, telling the *Dutch*, they ſhould build no Fort there. But they being reſolved right or wrong to have one, immediately fell upon the *Bandaneſe*, and fought one Battle with them, the very ſame Evening that they gave the Denial.

The *Bandaneſe*, 'tis to be ſuppos'd, having had the worſt on't, and fearing themſelves too weak to hold out in ſuch a Diſpute with the *Dutch*, came and craved a Ceſſation of Arms for three or four Days: But this would not be granted, the other was perfectly inflexible, and would hear of nothing but a preſent acceptance of their firſt Propoſal. Upon this the *Bandaneſe* yielded to their Fate; the Fort muſt be built, and ſince the *Dutch* ſaid it ſhould, it was in vain for them to ſay it ſhould not.

But this put them upon that * ſharp Revenge which they afterwards took, to the Deſtruction of *Verheuf*, and all his Company. And ever after this, there was a continual Heart-burning between the *Dutch* and them; there was indeed ſometimes Peace between them, but 'twas never ſteddy and certain, but often interrupted with the Confuſions of open War and horrid Depredations upon one another. The old Spleen remain'd on both ſides, and as the *Dutch* ſtill remembred the killing of the Admiral, ſo the *Bandaneſe* did the building of the Fort.

* See Capt. *Keeling's* Voyage, *lib.* 2.

Their other Proceedings at theſe Iſlands we have an Account of in our own Journals: So that here we ſhall conclude the Account of their Affairs.

CHAP.

CHAP. XLIII.

A Collection of Rules and Directions for the Eaſt-India *Navigations: Taken out of the Obſervations of ſome of our* Engliſh *Sailors of great Experience; particularly Mr.* John Davis, *of* Lime-Houſe, *who made five of thoſe Voyages himſelf.*

Long. Comput. from the *Lizard.*

IN this Account it is firſt of all to be noted, that the Longitude is computed from the Meridians of the *Lizard*, and the Cape of *Good Hope*; in ſome parts of the Voyages, from the one Meridian, and in others from the other; but as far as the Cape *Das Aguillas*, they reckon from the Meridian of the *Lizard*. This premis'd, they give us theſe following Obſervations relating to Navigation and Geography: And firſt of all concerning Places lying between the *Lizard* and St. *Auguſtine*'s Bay, upon the Iſle of St. *Lawrence*.

Cape *Finiſter*

Cape *Finiſterre*, in *Gallicia*, has 43 Degr. 20 Min. N. L. and 2 Degr. 36 Min. Long. to the W.

Iſl: *Lancerota*
Note.

The Iſle *Lancerota*, Lat. N. 28 Degr. 40 Min. and Long. 5 Degr. 24 Min. W. and the Var. 6 Degr. 6 Min. from N. to E. You may be poſitively ſure that you are N. N. E. from the ſaid Iſland, when being in the Lat. of 33 Degr. 30 Min. you happen to have 5 Degr. 20 Min. Var.

Gr. *Canary.*
Note.

The Grand *Canary*, Lat. 27 Degr. 40 Min. Long. 6 Degr. 30 Min. W. Var. 6 Degr. from N. to E. So alſo here, when you are in the Lat. of 30 Degr. 30 Min. and have at any time 5 Degr. 50 Min. Var. you may conclude that you have the Grand *Canary* S. and by W. from you.

Iſle St. *Mary.*

The Iſle of St. *Mary*, which is the Eaſtermoſt of the *Azores*, Lat. 37 Degr. Long. 14 Degr. W. Var. 1 Degr. 40 Min. from N. to E.

Note,

When you are coming homewards from the *Indies*, and make Lat. 30 Degr. 30 Min. and Var. 5 Degr. and would ſee theſe Iſlands in your Courſe, you may go N. E. for St. *Mary*; but the better way is to go more Northerly, and ſo you ſhall be ſure not to miſs ſome of them: For the Var. is much upon that rate in the N. E. Courſe, till you come in with the Iſlands.

Sal Iſle.
Obſervations

The Iſle *Sal*, one of the Cape *de Verds*, Lat. 10 Degr. 30 Min. Long. 12 Degr. 12 Min. Var. 3 Degr. 30 Min. from N. to E. Obſerve, That when you are in the mid-way, between Cape *Verd* it ſelf, and theſe Iſlands that bear its Name, that you have then 2 Degr. 15 Min. Var. to the Eaſtward, and the nearer you come to the main Land, the leſs you find the Var.

As for the Winds, you may obſerve, that if the Tornadoes don't meet with you before you come into 5 Degr. N. Lat. that there you ſhall be ſure to have ſome Blaſts from them.

Directions for paſſing the Line.

And in order to paſs the Equinoctial, uſe all the Endeavours that may be to get free from theſe troubleſome Winds; but yet manage your Ship ſo, that you may be but S. by E. or S. S.E. from *Maio* Iſle: For whereas you may imagine, that your much going over to the Eaſtward may be a help to you, when you ſtand over with the general Wind, you'll find no more in that Courſe, than that it takes up a great deal of time to very little purpoſe. Farther, when you are in 2 or 3 Degr. N.L. and have the Wind at S. S. E. be ſure to ſtand away with it: For if you can but cut the Line in 10 Degr. Long. you ſhall then have 6 Degr. 10 Min. Var. from N. to E. and ſo ſhall feel neither the E. S. E. Current, nor the N. W. and by W. Current that ſets over to the *Weſt-Indies*. But if the Wind does hinder you much, you need not be afraid to paſs the Line in 14 Degr. Long. where you will find 6 Degr. 45 Min. Var. and having paſt it, 'tis beſt to make your way to the Southward as ſpeedily as may be: Only if the Wind be at E. or E. N. E. as many times it is, 'twill not be adviſable to go more Eaſtward, than S. E. and by E. becauſe if you do, you ſhall find the Wind at S. E. and S. S.E. and it will certainly bring you down to your South Courſe again: This will be the effect on't, tho' you have ſpent as much time about it, as would have carried you (in your South Courſe) without the Tropick, into the way of the variable Winds, which is in 26 or 28 Degr. And when your Ship is brought into the variable Winds way, it cannot be long before you have a ſleut to get up to the Cape of *Good Hope*.

Increaſe of Var. in running Southw.

And 'tis to be noted, that in running South from the Line, your Variation encreaſes; for in 20 Degr. S. L. you ſhall have 15 Degr. Var. and more, to the Weſtward 14. By which Obſervations 'twill alſo be manifeſt, that between the Tropicks there's no certain Method or Order of Eaſtering and Weſtering, as there is without them, as may be ſeen at the Iſle *Fernand de Loronha*, where you have 4 Degr. S. L. Long. 19 Degr. 20 Min. W. Var. 8 Degr. 10 Min. from N. to E.

Iſle *Fernand de Loronha.*

The Iſland of St. *Helena* is in 16 Degr. S. L. and Long. from the *Lizard* 4 Deg. 30 Min. E. and from the Cape of *Good Hope* 23 Degr. 30 Min. W. The Variation is there 7 Degr. 30 Min. from N. to E. 'Tis one of the beſt Iſlands in the Ocean for good Refreſhment, a healthy Air, and a convenient Road. The Road is open to the N. W. ſide, and right before the Chapel you may ride from 12 to 7 Fathom, good Ground, and no danger but what you ſee along the Shore.

Note of St. *Helena.*

If you have a mind to ſee the Iſland St. *Helena*, remember that you have the Wind always at S. E. or thereabouts, and therefore keep in the Latitude of 16 Degr. 10 Min. or 15 Degr. and run Weſt upon that height, and you cannot miſs it: And this Courſe you may purſue boldly, either by Day or Night; eſpecially 'tis certain, that in your Courſe from the Cape of *Good Hope*, there's no Stream nor Current that can do you any prejudice; for the S. E. Wind will take you about 30 Degrees, and ſometimes ſooner, and carry you to the Northward of the Equinoctial.

Soldania Bay.

At *Soldania* Bay you have 28 Degr. Longitude E. and 30 Min. Variation from N. to E. The Land is all high, and ſo is eaſily known; but commonly when you come from the Weſtward 'tis dark and foggy about it, ſo that you ſhall ſee the Breach of the Shore, before you can come to make it conſiderably. The worſt Winds for this Road are from the N. W. to the N. E.

Note of the Var. between *Braſile*, and the Road of *Soldania*, and Cape of *Good Hope.*

Between the Coaſt of *Braſile* and this Road, the Variation is 20 Degr. more or leſs, according as you are to the Northward or Southward, but the more to the Southward the more Variation, and to the Northward the leſs. But the higheſt Variation of all is in Lat. S. 33 Degr. 30 Min. for there you have 21 Degr. Variation from North to Eaſt, and Long. 7 Degr. 30 Min. Now obſerve, that when you are come into 11 Degr. Variation (ſuppoſing you take it right), it may paſs for a Rule, that you are 330 Leagues ſhort of the Land; and you may eſtabliſh it as a Method of Computation for the Diſtance upon this Principle, allowing after the rate of 30 or 28 Leagues to a Degree: And you will find it to give you a true Account of your approach to the Land.

Coney Iſland.

Coney Iſland, in Lat. 33 Degr. 27 Min. has bad Ground about it, and on the Weſt-ſide a dangerous Ledge of Rocks, lying off it to the Seawards; but a Ship may go ſafely enough between it and the Main, the Shoar being all along free from any danger but what may be eaſily diſcern'd.

Chapman's Chance.

Chapman's Chance, Lat. 34 Degr. 10 Min. a very good Harbour, ſafe Riding and good Ground: A Ship may come away from hence, with a Wind that will not ſerve her to come from *Soldania*.

Cape *Falſo.*
Cape of G. H.
Cape *Das Aguillas.*

Cape *Falſo* has no Variation diſcoverable by Obſervations made South from it: Whereas at the Cape of *Good Hope* 'tis 25 Minutes from North to Eaſt; and at Cape *das Aguillas*, 'tis 30 Minutes from North to Weſt. The knowledge of the Ground and Depths hereabouts, will be a great help to you, when you can't obſerve either the Latitude or Variation: And therefore 'tis worth remembrance, that at ſeven or eight Leagues diſtance from the Land, when you are to the Eaſtward of Cape *das Aguillas*, you have from 70 to 40 Fathom black ſandy Ground upon your land, and this for a matter of 100 Leagues; but to the Weſtward of it you have deep Water, and all ozie, by the diligent Obſervation of which Remarks you may know in dark Weather, how the Lands are from you, and how to hale in with the Cape of *Good Hope*.

Benefit of the Var.

In all Voyages the great care ought to be about ſettling the Point of the Variation well and ſure; for 'tis by this help that you muſt be able to make a true Judgment of the influence and force of Currents, which are very uncertain till you are come up to have ſeven or eight Degr. Variation: But after you have had ſo much as this, you are out of all danger of Currents, if you be bound Eaſtward; for all the Tides and Streams do ſet between that ſtated Term of Variation before-mention'd, and the Cape *das Aguillas*.

Again, whatever your Variation be under 7 or 8 Degr. obſerve whether it alters or no between the Cape *das Aguillas*; and where it comes to that ſtated number of 7 or 8 Degr. whether or no it alters (I ſay), ſuppoſing your Ship ſails to the Eaſtward; if it does not, you may be ſure that your Reckoning of it was wrong, for 'tis a Rule ſufficiently juſtified by Experience, that the Variation does increaſe at the rate of 29 or 30 Leagues to the Iſle of St. *Lawrence*.

Note, By Leagues is here meant, not the Leagues of the Courſe you ſail by, but Leagues of Eaſtering from the Meridians; when you have gone 29 or 30 Leagues in this reſpect, you ſhall find a change of 1 Degr. Variation, whereas upon another Courſe the allowance of Leagues muſt be different; as for inſtance: If you ſail N. E. and by E. you ſhall have 36 Leagues for 1 ½ Degr. of Longitude, or Eaſtersng, which will alter 1 Degr. Variation: And let it be taken Notice of beſides, that the Rule before deliver'd of the change of the Variation between the Coaſt of *Africk* and that of *Braſile*, does alſo hold from Cape *Aguillas*, and St. *Lawrence* Eaſtward, *viz*. that the more Northward your Courſe is, the more Variation ſtill you have, and the more Southward the leſs; the Rule is plain, and needs no Examples (of which there are enough) to make it clearer than 'tis.

Note.

It is alſo as ſure a Rule, that from the Cape of *Good Hope* to *Java*, the Variation increaſes to the Weſt, the farther Eaſt you run, till it comes to a matter of 17 Degr. and then as you run to the Eaſtward your Variation decreaſes: And thus it holds on decreaſing, till you come to the Streights of *Sunde*, where you have but 3½ Degr. Variation. This we reckon the beſt and moſt approved Rule for Eaſtering and Weſtering, tho' at the ſame time it does not always obſerve an exact proportion.

Directions to find St. *Auguſtine's* River, at St. *Lawrence* Iſle.
Long. Comp. from the Mer. of the Cape of *G.H.*

St. *Auguſtine*'s River upon the Iſle of St. *Lawrence*, being in ſome Repute for a Watering-place, you muſt take this Courſe in order to find it. Seek the Land in the Lat. 24 Degrees 20 Minutes (for 1 Degree higher there's Rocks and Shoals that are dangerous), and here meddling not with the Variation, ſteer N. and N. by E. as Diſcretion will guide you by the Land, and coming along the Shore in 24 Degrees 10 Minutes, you ſhall ſee a Head-land having on it a round Hill of white Sand like a Caſtle, from hence hold on the ſame Courſe as before, without fear of any danger, till you ſee the Iſles and Shoals before the Bay: And now you ſhall have before you, in the Country, a Proſpect of two riſing High-lands, between which the River lies. When you come with the Iſles and Shoals, and will go to the Northward of them, you may be bold in ſeven Fathom; that is, if you will only loof in by them, and not come to an Anchor, which 'tis not ſafe to do, becauſe of the badneſs of the Ground: 'Tis better to hale E. up for the Channel, which comes from the River, where you have Ozy Ground along by the Main, and deep Water too, till you come faſt by the two fore-mention'd Hills; here you may chuſe your Riding from 20 to 4 Fathom.

This River has Latitude 23 Degrees 35 Minutes, Longitude 23 Degrees 20 Minutes, E. Variation 14 Degrees 50 Minutes from N. to W.

Cape *Sebaſtian*.

Cape St. *Sebaſtian* has Latitude 25 Degrees 45 Minutes, Longitude 25 Degrees, Variation 16 Degrees 40 Minutes from N. to W. The Refreſhing-place is call'd St. *Lucia*, and it lies on the S. E. ſide, in the Latitude of 24 Degrees, and affords Ships a very ſecure and agreeable Riding. This Character is chiefly owing to the Obſervation of the *Dutch*, who pretend to have had Experience of it; and if it be ſo, it muſt be much more convenient for Ships bound up or down, than St. *Auguſtine*'s River, becauſe it lies upon the Head of the Iſland.

St. *Mary* Iſle.

The Iſle of St. *Mary*, on the Eaſt-ſide of St. *Lawrence*, has Latitude 16 Degrees 30 Minutes, Longitude E. 31 Degrees, Variation 19 Degrees 50 Minutes, from N. to W.

Iſle *Roque Pize*.

At the Iſle of *Roque Pize*, you have Latitude 11 Degr. Longitude 41 Degr. Variation the higheſt and greateſt 23 Degr. 30 Min. And 'tis obſervable, that S. from this place (as near as can be judged by ſeveral Trials made going up and down), there is likewiſe the Variation riſing ſtill higher and higher.

Shoals *Baxos da Chagas*.

The dangerous Shoals call'd *Baxos das Chagas*, have Latitude 6 Degr. Longitude 53 Degr. 36 Min. E. Variation 19 Degr. 50 Min. from N. to W. The beſt way to avoid the danger, is to keep the Iſlands that lie amongſt them S. S. W. from you: But 'tis to be remembred, that theſe Shoals are put down falſe in the common Plats.

Maldive Channel.
Cape *Comori*.

To carry on the ſame Obſervations ſtill farther into the Eaſtern Parts: In the *Maldivian* Channel you have 17 Degrees Variation: At the Cape *Comori* you have 16 Degrees.

Iſles *Nicabar*

The Iſles *Nicabar*, lying off the N. end of *Sumatra*, have 7 Degr. 10 Min. N. Lat: 73 Degr. Long. E. 7 Degr. 5 Min. Variation from N. to W. As you go within theſe Iſlands (coming from the Weſtward) at about 40 or 50 Leagues diſtance, you ſhall meet with ſome Overfalls that may cauſe ſome miſtruſt of Shoal-Water, tho' the Lead diſcovers none at all: 'Tis probable that they are ſome Streams coming from the Bay of *Bengala*.

Achen.
Iſles *Das Jarras*.

The City of *Achen* has Latitude 5 Degr. 40 Min. Longitude 74 Degr. 40 Min. E. Var. 6 Degr. 25 Min. from N. to W. Your Road lies here to the Eaſtward of the Caſtle, and a round Hill in the Country S. E. from you. If you will go from hence for the Streights of *Malacca*, there's no danger till you come to the Eaſtward of the Iſles *Das Jarras*, from whence you may ſee the high Land of *Malacca*.

Note.

Obſerve that your Variation here about the Equinoctial is reducible to the Rules deliver'd before, about the higheſt Variation, *viz*. That there is leſs Variation within, than without, in the Latitude of 14 or 15 Degr. and much after the rate of 31 Leagues in the Offing of the Eaſtering or Weſtering, will alter 1 Degr. Var. or 1 ½ Degr. Long. but within you run 40 Leagues, or two Degrees.

Direction for ſure Sailing from *Achen* to *Priaman*.
Iſles *Nintam*.

If you were at *Achen*, and would ſail to *Priaman*, the ſureſt way is this: Keep the Sea till you ſee the Iſles *Nintam*, in 1 Degr. 30 Min. S. L. and then ſailing in 1 Degr. 20 Min. you ſhall be ſure to fall with the North end of the biggeſt, which you are to go up by, taking care to uſe your Lead ever now and then to prevent danger, tho' the leaſt depth ſeems to be about 10 Fathom. From hence your beſt Courſe is E. N. E. and N. E. by E. till you ſee the three Hummocks in the Main, and then go in till you ſee the low Land, but with caution, becauſe when theſe Hills come to the N. E. from you, there is Shoal-Water, and Banks of Stone: Now you are 6 Leagues from *Priaman* Road, and your Courſe lies E. S. E. or S. E. by E. keeping your Lead going at times.

To know *Priaman* Road diſtinctly, obſerve that when you have brought the Hummocks N. and W. from you, there will ſeveral Iſlands appear to the Southward; the firſt of which (that ſhews very white) lies three Leagues W. S. W. from the Road. Before the Road it ſelf there lie a matter of four Iſlands, that ſeem to cover it, and you may poſſibly (coming from the W. N. W.) miſtruſt going within them, becauſe they don't open in that Poſition; but the way is to bring them E. N. E. from you, and then they will begin to open, and you'll find good paſſing betwixt them, leaving two on the one ſide, and two on the other.

Take ſpecial care to keep off from the uttermoſt little Iſland that lies by the Main, and keep in 8 or 9 Fathom, till you come with the other 3 of the 4 Iſlands (which lie all in a row) and then ſailing to the Southward of the moſt Northerly of thoſe 3, you come into the very Road, where you may be bold in 5 or 6 Fathom, but be ſure to moor your Ship well.

In this paſſage it will be very adviſable to have the Command of Day-light all about the Sound of the Iſlands *Nintam* (and ſo likewiſe about the Shoals of *Feco*) being contented to hull all Night, and ſail only by Day, by reaſon of the horrid badneſs of the places hereabouts.

Notes for *Tecoo*.

As for the Road of *Tecoo*, you need not be very ſolicitous about that, ſince 'tis ſhoaly Water, and very ill for Ships; and beſides, all the People will bring their Commodities to you to *Priaman* Road, if they know you are there. But if you have a mind to go thither, keep off ſo that the Hummocks may bear N. or N. by E. and then ſail on without fear. Your danger hereabout may be perceiv'd at any time by the whitiſh Spots which appear in the Water, otherwiſe the Sea ſhews its own Natural Colour as 'tis in the main Ocean. You'll find the Var. at *Tecoo*, to be 4 Degr. 40 Min. N. E.

Directions for Sailing to the Southward from *Priaman*.

To the Southward of *Priaman*, the Coaſt is full of Iſlands all along, till you come to the Lat. of 2 ½; and in going this Courſe, obſerve to keep the Main ſtill, and not upon any Terms go without thoſe Iſlands; as alſo not to ſail by Night, till you are in 2½ Degr. S. L. Your danger lies particularly in paſſing the high Land, diſtant from *Priaman* Road about 13 Leagues; here keep your ſelf in 20 or 30 Fathom off the Main, and look well about when the high Land comes towards the Eaſt.

When you are clear of all the Iſlands about the Town of *Celladai*, which lies between the Gut of high Land as you paſs, then your Courſe is S. and by E, along the Main, till you come to 2 ½ Degr. and then the Land lies S.E. to 3 Degr. 10 Min. and then S. E. and by S. to 4 Degr. and ſo to 5 Degr. by the very ſame Courſe, where it is high and bold.

Iſle *Engano.*

The Iſle *Engano* lies in 5 Degr. 30 Min. Lat. a place where you cannot Anchor for Rocks and deep Water; but that defect is here recompens'd by the Neighbourhood of a very good Road, where you may both ride very ſafe, and have all neceſſary Proviſion of Wood and Water.

A good Road.

It lies under an Iſland faſt by the Main, in Lat. 4 Degr. 10 Min. and is call'd by the Country People *Celebar*: Take care two Leagues W. S. W. from this Iſland, of the dangerous Shoal and Breach; to avoid which, keep in by the Iſland, and give the Point a birth; remembring too (that whatever a Boat may do) no Ship can paſs between this Iſland and the Main.

High Land of *Manancabo.*

The Land lying to the Northward in the Country, is that of *Manancabo*; 'tis extraordinary high, and in the Lat. of 5 Degr. 20 Min. Your Courſe here along the Shore is S. S. E. Eaſterly, till you ſee the little Iſland faſt by the Main, that lies in 6 Degrees Latitude, or thereabouts.

Marrough Road.

All along the Coaſt of *Sumatra*, almoſt, are ſuch vaſt numbers of Iſlands, that 'tis impoſſible to give Rules and Directions for all of them: But if you have a mind to go into the Road of *Marrough*, you may bear in boldly amongſt them Iſlands that lie N. E. and by E. till you come to the main Land of *Sumatra*, where you ſhall have 20 or 30 Fathom, and no danger but what is eaſily diſcern'd.

Directions to find *Marrough* Road.

Now when you come in with the Main, 4 Leagues W. S. W. from the Head-land of *Marrough*, you ſhall have all to the Northward of you low Land, and abundance of Iſlands; but you muſt ſail E. S. E. to the Head-land of *Sumatra*, for the Road of *Marrough* is along the Shore from the three little Iſlands (that lie Eaſt of one another faſt by the Main), till you come almoſt to the Point that makes the Streights of *Sunde*.

But now if you would come for the Road of *Marrough*, not from the three Iſlands that bear E. and W. of one another, but from the three that lie N. and S. (which are the three Salt Hills), then you muſt ſteer in with the High-land N. when you are to the Eaſtward of the Salt Hill, and ſo you go right with it, for the Land about it appears like a Barn, and there's none in view like it. It is a good Road, you may Anchor in 20 or 12 Fathom; there's agreeable Refreſhing, and Rivers all along the Shore. You are in no danger coming to it, but what may eaſily be ſeen and avoided; and ſo you may be bold any where without the Streights Mouth.

When you are in the Streight, or Narrow, between *Java* and *Sumatra*, if you go to the Weſtward of the three Salt Hills, you need not apprehend any danger of the Rocks you ſee a League to the Weſtward of the S. Salt Hill; for you may come cloſe by them, or put between any of thoſe Iſlands mention'd, and have 20 or 30 Fathom depth. The Courſe from the Head-land of *Sumatra*, where the three E. and W. Iſlands are, is E. N. E. with that Point or Head-land of the ſame Iſland, that makes the Streights entrance.

Salt Iſlands.

The Iſlands call'd the Salt Hills, are nearer *Java* than *Sumatra* by two Leagues. You may ſee both the Mains at once, if it be a clear Day, and you are about the midway. At the S. E. Salt Hill you have 81 Degr. Long. E. and Var. 3 Degr. 20 Min. The Stream in the Streights ſets twelve Hours one way, and twelve the other; but it runs with a mighty ſtrength, ſo that many times you can't bear a-head with a hard Gale; in which caſe 'tis beſt to go off, and Anchor on one ſide or the other, 'tis no matter which. If you chance to go in by *Sumatra*-ſide, keep nearer to *Sumatra* than to the Iſlands a good deal, till the Iſlands be E. and by S. from you, becauſe of a deſperate Rock under Water (and which breaks at low Water) lying W. and by N. from the Iſle *Sumatra* is bold, ſo you do but keep off the Land, and ſo is *Java*-ſide too.

Directions to ſail into *Bantam* Road from *Sumatra.*

When you are about the Point of *Palimbam*, your way to *Bantam* is by the Land E. S. E. and S. E. and by E. uſing your Lead till you ſee the Iſle *Pulo Panian*; when you come to this Iſland, you may go within or without it as you will; but keep your Lead going, and don't go any nearer it than 5 or 6 Fathom. Then looking to the Main of *Java*, the round Hill that you ſee bear between S. and S. S. W. ſtands right over the Town of *Bantam*. If the Hill bears S. S. W. of you, go in with that Courſe till you come to ſee the five Iſlands together right from *Pulo Panian*: Your Road lies juſt by theſe Iſlands, the name of it is *Pulo Lima*, and you may ride there at what depth you pleaſe; but you muſt be ſure to have the Tide in mind, that you may not be a Ground at low Water as otherwiſe you will, it highing about five Foot Water in the Road. The Variation here is 3 Degr. from N. to W.

Directions for Sailing from *Bantam* to *Palimbam*, *Banca*, *Bintam*, Streights of *Sincapura*, &c.

If you would ſail now from *Bantam* to *Palimbam*, on the E. ſide of *Sumatra*, or for *Bintam*, *Banca*, and thoſe parts, theſe following Inſtructions may be ſerviceable for that purpoſe.

When you weigh from *Bantam* Road, you ſail N. E. by E. in 4 or 5 Fathom, till you come with the Point of the Main; where it comes to bear S. E. by S. you have very Shoaling Water upon that Spot of hard Ground, wherefore keep off betimes. The great Iſland that is to the N. N. W. of you, as you go from *Bantam*, you may leave on your Larboard ſide, and have your depths at 5 or 6 Fathom; from hence in your N. N. E. Courſe, you meet with a long Bed of very ſmall Iſlands, between the Lat. of 5 Degr. and 5 Degr. 30 Min. where you have 18 and 20 Fathom Water amongſt them, and no danger.

When you are at the N. end of theſe Iſlands, ſail N. N. E. and N. over for the Coaſt of *Sumatra*, in which Courſe you ſhall have from 4 to 13 Fathom, and then you'll ſee the low Land of *Sumatra*, and will have about 3 Degr. 30 Min. S. L. Now when you come in with a Riff of hard Sand hereabouts, and have gotten into about 4 ½ Fathoms in your N. and by W. Courſe, then take ſpecial notice, and hale off again E. N. E. into your old Depths, which are from 10 to 7 or 5 Fathom off *Sumatra*, and your Courſe N. by W. and N. N. W. to hold the Coaſt from 5 to 10 Fathom; but be ſure not to go without 10 Fathom, neither by Night nor by Day.

Note.

This for your N. W. or N. N. W. Courſe: But now if your Courſe from *Bantam* be N. you muſt look carefully about for a Shoal, till you have ſight of thoſe two Iſlands that lie 3 Leagues from the Main of *Sumatra*: After you have made theſe 2 Iſlands, you ſhall have no more by *Sumatra*, till you come in 3 Degr. S. L. where you ſhall fall with *Lucapara Falſa*, which is the firſt of the 4 Iſlands that lie at the S. S. W. end of *Banca*. And you ought to look out very well for them, in going your N. by W. Courſe, as the Depths will guide you from 6 to 10 Fathom Ozy Ground. All about them you'll ſee broken Ground, and among them horrid Shoaling Water: And when you have brought them E. from you, your Shoaling will be 4 and 5 Fathom, and your Courſe N. and N. by W. till the Southermoſt Iſle bears S. E. by E. from you.

Lucapara.

From hence you ſail N. N. E. by *Banca*, and when you come along with theſe Iſlands, keep *Sumatra* as the bolder ſide; you have Ozy Ground on that ſide, but hard and ſtubborn on the other. This N. N. E. Courſe holds about a League, and then you ſail N. again, and being paſt the Banks or Shoals by theſe Iſlands, you have 9 or 10 Fathom depth, and are to hold on the N. Courſe by the Land, for a matter of 3 Leagues.

Tides.

Note here by the way, that in the Narrow the Tide ſets N. and S. and runs 12 Hours one way, and as many the other.

Account of the Courſes for ſailing this way.

The next Courſe is N. by W for a League, and your beſt depth here is 15 Fathom: But when you come near to the high Land on the N. ſide of *Banca*, your Courſe is N. N. W. and the beſt depths 20 Fathom. This Courſe of N. N. W. and N. W. by N. continues for 9 Leagues, and then you ſail 20 Leagues N. W. by W. and your depth 24 Fathom; and your Lat. in this Courſe will be 1 Degr. 38 Min. S.

Linga. The Charts wrong in the placing of it.

You change this Courſe for a Northern one next, which you hold 10 Leagues from 10 to 7 Fathom depth, and Lat. 1 Degr. 5 Min. S. but no ſight of the main Land yet. Then you ſail N. E. by N. with *Pulo Sio*, or *Pulo Powe* in 40 Min. S. L. where you may have a Supply of Wood and Water; from hence your way is to go N. N. W. without *Linga*, which lies under the Equator, tho' the Charts place it in 1 Degr. S. L. It's full of Iſlands, and ſunk broken Grounds; and the Tide runs here S. S. E. and N. N. W. The depth in the Offing is 20 Fathom Ozy Ground, and your Courſe N. by W. 15 or 16 Leagues: But beware of the Tide, and keep in 15 or 16 Fathom in the Ozy Ground. In this Courſe you ſee 8 ſmall Iſlands in a Cluſter, in 50 Min. N. L. where, if you have occaſion, you may get both Wood and Water. The Tide runs here 12 Hours, the Flood from the Northward, and the Ebb from the Southward, the Depth 20 Fathom.

Bintam Iſle.

All along by theſe Iſlands you have 14 Fathom, till you come up to the Iſle of *Bintam*, in 1 Degr. 10 Min. N. L. for ſo far alſo the Iſles and ſunken Grounds do continue to run.

The Tide ſets W. by N. on the Northern ſide of this Iſland, and upon the S. E. ſide of it you have bold Shoal-

ing

Sincapura Strait.

Pulo { *Tinge. Timott Lore.*

ing from 14 to 9 Fathom. When you are paſt the E. point of *Bintam*, you are open then of the Strait of *Sincapura*, in which you'll find the Tide to ſet E. And from hence you Sail N. E. and by N. 7 Leagues, with a rapid Stream againſt you, for *Pulo Tinge* upon the Coaſt of *Jor.* in 2 Degr. 20 Min N. Lat. Here you ſee alſo the near Neighbours of this Iſland, viz. *Pulo Timott* and *Pulo Lore*; the former in 2 Degr. 30 Min. the latter in 2 Degr. 40. Min. Nor. Lat. When you have made the Straits of *Sincapura* and would ſail to *Jor*, you are to ſteer N. W. by W. taking care of the Current; you may be bold from 16 to 25 Fathom, and have good ground for Anchoring.

Directions to ſail to *Jor*, &c.

Note.

From *Pulo Sio* ſteer S. E. for *Pulo Paccadour*, in 1 Deg. S. L. where be ſure to keep in 15 Fath. and you may go without danger; from hence your Courſe is S. E. by E. 9 Leag. to *Pulo Pagadure*, in which Courſe be very careful, becauſe *Banca* upon this ſide is all Rocks and Breaches in ſome Places 8 or nine Leagues off, and ſo it is without you again all bad Ground; from hence your Courſe is S. E. by E. again to the Mariners Iſland, or *Pulo Calaſui*, which as ſoon as you ſee you muſt contrive to lie ſomething ſhort of, becauſe there's no anchoring by it for the foul Ground.

Note.

Obſerve alſo not to ſail at all by Night when you are in ſight of this Iſland, becauſe if you go never ſo well by your Compaſs, yet the Currents will deceive you, and force you to the Eaſt ſide of *Chinabata* Iſland; your Courſe therefore will be, to ſail between *Banca* and theſe Iſlands of *Chinabata* and the Mariners Iſlands, ſince 'tis all ſharp Rocks like Steeples to the Eaſt ſide, and particularly your Courſe between *Banca* and *Chinabata* is S. S. W. but look to the Stream, and borrow of *Banca* in this place, in 20 or 25 Fathom. From the Rocks you have in the Offing (which are called *Pulo Pelican*) to the Coaſt of *Sumatra*, the Courſe is S. W. by S. till you have ſhoaling off the main, and ſail as you did outward from *Bantam*, keeping the ſhoaling of *Sumatra* in 7 or 8 Fathom, till you draw near the Straits of *Sunde*.

A draught of the Paſſage between *Bantam* and the *Moluccas*.

If now being at *Bantam* you would Sail for the *Moluccas*, the draught of that Voyage is as follows. From *Bantam* Road N. E. by N. 2 Lea. (and E. by N. and E. N. E. 2 Lea. more) which will bring the low Point to the E. of *Bantam* Bay, S. of you, which point you muſt venture no nearer than three Fathom. Then ſail E. & E. by N. 4 Leagues, leaving to the N. ſide of you the 5 Sandie Iſlands, and the Ledge of Rocks that lie to the E. ſide of them. From hence your Courſe is E. S. E. with the Eaſt Iſland of *Jacatra*; then N. E. by E. 4 or 5 Leagues, which done, ſail by an Eaſterly Courſe 30 Leagues more. Here look out well for a Sand that lies three Leagues from the Main, and obſerve a low Iſland to the N. of you; the beſt Courſe is to go three Leagues to the S. ſide of that Iſland, but you may ſail either between the Iſland and the Sand, or the Sand and the Main, which you will without Danger. Your Courſe now is E. by S. and E. for 70 Leagues, which will bring you in ſight of *Madura*, at 4 or 5 Leagues from the Eaſtern or Weſtern end of which you have 30 or 40 Fathom depth.

Madura.

Straits between *Celebes* and *Cambina*.

Straits of St. *Thomas*

From the Weſt end of *Madura* your beſt Courſe is E. by N. till you make the Lat. of 6 Degr. in which Lat. keep your ſelf and you will go clear between the Shoals of the *Celebes* Iſlands, and the others that lie S. S. W. from them. From the S. Point of the Shoals of the *Celebes* (which lies in Lat. 6 Degr.) your Courſe is E. N. E. with the Straits of the *Celebes*; and from hence ſailing 30 Leagues N. E. by E. & N. E. you come to the Strait between the *Celebes* and *Cambina* Iſland, which is about 5 Leagues breadth, and will give you near 40 Fath. for your Lead. But remember to lie ſtill here always at Night, becauſe you have dangers before you till you are paſt the Straits of St. *Thomas*. To reach theſe Straits laſt mentioned, you purſue your Courſe N. E. by N. 6 Leagues, N. N. E. 8 Leagues, E. and E. by N. ten Leagues, which brings you ſafe into the Straits of St. *Thomas*. The going thro' here is E. for one League, in running of which League you'll have at leaſt 11 or 12 Fat. the Straits are very narrow and hardly to be perceived till you come at them, and ſome Sands will diſcover themſelves, moſt of your Lar-board ſide; but the forementioned Courſe (by the guidance of Providence) will bring you thro' clear of all Danger. From the Straits of St. *Thomas* your Courſe is N. E. by E. and E. N. E. 14 Leagues, then N. N. E. 38 Leagues, at which time look out for an Iſland and a Shoal lying to the N. N. W. of that little Iſland, and bringing the Iſland about 2 Leagues to the E. of you, ſteer N. by E. and N. N. E. 5 Leagues (then W. N. W. and N. W. by N. two or three Leagues) laſtly, N. E. by N. 4 or 5 Leagues, and that Courſe carries you cleverly between the 2 Shoals that lie in 2 Degr. S. Lat. the diſtance between them is not a Mile, and they are quite dry at low water, otherways you have 14 Fathom between them. When you are clear of theſe Shoals, and ſee the Land that your laſt Courſe carries you to, at a League diſtance from it alter the Courſe and Steer E. S. E. 2 Leagues, then N. E. by E. brings you to the Straits of *Bengaia*. They lie in 1 Degr. 20 Min. S. L. and the poſition of them is N. E. by N. and that Courſe you muſt take to go thro'.

Straits of *Bengaia*.

Now from hence to *Machian* one of the *Moluccas*, your Courſe is N. E. by E. 72 Leagues, but you may ſteer with any of them at pleaſure if Wind and Weather ſerve, there being no danger lying near them.

Directions to ſail to *Botun*.

If you are at the Iſland of *Botun*, and at the Northern end of it, and are willing to ſail to the King's Town, your Courſe is between the S. by W. and S. S. W. along the Land for 20 Leagues, or indeed betwixt two Lands, *Botun* on the Eaſt and *Cambina* on the Weſt, the diſtance between them from 4 Leagues to leſs than one League very narrow. When you are nine Leagues ſhort of the Town in this Courſe, look out for a Shoal, not great but very dangerous, and dry at low Water.

Note.

To know when you are near it obſerve the round Hill upon *Botun* near the Water ſide; that Hill and the Shoal lie E. by N. and W. by S. one from the other; and therefore leave the Shoal on your Lar-board ſide. From hence you purſue the ſame Courſe as at firſt, in order to go with the narrow Straits four Miles ſhort of the King's Town. This Strait is a League thro' and half a Mile broad, and 'tis no matter for the Courſe in going thro', ſo you keep the Ship in the middle of the Paſſage, for there's no riding in the narrow by reaſon of the very ſwift Tides that run there: You muſt obſerve too, to take the Tide along with you when you paſs here, for elſe you can't get thro', there being no Wind becauſe of the high riſing of the Land over the Maſts on both ſides. If you have occaſion to Anchor, you may do it two Leagues ſhort of the narow, and ride very ſafely in 30 Fathom Sand. Being paſt this Strait ſteer S. S. W. 1 League to go clear of a Point of Land, that muſt be left on your Lar-board ſide; and being clear of it hale up to the S. S. E. 4 Miles if the Wind will permit you, and then you may Anchor in 28 Fathom, hard Sand, near the flat Iſland, at which time you ſee the Town of *Botun* about a League diſtant from you upon a Hill. The Road lies in 5 Degr. 15 Min. S. Lat.

Directions to ſail from *Botun* to the Straits of the *Celebes*, and from thence to *Banda*.

When you are at *Botun*, to ſail to the Straits of the *Celebes*, you go thus: From *Botun* Road W. S. W. 4 Leagues (S. W. and S. W. by S. 5 Leagues) W. by S. and W. 33 Leagues, and ſo you are at the Straits deſired. From theſe Straits to *Banda* Iſland you ſail thus; firſt E. 37 Leagues (E. by S 15 Leagues) N. E. half a Point to the N: ſide 17 Leagues, at which time you are in the Lat. of 5 Degr. 10 Min. then E. N. E. with *Burro*, and from the S. part of *Burro* to the S. part of *Amboina*, and from thence E. S. E to *Banda*.

Directions to ſail from *Bantam* to *Patane*.

If you are at *Bantam* and have occaſion to Sail for *Patane* upon the Continent of *Malacca*, obſerve the Directions before delivered, that bring you along from *Bantam* as far as *Bintam*, *Pulo Linga*, *Pulo Timon*, and thoſe parts; then from *Pulo Timon* ſail N. by W 36 Leagues to *Pulo Capas*, where if occaſion ſerve, you may go between the Iſlands you ſee there and the Main, in a very fair Channel: theſe Iſlands you'll find to lie in 4 Degr. 52 Min. N. Lat. From *Pulo Capas* your Courſe is N. W. by N. 14 Leagues to a knot of Iſlands, ſo many that they are not to be reckoned; from hence ſail W. N. W. going no farther off the Land then 20 Leagues, nor come no nearer then 12 or 13, unleſs you want to Anchor; and this ſame W. N. W. Courſe purſued, brings you to *Patane*. You have a Rock in your way at 14 Leagues diſtance from it, but you may if you will go between it and the Main.

To conclude this Account, let that general and moſt uſeful Advice of our Sailers about the varying be nicely obſerv'd and followed every where. They propoſe it as the ſureſt Rule to go by under all the Irregularities of Streams and Currents; and the beſt Principle to proceed upon in the Rectification of the Errors that may be introduced thereby. Nay, they declare it to be the only Help in theſe Caſes, and that 'tis not poſſible for any Man to deal to any good Purpoſe with Currents, without he calls in the Variation to his Aſſiſtance. This therefore may be a ſufficient Reaſon for the utmoſt Care and moſt Critical Obſervation in the Buſineſs of the Variation.

THe English *and* Dutch *having ſetled an Advantageous Trade in the* Eaſt-Indies; *the* French *fitted out ſome Ships for the ſame purpoſe. The moſt material of their Voyages are as follows.*

MEMOIRS
OF
Admiral Beaulieu's Voyage
TO THE
EAST-INDIES:

Drawn up by HIMSELF.

Tranſlated from Monſieur THEVENOT'*s Large Collection of Voyages.*

Octo. 1619.

We paſs Madera.

And double Cape Verd.

OCtober the 2d, 1619, I ſet ſail from *Honfleur Road*, with three Ships, namely, the *Montmorancy*, a Ship of 450 Tun, carrying 126 Men, 22 Guns, and 20 Pedereroes; the *Hope*, of 400 Tun, 117 Men, 26 Guns, and 20 Pedereroes; and the *Hermitage*, Advice-Boat, of 75 Tun, 30 Men, 8 Guns, and 8 Pedereroes; All Victuall'd for two Years and an half. The 17th we came in ſight of *Madera*, and at Night its Weſtern Point lay about 7 Leagues off to the S. E. ¼ E. the 18th in the Morning it lay about 12 Leagues off to the N. E. at which time we ſtood South with the Wind at Eaſt, expecting by that Courſe to deſcry the Iſland of *Palma*. *Madera* lies very high, but is commonly ſo foggy, that we could ſcarce deſcry it. The Admiral Ship being deep loaded, and embarraſs'd with an unwieldy Rudder, that two or three Men could ſcarce manage, we reſolved to make the beſt of our way to *Cape Verd*, in order to have a new one made, or to put the old one to rights, which was encumber'd with too much Wood. *November* the 1ſt, we made the Coaſt of *Africa* between the River *Senegal* and *Cape Verd*, which lies very low, running North Eaſt and South Weſt, and is waſhed by a Sandy Sea. Next Day by eight in the Morning we doubled *Cape Verd*, and coaſted along the Shoar in order to get into *Ruffiſque* Road; at which place in the Afternoon we ſaw three *French* Ships at Anchor, and a ſmall Bark, which had Captain *Drowet*'s Equipage on board, and lay off of that place, waiting for him. In the Evening I caſt Anchor within a Cannon Shot of the three Ships; for the Wind being contrary I could not come up with them, and the rainy Seaſon was ſcarce over in that Country.

The 15th having reſolved to ſend the Advice-boat to the *Idol Iſlands* to buy up Proviſions, I furniſhed it with Kaſſade and Knives, which were proper Commodities for that place, and reinforc'd its Compliment with Captain *Soyer* and ſix Souldiers; ordering Captain *Ridel*, who commanded the Pinnace, not to treat with the Natives without Hoſtages, and withal, not to ſtay there above three Days at moſt, but to come with all poſſible expedition to rejoin us at *Tagrin*. When ſhe parted from us we were in the Lat. of 10 ½; from the time we paſt *Cape Verd*, we had but little Wind, and the Tides run againſt us W. N. W.

A Deſcription of the *Idol Iſlands*.

The 19th, about Noon, we deſcried the *Idol Iſlands*, about 8 Leagues off to the E. N. E. and our own Pinnace making into the Shoar. Theſe Iſlands lie in 9 ½ N. Lat. They are cover'd with Wood, and bating *Tagrin*, are the higheſt Land between *Cape Verd* and *Cape Sierra liona*. *Great Idol*, being the largeſt and moſt ſouthern of thoſe Iſlands, affords Water and ſeveral ſorts of Fruits and Fowls; but its Inhabitants, who are very numerous, are not to be dealt with without Hoſtages. The *Leſſer Idol* affords likewiſe Water. Beſides theſe two, there are other ſmaller Iſlands, which are ſo inconſiderable, that they are not diſtinguiſh'd by any name. The name of theſe two is taken from a River ſo called in the Continent, the Mouth of which lies oppoſite to them about three or four Leagues off. The King of this Country reſides up that River. The Natives are Negroes, Idolaters, great Hunters and Eaters of *Elephants*. They have no commerce with the Continent; and 'tis hard to get aſhoar upon them, becauſe their Coaſt lies very high. I believe they put off their *Elephants* Teeth in the River of *Tagrin*. At Night we loſt ſight of theſe Iſlands, which are diſtant 25 Leagues from Cape *Sierra liona* or *Tagrin*; next Day, we ſaw, about ¾ of a League off, ſeveral Spouts or Guſts of Wind whirling about upon the Sea, and forcing up the Water with great violence, two of which were very formidable: As ſoon as we perceived them, we furl'd all our Sails for fear of any inconvenience.

Spouts obſerved upon the Coaſt of *Africa*.

They caſt Anchor at *Tagrin*.

November the 23d, we arriv'd at Cape *Sierra liona*, and caſt Anchor at *Tagrin*, where ſeveral Negroes coming aboard, gave me to underſtand that there was an *Engliſh* Veſſel about four Leagues off, at *Saſena*, the Reſidence of the King of *Tagrin*. *November* the 28th, I cauſed the Rudder to be taken off the Stern Poſt, and hauled aſhoar, where, having poſted a ſtrong Guard, and fortified the place with fell'd Trees, I ſet the Carpenters at work. Having walk'd a little further into the Country, I found it very pleaſant. At the bottom of the Creek, there was a ſmall Brook of clear and ſweet Water; the Banks of which, towards the Sea, were deck'd with great quantities of Citron Trees, Willows, and pretty thick Woods. I likewiſe found ſome Plains good for Paſture; but the Soil is nothing but Stone or Iron-colour'd Rock. Their Houſes are infinitely better than thoſe at *Cape Verd*. The Natives, who are Negroes, worſhip little horrible Images, reſembling Devils, and ſmall lumps of black Earth, in the form of Sugar Biſkuyts, which I underſtood to be the Neſts of Aunts. To theſe they offer Fruits, the Heads of Monkeys, Baboons, and other Beaſts. They call the Idols *Grigris*, which name I take to be derived from the *French*; for they commonly ſalute one another in theſe Words, *Tout Haut*, but when they ſalute a White, they cry *Tu As Menti*. They are a much better ſort of People than the other Negroes; tho' they begin now to improve their Cunning, by converſing with the People of ſeveral Nations that touch there. The place where we lay being the third Creek from *Cape Sierra liona*, is very convenient for taking in Water, Wood, Citrons, Oranges, and Hoops for Water-Casks, which are all to be had for little or nothing. There we had very good Rice in exchange for equal quantities of Salt. It affords no Fleſh, unleſs it be Pullets, which are very ſcarce; and has little accommodation for Hunting; but all its Creeks are well ſtor'd with ſeveral ſorts of Fiſh. The Cape lies in 8 Deg. North Lat. and the Needle varies there 2 ¼ Deg. N. E. One of our Trumpeters that could not ſwim was unfortunately drown'd in a little River near this place, which was nine or ten Foot deep. 'Tis preſumed, he was deceiv'd by the extream clearneſs of the Water, which repreſented the bottom of the River to be nearer the Surface than it was; and that thereupon going to waſh himſelf, but not meeting with the expected Ground, was ſo frightned with the Surpriſal, that he neglected to catch hold of the Banks of the River which was not above ten Foot broad.

The *Portugueze* at *Tagrin* murder the Crew of a St. *Malo's* Bark.

December the 3d. Two Negroes came aboard, one of whom was armed with a Bow, Arrows, Sword and Knife. The other, who was the Interpreter, told me that he who bore the Arms, was ſent by the King to acquaint me, that the *Portugueze* up the River had murder'd the Captain and the whole Crew of a St. *Malo's* Bark, that his Maſter was ſorry ſuch a thing ſhould happen near his Territories, and that if I had a mind to reſent it, he would furniſh me with Negroes to conduct me to the place where the *Portugueze* had lodg'd the Bark. This I underſtood to be about ſeven or eight Leagues above *Saſena*; whither the St. *Malo's* Captain had gone to buy a ſort of Wood not unlike that of St. *Martha*, which in *France* might be worth eight or nine Livers a Hundred. When I firſt heard the News, I ſuſpected that the *Portugueze* underſtanding that my Rudder and many of my Men were aſhoar, had contriv'd the Meſſage, to induce me to ſend a Detachment out of the Land Guard, and ſo give them an Opportunity of poſſeſſing themſelves of the Rudder and Water Casks that were aſhoar. But upon Second Thoughts, calling to mind the Humour of the *Portugueze* in that Country, and the weakneſs of the St. *Malo's* Ship, I concluded the Account to be not improbable, and withal foreſaw, that the ſlighting of ſuch Intelligence, might leſſen the Reputation of the *French* in that Country. At laſt having reſolved to ſend out a Detachment purſuant to the King's Meſſage, the Interpreter with ſeveral other Negroes, offer'd to go along with my Men to the place, ſaying, They would go any where to have an Opportunity of killing the *Portugueze*. To carry on this Affair with more ſecurity, I order'd the Rudder to be brought aboard, for the Carpenter's work being then finiſhed, there wanted nothing but the Iron work, which might be done aboard, by ſetting up a Forge in the Ship: I reinforced the Land Guard with an addition of ten Men, ordering them to plant Barricades of Water-Casks before the principal Avenues of the place where they lay, and to ſuffer neither White nor Black to come near them in the Night time, and got Captain *Pile* to accompany my Men in the Expedition. Accordingly the next Day, I ſent up the River our *Sloop*, with an addition of ten Men to her Complement; together with Captain *Pile*'s Bark mann'd by his own Men, and the *Hope*'s Long-Boat, with 20 Men and four Pedereroes; all under the Command of Monſieur *Montcurier*. *Dec.* the 8th, *Captain Catel* of *Dieppe* arriv'd in the Bay, and told me that at the Iſle of St. *Vincent*, he met a *Dutch* Ship of 400 Tun, mann'd with *Dutch* and *Engliſh*, bound for *Bantam*, in order to convey thither the News of the Agreement between theſe two Nations. At three of the Clock in the Afternoon, Mr. *Monteurier* return'd with the *Hope*'s Long-boat, and *Captain Pile's* Bark, our Pinnace not being able to keep up with their Oars; and reported that he had been ten or twelve Leagues up the River, where finding the River very narrow and rocky, inſomuch that the Bark ſtruck ſeveral times, and having no Commiſſion from me to venture the loſs of the Bark, he turned back without meeting any *Portugueze* or their Veſſels.

December the 31ſt, We were in 3 ½ Degr. N. Lat. After our departure from *Tagrin*, the weather was various, ſometimes ſtormy and ſometimes very calm, as it uſes to be in thoſe Seas; and we found our Rudder much more ſerviceable than before. *Jan.* the 1ſt, 1620, at Sun riſing, we found the Needle 3 ½ Deg. North, and the Lat. 3 Deg. 5 Min. North. The 6th, we croſs'd the Equinoctial Line, and celebrated the uſual Cuſtom of throwing Sea Water upon thoſe who had never paſs'd it. From the third of this Month, we had the Wind at S. E. and S. S. E. and ſail'd cloſe to the Wind in order to raiſe the South Pole, purſuant to the common courſe of Navigation. The 24th, we were under the *Tropick of Capricorn*, and the Needle vary'd 13 Degr. to the N. E. From our paſſing the Line we had the Wind at E. and E. S. E.

February the 1ſt, we began to have the Weſterly and other variable Winds; being then in 13 Degrees South Latitude, and the Needle varying 13 ½ Degrees N. E.

Remark upon the Variation of the Needle.

February the 3d, Being becalm'd, I obſerved at the Sun Riſing, that the Needle was 13 Degr. North; whereas at my laſt Obſervation, when I was almoſt a Degree farther from the Antarctick Pole, it was 13 Degrees and a half. So that inſtead of increaſing it decreaſed. Upon which I concluded its Variation to be irregular; and that it is not fix'd on two *Meridians* cutting the World in four parts, as the *Portugueze* and others imagined.

Fiſhes with long Horns or Bills, which pierce thro' Ships.

During this calm, we ſaw two great Fiſh with long Snouts or Bills, which ſeem'd to be of that ſort that are known to pierce lin'd Ships. I could ſcarce have credited the Story of their penetrating thro' Ships, if the Governour of *Dieppe* had not ſhow'd me a piece of the Beak or Horn of ſuch a Fiſh, found in the ſide of a *Dieppe* Ship, when it was laid up to be caulk'd after an *Eaſt-India* Voyage; the Captain of which had found ſomething ſtrike againſt his Ship as he ſail'd from the Coaſt of *Braſil* to the Cape, but did not know what it was, till that diſcovery happen'd. This piece of Horn reſembled the Tooth of a Sea-Horſe, only 'twas ſtraight all along, and the Colour of Ivory. Its thickneſs was an Inch and an half diameter. It had run 5 Inches into the Wood, and was broke off where the Lining join'd the Wood, probably by the ſtrugling of the Fiſh, which could not recover it without breaking. Several Perſons have met with the like Adventure in their Voyages. But I ſhall only mention one more of a *Dieppe* Captain, who upon a Voyage to theſe parts, had his Boat ſtaved to pieces by a blow from one of theſe Fiſhes, for the Fiſh endeavouring to withdraw its Horn, disjointed the Planks. Thoſe which I ſaw on this Occaſion ſeem'd to be of the ſmalleſt ſort. One of 'em that came juſt under me appear'd to be 10 Foot long beſides its Beak. 'Twas a maſſie Fiſh, tho' not ſo big proportionably to its length as a *Porpoiſe*. Its Colour was a dark blue; and its Laps and Tail, which were very large, repreſented a bright Azure in the Sea. It had a pretty high Lap upon its Back, reſembling that of a *Rechien* or *Indian* Sea-Calf, which ſometimes puts above water. Its Head was not unlike a Porpoiſe's, only it was longer, and inſtead of a Snout had this Horn or Bill, which was very ſharp at the Point, and almoſt two Foot long, and as thick as a Boy's Wriſt. 'Tis a very ſtiff and ſwift Fiſh, for I have ſeen it fly at *Bonitoes*, with which it wages continual War. I have often obſerv'd *Bonitoe's* and *Albacore's* wounded by this ſort of Fiſh, and the Sea tinctur'd with their Blood. I am certain there are ſome of this ſort much greater than thoſe I ſaw this Day, which attack the Whales; and probably 'tis their miſtaking a Ship for a Whale that occaſions their encountering with a Ship. However I doubt not but even a great Ship may be endanger'd by the ſpliting and gaſhing of its Planks, occaſion'd by this Fiſh's endeavouring to recal its Horn after it has ſtruck.

White things floating in the Sea, like Men's Heads.

While the Calm and the exceſſive Heat continued, we ſaw a certain white thing about the bigneſs of an *Oſtrich* Egg floating upon the Water, which ſunk when the Ship came within 50 or 60 Paces of it. Our Pinnace's Crew ſaid they ſaw a great many of them. It reſembled a Man's Head without Hair; and ſome ſay they obſerved two Black Eyes and a Mouth upon it. We likewiſe ſaw a ſtrange ſort of Fiſh about as long as an ordinary *Lamprey*, and equally round, with a large Fin or Creſt, which ſeem'd to be above a Foot high over its Head, and ſlop'd in a continued ſeries down to its Tail. It ſwims upon one ſide, ſo that the Fin together with the Body, repreſents a large Fiſh of a triangular form; and it makes its way by ſhifting from one ſide to the other. But when it catches its Prey the Fin is ſtrait, and appears above the Water to be of an aſhy Colour; tho' the Body of the Fiſh is as white and as round as a Tallow Candle.

A ſtrange ſort of Fiſh.

February the 10th, we were in 31 ¼ Degrees South Latitude, the Needle varying 12 ½ Degrees North Eaſt.

Sea Wreck.

The 20th, our Latitude was 24 Degrees, and the variation 9 ½. Here we ſaw a great deal of Wreck or Sea-Graſs of a reddiſh Colour; which, ſome ſay, comes from the *Triſtand*, *Acuna* Iſlands. The next Day there happen'd a violent Storm, the Wind at Weſt, which had almoſt broke down our Maſt, our top-Maſt Sails being then out. Such Storms are common and very violent in thoſe Seas in Winter; but 'twas then Summer there, and the Autumn was juſt approaching.

March the 8th, our Latitude was 34 Degrees, and the Variation no more than 20 Minutes; which I took for a certain ſign that we were not above 70 or 76 Leagues off of the *Cape* of *Good Hope*.

The 11th, we ſaw *Trombs* or large Sea-weeds, about three or four Fathom long, *Cormorants*, Sea-Bears, and the Fowls call'd by the *Portugueze Alcatra's*, which are white all over, only the tips of their Wings are black. And all theſe were certain ſigns of our approaching to the Land. We likewiſe ſaw innumerable Troops of *Porpoiſes*, and a great many Whales. Towards night we deſcried Land, and found the common Navigation to be very juſt. Being then in 33 Degrees Latitude, which is over againſt the *Bay de Soldaigne*, we reſolved to ſteer our Courſe to the *Table Bay*, which lay from us about 20 Leagues S. E. ¼ S. in order to take in freſh Water. But the Wind being contrary, *i. e.* S. and the Tides being likewiſe contrary, *i.e.* N. N. W. we did not arrive at the *Table* Bay till the 15th at Night, at which time we caſt Anchor there, having loſt only one Boy in the Voyage.

A Deſcription of the Country near *Table* Bay.

March 16. I ſent fifty Men aſhore with Sails to make Tents of. When the Boat return'd, they told me, They had found ſeveral Corps of dead Men, and Cloaths ſcatter'd up and down, and a ſmall Fortification of Earth, which we gueſs'd to be built by the *Danes*; for one of the Natives, that ſpoke a ſort of *Jargon* of broken *Engliſh*, gave us to underſtand, tho' more by his Signs than by his Language, that five Ships had ſail'd from thence to the Eaſtward about three Months before.

The 19th it continu'd to be very ſtormy, with a N. E. Wind. Some Musketteers, whom we had ſent in queſt of a Soldier that had ſtraggled from us, reported, that they had paſs'd along the South-ſide of an Inland Mountain, joyning to the *Table* Mountain, where they ſaw an infinity of very large Baboons and Monkeys: And from thence continu'd their Courſe along the declining part of the Mountains that bound the Weſtern Sea, till they deſcry'd the Sea about half a League off, which I took to be another Bay between this and the Cape of *Good Hope*; that then they turn'd back, and when they were upon the Mountains, deſcry'd the Sea to the Southward, which muſt be that to the Eaſtward of the Cape of *Good Hope*; that they had a plain View of other Mountains, between which and thoſe they were upon, there lay an open Plain, about 10 or 12 Leagues broad, the Soil of which was very good, and capable to produce ſeveral Fruits, the Plain terminating upon the Sea without any Mountains, between Cape *Falſo*, and the Cape of *Good Hope*; that at the foot of the Weſtern Mountains they met with Woods, and large Trees like Apple-Trees, which bore no Fruit, but were very hard Wood; that in the ſame places they met with very pleaſant Paſtures, and ſome Cattle, and excellent clear Weather.

This Report inſpir'd me with a Curioſity to ſee the Country: Accordingly, the next Day, I walk'd out by the back of the *Table*-Mountain; and when I was got three Leagues into the Country, obſerv'd very good Grounds, deck'd with Graſs and pleaſant Flowers, and a ſmall Rivulet of freſh Water gliding along the Plain, and loſing it ſelf in the Sea, at the foot of the Bay, at a place where there is a great Confluence of Water, which we call the River. This Rivulet riſes out of the Mountains that lie between the Point of the Cape and this Bay, and ſerve for Boundaries to the Weſtern Sea. I likewiſe obſerv'd, that this Rivulet makes ſeveral Fens, which run to the Northward along the *Dunes*, or Banks of Sand that terminate the Bay, and to that place which we call the River, where Barks of 50 or 60 Tun may enter at high Water.

I return'd along the Mountains, and at the foot of the *Table* Mountain to the Southward, met with a great many Trees, ſome of which afford Planks a Foot broad, and 18 or 20 Foot long, their Trunk being ſtrait like that of a Pear-Tree, their Leaves whitiſh and ſmall, their Bark about two Inches thick, and reddiſh, the Heart of the Wood white and hard, and the whole Tree full of Sap.

I likewiſe obſerv'd Herbs of the ſame Nature with thoſe in our Country, ſuch as Sorrel, Fern, Broom, &c. From this Mountain I ſaw Cape *Falſo*, and the Sea that waſhes the Eaſt-ſide of the Cape, which forms a large Bay as far as the Cape, where a great many Rocks ſhoot out into the Sea, that muſt needs be pernicious to Ships upon a Southerly Wind, upon the ſide of the Mountains of Cape *Falſo*, there runs either a great River, or an Arm of the Sea, that ſheals very far up; and I obſerv'd the like upon the Inland ſide of the Mountains upon the Cape of *Good Hope*. Upon all theſe Mountains, there are great Quantities of Goats, Fallow Deer as big as Harts, Partridges, and all ſorts of Fowl; Baboons, Monkeys, Lions, white Wolfs, Foxes, Porcupines, Oſtriches, and other Animals unknown to me. In this Day's Journey I ſaw none of the Natives, they having retir'd for fear of us.

A Character of the Inhabitants about *Table* Bay.

Thoſe who liv'd towards the Point of the Cape, are the moſt miſerable Salvages yet diſcover'd; for they neither ſow nor cultivate the Ground; neither do they Fiſh, or ſo much as venture themſelves two Steps into the Sea. They are of a very low Stature, eſpecially their Women, and are ſo meagre, that they always look as if they were dying for Hunger. Their greateſt Food is ſome White Roots, about the bigneſs of ſmall Cheſnuts, which have a Stalk like a Leek, only a little narrower and not indented, that bears a White Flower. If they find any Cockle-fiſh, or Whales, or any other dead Fiſh upon the Shore, tho' never ſo much putrified, they put 'em a little upon the Fire, and then feed heartily upon 'em: Nay, when the very Skins, Heads, and Entrails of the Sea-Bears and Pinguins (*i.e.* a ſort of Fowls without Wings) which our Men fed upon, were thrown out of the Tents, and had lain for 7 or 8 Days, till their Stench oblig'd our Men to remove their Tents, and ſcar'd the Wolves and other wild Beaſts from touching of 'em; even then, I ſay, the Savages would take 'em up, and after having put them under the Aſhes, and ſqueez'd them between two Stones, would eat up every bit of 'em.

When they meet an *European*, the firſt thing they do, is to ſhew their Stomach, which they draw into their Body, and ſo that makes a hollow or great Pit upon their Breaſt. They have Wars one with another, probably, upon the Account of their Cattle. They abſtain from Man's Fleſh, neither do they eat any of their Cattle, unleſs theſe are apt to die through Leanneſs, Age, or any other Accident. They cover their Privities with a Sheep's Tail, and wear the Skin of a Sheep, or ſome other Animal, over one Shoulder like a Scarf. The better ſort have dry'd Tripe about their Necks, upon which there hangs a little Knife ſhap'd like a Launce, in a wooden Sheath: And this I take to be the Inſtrument with which they cut off one of their Teſticles at ten or twelve Years of Age; that being a Cuſtom among 'em, perhaps in order to qualifie themſelves for running, in which Exerciſe they outdo all that ever I ſaw. Some hang upon their Necks a Plate of Copper, as thin as a *Teſtoon*, and about a Hand long, and four or five Inches broad. Others wear Bracelets, being Pieces of Copper or Iron, with a hole in the middle. Thoſe who ſeem to have ſome Command over the reſt, have commonly a Stick in their Hands, with a Fox's Tail at the end of it.

They cut off one Teſticle.

I could not perceive any Religion among 'em. They marry indeed, and dance; and their common Salutation to us is dancing to a Song, which from the beginning to the end, is nothing elſe but *Hautitou*.

Their Arms are an *Aſſagay*, with a weak ſort of a Bow and a Quiver; which they hide under ſome Buſhes when they come to our Tents. They are very apt to ſteal any thing of Iron or Copper; but Linen or Cloths they do not covet.

They are Negroes, and have frizzl'd Hair, as well as thoſe in *Guinea*, but they wear no Ornaments upon it. They have no Sheds to live in, that I could perceive: But in the Night-time they ſhelter themſelves with their Wives and Children with Buſhes, and have ſome Skins ſtretch'd like an *Umbrella*, upon two Sticks laid a-croſs, with one in the middle to faſten it in the Ground; under which they lie bury'd in the Sand up to their Belly.

They are altogether ignorant of Agriculture, or the making of Canoes; whereas, if they could but tack ſome pieces of Wood together to convey 'em to the Iſlands juſt by the Continent, they would find vaſt Quantities of Pinguins, and Sea-Bears (which are their delicious Food) not only for their own Suſtenance, but for Sale among their Neighbours.

An Account of *Table Bay*, and the Mountain above it.

This *Table-Bay* lies in 34 Degr. Lat. the Needle varying 1½ Degr. N. W. It's Air is very wholeſome. Sometimes you may treat here with the Natives for Beef and Mutton; but that's very uncertain. 'Tis a ſecure Road to Anchor in, and has about 6 or 8 Fathom Water. There's more Rain and Wind in the Bay, than a Shore; for the high Mountains ſtop the Clouds and Vapours, which being driven by the Wind, break and fall down in Hurrycanes upon the Bay. The height of the *Table*-Mountain from the Sea-ſide to the top, is 1350 Foot perpendicular.

Dutch Letters found aſhore.

Some of our Men going aſhore, happen'd to light upon a great Stone, with two little Packs of pitch'd Canvas underneath, which we afterwards found to be *Dutch* Letters. When we open'd them, we found firſt a ſtrong piece of pitch'd Canvas, then a Plate of Lead wrapp'd round the Packet, under that two pieces of freſh Cloth, then a piece of red Frize, all wrapp'd round a Bag of coarſe Linen; in which were the Letters very ſafe and dry. They contain'd an Account of ſeveral Ships that had paſs'd that way; particularly of an *Engliſh* Advice-Boat that was gone for *England*, to acquaint the Company with the Injury the *Dutch* had done 'em in the *Eaſt-Indies*. They likewiſe gave Notice to all Ships that paſs'd that way, to take care of the Natives, who had murder'd ſeveral of their Crew, and ſtole ſome of their Water-Casks. Farther, they gave Advice, that the *Dutch* had beſieg'd *Bantam* with 35 Ships, and that the *Engliſh* were forc'd to abandon it for want of Proviſions: That the King of *Bantam* and the *Dutch*, committed ſeveral Acts of Hoſtility; and many other things, too long to be inſerted. Having read this Letter, I was in a quandary, whether I ſhould go to *Bantam* or not: For I readily imagin'd, that *Bantam* being block'd up by the *Dutch*, they would not ſuffer

Bantam beſieg'd by the *Dutch*.

ſuffer us to enter, and far leſs to traffick there, ſince they always endeavour'd to keep the Trade out of our hands. Beſides, I was apprehenſive they might carry the place, in regard that Prince *Mataran*, who calls himſelf Emperor of all *Java*, and alledges that the King of *Bantam* revolted from him, would readily joyn with the *Dutch*, in reducing the Rebel King. Upon theſe Conſiderations I reſolv'd to ſteer my Courſe to the Coaſt of *Coromandel*, to put off ſome Goods that were proper for that Coaſt, and buy up others that ſhould be ſaleable at *Achen*, and upon the Coaſt of *Sumatra* and *Java*; and after all, to take in at *Achen*, a Ship's Loading of Pepper, or two, if the Siege continu'd; and leave there a Factory, together with the Pinnace, to trade up and down the Coaſt. But if the Siege were rais'd, I deſign'd not to ſettle any Factory at *Achen*, but to ſend one of the Ships back to *France*; and the other, together with the Pinnace to *Bantam*, where we might get 200 or 300 *per Cent.* upon the Coaſt Goods; and there to load the other Ship, and leave a Factory together with the Pinnace.

In the mean time I call'd to mind, that the Directors of the Company mean'd that I ſhould go ſtraight to *Bantam*, and ſend at leaſt one of their Ships back to *France* that Year; which I could not do, if I touched upon the Coaſt of *Coromandel*: Beſides, if the Siege of *Bantam* ſhould happen to be rais'd, I was apprehenſive the Company would blame me for not following their Orders. But even that Conſideration was counterpois'd by this, that I could not at any rate ſend back one of their Ships that Year, ſince I could not make the Streight of *Sonda* till *Auguſt*, nor get out from thence till *October* or *November*, by reaſon of contrary Winds; and upon that ſcore I ſhould be oblig'd to ſpend the whole Year, without doing any thing, and eat up my Proviſions, which in that Country are ſo ſcarce, that the *Engliſh* are forc'd to ſpread themſelves along the Coaſt to be ſupply'd; not to mention that I ſhould be expos'd to the Diſcretion of the *Dutch*, who never mean'd us well. Having maturely weigh'd all theſe Conſiderations, I ask'd Advice of the principal Deputies, ſome of whom ſaid they would ſubmit to my Judgment; and others told me, that ſince I had a poſitive Commiſſion for *Bantam*, and ſince *Bantam* was a place of too great Importance to the *Dutch*, to be long at Variance with the King, I had beſt ſteer my Courſe thither. Theſe different Opinions put me upon another Expedient, of ſending the *Hope* to *Bantam*, and giving the Captain, Mr. *Grave*, an ample Commiſſion.

A little Iſle near *Table* Bay.

April 3. We weigh'd Anchor; and being becalm'd about two Leagues off from the Bay, were driven by the great Waves coming from the South, and the Tides running North upon a little Iſland, and caſt Anchor within a League of it, at 20 Fathom Water, the Ground being muddy Sand. The Iſle lay from us North one quarter N.E. and the Southerly Waves made us roul prodigiouſly, ſo that every thing crack'd in the Ship. This Iſland is almoſt round, and about a large League in Circumference. Within, it affords nothing but Sand, and ſome Buſhes, under which the Pinguins hatch their Eggs. A great many Rats and Adders live in it, as well as Chamæleons and Lizzards.

Sea-Bears deſcrib'd.

Upon its Rocks, by the Sea-ſide, we ſaw a great many Sea-Bears, which bleat like Sheep, ſome of which are very large, and have a Skin as thick as a Wolfs, with very ſoft Hair. Both theſe and the Pinguins taſte very rank of the Oyl of Fiſh, of which a great quantity might be taken from them, if one were at the pains. They have two Paws before, and two Fins behind; they cannot ſtay long under Water without taking the Air; they live upon Fiſh, and in the Night-time retire to the Rocks.

A Deſcription of Pinguins, or Fowls without Wings.

The Pinguins are Fowls without Wings, which have two Fins, and two broad Paws, upon which they walk upright, and with which they dig the Ground to make their Neſts. They are a little bigger than a Cormorant, having a white Belly, a black Back, a very thick Head, and a Bill like a Raven's. In the Morning they repair to the Sea, where they ſwim and feed upon Fiſh, and at Night return to their Neſts. They have nothing of the taſte of Fleſh, and for my part, I take them to be feather'd Fiſh.

While I was aſhore, there aroſe ſuch a Storm from the S. E. that I could not reach the Ships, but was forc'd to ſtay upon the Iſland all Night, notwithſtanding that it was a perfect Calm where the Ships rode.

April 7. We had a violent Thunder and Lightning, and the next Day the Weſterly Winds began to ſwell; beſides that, the Fog was ſo thick, that we could not ſee from one end of the Ship to the other; upon which, having given a Signal to the other Ships to follow me, by the Sound of Trumpets and Drums, I return'd Sounding all the way, and caſt Anchor in *Table*-Bay.

April 12. We weigh'd Anchor again, and all that Day had but little Wind, and that very variable. However, on the 14th we doubled the Cape of *Good Hope*; and the 15th were in 36 ½ Degr. Lat.

The Signal of an approaching Storm.

The 16th we had a violent Storm from the N. E. at Full Moon, which we foreſaw the Night before; for at Sun-ſetting reddiſh Rays aſcended from the Sun, and underneath him was a Bank of the ſame Colour; towards the Wind there appear'd, as it were, a Circle, from the Centre of which there proceeded great Rays; under the Wind there appear'd a round blackiſh Cloud, and in the middle of it we ſaw what the *Portugueze* call the *Ox's Eye*, which is generally taken notice of, as the Fore-runner of a great Storm. When the Moon came low, the Sea ſwell'd mightily, and the Storm was indeed very great, notwithſtanding that the Air was ſo clear, that in the Night-time we ſaw the riſing and ſetting of the Stars. The Storm parted me from the other two Ships, till the 17th that the Wind abated, and came Southerly, after which I perceiv'd our two Ships about a League before me; and found, to my great admiration, that none of 'em had ſuſtain'd any harm. However, this wonderful Deliverance made me reſolve not to part with the *Hope*, but to go all in a Company to *Bantam*, purſuant to my Orders.

Accordingly I dropp'd all my former Projects, and ſail'd E and S.E. directly for *Bantam*. But *April* 26. in 36 Degr. Lat. and 12 Degr. N. W. Variation of the Needle, a violent Storm overtook us, and not only broke my *Bowſprit*, but damag'd the Pinnace's Maſt: Upon which I was oblig'd to take up my former Reſolution of ſending Captain *Grave*, with the *Hope*, ſtraight to *Bantam*; deſigning to carry my own Ship and the Pinnace to *Madagaſcar*, in order to have them refitted.

They make S. *Auguſtine's* Bay.

I parted with the *Hope* on *May* the 1ſt, in 37 ½ Degr. S. Lat. and 18 Degr. Long. reckoning the Cape of *Good Hope*, for the Meridian.

The 17th in the Morning we deſcry'd *Tillac*, about ten Leagues off, which is a running Coaſt, that appears very high; and that Night had ſight of St. *Auguſtine* Bay.

The 17th we were oppoſite to the two little Iſlands of Sand, which lay about three Leagues from the Bay, which having no Trees upon them, are very low. But in the Night-time the contrary Winds, and the Trees carry'd us W. N. W. where finding no Anchorage, and not being able to make the Bay, I reſolv'd to ſtand for the Iſles of *Comorro*, during the light Quarter of the Moon. In thoſe Seas their Surface is very plain and ſmooth, and the Air very clear. While we ſtood for theſe Iſlands, the Wind turn'd North, upon which I tack'd about for the Bay, and arriv'd there on the 21ſt, caſting Anchor at 17 Fathom Water, upon a clayie Ground, about a quarter of a League from the Shore.

The Natives fond of Silver Chains.

May 22d, I went with the two Long-Boats, and fifteen Musketeers, to obſerve the River upon our approach to the Shore, we obſerv'd nine or ten of the Natives, upon a conſpicuous Point of Sand, who gave us the Signal to come to them. Upon this we went aſhore, and tho' we were arm'd, they joyn'd in and talk'd with us above an Hour, ſignifying by their Language and Signs, that they were very well pleas'd with us, and would viſit us next Day on Board. They were very curious in obſerving what ſort of things we had about us; and one of 'em, who ſeem'd to be a leading Man, ſpying a Silver Whiſtle, with a Chain to it, that my Mate had about him, deſir'd it very earneſtly: I order'd the Mate to ſhew it him, tho' I was ſorry for the diſcovery, for fear they ſhould inſiſt upon having that, and no other Commodity in exchange for theirs; and for that Reaſon had caution'd all our Men to hide 'em. However, they all lik'd it mightily, and the chief Man among 'em, promis'd to give for it an Ox, which might be worth 20 Crowns at leaſt. Upon which I gave him to know, that we could not ſell it, becauſe we had uſe for it; but if any of 'em would come aboard, I would ſhew them things that they would like as well. Without further deliberation, this principal Man, and three others embarked with us, deſiring that ſo many of our Men might be left aſhore, which I agreed to. In the mean time, at one Caſt of a Sean, we drew up an infinity of little Fiſh reſembling Herrings, both in form and taſte: But I could not make any material Remarks upon the River, only I was ſure that it was very great and rapid.

A Deſcription of the Natives, and their Habit.

The Natives of this place are the handſomeſt Negroes that ever I ſaw. They are large and well ſhap'd; they feed well, and are neither flat Nos'd, nor thick Lip; neither do they ſtink like the *Guinea* Negroes. They are very curious in their Hair, which is long, frizled, rais'd upwards, and made up in Wreaths at the top. Their Teeth are very white, even and ſmall; and they rub 'em every Minute with a ſmall piece of Wood. Their Garment is a Cotton Cloth well woven, of two or three Colours, with which they cover their Privities, the reſt of their Body being naked. As for their Ornaments, he whom we took for the chief Man, had a large Plate like a piece of Bone or Ivory, perfectly white upon his Forehead, a large Ring of Copper at his Ears, about his Neck a Collar of Raſſade, beſides Glaſs-Beads of ſeveral Colours, and a Necklace of fine Yellow Amber, which he eſteem'd very much. The reſt had Ornaments correſponding to all his, excepting the Trinket on his Forehead.

As ſoon as we came on Board of the Ship, the Natives were ſurpriz'd with the bigneſs of the Ship, and mightily taken with the Sound of the Trumpets and Drums. I preſented them with ſome enamell'd Rings, and others of Pearl and falſe Amber, and entertain'd them with Diſcourſe till Supper was ready.

They are ſick on Board.

But in the mean time they were taken ill of the Sea Sickneſs, inſomuch that they would needs go above Deck, and lie upon a Sail. One of them that was not ſo ſick as the reſt, did nothing but jeer his Companions all Night, and merrily imitated every word that the Men upon the Watch ſaid to one another. In a word, theſe are very jolly Negroes, and have nothing in 'em that's brutiſh; they readily apprehend what is ſaid to them, and in my Opinion are much preferable to the other Negroes. Next Morning by Break of Day, I went to ſee for my Gueſts, and found them upon their Legs, and much better than before. Then I ſhew'd them ſeveral little things I thought they would like; ſuch as Coral, yellow Amber cut fine, Raſſades of all Colours (they lik'd the blue, red, and green, but not the white) Knives, Razors, Combs, Iron, Tin Veſſels, a Copper Baſon, and red Cloth, as well as Cloth of other Colours. They ſeem'd to like every thing, and deſir'd the Gift of 'em; but when I ſpoke of their Beeves, they always came back to the Silver Whiſtle, and the Chain: Finding I could make nothing of them, I ſent them a-ſhore again; as well as ſome of our Men, with ſeveral of the above-mention'd Goods, to try what they could do with the other Natives. One of the Natives offer'd a fat large Ox, with Bumps upon his Shoulders (like to thoſe on Camels Backs) in exchange for a Copper Baſon, but he that bore the Trinket on his Forehead ſpoke to him, upon which he gave back the Baſon, and ask'd for a Silver Whiſtle with a Chain to it. In fine, I underſtood they reſolv'd not to truck with me for any thing elſe, but Silver Chains.

The next Day, hearing that the Natives were come down to the Shore with their Cattle, I ſent our Men aſhore with Chains of Steel, Lattin, Copper, Jett, and other things reſembling Pearl; ordering them to conceal the Silver Chain, and not exchange it, till they had try'd if any of the former would do; for I had no mind to make them acquainted with that Metal. But after all, they gave me to know, they would deal in no other thing but in the Silver Chain, and would give no more than one Cow, for as much of it as would go round the Neck of the talleſt of them, and meet with two ends at his Navel. Being unwilling to part with the Silver Chain, and at the ſame time in great want of their Cattle, becauſe we could not live upon the Fiſhing; I reſolv'd to have a Chain made of Pewter, by a Goldſmith that we had aboard; and for that end cauſ'd to melt a Platter; hoping to do as much with a Pewter Chain, as with a Silver one: For when I offer'd them Silver and Pewter Spoons in a heap together, they chus'd the Pewter ones, becauſe they were neweſt. In like manner, when I ſhew'd them a large Silver Baſon, and Silver Cups, and even a Chain of Gold, they would give me nothing for 'em; but ſtill wanted the Chain that was along with the Whiſtle.

The Commodities of the Country.

The next Day they came aboard without Hoſtages, and brought with them ſome Hens and Capons, a pretty deal of Milk, ſome Peaſe, and ſome Horn-ſpoons, made after their Faſhion. Theſe were very fond of our red Raſſade; but we had but very little of it. However, we exchang'd what we had at a pretty good rate; for they gave us a large Capon, or ſome ſuch Poultry, for every String of it.

Theſe Natives lodg'd all Night on board of us, and were not ſick as the others were: They fed heartily, and eat a great deal of broil'd Fiſh, and thrice as much Bread as any of our Men.

The Peaſe they ſold us were white, and as large as a Muſquet-Ball, and the beſt I ever ſaw: They eat 'em raw; and next to their Milk, I believe, they are their beſt Food.

The 26th I ſent ſome red Raſſade, and the Tin Chain aſhore; but they quickly perceiv'd that the Chain was not the right. They gave us Fowls for half a String of Raſſade a piece, as well as a Weather for one String; and Aſſagays and Darts very well made, for half a String a piece. Thoſe Natives work very prettily in Iron and Copper, and to my Mind, their Iron, of which they have great Quantities, is as good as in *Spain.*

They ſold us a ſmall quantity of Rice, which they valued very high.

When our red Raſſade was all gone, I ſhew'd 'em ſome red Coral, Cryſtal, and other pretty little things; but they did not like 'em.

On the 27th, they brought down as many Cattle, as cover'd at leaſt a quarter of a League and ſtill demanded the Silver Chain for an Ox, the red Raſſade for their Sheep and Pullets, and the blue for their Milk, of which they brought great Quantities. For the Silver Chain I demanded three Oxen, and a Sheep for two Strings of red Raſſade.

In the mean time, their King, or Governour, ſent me word to come aſhore (for I marketted in my Long-Boat), and ſhew him the Chain: But I gave him to know, that I could not come aſhore; but if he would be pleas'd to come on Board, he ſhould be very ſafe, and I would ſend ſome of my Men aſhore for Hoſtages. After ſome deliberation he came aboard, and I was ſorry I had no nice thing to preſent him with. However, having four Strings of red Raſſade in my Hand, tho' I thought 'em too mean a Preſent for him, yet finding that he look'd upon 'em with a greedy Eye, I complemented him with 'em; which he accepted with pleaſure, and gave me a Sheep for a Recompence. I had a great Mind to have given him the half of the Silver Chain, which was 5½ Foot long, and weigh'd three Ounces and a half: But conſidering, that if I was prodigal of the Chain, I ſhould have nothing to fetch Beeves; or elſe I would be oblig'd to rob the Mates of their Silver Whiſtles, I e'en put it off till the next opportunity.

But ſome time after, the King reflecting upon the Chain, ſent one of the ſtatelieſt Oxen I ever ſaw, which we bought for half the Chain: But we had a great deal of trouble in bringing it aboard; for tho' it receiv'd in its Head two Piſtol-ſhot, one Harquebuſe, and one Musket-ſhot, yet it was ſo ſtrong, that we were forc'd to ſtifle it under Water, and give it ſeveral Blows in the Head with an Axe, before we could get it aboard. Such an Oxe might be worth 100 Livres in *France.*

An Account of their Cattle and Fruit.

Theſe Oxen are neither high, nor ſo large as thoſe of our Country; but they are ſhort and thick; their Head is ſmall, their Neck ſhort and thick, with a large Bump or Lump of Fat, upon the joyning of the Neck to the Shoulder; which at a diſtance appears, as if it were a Burthen ty'd upon that part.

Their Sheep reſemble thoſe of *Barbary,* as to their Head and Wool; but their Ears hang down like a Hound's, and their Tail contains ten or twelve Pound of pure Fat; which does not diſoblige the Stomach, as the Fat of the Body does. Their Fowls are large, fat, and thick. In a word, their Men are in ſo good a caſe, and their Cattle ſo fat, that the Iſland muſt needs be a very good Country. As for their Fruit, I queſtion whether we were there in their Seaſon; at leaſt they brought us none, but a little Rice, ſome Beans, and very large white Peaſe. They have a great many Gourds, and Bottles made of 'em, in which they put their Milk.

The 28th I was to ſee a little Iſland in the Mouth of the River, and then return'd to the place of Barter; where the Natives waited for us with a great number of Cattle. This Day I bargain'd to a double advantage of what I did yeſterday: But having allow'd ſome of our Men to go aſhore, and treat for themſelves, whether they ſpoil'd the Market by being too prodigal of their Commodities, I cannot tell; but ſo it was, that the Natives, all of a ſudden, demanded four Strings of red Raſſade for a Sheep, whereas they had ſold me ſeveral for two a piece but juſt before: Upon which I call'd all my Men into the Boat, for I always Marketted in my Long-Boat, from the Commencement of the Treaty. I had no ſooner recall'd my Men, but the Governour of the Natives, whom they call *Aurea,* appear'd in a Paſſion, and order'd all the Natives to retire. Leſt our mutual Friendſhip ſhould be thus broke, I made a Signal, that I would ſpeak with the Governour; upon which he came down to the Shoar-ſide, and I going aſhore, preſented him a Cutlas with a Silver Hilt, aſſuring him that I was his Friend, and earneſtly deſir'd, that I and my Men ſhould live in perfect Amity with him and his People: This done, he expreſſed a great deal of Satiſfaction, the Negroes made loud Acclamations of Joy, and I cauſing the Trumpets to ſound, and the Drums to beat, order'd a Party of our Men to come aſhore, who joyn'd in, and ſhak'd Hands with the Negroes. In the mean time the Governour made me ſit down by him, and admiring the Trumpets and Drums, offer'd me an Ox for one of either. But I told him I could not want it. After that we ſold the reſt of our Silver Chain for 2 Heifers and a String of Coral Beads for an Ox; and then we return'd on board, giving the Natives to know, that within four or five Days I would be gone, which they heard with grief. The next Day one of our Officers went aſhoar, and ſold four Ounces of a Silver Chain, for ſix luſty oxen, which I caus'd to be ſalted up.

A Deſcription of the Bay, River, and adjacent Country.

June the 1ſt, I went into our little Skiff with twelve Men; deſigning to reach the Mountains by a ſmall Creek, and from thence to deſcry the Valley where the River run. But finding the Creek very inacceſſible, and ſurrounded with Buſhes, ſteep Rocks, and Aloes Plants, I left it, and rowed about half a League up an Arm of the River to the Southward, where I found a Landing place. Having walk'd up a third part of the Mountain, I diſcover'd that the other Arm of the River to the Northward was yet greater, for it appear'd as broad as the *Seyne*, a League below *Roan*. Upon the Sea ſide, and for two Leagues up the River, there is nothing but thick and black Woods; but beyond that there are very pleaſant Fields.

This Bay is ſo cover'd with Flats to the North and South, that 'tis only acceſſible by the N. W. and W. N. W. I do not believe that great Storms do ever reach it for the Coaſt does not ſeem to be much beaten by the Waves, and all the 15 Days I was there, I obſerv'd but one Cloud in the Zenith; neither is the Heat exceſſive, being temper'd by the Land Breezes, that never fail from the Sun ſetting to ten or eleven a Clock in the Morning, and the Sea-Gales that blow from that time to Sun ſetting. I found the Air of that Bay very healthy, for we had not one ſick aboard, to which the abundance of freſh Meat and good Water contributed not a little. As for the adjacent Country, the Valley is very pleaſant, and affords excellent Paſturage, being water'd by a large River, which would render the Ground very fertile if it were cultivated. The Sea ſwells the Mouth of the River to 10 or 12 Foot running Water, ſo that ordinary Ships might enter it. The Mountains are a dry Rock, the Surface of which looks as if it were burnt. The Low-Country is clad with an infinity of Buſhes and Shrubs, and the greateſt quantity of *Tamarinds* I ever ſaw, as well as with *Ebony* and *Aloes* Plants.

A Fruit reſembling Wall-nuts.

Their *Tamarinds* were not then ripe; but I met with another Fruit almoſt ripe, that reſembled a large Wallnut, having a green Rind; when I open'd it, it gave a fragrant ſmell, and the Fruit within was black and full of little Stones, almoſt like Caſſia Fiſtula, and its Pulp, being of the ſame Taſt and Colour, tho' not ſo thick, and, as I take it, entitled to the ſame qualities. This Fruit is by ſome call'd *Tamboarions*, and ſaid to reſemble Poppy Heads, but without any reaſon. We ſaw in the Hands of the Savages ſome ſmall Cucumbers, which ſeem'd to be better than ours, and which they eat as we do *Pears*; a great many *Gourds*, ſome *Beans*, very good *Peaſe*, a little *Rice*, and only one *Citron*.

The Government of the Natives.

The Natives are jolly, proper, handſome Negroes. They are very friendly one to another, and obey one Sovereign call'd *Aurea*, whoſe Reſidence, as they told me, is at a great Habitation up the River. I take their *Aurea* to be another ſort of a Man, and better qualified than he who appear'd as the *Aurea*, and to whom I made a Preſent of the Silver Cutlas; for they told me with grief that their *Aurea* had been lately ſtabb'd. I could not perceive 'em guilty of any brutiſh or inhuman Action, for they dealt with us very frankly and honeſtly; they did not ſteal the leaſt odd thing, or offer the leaſt Injury to our Men, tho' they met them ſometimes ſtragling and unarm'd. One Day, when one of our Prieſts was ſaying Maſs, and had but very few Auditors, 25 or 30 of the Natives came about him, and being deſired to kneel, did ſo, and behav'd themſelves very reſpectfully till the Service was over.

Their Honeſty.

Their Religion.

As for their Religion, I could perceive none amongſt them. Indeed they are Circumciſed; and tho' the Inſtitution came to them time out of mind, yet I believe they had it from the *Mahometans* upon the Coaſt of *Æthiopia*, who have long had, and ſtill have, an unknown Traffick with that Country.

Their Language.

Their Language ſounds pretty ſmooth, for they pronounce it very glibly. They do not reckon beyond Ten in Computations; and their ten Numbers are thus expreſs'd in order, *Iſſa, Rowa, Tello, Effad, Linne, Euning, Frutto, Vuollo, Sinay, Foulo.*

Their Women.

As for their Women and Houſes, I ſaw neither. Some of our Men told me they left their Women about half a League off in the Woods, and that they ſaw three or four of 'em, that were very handſome, being cover'd from their Breaſt to their Knees with a party colour'd Cloth of Cotton, and having their Ears pierc'd in ſeveral places, with a great many Ear-Rings and Bracelets hanging upon 'em.

Having refitted our Ships, and furniſhed our ſelves with freſh Proviſions, Wood and freſh Water; and rode 15 Days in this Bay, which is a very proper place for taking in freſh Proviſions, and ſheltering diſtreſſed Ships, and might be made as uſeful for thoſe who trade to the *Indies*, as *Mozambique* is to the *Portugueze*: Having rode, I ſay, 15 Days in this Bay, which lies in the Iſland of *Madagaſcar* or *S. Laurence*, under the Tropic of *Capricorn*; we weighed Anchor, and ſtood North Weſt, to avoid the Flats; and having ſail'd all that Day with little Wind, at Night the Bay lay about ten Leagues off S. E. ¼ E. At which time we perceived another Bay about ſix Leagues off to the Eaſtward. The Coaſt runs North and South, as far as we could See; and appears high, ſmooth, and all of a piece, like the Coaſts of *Piccardy*, *Normandy*, and *Bretaigne*.

June the 9th, we came in ſight of the *Terra Firma*, between *Sophala* and *Mozambique*; and at Night being in 17 Degrees 10 Minutes Latitude, and ſailing N. E. ¼ E. were in danger of being caſt away, becauſe our Sea Maps are very defective in that part. For the Pinnace being order'd to ſail in head and ſound, and if ſhe apprehended any Danger to give us a ſignal of three Guns; about an hour and an half before Day, the Signal being given, we immediately tack'd about, and dropp'd an Anchor: And when Day came, perceiv'd that if we had but gone a little further, we had run our Ship aground. For about a quarter of a League off there lay a little Iſland, ſcarce a Mile in Circumference, cover'd with Buſhes and Greens, having 2 tall Trees together upon its Weſtern Point. And to the W. N. W. of this Iſland, which has a long Bar before it, there lies another of the ſame bigneſs, very low, and cover'd all over with Trees. The Continent lay about four Leagues from the firſt Iſland. To the S. W. we ſaw a high and ſandy Coaſt, with a woody Country behind it, and to the Weſt we deſcried a low Land, with large Trees upon it, as if they had been planted in the Sea. I was ſurpriz'd to ſee the Continent ſo near me, taking my meaſures from the Sea Cards. For over Night, when we ſaw the *Terra Firma* and the Iſlands, we took 'em according to the Latitude in the Charts, to be what the *Portugueze* call the *Primieras*; and reckoning theſe three Leagues to the Weſtward of us, the Courſe chalk'd down in the Chart from theſe Iſlands to a large Flat (lying in 16 ¼ Degrees about 12 Leagues from the *Terra Firma*) being N. E. and S. W. and the laſt of the *Primieras* Iſlands, being placed in 17 Degrees above ten Leagues from the *Terra Firma*, we reſolved to ſtand N. E. ¼ E. thinking to ſail nearer to that Flat than the *Primieras* Iſlands. But we were miſtaken;

Primieras and Angoxa, miſplac'd in the Sea-Charts.

for the *Primieras* Iſlands are not above two or three Leagues from the *Terra Firma*, from which the Coaſt runs away E. ¼ N. E. Beſides, the Charts have no Flats or Iſlands along that Coaſt, unleſs it be thoſe of *Angoxa*, which are placed more to the Southward, *viz.* 16 Degr tho' after all, I ſaw that Morning a ſtring of Iſlands, about a League and an half or two Leagues diſtant one from another, and lying in 16 and ¼ Degrees, which I could imagine to be no other than theſe of *Angoxa*, ſo that the Charts miſplaced them alſo two thirds of a Degree. Being at a loſs to know what little Iſlands theſe were, and finding the Chart ſo much out, I reſolved to ſtay there no longer. Accordingly I weighed Anchor, and ſaill'd between the 2 Iſlands, the Pinnace ſounding in the Head of me. We ſail'd cloſe by the Land-ſide of the firſt Iſland; where we had 10 or 12 Fathom Water, with a good Ground of muddy Sand, and no Banks; ſo that this ſide together with the Bar, affords a very good Road for Ships. Then ſtanding E. S. E. with a freſh Southerly Gale, we got clear of the ſecond Iſland, between which, and the Continent, I doubt not but there is a good Paſſage, for I obſerved no Banks nor Shallows.

Having paſs'd this Second Iſland, we deſcryed a Third, of the ſame bigneſs with the former, which aſſur'd me that theſe were the Iſlands of *Angoxa*. The next Day 'twas as much as we could do to ſee the Land to the North Weſt of us, being then about ſix Leagues off; but according to the Charts we ſhould have been above 20.

A Deſcription of the Iſlands of Comorro.

The 13th, we deſcryed one of the Iſlands of *Comorro*, which is very high, and as conſpicuous as *Madera*.

The next Day we perceived another not ſo high, which is call'd *Majotta*, and abounds with all ſorts of Proviſions and Fruits; lying about ten Leagues from the Iſland that's neareſt the *Terra Firma* of *Mozambique*, the South Point of which we made the next Day, but could find no convenience for coming to an Anchor, notwithſtanding it is inhabited all along the Shoar. This laſt Iſland is very Cool, Moiſt, and full of Verdure, by reaſon of its heighth, which gathers a great number of Clouds that break upon it. It has a great many Brooks of Water running down from the top, which in my Opinion do not ſpring from the Rock, but are occaſion'd by the continual elevation of Vapours.

The 16th, we made the North Cape, which is 15 or 16 Leagues diſtant from the South. Having doubled the Cape, we perceiv'd a ſmall Sandy Creek, which appear'd like an old ruinous Caſtle, where two Ships (not more) may ride at Anchor, at ſix Fathom Water upon a Sandy Ground. We thought to have rode there, but the Tide carry'd us by it.

The Natives command the Wind,

Having doubled the Point of this Creek, we came before an Inhabited Place, furniſhed with Houſes like thoſe of our own Country, where we thought to come to an Anchor; but finding nothing but from 50 to 30 Fathom Water upon a Rocky Ground, we ſtood to the Sea, deſpairing of Anchorage upon that Iſland. In the mean time the Tide carried us Weſtward along the Coaſt to a Point, where we came in ſight of a Ship, and having ſent out our long Boat with ten Musketeers, we underſtood it to be a *Mecca* Ship of 40 Tun, that upon our appearance on that Coaſt had run all their Goods aſhoar, taking us to be *Dutch* Ships. The Captain ſhew'd me two Letters, one from an *Engliſh* Captain call'd *Martin*, and another from Captain *Bannar*, intimating to all their Country Men, that they had taken in ſeveral Refreſhments at that place, eſpecially Fruits but little Meat; that they had found no Water there; that Linen Cloth and Paper was a proper Commodity for that place; and adviſing them to take care of diſobliging the Iſlanders, who, tho' they appear'd friendly enough, were capable to do them a great deal of Injury. Having ask'd the *Arabian* Maſter, where I could find the beſt conveniency for coming to an Anchor; he told me the place of Anchorage lay to the Windward of their Ship; but withal, adviſ'd me to fetch a Pilot from the Shoar, by reaſon that the Road is ſurrounded with Rocks and Banks, and the Inhabitants of the Iſland being great Sorcerers, and having the Wind at their command, could, upon occaſion, change it to our diſadvantage. Purſuant to his Advice, I ſent my Boat aſhoar along with him, and in the Afternoon he returned with two of the Inhabitants, who were *Negroes*, and brought our Ship ſafe to an Anchor before Sun-ſet. In the mean time I ſent the *Arabian* Maſter back to his own Ship, with full Aſſurances of the Innocency of our Deſign, and the Friendly Diſpoſition of the *French*; together with a Letter to the ſame purpoſe addreſſed in *Spaniſh* to the King.

And are ſlow in making Bargains.

The 17th, The King ſent ſome of his chief Favourites, to aſſure us of his Friendſhip, and readineſs to ſupply us with the Product of his Country. I acknowledged my Obligations to the Prince, and ſent him a Preſent of a Silver-Hilted Hanger, a couple of very pretty Knives, a Ream of Paper, and a Looking-Glaſs; which he receiv'd with pleaſure, and return'd me a Compliment of a young Kid and ſome Fruit. At the ſame time I deſired the *Arabian* Captain, who was then aſhoar, to buy up ſome Proviſions for me, promiſing to ſend ſuch Commodities aſhoar as were proper to be given in exchange. But the Captain ſent me Word that the Inhabitants of that Iſland were of ſuch a particular Humour, that they would not ſtrike a Bargain of half a Rial value in a Days time; for they would not buy half a Yard of Cloth without calling all their Relations and Neighbours to concert the meaſures of the Bargain. I was likewiſe inform'd by a *Portugueſe* that a *Portugueze Carrack* had been loſt upon that Iſland about three Years before, and by that means the Inhabitants were ſo overſtock'd with Rials, that they put no eſteem upon that Coin. Accordingly I found, that tho' they had vaſt quantities of Fruits, they would not ſell them to our Men for Money, but only for Paper, white Cloth and Knives. In fine, I perceiv'd that it would coſt me 15 Days Attendance to make up two Pipes of Peaſe which I wanted; tho' I did not deſign to ſtay above three or four Days.

The 18th, having deſcry'd a couple of the Ships of that Country, I brought the Captains aboard; who gave me to know that they came from the Iſle of *Majotta*, were laden with Rice and Hung Fleſh, and were bound for *Lama* near *Bombaze*. Next Day they ſupply'd me with as much Rice, Peaſe and Hung Beef as would ſerve us for four Months: And I was glad of the Opportunity, for I could buy nothing from the Inhabitants without an infinite loſs of time: Beſides, I began to ſuſpect the Honeſty of their Intentions; for the Day before, when we were ſounding for Anchorage, ſome of the Inhabitants gave us a ſignal to come to a place, where we ſpied a long Ridge of Rocks, and had certainly been loſt if we had anſwer'd the Signal: And upon that ſcore I preſum'd that the Advantage they had made by the Shipwrack of the *Portugueze Carrack*, tempted them to wiſh us the like Fate.

The 20th, I thought to have taken up ſome freſh Water aſhoar; but finding it brackiſh, and hard to be got on board, by reaſon of the great Waves; and obſerving withal that the Ship rode in the midſt of Shelves, I dropped that deſign, and weighed Anchor on the 21ſt by break of Day. The *Arabian* Captains underſtanding that I deſign'd to double *Cape Comorin*, had adviſ'd me to ſtop at the Iſle of *Socotora* for ſix Weeks, to avoid the uſual Storms upon the Coaſt of *Malabar*. I would gladly have taken one of their Pilots along with me, to ſhew me the coaſting of that Iſland; but they pleaded the difference of Religion, and our Men's eating of Pork for an Excuſe.

A Deſcription of the Iſland of *Nangaſija*.

This Iſle of *Nangaſija* extends it ſelf from North to South about 15 or 16 Leagues, with about three or four Leagues in breadth. We could obſerve no Anchorage round it, but that where our Ship rode; which lies upon the N. N. W. Point, in 11 $\frac{1}{2}$ Deg. South Latitude, but the middle of the Iſland is in 12 Degrees South Latitude. In that place we rode at 25 or 30 Fathom Water upon a Ground of Sand. But within a Piſtol ſhot of us, there lay Flats which had not above two Foot Water at low Water; and rocky Ground all about. 'Tis a very dangerous Road, and hard to be found by Strangers. Indeed among many Inconveniencies it has theſe Advantages, that the Tide always runs againſt the Wind, ſo that the Ship rides eaſie; and that Night brings a perpetual Calm at Sea, becauſe the Wind then takes the Land: Beſides the Inconveniency of Anchorage, it is likewiſe a very improper place for taking in freſh Proviſions; for its Water is very bad, and the Inhabitants are ſo over cautious, that they will be two Hours in marketting to the value of five pence. So that *Majotta* is upon that ſcore infinitely preferable to it. The Iſland it ſelf affords a pleaſant proſpect, eſpecially to the Northward; for on that ſide the Mountains riſe gradually, being clad with ſeveral ſorts of Trees; and below upon a large Creek of Sand along the Sea-ſhoar, there ſtands a great many Houſes, ſhelter'd with an infinite number of Coco, Orange and Citron Trees. Their Oranges are ſmall, but very ſweet and delicious, reſembling both in ſhape and taſte thoſe of *China*. The Inhabitants are *Negroes*, and call their Iſland *Nangaſija*. They are all very zealous *Mahometans*, and mark'd with a hot Iron on the Temples and middle of their Forehead. They are neither ſo handſome, nor ſo well ſhap'd as the Negroes of St. *Laurence*.

The Religion and Government of the Natives.

The Iſland is govern'd by 15 petty Kings; of whom the King of the place where the Anchorage is, is the ſtrongſt and the beſt ally'd. Theſe Kings War with one another, and ſell the Priſoners of War to the *Portugueze* and other Nations.

Their way of Fighting.

Their Fighting conſiſts in throwing of Stones, beating one another with Sticks burnt at the end, and flinging Sand in one anothers Eyes. We ſaw no Arms among them, but what the King had; and thoſe were Fuſees and Piſtols, which the *Engliſh* preſented him ſome time ago, and which he valued mightily.

They are reckoned great Sorcerers, but are civil and reſpectful enough to Strangers, unleſs it be when they ſee a Stranger ſtand upright and make Water, for then they ridicule him with a prodigious ſhouting.

A ſtrange way of building Ships.

The *Arabian* Ships, which they call *Pangays*, are ſtrangely built; for the Planks are neither nail'd nor cauk'd, but ſowed together with a ſort of Thread made of the Rind of the *Coco* Tree, and tarr'd or pitch'd above the Seams: ſo that they are very leaky, and there are always five or ſix Men employed to lave out the Water, beſides, that they always obſerve the Seaſons of the Trade Winds, ſo as to Sail right before the Wind, for they won't venture to ſet their ſide to the Wind-ward. They are undeckt, and may carry about fifty or ſixty Tun.

Juan de Caſtraval deſcried.

When we weighed Anchor in this Road, we ſtood N. N. E. and without the Points of the Land met violent Tides bearing to the Windward, *i. e.* S. S. W. At Night we deſcry'd another tall Iſland to the Sea-ward, which muſt be that call'd in the Maps *Juan de Caſtraval*, and lies fifteen Leagues N. E. $\frac{1}{4}$ N. from *Nangaſija*:

The 28th we croſs'd the Equinoctial Line; and *July* the 1ſt, the Wind blowing very high, ſail'd 55 Leagues in 24 Hours, notwithſtanding that moſt of our Sails were furl'd; which gave me to underſtand that upon that Coaſt the Tides run rapidly before the Wind. Next Morning we diſcover'd a clear and rocky Coaſt, with good Ground a great way off from it; for at three Leagues diſtance, we had 30 Fathom Water, upon a fine white Sand.

July the 2d, we ſtood againſt the Wind, hoping the Storm would abate upon the change of the Moon, but by our Latitude found that the Tide and Storm had carried us 38 Leagues, tho' in the Night we ſtood to the Sea, and by Day to the Land; which ſeemed very wonderful.

Cape Orp'n.

The 4th, we made Cape *Orpin* (which in the Maps is plac'd in 10 Degrees Latitude) and drop'd two Anchors, the Storm ſtill continuing.

The 8th, it blew ſo very hard that a Man could not walk upon Deck; upon which, we try'd all the Inventions imaginable, of lowering our Top-Maſt, running out above a hundred and eighty Fathom Cable to every Anchor, &c. for our Pilots declar'd us to be loſt. At the ſame time our Pinnace was drove from two Anchors, the Ropes being cut by the Rock.

The 14th, 15th, and 16th, it blew ſtill harder, inſomuch, that the Pinnace was oblig'd to quit the Coaſt.

But the 17th, ſhe returned and caſt Anchor nearer the ſhore, at ſix Fathom Water upon very good Ground.

The high Winds continued without intermiſſion till the 3d of *Auguſt*; during which time we could neither ſend our Boat aſhoar, nor hoiſt up a Sail. However I reſolved to ſtand for Cape *Guardafu*, in order to conſider the ſtate of our Tackling as well as to take in freſh Water, and receive Directions from the Natives about our coaſting on *Socotora*, where none of us had ever been. With this view I fitted out our Long-Boat with Proviſions for three Days, ordering the Men by all means to make the Land, and know of the Natives where they might come at freſh Water.

They returned on the 12th, and reported that they had coaſted along the Shore to the Eaſtward of the place where we rode under ſteep Mountains, on the tops of which they ſaw ſeveral Perſons in a mean *Arabian* Habit, who ſeem'd to them to be Negroes, and threw ſo many Stones upon 'em from the tops of the Mountains, that they were obliged to ſteer off, for notwithſtanding all the Signals they could make of Peace and Friendſhip, the Natives ſignified by their Swords and *Aſſagays*, that if they came aſhoar they would cut their Throats. Upon that, they ſteer'd to that part of the Coaſt which was oppoſite to our Anchorage; where ſome of 'em got up the Precipice by a gap, and found an open Champain Country as far as they could ſee, without any Trees, unleſs it were ſome wither'd Buſhes, and ſome Herbs burnt up by the Sun. They ſaw likewiſe two or three of the Natives, who fled further into the Country. Having lain that Night under the Precipice, they ſteer'd next Day two or three Leagues to the Weſtward, and ſaw ſome Natives along the Shoar, who marched up Hill as ſoon as the Boat offer'd to come near them. After that they doubled the Cape, from which, a ridge of Rocks ſhoots above half a League into the Sea; and there found a large Bay three Leagues broad, and ſhooting very far into the *Terra Firma*, but very ſhallow; for about two Leagues from the Mouth of it they found but 3 and 4 Foot Water, the ground Sand and thick Gravel, with a great deal of Wreck and an infinity of Fiſh. In this Bay they found two of the Natives a fiſhing, who fled as ſoon as they made up to them. Our Men went aſhoar here, and met with a great many of the Inhabitants, who, notwithſtanding all the Signals they could make of a White Standard, *&c.* ſtill fled from them, crying aloud *La Ilach, Illalach, Mahomet reſul Alack*, which is the Mahometan Confeſſion of Faith. Upon the Shore they found an *Arabian* Boat with nothing in it; a little further in the Country they met with a few ſmall Trees, and a little Lodge, with two or three very pretty Mats in it, which they did not touch. After they had reimbark'd, they ſaw the Natives peep out again; but could find no opportunity of treating with them, whether by friendſhip or force. Upon this unfavourable Report I reſolved to weigh Anchor as ſoon as the Storm abated.

Cape Orpin a very bad Anchorage.

This Anchorage, in which we encounter'd ſuch violent Storms, and which is indeed the Winter of that Country, lies in 10 ½ Deg. N. Lat. the Needle varying 17 ½ Deg. N. W. and the Coaſt running E. and W. I would not adviſe any one to pitch upon that place to lie in till the proper ſeaſon of Coaſting upon *Malabar*; for not only the Land is deſart and inacceſſible, by reaſon of the continual violence of the Wind, which never varies further than from S. S. W. to S. W. but it affords no Water, neither from Earth nor Heaven, as being altogether deſtitute of Rain.

The Storm being abated, we weighed Anchor the 17th; and the 18th, came within a League of Cape *Guardafu*. That Night we tack'd about and ſtood to the Sea, ſteering E. ¼ S.E. and E. S.E. in order to make the Iſles of *Curia Muria*, which lie between the Iſle of *Socotora* and the Cape, and afford good Water. But miſſing of them we return'd next Morning, ſtanding for the *Cape*; and in the Afternoon came to an Anchor within Cape *Guardafu*, at nine Fathom Water, upon good Ground, within one fourth of a League of the Land, that runs away N. W. ¼ W. Next Morning, I ſent one Boat's Crew in queſt of ſome Spring of freſh Water falling from the Mountain into the Sea on its South ſide; and another to coaſt along the Shoar N. W. ¾ W. which extends to the Mouth of the *Red-Sea*, in order to find Water, or to ſpeak with ſome of the Inhabitants. At the ſame time I ſent out the little Skiff to try what convenience they could have for fiſhing. The Skiff brought back word, that all along the Shoar for 20 or 30 Paces, the Ground was ſo Rocky, that they durſt not venture to bend their Sean. Thoſe who went in queſt of Water to the Southward, returned half dead with thirſt and fatigue; and gave me to know that they had travelled four or five Leagues into the Country, which was extreamly deſart, dry, and unſufferably hot, the Sun being in the Zenith of the Horizon, and there being no Shade nor Wind. The other Boat's Crew reported, that about three Leagues W.N.W. from us, they came to a place, which ſeem'd to be pretty green in compariſon of that dry Country; where they went aſhoar, and meeting with ten or twelve Negroes, ask'd them (as well as they could) where they could have Water to drink; that one of the Negroes ask'd a piece of Cotton-Cloth that one of the Sea-men had as a reward for the Diſcovery, and upon having it, ſhew'd him, ſome Ditches and Wells dug out of the Ground, in which was abundance of Water; and that the ſaid Negroes ask'd them if they were *Engliſh*, and promiſed to give them Cattle in exchange. Upon this Report, we weighed Anchor and ſet ſail for that place.

The Water about Cape *Guardafu* partly freſh, partly Salt.

The 22d about Noon, we came to an Anchor at ſix Fathom Water, bad Ground, about four Leagues within Cape *Guardafu*, over againſt ſome Buſhes and Greens which are not common upon that Coaſt. Having ſet 30 Men aſhoar to dig for Water, I found, that the Water which came in great abundance after they had dig'd but one Foot deep, was at firſt ſweet; but after we had fill'd a Barrel or two the reſt came very Salt; inſomuch, that for 22 Tun of Water, we were obliged to dig in above 70 places; which we did in leſs than 4 Hours, the Soil being Sand. While we lay here it was inſufferably hot without any Wind.

Cape *Guardafu* lies in 12 Degr. N. Lat. the Needle varying 17 ½ Deg. N. W. 'Tis the higheſt Land upon all this Coaſt, and riſes to a Precipice. All this Coaſt is wonderfully deſart and ſcorch'd by the Sun; inſomuch that I do not believe there is a hotter place in the World. We ſaw no appearance of Houſes; but there appear'd to us ſome Men wandering upon the Shoar, who were ſo large that we ſhould have taken them for Rocks if we had not ſeen them move. I ſaw one of their Bows, which by its largeneſs and ſtrength, ſpoke the hugh Stature of its Owner.

Very large Men.

Under the Cape there's no Wind.

I was mightily ſurpriz'd to find no manner of Wind when we lay cloſe by this Cape, whereas it had blown ſo very hard but a few Leagues off, in the Lat. of 10 ½ Degr. The Reaſon I imagine to be this; that Point of Land lying in 10 ½ Deg. Lat. being a Peninſula, not above 3 or 4 Leagues broad, ſerves for a Shock to heighten and inflame the Wind which runs along the Coaſt N. E. and S. W. Whereas Cape *Guardafu* is very high, and the Wind paſſing over a long Tract of dry and hot Land, in conjunction with the Rays of the Sun, does ſo heat its Surface, that the Wind is waſted above it.

The Sea ſtain'd with Red-Spots

The 27th we weighed Anchor; and as we advanc'd toward the Sea, found the Wind brisker. After we had ſail'd about 12 Hours we fell in with great Tides running out of the *Red-Sea*; and a few Hours after that found the Sea very much troubled and ſtain'd with red ſpots. Some took it for Flats; but we could diſcover no ſuch thing by ſounding. My Senſe of the matter was, that, we being then in the Mouth of the *Red-Sea*, and that being the Day of the Moon's Conjunction, ſome great Floods join'd to the Preſſure of the Sea, had occaſion'd the Violence of the Tides.

Next Day, a conſultation of the Pilots being call'd, 'twas reſolv'd that we ſhould run ſeven or eight Days to and again in the Mouth of the *Red-Sea*, for fear the Wind we then had ſhould waft us too ſoon upon the Coaſt of *Malabar*. Purſuant to this Reſolution, we ſteer'd North, towards the Coaſt of *Arabia*.

Carambe-rumma, a Frankincenſe Iſland on the Coaſt of *Arabia.*

Auguſt 31. We came within two Leagues of the Coaſt of *Arabia*. We were then in 14 ⅓ Degr. Lat. over againſt a Bay, in which, according to the vulgar Maps, there ſhould be ſome Iſlands call'd *Caramberumma*, and *Xael*, which produce great Quantities of Frankincenſe. I thought to have made *Caramberumma*, but the contrary Winds and Tides prevented me. *I* underſtand that there come to that place, every Year, a great many *Mahometan* Pilgrims; ſome of whom continue there a long time.

Thornbacks almoſt impenetrable.

In the entry of the *Red Sea*, and along the Coaſt of the *Abaſſines*, or *Gurdafines*, there is a prodigious quantity of Fiſh, eſpecially Thornbacks, ſome of which are as long as a Boat, and proportionably thick. Some of our Men ſtruck at them with a Graple, but it pierc'd their Skin no more than if it had been ſo much Iron. This Coaſt of *Arabia* is ſandy, and in ſome places low; but in the Inland parts there are very high Mountains, which were cover'd with Fog all the time we were there. The Calm obliging me to ſtay in the Mouth of the *Red Sea*, till *September* the 10th; *I* began to be apprehenſive we might come too late to double Cape *Comorin*: And for that reaſon ſtood N. E. with what E. and E. S. E. Wind we had; till we fell in with the S. W. Winds, and ſo ſteer'd our Courſe S.

A Conſultation what Courſe to ſteer.

Having call'd a Conſultation of the Pilots, and other Officers, in order to determine what Courſe we ſhould ſteer to Cape *Comorin*, whether through the Channel of *Mammale*, or along the Coaſt of *Malabar*. 'Twas alledg'd, that paſſing through *Mammale* at that Seaſon, would abridge our Voyage, by leading us into a clear Sea as far as *Achen*. But on the other hand, the Tides running N. W. were againſt us, and to ſtand S. S. E. we ſhould be oblig'd to ſail cloſe by the Wind; ſo that the Ship would make but little way, and for that Reaſon 'twas alledg'd, that we might ſooner make the Coaſt of *Malabar*, than the Latitude of that Channel. And for my part, I was apprehenſive of being becalm'd on that Coaſt, upon which we had 120 Leagues to ſail, before we could double Cape *Comorin*. 'Twas likewiſe alledg'd, that we could not reach the Latitude of that Channel (which was 9 Degr.) without falling in upon the *Terra Firma*, by reaſon that ſtanding S. E. would make no more than an E. Courſe.

Others again pleaded, that ſtanding S. S. E. would do our buſineſs.

In this difference of Opinions, I reſolv'd to put the Caſe to a Trial, by ſtanding S. S. E. and remarking from the Latitudes what way we made. Accordingly we ſteer'd S. S. E. till next Day at Noon; and then having taken the Latitude, found that our way was no better than E. S. E.

After that, I call'd together the Pilots again; the Majority of whom agreed, that we ſhould go directly in queſt of the Coaſt of *Malabar*, in the Lat. of 13 ' Degr. The chief Reaſon they inſiſted upon, was, that the Channel of *Mammale* lying in 9 ¼ Degr. it would be a long time before we could reach it; beſides, that in that Courſe we ſhould be in danger of falling in with the Flatts to the Northward of the Channel. Tho' I was very apprehenſive of being becalm'd on the Coaſt of *Malabar*, yet I yielded to the plurality of Votes, and ſtood E. S. E.

They make the Coaſt of *Malabar*.

The 26th we came in ſight of the Coaſt of *Malabar*, which is very high and mountainous within the Country.

The 27th we deſcry'd Mount *Deli*, about eight Leagues off, which lies between *Cranganor*, and *Mangalor*, and appears at that diſtance like an Iſland. In that place the Needle vary'd 15 ¼ Degr. N. W. Having ſpy'd a Galliot about a League off, and the Wind veering about to the North, we gave her chace, but could not come up with her.

The 28th being becalm'd, we ſaw a Ship two Leagues to the Windward of us; and I ſent M. *Monteurier* with 23 Men in the Long-Boat, ordering them not to board the Ship, but to command the Captain to ſend his Pilots and the Purſer aboard of us, and to acquaint him that I deſign'd 'em no harm, but only to know if it was not too late to double Cape *Comorin*. Sometime after, I ſaw our Long-Boat board the Ship, and ſome Muskets fir'd, and after that a Boat came off from the Ship, and made towards us. The Calm continuing, and the Boat advancing but ſlowly, I ſent out our Skiff to know their News, which I was in pain to hear. Upon its return, I underſtood that the People in the Boat were five of our Men, three of whom were dangerouſly wounded. When theſe came aboard, they recounted a Tragical Story, *viz.* That upon their approach to the Ship, which was a large one, M. *Monteurier* gave 'em Notice to lower their Sails; that they not obeying, he fir'd upon them two Braſs Guns, and a Broadſide of Musket-ſhot; that thereupon they ſtruck, and told him, he might board them if he would; upon which our Men boarded them upon the Quarter-Deck, and having kill'd all the Men abaft, thought themſelves entirely Maſters of the Ship; when of a ſudden 60 or 80 Men ſtarted up in the Forecaſtle, and with Shields and Hangers in their Hands, fell upon our Men with ſuch fury, that they oblig'd them to retire to the Boat; but by an unlucky miſchance, the Boat was ſo belaged, that they could not diſengage her, ſo that moſt of our Men were kill'd with Pick-axes, Arrows, and Pot-Grenadoes, which were thrown into the Boat; and the reſt being forc'd to leap into the Sea, one of 'em ſwim'd to the Moors Boat, and having cut the Cable, ſav'd himſelf and the other four Men, without ſtaying for the reſt, who in all probability were drown'd.

Next Morning I made all the Sail I could to come up with the Ship; and having boarded it, found no Body aboard but fifteen poor old Wretches, with white Beards reaching to their Girdle, who with Tears and Lamentations threw themſelves at my Feet, and rais'd my Compaſſion more than Revenge; beſides, that the five Men who were ſav'd, unanimouſly aſſur'd me, that they did not ſee them in the Engagement. The Account I had from theſe Men, was, that the Ship having carry'd a Cargoe of Pepper to *Mecca*, was upon her return to *Panama* near *Calecut*, to which place ſhe belong'd; that themſelves were poor People coming from *Mecca*, to beg upon that Coaſt; that the Owners of the Ship, in number 80, had gone off the Night before in our Boat, with their Gold and Silver, and the Boat being almoſt overladen, had left them behind. Upon the whole, I conſider'd that theſe poor Men were innocent, and that the Ambition and Avarice of our Men was the Cauſe of their Death, ſince the Moors had ſtruck, and deſign'd them no harm, till our Men fell upon them: For theſe Reaſons I ſpar'd the poor old Men.

I found aboard of the Ship, a great quantity of Salt, Dates, Wine, two Punchions of Opium, ſome Hundreds of Pounds of Coral, ſome Cotton Cloth of ſmall value, Roſe-water, and Knives; and I underſtood from the old Men, that if our Men had not boarded the Ship, the Owners could have furniſh'd me with 40000 Duckets of *Caire*, which is a Golden Coyn worth about four Livres a piece.

They paſs Cape *Comorin*.

October 2. We were off of Cape *Comorin*, in the Latitude of 7 Deg. and 50 Min. the Needle varying 14 ¼ Deg. the Tides bearing to the South, having carry'd us further off than we deſign'd. After that, being adviſ'd by our Pilots to ſtand for *Ticow* rather than *Achen*, I ſteer'd S. E. and S. E. ¼ E.

The 11th we had a violent Guſt of Wind, which laſted for two Hours; and ſoon after had another, which broke our Fore-maſt; being then in 1 ¼ Degr. S. Lat.

The 12th being in 1 Degr. 10 Min. S. Lat. we ſaw little Land-Fowls, which made us hope to ſee the Land in a ſhort time; moſt of my Ship's Crew, as well as that of the Advice-Boat, being then ſick.

A Pilot conducts them to *Ticow*.

November 11. We came in ſight of Land in 1 Degr. 40 Min. N. Lat. But the frequency of the Calms, and the ſickneſs of my Men, retarded me mightily; for the Pinnace had not above two or three Hands fit for Buſineſs, and in our Ship there were not eighteen that were able to work. Beſides, both our Surgeons were dead. I deſcry'd ſeveral Ships of that Country under Sail, and put out a White Ancient to make them ſteer towards us. At laſt finding they would not come, I ſent out my Skiff to ſpeak with one that ſtood between us and the Shoar; tho' they endeavour'd to run aſhore, yet the Skiff came up with them, and agreed to give 35 Pieces of Eight for a Pilot to conduct us to *Ticow*: They were of *Priaman*, a Town about 8 or 10 Leagues to the Southward of *Ticow*, and told our Men, That *Ticow* lay about 7 or 8 Leagues off, beyond ſome Iſlands that were in head of us. Our Pilot carry'd us nearer the *Terra Firma* than we were; and when we came to be off of the above-mention'd Iſlands, made us put back to Sea.

Having paſt theſe Iſlands, we came in ſight of an high Promontory of the *Terra Firma*, which had two Banks, one about half a League before its outmoſt Point, and another about two Leagues to the S. E. of it; and we had certainly run foul of the laſt, if one of our Men had not given us Notice of it from the Main-maſt-top; for we could not ſpy it upon the Deck, and our Pilot had told us nothing of the matter.

Having weather'd this dangerous place, and ſtanding S. S. E. we ſaw another in head of us, about a large League diſtant from the laſt. We ſteer'd between theſe two, which lie S. E. and N. W. ſounding all the way, and had all along 16 Fathom Water, the Ground Mud with a little Sand. The Night overtaking us, we were oblig'd to drop an Anchor between them.

Pageman.

This place lies off of a place call'd *Pageman*, juſt under the Equinoctial, which affords a great deal of Pepper;

making a large Creek, the bottom of which is a low Country cover'd with Wood; but in the Inland Parts there ſtands an high Mountain pointed like a Pike, which is ſeen above 30 Leagues off, and runs S. E. ¼ E. Having weather'd the Point of this Creek, we deſcry'd the three Iſlands of *Ticow*; and at laſt, after having ſpent two Months upon a Voyage, that's commonly perform'd in eight Days, landed at *Ticow* the firſt of *December*.

Between that time and the Second of *October*, I had loſt 25 Men; and if the Calm had but continu'd fifteen Days longer, I believe I had loſt all the Men in my Ship.

The *Dutch* and *Engliſh* expell'd at *Ticow*.

We caſt Anchor at *Ticow*, between the greateſt of the Iſlands, and the *Terra Firma*, at 4 Fathom Water, the Ground Mud; and ſent our Skiff aſhore, which brought us one *Pedro*, who had been Interpreter to the *Engliſh* Factory in that place. This Interpreter told me, That the *Engliſh* and *Dutch* had been expell'd that place, by the King of *Achen*, two Months ago; and that there was a great deal of Pepper aſhore; but we could not buy it without a Licence from the King of *Achen*, who was Lord of all that Coaſt.

The *Hope* loſes their Long-Boat and 13 Men.

He likewiſe acquainted me, that the *Hope* (our Vice-Admiral) had touch'd upon the Coaſt, about 20 Leagues off, in the latter end of *July*, and had ſent their Long-Boat with 15 Men to this place, to take in freſh Proviſions, which they wanted mightily; that upon the Boats arrival, a *Dutch* Ship in the Road fir'd upon them; but upon Complaint excus'd themſelves, pleading, that they took 'em to be *Engliſh*; that the 15 Men having met with a kind Reception from the Governour, and taken in what Proviſions they wanted, ſet out in queſt of their own Ship, but could never meet with it, upon which they return'd to this place, where ſeven of 'em dy'd in *October*, four went for *Achen* in a *Dutch* Ship, three for *Bantam* in another *Dutch* Ship, and one continu'd in the Country, and earn'd his Bread by gathering of Pepper.

I was infinitely griev'd to hear that Captain *Grave* had been ſo inconſiderate as to ſend his Long-Boat ſo far from him; eſpecially when I was inform'd, that among the 15 Men he had loſt, there were two principal Commiſſaries, and a Pilot.

Upon further enquiry *Pedro* inform'd me, That the place where the *Hope* had caſt Anchor, was a great Iſland about 20 Leagues to the Weſtward of that place; that, for a certainty, they had not ſuffer'd Shipwreck, either upon that Iſland, or along the Coaſt, ſince the Praws (ſo the Ships of that Country are call'd), going to and again, had never diſcover'd any Wreck; that the two Commiſſaries, before they dy'd, were of Opinion, that the Ship had been drove from her Anchors by Storm, and not being able to make her former Station, made the beſt of her way to *Bantam*, expecting that I would touch at this place according to my Promiſe, and take up her Men.

The *Dutch* unkind to the *French* at *Ticow*.

As to the Affront offer'd 'em by the *Dutch*, he gave me to know, That the *Dutch* knew 'em to be *French*, having ſpoke with them before they fir'd; that the News of the Peace between the *Dutch* and *Engliſh*, was arriv'd before this happen'd; that the *Dutch* had repreſented to the Governour and Inhabitants of that place, that the *French* were Robbers, and mean'd only to obſerve the Landing-place, in order to ſack them; that they would not aſſiſt our two Commiſſaries any manner of way, whether in Health or Sickneſs, nor give the leaſt Relief to any of our Men, bating ſome few Sailors that they ſtood in need of, and that the *Engliſh* had ſerv'd our Men to the utmoſt of their power. He added, that the Governour was very ſenſible of the Malice of the *Dutch*, who meant only to engroſs the *Indies* to themſelves, and had but lately abus'd the King of *Jacatra*, and uſurp'd his Territories; for which Reaſon the King of *Achen* thought fit to diſlodge 'em of *Ticow*.

Why the *Dutch* were expell'd *Ticow*.

As to the Death of our Men, he ſaid, it had been a very ſickly Year in that place, as ever was ſeen; but that after all, the *Dutch* were ſuſpected of having ſhorten'd their Days, conſidering that thoſe who dy'd were the Perſons they hated moſt, and were not the firſt who had receiv'd Poiſon from their Hands; witneſs the Death of ſeveral *Engliſh-men* occaſion'd by that means.

I queſtion'd him about the Injury done by the *Dutch* to the King of *Jacatra*, and whether they had laid Siege to *Bantam*. He aſſur'd me, that it was ſtill beſieg'd, inſomuch, that there was no Commerce or Traffick with that City; that the *Dutch* had poſſeſs'd themſelves of *Jacatra*, and expell'd the King; that they had raz'd the ancient City, and built a ſtrong Fort, and a City after the Faſhion of their own Country, which they had peopled with all ſorts of Nations; and in fine, that they were at that time Maſters of the Streight of *Sonda*, where no Body could ſail without their Paſſport. Having maturely weigh'd all the Particulars of this Advice, I reſolv'd to ſend both to *Achen* and to *Bantam* at any rate, to have ſome Account of Capt. *Grave* and his Ship, whoſe Condition I was mightily concern'd for.

December 2. The King and Governour allowing me to come aſhore, I carried ſome Preſents along with me, without which one will ſcarce be made Welcome in that Country. Upon my landing, the Governour, and principal Officers, gave me an honourable Reception, under a Roof, or Baly (as they call it). Having told 'em my Country and Buſineſs, they gave me to know, that I was free to buy up what Proviſions I wanted, provided I paid for 'em in Rials and Knives, and no other Commodity; that as for Pepper, and the other Commodities of the Country, they could not diſpoſe of any without a Licence from the King; but if I would go to *Achen*, and obtain leave of the King to erect a Factory with them, they would be glad to deal with us. I ask'd leave to hire a Houſe in the City, for accommodating my ſick Men, and thoſe who were to tarry aſhore to buy up Proviſions. But they reply'd, That they could not anſwer for the Safety of my Men aſhore, there being ſo many Rogues about the Town; but if I pleas'd, I might leave two Men to buy up Proviſions, and that only for the ſpace of five Day.

No Trading at *Ticow*, without a Licence from the K. of *Achen*.

Next Day I ſent a Letter to *Achen*, directed for Monſ. *Grave*, Captain of the *Hope*, if he was there; having oblig'd the Maſter of a Praw bound thither, by ſome Preſents, and Promiſes of Reward, to carry it.

The 6th I agreed with the Maſter of a Praw that liv'd at *Ticow*, to give him 100 Rials for carrying one of my Men to *Bantam*, or *Jacatra*, in queſt of the *Hope*; provided he return'd in 20 Days. The Articles of Agreement were drawn up in Writing, and lodg'd in the Hands of *Pedro* the *Engliſh* Interpreter; and both he and the Maſter of the Praw deſir'd, that his Voyage might be conceal'd from the Governour and Inhabitants of *Ticow*.

The Governour having ſent me a Buffle, and ſome Fruit, I went to return him Thanks; and by Virtue of ſome Preſents *I* made him, obtain'd leave to hire a Houſe, in which *I* lodg'd 43 ſick Men, with three Surgeons, a Prieſt, and three more to wait upon 'em. In the mean time, *I* had ſeveral Preſents ſent me of Fruit and young Kids; particularly from the Governour of *Priaman* (a Town about eight Leagues off) who preſs'd me earneſtly to give him a Viſit. *I* return'd him Thanks, together with ſome Preſents, and a Promiſe to come and wait upon him with the firſt opportunity.

The 8th an *Achen* Galliot arriving, aſſur'd me, that no *French* Ship had touch'd at *Achen*; upon which *I* concluded, that our Vice-Admiral muſt of neceſſity be either at *Bantam* or *Jacatra*.

They fortifie their Ship for fear of the Natives.

The 10th, there arriv'd three Galleys pertaining to the King of *Achen*, with an Elephant, and ſome 300 Men in each of 'em: And the Inhabitants of *Ticow* acquainted me, that they expected a further Reinforcement of Elephants and Men, in order to carry on a War againſt a Prince that had revolted from the King of *Achen*. Upon this News, conſidering *I* had 50 Men at *Ticow*, and 50 more at the Iſland with the Water-Caſks, beſides 8 or 10 that were always out with the Skiff; ſo that *I* had few Men left on Board, tho' at the ſame time *I* us'd to have 80 or 100 of the Natives on Board, ſome by way of Viſit, and others to ſell their Eggs, Fruit, Pullets, Fiſh, and other Proviſions: Upon theſe Conſiderations *I* nail'd down the Hatches, and run a Rail between the Great Maſt and the Fore-Maſt, which was fortified by two great Pedereroes mounted on Wheels, and five more upon the Bittacle; together with a Guard upon the Deck, and two Musketteers, with as many Halberdeers ſtanding at a Door in the ſaid Rail, which *I* never ſuffer'd to be open'd, but when *I* receiv'd a Viſitant into my Cabin: So that 200 Men upon the Deck could do us no injury, while our Men were upon their Guard.

The Inhabitants of *Ticow* fond of a *French* Factory.

The 13th *I* went aſhoar, and found my Men recovering by degrees. Being to wait upon the Governour, to ask leave to ſtay fifteen Days longer, he granted my Requeſt; but withal intreated me to go to *Achen*, and obtain a Licence of the King for erecting a *French* Factory, which would be infinitely more acceptable to the Inhabitants, than that of any other Nation. He likewiſe deſir'd me not to be jealous of the Inhabitants, or fear any injury from them; which it ſeem'd *I* did, ſince *I* had made a Fortification in my Ship, and mounted more Guns than before.

I made Anſwer, That my coming ſo careleſly aſhore, and leaving 50 ſick Perſons in their hands, was ſufficient Evidence of the Confidence *I* put in the Natives; that the deſign of the Barrier in my Ship, was only to keep out thoſe *I* did not know from running into my Cabin, that ſo *I* might be capable to diſtinguiſh an Orankaye (or a noted Gentleman) from a Fiſher-man; and that I had not mounted ſo many Pieces of Cannon, if I had not heard that two *Dutch* Ships were expected here, of whom *I* had reaſon to be jealous. Upon this he told me, *I* had a great deal more reaſon to miſtruſt the *Dutch* than them: And that if *I* pleas'd, he would forbid the Natives to go on board of me. But *I* aſſur'd him, they ſhould be at all times very welcome, and that *I* did not at all miſtruſt 'em. After that, *I* viſited the Captains of the three Galleys, who aſſur'd me afreſh, that there had no *French* Ship come lately to *Achen*.

The 19th, the King of *Ticow*'s eldeſt Son viſited me on board with a great Retinue; and *I* gave him the beſt Reception *I* could. That Night the Praw *I* had ſent to *Bantam* return'd in 11 Days; and the Maſter made the following Report:

Surabaya.

Four Days after they had put to Sea, they arriv'd at the Port of *Surabaya*, which lies on this Coaſt of *Sumatra*, in 4 Degr. S. Lat. There being a *Dutch* Ship in the Road, Mr. *Iſaac* (the Man whom *I* had ſent on board of the Praw, in queſt of the Vice-Admiral) would needs ſpeak with them, tho' he diſſwaded him; the *Dutch* Captain acquainted him, That *Bantam* was block'd up ſo, that no Ships of any Nation could get in; that the *Hope*, which was then at *Jacatra*, had been in great Diſtreſs upon that Coaſt, there being only 4 or 5 Men on board, till a *Dutch* Veſſel re-inforc'd her; and that the Streight of *Sonda* was infeſted with the *Java* Praws and Caracau's, they having from the King of *Bantam* a Sum of Money for every Head they kill'd of what Nation ſoever. Upon this Advice Mr. *Iſaac* thought it not ſafe to go further in the Praw, but took the opportunity of a Veſſel, the Maſter of which promis'd to land him in *Jacatra* in 7 or 8 Days. The Maſter of the Praw brought likewiſe a Letter from Mr. *Iſaac*, containing the foregoing Account.

Theſe News vex'd me more than the former; for *I* had poſitively order'd *Iſaac* not to ſtop for any Ship, but to go ſtrait on. After mature deliberation we reſolv'd not to go to *Bantam*, where our Ship and Cargoe might be in danger in a time of War, beſides that we ſhould be oblig'd to ſpend *January* and *February* in going thither, and managing the Traffick of the place, and *March* would be too late a Seaſon for returning along this Coaſt to *Achen*. At the ſame time we diſpatch'd the Advice-Boat with a Re-inforcement of 20 Men for *Jacatra*, in order to aſſiſt and ſupply Capt. *Grave*; whom we order'd to return to *France*, if he could get his Lading at *Bantam*; or if he fail'd of it there, to return forthwith to *Achen*, where he would find us.

The Soil of *Ticow*.

Ticow lies in 20 Min. S. Lat. The Inland Country is very high, but towards the Shore it falls very low, being cover'd with Woods, and water'd with ſeveral little Rivers, which render it marſhy. 'Tis grac'd with ſeveral pleaſant Meadows well ſtock'd with Buffles and Oxen, which may be purchas'd for 4 or 5 Rials apiece. It affords plenty of Rice, Cattle, Poultry, Ducks, and ſeveral good Fruits, ſuch as Durions, Anana's, Patatoes, Mangoes, Pomegranates, Oranges, Citrons, Water-Melons, Cucumbers, *&c.* The Riches of the Country conſiſt in Pepper, which it produces very plentifully, and which is much better than that of *Bantam*. As for other Rarities, Drugs, and Manufactures, it affords none of 'em.

Its Commodities.

The City of *Ticow*.

The City of *Ticow* is but a ſorry place; it lies about half a League from the Sea-ſide. Upon the Shore, oppoſite to the little Iſland where the Ships ride, there are ſome Houſes, and a ſort of Halls. But both the City and Suburbs will not make 800 Houſes, which are built of Reeds, and are neither ſtrong nor convenient. However the Country is very populous, eſpecially at the foot of the Mountains, where the Pepper grows.

Its Government.

The King of *Ticow* is Subject to the King of *Achen*, who puts in a new Governour every three Years, without whom the King of *Ticow* cannot do any thing of importance; ſo that Foreigners have more Buſineſs with the Governour, than with the King; nay, the very Inhabitants pay more Reſpect to him, calling him *Pangaran Lima*. The Inhabitants of the City are *Malays*, and no other Language is ſpoken all along that Coaſt. The Inland parts are poſſeſs'd by the Natives, who diſown the King of *Achen*'s Authority, having a peculiar Language, and Kings of their own. Theſe are Idolaters, and eat Human Fleſh. They have rich Gold Mines, but do not know how to manage 'em; for they only gather the Gold out of ſome little Ditches, which are not very deep, and out of the Cavities made by Floods. This Gold they exchange with the *Dutch*, or the Inhabitants near the Shoar for Pepper, Salt, Iron, Cotton Cloth dy'd red, and *Surat* Pearl, which they eſteem mightily. But among the *Malays* Gold is as dear as in *France*; and in *Achen* 'tis yet dearer. Theſe *Malays* are all of 'em very ſuperſtitious *Mahometans*, but withal great Robbers, inſomuch that the People are not ſafe in their Houſes in the Night-time, and far leſs in the Fields. They are of an Olive Colour. Their Women are all kept up, and not ſuffer'd to appear in the Streets.

A Character of the *Malays*.

From *July* to *October* their Air is very unhealthy, being attended with Fevers that ſeldom admit of a Cure: Inſomuch, that if it were not for their Pepper, no Body would venture to come near 'em. They gather Pepper at any time, but eſpecially in *December*, *January*, and *February*. No Trade can be carried on at this place, without a Licence from the King of *Achen*, which they call *Chappa*: And if you have that, neither the Governour nor the King can diſturb you. For want of it, *I* could neither ſell any Commodities, nor buy any Pepper while I was there; excepting about 8000 Pound, that was brought by Night from *Priaman*, and ſold me at a reaſonable Price.

The *Ticow* Money.

The *Surat* Commodities go off very well here; as well as ſome of the *Maſulipatan* Commodities. Rials are current enough; but the Money of *Achen* does not paſs among 'em: All their Money is ſome ſmall Pieces of Gold as they come from the Mine, which they weigh with Scales. They ſell their Pepper by Bahars, (a Weight containing 150 Pound *Averdupois* Weight;) and the King of *Achen* has 15 *per Cent* of all that is ſold, that is 7 ½ for the Export of the Pepper, and 7 ½ for the Import of the Rials, or Commodities given in exchange for it. This Cuſtom is paid either in Subſtance, or in Rials, over-valuing the prime Coſt.

The Duties upon Pepper.

Beſides the abovemention'd Impoſt for every hundred Bahars, we pay 25 Rials to the King of *Ticow*, and ½ of a Rial to the Weigher, and ſome inconſiderable Allowance to 10 or 12 Perſons more. But above all, one muſt make the Governour his Friend, and have a watchful Eye over the *Malays*, who are apt to wet the Pepper, or to put Sand and little Stones among it.

1621.

January 1. 1621. Having brought on board all my ſick Men, who began to recover apace; I weigh'd Anchor, and ſteer'd for *Achen*.

Barros, a principal Town on that Coaſt; its Situation & Commodities.

The 14th we were off of *Barros*, one of the moſt conſiderable places on that Coaſt, belonging to the King of *Achen*, where no Perſon can traffick without that King's leave. This place is half way between *Ticow* and *Achen*, and affords plenty of Benjamin, which ſerves the Natives for Money. 'Tis a pleaſant Country, abounding with all ſorts of Wines and Fruits; but bears no Pepper. It affords a good quantity of Camphire, which is worth 14 or 15 Rials the Carti (*i. e.* 28 Ounces). Rials will ſcarce paſs there; but the *Surat*, or Coaſt Commodities, go off very well. Both the Inhabitants of the Coaſt, and the *Dutch* and *Engliſh* buy up their Camphire, to carry it to *Surat*, and the Streight of *Sonda*.

The 23d we deſcry'd the high Lands of *Achen*, and the Iſlands that lie to the Sea-ward of the Road. We ſtood directly for theſe Iſlands, but it was eight Days before we could make them, notwithſtanding that we were but four Leagues off. For wanting a Pilot, we took the Channel that lies neareſt the Land, where the contrary S. E. Winds incommoded us very much. At laſt, with much adoe, we weather'd 'em about a League and a half from the Road, which lies oppoſite to the Mouth of a River, upon which there ſtands a Fort very remarkable for its Moſkey or *Mahometan* Church.

A Fort remarkable for its Mosks.

The King of *Achen*'s Chappe.

The 30th *I* came to an Anchor juſt by an *Engliſh* Ship of 600 Tun that rode there. Immediately a Boat came off from the Shore, with ſeveral of the King's Officers, and one of his Eunuchs carrying a Chappe (as they call it) which is a Dagger with a Gold Handle and Scabbard, belonging to the King; made uſe of for a Badge or Sign, that the Perſon who bears it is commiſſion'd by the King. After a profound Silence, he who carry'd the Chappe, welcom'd me in the King's Name, and order'd me to come forthwith a Shore. Accordingly *I* made my ſelf ready, but before *I* could come off, *I* was oblig'd to pay the Officers Dues, which amount to above 80 Rials, beſides a great Looking-Glaſs for the Eunuch, and another for a Friend of his, and ſome ſmall ones for his principal Officers.

This done, *I* came aſhore, where the Captain of the *Engliſh* Ship invited me very kindly to Dinner, and to lodge in his Houſe. *I* accepted his Invitation to Dinner, and was very handſomely entertain'd.

After Dinner *I* went to look upon a Houſe, and offer'd 40 Rials a Month for it, but could not have it under 54. In the mean time the *Engliſh* Captain complain'd heavily of the King, for that he would not let them have the Pepper under 54 Rials the Bahar, tho' 30 Rials was as much as it was worth. Finding that *I* could not ſpeak with the King that Day, and that the King had ſent his Chappe twice for an Emrauld *I* wore on my Finger, and would not be ſatisfied with my Promiſe of bringing it to morrow, I went on board again.

Febr. 1. I came aſhore again, and by the way met ſome *Portugueze*, whom the King of *Achen* had laid in Irons; and who told me, that the *Dutch* and *Engliſh* had a Deſign to poyſon me. *I* told 'em, *I* did not believe the *Engliſh* would do me any harm; however, *I* would be upon my guard. They reply'd, That if *I* went to Dine with the *Engliſh* Captain that Day, *I* would never return; and very affectionately begg'd me to avoid it, becauſe they had no hopes of being deliver'd from their Captivity, but through my means.

But after all, purſuant to my Promiſe, *I* went and Din'd with the *Engliſh* Captain, namely Mr. *Roberts*, who treated me very kindly and handſomely, and gave me nothing either to eat or drink, but what he and his Company took part of. After Dinner, the King's Officers came for the Emrauld, which *I* gave 'em; and told me, *I* could not ſpeak with the King, till the Day after the next.

Houſes dear at *Achen*.

After that, conſidering *I* was troubleſome to the *Engliſh* Captain, and that it was not my Intereſt to lodge with him, *I* agreed to give 50 Rials a Month for a Houſe.

February 2. *I* was taken with a violent Looſeneſs and Vomiting; and being apprehenſive of the truth of what the *Portugueſe* had told me, took ſome *Maldiva* Cocoes with Bezoar, which in that Country are reckon'd a Sovereign Counter-Poyſon.

Next Day *I* went aſhore, where *I* met with bad News, *viz.* That the *Dutch* and *Engliſh* had taken the *Hope* off of *Bantam*, and ſhar'd the Cargoe, and murder'd moſt of the Men; and that they would do as much to me, if they were able.

This Diſcovery came from a *Dutch-man*, who being diſoblig'd by his Country-men, had taken Protection under us in one Apartment of the Houſe *I* had taken. *I* was unwilling to take this Man on board, by reaſon that in a former Voyage *I* was challeng'd at *Bantam* for having *Dutch-men* on board, and thoſe *I* had, who were the moſt uſeful and neceſſary Officers in my Ship, were taken from me. But after all, finding that the Fellow was ready to turn *Moor*, and that he ſpoke the Language of the Country naturally, and that might be uſeful to me as an Interpreter; *I* told him, if he would lie cloſe, without giving any notice to the *Dutch* or *Engliſh*, till *I* was ready to ſet Sail, *I* would do my utmoſt to convey him on board: For *Pedro*, the *Engliſh* Interpreter, whom *I* had brought from *Ticow*, had then left my Service; being check'd and threaten'd by the *Engliſh* Factor for entring into my Service, and hated by the King's Officers, who upon my ſcrupling at firſt to pay their Dues, thought he had ſuggeſted to me ſomething to their diſadvantage.

In the mean time one of our Men, that had been drinking with the *Engliſh* Sea-men, pump'd out of them, that their Ship, in Company with the *Dutch* Ship, had given chace in the Streight of *Sunda*, to a Veſſel which they took to be *French*; that the *Dutch-man* falling behind, was mad that he could not come up with her; but their Ship being the better Sailor, made up to 'em, and found it was an *Engliſh* Veſſel, upon which they left her; that before *I* came into the Road, they hearing *I* had not twenty ſound Men, had a Deſign to take me; but finding upon my Arrival that *I* was ſo ſtrong, they dropp'd their Deſign.

The Preſumption of the *Dutch* in *Jacatra*.

The *Engliſh* Captain acquainted me, That the *Dutch* Admiral aſſum'd the Authority of King of *Jacatra*, and ſhew'd me a ſort of Money half Silver half Copper, that he had coyn'd in that Country, bearing on one ſide a Lion with a Hanger in one Hand, and Arrows in the other, and on the Reverſe *Trajectum*, in *Roman* Letters, with the Date of the Year underneath.

The 4th *I* kept aboard, and receiv'd Advice from the Shore, that a Draught was a brewing for me in the *Engliſh* Ship.

The 6th *I* was invited to Dinner on board of the *Engliſh* Ship, where *Reiſembrat*, the *Dutch* Factor, was to be preſent. *I* return'd Thanks for all their Civilities, and promis'd to wait upon 'em, if ſo be *I* was not oblig'd to go aſhore upon an Interview with the King; or, if *I* was, to ſend Capt. *Riddel* to ſupply my place.

Next Morning *I* went aſhore betimes, and ſent my Excuſe to the *Engliſh* by Capt. *Riddel*, whom *I* acquainted with the Reaſon of my abſence, and caution'd to be upon his Guard.

A Letter and Preſent deliver'd to the King of *Achen*, as from the K. of *France*.

As ſoon as *I* was aſhore, *I* clean'd and prepar'd the Preſent *I* deſign'd for the King of *Achen*; and withal, meaning to oblige him as much as poſſible, took a Blank Letter *I* had by me, with the King's Seal affix'd to it, and having adderſs'd it, *To our deareſt Brother the King of* Achen, ſeal'd it with Red Wax, bearing the Impreſſion of the Arms of *France*. That my Preſent might not be unworthy of my Prince, in whoſe Name I deſign'd to preſent it, I ſet apart the following things for that uſe. The complete Armour of a Horſeman, carv'd and gilded; a *German* Hanger, with a carv'd and gilt Hilt, upon which hung a Piſtol; ſix Muskets, the Barrels of which were partly carv'd, and partly gilt, and the But-ends enrich'd with Mother of Pearl; two Heads of Pikes enamel'd and gilded; a very large Looking-Glaſs, which was broken, but pretending I had receiv'd it entire, and that I durſt not but deliver it at any rate, having receiv'd the King's Orders to that effect; two large Flasks full of excellent Roſe-Water; and two pieces of Watered Camlet of a Crimſon Colour. Such was the Preſent that I had clean'd and put in order, in our Houſe aſhore.

The Captain of the *Surat* Veſſel came to ſee it, and told me, it was ſo magnificent a Preſent, that it was more proper for the Great Mogul his Maſter, than for the King of *Achen*.

The King's Officers came likewiſe to our Houſe, to take an Inventory of what *I* deſign'd to preſent to their Maſter, and gave me to know, That they fear'd the Preſent *I* deſign'd was not conſiderable enough for their Prince, who was a great Sovereign, and had but few Equals in the *Indies*. I reply'd, That I was not unacquainted with the Grandeur of the King of *Achen*; and at the ſame time I knew the Value of the Preſent, which came not from a private Man, but from a puiſſant King, and merited a Reception from any Potentate whatſoever; and withal, that my Maſter had given me nothing elſe to preſent.

The manner of being conducted to an Audience of the King.

The 8th I was conducted to an Audience of the King, by the Sabandar, and four of the principal Orankayes, with two Elephants; and that with the following Ceremonies. Upon a great Elephant ſate one of the principal Orankayes in a cover'd Pulpit, who ſent me a great Silver Diſh, cover'd with a Cloth embroider'd with Gold and Silk of divers Colours; in which I put the Letter, and then gave it to him. By his Command one of the other Orankayes mounted the other Elephant, and after him the Sabandar, then I, and after me another: So that four of us rode upon one Elephant, and I ſat between two Perſons.

The other two Orankayes rode upon *Arabian* Horſes, before the Elephant that carry'd the Letter.

Before them went 14 or 15 Men, each of 'em carrying a piece of the Preſent, cover'd with yellow Cloth, without which nothing could be preſented to the King. Six Trumpets, ſix Drums, and ſix Hautboys lead the Van, which ſounded till we arriv'd at the Caſtle, about a League off.

In the Rear follow'd three Sabandars, and all the Officers of the Alfandeque on foot.

When we arriv'd at the Caſtle, we alighted at a great place before it, and when we entred the outer Gate, all my Men were order'd to retire. Then we paſs'd two other Gates. I was order'd to put off my Shoes, without which Ceremony I could not have Audience of the King.

Soon after, the Royal Chappe was brought, and being firſt put into my Hands, then rais'd above my Head, and re-deliver'd to him that brought it, I was order'd to follow it, being accompany'd by a Sabandar and an Orankaye.

We waited ſome time at the King's Chamber-Door, which was cover'd with Silver Plate. At laſt an Eunuch came out, who gave the Sabandar to know, that tho' the King was more indiſpos'd that Day than uſually, yet ſince I was ſo near, he ſhould bring me in. Upon which I was led into the Chamber by two Men, one holding me by each Hand; and ſet upon a Turky-Carpet with my Legs a-croſs, in purſuance of the Cuſtom of that Country.

The Form of Salutation.

Then the two Men retir'd, and I ſaluted the King in the uſual Form, *viz.* by joyning my Hands, and lifting them up to my Forehead, bowing my Head a little. The Cuſtom does not oblige one to take off their Hat, but I being unaccuſtom'd to appear before Perſons of that Quality with my Hat on my Head, choſe to put it off. The King ſate upon a place about two Foot higher, and gave me to know by the Sabandar, That he was infinitely oblig'd to the King of *France* for the Preſent he had ſent him, which he eſteem'd more than ten Bahars of Gold. Then he open'd the Letter, and gave it to me to interpret to the Sabandar, who underſtood a little *Portugueze*. But his Knowledge of that Language was ſo very imperfect, and the Stile of the Letter ſo uncommon among them, that I could not make him underſtand it: For the very firſt word, *viz.* *Moſt Illuſtrious*, put him to a ſtand; upon which I turn'd it to *Deareſt Brother*; which the King lik'd mightily, ſaying, He knew very well that Chriſtian Princes us'd to uſher in their Letters by ſuch Expreſſions. At laſt, ſince I could not make the *Sabandar* underſtand every Word of the Letter, I repeated the ſubſtance of it in ſhort, *viz.*

That his Moſt Chriſtian Majeſty deſir'd His Mightineſs to grant me a Free and Undiſturb'd Traffick in his Territories, and promis'd in like manner to protect his Mightineſs's Subjects if any of 'em ſhould happen to come into his Kingdom; That he deſired nothing more, than that a Commerce between his Subjects and thoſe of *Achen*, ſhould bring him to the knowledge of ſo great a Prince; And that he had ſent him a Preſent of Arms, as a Pattern of the Manufacture in which his Subjects excell'd. This done, the King gave me to know by the *Sabandar*, That I was both welcome and ſafe in his Territories; That as to the Buſineſs of Trade, the *Dutch* and *Engliſh* us'd heretofore to have Pepper in his Country at an eaſy rate, but now that they had ſhown ſuch flaming ingratitude in warring with the King of *Bantam*, who had formerly vouchſafed them a kind Reception, he had thereupon caus'd all the Pepper Plants to be cut down, leaſt hereafter they ſhould prove the occaſion of trouble; That by this means the price of the Pepper was rais'd 64 Rials the Bahar; and that, even at that price, he did not much care to let them have it, knowing them to be an ill ſort of People, that would rob and pillage, and do any thing in order to engroſs the Trade of the *Indies*.

I reply'd, That the Inſolence of that Nation, in offering to dethrone Kings that have ſhown them Civilities, would be a ſurpriſing piece of News in *France*; That for my part *I* was ſtruck with amazement, to find that a People, who pretended to nothing but fair Merchandize, and whom the King of *France* has long protected againſt the *Spaniards*, ſhould on this ſide of the World ſlight us, and uſe all means to do us an Injury; and that, in regard I had no Commiſſion to uſe any manner of Violence, or to fortify any place, but only to ſell and buy in a fair way, I ought not to be rank'd among a Nation, whoſe very Converſation I avoided.

Upon this, the King order'd ſome Sallade to be given me in a large Gold Veſſel, and a Suit of his Cloaths laid upon a Silver Platter, which he order'd me to put on. Having retired to the next Chamber and put on his Cloaths above my own, I return'd to his Majeſty, who told me the Arms my Maſter had ſent him, would be very ſerviceable to him in the Siege of *Malacca*, which he had in his view, and ask'd me if I would accompany him thither.

I reply'd, I would place my laſt Happineſs in doing him any manner of Service. Then he put ſeveral Queſtions to me about the Age, Puiſſance, &c. of my Maſter; and when I told him that my Maſter was in peace with all the World, particularly with the *Grand Seignior*; He ſaid, He would enter into a ſtrict Alliance with the King of *France*. This done, I was mounted upon an Elephant and conducted home.

One thing happen'd upon my firſt ſetting out in order to an Audience of the King, that I muſt not omit. Juſt as I was mounted upon the Elephant, the *Dutch* and *Engliſh* Commiſſaries, with 20 or 30 of their Gang, having hid themſelves in a Porch of the *Engliſh* Houſe that was juſt oppoſite to mine, ſiez'd upon the *Dutch Man* I mentioned above, whom *I* deſigned to make uſe of as an Interpreter to the King. Being then upon the Elephant, *I* could not conveniently get down; but *I* repreſented to the *Sabandar* the impudence of thoſe Men, in offering to lay hands upon one that was carrying Preſents from his Majeſty of *France* to the King of *Achen*; and preſs'd him to order the *Dutch Man* to be releaſed. The *Sabandar* reply'd, he would take care of it, but could not ſtop at that time. When *I* had audience of the King, *I* importun'd the *Sabandar* to let the King know my reſentment of that Action; but he told me it was not a proper time: And the King perceiving *I* wanted to ſay ſomething, ask'd the *Sabandar* what it was, who replied, He did not underſtand me.

Upon this I went next Day and viſited the *Orankay Laxemane*, a great Favourite of the King's; and made him a Preſent of two Arquebuzes, a piece of water'd Camlet, a gilded Head-piece, a Looking-Glaſs, ſix Ear-Pendents, and two Glaſs-Chains. He receiv'd me very graciouſly; and after ſome diſcourſe, I recounted to him the Story of the *Dutch Man*, whom *I* pretended to have entertained, becauſe he ſaid he had been formerly under the *Orankay's* Protection. But the *Orankay* told me that if the *Dutch Man* ſaid any ſuch thing, he was a Cheat and a Villain. Next Day to prevent all further Correſpondence with the *Engliſh*, *I* ſhut up the Gate of our Houſe that was oppoſite to theirs; for they haunted the Houſe perpetually, ſo that *I* could not do or ſay any thing without their knowledge; beſides, they frequently viſited my Commiſſaries and Purſers, which made me ſuſpect, that they deſign'd either to do 'em an Injury, or to pump out of them an Account of my Deſigns.

February the 11th, being call'd to ſpeak with the King, he ſhewed me the two Pike Heads that I had preſented him, which, above the carv'd Work, were at firſt cover'd with an enamel Colour; but the King having given them to one of his own Gold-Smiths to be carved and gilded, the Paint went off as ſoon as the Gold-Smith put them in the Fire. So the King wanted to know if I could think of any Body that could put them to rights as they were. I told him I knew none: Upon which he caus'd to cut off the poor Fellows Hands that had put them into the Fire. Then the King told me he heard I had a Gold-Smith on board, and deſired I would order him to enamel a large Gold Ring of his, that weighed above an Ounce, which he deliver'd to me.

The King of Achen's Cruelty to one of his Gold-Smiths.

His Rich Jewels, &c.

This Prince was very curious in all Lapidary and Gold-Smiths Wares; for he had above 300 Gold-Smiths, that wrought daily for him; and he ſhew'd me a great number of Stones, ſome ſet, ſome not, which for the moſt part were bor'd at the two ends; ſeveral Necklaces and Chains of large Emeralds; Caſacks or Garments after their faſhion, embroider'd with Jewels; great Veſſels of Gold cover'd with Jewels; a great many Swords, Hangers and Daggers, cover'd all over with Jewels both upon the Hilts and Scabbards; and a vaſt number of Gold Claſps to put upon the Caſacks: And told me that he had above three *Bahars* of Gold in Caſacks and Claſps; and that ſix Days would not ſuffice for taking a view of all his Jeweſs and Stones. Whether he ſaid this out of Oſtentation or not, I know not. But the greateſt part of what I ſaw were rather Stones of ſhow than value; tho' after all I muſt own he ſhew'd me ſome that were very rich, particularly three Diamonds, that may be worth from 15 to 20 *Carats* a piece, two very large Rubies, and an Emerald that he got in the Conqueſt of *Pera*, which was one of the prettieſt Stones I ever ſaw. After that, I ſet our Gold-Smith to work for the King, and was ſorry I had one on board, being apprehenſive that if the King lik'd his Work, he would retard us to get his Jewels enamel'd.

Having occaſion to build a Long-Boat to ſupply the room of that I had loſt, I went to the *Orankay Laxemane*, to deſire he would obtain me a Licenſe for the cutting of Wood in the Iſlands oppoſite to the Road, and let me have his Boat, which carried about 15 Tun, to bring the Wood aſhoar. He granted my Requeſt upon the Conſideration of paying him 20 *Rials* a Month for his Boat; which was indeed extravagantly dear, but I was oblig'd to give it, or elſe I had not had the King's Licenſe ſo eaſily.

The King's way of Treating.

The 19th, the King ſent a *Sabandar* to invite me to Dinner. When I came I found the King in a ſquare Hall, the Floor of which was cover'd with Turky Carpet, upon which he made me ſit down; and after he had order'd ſome Sallade to be given me in a large Golden Diſh, the cover of which was ſet all over with Emeralds, and ask'd me ſome queſtions concerning the Grandeur and Puiſſance of Chriſtian Princes; there came about 30 Women, each of which had a large Silver Diſh in their Arms, which they ſet on the Ground on the Carpet. Each Diſh was cover'd with a Cloth of Gold, or half Silk half Gold, with Jewels trailing upon the Ground. After theſe Women had ſtood for ſome time, the King order'd them to ſet Dinner before me. Upon which they uncover'd the Diſhes, which had the circumference of a large Baſon, and together with the Lid were about two Foot and an half deep. Out of each of theſe Diſhes they drew ſix Plates of Gold, full of Comfitures, Meat, and Paſty, after this Faſhion. So that in leſs than a Minute, I found my ſelf ſurrounded with Golden Diſhes, ſome containing Water, other Sauces, and one, which was very large, full of Rice; beſides two other Diſhes of *Tomback*, which they eſteem more than Gold, containing Rice (made uſe of for Bread all over the *Indies*) of which the King order'd me to eat; and I found it very good, for its taſt reſembled our *Marchpane*. After that, by the King's order, an Eunuch brought me ſome drink in a Gold Cup ſet in a large Golden Baſon. I drank to his Grandeur's better Health, and thought to have drunk it up; but the Liquor was ſo very ſtrong and fiery, that it quickly baulk'd my tip, and put me into a great Sweat. The King told me, ſince I had drunk to his Health, I ſhould drink it out; and that if he were to drink the King of *France's* Health, he would not leave a drop of it. But upon my Requeſt, they exchang'd the Liquor for a

Their Rice very good.

The King's Women.

weaker ſort. They preſs'd me mightily to eat and drink. But at laſt, being quite tir'd by ſitting with my Legs acroſs, I pray'd the *Sabandar* to preſs me to eat no more: Upon which the King order'd all the Diſhes to be remov'd, and bid me drink his Health once more. This done, they brought a very fine Carpet, done upon a Ground of Gold, and laid between me and the King; then came 15 or 20 Women, who ranged themſelves by the Wall ſide, and each of 'em having little Drums in their Hands, ſung their King's Conqueſts, making their Voice to anſwer the Drums. After that there came in at a little Door, two Girls very oddly dreſs'd, but very handſome, and whiter than any I ever ſaw in ſo hot a Country. Upon their Head they had a ſort of Hat made of Spangles of Gold, which gliſter'd mightily, together with a Plume about a Foot and an half high, made of the ſame Spangles. This Hat hung down upon one Ear. They had large Ear Pendants of Spangles of Gold reaching down to their Shoulders. Their Neck was cover'd with Necklaces of Gold; and upon their Shoulders was a ſort of Jacket of Gold curiouſly engrav'd; under which was a Shift or *Baiu* of Cloth of Gold, with Red Silk covering their Breaſt, and a very broad Girdle made of Gold Spangles. Their Girdle was tied above the Hanches, from which there hung a Cloath of Gold, with ſtrait Breeches underneath, which were likewiſe made of Cloath of Gold, and did not paſs the Knees, where ſeveral Bells of Gold hung upon them. Their Arms and Legs were naked; but from the Wriſt to the Elbow were ſurrounded with Bracelets of Gold and Jewels, as well as from the Ancle to the Calf of the Leg. At their Girdle, each of 'em had a Sword, the Hilt and Scabbard of which was cover'd with Jewels, and in their Hands a large Fan of Gold, with ſeveral little Bells about it. They advanc'd upon the Carpet with a profound Gravity, and falling upon their Knees before the King, ſaluted him by joining their Hands and lifting them up to their Head. Then they began to dance with one Knee upon the Ground, making ſeveral motions with their Body and Arms. After that they danc'd upright with a great deal of Agility and Cadence; ſometimes putting their Hand to their Sword, another time making as if they ſhot a Bow, and ſometimes as if they had a Shield and Hanger in their Hands. This laſted about half an Hour, after which they kneel'd before the King, and in my opinion were pretty well tir'd, for each of 'em had above 40 pound weight of Gold upon 'em. However they danc'd with a very good grace; and if our *French* Dancing Maſters had ſeen 'em, they would have own'd their Performance to exceed what we account barbarous.

Mas, a ſmall Gold Coin.

To look upon the King's She Favourites a Capital Crime.

At laſt it grew late, and upon my requeſt the King ſuffered me to go, having firſt preſented me with 200 little pieces of Gold of his Coyn, which they call *Mas*, and are worth about ten Pence a piece. Then the *Sabandar* conducted me home by Water, and aſſur'd me he never ſaw the King ſhow ſo much Reſpect to any Stranger, eſpecially in ſuffering his Women to dance before me; for, during that Entertainment, the whole Company ſhut their Eyes, it being a Capital Crime to look upon the King's Women; tho' indeed I look'd upon them very earneſtly all the while, preſuming that they were not brought thither to make me ſhut my Eyes.

The King's Treaſure.

This Prince told me he had above 100 *Babars* of Gold, *i. e.* 18000000 of Livres, beſides his Silver Jewels and other Commodities; but then he keeps it cloſe, and has no occaſion to ſpend it. Beſides, the Royal Treaſure has been handed down from Father to Son, for *Achen* was never pillag'd or ſack'd by any Nation, and the King often boaſts that he fears no Prince but the *Grand Seignior*, who, according to an Ancient Prophecy, handed down by Tradition, ſhall one Day conquer that place.

A dangerous Bar in *Achen* Road.

February the 19th, An *Orankaye* and two *Sabandars* came aboard in the King's Name, to demand two Swords that I had, one of which I had promis'd him before. Before they boarded me, they were in ſome danger in the Mouth of the River, where there lies a very dangerous Bar, eſpecially towards the Evening, when the Sea Breezes break the Water upon it. I gave 'em both my Swords, but withal pray'd them to acquaint his Majeſty that I had no more, and it being an unwonted thing in *France* to go abroad without a Sword, I hoped he would let me have one of them again. Next Day he returned one of them, with a Preſent of a Dagger, made after the faſhion of the Country. He who brought it told the King lik'd the other mightily, becauſe it did not bow when they offered to bend it, and that if this had not bow'd I had never ſeen it again. After that I went aſhoar, and adreſs'd the King, that he would pleaſe to order ſome of his Officers to make ſome Overtures about the Price of his Pepper, to the Merchants that were along with me. He gave me no anſwer to that point; but ask'd me what ſort of a Ship the *Hope* was, that I had ſent to *Bantam*, and what her Cargo might amount to. I anſwer'd him as near as I could; upon which, he aſſur'd me ſhe was taken by the *Dutch*, and that in a ſhort time I ſhould have certain intelligence of it. He told me withal that while I continued in his Road, he would ſecure me from receiving any injury at their Hands, the *Dutch* and *Engliſh* Factory being worth more than my Ship; but that without the Road he would not intereſt himſelf in the Quarrel. It ſeems the King had mentioned the taking of the *Hope* at my firſt Audience: But the *Sabandar* did not give me to underſtand it. And indeed I was at a great loſs, both in this, and many other things, that I could not make uſe of an Interpreter of my own. For without a particular Licenſe from the King, it is not to be done. Beſides, no Interpreter is fond of appearing before the King; for if he makes but the leaſt trip in his Diſcourſe, or ſays any thing that the King does not like, tho' order'd to ſpeak it, he is in danger of being cut to pieces. An Inſtance of this we have in one *Pedro Lorenzo*, a Native of *Achen* and deſcended of a very good Family, who, being Interpreter for the *Dutch*, and having ſpoke ſomething by their Orders that diſpleas'd the King, was order'd by his Majeſty to be cut in two alive; and the Orders had certainly been put in Execution, if the *Engliſh* had not interceded very effectually with their Prayers and Preſents on his behalf.

The danger of being an Interpreter at *Achen*.

The King's Cruel Freaks.

All this while I could do nothing in the Pepper Concern; for no body durſt ſell a Grain till the King had ſold his; and it was not proper for me to preſs the King much upon it, becauſe he was out of humour with ſome of his Grandees, having put three of 'em to death for appropriating to their own uſe ſome Jewels they had met with in the late Conqueſt of *Pera*; and condemn'd the *Serjeant Major* to die for retaining ſome Booty in the War with *Queda*, who with much Interceſſion got off for 1200 *Rials*. When the King was in theſe Humours no Body durſt ſpeak to him upon any Subject; and the People of that Country imagine that he is more ſubject to them about New-Moon than any other time.

An Earthquake at *Achen*.

March the 7th, About an hour before Sun riſing, we had a great Earthquake, at Full-Moon, which, the Natives ſaid, was predicted four or five Days before by the *Cady* or Biſhop of *Achen*, whom they gave out for the wiſeſt of Men. I am inform'd there are commonly three or four Earthquakes in this place every Year.

March the 9th, I waited upon the King with ſome Preſents, in order to obtain leave to buy up Pepper from private Perſons, which he would not allow till his own was ſold off, which he always kept half as dear again as the other.

The King intent upon Betting at a Cock-Fighting.

The next time I waited upon him I found him at a Cock Fighting and laying very high Wagers with his *Orankays*. Upon my entrance he preſented me with a Dagger, which had about five or ſix Livres worth of Gold upon the Handle. But I found him ſo intent upon his Wagering, that 'twas not proper to mention my Affair at that time. I could not but take notice of one Inſtance of the King's Avarice, and his Readineſs to ſacrifice all things to his covetous Temper 'Twas this, One of the Company pitch'd upon a middle ſiz'd Cock, offering to bet upon his Head againſt any other of what ſize ſoever (it being cuſtomary there to match 'em according to their ſizes) Upon which an *Orankay* that had ſome of the King's Cocks a keeping (for he gives them out among his *Orankays* according to their Subſtance and Eſtate) preſented a very large Cock; and upon this the King betted very high. But the little Cock beat the great One, and ſo the King loſt his Money. Being fretted by the loſs, he ask'd the *Orankay* how it came to paſs that the little Cock had more ſtrength than the great one. The *Orankay* anſwering with all poſſible humility that he could not conceive how it was; the King replied, He conceiv'd very eaſily, that it proceeded from the Cocks being ill fed, and that he had given the Cock's Rice to his Whores, or elſe eat it himſelf. This ſaid, he order'd his Right Hand to be cut off, which was immediately put in execution.

He demands extravagantly for his Pepper.

Next Day the *Sabander* came to my Houſe, and acquainted me that the King ask'd for his Pepper 64 *Rials* the *Babar*. I told him I could not buy it at that rate. Then he ask'd me what I was willing to give. I anſwer'd, I would not pretend to ſet a Price upon the King's Goods, but would gladly treat with his Subjects, if his Majeſty would give me leave. Upon which he gave me to know, that could not be granted, till the King had ſold his. At that time, tho' the King kept his Pepper at 64 *Rials*, the private People would have ſold it for 8 *Tails* in Gold.

The value of a Tael. A loſs upon Rials at *Achen*, and why?

Ticow a more proper place for taking in Pepper than *Achen*.

Now the common value of a Tael is four *Rials*. But ſince we arriv'd in this place, the Gold roſe, and the *Rials* fell; for whereas we us'd to have 16 Mas for 4 *Rials*, now we cannot have above 14. This Alteration is occaſion'd by the King's engroſſing all the Gold in his own Hands, and coyning Lead Money to circulate among the People, who put it off at any rate for Gold. Beſides, *Rials* would have no circulation in that City, were it not for thoſe of *Suratte* and *Maſulipatan*, who ſupply this place with Commodities that they cannot be without, and export nothing from it but *Rials*, upon which, they gain conſiderably. Now there being no *Suratte* Ship there at this time, to take off the *Rials*, their value ſunk apace; which was an infinite Loſs to me, who had nothing elſe but *Rials*, at a time, when the *Dutch* and *Engliſh* had Gold enough in their Hands. To return to the *Sabandar*. He told me after all, that the King, out of his particular Affection to me, would, perhaps, let me have his Pepper at the ſame Price that the *Dutch* had offer'd, *viz.* 48 *Rials* the *Bahar*. I reply'd, that the King had given ſeveral Inſtances of his Affection to me, that I would take care to report to the King of *France* the Reſpect his Majeſty of *Achen* had ſhown to his Letters, and that the Obligations I lay under to the King of *Achen* would be much ſtrengthen'd, if he would allow me to take in my Lading at *Ticow*, ſince I could not do it at *Achen*, where the Pepper was ſo very dear, unleſs I had a mind to return to *France* with half Lading. Then the *Sabandar* ask'd me what Preſent I would make to the King for that Favour, and what I would give him for procuring of it. I told him I would conſider of the matter, and acquaint him with my Reſolutions that Night. Having communicated the Motion to our Merchants, it was unanimouſly agreed upon, that *Ticow* would be a place of more profit for us, tho' it coſt us 3000 *Rials* for a Licence to trade there. Thereupon I ſent one to ſound the *Sabandar*, in order to know what his Demands might be: The *Sabandar* told him the *Dutch* and *Engliſh* had offer'd the King two Ships laden with Goods, for the Privilege of an Eight Years Factory at *Ticow*, and that if I would give him 4000 *Rials*, and make the King a Preſent of 20000 *Rials*, he would procure me a Factory there for two Years. Hearing this extravagant Demand, I perceiv'd the *Sabandar* to be a grand Villain; and reſolved to make my Addreſs to *Orankay Laxemane*. Accordingly I gave him a Viſit, and repreſented to him that I had been a long time there, without making any progreſs in my Buſineſs; that the Pepper was ſo dear at *Achen*, that I could not buy it there without a conſiderable loſs; That *Ticow* was the moſt proper place for me within the King's Dominions; That foraſmuch as I could not trade at *Ticow* without the King's Licence, I thought it my ſafeſt way to have recourſe to him, knowing that if he favour'd me, the King would certainly grant it; And that out of a grateful Senſe of ſuch a Favour, I would make him a Preſent of 400 *Rials*, and another to the King of four Iron Guns, weighing 3500 Pound each. Upon this he adviſ'd me not to deſire any ſuch thing of the King, who had a great Affection for me, and was deſirous of lading me with his own Pepper. I reply'd, That I was infinitely oblig'd to the King, but could not come up to the Price that the *Dutch* had offered him. Then he told me that I did not know what the King would do on my behalf, and that the Guns I mention'd was not a proper Preſent for the King, who had more already than he knew what to do with.

The *Portugueſe* skill'd in Bleeding and Surgery.

March the 23d, I interceded with the King for the Redemption of four *Portugueze* Chriſtians, that were his Captives at *Negapatan*. Their Ranſome came to 650 *Rials*, 128 of which I was forc'd to advance, retaining one of the Men for my ſecurity; the reſt of the Money being gather'd by a Charitable Contribution from the People of *Negapatan*. There were five of theſe Slaves, for whoſe Redemption I interceded; but the King would needs detain one to bleed himſelf, or any of his Family upon occaſion. For all of 'em not only knew how to open a Vein, as indeed moſt of the *Portugueze* in the *Indies* do, but likewiſe practis'd ſome ſort of Surgery to earn their Bread in the time of their Captivity.

Five or ſix Women cruelly tortur'd.

Their Obſtinacy and Courage.

The *Sabandar* and an *Eunuch* came next Day to acquaint me that the King wanted to ſpeak with me. In obedience to his Commands, I went, and found him very much out of humour, and giving orders for the Torturing five or ſix Women. To my great mortification I ſaw theſe poor Creatures tortur'd in his preſence to the laſt Degree for three Hours, and the King's Wrath increaſing in proportion to their Torment. After the Torturing was over, he order'd their Hands and Legs to be cut off, and their Bodies to be thrown into the River. The occaſion of this Execution was as follows. In the preceding Night, there being 5 or 6 of his Women in a Room adjoining to his, one of 'em gave a hideous ſkreek: Upon which the King enquir'd into the matter, and at firſt they all told him there was nothing in it; but after many Threats, ſhe that had cry'd out, confeſs'd, that ſome body came in the Night Time, and prick'd her in the Thigh with a Dagger, thro' the Reeds upon which they lay, upon which ſhe ſaid, ſhe cry'd out and awak'd the reſt. But the reſt did not agree in their Anſwers, ſome ſaying they heard a Noiſe, and others that they heard nothing. However the Dagger was found, but no body would own it. After all, the King having ask'd 'em who it was that came with the Dagger, and why they did not tell him the Truth at firſt; and finding they would give him no ſatisfying Anſwer, was led into the Suſpicion of a Deſign againſt his Life carried on by his own Mother, who, as he imagin'd, had alarm'd theſe Women, that their out-cry might induce the King to come out of his Chamber, which would be a favourable opportunity to the Aſſaſſins. Thinking to extort a Confeſſion of the whole matter by Torture, he put all the Women upon the Rack: But their Reſolution, Courage, and Conſtancy was invincible; for notwithſtanding the King's frequent Offers of Pardon, in caſe they would diſcover the Plot, and the repeated Intreaties of the *Cady* of *Achen*, and the whole Court, who begg'd of 'em to be kind to themſelves; yet they did not ſo much as ſhrink or relent. One of 'em being very old, and ſwooning away from time to time, the King took Compaſſion upon her, and graciouſly order'd her to be put to death; upon which ſhe aſſum'd a gay Countenance, and thank'd the King for his Grace and Mercy, wiſhing him in recompence for his Favour a long and happy Life of 1000 Years. In a Word, all of 'em ſtood out undaunted to the laſt gaſp, and even after their Hands and Legs were cut off, ſome of 'em had the Courage to ſay, That for the ſpace of 10 Years, they had long'd for this Happy Hour, that deliver'd them from the drudgery of the Caſtle. When the Execution was over, the King ask'd me what I thought of it. Tho' the Spectacle was very mortifying to me, yet I diſſembled upon the Matter, and anſwer'd, That without the Execution of Juſtice no Kingdom could ſtand.

The King's Apology for his Cruelty.

Then the King told me in a long Diſcourſe, That if the laſt Nights Action had paſt with impunity, his very Life had been expos'd to danger; That his *Orankays* were fooliſh and unthinking Men, who charg'd him with Cruelty, not conſidering that 'twas their Wickedneſs that drew upon them the Anger of God, who made uſe of him as an Inſtrument to puniſh their Impiety; That they had no occaſion to complain of him who ſuffer'd 'em to poſſeſs their Wives, Children and Slaves, and competent Eſtates to maintain 'em; who maintain'd their Religion, and preſerv'd 'em from the Captivity of Neighbouring Kings, and the Robberies of Strangers; That in former times *Achen* was a Neſt of Murderers and Robbers, in which the weaker were oppreſs'd by the ſtronger, and no Man was ſafe, all of 'em being oblig'd to keep off the Robbers with Arms by Day, and barricadoe themſelves in their Houſes by Night, whereas at preſent they had no occaſion neither for Arms in the Day, or Doors to their Houſes in the Night; That his Nobles hated him, becauſe he ſuppreſs'd Extortion, Maſſacres, and Robberies; That they mean'd to ſet up Kings at pleaſure, and murder 'em when diſoblig'd; That his Mother was in the ſame intereſt, and wanted to make away with him, in order to prefer another, that would give way to their Inſolence.

The *Cady* of *Achen*.

This he deliver'd with ſo much Vehemency and Paſſion in his looks, that all his Courtiers threw themſelves upon the Ground, imploring his Mercy; and among them even the Biſhop or *Cady*, a Man of above 80 Years of Age, for whom every Body had a vaſt Veneration, and who could boaſt of the nobleſt deſcent in *Achen*. In fine, the Cruelty of this Prince is unparallell'd. Notwithſtanding, that all his Tortures could extort no diſcovery, yet he impriſon'd his own Mother and put her upon the Rack; and put to death five of the Principal Lords of his Court, whom he ſuſpected of favouring his Mother. He barbarouſly murder'd his own Nephew, the King of *Joor*'s Son, ſaying, his Mother mean'd to prefer that young Prince to the Throne. He put to death the Son of the King of *Bantam*, as well as the Son of the King of *Pau*, who were both his Couſins. He has not left one of the Royal Family but his own Son, who has been thrice baniſh'd the Court, but now begins to return into favour, and is only ſafe for being more cruel than his Father, and hated by all the World. He has extirpated all the ancient Nobility, and raiſ'd a new ſet of *Orankays*, who, in my opinion, would live much happier in a meaner Capacity.

pacity. In fine, his Cruelty is without a parallel, he takes Advice of no body, and never liv'd a Day (while I was at *Achen*) without the Execution of one, and ſometimes ſeveral of his People.

Elephants fighting.

The 28th, The King ſent for me to ſee two Elephants Fight. After I came, two Elephants were brought into a large Court, each of 'em having a Cable faſten'd about their hind Feet. Then came ſeveral Men with long Pikes forked at the Head. The two Elephants fell upon one another with a prodigious roaring; but all of a ſudden the King was taken ill, and the Fight was interrupted.

We obtain a ſham Licence to buy Pepper.

Having preſented the *Orankaye Laxemane* with an enamel'd Ring, which he again preſented to his Majeſty, I at laſt obtain'd leave to buy up Pepper in the City. Being ſenſible of this Favour, and Meaning to oblige the King as much as I could, I profer'd to buy 600 *Bahars* of his own Pepper; but he reply'd, he was my Friend, and would not put it upon me, ſince it was too dear, in regard he had made an Oath not to ſell it under 16 *Taels* the *Bahar*. Next day I made a Publication of the King's Licence, that the Inhabitants might not ſcruple to ſell their Pepper. But at the ſame time the King was buying up Pepper for himſelf, and the Inhabitants fear'd that if they ſold me any, he would alledge they had prefered my Cuſtom to his. To ſtifle this Apprehenſion, I firſt bought ſome of the *Sabandar*, thinking his Example would dipſel their Fears. But by an unlucky Accident, before he had deliver'd me any, the King took him up and laid him in Irons, for not having ſome enamel'd work ready, which he had committed to his Care to get done by our Goldſmith by a prefix'd Day, at which time he had promis'd it to a She-Favourite: Tho' after all it was not the *Sabandar*'s Negligence, but the Goldſmiths being taken ill, that occaſioned the Delay. After this, notwithſtanding I had the King's Licence, they would not ſell me one *Bahar*, ſome pretending they durſt not while the King bought, others refuſing to take *Rials*, or any other Coin but *Mas*, which is a Gold Coin current in the Country.

The uſefulneſs of a Factory at *Suratte*.

In the mean time I ſent *Don Franciſco Carnero*, a *Portugueze*, to the Court of the *Great Mogul*, by the way of *Maſulipatan*. His Errand at that Court was, To obtain leave from the *Great Mogul* to ſettle a *French* Factory at *Suratte*, the Sovereignty of which belong'd to him. The deſign of that Factory, was, to render a Factory at *Achen* more uſeful for us: For there being no acceſs to *Bantam*, there was a neceſſity of having a Factory at *Achen*. Now the *Rials* and *French* Commodities could not be put off at *Achen* without loſs, whereas at *Suratte*, the *Rials* are pretty high, and ſome *French* Commodities may be put off at *Cent. per Cent.* profit. So that 'twould be our Intereſt not to ſail directly from *France* to *Achen*, but to *Suratte*, where we might put off our own Commodities at a good rate, and buy up ſome *Suratte* Commodities, that the People of *Achen* can as little be without, as the very Rice they eat; and this would fetch us the *Achen* Pepper at an eaſy rate.

The People of *Achen* cannot be without the *Suratte* Commodities.

This *Carnero* was an everlaſting Gameſter, and won great Sums by the help of ſome falſe Dice he had brought from *France* with him, particularly from the *Sabandar*, whoſe Loſſes at Game made him very hungry in his Demands upon me; and yet I could not take off the *Portugueze* from playing with him. One time, when *Carnero* was a playing, he happen'd by beating his Hand againſt the Table to break one of his falſe Dice, upon which there run ſome Quick-Silver out of it, that quickly ſlip'd through the Chinks of the Table. This put his Company into a horrid Conſternation, for *Carnero* quickly hid the pieces of the broken Dye, and they imagin'd there was ſome Magick in the ſubtle Spirit, that appear'd and diſappear'd ſo ſuddenly.

The King's Licence for buying of Pepper proves a Bam.

April the 15th, I made a diſcovery that the King had play'd me a Trick, and that no Recommendation or Preſents whatſoever would turn his avaritious Temper. For he only gave me the Licence to amuſe me, and keep me from leaving the place, as I had threatned to do before. He knew very well that his buying of Pepper at the ſame time would ſtifle my Market, and if any one had ſold me Pepper, he would certainly have puniſh'd him under the Pretence of prefering my Cuſtom to his. Beſides, the true reaſon of the *Sabandar*'s Confinement, was not the Buſineſs of the Rings, but his miſunderſtanding the King's deſign in giving me the Licence: And the *Sabandar* ſent to intreat me to intercced with the King that he might not be diſgrac'd for that he had expos'd his Life to Danger by doing me Service. Next Day I went to interceed with the King on the *Sabandar*'s behalf. But he interrupted me by asking if I had bought any Pepper. I anſwer'd, That I had not endeavour'd to buy any, nor would not, till his Majeſty's Market were over. Then he laughed, contrary to his cuſtom, and told me he would buy no more, till I had got what I wanted. Soon after, he ſent for me, and having often preſs'd me to tell what I was willing to give for his Pepper, I order'd the Interpreter to offer him a *Catti*, or 32 *Rials* a *Bahar*. But the Interpreter durſt not mention the Sum, and pretended he did not underſtand me. Upon which I told it my ſelf in the *Malays* Language. The King was ſilent for ſome time; after which he gave me to know, that tho' he had ſwore that whoſoever offer'd him leſs than two *Catti*'s or 64 Rials for his Pepper ſhould loſe his Favour, yet he would overlook it in me; that the *Dutch* and *Engliſh* had offer'd him 48 Rials, and at that price I ſhould have what I would. I made anſwer that the *Dutch* and *Engliſh* had a longer Purſe than I, and dealt in ſeveral Branches of Trade that compenſated the dearth of the Pepper; and in fine, that I had not ſo much Money to give. However, being inform'd, that unleſs I took ſome of his Pepper, they durſt not ſell me a Grain in the City, and conſidering withal that *Bantam* being block'd up, there was none to be had but within his Dominions; upon theſe Conſiderations I offer'd to take 400 *Bahars* at 40 *Rials*. But the King would not abate any thing of his price, ſaying, he had us'd me more kindly than the *Dutch*, ſince he would not let them have it at the ſame price. Finding him reſolute, I offer'd to take 300 *Bahars* at his price, provided he would give me a Licence to buy 300 more at *Ticow*. At laſt he agreed to it, and order'd the 300 *Bahars* to be deliver'd. I preſs'd him to ſign my Licenſe for *Ticow* out of hand, in regard he was about to take Phyſick for his illneſs, ſo that I could not have Audience of him for ſome time. But he told me that would be over before I was ready to go. Notwithſtanding the King's Orders, it was a long time before I could get the Pepper which the King had order'd me, by reaſon of the Avarice and Villainy of his Officers, who always find out ſome trick or other to put off thoſe they have to do with, till they are ſufficiently brib'd. For beſides, that they have no Sallary, they are oblig'd to make the King a rich Preſent every Year. As for dealing with private Perſons, I found them all unwilling to take *Rials*, and for that reaſon employ'd a Broker to make a Propoſal to the *Dutch* and *Engliſh* of giving them my *Rials* at the current price, in exchange for Gold. But the Broker acquainted me that they were ſo far from liſtning to the Propoſal, that they had a great Hand in ſinking the value of the *Rials*, in order to ſpoil my Market.

The Avarice and Villainy of the King's Officers.

The *Engliſh* and *Dutch* have a Hand in ſinking the Rials.

Being diſappointed on that hand, I made my Addreſs to the *Orankaye Laxemane*, offering him the *Rials* at ten *per Cent.* diſcount. At firſt he agreed to it; but next Day, when I came with the *Rials*, he retracted, and ſaid, he would give but three *Mas* and an half for them, ſince they went for that in the City. Finding I could not mend my ſelf, I condeſcended to let them go ſo; but after all, when I came to deliver the *Rials*, he retracted again. The notorious perfidiouſneſs of this Nation, made me think of leaving them in time, before the bad Seaſon was further advanc'd. In the mean time the Officer of the *Alfamdegue* ſtop'd 21 *Bahars* of Pepper for the King's Duties. It was a great Surpriſal to me, to hear that the King demanded Duty for the Pepper he had ſold me himſelf: eſpecially conſidering that before I made the Bargain, my Interpreter had aſſur'd me he never did. But when I repreſented the matter to the *Orankaye*, and deſired acceſs to the King in order to complain of the Injury done me; he told me that I was oblig'd to pay Cuſtom for it, that the *Dutch* had always pay'd it, and that ſuch a Complaint would be very diſagreeable to the King: And ſuſpecting that my Interpreter had miſinform'd me upon the matter, would have ty'd him to a Poſt, if I had not brought him off as being one of my Domeſticks.

At laſt I found my Interpreter to be one of the Spies of the *Alfandegue*, and perceiv'd he had diſcover'd all my Intrigues to the King's Officers. Tho' this Fellow was born of Chriſtian Parents, and profeſs'd Chriſtianity for 40 Years, when among Strangers, yet he inſtructed his Children in the *Mahometan* Religion; a certain Evidence that he was worſe than a true *Mahometan*, and had neither Religion nor Conſcience.

The Duty upon Pepper at *Achen*.

The Duties upon the Pepper that I was oblig'd to pay, was Seven *per Cent.* to the King, Ten *per Cent.* of the King's Duty to the Officers, and a *Mas* for every *Bahar* to the Weigher. When I paid this Cuſtom to the Officers, they ſiez'd upon the Interpreter, who had made me believe there was none due, and having ty'd him to a Poſt, beat him ſoundly, and made him pay more than he had got in my Service to get clear.

May 15. I could have had Pepper enough for 8 Taels and a quarter in Gold, which as Rials went then, came to 37 ½ Rials, ſo that the loſs upon Rials was unſufferable.

Clipp'd *Mas* will not paſs at *Achen*

Another Miſchance, that gall'd me mightily, was, that their Mas, or Gold Coyn, is often clipp'd by the *Chineſe*, and that there are a great many of a falſe Coyn: For at *Achen* they are ſo nice, that if the edge be but any ways ſhrunk or broke, they will not meddle with it, ſo that in the Payment of any Sum they'll return a third part, or a half. However, *I* bargain'd with one Man for 300 Bahars, at 38 Rials the Bahar.

The Chapman *I* dealt with, call'd himſelf *Xerif Nepueu of Jeſus Chriſt*. He was a *Mahometan*, and great Doctor in the Law of *Mahomet*. He bore the Character of a Prophet, and came to this place to make ſome Remonſtrances to the King of *Achen*, who was ſo little mov'd with his Remonſtrances, that he order'd him to keep within Doors, and not to meddle with his Deportment; ſo that the Oracle was ſtruck dumb all of a ſudden.

The Fraud of a *Mahometan* Prophet.

When *I* came to have my Pepper weigh'd, the Prophet alledg'd, that *I* had bargain'd with him for 39 Rials, and offer'd to appeal to the Broker; but *I* told him roundly, that *I* had promis'd no more but 38, and that my Word was as much to be credited as either his, or the Broker's. After ſome wrangling he yielded; but when we had weigh'd about 200 Bahars, I began to perceive ſome black Sand among the Pepper, and return'd it. He pleaded for his excuſe, that ſome of his Domeſticks had mix'd Sand with the Pepper without his knowledge; and tho I might have done him an Injury, in regard that the King of *Achen* cuts off their Hands and Feet without any Mercy, who are found guilty of that Trick, yet conſidering his Credit upon the place, I was willing to overlook it. After that, we continu'd to weigh, till I obſerv'd the Pepper wet, upon which I ſtopp'd and would have no more, alledging only that his Houſe was faulty, and that ſome Rain had fallen upon the Pepper. What for a Doctor or Prophet this may be, I cannot tell; but both he, and moſt of his Followers, ſeem to place a great deal of Honour and Goodneſs in cheating a Chriſtian, eſpecially about *Achen*.

Tiburou's, or large Sea-Calves.

May 22. One of our Men waſhing himſelf by the Ship's ſide, had all the fleſhy part of his Leg, and both his Hands bit off by a great Fiſh, or Sea-Calf, which the *Portugueze* call *Tiburou*, and immediately expir'd. By this time the Pepper was become very ſcarce; for not only the King continu'd to buy, contrary to his Promiſe, but an *Engliſh* Veſſel that arriv'd lately from *Surat*, laden with Cotton Cloth, and truck'd their whole Cargoe for Pepper; not to mention the *Dutch* and *Engliſh* upon the place, who having the advantage of Gold, and Commodities vendible in that Country, ſtill bought it up under-hand.

A great Fire at *Achen*. The Woman impail'd alive, in whoſe Houſe it began.

June 4. There happen'd a great Fire in the City, which in an Hour's time conſum'd 260 Houſes: And the King caus'd the Woman in whoſe Houſe the Fire began, to be impaled alive.

June 10. I had Audience of the King, and repreſented, that ſince the Pepper was become very ſcarce and dear, I wanted to be gone, and pray'd that he would allow me to buy three or four hundred Bahars at *Ticow*. The King reply'd, That I might have ſome more of his, which he had ſold me at a lower rate than to any Body elſe. I told him, his Pepper was ſo dear, and the loſs upon it would be ſo great, that if I offer'd to take it at his Rates, it would diſcourage the *French* from coming again to kiſs his Hands. His Majeſty reply'd, That the *French* might hereafter make a more profitable Voyage, by bringing Gold or Commodities vendible in the Country, this being infinitely more valuable to him than Silver, which he eſteem'd no more than Dirt. As for the Buſineſs of *Ticow*, he made me no Anſwer, neither durſt the Interpreter remind him of it, becauſe he found he did not like the Motion. However, I repreſented to him, That ſince I had no more Buſineſs in that place, I hop'd he would give me leave to be gone: Upon which he ſaid, He would firſt write a Letter to the King of *France*.

Floods and Storms at Full & New Moon.

June the 15th, We had a violent Storm of Wind and Rain, from the S. W. and W. S. W. commonly, for three Days before, and three Days after New Moon and Full Moon, we had heavy Rains and Floods that ſwell'd the River mightily, together with violent Guſts of Wind call'd *Samatra*.

The 19th, One of my principal Merchants dy'd of an uncommon ſort of a Diſtemper, who in my Opinion was poyſon'd by the *Dutch*. In this place we loſt fourteen Men, moſt of whom were ſiez'd with a violent Vomiting, and the Bloody-Flux, which no Remedy could ſtop. In earneſt, this Climate is ſo very much hotter than *France*, that one can ſcarce avoid Sickneſs at firſt. But a regular Diet goes a great way, if not in preventing, at leaſt in abating the Sickneſs: For my part, I eat little or no Roaſt-meat, but moſtly Fiſh, and drank Cider; or in want of that fair Water firſt boil'd and then cool'd. But the unwary Sailors fill'd their Bellies with Beef, and drank a great deal of Rack, beſides other Liquors, and when they were out of order drank Water, and ſleep'd with their Stomachs expos'd to the Air; by which means the Stomach being at once overcharg'd, Vomitings and Fluxes enſu'd. The Cure for that Diſtemper, is, to let Blood, and take ſome cooling Medicines, and to abſtain from Meat, Wine, and Rack.

An Account of the Diſeaſe of the Country, and its Cure.

The King's Letter deliver'd with a great deal of Ceremony.

The 27th, The King ſent his Letter for the King of *France* to our Houſe, with a great deal of Splendour, the Letter being carry'd upon a great Elephant by one of the principal Orankays; after which follow'd three of the principal Officers of the Houſe upon another Elephant, with all the Officers of the *Alfandegue* on foot. Before the Elephant went four Drums, and four Trumpets, and four large Umbrelloes ſurrounded it.

But all this Splendour was to my Coſt, for I was oblig'd to ſatisfie not only the principal Orankaye, who brought the Letter, but all thoſe that accompany'd him. The Letter was carry'd in a Silver Baſon, in a Red Velvet Bag, with Gold Strings; being writ in the *Achen* Language, in Letters of Gold, upon very ſmooth Paper, with ſeveral Gildings and Colourings round it.

The Form of it was this:

The King's Letter.

THE *Letter of the Grand* Siri Sultan, *Subduer and Conqueror, by God's aſſiſtance, of ſeveral Kingdoms, King of* Achen, *and, by the Divine Favour, of all the Countries that lie to the Eaſt and Weſt; to the Eaſtward, the Kingdom, Territories, and Sovereignties of* Deli; *the Kingdom of* Joor, *with its Lordſhips and Territories, the Kingdom of* Paham, *the Kingdom of* Queda, *and the Kingdom of* Pera, *with their Lands and Seigniories: To the Weſtward the Kingdom and Territory of* Priaman, *the Kingdom and Territory of* Ticow, *the Kingdom and Territory of* Paſſuruam. *To be deliver'd to the great and puiſſant King of* France. *May the King of* France *know, That the Letters he ſent me by Admiral* Beaulieu *was deliver'd, and that I have ſeen all that was written in it: And foraſmuch as he recommended the ſaid Admiral, that I have done him a great deal of Honour, both in the Matters of Traffick, and in allowing him the Quality and Rank of my principal Gentlemen. As for the Offer made me, in caſe I have any Buſineſs in* France, *I ſend a Memorial by the ſaid Admiral, to ſhew how much I eſteem it; ſaying farther, that if God bring this Letter ſafe to hand, I expect an Anſwer by the Ships that ſhall come to trade in this place, which will be to me a great Satisfaction. So, I pray God, preſerve the States of the King of* France. *And ſince God has made us great Kings in this World, it ſeems reaſonable we ſhould live in Friendſhip, and correſpond with one another. For a Token of Friendſhip I ſend Eight Bahars of Pepper, which is the Product of this Country. God preſerve the illuſtrious Perſon of the King of* France.

Given in the Month *Raab* (or *June*), in the Year 1030.

The French Goldſmith ſtays at *Achen*

June 28. My Goldſmith ask'd leave to ſtay at *Achen*, promiſing to find another to ſupply his place, that would be more ſerviceable than himſelf. And tho' he could not find one according to his Promiſe, yet conſidering that he was blinded by the Promiſes of the King, and the Orankaye *Laxemane*, who were mightily taken with his Work, and that he had a great mind to ſtay, I left him in the *Engliſh* Houſe; wiſhing I had never brought him from *France*, or had turn'd him off ſooner; for the King of *Achen* retarded my Affairs upon the account of having more of his Work.

The Reaſons inducing us to think of ſteering towards *Queda*

July 1. The *Portugueſe* Captives whom I had redeem'd, and ſome others, having adviſ'd me to go to an Iſle near *Queda*, upon the Coaſt of *Malacca*, about 200 Leagues from hence, where I might have Pepper cheaper than any where elſe, *viz.* at 16 Rials the Bahar: I reſolv'd to follow their Advice, conſidering that I had no proſpect of a Licence to Trade at *Ticow*; that at *Achen* the Dearth and Scarcity of the Pepper, the Charge of keeping Houſe and living aſhore, the coſtly Preſents and Bribes that the King and his Officers expect, cut off the Profit of the Trade; that I had no hopes of ſeeing our Vice-Admiral, or Advice-Boat there, the laſt being gone from me above ſeven Months, and there being no poſſibility of hearing from *Bantam*, or *Jacatra*, till *October*, by reaſon of contrary Winds; that the preſent Weſterly Winds ſtood fair for *Queda*; and in *October*, when they begin to veer to the

Eaſt, they would favour my return; that tho' the King of *Achen* had lately conquer'd the place I was bound for, and prohibits all Perſons to go there without his Conſent; yet I could manage it ſo, as not to diſpleaſe him, by pretending to be forc'd in by the Winds, which blow right upon it; beſides, that the *French* having no Factory in *Achen*, and he having us'd me unkindly, I had no great reaſon to fear his diſpleaſure. Theſe Conſiderations induc'd me to reſolve upon a Voyage to that Iſland, where I might lie more ſecurely till the Weſterly Winds were over, as well as make a better Bargain for Pepper. To this end, I reſolv'd to give 250 Rials by way of Ranſome, for two *Portugueze* Captives, one of whom having been in that Iſland would ſerve for a Pilot, and the other had been a Merchant at *Pera*. The number of my Men being reduc'd by Sickneſs and Detachments to a ſmall Complement. I likewiſe redeem'd 7 more Chriſtian Slaves, for 361 Rials, that had formerly ſerv'd the *Portugueze* at Sea. Some *Engliſh-men* offer'd to ſerve me, but not having leave of their Superiours, I rejected them.

The *Surat* *Ladea.*

The 15th, I had Audience of the King, at which time the *Dabul* and *Surat* Captains preſented their *Ladea*, i. e. a Preſent of the Commodities of their Country, computed to be worth 1500 Rials. After theſe Captains had withdrawn, the King ask'd me, If the King of *France* was Subject to the King of *England?* I anſwer'd, That *France* was inferiour to none of the Chriſtian Monarchies, having continued for 1300 Years under the Government of their own Kings, without ſubmitting to any Foreign Power whatſoever. Upon which he told me, He had ſeen a Letter from the King of *England*, in which he aſſumes the Title of King of *France*. But I ſhew'd him how ſlender a Right he had to that Title, which proceeded only from a ſpite that one of our Kings had againſt his Succeſſor. After he had put ſeveral Queſtions about the Grandeur of Chriſtian Princes; I humbly requeſted he would ſuffer me to put into *Ticow* for one Month, in order to buy only 200 Bahars of Pepper, and to ſend a Praw from thence to *Bantam*, to enquire after my two Ships; adding that ſuch a Favour would be a laſting Obligation upon the *French* Nation. He anſwer'd me very coldly, That I might diſcourſe that Subject with the Orankay *Laxemane*. This done, I took leave of his Majeſty, who wiſh'd me a good Voyage.

After that, I went to wait upon *Laxemane*, who told me, that the King had ſworn never to ſuffer any Nation to Trade at *Ticow* after the *Dutch*; and that 'twas a ſign he had no mind to give me a Licence, ſince he had put it off by ſending me to him. However, I preſs'd him to ſpeak to the King about it, and let me have his Anſwer. After ſome time he ſent me word, That the King would allow me to put into *Ticow* for a Month, provided *I* gave him half a Bahar (*i. e.* 3200) of Rials.

At laſt, being ſo much provok'd by the inſatiable Avarice and Ingratitude of this Nation, that notwithſtanding all my Preſents, gave me ſuch uſage, I reſolv'd to ſteer for *Ticow*, and if they would not deal with me in an amicable way, to ſtop the Ships that were to come from thence, and take out of 'em what Pepper I wanted, allowing for it the Market-price at *Ticow*: But if I could not weather the Point of *Ticow*, as 'twas probable I might not, by reaſon of the violent Winds aad Tides from the Weſt, I deſign'd to Sail for *Pulo Lancabuy*, alias *Pulo Lada* (ſo the Pepper Iſland near *Queda* is call'd) notwithſtanding that about two Days before the King had ſent three large Galleys, and thirty Sail of other Ships to *Pera*, with Orders to return by that Iſland, and cut down all the Pepper-Plants.

July 24. Having taken in 700 Bahars of Pepper at *Achen*, I ſet Sail from that Road, which lies in 5 Degr. 34 Min. North Lat. the Needle varying 5 ½ Degrees N. W.

The 25th, we weather'd the Iſles of *Gomiſpola* and *Poolaway*, which fence in this Road on the North-ſide. In this Seaſon the Trade-Wind blows S. W. with which I endeavour'd to double the Point of *Achen*, in order to reach *Ticow*, ſteering our Courſe W. N. W. But the Tides ſtill bringing me right before the Wind, I was oblig'd to ſteer directly for *Pulo Lancabuy*; tho' the Calms were ſo great, that I could not make it till the Seventh of *Auguſt*, whereas it is but commonly four Days Sail with that Trade-Wind.

The next Day after my arrival, the Pangoulow, or Governour of the Iſland came aboard, and gave me to know, That he could not ſuffer me to Trade with the Inhabitants, without a Licence from the King of *Queda*, which he doubted not but I might have, eſpecially if I aſſiſted him with ſome Artillery.

Scarcity Pepper at da, and Lanca

The 12th, The Governour accompanied with two of my Men (in lieu of whom he had left me his own Son, with one of the principal Men of the Iſland for Hoſtages), went in Perſon to acquaint the King with my Arrival. At that time the King of *Queda* had retir'd from *Queda* to *Perleys*, about three Days Journey further into the Country, for fear of the King of *Achen*'s Army.

The 20th, I receiv'd a Letter from Sieur *D'Eſpine* (one of our Company that went along with the Governour) acquainting me, That he underſtood the King of *Queda* had but little Pepper, and that this Iſland had not much: To my infinite regret I found this Intelligence to be true; for I found that we came too late for the laſt Year's Pepper, and too early for that of this Year, which is not gather'd till *December*.

September 2. Sieur *D'Eſpine* ſent me word, That he could not come to ſpeak with the King, who had retir'd into the Woods, under the apprehenſion that we were employ'd by the King of *Achen* to do him an Injury; but in the mean time he had order'd all the Pepper that could be had to be gather'd up, in order to buy ſome Cannon of me, if I would ſell them. Upon this Advice I ſent poſitive Orders to Sieur *D'Eſpine*, to inform himſelf particularly what Quantity of Pepper might be expected in that place, and if it was under 100 Bahars, to return immediately, without troubling himſelf about it, or if it was above that number, to ſolicite the King to ſend a Commiſſioner with full Power to treat with me, and that without any delay.

The King of *Queda's* Offers to obtain ſome Guns.

The 9th, Sieur *D'Eſpine* return'd in Perſon, and reported, That the King had but very little Pepper in *Queda*, but had a ſtrong Mind for my Cannon, offering, if I would ſtay till *December* (which is the Seaſon for gathering of the Pepper) to give me twice as much Pepper for my Cannon as *I* had ask'd; and farther, to furniſh me with 1000 Bahars more, if *I* had occaſion for 'em; and if *I* had a Mind to eſtabliſh a Factory there, to furniſh it every Year with 2000 Bahars of Pepper, and exclude all other Nations from trading in his Territories. The King ſent me a Letter, empowering me to trade freely with the Natives, and deſiring two of my Cannon for 30 Bahars of Pepper, which he ſaid was all he had. In the mean time they had detain'd my Purſer at *Perleys*, about 7 or 8 Leagues from this Iſland, thinking *I* would come and lie off of that place, to eſtabliſh a Factory in the ſame. But *I* underſtood, that the Channel between this Iſland and *Perleys*, was embarraſs'd with Shelves and Flats, and at the ſame time obſerv'd, that my Ship did not anſwer the Helm as it us'd to do: Upon which *I* reſolv'd rather to continue where *I* was, threatning to ſet Sail with the Hoſtages *I* had on board, if they would not return me my Man.

October 1. The Purſer was return'd, and *I* deliver'd them their two Hoſtages. He reported, That the King had only 20 Bahars of Pepper, and deſign'd to pay the other 10 in Rials, at the rate of 20 Rials a Bahar; that the Country was very poor, and the Rice extream dear; that upon the arrival of every Praw, the People fled into the Country, thinking them to be the Partiſans of the King of *Achen*; that about 8 or 10 Days before, they had receiv'd Advice, That 70 Sail were arriv'd at *Pera*, with the King of *Achen*'s Army on board; and by yet freſher Intelligence, that the King of *Achen* was dead. Upon this Report, tho' *I* had reſolv'd not to let them have any Cannon, becauſe *I* mean'd to return by the way of *Achen*, yet *I* thought fit to amuſe 'em with fair Words, till *I* had taken in freſh Water; and with that view ſent back the Purſer, to acquaint them, that *I* was very much diſpos'd to deal with them, that *I* could not bring my Ship to *Perleys*, becauſe my Rudder was out of order, and that to ſhew my willingneſs to oblige 'em, *I* was ready to ſend one of my Cannons aſhore, provided they gave me two Hoſtages to enſure the delivery of 20 Bahars of Pepper within eight Days, or elſe deliver'd the Pepper it ſelf. This Offer pleas'd them ſo well, that they ſent me word, There was no occaſion for giving Hoſtages, or putting a Cannon aſhore, till the Pepper was got ready, which would be in 6 or 7 Days.

In this place *I* did nothing to the purpoſe; only *I* caus'd to be cut down, a Main-top Maſt, a Mizen-Maſt, and Boltſprit, which *I* could not have had elſewhere. Could *I* have tarried there till *January*, *I* could have loaded my Ship with Pepper at a quarter of the Price it coſt me at *Achen*; beſides, that at that time the Trade-Winds come E. and ſo would have ſtood fair for returning directly to *France*: But the Men *I* had were ſo few, and withal ſo diſcourag'd, that *I* could not think of tarrying.

A Deſcription of *Pulo Lancabuy.*

This Iſland call'd by the Inhabitants *Pulo Lancabuy*, and by the Natives of *Achen*, *Pulo Lada*, i. e. *The Iſland of Pepper*, lies in 6 Degr. 15 Min. N. Lat. the Needle varying 2 ½ Degr. N. W. It has about 15 or 20 Leagues in Circumference, and is Mountainous in ſome places, eſpecially where it faces *Pulo Botton*, where it lies 5 Leagues off to the Weſtward.

In the middle of the Country there's a high Mountain divided in two by a very narrow Vally, which is not obſervable but on the South-ſide. The Pepper grows at the foot of this Mountain, as well as in the intervening Plain, which extends it ſelf about 3 or 4 Leagues in length. The Pepper-Plants are dreſs'd after the ſame manner with tall Vines. Were this Iſland more cultivated, it would produce many more than it does; for there are not at preſent above 100 Perſons in the Iſland, whereas formerly it was inhabited by above 700.

Its Soil.

The Soil of the above-mention'd places is very convenient for all ſorts of Drugs, Fruits, Rice, and Cattle, being enrich'd with excellent Paſturage, and plenty of Rivers and Springs. The reſt of the Iſland is cover'd with very thick Woods, in which eſpecially upon the Mountains, there are ſome Trees exactly ſtraight, of an incredible heighth and proportionable thickneſs.

On the South-ſide the Shoar is frequently interſected with Arms of the Sea, leaving little Iſlands and Rocks cover'd with Woods.

On the North, there lies a large Iſland about a League off.

On the Eaſt it has a Bay cover'd with a little Iſland, in which Ships of 200 Tun may ride with ſafety, and be ſhelter'd from all Winds. In a word, there is very ſafe Anchorage all round the Iſland; and any part of it affords excellent freſh Water.

From the beginning of *July* to the end of *October*, the Winds are there Weſterly, at which time it rains very much, and the Climate is unhealthy, as it happens in all other places of the ſame Latitude.

The Pepper Seaſon. This Iſland produces the beſt.

The Pepper ripens in *November*: It's Harveſt is from the middle of *December* to the end of *February*. At preſent this Iſland produces every Year 500000 Pound Weight of excellent large and dry Pepper, which is preferable to that of any other place in the *Indies*.

Patani.

This Iſland is ſubject to the King of *Queda*, without whoſe permiſſion no Trade can be carry'd on there. The *Portugueze* that reſide in *Malacca*, come there every Year to Trade, and continue there from *December* to *February*. The Commodities they bring are *Guzurat* Pluſh, Salt, Rice, and a few Rials, which go well off there, by reaſon of the vicinity of the *Chineſe*, a good number of whom are ſettled at *Patani*, a Town ſituated on the oppoſite Coaſt. They ſell their Pepper by Meaſure, and not by Weight, which is better for the Buyer, ſince at that rate he cannot be ſo eaſily injur'd by wetting it, or deceiv'd by the putting Stones or Sand among it, as they commonly do at *Achen*. They ſell it by the Nali, which contains 16 Gauta's, each Gauta containing 4 Chuppa's. Fifteen Nali make a Bahar, which is 450 Pound *Averdupois*: So that the Meaſure in this Iſland is greater by one quarter than in the King of *Achen*'s Territories. The common Price of a Bahar is 16 Rials.

Nali, what it contains.

The Pepper-Plants grow in a fat free Soil. They are planted at the Root of all ſorts of Trees, round which they creep and twiſt like Hops. The way is, to take a Shot or Spring of an old Pepper-Plant, and plant it under ſome Shrub, taking care to clean the Ground, and weed out all the Herbs about it: It will bear no Fruit till the third Year, after which it bears every Year perhaps ſix or ſeven Pound Weight of Pepper. Its firſt, ſecond, and third Crops are much at one; but the fourth, fifth, and ſixth decreaſe one third, both in the quantity and ſize of the Pepper; and in the ſeventh, eighth, and ninth, the Pepper becomes very ſmall and ſcanty: So that after its twelfth Year it bears no more; and a new Shot muſt be planted in its room. For the firſt three Years the Ground about 'em muſt be kept very clean, elſe they will not bear: And even that requires a great deal of pains, for the Climate is extream moiſt, by reaſon partly of the Rains, and partly of the Dew, which is ſo great, that if one walks among Trees, or Graſs, before the Sun-riſing, they will be as wet as if they waded through Water. When the Plant begins to bear, the Branches of the Tree round which it creeps, muſt be lopp'd off, leſt they intercept the Rays of the Sun, which above all things that Plant ſtands moſt in need of. When the Cluſters of the Fruit are form'd, care muſt be taken to ſupport 'em with Poles, leſt their Weight ſhould draw down the Plant, which of it ſelf is tender enough. Care muſt likewiſe be taken, that no Buffles, or Oxen, or large Animals, get in among 'em, for fear they be entangled among the Branches, and ſo break 'em. They muſt be planted at a convenient diſtance from one another, that one may get round 'em with a Ladder to prune them after their Fruit is gather'd; for otherwiſe they would grow too high, and ſo bear leſs Fruit.

A great Dew in that Iſland.

Commonly this Plant has a white Flower in *April*, in *June* this knots, in *Auguſt* 'tis large, green, and ſtrong, and the Natives make uſe of it for a Sallad, or make a Confit of it and other Fruits in Vinegar, which they call *Achar*, and which will keep for a Twelvemonth. In *October* 'tis red; in *November* it begins to grow black; in *December* 'tis all over black, and conſequently ripe. This is the moſt general Method, tho' in ſome places 'tis ripe ſooner or later than in others. When the Fruit is ripe, they cut off the Cluſters, and dry 'em in the Sun, till the Grain falls off from its Stalk; which does not come to paſs in leſs than 15 Days, tho' the Sun is very hot; and during that time they muſt be turn'd from ſide to ſide, and cover'd up in the Night-time. There are ſome of the Grains that neither redden nor blacken, but continue ſtill white; which are made uſe of Phyſically, and ſold for double the Price of the other.

A way of adulterating white Pepper.

Of late Years, the Inhabitants underſtanding that Foreigners wanted theſe for the ſame uſe, have found out a way of whitening the black ones, by taking them when they are yet red, and waſhing off the red Skin with Water and Sand, ſo that nothing remains but the Heart of the Pepper, which of it ſelf is white.

By this Account we may perceive that Pepper does not grow ſo eaſily as many are apt to imagine, and that the Pepper-Plants require a great many Hands to dreſs them; which at preſent is mightily wanted in this Iſland, both it and the Country of *Queda* being laid deſolate by the King of *Achen* within theſe three or four Years, inſomuch that the King of *Queda* is now oblig'd to put himſelf under the Protection of the King of *Siam*.

The Inhabitants are *Malays*, but not ſo crafty and roguiſh as theſe of *Achen*. Their Habit is much the ſame, but not ſo rich.

They are very zealous *Mahometans*, and in their Cuſtoms and Way of Living, differ but little from the Inhabitants of *Achen*.

Tras, a Coin.

They have a ſort of Coin not unlike our *French Sols*, but of a little better Alloy, which they call Tras; and 32 of theſe make a Rial. They reckon by Taels, but one of their Taels makes four of theſe of *Achen*.

The Revolutions of Queda.

Queda is a good Marſhy Soil, cut by ſeveral Brooks, taking riſe from a large River, in which are a great many large and dangerous Crocodiles. In former times the Country was well peopled, and abounded with all ſorts of Proviſions, eſpecially Rice and Cattle: And *Queda* was reſorted to by all ſorts of Merchants from *Pegu*, *Aracan*, *Bengal*, *Jerſelin*, the Coaſts of *Coromandel*, and *Surat*, beſides the *Portugueſe* reſiding at *Malacca*, and even the Merchants of *Achen*.

The Cuſtoms and Impoſts at this place were very moderate, till the Father of the preſent King came to Reign, who was a perfidious and cruel Tyrant, and by Divine Vengeance (as the Natives will have it) was carry'd off in Captivity by the King of *Achen* about three Years ago. In earneſt, this place bears ſeveral Marks of the Divine Wrath; for about four Years before 'twas ſubdued, two thirds of the Inhabitants, amounting to above 40000 Souls, were carried off by a Plague.

The next Year after that, the Peſtilence ſeiz'd upon the Cattle, and carried off all the King's Elephants, and $\frac{7}{8}$ of their other Cattle.

The third Year, there was ſuch a Scarcity of Rice and all manner of Fruit, that they underwent a terrible Famine.

The Year after that, the King of *Achen*, who always lies in wait to pillage his Neighbours, laid Siege to *Queda*. The City held out three Months, and then the King with his Family and Retinue, conſiſting of 120 Men, retir'd to his Palace which he had fortified, and where he was reduc'd to the laſt extremity of want; till about two Months after, that the King of *Achen*'s Officers overperſwaded him to ſurrender, by alledging, that their King admir'd him for his Valour, and would certainly re-inſtall him in his Throne, if he truſted to his Diſcretion.

This Siege was carried on by the *Achen* Army with a great deal of vigour; inſomuch, that they fought when up to their middle in Water, in Winter; for their King had ſent 'em word, That he would cut 'em all in pieces, if they did not bring him the King of *Queda*. At laſt having demoliſh'd the City and Caſtle, they carried the King and his Family, and about 7000 of the Inhabitants to *Achen*.

The Miſery of the late King and his Subjects.

The King of *Achen* gave the Captive King a tolerable Reception, till he had drein'd him and his Friends of all they had; after which, he put to Death not only him and his Children, but the principal Men among the other Captives; confining the reſt to a remote part of the City, where moſt of 'em were kill'd by Miſery and Want; and the ſorry remainder, amounting to about 500 Souls, work at preſent in little Huts one half of the Week, for their own maintenance, ſuch as it is; and the other half in the building of the King of *Achen*'s Houſes, and manuring of his Grounds.

The preſent King of *Queda*, the Son of this his miſerable Predeceſſor, was ſhut up with his Father in the Caſtle of *Queda* before it was ſurrendred; but finding that his Father was inclinable to ſurrender, and carry all his Children and Treaſures to *Achen*, to procure a better Reception from that King, he made his eſcape privately without his Father's knowledge.

October 12. I weigh'd Anchor, and ſtood for the Road of *Achen*, in order to try if I could hear any thing of our Ships.

A Deſcription of the Iſles of *Pulo Botton.*

Soon after the Tides carried me upon the Iſles of *Pulo Botton*, above five Leagues off, where I was oblig'd to drop an Anchor to keep clear of a Rock. Theſe Iſlands are three in number, but accompany'd with a great many ſmall ones. They are uninhabited and cover'd with Woods, in which there are ſome Trees fit for the Maſts of Ships. They afford good Anchorage all about; and the largeſt of 'em has good freſh Water upon a Sandy Creek.

Next Day we came in ſight of the Coaſt of *Sumatra*.

The 27th we came within two Leagues of the Iſle of *Pooloway*; and I deſign'd to double it, in order to caſt Anchor on the Weſt-ſide of the Road of *Achen*, where I might eaſily get off, in caſe the King of *Achen* ſhould uſe me otherwiſe than well. But the Tides were ſo ſtrong, and the Wind blew ſo hard from the W. and W. N. W. that I was drove above ſix Leagues before the Wind, and oblig'd to put into a ſmall Creek of Sand about half way between *Pedir* and *Achen*.

That Evening a Praw came up to me with a Commiſſioner from the King of *Achen*, to know who I was, whence I came, and whither I was going: For it ſeems the King had heard of a Ship cruiſing upon his Coaſt 15 Days before I came to an Anchor in this place. By this Commiſſioner I underſtood that a ſmall *French* Ship had arriv'd in the Road of *Achen* about 8 Days before. It happen'd that the King's Commiſſioner knew me to be the Perſon that had been at *Achen* before: And when he ask'd me, whence I came, I order'd my Interpreter to ſay, That when I went from *Achen* I was bound for *Bantam*, by the way of *Ticow*; but having loſt two of my Maſts by a Storm, was forc'd to put into an Iſland to be refitted. *I* deſign'd to conceal the Name of the Iſland, knowing the King would be angry at my going thither without his leave, and to pretend that *I* knew not the Iſland, and could meet with no Inhabitants upon it to inform me. But my Interpreter precipitantly told him, *I* had been at the Iſle of *Pulo Lancahuy*.

Next Day a Praw came on board with an *Achan-man* in her that *I* knew, and he aſſur'd me, there was a ſmall *French* Veſſel in the Road, and ſome *French-men* that ſaid they belong'd to me; adding withal as a Secret, that the King of *Achen* detain'd 'em there againſt their Will. In the mean time *I* ſent my Long-Boat aſhore for ſome freſh Proviſions; but the People would ſell none, alledging that the King had prohibited them to ſell without his Command. Upon the whole, *I* was apprehenſive, that the King of *Achen* might ſtop our Advice-Boat (for *I* took the *French* Ship in the Road of *Achen* to be it), to prevent their coming to an Interview with me: And thereupon *I* weigh'd Anchor, and ſtood for the Road of *Achen*: But the Winds being contrary and very high, *I* was forc'd to come to an Anchor at the Point of a large Bay; and ſent by Land one of the Men *I* had redeem'd at *Achen*, in a *Moor*'s Habit, to carry a Letter to the People belonging to the *French* Veſſel in the Road of *Achen*; promiſing him his Freedom if he brought me an Anſwer in two Days; for we were then but four Leagues off of *Achen*, and he knew the way exactly well, for which reaſon *I* ſet him aſhore in the Night-time, ordering him to walk it before Day, leſt any Body might meet him, or enquire after his Buſineſs.

The next Day a large Ship, with *Engliſh* Colours, made up to us; and when they came within a quarter of a League, put out their Long-Boat, which brought on board of me Mr. *Du Parr*, one of the Men belonging to our Vice-Admiral, *The Hope*.

An Account of what befel the *Hope* and the *Hermitage*.

The State of the Vice-Admiral's Affairs, according to *Du Parr*'s Report, was as follows:

This Great Ship was an *Engliſh* Ship of 600 Tun, and 32 Guns, and had on board Capt. *Grave*, the Captain of the *Hope*, who was very ſick, and not finding me at *Achen*, was going to *Jacatra*, to find paſſage for *France*. After the *Hope* parted from me, they came to an Anchor at a long Iſland, about 20 Leagues from *Ticow*; and ſent their Long-Boat to *Ticow*.

The Cruelty of the *Dutch* to the *French*.

Twelve Days after the departure of their Long-Boat, they ſtood for *Ticow* themſelves, to put aſhore Mr. *Telier*, the firſt Commiſſary, who was then ill. But the Winds and Tides being contrary, they not only loſt the Men in the Long-Boat, but even thoſe they had on board were all ſick, bating the Captain and five or ſix more. In this diſaſterous Condition they met with a *Dutch* Ship of 1200 Tun, call'd the *Leyden*, and commanded by *William Schouten*: And Capt. *Grave* went on board 'em, to deſire their aſſiſtance: He was no ſooner on board, but the *Dutch* Captain ſent 60 Men in two Long-Boats to board the Vice-Admiral, which accordingly they did without any oppoſition, and not only plunder'd the Ship, but us'd our ſick Men moſt barbarouſly, turning them out of their Hammocks, and throwing them upon the Deck. In the mean time, the *Dutch* Captain having detain'd Captain *Grave*, told him, both he and his Ship was a Prize, and if they met with me, they would ſerve me the ſame way.

Some few Days after this, they met another *Dutch* Ship that had a great many Sick aboard, and was going to put 'em aſhore on the Iſle of *Naſſaw*; Capt. *Grave* deſir'd his Men might be likewiſe ſet aſhore at the ſame place, for the recovery of their Health; which indeed they did, but with ſo much Cruelty, that one would think that Nation had neither Humanity, Religion, nor Conſcience: For they threw the ſick Men like ſo many Logs of Wood out of the Ship into the Boat; and ſome they dragg'd through the Water with a Rope faſten'd about 'em, particularly one who being ſo dragg'd, expir'd immediately upon the Rocks on the Shore.

In the mean time the firſt Commiſſary of the *Leyden*, being ſenſible of his Crime, told Capt. *Grave*, They were miſtaken, and that upon a Review of his Commiſſion, he found he had no Authority to take any *French* Ship; ſo that he was at liberty to return to his own Ship. Captain *Grave* conſidering that he ſtood in need of their aſſiſtance, anſwer'd with a great deal of Complaiſance, That the Commiſſary was not the firſt that had been miſtaken in Matters of as great conſequence; and deſir'd he might have ſome of their Sea-men to Man his Ship. The Commiſſary granted his Requeſt, upon a Proviſo, That the Captain ſhould forget what had paſt, and give ſomething to that effect under his Hand.

Captain *Grave* receiving this Reinforcement, went on board of his own Ship; but the *Dutch* Sea-men threatned every Day, to throw him and his Crew overboard; and he believ'd they had certainly done it, if the other *Dutch* Ship, namely, the *Horn*, had not been in Company.

Sometime after they fell in with three *Dutch* Ships near *Selibar*, upon the Coaſt of *Sumatra*; one of which having a Flag upon its Maſt, like an Admiral Ship, Captain *Grave* went on board of her; but as ſoon as he was on board, that Admiral Ship fir'd upon his, in order to make them take down their *French* Colours; upon which the Captain ſent back his Boat, with Orders to take 'em down. This done, they ſail'd all together for *Jacatra*, where they arriv'd in *December*; and Captain *Grave* went to wait upon the *Dutch* Admiral, and deſir'd he would aſſiſt him with ſome Sea-men to conduct his Ship to *Bantam*, purſuant to his Commiſſion.

The Admiral promis'd to aſſiſt him, and to allow him to go to *Bantam*, provided he would there buy up all the Pepper he could get, at a limited Price, *viz.* two Rials a Sack; and then diſtribute two thirds of it to the *Dutch* and *Engliſh* in that Road. The Captain conſidering his miſerable Condition, was fain to ſubmit and ſign an Obligation of buying 15000 Sacks of Pepper, 5000 of which ſhould be given to the *Dutch*, and 5000 to the *Engliſh*.

The Reception the *French* Ship met with at *Bantam*.

In the mean time the Pinnace I had ſent in queſt of him arriv'd at *Jacatra*, but the Bargain being ſtruck before its arrival, Capt. *Grave* was oblig'd to go to *Bantam*. Accordingly he went, and arriv'd there the end of *January*, where the King gave him a welcome Reception, but would ſell him no Pepper under four Rials a Bag. In the mean time, the *Dutch*, contrary to their Promiſe, ſent out arm'd Barks up and down *Bantam* Road, in purſuit of the *Javans*; and theſe Barks having purſu'd the *Javans* within Cannon-ſhot of their Walls, return'd always on board of our Ship the *Hope*, in order to make thoſe of *Bantam* believe, that the *French* gave ſhelter to their mortal Enemies. However, the King of *Bantam* reſented it no otherways, than by keeping the Pepper at the firſt Price. Upon which Captain *Grave* reſolv'd to take it at the Current Price, and when he had got his Loading, to return to *France*.

He offer'd part of what he got to the *Dutch*, but they would not have it at that price; the *Engliſh* indeed took 150 Bags of him, but never paid for it. The *Dutch* and *Engliſh* paying him no Money, he had not enough to pay the King of *Bantam* for the 15000 Bags he had bargain'd for, and therefore deſir'd he would let him have only 2000 Bags more; but the King refus'd to let him have any, unleſs he would take all he had bargain'd for. At laſt the Commiſſary of the St. *Malo's* Company at *Bantam*, ſupply'd him with as much as would compleat his Loading, taking the *Hermitage* Advice-Boat for 1500 *Rials* in part of payment.

How they were us'd by the *Dutch* at *Jacatra.*

This done, he reſolv'd to return directly for *France.* But three Ships that lay at an Anchor juſt by him, commanded him to go to *Jacatra.* Accordingly he went, and was there order'd to unlade ⅔ of his Cargo; and, notwithſtanding that he had ſhew'd Letters under the *Dutch* Preſident's Hand, importing, that they would not ſtand to the firſt Bargain, yet they arreſted the Captain aſhoar, and made ſeven or eight of their Ships to ride at Anchor round the *Hope*, and began to unload the Pepper themſelves, tho' none of Captain *Grave*'s Crew put their Hand to it. In the mean time Captain *Grave* enter'd a Proteſtation againſt the Injuſtice of the *Dutch*, declaring that all Damages enſuing upon that Action, ſhould be put to their Account.

Soon after, in a very dark Night, a *Praw* was ſeen to come from the place where the *Dutch* Ships lay at Anchor, and make up to the Stern of the *Hope*, near which it continu'd for a little time, and after that putting off, one of their Men cry'd out in the *Malays* Language that the *Hope* was on fire. Immediately the *Dutch* Ships were ſeen under ſail, having weighed Anchor before, which was a certain ſign that they knew of the Deſign: And when the Preſident of *Jacatra* receiv'd the firſt Advice, that a Ship was on fire in the Road, he reply'd without any concern, that he knew it was the *French* Ship. In the mean time the *French* Sea-men finding the Fire too far advanc'd to be extinguiſh'd, came off in the Long-boat, and abandon'd the Ship. Next Morning Captain *Grave* ſent ſix *Praws* to ſave ſomething in the Ship; but the *Dutch* kept them off; So that they ſav'd all the Pepper and Artillery, and put it in their own Magazines, and ſold the very Hulk of the Ship by beat of Drum.

The King of *Achen* arreſts Capt. *Grave's* Men, and takes all from 'em.

This done, Captain *Grave* hearing I was at *Achen*, ſet out for *Achen* in the *French* Commiſſary at *Bantam* his Pinnace, and the reſt of the Men came in another Bark; but as ſoon as he arriv'd there, the Bark and all that was in it, was ſtop'd by the King of *Achen*; and Captain *Grave* being taken very ill, and not meeting with me there, took the opportunity of returning to *Jacatra* by the *Engliſh* Ships above mentioned. Having heard this fatal Account of our Affairs, I ſent out a Boat for Captain *Grave*, and receiv'd him aboard.

November the 5th, We weigh'd Anchor, and making the Road of *Achen*, came to an Anchor among five more Ships that were in that Road, in order to be in a capacity to force the King of *Achen* to deliver up my Men, if ſo be he would not do it with Good Will. Immediately upon our arrival the King ſent an Eunuch aboard to welcome me, and pray me to come aſhoar. I made anſwer, that I could not truſt my ſelf aſhoar, ſince the King had impriſon'd my Men like Robbers, and ſiez'd upon the ſorry Remains of a burnt Ship, contrary to what might have been expected after the Services profer'd him by the King of *France* and me in particular. The Eunuch reply'd, that the King took 'em to be *Portugueze* that had ravag'd his Coaſts, and as ſoon as he was undeceiv'd, had ſet them at liberty and return'd 'em their Money; that it was true, he had hinder'd them to go on board the *Dutch* and *Engliſh* Ships, for fear they ſhould come at any harm from theſe their mortal Enemies, deſigning to put them into the Hands of the firſt *French* Captain that ſhould have arriv'd in that place. To this I anſwer'd, That the *French* were eaſily diſtinguiſhable from the *Portugueze*; and that I underſtood, that tho' the King had return'd 'em ſome *Rials*, yet he had not return'd the value of 2500 Rials, that he took from 'em in *Musk, Jewels, Bezoar, Coral*, and other things. The Eunuch told me the King would certainly pay that. But after all I gave him to know that I was firmly reſolved not to come aſhoar till all my Men were aboard, after which I would come and receive his Commands. Then they demanded the Duties of the King's *Cappe*, beſides 400 *Rials* of Anchorage for the King, and 200 for the Officers of the *Alfan degue*, a late Impoſition laid upon all Ships that ſhould come into the Road. But I told them I did not come to Traffick, and therefore would not pay a Farthing.

His Apology for arreſting them.

The Men are deliver'd, but not their Goods.

Some time after the *Cappe* return'd and brought all my Men aboard; upon which, purſuant to my Promiſe, I went aſhoar. When I waited upon the King, he complain'd heavily that I did not come to ſee him ſooner, and told me that the *Dutch* and *Engliſh* had ſpread falſe Reports, in order to exclude the *French* from the Trade of *Achen*; that the Men he had impriſon'd were repreſented to him as Robbers and Pirats, but as ſoon as he underſtood they belong'd to me, he immediately ſet them at liberty; that he was afraid the King of *France* might have taken it ill if he had put his Subjects into the Hands of the *Engliſh* or *Dutch*, who were his Mortal Enemies; and that he only waited for the arrival of a *French* Ship, in which he might ſend them home. But after all, when I thank'd him for ſending the Men on board, he told me he had only ſent them to viſit me, but not to ſtay with me; for that they being ſhipwrack'd and loſt Men, belong'd to him into whoſe Port they came. This, as I took it, he ſaid to prevent my asking for what he had taken from them, the value of which amounted very near to 2000 *Rials*. However I reſolv'd to play him a trick for it; and with that view, deſir'd Mr. *Limmony* (ſo the firſt Commiſſary of the St. *Malo's* Company at *Bantam* was call'd) who was now Proprietor of the Pinnace, to retire from *Achen* as ſoon as he could, to avoid the Danger he might incur thro' the Inſolence and Perfidiouſneſs of the King. But *Limmony* made anſwer, That he had ſome Goods to put off, which would require ſome time; and he being of another Company I could not force him.

Upon this anſwer, I reſolv'd to put in for a Licence for *Ticow*; and for that purpoſe, offer'd *Orankay Laxemane* a Diamond if he would procure it me. The *Orankay* told me it might be done, provided I made a Preſent of ſome fine Diamond to the King, who was then paſſionately fond of Diamonds. I ſhew'd him a rough Diamond, weighing 12 Grains, which I deſign'd for the King, and another cut, of five Grains for himſelf. Next Day he acquainted me that he had ſhown the Diamonds to the King; but the *Engliſh* having lately preſented him with very large ones, he did not value mine; but after all, that if I could find any extraordinary Rarity, I might certainly obtain my Requeſt. Upon this Advice, I bought of *Peribey*, the *Portugueze*, who was lately return'd from *Maſulipatan*, Two Diamonds; One weighing 18 Grains, cut Lozenge-ways, and very prettily ſet, which coſt me 550 *Rials*; and another of nine Grains cut Point-ways, which coſt me 120 *Rials*. I ſhew'd them to *Laxemane*, who advis'd me to preſent them my ſelf. Upon which I deſir'd *Quylin* the Gold-Smith, who was my Interpreter, and who uſed to ſpeak very boldly to the King, to acquaint him that I had ſome Jewels to ſhow his Majeſty, without telling him whether I meant to ſell them or give them away.

A Preſent made to the King, in conſideration of a Licence to trade at *Ticow.*

Accordingly, after ſome time the King ſent for me, and deſired a ſight of the Diamond that he heard I had. I ſhewed him the large one, which he look'd mightily upon; and when he ask'd the price of it, I told him it was at his ſervice, if he would allow me to buy 300 *Bahars* of Pepper at *Ticow*. His Anſwer was, That if the *Dutch* ſhould offer him 30000 *Rials*, for that Liberty, he would not give it them; but to me he would give a Licenſe of ſtaying at *Ticow* 20 Days, provided I gave him another Diamond like that. *I* told him *I* had none ſuch, nor could not poſſibly find any. Then he deſir'd *I* would preſent him with a Cannon in the room of it: But *I* beg'd his Majeſties Pardon. Upon which he ſaid, all other Nations had preſented him with Cannons, and *I* ought not to refuſe him. *I* pray'd him to excuſe me, in regard *I* had ſo many Enemies, and that there were ſome Ships near *Ticow*. He reply'd, *I* needed not fear the *Dutch* at *Ticow*, ſince they had a Factory at *Achen*, which was more valuable than my Ship. After all, finding he was ſo bent upon the Gun, *I* agreed to let him have it; upon which he call'd for the *Orankay Laxemane*, and order'd him to give me a Commiſſion to trade at *Ticow*: After that he queſtion'd me very particularly concerning Mr *Limmony*'s Circumſtances; the force of his Ship, the value of his Cargo; and at laſt advis'd me to carry him and his Pinnace along with me, and not leave him expos'd to the indiſcretion of the *Portugueze, Dutch, Engliſh*, and even the *Moors* themſelves, who would be eaſily tempted to fall upon ſuch a ſmall Veſſel (repreſenting, that his Affection to the King of *France* mov'd him to give that Advice, and that, tho' Mr. *Limmony* was not under my Command, yet out of reſpect to my Countrymen and Acquaintances, *I* ought to reſcue them from the Danger they were in.

His Intrigue for getting another Diamond.

December the 5th, Having ask'd *Laxemane* often for my Commiſſion, and finding he only ſhuffl'd and put me off, *I* complain'd of him to the King, who bid me give him a Diamond, as if that had been agreed to at firſt.

To make ſhort of the Story, *I* ſmell'd that the *Orancay Laxemane* could do nothing of the matter, for that the King diſpatch'd all his Commiſſions himſelf; and that the deſign of turning me over to him, was, to worm out of me another Diamond for the King's own uſe. On this diſcovery, *I* gave him another Diamond that weigh'd about ſix Grains; and at laſt after many Stops and Delays, receiv'd out of the King's own Hand a Letter, empowering me to traffick in *Ticow* for 20 Days, and ordering the King and Governour of that place to aſſiſt me in carrying on the Trade of Pepper, for which, I was to pay the uſual Duties. At the ſame time the King order'd me to pay the Duties of ſome Goods that *I* had bought up in order to ſell at *Ticow*; which *I* thought to have been excus'd from, in regard *I* mean'd to put 'em off within the Territories of the King of *Achen* However *I* was forc'd to pay it. *I* had frequently order'd my Interpreter to deſire Reſtitution of the King for what he had taken from my Men; but the Interpreter would not venture to mention it, becauſe he found it was diſagreeable to the King. After all, *I* preſs'd *Orancay Laxemane* to repreſent my Requeſt to the King, which at laſt he did, and then gave me to know, that it was in vain to expect it, that the King had a Title to all the Goods of thoſe who were Shipwrack'd upon his Coaſt; and that the King had been very favourable in delivering the Men themſelves.

1622. We take in Pepper at Ticow.

December the 16th, We weighed Anchor, and arriv'd in the Road of *Ticow* the laſt Day of this Year.

January the 1ſt, 1622. I ſhew'd the Inhabitants of the Iſland the King of *Achen*'s Letter, who receiv'd it with pleaſure. In this place *I* bought about 400 *Bahars* of Pepper, which coſt me about 25 *Rials* the *Bahar*, including the Charges of my Commiſſion, and the Preſents *I* made at *Achen*.

We ſteer Homeward.

February the 1ſt, We weigh'd Anchor from the Road of *Ticow*, in order to return home; having on board 75 Men all in good health, and Proviſions for nine Months.

A Deſcription of the Iſland of Sumatra.

THe Iſland of *Sumatra* is larger than *Great Britain*. It contains 11 Deg. in length, running S. E. and N. W. *i. e.* from the Point of *Achen*, which lies in 5 ½ Deg. N. Lat. to the Streight of *Sunda*, the Latitude of which is 5 ½ Deg. S. So that its length may be computed to be 300 *French* Leagues. Its South End is broader than the North; but one with another, its breadth will make 70 Leagues. The Coaſt for the moſt part lies low, tho' there are very high Mountains within the Country. Its Valleys afford excellent Paſturage, and are fertile in Rice, and all other Fruits. 'Tis water'd with many noble Rivers, ſome of which are very great, for inſtance, *Cinquel*, *Baaros*, *Daya*, *Achen*, *Pedir*, *Jambi*, *Andripoura*; Beſides ſeveral ſmall Rivers and an infinity of Brooks. By which means 'tis render'd very moiſt, and in ſome places marſhy. Beſides 'tis ſubject to frequent Rains, for the Equinoctial cuts it directly in the middle. It bears very large Trees, which retain their verdure all the Year round.

Sumatra unhealthy.

The Air is unhealthy for Strangers, eſpecially near the Equinoctial Line, as in *Ticow*, *Paſſaman*, &c. nay, the very Inhabitants of *Achen* don't care to live in thoſe places during the wet Seaſon, which laſts from *June* to *October*; and in which the Weſterly Winds, mix'd with Whirlwinds, Rains, Tempeſts, and ſudden Calms, blow upon that Coaſt. In theſe Calms the Air being unmov'd, and the Ground ſoak'd with conſtant Rain, the Sun with its perpendicular Rays, attracts very ſtinking Vapours, which occaſion'd peſtilential Fevers, that carry Strangers off in two or three Days, or at leaſt terminate in obſtinate Swellings and Dropſies.

Achen the moſt temperate place.

The City of *Achen* ſituated on the North Point, is more temperate. It ſtands upon a great River, about half a League from the Sea, in the midſt of a great Valley, that is ſix Leagues broad. The Soil is very proper for all ſorts of Grain and Fruit; but the Inhabitants ſow nothing upon it but Rice, which is their principal Food, together with *Coco's* with which the whole Iſland abounds. This place is well ſtor'd with Fruit Trees, which bear in their proper Seaſons; ſo that there is not a Month in the Year without ſome ripe Fruit. Here they ſow no Pulſe or Pot-Herbs; but they have excellent Paſturage, and a great many Buffiers, which they imploy in manuring the Ground, and in drawing or carrying. They have plenty of Young Kids, and Horſes of a ſmall breed; but their Sheep are good for nothing. The Peaſants breed up great numbers of Hens and Ducks, in order to ſell their Eggs. Hunting and Game they are much accuſtom'd to, for they have an infinite number of Wild-Boars, tho' not ſo large and furious as they are in *France*; and their Stags and Does go beyond ours. They have but few Hairs or Roebucks; but in the Woods, and at the Foot of the Mountains, there are great numbers of Wild-Elephants. Upon the uninhabited Mountains and Hills, there are a great many Tigers, ſome Rinocerots, Porcupines, Wild-Buffles, Civet-Cats, Wild-Cats, Monkeys, Adders, large Lizards, and in ſome Rivers poiſonous Crocodiles.

The Coaſt of Sumatra.

The better half of this Iſland is poſſeſs'd by the King of *Achen*. If you go along the Coaſt to the Eaſtward of *Achen*, about 12 Leagues from it you meet with *Pedir*, a large and populous City, and after that *Pacem* and *Dely*. About 12 Leagues to the Weſt-ward of *Achen*, lies *Daya*, a conſiderable City; and then the King of *Achen*'s late Conqueſts, viz. *Labo*, *Cinquel*, *Barros*, *Barabam*, *Paſſaman*, *Ticow*, *Priaman*, and *Padang*. The other half of the Iſland is poſſeſs'd by five or ſix Kings, who, tho' they are Lords of very good Countrys, yet if you put them all together, they are not ſo conſiderable as the King of *Achen*.

Upon the Eaſt ſide, near the Equinoctial, lies the little Kingdom of *Andrigri*, and beyond that *Jamby*, the richeſt of them all; and a little farther *Palimbac*. To the Weſt-ward of *Padang*, lies the Kingdom of *Manimcabo*, and beyond that *Andripoura*. The reſt of the Coaſt extending to the Streights of *Sunda*, is woody and uninhabited. That part of the Coaſt that faces theſe Streights is ſubject to the King of *Bantam*. Thus you have an Account of the whole Coaſt of *Sumatra*, the Inhabitants of which are *Malayans*; ſo that they all underſtand the *Malays* Language.

Its Inland parts.

The Inland parts of this Iſland are inhabited by Natives that ſpeak a different Language from the *Malays*; and are under the Government of ſeveral Petty Kings, of which the Richeſt and moſt Powerful is one that reſides between *Ticow* and *Manimcabo*, as being poſſeſs'd of all the places where the Gold of this Iſland lies. 'Tis certain there is a great deal of Gold to be found in this Iſland; but the Inhabitants are altogether ignorant of the working of Mines, and what they gather is only in Torrents, and little Ditches, that they dig in the places where the Floods diſcharge themſelves. This Gold the Natives truck with the Inhabitants of *Manimcabo*, for Rice, Arms, and Cotton-Cloth; and with thoſe of *Priaman*, for Pepper, Salt, *Surat*-Cloth, and *Maſulipatan* Steel. *Ticow* and the other Kingdoms they have but little Commerce with. As for Strangers, they have no dealings with them; but murder and eat 'em wherever they catch 'em, as well as their Enemies. For when they war with one another, they never ranſome Priſoners; but eat their Fleſh raw with Pepper and Salt. Tho' they have no Religion, yet they have ſome Polity relating to Marriage, Juſtice, and their Duty to their King, which they obſerve with an Inviolable Reſpect.

The Iſlands upon the Coaſt of Sumatra.

Upon the Weſt Coaſt of *Sumatra*, there are a great many Iſles; ſome of 'em large, about 18 or 20 Leagues off, and others but ſmall, about three or four Leagues from the Continent; which do not belong to any of the abovemention'd Kings. Thoſe which are inhabited, are poſſeſs'd by the Original Natives, whom the *Malays* never expell'd, becauſe theſe Iſlands were not to their purpoſe.

Engano.

Upon the South ſide of *Sumatra*, in the Latitude of 5 Deg. lies the Iſland of *Engane*, Inhabited by Barbarous Savages, that ſpare no body, but maſſacre all that come upon their Shoar, whether White or Black. They go naked with long Hair, and have *Canows*, in which they fiſh. Their Arms are Bows and Arrows.

Naſſaw.

Upon the ſame Coaſt, in the Lat. of 3 ½ Deg. lies a long Iſland, call'd by the *Dutch Naſſaw*, which may contain about 14 or 15 Leagues in length; but is not inhabited.

About four or five Leagues from this, near the Equinoctial, we meet with another uninhabited Iſland, about 7 or 8 Leagues long.

Montabey.

Then we came to a great Iſland in the Latitude of 1 ½ Deg. call'd *Montabey*, above 20 Leagues long, the Inhabitants of which are cloath'd, and traffick with thoſe of *Ticow*, tho' they ſpeak a peculiar Language.

Under the Equinoctial there are 20 or 25 Iſlands, ſome great, ſome ſmall, ſome inhabited, ſome not.

Pulo Nyas.

Having croſs'd the Line, we meet with the Iſle of *Pulo-Nyas*, in 2 Deg. N. Lat. which is 15 or 16 Leagues long; and peopled with a good ſort of People that hurt no body, unleſs they be injur'd, and traffick with the People of *Barros* and Strangers, to whom they ſell their Children and Slaves.

In 3 ½ Deg. N. Lat. there are ſeveral other inhabited Iſlands. Several of theſe Iſles are cover'd all over with palm-Trees, that bear the Coco's, which the Inhabitants of the Maritim Towns carry off in their Ships and make Oil of. Others are cover'd all over with very high Trees that differ much from thoſe of *Europe*.

The particular Kingdoms in *Sumatra*.

To return to the Great Iſland of *Sumatra*, and take a Circumſtantial View of what it produces.

Andrigri.

The Kingdom of *Andrigri* affords a conſiderable quantity of Pepper; but is very ſmall. Gold is cheaper there than in any other Country poſſeſs'd by the *Malays*.

Jamby.

The Kingdom of *Jamby* produces a great deal of Pepper, which is much better than that of *Andrigri*. The *Engliſh* and *Dutch* have a Factory in it, as well as the *Portugueze* of *Malacca*. The City, which is very unhealthy, lies 50 or 60 Leagues up a River, which one muſt row up with a Boat. The Inhabitants drive a great Gold Trade, not only with thoſe of *Manimcabo*, but with the Natives of the Country.

Polimban.

The Kingdom of *Polimban* abounds in Rice and Cattle; and affords but little Pepper. 'Tis a pleaſant Country towards the Shoar; and is poſſeſs'd by the King of *Bantam*.

Andripoura.

Andripeura is ſeated on a rapid River, in 3 ½ Deg. S. Lat. and furniſhes every Year two Ships loading of ſuch Pepper as we have in *Jamby*. The Inhabitants trade likewiſe in Gold with thoſe of *Manimcabo*.

Manimcabo.

Next is the Kingdom of *Manimcabo*, which ſhoots into the Country, but has ſome Harbours upon the Sea-ſide, particularly *Cortatinga*, where the *Engliſh* and *Dutch* come often. They have little Pepper, but a great deal of Gold, which is not above 30 or 35 *per Cent.* cheaper there than in *France*, becauſe they deal with ſo many Nations in that Commodity. They ſell it by the *Tael*, of which 1 ½ makes ſharp two Ounces. It is in duſt and ſmall pieces, for they make but few Bars of it.

The Dominions of the King of *Achen*.

As for the Dominions of the King of *Achen*, the Territory of his principal City, is not ſufficiently cultivated for maintaining the Inhabitants; ſo that a great part of their Rice comes from abroad. In former times it produc'd a great deal of Pepper; but one of their Kings obſerving they minded nothing elſe, and neglected the manuring of the Ground, cut down all the Pepper Plants, ſo that at preſent it does not produce every Year, above 500 *Bahars* of Pepper, and that of the ſmalleſt ſort. Six Leagues from *Achen*, towards *Pedir*, there is a high Mountain that furniſhes great quantities of Sulphur, as well as the Iſle of *Pooloway* in the Road of *Achen*, which ſupplies in a manner all the *Indies* with Sulphur to make Powder of.

Pedir.

The Territory of *Pedir* being very fertile in Rice, is call'd the Granary of *Achen*. This place affords pretty large quantities of a yellow and hard ſort of Silk; part of which is by the Natives made into Stuffs, that are eſteem'd all over *Sumatra*, and the reſt they ſell to the Inhabitants of the Coaſt of *Coromandel*.

Dely.

At *Dely*, there is a Fountain of Oil, which is ſaid to be unextinguiſhable when once it is ſet on fire, and with which the King of *Achen* burnt two *Portugueze Galleons* near *Malacca*, about 8 or 10 Years ago.

Daya.

Daya abounds in Rice and Cattle.

Cinquel.

Cinquel affords every Year large quantities of Camphyre, which the Inhabitants of *Surat* on the Coaſt of *Coromandel* buy up very eagerly for 15 or 16 *Rials* the *Catti*, or 28 Ounces.

Barros.

Barros is a pleaſant place, ſeated upon a large River, in an open and well cultivated *Champaign* Country, about a League from the Shoar. Its *Benjamin*, eſpecially the White ſort, is mightily eſteem'd in theſe Iſlands; and it ſerves the Inhabitants for a Barter in all their Bargains, for they have no other Money. This place affords likewiſe plenty of Camphyre. The Camphyre of *Batabam* is reckoned the beſt, but there's very little of it.

Paſſaman.

Paſſaman ſtands at the Foot of a very high Mountain, that may be ſeen in a clear Day 30 Leagues off. It has excellent large Pepper, being the firſt place of this Coaſt where we meet with Pepper-Plants.

Ticow.

Seven Leagues from this place ſtands *Ticow*, which is yet more fertile in Pepper.

Priaman.

Priaman has not ſo much Pepper, but it is a better Air, and very well Peopled, and plentifully furniſh'd with all ſorts of Proviſions; and drives a great Gold Trade with the Inhabitants of *Manimcabo*. The *Dutch* had a Factory there for a long time; but the laſt Year the King of *Achen* expell'd them

Padang.

Padang has little Pepper, but deals pretty much in Gold, and has the Conveniency of a fine River, where great Ships may come up and ride ſafe. All theſe places are well Peopl'd and Cultivated, and ſome of the Inhabitants are rich, and live happily by virtue of their Remoteneſs from the Tyrannical Court of *Achen*.

A Character of the People of *Achen*.

The Inhabitants of *Achen* are a worſe ſort of People than thoſe of *Ticow* and *Priaman*, and the other places along the Coaſt. They are Proud, Envious, Men of no Faith or Conſcience, eſpecially in their Dealings with Chriſtians, Treacherous, and given to Robbing and Poiſoning. They deſpiſe their Neighbours, and take all other Nations but themſelves to be brutal. They are very prodigal in their Cloths, and would be the ſame in their Houſes, Slaves, and other things, if the King did not cramp 'em. They ſpeak well in their own Language, and ſome of 'em ſet up for Orators. They are very fond of Simile's, and happy enough in applying them; but the Frequency with which they uſe them, would be nauſeous and impertinent in any other Country. They compoſe ſome Poems and Songs, and apply themſelves to Writing, and the *Arabian* Arithmetick, which differs but little from ours. Some of 'em are very good Mechanicks, eſpecially for the building of Gallies; and they make all ſorts of Iron Work as well as any where elſe, tho' they do not work with that ſame Facility and Dexterity as the *Europeans*. They work very well in Copper and Wood, and ſome of 'em are skill'd in caſting of Artillery.

The King entertains 300 Goldſmiths in his Caſtle; beſides a great many other Artiſans.

Since this King came to the Throne, the Subjects of *Achen* have got the Name of the beſt Souldiers in *India*; for they endure Fatigue wonderfully, and are excellent *Pioneers*, as appear'd in the Siege of *Queda* and *Dely*, the laſt being a place of great ſtrength; fortify'd by the Aſſiſtance and Contrivance of the *Portugueze*; and defended by a Perſon of great Valour and Reputation, which, nevertheleſs the King of *Achen* took in ſix Weeks time, by cutting Trenches and gradually advancing them.

They live very ſoberly, and for the moſt part upon Rice, to which the Richer ſort may add a ſmall matter of Fiſh and a few Herbs: And he muſt be a great Lord indeed, that, in a Day's time, eats a Hen boil'd or broil'd upon the Coals. 'Tis a common ſaying among them, That if there were 2000 Chriſtians in that Country, all their Beef and Fowl would quickly be conſumed.

They pretend to be very ſtrict *Mahometans*, but are great Hypocrites and Diſſemblers, eſpecially in their Reſpect to the King, whom they would ſee hang'd if they could.

If they ſuſpect, tho' without reaſon, that any one does not love them, to prevent his being in a Capacity to miſrepreſent them to the King, they'll form an Accuſation againſt him before the King; and it is the frequency of theſe Accuſations, that makes the King ſo cruel, foraſmuch as it perſwades him, that there are more Conſpiracies againſt him than there are.

In fine, they are ſuch a wicked ſort of People, that it is a common thing among them, for one Brother to accuſe another, or the Son the Father; and if you charge them with Inhumanity and want of Conſcience upon that ſcore, they'll tell you, that God is not far from them, but the King of *Achen* is near at hand.

Their Marriages.

Purſuant to the Law of *Mahomet*, they marry as many Women as they are able to maintain, one of which is entitul'd to a Preference before the reſt, her Children being reckon'd the lawful Heirs. They ſuffer their Slaves and Concubines to go abroad, but not their Wives. If a Man marries a young Woman, he commonly pays ſome Money for her to her Relations, and allots her a Joynture upon his own Eſtate. If a Woman has any thing of her own, ſhe lodges it in the Hands of her Husband, and takes of him a Note, entituling her to the Recovery of it in caſe of Separation or bad Husbandry: And if the Husband dies firſt, this Note, together with the Joynture, ſtipulated in the Contract of Marriage, muſt be firſt ſatisfy'd out of the Goods of the Deceas'd, to the prejudice of all Creditors. If the Woman dies firſt, the Husband is entitul'd to all that ſhe brought him. Man and Wife may ſeparate when they will, provided they both agree to it, for the Conſent of one party is not ſufficient.

Their Courts of Juſtice.

In *Achen* Uſury is prohibited, and the Intereſt of Money is limited to 12 *per Cent. per Annum*, without Pledges; whereas in *Bantam* they'll give 5 *per Cent.* a Month, and a Pawn beſides. If the Debtor refuſes to pay, he is cited before a Court of Juſtice, where, if the Debt be made to appear, he is condemn'd to pay it in a little time; and if he do's not pay it in the appointed time, he is cited a ſecond time, and muſt either pay it in

Court, or elſe have his Hands ty'd behind his Back with a Withe, in which poſture he continues (for no Body dare to untie him), and is oblig'd to appear before the Court every Day that it ſits, till he ſatisfies the Debt: At laſt, if the Judge perceives that he appears every Day, and is not capable to ſatisfie the Debt, he delivers him up to the Creditor to ſerve him as a Slave, empowering the Creditor to carry him home, or ſell him, or to do by him as he pleaſes, ſo he does not put him to Death. This Court ſits every Morning, excepting *Friday*, under a great *Bali*, near the great Moskey; and one of the greateſt and richeſt Orankays preſides in it.

Under another Bali, by the Caſtle-Gate, ſits the Criminal Court, in which ſeveral of the principal Orankays preſide by turns. Under the Cogniſance of this Court are all Quarrels, Murders, Robberies, &c committed in the City. Any Criminal may be ſtopp'd, or taken up by a Girl or Child of four or five Years of Age, for whenever Hands are laid upon him, he dares not but ſtand unmov'd like a Statue, and ſuffer his Hands to be ty'd, in order to be dragg'd before the Court, where Juſtice is immediately put in execution. I have ſeen great lubberly Scoundrels dragg'd in that faſhion by little Children, and condemn'd to receive ſome Laſhes of a Withe upon the Shoulders, for ſtealing the Value of a Farthing. After the Execution is over, neither Criminal nor Informer dare complain; nay, ſometimes they return together equally unconcern'd.

I ſaw a Man try'd there for having peep'd through a Hedge, to ſee his Neighbour's Wife waſhing her ſelf, and condemn'd to receive thirty Laſhes upon his Shoulders, but after the Sentence was pronounc'd, the Criminal capitulated publickly with the Executioner, and after ſome words gave him 20 Maes in the open Court, in Conſideration of being only whipp'd above his Cloths. 'Tis a common Cuſtom in that place, to bargain with the Executioner for mitigating the Puniſhment: For there's never a Day but the King orders a Noſe, Eye, Ear, Hand, Foot, or Teſticle to be cut off from ſome Body or other; and upon thoſe occaſions the Executioner gets Money for doing his Buſineſs handſomely, and with little pain; for if the Criminal does not come up to his Price, and pay him in ready Money, upon the ſpot, he'll cut the Noſe, for inſtance, ſo deep that the Brain may be ſeen through the Wound, or mangle a Foot or a Leg in two or three pieces, &c. In all theſe cruel Mutilations, and even Gelding it ſelf, ſcarce any one dies, tho' ſome of the Perſons thus maim'd are above 50 or 60 Years of Age; and the only Remedy they uſe, is to put the wounded part immediately into Water, and after it has bled a little waſh it, and bind it up with Linnen Clouts. After a Criminal has thus ſuffer'd Juſtice, whether by the King's Command, or by the Judge's Sentence, all the Ignominy of his Crime is wip'd off, and if any one upbraids him with it, he may kill him with Impunity. There is another Court, in which the Cady or Biſhop preſides; that takes Cogniſance of all Infringements upon their Religion.

In the Alfandegue likewiſe there's a Bali for determining Differences among Merchants, whether Natives or Foreigners, the Preſident of which is the Orankay *Laxemane*, who in a manner governs the whole City. In this Alfandegue they keep an exact Account of all the Cuſtoms, Gifts, Fines, and Commodities belonging to the King; with a particular Liſt of the Perſons Names that buy of the King, and pay the Duty, or make him Preſents. To the end they may be capable to give his Majeſty a ſatisfactory Account how every thing is diſpos'd of; for if their Accounts be perplex'd, they can expect nothing but death. Beſides theſe, there are four Officers call'd *Pengoulow Cevals*, who take Cogniſance of all things done in the Night-time, ſuch as running of Goods without paying the Duty, Robberies, &c. Each of theſe has a quarter of the City under his Juriſdiction. Farther, each of the Orankays has a Province or Country Diſtrict under his Juriſdiction, where they give Orders, and adminiſter Juſtice to the Inhabitants. Some of the principal Orankays reſiding near the City, are oblig'd to give Orders for a Watch of 200 Horſe, that Patrols every Night in the Country, and along the Shore.

The King's Houſe. His Women.

As for the Caſtle, or King's Palace, the inner part is fill'd with 3000 Women, which he keeps partly for a Guard, and partly for other Uſes. Theſe Women come ſeldom out of the Caſtle; they have a Market-place of their own, and traffick with one another in ſuch Commodities as they make. They are rang'd under ſeveral Captains, and have their Civil Judges, and Night Officers as well as the City.

His Wives.

None are allow'd to enter into their Apartments, but the King's Eunuchs, who are ſaid to be in number 500. Beſides theſe, the King has a great many Wives and Concubines; and of theſe his Wives, twenty are the lawful Daughters of the Kings whom he has pillag'd. The laſt Wife that he had by ſuch means was the Queen of *Pera*, who is ſaid to be very handſome; and from whom he contracted a Diſeaſe that is likely to carry him off, unleſs the Vigour of his Age, which is now in its prime, be able to overcome it.

Of all theſe Wives he has but one Son of 18 Years of Age, who is yet more cruel than himſelf. This Prince has only the Quality of a ſimple Orankay, and is always confin'd to the Caſtle, except when he goes to the Moskey, and then he has a pompous Retinue. Some time ago, his Father gave him the Inveſtiture of the Kingdom of *Pedir*; but his Government was ſo cruel and licentious, that the King call'd him home, and put him to ſtrange Torments, from which time he hath ſtill kept him with himſelf.

In the great Court, where the King's Apartments are, the Eunuchs keep Guard; beſides which, there is a Guard of 250 Slaves at one Gate, and another of the like number at the outer Gate of all.

Theſe Slaves are moſtly Foreigners, taken in young, and bred up in the Exerciſe of Arms and Shooting; they are confin'd within the Caſtle, and allow'd to converſe with no Body: So that the King makes uſe of them to overawe his own Subjects, and ſcare them from treaſonable Deſigns. All the Puniſhments inflicted in the Caſtle, are put in Execution by theſe Slaves.

To put the Orankays in the Cuſtody of theſe Slaves, he ranges them in three Companies, one of which is oblig'd to keep Guard in the Caſtle Day and Night, without Arms, in a Court ſurrounded by Slaves; ſo that every third Night each Nobleman comes upon the Guard; and if any ſuſpicious Plot ſhould be diſcover'd, the King has always the third part of his Nobility in his hands. If any of the Orankays fail to obſerve the third Night, he undergoes the loſs of his Life, together with the Confiſcation of his Goods, Wives, Children, and Slaves. The Orankays dare not converſe familiarly, or have frequent Interviews one with another, for the King ſuſpects all Familiarity among them: So that they never converſe together, unleſs it be upon an accidental Rencounter, that they ſalute one another with a great deal of Complaiſance. When ever they, or any Body elſe, enters the Caſtle, they are oblig'd to take off their Sword, and put it into the Hands of the Guard at the Second Gate.

The Fortifications of the Caſtle.

The City of *Achen* is more like a Village than a City, being an open place without Walls, and the Caſtle is no more fortify'd than an ordinary Gentleman's Houſe; it has about half a League in Circumference, of an Oval Figure, ſurrounded with a Ditch of 25 or 30 Foot depth and breadth, the Banks of which are almoſt inacceſſible, by reaſon of their ſteepneſs and plenty of Thickets. Before the Caſtle the Earth is caſt up in Banks, which ſerve for a Wall. On the top of this Bank there grows a great many large Reeds as tall as Aſh-trees, and planted ſo thick that one cannot ſee through them. 'Tis preſent Death for any one to touch the leaſt Branch of theſe Reeds; for the King of *Achen*'s Ambaſſador to *Holland*, upon his return home, having forgot that Order, and unluckily pulling off a ſmall Twig, was immediately put to Death. Theſe Reeds enjoy a perpetual Verdure, and can't be ſet on fire.

I could obſerve no Flanks or Baſtions round the Caſtle; but upon that ſide which faces the Moskey, I ſaw the beginnings of ſeveral Ramparts, but nothing yet finiſh'd. Before the Gates there are neither Ditches nor Draw-Bridges; but on each ſide of every Gate there is a Stone-Wall, about 10 or 12 Foot high, ſupporting a Terraſs, on which a couple of fine Braſs Guns are planted. The Gates are as high as the Wall, and are made of a ſtrong ſort of Wood, being ſhut on the inſide with two great Croſs-bars fix'd in the Wall, beſides other Bolts.

Through the middle of the Caſtle there paſſes a ſmall River, that deſcends from the Mountains, the Water of which is extream cool and agreeable. Upon the Banks of this River, there are Steps for People to go down and waſh themſelves.

Before we come at the King's Apartments, we paſs four Gates: From one of theſe Gates there runs a Brick-Wall, back'd with a Terraſs, with ſeveral Braſs Guns upon it, within which, as I take it, is the King's Arſenal. This Rampart incloſes part of a very large Court upon the Front of the Houſes, in which I have ſeen 300 Elephants at a time.

The other part of this Court is encloſ'd by four great Pavilions, and a ſort of a Stone Rampart, which commands the Terraſs, being fortify'd with a Parapet. As for the inner part of the Caſtle, I can give no account of it, being deny'd acceſs.

To conclude, the Fortifications of this place are inconſiderable; but its Avenues are very difficult; for the Country about it is full of Rivers, Marſhes, Trees, and very cloſe Thickets. Where the River enters the Caſtle, there is a Stone Fort, conſiſting of a large round Baſtion, and two Courtines, with ſeveral Guns mounted upon 'em. Upon the Land-ſide theſe Courtines are joyn'd by a Rampart made of Turf, in which there is a Gate, but without either Ditch or Draw-Bridge, as well as the whole Fort. The Walls both of the Baſtion and Courtines are 18 Foot broad, and 20 Foot high.

Before this Fort the King has a ſort of a Pleaſure-houſe, by which there are ſeveral Fiſh-ponds and pleaſant Walks; the whole being encloſ'd with a Trench made of Turf, the Breaſt of which is 10 or 12 Foot high, and moted about, where 2 or 3000 Men may lie. Before this Trench is a ſmall Fort cover'd with Thickets, and Ditch'd about, upon which there are ſeveral Pieces of Cannon. The Country round all theſe Forts is ſo full of Marſhes, Ditches, and the Trees that they call Nippiers, that it is almoſt unpracticable.

Forts upon the Shore.

Paſſing Eaſtward from the Caſtle along the Shore, we meet with ſeveral little Forts of Turf, ſurrounded with Thickets, and plac'd at a Musket-ſhot diſtance from one another, on each of which there are two or three Pieces of Cannon, but ſo cover'd with the Buſhes that they are not viſible. In theſe Forts there is no Guard by Day; but in the Night-time the Horſe-Watch above-mention'd patrols round 'em.

The Weſtern Shore is more acceſſible, and deſtitute of Forts. About a Piſtol-ſhot from this Shore, there is a wet Trench above forty Foot broad, and very deep, that riſes out of the great River, and runs along the Shore to the ſide of the Mountains. Having paſs'd that, we meet with a plain open Country, free of Ditches and Trenches. 'Tis computed that *Achen*, and the adjacent places in that Valley, are able to raiſe 40000 Men: But they have no Fire-Arms or Powder, for the King keeps theſe up in the Caſtle, as well as his Artillery. That Prince has above 2000 Braſs Guns, in his Gallies, Forts, and two Houſes, where they are heap'd one above another. He is likewiſe well furniſh'd with Fire-Locks, but they are ſhort and ill mounted.

The King's Elephants.

But his greateſt ſtrength he places in 900 Elephants, which are bred to tread Fire under their Feet, and to be unmov'd at the Shot of Cannons or Guns; and likewiſe to ſalute the King when they paſs by his Apartments, by bending the Knee, and raiſing their Trunk three times. The King gives a Name to each Elephant, and confers much Honour upon ſuch of 'em as are moſt ſtout and docile; for he orders Umbrello's to be carry'd before 'em as they paſs the Streets, for ſome ſix, for others four, and for others two, in proportion to their merit. Now there is not a Man in *Achen*, beſides the King, that is allow'd the Priviledge of an Umbrello. He matches the Male Elephants with their Females; and to ſome that are deareſt to him, he allows ſeveral Concubines. The Elephants that the King commonly makes uſe of, have a great deal of Honour paid 'em; for as they paſs along, every Body ſtops and makes way for them; for which purpoſe a Boy goes before 'em with a Copper Inſtrument in his Hand, with which he makes a Noiſe to give the People Notice. When the Oil drops from their Ears, they are furious, and it is not ſafe to come near 'em; and at that time the Boy runs above 200 Paces before 'em, to give the People earlier Notice: For they'll ſteal upon a Man ſtrangely, and notwithſtanding their huge bulk, make no more Noiſe when they walk than a Rat; tho' at the ſame time upon that marſhy hollow Ground, the Trot of a Horſe makes the Earth to tremble in a manner.

Sometimes the King is out of Humour with his Elephants, as well as with his Subjects, and ſhews his Diſpleaſure by robbing them of their Wives, Concubines, and other Honours, and inflicting Corporal Puniſhments in preſence of the reſt: For exemplary Correction has the ſame Influence upon them as upon Men, as appears by the following Inſtance:

The King having order'd the Embarkation of 100 Elephants for the Siege of *Dely*, when the Elephants were brought down to the Shore, not one of them would enter the Ship: The King being acquainted with the matter (which ſome took to be a bad Omen) came in Perſon to the Shore, and having check'd and chid 'em with a great deal of Paſſion, and upbraided them with the Breeding and Honour he had beſtow'd upon 'em, cauſ'd one of the principal Elephants to be cut in two before their Eyes, threatning the reſt with the ſame uſage, if they did not embark immediately. This done, they embark'd very peaceably, and were extream tractable during the whole Voyage.

There never was a Prince in *Achen*, that had ſuch a dexterity of managing theſe Animals. He would ſtand upright upon their Backs, while they run a full ſpeed: For my part, I had rather run ten Stages on Foot, than ride four Leagues upon an Elephant; for it is a very uneaſie poſture to thoſe who are unaccuſtom'd to it, eſpecially if one ſits behind, for the forepart of the Shoulders is the ſofteſt.

His Horſes.

When the King was well, he us'd to hunt every other Day. In his Stables he has about 200 Horſe, 50 of which might be worth 500 Crowns a piece in *France*. All of 'em have rich and magnificent Trappings.

The *Achen* Gallies.

The King of *Achen* is ſtronger by Sea than any of his Neighbours; for he has about 100 great Gallies, of which a third part are much larger than any we build in Chriſtendom. I ſaw the Keel of an ordinary one, that was 120 Foot long, all in one piece. They build their Gallies very prettily in that Country; but they are too heavy, for they are broader and higher than they ſhould be. Beſides, the Rigging is too ſmall and weak for their bulk; their Oars have neither length nor weight ſufficient, being only Poles, with a piece of Board at one end. They put but two Men to an Oar, who ſtand upright when they row. Their Sails are not made like Mizain Sails, but ſquare like thoſe of a Ship. The Sides or Planks of theſe Gallies are ſix Inches thick: So that conſidering their dulneſs, one of our *European* Gallies might beat ten of 'em. They have commonly three good Pieces of Cannon, of which that planted in the Bourſey is not leſs than a Battery Gun, for ſome of 'em will carry a Bullet of forty Pound. Beſides theſe, they have ſeveral Fauconites, which they plant before and abaft. The largeſt Gallies have commonly ſix or eight hundred Men: Their Crew conſiſts not of Slaves, but of poor People that row very well.

This King's Wars are not very chargeable to him, for all his Subjects are oblig'd to march at his Command upon their own Charges, and carry Proviſions with them for three Months. The King gives them Arms, of which a Regiſter is kept, they being oblig'd to reſtore them at their return. Their Wives and Children, and their Parents, if they have any, are anſwerable for their Behaviour; for if they ſhrink or give way before the Enemy, not only themſelves, but theſe their innocent Relations ſuffer for it: By this means the King has brought them to be good Soldiers, and the Terror of their Neighbours. If they continue above three Months in the Field, the King is at the Charge of Rice to maintain 'em.

His Gallies coſt him as little as his Land-Armies; for he divides 'em among his principal Orankays, obliging them to fit them out, take care of 'em when they return, and repair 'em at their own Charges; and orders a certain number of People to be ready upon the Command of ſuch and ſuch an Orankay, to aſſiſt at theſe Services. The Orankays are very careful of the Galleys; for if theſe fail, they either loſe their Lives, or muſt build new ones in their room: For that reaſon, when the Gallies come into the River to be laid up, they cleanſe the Dock very carefully, and then lay great pieces of Wood a-croſs it, which are ten Foot diſtant from one another, and lie upon an exact Level, leaſt the Gally ſhould bow when it lies upon 'em.

When the Tide comes in, the Elephants draw the Gally up upon theſe Sommers, which lie above ten Foot from the Ground, that they may get underneath to view and caulk the Ship's bottom. This done, they run a Dyke of Turf, Stone, and Planks, between the Dock and the River, and then fill the Dock with Water to the upper Surface of the Sommers. This they do that the Gally may be refreſh'd by the Water, but ſo as not to dip into it, leaſt Sea-worms ſhould breed in it. Having laid up the Sails and Rigging, they cover the Maſts very carefully with Palm-Tree Leaves, ſo that neither Rain nor Sun can hurt them. Beſides they have a great Roof, that they bring entirely over the Gally. After that they put Water into it to the depth of four or five Foot, to keep the Planks freſh, and prevent their being ſplit by the heat. All this is done in five or ſix Days; and one cannot imagine how well they preſerve the Gally, and how readily they launch it again. For the Dock being full of Water, there is no occaſion for caulking, the Rigging is at hand, and the Roof is taken off in a Minute; the Water within the Gally being thrown out into the Dock, augments the Water there, which ſets the Sommers afloat, ſo that they are eaſily remov'd: Upon which the Water ruſhing into the River carries the Gally along with it.

A Cuſtom peculiar to the King of *Achen*.

Every Morning and Evening, upon the opening and ſhutting of the Caſtle Gates, the King cauſes a Gun to be fir'd; and if any of the neighbouring Kings offer'd to do the like, he would declare War againſt them, alledging, That he being the Inventer of that Cuſtom he had a Right to engroſs it to himſelf, for a Badge of his Grandeur. He prohibits the ſhooting of Muskets, or Fire-Locks, in the

City, on any other Days but *Munday* and *Thurſday*.

The Riches of the King of *Achen*.

From what has been ſaid, 'tis manifeſt that this King cannot be but very rich. For in War he is only at the Charge of the Arms, Powder, Lead, and Rice, which is very inconſiderable: And in Peace he ſpends yet leſs, for as to the maintenance of his Family, he has more Rice, Fleſh, Fiſh, Fowl, Oils, Sugar, and Herbs, paid him by his Subjects, than is conſum'd in the Caſtle; and the Surpluſage is ſold in the Market to the King's advantage. Beſides, he allows his Servants nothing but Rice; if they eat any thing elſe, they muſt purchaſe it by their Labour and Induſtry.

He amaſſes together great Quantities of Rice every Year; for having large Hereditary Countries, he parcels them out among his Subjects to be manur'd, obliging them to furniſh him with a certain Quantity of Rice every Year, whether the Crop be good or bad; and he calculates the Product of his Land ſo nicely, that the Farmers can't be idle, if they maintain themſelves, and pay the King, who never bates them a Grain. This Rice he puts into a Magazine, and keeps it up till the latter end of Autumn, at which time it fetches a double Price, and dreins all the poor People of their Money. If it be a plentiful Year in *Achen*, he ſends it to ſome neighbouring Country, where Rice is ſcarce.

He has vaſt Herds of Cattle, kept by his Slaves.

His Elephants coſt him nothing, for he gives them no Rice, but only the Trunks of *Banana*-Trees, which being cut, a Sprout comes up next Year that bears Fruit.

As for his Cocks, they coſt him nothing, for the Orankays take more care of them, than of their own Children.

The Preſents made him by his Officers.

He is at no charge for his own, nor his Womens Cloaths; for on a certain Day of the Year, all that have any Offices or Places in *Achen*, are oblig'd to make him a Preſent of one or more Garments, according to the Incomes of their Places, or elſe of Stuffs for Cloathing the Women: And every one ſtrives to outdo another in the Magnificence of his Preſent, in order either to procure a better place, or to ſecure what he has. If he does not like the Garments or Stuffs, he turns them back, and the Officer that gave 'em is ſure to be turn'd out of his Poſt, unleſs he quickly accommodates the matter with a large Sum of Money; or if he be a Man of Riches, he'll be charg'd with ſome Male-adminiſtration in his Office, and perhaps put to Death.

Houſes;

He cauſes a great many large Houſes to be built of rough Stone, which coſt him but little, tho' they would be very chargeable to another, becauſe he has ſuch large Numbers of Slaves. Tho' theſe Houſes are reckon'd inimitable in that Country, yet they are infinitely ſhort of what we have in *Europe*:

Slaves.

His Slaves indeed have a better Life, than any Slaves I know; for he does not chain 'em, unleſs they ſeem to endeavour an eſcape, or to rebel againſt their Maſters; and of eight Days he allows 'em four to work at what Work they will, for their own Livelyhood. And thus the King pays nothing for their Maintenance. He employs them moſtly in cutting of Wood, making of Mortar, hewing of Quarries, and Building. There are three or four Overſeers of their Work, who are maintain'd by the Slaves; for thoſe who underſtand any Trade may live pretty handſomely, and be excus'd from working to the King for Five-pence a Day, which is receiv'd by Commiſſaries appointed for the purpoſe, and goes toward the Maintenance of the Overſeers, and the buying of Iron, and all other Materials.

The King gives the Model of the Buildings himſelf; and very often, if a Window, or a Door, or any ſuch thing, be not exactly according to his Fancy, down goes the Houſe, and another muſt be built in its place. He appoints them a certain time, in which the Work muſt be finiſh'd, which is commonly but very ſhort; for in the ſix Months that I was at *Achen*, I ſaw more Buildings rear'd up and pull'd down again, than I could have imagin'd to be done in the ſpace of two Years. Theſe Slaves may redeem themſelves; but their Ranſome riſes according to their Quality.

The King is Heir to all his Subjects that die without Male Iſſue; and if they leave any Daughters then unmarried, he puts 'em into the Caſtle, which occaſions the numerouſneſs of his Women.

A Cuſtom peculiar to the King of *Achen*.

In that Country Daughters have no Title to any Heritage; and not only the People of *Achen*, but even all the *Mahometans* are ſo loth to part with their Money, and ſo buoyed up with the hopes of having Male Children, by ſome of their many Wives, that they ſeldome or never give any thing to their Sons-in-Law in their Life-time: And after their Death they can't have it; nay, even in their Life-time, if the King's Spies obſerve it, it may do them more injury than good.

Forfeited Eſtates.

The Royal Treaſure is likewiſe conſiderably enlarg'd by the forfeited Eſtates of thoſe whom he puts to Death every Day; for to prevent their alienating their Eſtate or Goods, he takes them at a ſurprizal, and has their Wives, Children, Slaves, Cattle, Money, and all ſorts of Movables, lodg'd in the Caſtle, before they know their Sentence. While I was there, I ſaw the Jewels, Gold, Silver, and all the movable Goods belonging to his own Mother, brought in upon the ſame occaſion. The Perſons that he thus puts to Death, are commonly the Orankays, or great Lords; and that for one of theſe two Reaſons, *viz*. Either their Reputation and Intereſt among the People, or their Riches, the former giving him occaſion of Jealouſie, and the latter awakening his covetous and avaricious Temper.

The King is Heir to all Foreigners.

The King is Heir to all Foreigners that die within his Territories; for as ſoon as a Foreigner ſickens, the King's Officers preſently take poſſeſſion of his Houſe, and upon his Death remove his Effects to the Caſtle: And oftentimes his Servants, Friends, and Slaves, are put upon the Rack to diſcover where his Gold, Silver, and Jewels are, or where any thing is due to him. But the *Engliſh* and *Dutch* having Factories here, are exempted from this Law; as we were while we ſtaid there.

This King has another bad Cuſtom, of impropriating the Men and Goods of all Ships that ſuffer Shipwreck upon his Coaſt.

No Audience of the King without a Preſent.

No Foreigner can enter the Caſtle, without making a Preſent to the King. 'Tis true, *I* often went without any, being allow'd the Quality and Privilege of a principal Orankay; but at the ſame time I never could have Audience upon my own Affairs, but when I uſher'd it in with a Preſent. Nay, if either Foreigner or Native puts in any Requeſt to the King without a Gift, the former is not heard, and the latter is puniſh'd. And after all, the Requeſt will not be granted, unleſs the Preſent be lik'd; for I have ſeen the *Dutch* and *Engliſh* have their Preſents frequently return'd, and in that caſe they were oblig'd to make more valuable Gifts, ſuch as would pleaſe the King, before they obtain'd their deſire.

No Foreigner can enter the King's Chamber without the Chappe, for which he pays a Rial to the Officers that bear it. When a Ship comes into the Road of *Achen*, none of their Crew muſt go aſhore till the Chappe comes, and till the Duty of that be paid, which amounts to 50 or 60 Rials, according to the bigneſs of the Ship: And upon their departure from the Road, they are oblig'd to pay about half as much. The *Moors* pay nothing upon the Export of Goods, but upon the Import the Duty is very heavy; for they pay 10 *per Cent* in Gold for the Entry of all Goods, which are appris'd by the Officers of the Alfandegue, and commonly over-rated 50 *per Cent*. The *Dutch* and *Engliſh* pay as much; but then they pay it in the Commodity it ſelf, and not in Gold. But the greateſt Damp upon the Trade of that place, is, that the King engroſſes it all into his own hands; for what Commodities he buys, he muſt have 'em under the Market-price, and what he ſells riſe to 50 *per Cent* above it: So that if he continues at this rate, the *Dutch* and *Engliſh* will be oblig'd to abandon this place; and 'tis with that view, as I take it, that he does as he does, for at preſent he is very jealous of their ſtrength.

From what has been ſaid, we may ſafely infer, that the King of *Achen* is infinitely rich; eſpecially if we conſider, that over and above the above-mention'd Articles, he had a rich Exchequer left him by his Father.

The ancient State of the Kingdom of *Achen*.

To underſtand how this preſent King of *Achen* came to the Crown, we muſt know, that before the Reign of his Grandfather, the Orankays being never oppreſs'd with their Kings, nor pillag'd by other Nations, were very rich in Lands and Houſes, beſides Gold and Silver, and gave a licentious Range to their inſolent and proud Tempers. In thoſe Days the City was ſix times greater than it now is, and ſo crouded with People, that one could ſcarce paſs along the Streets: No City in *India* had ſo flouriſhing a Trade; the Alfandegue requir'd no Cuſtoms but that of the Chappe; Merchants might unload and load again, in 15 Days time.

The Orankays liv'd in great ſtately Houſes, with Cannons at their Gates, and great Numbers of Slaves, both to ſerve and guard them, they had proud magnificent Garments, and pompous Retinues, and were much reſpected by the People. This Grandeur and Authority of the Orankays, not only leſſen'd the King's Authority, but was oftentimes fatal to his Perſon. Inſomuch, that it was a great matter, if a King enjoy'd his Crown two Years; or if he did, 'twas with ſo much trouble and dependance upon the Orankays, that nothing but the Title of his Dignity was left.

Things continu'd at this rate, till the extirpation of

The ancient Line extinct.

ancient Royal Line, which happen'd about forty Years ago. Upon that the Orankays met in order to chuſe a King: But every one affecting that Dignity for himſelf, they could not agree upon the matter, and reſolv'd to decide it by force.

In this Ferment the Cady, or great Biſhop, by his Authority and Remonſtrances, perſwaded them to liſten to an Expedient that would remove all their Jealouſies; namely, to put the Crown upon the Head of a certain Orankay, who in all theſe Diviſions had not ſtirr'd or affected any thing for himſelf or his Family; but had liv'd in the Reputation of a wiſe experienc'd Man, being then 70 Years of Age, and deſcended of one of the Nobleſt Families in *Achen*.

The Orankays accepted the Propoſal, in regard it did not ſink their reſpective Pretenſions, ſince they only entituled him to a preference by reaſon of his Age and Prudence. But after all, the old Nobleman deſir'd to be excus'd; alledging, that he had retir'd for ſome time from the Affairs of the World, and deſired to paſs the remainder of his Life in peace and quietneſs. Upon this the Orankays fell together by the Ears: But at laſt finding that every thing run into confuſion, they endeavour'd to threaten the old Orankay into an acceptance of the Crown: But both their Threats and Intreaties were equally ineffectual. At laſt they came all in a Body to his Houſe; the Cady carrying the Crown, and one of the Orankays a naked Sword. There they repreſented to the old Gentleman, That they could not poſſibly find any other Remedy for their preſent Calamity, but that of making him King; that as they had frequently importun'd him to accept of the Crown, ſo they came now once more to make the laſt Offer; and that if he refus'd it, they were reſolv'd to cut him off immediately, to prevent their inſiſting any longer on an uſeleſs Expedient.

The Acceſſion of this Kings Grandfather to the Crown.

The old Orankay finding himſelf in a quandary, told 'em, That tho' he had firmly reſolv'd to finiſh his Days without the diſturbance of Publick Affairs; yet ſince nothing but his mounting the Throne could prevent a pernicious War, he accepted their Offer; with this Proviſoe, That they ſhould reſpect him as a Father, and he ſhould treat them as his Children, that if any of them diſſatisfy'd him, he ſhould treat them as his own Children, and they ſhould receive his Correction as from the Hands of their own Father.

This ſaid, they all thank'd him, promiſing not only to honour him as their Father, but to reſpect him as their Sovereign Lord.

After his Coronation he took poſſeſſion of the Caſtle, and invited all the Orankays to a Feaſt upon an appointed Day, and made ſuch vaſt Preparations for their Reception, that the Orankays were ſtruck with admiration. The Orankays were drawn up in order in a Court near the King's Apartment, and conducted by the Chappes into a Hall; but as every one entred the Hall, he was immediately ſeiz'd and dragg'd into another Court behind the Buildings, where the King had caus'd to dig a deep Ditch, upon the Brink of which their Throats were cut, and then their Bodies were thrown into it.

His Cruelty.

In the mean time the Muſick play'd, and nothing but Songs and Mirth was heard in the Hall, and the matter was carried on ſo warmly, that 1100 were cut off before thoſe in the Rear could perceive any thing of the matter; at which time the ſmall Remainder ſlipp'd ſoftly out of the Caſtle, without knowing diſtinctly the occaſion of their miſtruſt, till the next Day that the principal Orankays were miſſing.

The King having thus cut off all thoſe whom he ſuſpected, and fortify'd himſelf with a good Body of Men in the Caſtle; he publiſh'd a Declaration, ſetting forth, That this great Execution was neceſſary for the Safety of his own Perſon, and the States; that as in former times the Orankays had made and dethron'd ſo many Kings at pleaſure, and extinguiſh'd the Ancient Line, ſo when they were at the point of cutting one another's Throats, they could find no other Remedy but that of making him King by force, in order to uſe him as they did the former Kings upon occaſion; that ſince he was King, he would not be expos'd to the inconſtant Humours of the Orankays; who, after they ſhould have maſſacred him, would have relaps'd into their former Animoſities, and made the People to ſuffer by their Quarrels; and in fine, that all his Deſign was to preſerve the General Peace, to Reign in Equity, and execute ſevere Juſtice upon Offenders.

After this Declaration, when he ſaw that no Body ſtirr'd, and none came near him to pay their wonted Reſpects in the Caſtle, he demoliſh'd all the Houſes of the executed Orankays, and lodg'd their Cannon, Arms, and movable Goods in the Caſtle; he prohibited every one to build with Stone, or to have Cannons or Intrenchments about their Houſes; he order'd the Trenches that then were to be fill'd up, and the Stone-Walls to be pull'd down; he enjoyn'd, that all their Houſes ſhould be but one Story high, and their Walls be made of Mats, as they are at this Day; he conferr'd the Quality of Orankays upon his Favourites and Abettors, allowing them part of the Lands of the executed Lords; he put to Death the ancient Orankays, and thoſe of the People that teſtify'd any diſlike of his Conduct: Inſomuch, that the firſt Year of his Reign he put to Death 20000 Perſons; and in the ſecond, ſome thouſands more. This Prince reign'd a long time, and reduc'd the City to the pitiful Condition that it is now in. He us'd the *Mooriſh* Merchants very unkindly; but was extream civil to the *Engliſh* and *Dutch*, who ſettled there in his time. He brought up this preſent King, who is the Son of his own Daughter, and whom he had a particular Love for.

He divides his Kingdoms between his two Sons.

He died in the Year 1603, aged 95 Years, leaving behind him two Sons, who were already advanc'd in Years. To the eldeſt of theſe he left the Kingdom of *Achen*, and all his Territories along the Coaſt of *Sumatra* to the Weſtward; and to the other the Kingdom of *Pedir*, with the Territories upon the Eaſt Coaſt of *Sumatra*. Theſe two Princes were of too meek and humane a Temper for their Subjects; ſo that Murders, Robberies, Oppreſſion, and an infinity of Diſorders, reign'd in *Achen*, for want of a ſevere execution of Juſtice.

A War between the Brethren.

The King of *Achen* happening to give ſome ſlight Rebuke to his Nephew, the preſent King, whom he entertain'd in the Caſtle, the young Prince made his eſcape out of the Caſtle, and fled to his Uncle the King of *Pedir*, who gave him a very kind Reception. The King of *Achen* deſir'd his Brother to ſend his Nephew back to *Achen*; but his Brother made anſwer, That he would not offer to force a young Prince, whom their Father had recommended to their care. Upon this, the two Brethren declar'd War one againſt another, the Forces of *Pedir* being commanded by the Nephew, now King. In this War above 60000 Men were kill'd between 'em; and the Nephew had oftentimes the advantage. But at laſt the Forces of *Achen* being more numerous, thoſe of *Pedir* refus'd to march; upon which there King was oblig'd to deliver his Nephew into the hands of the King of *Achen*, who immediately put a ſtrong Guard upon him, and laid him in Irons.

Some time after, the *Portugueſe* made a Deſcent upon *Achen*, and carried the firſt Turf Fort at the entry of the River, but could not maſter the Stone one. In this Juncture the young Prince deſir'd his Uncle would let him go and fight againſt the *Portugueze*, remonſtrating, that he had better die in a Battle with the *Caſires* (ſo they call the Chriſtians) than lie in Chains to no purpoſe. The King of *Achen* being at that time in a Conſternation, releas'd him, and ſuffer'd him to go upon that Deſign. The young Prince behav'd himſelf with ſo much Bravery in two or three Engagements with the *Portugueze*, that he acquir'd a great Reputation among the People of *Achen*.

This King's Acceſſion to the Throne.

Upon this, his Mother, being an Active ambitious Woman, forms a Deſign of making him King of *Achen*, and furniſhes him with great Sums of Money to be diſtributed among the principal *Orankays*. With the ſame view, the young Prince was very familiar in his Converſation, what ever he had was common to his Friends and Courtiers, he refus'd nothing that was ask'd of him; in a word, he ſhew'd himſelf liberal to the *Orankays*, affable to the Rich, a Companion to thoſe that profeſs'd Arms, and extream courteous to the Common People. In the mean time the King of *Achen* dy'd ſuddenly. At the Hour of his Death, the young Prince gets into the Caſtle, bribes the Guards, makes large Promiſes to the Officers, advances a large Sum of Money to the Governour of the Caſtle, diſtributes Money among the principal *Orankays*, and threatens the *Cady* who ſcrupled to Crown him. In fine, he managed the Intriegue ſo happily, that he was proclaim'd King that very Night, to the great joy of all the People; who had conceiv'd great Hopes of him, in regard of his Liberality, Courteſy, and Familiarity, as well as his Valour.

This Kin cuts his U kle's Thr

Pedir being 12 Miles from *Achen*, the King of that place was quickly acquainted with his Brothers Death, and came next Day to receive the Inveſtiture of his Patrimony: But as he approach'd to the Caſtle with a ſmall Retinue, he came into the Hands of his Nephew the King of *Achen*, who forgetting his former Favours, kept him a Month Priſoner in the Caſtle, and then pretending to ſend him out to a more agreeable Retreat at a diſtance from the City, caus'd his Throat to be cut by the way. Thoſe who put the Crown upon his Head were not better us'd: For he began with the *Maraja*, or Governour of the Caſtle, who had taken moſt of his Money, and ended with thoſe that receiv'd the laſt. In a Years time they found a great alteration upon him; for, inſtead of

being

His Character.

being *Human* he was very *Cruel*, inſtead of *Liberality* he diſplay'd an extream *Avarice*, and his *familiar meek* Temper became *auſtere* and *inexorable*. In fine, he has ſhed more Blood than his Grandfather did in his whole Reign; he has diſpeopled the whole Territory of *Achen*, and drain'd, not only the Natives, but, the Foreigners that reſide there, of all their Money. 'Tis true, he endeavour'd to repeople this City with his Conqueſts or rather Ravages (properly ſpeaking) for having ruin'd the Kingdoms of *Jor*, *Dely*, *Pahan*, *Queda* and *Pera*, he tranſported from thence to *Achen* about 22000 Perſons; but at preſent there are ſcarce 1500 of them left, ſo that that Policy ſerv'd rather for an inſtance of his Cruelty than any other thing, for the People being brought naked to *Achen*, and allow'd not a Grain of Rice for their Maintenance, dy'd of Hunger in the Streets. Hitherto this King has been ſucceſsful in all his Enterpriſes, inſomuch that ſome take him for a great Sorcerer. For my part *I* take him to be a Man of great judgment, one that undertakes nothing raſhly or unſeaſonably, but after a mature Deliberation, and upon the Foot of very probable Conjectures. He never aſſaulted one of his Neighbours, but when they were reduc'd to ſome Extremity. All his preparatory Meaſures are incomprehenſible, till the Deſign is put in execution; for he never asks nor receives Advice of any, and being inveſted with an abſolute Authority, his Commands are immediately put in Execution. Now, all this may be done without the Aſſiſtance of Devils: Beſides, *I* have often heard, that Sorcerers are poor ſorry Wretches, but *I* am certain, that this King is the richeſt of all his Neighbours.

Iſlands upon the Coaſt of *Sumatra*.

February the 3d, We came in ſight of the Iſle of *Montabey*. The 5th, We came to an inhabited Iſle that lies between *Naſſaw* and *Montabey*. The 6th, we paſs'd between *Naſſaw* and another Iſland not mark'd in the Charts. This Channel is four or five Leagues broad. All theſe Iſlands lie very low, whereas the oppoſite Coaſt of *Sumatra* is very high and conſpicuous. I would adviſe all Sailors rather to put in to *Sumatra* than into any of theſe little Iſlands; for the former is peopled all along the Shoar with Perſons acquainted with the Converſation of Strangers, whereas the Inhabitants of theſe are barbarous Savages, that have no communication with any other People.

We return to *Table-Bay*.

April the 20th. In 33 ½ Deg Lat. the Needle varying 7 ½ Degr. N.W. We deſcry'd a ſmooth and uniform, but rocky Coaſt; upon which, we ſtood to the Sea, and next Day encounter'd a violent Storm that laſted to the 23d. *May* the 1ſt, We perceiv'd the Land between Cape *Anguillas* and Cape *Falco*; and *May* the 5th, we came to an Anchor in *Table-Bay*. Our ſick Men did not recover at this place as I expected; either by reaſon of the extream cold, or becauſe I could not take in ſuch freſh Proviſions has I had a mind to, there being ſome *Dutch* Ships in the Bay that I miſtruſted. I bellieve the Cold had a great hand in it, for all the *Dutch* Sick died as well as mine. The Wind continu'd at W. N. W. from my firſt arrival in this Bay to the 24th, that I weighed anchor, and a bad Rudder obliging me to paſs by the N. E. of the little Iſland, was becalm'd within a Cannon ſhot of it. *May* the 30th, we ſet ſail, the Wind at S. S. E.

S. Helena.

June the 21ſt, we deſcry'd St. *Helens*, about 15 Leagues W. N. W. of us. Next Day I came to an anchor before it, and ſent our ſick Men aſhoar, who were ſomething benefited by the Air. This is a very convenient place for the refreſhing of Men, not only with regard to the Temperateneſs of the Air, but by reaſon of the plenty of young Kids and Hogs, the facility of coming at good Water, the conveniency of good Fiſhing in the Road and upon the Shoar, the abundance of Oranges and Citrons, which are excellent Remedies againſt the Scurvy, beſides ſeveral good Herbs, ſuch as Purſlain, a ſort of Tarragon in large quantities, ſome Fenugreek, Tobacco, and the Herb Mayoc; not to mention the Partridges, Pidgeons, and, as ſome ſay, Oxen, that this Iſland abounds with. For tho' the Iſland be mountainous and very ſteep and wither'd like, yet on the top there's a great deal of moiſture, and there is not a Gap or Valley without a Brook or Rivulet, the greateſt of which runs in the large Valley, where a Chapel is built, tho' the Valley is not above 150 Paces broad, and 1000 long; at the end of this Valley there's a ragged cleſt hill of Rocks, upon which there falls down a Stream of Water from a very high Mountain, inſomuch that it is beat as ſmall as Rain before it falls. This Iſle lies in 16 Deg. S. Lat. the Needle varying 5 ¼ Deg. N. E. and always has the Wind at S E.

Iſle of Aſcenſion.

July the 16th, we ſaw the Iſle of *Aſcenſion*, about 12 Leagues N. E. of us. 'Tis very high, and its Anchorage lies over againſt a Sandy Creek. This Iſle has neither Wood nor freſh Water, nor any green Herbs, being nothing but parch'd Rock. Yet it affords ſome Hogs, and a great many Fowls, ſuch as can live without freſh Water. Upon the Rocks and in the Road it has abundance of Fiſh, and Tortoiſes. *Its* circumference will make about 8 Leagues, as well as that of St. *Helens*. *It* lies in eight Deg. S. Lat.

The Iſle of S. Vincent.

After we croſs'd the Equinoctial we had ſuch Calms and drizling Rains, that moſt of our Men were ſiez'd with Dropſies and Tumours, upon which there enſued a great Mortality in the Ship. *Auguſt* the 11th, the Calms and drizling Rains continuing, there came a ſudden Whirl-wind that laſted for two Minutes, and broke all our Sails, carrying the Main-top-Sail quite off. The next Day we ſaw ſome Swallows and Butter-flies, which ſignified that we were near the Land. The 13th, we ſaw an *Iſland* to the North, in 16 Degr. Lat. which we knew to be St. *Nicolas*, one of the *Cape Verd* Iſlands. The 16th, we made the *Iſle* of St. *Vincent*, and caſt Anchor at five Fathom Water. The 17th, *I* ſet my ſick Men aſhoar, who were very numerous and in a ſorry condition; but when they came upon Land retriev'd apace. The ordinary Anchorage of this *Iſland* lies in 17 Deg. 20 Min. Lat. the Needle varying 2 Deg. 15 Min. N. E. *It* affords at this Seaſon great plenty of excellent Tortoiſes, which they call Free-Tortoiſes, and are diſtinguiſh'd from the others they call *Cabouanes*, by the ſmoothneſs, plainneſs, and green colour of the Shell, the largeneſs of their Body, and the ſmalneſs of their Head, and the form of their Snout, which reſembles the Teeth of a Saw. Theſe eat as well as a young Heifer, and ſome of 'em are ſo large that they'll weigh 300 Pound. They come out in the Night time, and lay their Eggs upon the Sand, which they bury a Foot deep: Thoſe who have a mind to catch 'em, watch 'em at that time, and getting behind 'em, turn 'em over upon their Back, after which they cannot turn themſelves to get upon their Feet, and ſo lie there till the Morning: Moſt of 'em have 250 Eggs ſhell'd and as many unſhell'd in their Belly, which are very good. *In* this *Iſland* we meet with an Herb, that in ſome meaſure reſembles *Spinage*, but is infinitely better. We us'd it both in Sallad and Soup; and both it and the Tortoiſe Fleſh, kept our Bellies open, and cur'd our Men of great Dropſies, without any other Purgation, in the ſpace of eight Days, which perhaps could not be cur'd in *France* in a Month. 'Tis well ſtor'd with young Kids, but you are not ſure of catching them, unleſs you have Dogs. We ſaw no Fruit in it, but Wild Figs, which were all ſpoil'd with Worms. To the Eaſt-ward, under a high Mountain, there are vaſt quantities of Purſlain. Commonly the Water of this *Iſle* is brackiſh; but upon the S. W. Point of the Bay, where the Anchorage is, there's a ſmall Spring, that, if it were cleans'd and deepen'd, would afford pretty good Water. 'Tis furniſh'd with a conſiderable quantity of Wild Pines, which may ſerve for firing; beſides which, it has no Wood, unleſs it be ſome Shrubs that caſt forth a white milky Juice, that's very dangerous and painful to the Eyes, if it touches 'em. There's very good fiſhing along the Rocks, eſpecially at a little Rock at the entry of the Bay, about ½ of a League from the Anchorage. *In* two Hours time ſeven or eight Men may there catch Fiſh enough for 200 Men. *In* fine, 'tis not inferiour to St. *Helens* for a place of refreſhment, bating that its Water is not good; in compenſation of which Defect, 'tis all over acceſſible, and furniſh'd with pleaſant Walks, whereas the other is the moſt inacceſſible Country *I* ever ſaw. This *Iſle* is about 9 Leagues in circumference, and it has always the Wind at N. E. *It* has ſeveral pleaſant Bays; but that towards the *Iſle* of St. *Anthony* is the beſt Road for Ships that can be, for we rode at five Fathom Water on an excellent ſandy Ground, and were ſhelter'd from all Winds. We ſaw neither Men nor Honſes, tho' we travel'd over moſt of the *Iſland*.

After our departure from St. *Vincent* (which happen'd *September* the 15th) we had ſeveral violent Storms. *October* the 12th, we deſcry'd the *Azores Iſlands*; but it was the 17th before we could weather 'em. The 19th, we had a violent Storm from the N. W. that broke our Mizen-maſt, and oblig'd us to bring our Main-top-Maſt upon the Deck. The 30th, we were in 50 Deg. Lat. and had 70 Fathom Water; upon which moſt of our Pilots agreed that the *Sorlingues Iſles* lay about 20 Leagues to the W. of us. *November* the 3d, we deſcry'd the *Lizard* Point in *England*; and *December* the 1ſt, came ſafe to *Havre de Grace*, having been out 38 Months.

The End of Admiral Beaulieu's *Voyage to the* Eaſt-Indies.

The VOYAGE
OF
Francis Pirard de La Val to the Eaſt-Indies,
AND HIS
Remarks upon that Country.

Tranſlated from the FRENCH, *and Abridg'd.*

The French put to Sea May, 1601.

IN the Year 1601, a Company of Merchants of St. *Malo's* fitted out two Ships for the *Eaſt-Indies*; one of 400 Tun, call'd the *Creſſant*, and another of 200, call'd the *Corbin*; the former commanded by *Sieur de la Bardeliere* as Admiral, and the latter by *Francis Grout* of *Cloſneuf*, in the quality of Vice-Admiral. Our Author being on board the *Corbin*, drew up a Journal of the Voyage, the Subſtance of which is as followeth.

May the 18th, 1601. We ſet ſail from St. *Malo's* with a N. E. Wind; and at the Diſtance of nine or ten Leagues from the Shore, the Mizen-maſt of the *Corbin* ſplit in two.

They encounter ſome Dutch Fly-boats.

May the 21ſt, We fell in with nine great *Dutch* Hoys, each of which ſaluted us with a Gun; but one of 'em being loaded with Ball, beat the Sail of the *Corbin* to pieces; upon which the Vice-Admiral fired two Guns upon the Rigging of the Ship that had injur'd him; and the Admiral taking to the Windward of the *Dutch* Admiral, made to with all his Sails, and fir'd a Gun upon 'em. The *Dutch* Admiral preſently ſtruck, and having inform'd himſelf that the Miſchance was occaſion'd by the over-ſight of a Gunner that was in drink, deliver'd up the Gunner to the *French* Admiral, in order to condign Puniſhment, and beg'd he would pardon the Miſtake. Our Admiral finding how the Matter ſtood, ſaid, he deſir'd no further Satisfaction, and having return'd the Gunner, intreated the *Dutch* to vouchſafe him a Pardon. How the *Dutch* treated him afterwards I know not; tho' I do not much doubt, but they hang'd him up immediately at the Yard's Arm; for the *Dutch* obſerve an exact Diſcipline in their Ships, and ſuffer no Crimes to paſs with Impunity; and from thence it comes to paſs that their Navigation is more ſucceſsful than the *French*.

June the 3d, We deſcry'd the *Canary* Iſlands in 28, 29, and 30 Degrees North Latitude: The 12th and 13th, we came in ſight of the Iſlands of Cape *Vard*, which run from 20 to 14 Degrees North Latitude.

June the 29th, We were in five Degrees Latitude, and deſcry'd the South Star call'd the *Croſs*; at the ſame time we ſaw a prodigious quantity of flying Fiſh, with Wings like thoſe of Bats, which are very plentiful near the Equinoctial Line, whether on the North or South ſide.

July the 14, We diſcover'd the unhealthy Coaſt of *Guinee*, being carried out of our Courſe in a Calm, by the ſtrength of the Currents.

The Weather unconſtant near the Equator.

Auguſt the 24th, We croſs'd the Equator, on both ſides of which, for the extent of ſeven or eight Degrees, we had very unconſtant Weather, and an extremity of Heat in an inſtant of time: The greateſt Calms were frequently turn'd into Thundrings and Lightnings (eſpecially when the Sun is near the Equinoxes) and with boiſtrous Winds; which ſurpris'd us ſo ſuddenly, that we could ſcarce get our Sails down in time: The Heat was ſo great, that it melted our Candles and Butter, corrupted our Water, and ſpoil'd our Meat and Fiſh, tho' never ſo well ſalted. Oftentimes we ſaw great Whirlwinds riſing at a diſtance, call'd by the Sea-men Dragons, which ſhatter and overturn any Ship that falls in their Way. When theſe appear, the Sailors have a ſuperſtitious Cuſtom of repairing to the Prow, or the ſide that lies next the Storm, and beating naked Swords againſt one another croſs ways, upon a vain Apprehenſion of preventing their approach by that Means. In this Air the Rains are very dangerous, for if one is wet, and does not immediately ſhift himſelf, his Body is ſoon after cover'd all over with Botches, and his Cloths with Worms. In the time of a Calm, Ships roll prodigiouſly in thoſe Seas; but when they run with a freſh Gale, they are more ſteddy.

Auguſt the 29th, Our Pilot (an *Engliſh* Man) deſcry'd Land ten Leagues off; for tho' we mean'd to ſtand 100 Leagues off to the Sea, the Currents drove us towards the Shore. This we found to be the Iſle of *Anabon*, poſſeſs'd by the *Portugueſe*, where we took in freſh Water and Fruit; and after a Show of Civility at firſt, treacherouſly ſlew one of our Men, and took five Priſoners.

A Deſcription of the Iſle of Anabon.

Pinguin's

This Iſland is govern'd by a *Portugueſe* Lord, who had the Gift of it from the King of *Spain*; the other *Portugueſe* who inhabit it, being only his Factors and Commiſſaries. The Natives, who are all his Slaves, are *Negro's*, and go naked, covering their Privities with Cotton. Their Women carry their Children upon their Backs, and ſuckle them over their Shoulder, their Breaſts being very long. The Iſland is ſituate in 1 ½ D. S. Lat. and is five or ſix Leagues in Circumference. 'Tis high, mountainous, and always green. The Road is on the N. W. ſide, and is very dangerous, by reaſon of Flats and Rocks. We lay there ſix or ſeven Weeks, and during that time, it rain'd every Day more or leſs. The Country produces great plenty of Fruit and Cotton, in which all the Revenues are paid; their Fiſh is extraordinary good, and very plentiful. The diſtance of a League and a half from *Anabon*, there is a little ſcorch'd Iſland, that affords no Greens; but is ſo cover'd with the Fowl call'd *Pinguin's*, that one cannot walk any where without treading upon their Eggs. This Fowl is no bigger than a Pigeon, and its Fleſh is black, but it eats admirably well.

St. Helens.

October the 16th, We put to Sea again, and *November* the 17th, we made the Iſland of St. *Helens*, which lies in 16 Degrees S. Lat. at a diſtance of 600 Leagues from the Cape of *Good Hope*. Upon the Altar of a Chapel in this Iſland, we found ſeveral Letters, adviſing, that the *Dutch* had paſs'd that way. Here we thought to have fitted our Mizen-maſt, but found no Wood fit for the Purpoſe. The Air, Fruit, Fleſh and Water of that place are ſo healthy, that our Men who were much oppreſs'd with the Scurvy, recover'd in the ſpace of nine Days

Abroilles.

November the 26th, We ſet ſail, and ſtood for the Cape of *Good Hope*; and three Days after doubled the *Abroilles*, i. e. a Bank of Shelves upon the Coaſt of *Braſil*, which lies in 18 Degrees South Latitude and is 70 Leagues long. The doubling of theſe Sands is both difficult

The *Guinea* Coaſt unhealthy.

difficult and dangerous; and in ſailing to the *Eaſt-Indies*, an expert Pilot ought to be very cautious, in keeping to a juſt diſtance from the *Guinee* Coaſt, which is very unhealthy, and incommoded with Calms and Currents, and at the ſame time ſtanding off from the *Abroilles*: For the doing of which, there is Sea room enough, ſince we reckon 1000 Leagues from the Coaſt of *Africa* to that of *Braſil*.

The Cape of Needles.

Having doubled this Cape, we continued our Courſe for the Cape of *Good Hope*, and in few Days knew that we approach'd to it, by the appearance of the Reeds call'd Tromba's, and white ſpeckl'd Fowls. Having weathered the Cape of *Good Hope*, we came in ſight of that of *Aiguiles*, or *Needles*, which ſhoots 15 Leagues further into the Sea, and lies in 35 Degrees South Lat. This Cape derives its Name from the Obſervation, that when a Ship comes before it, the Needle of the Compaſs Points directly Northward, without declining to the E. or W.

January the 6th, 1602, We met with a violent Storm, in which one of our Sea-men fell over-board, and his Companion would have jump'd after him, if we had not prevented him; tho' after all, I take his Offer to be the effect of Wine rather than true Affection, for there is but little Friendſhip among Sea-faring Men.

Coaſt of *Natal* very ſtormy.

Purſuing our Courſe, we ſteer'd by the Country of *Nathal*, upon the Coaſt of *Ethiopia*, without any Storm, which was an uncommon Favour in thoſe Seas; for between the 33 and 28 Degrees, they are never almoſt without violent Storms.

After that we miſtook our Courſe through the Ignorance of the Pilot, and *February* the 4th, finding our ſelves on the Land-ſide of St. *Lawrence*, tack'd about, in order to make the other ſide.

A violent Storm off of *S. Lawrence*.

February the 7th, 1602, Having paſs'd that Iſland according to our Wiſhes, we were ſurpriz'd all of a ſudden, with a violent Storm from the South-Weſt, being leſs acquainted with thoſe Seas than the *Portugueſe*, who make timely Proviſion for ſuch Accidents. In this Storm, it was ſo dark in full Day, that we could not ſee the Heavens or one another; our two Ships were ſeparated, and our Sails were tore to rags; ſuch was the Force of the Rain and Wind, that they wounded our Faces like ſo many Laſhes of Whip-cord; the Waves ſwell'd ſo high, and waſh'd in with ſuch Force upon the Ship, that we could not ſtand upon the Deck. In this place we continu'd four Days and four Nights, and the Men of Senſe that were on board, apply'd themſelves to devout Exerciſes, while the Sailors redoubled their Oaths and Blaſphemies. Our ancienteſt Pilots and Sea-men proteſted they never encounted ſuch a violent Tempeſt; but the Buſineſs was, they never had been in thoſe Seas, which ſwell higher than elſe where.

St. *Auguſtin* Bay deſcrib'd

February 11, The Storm being over, we ſtood in for St. *Lawrence*, being much diſabled. All our Men were in a Manner half dead, and we had not a Man on board but a *Dutch* Gunner, that had ever been in the *Indies* before. When we came within 30 or 40 Leagues of the Iſland, the Sea appear'd yellowiſh and frothy, and was cover'd with Reeds and floating Herbs, which continued to appear on its Surface till the 19th, that we arriv'd and caſt Anchor at St. *Auguſtine*'s Bay, in 23 ½ Deg. S. Lat. This Bay is large and very convenient, having an excellent Ground of Clay and Sand. The ſame Day the *Creſſant* rejoin'd us after twelve Days Separation, and was more diſabled than we. The Sea-men being Scorbutick, we mark'd out a place on the Shore for the Sick: And at the ſame time a *Dutch* Ship was forc'd into the ſame Harbour by ſtreſs of Weather, which had not one ſick Man on board. The Natives gave us Cattle, Fowl, Honey, Milk and Fruit, in exchange for Knives, Ciſſars, and Trinkets of little value. But the place was ſo unhealthy, that many of our Men were ſwept off, partly by the Scurvy, and partly by a Phrentick Fever. We lay directly under the Tropick of *Capricorn*, and the Sun Beams darted upon us almoſt in a perpendicular Line; ſome had their Legs ſcorch'd and ulcerated thro' their Stockings; nay, the extream heat would have incommoded us yet more, if it had not been for the Conveniency of a fine River to bath in, and the Shades of a large Wood. We were poſted at the Foot of a great Mountain, which was cover'd with an infinity of large Lizards, that offer'd no hurt to any body. The Wood was repleniſh'd with an innumerable quantity of little Monkeys and Apes, which entertain'd us with a pleaſurable Shews, in dancing about, and skipping from Tree to Tree. Parrots are there very numerous, and make an agreeable Harmony with their various and warbling Notes. Not to mention the Indiſcretion of our Men, in over feeding in ſo hot a Climate, and the pernicious Conſequences that attended it, I ſhall only take notice further of the unſpeakable Uneaſineſs that attended from the Flies by Day, and the Gnats that peſter'd us in the Night time, in piercing the Fleſh till the Blood came, and an Inflamation inſued. This Inconvenience was ſo cutting, that ſome crept into Sacks and Bags, leaving only a ſmall hole to breath through, and all of us were forc'd to make Fires, and lie down in the midſt of the Smoak.

A Deſcription of St. *Lawrence*.

The Iſland of St. *Laurence* has 700 Leagues in circumference; It lies between 26 and 14 Deg. South Lat. It abounds in Cattle, eſpecially Sheep, which bring forth three or four Lambs at a time. The Cattle are not impropriated, but common to all that catch 'em; for the Inhabitants, and indeed moſt of the other *Indians*, chooſe rather to feed on Fiſh, Fruit and Milk. 'Tis common there to ſee 200 or 300 Bulls and Cows in one Herd; and when they come to croſs a broad deep River, the Cows raiſe their Heads upon the Bull's Rump, and ſo get over. We anchor'd at the Mouth of a River that afforded great plenty of Fiſh and Crocodiles; and when we kill'd a Crocodile and took out its Intrails, we obſerv'd, that like Musk, they made a very agreeable Perfume in the Air. The Natives are of a tawny Olive Complexion, inclining to a red; they are tall, ſtreight, well made, and not only of a ready Apprehenſion, but wiſe. Their Hair is long, and reath'd into Treſſes; they go naked all over, excepting that their Privities are cover'd with Cotton Cloth. Their Women wear one Piece of Cloth that covers 'em from under their Breaſt to their Girdle, and another that reaches from thence to the Knees, their Head being bare and ſhav'd. Their Arms are Darts and Javelins, call'd *Azagayes*, for the Noiſe of a Gun frights 'em exceedingly. 'Tis ſaid, that this Iſland was formerly peopled by the *Chineſe*, upon the Occaſion of a Ship's being caſt away upon that Coaſt; and indeed they reſemble the *Chineſe* very much, bating, that their Complexion is not near ſo white, which perhaps may proceed from their going naked, and living in the Torrid Zone. At preſent the Iſland is very populous, and govern'd by ſeveral Kings, that wage War with one another. Some of the Inhabitants are *Mahometans*, and circumcis'd, and the reſt are *Pagans*: The inland Parts of the Iſland are in great want of Water.

The Iſlands of *Comorre*.

May the 15th, 1602, Having refitted our Ships as well as we could, and provided our ſelves with Water, Wood, and Fleſh, which after all would not take Salt ſo well as what we have in *Europe*, we ſet ſail, and ſteer'd for the *Comorro* Iſlands, upon the Conſideration, that our complement of Men was very ſhort and ſickly.

The 23d, we made theſe Iſlands, which lie in 12 ½ Deg. South Lat. between S. *Lawrence* and the Continent of *Africa*, at the diſtance of 70 Leagues from *Mozambick*. There are five of 'em, each of which has a peculiar King; and one of 'em, call'd *Molaill*, being ſurrounded by the other four, we choſe to anchor in its road. We ſaw ſeveral Villages aſhoar, the Inhabitants of which us'd us kindly, and gave us Fruit in exchange for Trinkets made of Iron. The Inhabitants of theſe Iſlands are *Mahometans*, being a Medley of ſeveral Nations, viz. *Ethiopians*, *Caffrians*, *Arabians*, and *Perſians*. They are true Friends to the *Portugueſe*, and a cunning ſharp ſort of People, that are not fit to be confided in. When our Men offer'd to land at a little Village to take in Water, the Inhabitants roſe up in Arms, and oppos'd their landing, till they ſent 'em five or ſix Crowns, after which they allow'd 'em to take as much Water as they pleas'd. All theſe Iſlands are extream fertile in Oranges, Citrons, Coco's, Honey, Betel and Rice, which we bought up at the eaſie Purchaſe of a few Iron Trinkets, and Flanders Ware. Fleſh indeed is as dear there as here, tho' they have plenty of Oxen, Cows and Sheep. They have Barks made altogether of the Core and Tree, in which they ſend their Fruit to *Mozambick*, to be exchang'd for Cotton, Cloth, Gold, Ivory, *&c.* One Day we ſaw a monſtrous Fiſh riſe above the Water, which had the Form and Figure of a Man, with a ſort of Beard towards the Chin, that ſeem'd to be its Fins, and a long ſhaly Head, terminating in a Point. When we offer'd to come near him, he plung'd his Head under Water, and ſo diſcover'd part of his Back, which was ſcaly. We ſtay'd a Fortnight in this Road, and the Goodneſs of the Fruit and the Air, cur'd our Men of the Scurvy, to a miracle; and indeed I have always obſerv'd, that Citrons and Oranges, and their Juices, are of ſoveraign uſe in Scorbutick Caſes.

The *Corbin* is caſt away on the Coaſt of the *Maldives*.

June the 17th, 1602. We ſet ſail, and the 24, repaſs'd the Equinoctial Line, ſtanding to the Northward. In the Lat. of 5 Deg. N. Lat. we perceiv'd ſome great Shelves ſurrounding little Iſlands, which were the *Maldives*, tho' moſt of our Maſters and Pilots miſtook for the Iſlands call'd *de Diego des Rees*, which we had left 80 Leagues a-ſtern to the Weſt. Our Admiral deſign'd to paſs to the North of the *Maldives*, between them and the Coaſt of *India*; But on the contrary we run directly upon 'em, whereas we ought to have ſtood 100 Leagues off 'em, if we had a mind to be ſafe. In fine, ſuch was our Miſfortune, that the *Corbin* which ſail'd in head, ſtruck thrice upon a Rock, at the diſtance of five or ſix Leagues from the Shoar of the *Maldives*. In this Diſaſter we ſaw a Bark belonging to the Iſlands, which would not come near us, by reaſon of a ſtrict Prohibition in that Country, to approach any Ship in diſtreſs, without the King's eſpecial Leave. In the mean time the Sailors eat and drank heartily, and treated their Commanders with a flaming ſort of Inſolence; inſulting all thoſe that ſhew'd any regard to Religion, and loudly proclaiming, that ſince Death was ſo certain, they were reſolv'd to render its Approaches eaſy and ſoft. This fill'd me with Horrour, and convince me that moſt Sailors leave their Souls and Conſciencies a-ſhoar. In fine, after continuing two Days in this deplorable and deſperate Condition, we made a ſhift to refit our Galioon, and haul it over the Flats, and with infinite Labour and Difficulty, arriv'd on board of it, at one of the Iſlands call'd *Pouladon*, which is not a League in circumference. We had carried ſome Arms along with us, but the Inhabitants diſputed our landing, till we gave up our Arms, and ſurrender'd our ſelves at diſcretion. There was not above 20 or 25 Inhabitants in the Iſland; but they concerted their Meaſures ſo wiſely, that they ſent off our Boat and all their own to the other Iſlands, to prevent any Inſurrection from us. They carried us all to a Lodge in the middle of the Iſland, where they entertain'd us with ſome Fruit, Coco's and Limons, and riffled us of all we had, pleading, that it belong'd to their King, as being Wreck. We had a piece of Scarlet Cloth with us, which (we pretended) was deſign'd for a Preſent to the King of the Iſlands, alledging at the ſame time, that the whole Cargo of our Ship was mean'd for a Compliment to him. Upon this, no body dar'd ſo much as touch the Scarlet; but after all, we cut a piece of two or three Ells off it, and preſented it to the Governour of this little Iſland, in order to oblige him; and the Governour, who was a very old Man, took it very kindly, conjuring us not to ſpeak of it. Soon after, the Governour ſent the Maſter and two Sailors to the King, who reſided in the Capital Iſland call'd *Male*, and the Maſter preſented him the piece of Scarlet. Immediately the King ſent for his Brother-in-Law to ſave what was on board our ſtranded Ship. Tho' the Flats were ſuch that no Boat could come near it, yet they found a way of getting at it, by the means of a Rope faſten'd at one end to the Ship, and at the other to the Rock; for tho' the Waves waſh'd over 'em, they held faſt by the Rope, and ſo got to the Ship; nay, they are ſo ingenious, that they took the very Cannon and the heavieſt Goods, and laugh'd at any Advice we could give 'em. When we left the Ship, we brought with us about 1000 Crowns in ſeveral Girdles, and bury'd it a-ſhoar for a common Reſerve to ſupply our Neceſſities: But ſome of our Men being in want of Suſtenance, dig'd up the place, and offer'd the Natives pieces of Money for Food; after which, the Natives would never allow us Suſtenance, without pieces of Money; and in regard that the leaſt piece in the whole Bank was worth 20 pence, their Proviſions were much over-valued. Every Seaman hid from his Neighbour what he had got, and would not aſſiſt him even at the point of ſtarving; nay, when any lay very ſick, the reſt came and rifled him before he dy'd. As for my own part (ſays our Author) I and two more were tranſported to the Iſland of *Pandowe*, the Natives of which being acquainted with what paſs'd in the other Iſlands, and thinking we had Money about us, refus'd us Suſtenance, till we gave 'em pieces of Silver; but in effect we had none of the Money, and were reduc'd to great Extremities. In the mean time I made it my Buſineſs to learn their Language, and by the being able to diſcourſe with 'em, inſinuated my ſelf into the Favour of the Governour of the Iſland, who ſent me to *Male*, with Recommendation to the King, and both the King and his Queens were ſo well pleas'd with my ſaluting 'em in their own Language, and according to the Cuſtom of the Country, and with the Account I gave 'em of the things that were took out of our Ship, the Manners of the *French* Ladies, &c. that they took a diſtinguiſhing Care of me, particularly in a fit of Sickneſs, that laſted for ſeveral Days. In a word, I roſe by the King's Favour and Bounty to a competency of Riches; and having by virtue of a long Stay in the Country, an Opportunity to inſpect their Conſtitution, Cuſtoms, Laws, &c. am now going to gratifie the Publick with what I have learn'd upon that Subject.

The Natives covet pieces of Silver.

The Sufferings of the *French*.

The King of the *Maldives* favours thoſe that learn his Language.

The *Maldives*, Their Situation, Diviſion and Number.

The Inconvenience of going into the Water.

The Fowl call'd *Pingui's*

Scarcity of freſh Water.

Freſh Water juſt by the Sea.

The *Maldives* lie between 8 Degrees North Latitude and four Degrees South Latitude, being 200 Leagues in length and 35 in breadth. They are diſtant from *Spain* (according to the Courſe of Sailing) 4500 Leagues, and from the Continent or Cape *Comorin*, 150 Leagues. They are divided into 13 Provinces, call'd *Attollons*, each of which comprehends a great many ſmall Iſlands, and is of a circular form, containing about 30 Leagues in circumference. Theſe Iſlands are ſurrounded with a great ridge of Rocks, which breaks the Shocks of the Sea, and raiſes prodigious Surges. 'Tis ſaid the number of Iſlands amounts to 12000, a great part of which is nothing but uninhabited Hillocks of Sand. But the Inhabitants inform'd me, that the daily Incurſions of the Sea had impair'd the number both of the Iſlands and Inhabitants; and that the Iſles of one *Attollon*, were formerly one continued Tract of Land. 'Tis plain that the Seas which divide the Iſles of one *Attollon* are ſo ſhallow, that at low Water one might eaſily wade over, were it not that the bottom is rocky and ſharp, and apt to wound the Feet to a flaming degree; and that thoſe Seas are peſter'd with the Fiſh call'd *Paimones*, which break Mens Legs and Arms, and devour 'em. Another great Inconvenience that attends the going into the Water, proceeds from a rough, ſharp, polous, hard and ponderous ſort of Subſtance, not unlike white Coral, which they call *Aquiry*, and make uſe of in boiling it with Coco Water, for 'tis that which forms their Sugar or Honey. A great part of theſe Iſlands are uninhabited, and produce nothing but Trees and Graſs; others are only a moveable Sand, without any Green; and others again are overflowed at high-water. The reſt are cover'd all over with great Crabs call'd Cacouue, and Cra-fiſh, or elſe with the Fowls call'd *Pingui's*, inſomuch that one cannot place their Foot in any part, without treading upon their Eggs and Young ones, or upon the old Birds themſelves, which do not fly far upon the approach of a Man. This Fowl is as big as a Pigeon, with white and black Feathers, and is excellent Meat, tho' the Natives do not eat it. The uninhabited ſandy Iſlands appear at a diſtance, as if they were cover'd with Snow; for the Sand, which is as fine as that of an Hour-glaſs, is extream white, and withal ſo very hot, as to hatch the *Pingui's* Eggs. Theſe ſandy Iſlands afford little or no freſh Water; but the covered Iſlands whether inhabited or not, enjoy that Benefit, abating for a very few, the Inhabitants of which are forc'd to have recourſe to the neighbouring Iſlands for Water, and make uſe of certain Inventions for the receiving of Rain Water. The Water of ſome Iſlands is better than that of others. Their Well-water is neither very ſweet nor wholeſome, but it is very plentiful and freſh, even within four Paces of the Sea-ſide; for they dig not above three or four Foot, and where the Sea makes frequent Inundations. This Water is very hot in the Night time, and extream cool in the Day, eſpecially about Noon.

The Names of the *Attollons*.

The *Maldivans* ſail very dexterouſly.

To return to the 13 *Attollons*; the firſt (beginning from the North) is call'd *Tilla Don Matis*, i. e. the *High Point*. In this lies the Head or Cape of the ſame Name, call'd by the *Portugueſe*, *Cabexa Des Las il has*, and ſituated in eight Degrees North Latitude; the ſecond is call'd *Milla dene Madone*; the third *Padypolo*; the fourth *Maloſmadon*; the fifth *Arratollon*; the ſixth *Male Attollon*, in which lies *Male*, the head Iſland of the *Maldives*; the ſeventh *Pouliſdous*; the eighth *Molucque*; the ninth *Nillandous*; the tenth *Collomadons*; the eleventh *Adoumatis*; the twelfth *Souadon*; the thirteenth *Addon* and *Pona Molubque*, theſe two being reckon'd but one by reaſon of their ſmalneſs. Each *Attollon* is ſeparated from the adjacent Provinces, by an Arm of the Sea, which is in ſome places narrow and in ſome places broad. There are only four of theſe limiting Chanels, that being much broader than the reſt, are navigable by great Ships, but not without danger, eſpecially in the Night, by reaſon of their Flats and Rocks, which are mark'd very exactly in ſome Sea Charts, which I ſaw in that Country. The Natives have a wonderful Dexterity in avoiding theſe dangerous places; I have ſeen 'em ſail ſo nicely, as to rub upon Rocks on both ſides, without any damage. Both the Rich and the Poor are inur'd to the Sea from their Infancy, and fear not to encounter the moſt turbulent and foaming Seas, in little Boats and Barques, the number of which is unaccountable, for the pooreſt Man that is has one, and the Rich have ſeveral. They never ſail by Night or out of ſight of Land, unleſs it be when they undertake ſome great Voyage; and accordingly the Proviſions they have on board, are calculated only for one Day. The greateſt part of the Iſlands comprehended in one *Attollon*, are ſurrounded with a common Flat or Bar, that's only paſſable at one or two narrow places, which are not eaſily obſerv'd ; and for that Reaſon it is neceſſary for 'em to be very expert in the Management of their Boats or Barques, ſince the leaſt Ship is certainly followed with Shipwrack and the loſs of their Goods. As for their own Perſons, indeed they have no great Reaſon to fear, for all of 'em ſwim admirably well. Notwithſtanding their wonderful Dexterity in Sailing, they frequently looſe their Barques, which is chiefly occaſion'd by the Currents call'd *Oyvarou*, which run Eaſt and Weſt Currents, ſix Months upon the Eaſt Coaſt, and ſix Months upon the Weſt, but with ſuch uncertainty, that the change happen'd ſooner or later at one time than another. Tho' their Winds are frequently fix'd, as well as the Currents, in the Eaſt and Weſt quarter, yet they ſometimes ſhift to the N. and S.

The neceſſity of four landing places in each *Attollon*.

'Tis obſervably, that the *Attollons* lie all in a line, the end of the one facing the end of the next adjacent ; and that they have two Entrances or acceſſable places on each ſide, which is a wonderful Conveniency ; for if there were only one landing place at each end, the impetuoſity of the Eaſt and Weſt Currents would break their Communication with one another, or at leaſt 'twoud be impoſſible to practice it in all Seaſons. The neceſſity of four landing places in each *Attollon* will be evident, if we conſider the following Inſtance. Suppoſe a landing place on the Eaſt Coaſt, almoſt directly oppoſite to the Entry of the other *Attollon*, and another on the Weſt, oppoſite to that of the adjacent *Attollon* ; if the Current runs from Eaſt to Weſt, we cannot croſs directly from Entrance to Entrance, but ſet out from the Eaſt Coaſt, which is then the Head of the Current, and taking it ſideways, ſteers for the Weſt Entry of the other *Attollon*. In order to return, we ſet out from the Eaſt Entrance, and overthwarting the Current, make to the Weſt Entry of the other *Attollon*. *W*hen the Current changes its Courſe, we obſerved the ſame Contrivance in ſetting out from the Head of the Current, and entring the other *Attollon* at that place which lies under the Current. Of theſe Entrances, ſome are broad and ſome narrow, but the wideſt is not above 200 Paces broad, and ſome of 'em are leſs than 30. Each Entrance is guarded with an Iſland on each ſide ; and if Cannon were planted on theſe Iſlands, 'twere eaſy to hinder any Ships to enter.

The Chanels that parts the *Attollons*.

Of the Chanels that part the *Attollons*, there are only four broad ones, which are navigable by great Ships, and frequently viſited by Strangers, when the Currents carry them in againſt their will. To begin from the North ſide ; the firſt of theſe four waſhes the *Attollon*, call'd *Malos Madou*, and 'twas in this that we were caſt away. The 2d, call'd *Caridou*, has *Malé*, the greateſt of all theſe Iſlands in the middle of it. The 3d call'd *Addou*, lies to the South of *Malé*. The fourth call'd *Souadou*, lies directly under the Equinoctial Line ; and in regard that it is the broadeſt of 'em all, being 20 Leagues over, the Natives don't ſail upon it without a Compaſs, tho' they never uſe any in the other Chanels. Beſides theſe, there is a narrow Chanel, which ſeparates *Malé* and *Poliſdou*, in which the Sea appears as black as Ink, but the *Water* taken up in a Veſſel, looks like other *Water*. That Sea boils like *Water* on a Fire ; it ſwells into great black Surges, but is not mov'd from one ſide to another, which renders it very terrible.

A Sea as black as Ink.

The Climate of theſe Iſlands.

The *Maldives* lie ſo near the Equinoctial on both ſides, that their Climate is extream hot. Their Day and Night are always equal ; and their Nights are very cool and dewy, which renders the heat of the Sun more tolerable, and ſhoots forth their Herbs and Trees. Their *Winter* commences in *April* and continues till *October*, at which time the Summer begins, and laſts likewiſe ſix Months. In *Winter* they have perpetual Rains but no Froſt ; and the weſterly *Winds* are very boiſterous. In Summer their *Winds* are Eaſterly, with an exceſſive Heat and no Rain.

The Original of the Inhabitants.

'Tis ſaid, that the *Maldives* were in former times peopled by the *Cingala* (ſo the Inhabitants of *Ceylon* are call'd.) But 'tis obſervable, that the *Cingala* are black and ugly, whereas the Inhabitants of the *Maldives* are handſome, well made, and of an Olive Complexion : Tho' after all 'tis poſſible, that the Climate and proceſs of time, may have alter'd the Complexion and Shapes to their advantage ; beſides, that a great many Foreigners being caſt away on their Coaſt, are blended with 'em by intermarriages : And by this Means it comes to paſs, that thoſe who live about *Malé*, between it and the North Cape (where the Shipwracks happen) are more poliſh'd and civiliz'd, than thoſe on the South Coaſt, who are not only blacker, but much coarſer in their Language, Cuſtoms, and the ſhape of the Body ; nay, many of their *Women*, eſpecially ſuch as are poor, go naked, with a ſmall cover for their Privities. This North ſide of the Iſland is not only richer and more civiliz'd, as being the common Paſſage for all Ships, but the Seat of all the Nobility and Men of Fortune ; and when the King puniſhes a Criminal with Baniſhment, he only ſends him to the South parts ; The Souldiers are all rais'd in the North parts. But after all this Difference, I muſt ſay, that the Inhabitants of the South parts are naturally as apprehenſive and ingenious, as thoſe of the North.

The North point more civiliz'd than the South.

A Character of the Inhabitants.

In general, the *Maldivans* are very ingenious ; they apply themſelves with great Induſtry and Succeſs, to all ſorts of Manufactures, and even to Letters and Sciences, (after their manner) eſpecially to Aſtrology, which they hold in great eſteem. They are a wiſe cautious People, and very ſharp in their Merchandize and way of living ; they are brave, and skill'd in Arms, and their Policy is very regular. Their Women are very handſome, abating for their Olive colour ; nay, ſome of 'em are as white as the *Europeans*. Their Hair is black, which is reckoned a great Ornament ; and in order to turn it exactly black, ſeveral Women keep their Daughters Heads ſhav'd till they are eight or nine Year old, leaving only a little Hair upon their Forehead to diſtinguiſh 'em from Boys, who have none at all. I have ſeen ſome Children have half flaxen Hair, which was turn'd very black, by being ſhav'd every eight Days. Both Sexes affect black Hair, but the Women place an Ornament in having theirs thick and long, which they waſh and dreſs very frequently. They waſh their Head and Hair with Water and Lye made for that purpoſe, after which their Hair hangs diſhevel'd in the Wind (but within doors) till it dries, and then they rub and perfume it with an odoriferous Oil, which renders their Head always moiſt and oily. Both Sexes anoint their Bodies after waſhing, but tho' they waſh their Bodies oftner than once in a Day, their Hair is not waſh'd above twice or thrice a week. They may waſh their Hair when they pleaſe, but they are oblig'd to do it after copulation, and particularly on *Fridays*, which is their Sabbath for the Women, and Feſtival Days for the Men. After the Women have waſh'd, rub'd and perfum'd their Hair, they ſtretch all the Hair from before backwards, without leaving ſo much as one ſtragling Hair, and tie it behind in a great tuft or knot, which they enlarge by a Perriwig of Mans Hair, made in the form of a Horſe's Tail ; nay, ſome of 'em have two ſuch Perriwigs ; beſides which, they add odoriferous Flowers.

How the Women dye, waſh, perfume and dreſs their Hair.

How the Men wear their Hair.

As for the Men, none but Gentlemen and the King's Officers and Souldiers are allow'd to wear long Hair, and theſe indeed waſh, perfume and dreſs their Hair after the ſame manner with the Women, excepting that they make the tuft not behind, but on the Crown of the Head, or on one ſide, and that they wear no falſe Perriwigs. However they are oblig'd to wear long Hair, againſt their own pleaſure ; and moſt of thoſe who do cut it off when it gives over growing, in order to be made into Perriwigs for the Women ; for the Women's Heads are never ſhav'd, whether dead or alive ; and indeed the greateſt part of theſe Perriwigs come from the Continent, particularly from the Coaſt of *Melebar*, where every Man wears his Hair long. Their Hair grows much faſter than ours, by reaſon partly of the frequent waſhing and perfuming, and partly of the exceſſive heat, which occaſions thick and ſtrong Hair, and for the ſame reaſon their Hair is never curl'd. The Men are hairy all over the Body, and deſpiſe thoſe that are not ; but the Women have no Hair but what's uſual. They have no Combs but they have Ciſſars of caſt Copper, and Copper Looking-glaſſes, which they make uſe of in ſhaving themſelves with Steel Raſors, made after another faſhion than ours. There are no profeſs'd Barbers in the Country, for every one ſhaves himſelf, excepting the King and ſome Peers, who are ſerv'd by Perſons that are proud of that Honour, without any Proſpect of Gain ; ſo that in all theſe Iſlands both Men and Women are provided with Utenſils for ſhaving, and are very nice in taking off their Hair when it begins to be uneaſy to 'em. The Girls have their Heads ſhav'd once a week, from their Infancy to the 8th Year of their Age, at which time their Hair is ſuffer'd to grow to its full length, and dreſs'd as above, for then is the Seaſon of looking out for Husbands. Before that Age they have no Garments, but only a Cloth that hangs down from their middle to the Knees ; and the Occaſion of their being cloth'd afterwards, proceeds from the riſing of their Breaſts, which commences at that time ; for the Women in that Country are as tender of ſhewing their Breaſts, as our Women are of their ſecret parts. Before the ſwelling of their Breaſts, they are look'd upon as Children, and 'tis not allowable for Men or Boys to diſcourſe to 'em of Love Matters. The Cloth that

The manner of ſhaving, both for Men and Women.

The Modeſty of the Girls.

hangs down from their middle to the Knees, they put on as ſoon as they begin to go; but the Boys have none till they are ſeven Years old, and circumcis'd. As for the Men who are hairy all over, they only ſhave their Breaſt, which is left uncover'd; but they ſhave it ſo as to leave Hair ſtanding here and there. Their Beards are of two ſorts; Eccleſiaſtical Perſons, and thoſe who have perform'd Pilgrimages to *Mecca*, wear long Beards, ſhaving under the Throat, and upon the upper and lower Lip, all round their Mouth; for 'tis reckon'd the greateſt nuſance in the World, to have their Meat or Drink touch'd with Hair. The other ſort of People have little *Spaniſh* Beards without Muſtaches, being ſhav'd round the Mouth and under the Chin. They are very careful in ſaving the Pairings of their Nails and the Shavings of their Hair, which they wrap up in Cotton, and bury in their Church-yards, with a little Water, upon the Plea, that being parts of the Body, they require interment as well as the whole, and for that reaſon, many of 'em choſe to be ſhav'd in the Porches of their Temples; for they would not for any thing in the World, either trample upon theſe Excrements, or ſee 'em thrown in the Fire. They are ſo hardy, that tho' their Raſours are very bad, yet they uſe nothing but cold Water, and never complain of any Pain in ſhaving.

The Mens Beards.

They ſave their Shavings and Pairings.

The Fertility of theſe Iſlands.

To give a particular Deſcription of the *Maldives*, we ſhall begin with its Fertility. It produces great plenty of Millet, call'd there *Pura*, and another little Grain call'd *Brinby*, which reſembles Millet, but is black like Rapeſeed; theſe two ſorts of Grain they ſow and reap twice in one Year. They make a ſort of Meal of 'em, of which they make Pottage, with Milk, Coco, Honey, as well as Cakes and Fritters.

Nelpoul a Root.

The Country produces likewiſe ſeveral ſorts of Roots, which the Inhabitants feed upon, particularly one call'd *Nelpou'*, which grows wild, being round, and as big as two Fiſts. They bruiſe it upon a rough Stone, and then expoſe it to the Sun, upon which it turns to a white ſort of Meal, that eats admirably in Pottage or Cakes, only it muſt be very freſh, and 'tis apt to lie heavy upon the Stomach.

Alas a Root.

Another Root that grows there plentifully, and eats well, is call'd *Alas*, which muſt be ſown and cultivated, and is commonly as big as a Man's Thigh; ſome of this ſort of Roots are red and others white. The Inhabitants boil 'em ſeveral ways, and make 'em the moſt of their food, keeping 'em for a whole Year, for they come to maturity only once a Year, in *September*. They have no Rice but what is imported from the Continent; however they have it pretty cheap, and uſe a great deal of it, either boiling it with Water, or mix'd with Spices, or boil'd with Milk and the Sugar of Coco's, or boil'd with Pullets or Fiſh, or turn'd into Meal after drying and bruiſing, and then made into Cakes and Fritters with Eggs, Honey, Milk, and the Butter of Coco's.

Their Fruit.

Bannanes a Fruit.

This Countey is well repleniſh'd with Herbs and Trees, ſome of which bear Fruit and ſome do not, tho' the Natives eat their Leaves, theſe being very ſweet and well taſted. As for their Fruit, they have an infinite plenty of Citrons, Pomgranates, and Oranges of *Bannanes*, call'd by the *Portugueſe*, *Indian* Figs, and by the *Maldives*, *Quella*, which is a large, delicious, and nouriſhing Fruit, inſomuch that it ſerves their Children inſtead of Broth.

Coco's.

The moſt profitable Fruit is the Coco, or *Indian* Fruit, call'd by them *Koul*, which is more plentiful in the *Maldives*, than in any other part of the World; ſo that the Inhabitants know how to manage it better than others. This Tree alone might ſupply all the Neceſſities of Life, for it affords Wine, Honey, Sugar, Milk and Butter, beſides, that its Kernel may be eat as Bread, of which they have none in that Country. Further, moſt of their Utenſils are made of the Wood, Bark, Leaves and Nutſhells of this Tree.

Great plenty of Wood.

In fine, the whole Country is ſhaded and refreſh'd with Trees, many of which ſerve for no other uſe but burning, ſo that there's no occaſion to buy Firewood; beſides, that there are whole Iſlands cover'd with Trees, from whence they fetch what Fire-wood they pleaſe.

The Products of one Province differ from that of another.

'Tis very remarkable, that tho' all the thirteen *Attollons* are in the ſame Climate, and all very fertile, yet they produce ſuch different Commodities, that one cannot live without another; for what is plentiful in one is ſcarce in another, or at leaſt not ſo good. This occaſions a Neceſſity of Mutual Commerce, and purſuant to Nature's Method, the Inhabitants have ſo divided themſelves, that one Province cannot live without the other; for the Weavers repair all to one Iſland, the Goldſmiths to another, and ſo on. Now to render the Communication eaſy, theſe Artificers have little Boats with Cheeks, where they work, ſleep and eat, while they are ſailing from one Iſland to another, to vent their Manufacture, and ſometimes they are a Year out, before they return to their fixt abodes.

The Animals, Fowl.

As for their Animals; they have prodigious numbers of wild Pullets, which are ſold for a Penny a-piece; and the ſame price will fetch three dozen of Eggs; next to Fiſh, this is the moſt of their Food. They have great plenty of Wild Pigeons, Ducks, Rayls, Birds reſembling Spar-hawks, black and gray Muskits living not upon Prey but upon Fruit, *&c.* as for Domeſtick Fowl they have none. The Crows are here very troubleſome, for they are numerous to a miracle, and ſo bold as to take things out of the Houſes, before the Peoples Faces. Their Bats are as big as Ravens; and their Gnats or Muskito's bite more ſeverely than in any other part of the *Indies*. But they are moſt incommeded by Rats, Dormice, Piſmires, and other ſorts of Vermine, which over-run all their Houſes, and ſpoil their Grain, Proviſions, Fruit, and tender Commodities. To obviate this Inconvenience, they build Granaries and Ware-houſes, on Piles or Stakes in the Sea, at the diſtance of 200 or 300 Paces from the Land; and moſt of the King's Magazines are built after the ſame manner. They have no poyſonous Animals but Snakes, of which a very dangerous kind frequents the Sea. Cats, Pole-Cats and Ferrets are likewiſe found there; but there are no Beaſts for riding, nor indeed any great Beaſts, whether wild or tame, excepting a few Sheep, and ſome 3 or 400 Cows and Bulls in the Iſland of *Malè*, which belong only to the King, and of which they never eat but on Feſtival Days and Solemn Occaſions; for their Kind is imported from the Continent. They have no Dogs, nay, they abhor 'em ſo much, that when the King of *Portugal* ſent two as a Preſent to their King, he order'd 'em to be drown'd immediately.

Crows.

Bats as big as Ravens.

Rats very troubleſome.

No large Beaſts in this Country.

Great plenty of Fiſh.

The Sea affords wonderful plenty of all ſorts of Fiſh, eſpecially between the *Attollons*, where 'tis ſhallow and calm; and the Fiſhery is the moſt conſtant Exerciſe of the Natives, who feed moſtly upon Fiſh, whether freſh with Rice or other Meat, or fry'd with the Oil of Coco's, or boil'd in ſalt Water, and dry'd for keeping. They ſend every Day, Ships loaded with Fiſh for *Sumatra*, *Achen*, and other places. Many of the Fiſhermen want Arms and Legs, that have been bit off by a ſort of great Fiſh that frequents thoſe Seas.

All things very cheap.

This great plenty of all Neceſſaries occaſions an eaſy Purchaſe; 400 Coco's coſt but a Larin, which is eight Pence; the ſame price will purchaſe 500 *Barmanes*, or a dozen of Fowls, or 300 pound weight of Roots, or 100 large Fiſh, *&c.* In fine, there is no part in the *Indies*, where a Stranger can get an Eſtate ſo ſoon as here; for it lies conveniently for Trade, and requires but an inconſiderable Charge for Maintenance.

The Natives lazy.

The Natives 'tis true do not grow rich, and that I take to proceed from their cheap and eaſy living, which encourages 'em to Negligence and Idleneſs.

The Iſle of Male deſcrib'd.

Malè, the Principal Iſland, gives name to all the reſt, *Dives* ſignifying a heap of little Iſlands. This Iſland ſtands almoſt in the middle, and is one League and a half in circumference. 'Tis the moſt fertile of 'em all, the ſtaple Port and Magazine of all the reſt, and the Reſidence of the King and the Court. By this means 'tis better peopled, but at the ſame time 'tis not ſo healthy, for which the Natives give this Reaſon, *viz.* The King and the Court having reſided there time out of mind, and the Corps of all that dy'd being interr'd apart, the whole Surface of the Iſland becomes a continued Series of Graves, from whence the perpendicular Sun extracts pernicious Vapours; and accordingly the Water is here ſo bad, that the King and the Perſons of Quality ſend for Water from other Iſlands.

Their Houſes.

The way of taking Stone out of the Sea.

Candou Tree.

In all the Iſlands, even in *Malè* it ſelf, there's no ſuch thing as encloſ'd Towns, but the Houſes lie ſcatter'd here and there, tho' not without ſome Order, and the Diſtinction of Streets. The common Peoples Houſes are built of Coco Wood, and cover'd with Coco Leaves ſow'd double, one within another. Perſons of Quality and Fortune, have Houſes built of Stone taken out of the Sea from under the Flats and Rocks. This ſort of Stone is very ſmooth and white, and ſomewhat hard to cut, but when it is wet with Rain or freſh Water, it looſes its hardneſs, and at laſt becomes all over black; the manner of taking them out of the Sea is very remarkable. There grows in that Country a ſort of Tree call'd *Candou*, which is as big as our Walnut-tree, and reſembles the Aſpin in its ſhaking Leaves and whiteneſs, but is extream ſoft; it bears no Fruit, and is not proper for burning. When 'tis dry they ſaw it into Planks, like our Fir Dales; this Wood is lighter than Cork; this premiſ'd, we come to ſhew how they draw out the Stone. Being the experteſt Swimmers that can be, they dive under Water, and having pitch'd upon a Stone fit for their Purpoſe, faſten a great Cable to it, then they take a piece of the *Candou* Wood, and having boar'd it, run it along the Cable quite up to the Stone; after this they run on ſuch a number of Pieces as they have occaſion for, till the light and floating Wood drags up along with it, a Stone or any other weight of 100000 pound weight. 'Twas by this Convenience that the Natives took up the Canon and Anchors of our Ship that was caſt away; and I was Eye-witneſs to their clearing, by the ſame means, in the ſpace of 15 Days, the Harbour of *Malè*, which was choak'd with great Rocks, inſomuch that no Ship could come in.

The Advantage of the floating *Candou* Wood.

When the *Candou* Wood is once ſoak'd in Water, it muſt be dry'd in the Sun before it be us'd again, elſe 'twill not float. Upon other Occaſions they take five or ſix large pieces of Wood, and having rang'd 'em all in a line, raiſe upon 'em Planks of the ſame Wood to ſit upon, and ſo paſs from one Iſland to another; and 'tis by this Contrivance that they chiefly manage their Fiſhery. In the Canals that run between the *Attolions*, one Man can work theſe Inſtruments of Navigation, tho' they are not proper for the Sea; for they know how to trim their Dale Seats ſo well, that there's no fear of over-ſetting, and if that happens, their Planks will always ſwim above. All the Danger lies in the disjoyning of the Pieces; and this ſort of Float is call'd *Candoupatis*, from the Wood of which it conſiſts. The *Candou* Tree has yet another Property, namely, that when one piece is ſtruck againſt another, they will ſtrike fire, and this ſerves 'em in the place of Tinder-Boxes.

The Lime they make uſe of.

So much for the way of dragging their Stones from the bottom of the Sea; and as to Lime, they ſupply its room with an excellent Cement, made of the Shells that they find on the Sea-ſide.

Their Language,

Our Method directs us in the next place to ſpeak of their Language, which lies in two Chanels. The firſt is the *Maldivan*, properly ſo call'd, which claims a large extent. The ſecond is the *Arabick*, which runs upon the ſame lay with the *Latin* in a Popiſh Country, and is the Language of their Devout Addreſſes. I paſs over the *Cambaye*, *Guzeratta*, and *Portugueſe* Tongues, which are depriv'd from their Commerce; and ſhall only take notice, that in the Southern parts they ſpeak a coarſe unpolite ſort of Language, which, after all, is a Retainer to the common Tongue of theſe Iſlands.

Their Religion.

Temples.

Their Religion and Ceremonies come next in courſe. All the Inhabitants are *Mahometans*, and the greateſt part of the Foreigners (*viz.* *Arabians*, *Malabars*, and *Sumatrans*) are the ſame. Their Temples, *Alia's*, *Moſchees*, are built of good Stone well cemented, and have a thick Wall. They ſtand in the middle of a ſquare wall'd Encloſure, where they bury their Dead, abating for thoſe who deſire a ſeparate Sepulchre. Their Temples are ſquare and face the Weſt, as pointing to *Mahometan's* Tomb, with reference to their Poſition. They have three Doors, each of which is fac'd by a broad Well, with Steps, the bottom and ſides of which are lin'd with poliſh'd and flat Stones, the Floor of the Temple being cover'd with Mats and Tapeſtry, whereas the Church-yard is nothing but Sand. Their Temples are kept ſo clean, that if they want to ſpit or blow their Noſe, they muſt either do it in their Handkerchief, or get out of doors. The Roof or Ceiling of the Temples is of Wood admirably well poliſh'd, and the Walls are Wainſcoted, both of 'em being firmly join'd without Nails or Pegs or any other viſible Artifice. Upon the Walls of the Temples we met with large Tables of Stone or of Wood, with *Arabick* Inſcriptions. They have a particular place for the King and his Court, and Galleries for the Guards, with ſeparate Apartments for certain Dignities, Qualities and Ages, inſomuch that any Perſon who takes up an improper place, is fin'd accordingly. They are never without burning Lamps, for which end certain Coco Trees are conſecrated. Some of the Iſlands have nine or ten Temples; but that in which they ſolemnize a general Feſtival, is built and ſupported upon the common Charge, under the Name of *Ou couru Meſquite*.

Their Prieſts.

Each Moſche has it Prieſt call'd *Moudin*; and each Iſland that has 40 Perſons above the 15th Year of their Age, is dignified with a *Catibe* or Curate, who aſſiſts as Principal in all publick Exerciſes, and governs the inferiour Prieſts. He pronounces the publick Prayers, and by Sermons and Exhortations, explains and recommends the Law of *Mahomet*; under him the *Mondins* teach Children to read and write their Mother Tongues and that of *Arabia*, for which Service their Parents give a voluntry Reward.

Their way of Worſhip.

Their Prayers.

Every Day in the Week all above 15 Years of Age, repair by the break of Day to the Temple, and declare their Creed, *viz.* That the World is flat and not round; That 'tis ſurrounded with a Wall of Braſs, which prevents its being drown'd in the Waters that encompaſs it; That the Devil, the general Enemy of Mankind, indeavours every Night to break through and undermine this Wall; And that he is not much ſhort of compaſſing his end when the Day-light arrives. Upon this Belief they all join in Prayer at the break of Day, to prevent the Deſtruction of the World, which (as they believe) would otherwiſe inſue. They repair to the Temple four times a Day, beſides, namely, at Noon, at three a Clock in the Afternoon, at Sun-ſet, and at ten a Clock at Night, tarrying each time half an Hour. Thoſe that have no mind to go to Church, may ſay their Prayers at home, or ſay none at all if they will; but if it be known that any Perſon neglects the Duty of Prayer altogether, no body will eat or converſe with him; from whence it comes to paſs, that almoſt all of 'em, whether Tradeſmen or others, ſpend a great part of their time in Publick Service. They make uſe of Beads as well as the Papiſts, but they have no Croſſes. Before they enter the Temple, they waſh their Feet, Hands, Ears, Mouth and Eyes, obſerving at the ſame time certain Ceremonies, and pronouncing Prayers ſuitable to the Sin they repent of. They are ſo ſcrupulous, that no Temptation in the World can oblidge them to forbear this ſolemn way of Waſhing, upon the Apprehenſion, that it certainly purges 'em of all Sin and Pollution. The greateſt Indecency of their Worſhip is, that they waſh and bath publickly and promiſcuouſly, and offer their Penitential Prayers with a loud Voice, and ſo diſcover to all the world all the ſecret Tranſactions of their Life, whether in the way of Luſt or otherwiſe. At this rate all the ſecret Adventures of Man and Wife are laid open to the World, by the publicks Prayer of both Parties; for the Women pray aloud as well as the Men, only they do it in their Houſes, in regard that they never go to Church.

Circumciſion of Males.

of Female.

The Male Children are circumcis'd when they are ſeven Years of Age; and upon that Occaſion the Parents and Relations divert themſelves with Muſick and Publick Feaſting fourteen Days. They have particular Operators for Circumciſions, who apply themſelves to nothing elſe; and the Ceremony of the Action is after this manner. For ſix or ſeven Hours before the Circumciſion, the Child is bath'd in the Sea, in order to make the Yard ſhrink, and to render the Skin ſoft and tender. When the Hour of Action comes, the Child is brought to a Lodge built on purpoſe, and held by two or three *Moudins* or Prieſts, who in the mean time chant Verſes and Prayers ſuitable to the Occaſion; then the Operator, having drawn over the Prepuce and ty'd it with a String, cuts it with a Razor; after which he heals it in the ſpace of 15 Days. Before Circumciſion, they alledge, that the Child is innocent and cannot ſin; and for the ſame Reaſon they do not cover the Privities of the uncircumcis'd Children. As for the Girls, their Circumciſion conſiſts in drawing two or three drops of Blood from their Privy Parts, when they are two Years of Age, but 'tis attended with no Solemnity. When the Children are grown up, they pay a profound Deference to the Operator that circumcis'd them, and call 'em their Maſters.

Their Feſtivals.

The Feaſt of *Friday*.

Prieſts over-fed.

They celebrate ſeveral Feſtivals all the Year long, particularly every *Friday* is with them a Day of Feaſting, at which all the Males above 15 Years of Age are preſent, but no Females. On the preceding Eve they pray in their Houſes, ſome for their Health, others for the Dead; and for that end ſend for the Prieſt to their Houſes, where an Entertainment is provided; and when the Prieſts have no Stomach for eating, they chooſe rather to abſent, for if they come they muſt eat tho' againſt their Appetite. On *Friday* Morning, the publick Crier goes round the Iſland, with a ſort of caſt Bell in his Hand, and a Hammer of Wood to beat it withal: He is aſſiſted by three Trumpeters, who ſound often to give the People notice of their Duty. Upon this Warning the People throw aſide all work for that day, and after waſhing and bathing, and putting on their beſt Cloths, repair to the Temple. In the mean time the King's Muſicians play before his Palace on divers Inſtruments; and ſoon after, the King's four Prieſts, who are Men of Quality and Learning, and never aſſiſt but at publick Solemnities; theſe Prieſts, I ſay, aſcend an high Stone Edifice, adjoining to the Temple, where they clap their Hands upon their Ears, and with a loud and fearful Voice, cry thrice, *Alas*, *Alas*, *Aquebar*, i. e. *Great God*, and then they add ſomething of *Mahomet*. This done, they repair to the King's Palace, and pronounce the ſame Words after the ſame manner; upon which, if the King has a mind to be ſeen, as he commonly is, ſends a Carpet of Silk to be ſpread on the place where he means to ſit. Then the *Moudins* do the like at the *Catibe*'s Houſe; and he comes and waits upon the King, who walks in great magnificence to the Temple, his Head being cover'd with a white Vail above a great Turband, ſo that he cannot ſee, and is oblig'd to be led by one of the *Moudins.* The King comes laſt to the Church, and immediately ſays his Prayers; after which the *Catibe*, being mounted on a rais'd place at one end of the Temple, takes a naked Sword in his Hand with the point downward, and flouriſhing it about, recites his Prayers. In the mean time the People pray without ceaſing, putting themſelves into divers Poſtures, and obſerving ſeveral apiſh Geſtures. The *Catibe* has a new Prayer for every *Friday* in the Year, and when that Year is expir'd, makes uſe of the ſame Prayers for the next. He repeats all without book, and if he happens to be out in one Word, Syllable or Letter, the *Moudins* reprimand him publickly, and the Feaſt is thought to be of no avail. This Service laſts about two Hours, and after it is over, the People ſalute one another, and the King returning in great ſtate to his Palace, entertains 'em at his own Charges.

The New Moon Feaſts.

The Lent call'd Ramedan.

On Faſt-Days they muſt not ſwallow their Spittle.

They are very ſcrupulous on Faſt-Days.

The Diverſions of Men and Women.

How they carry on Love Intriegues.

They obſerve the like Solemnity on the Day of every New Moon, and rejoice when they ſee it. Upon this Occaſion they clean their Houſes, Courts and Streets, garniſhing the Entries of the Churches and the Gates of their Houſes, with Coco Shells cut in the middle, and fil'd with white Sand and burning Coals, upon which they burn almoſt all Night, ſweat ſcented Gums and Woods; at the ſame time the inſide of their Houſes, their Beds, *&c.* are perfum'd after the ſame manner. Tho' the *Maldivans* celebrate every New Moon, yet they obſerve four beyond the reſt, particularly in *December* or thereabouts (for their Months are lunar) they have a Feaſt call'd *Ramedan*, which commences at the New Moon, and laſts till the next New Moon. They take their Meaſures, not from the real change, but from the Appearance of the New-Moon; by which means it comes to paſs, that ſome Iſlands begin the Feaſt ſooner than others. The firſt Night of the *Ramedan* Feaſt, the Men and Women viſit one another apart, and divert themſelves with Feaſting, Dancing, *&c.* till 'tis near day; having prepar'd themſelves for eating by faſting the preceding Day, in which Cuſtom they are ſo ſuperſtitious, that for that Day they will not only avoid the taſting of any thing, but even the waſhing of their Mouth, or putting their Finger in their Mouth, or ſwallowing their Spittle. The prohibition of ſwallowing their Spittle, puts them to a great Inconvenience when they are in Church, for that 'tis not allowable to ſpit there, and ſo upon every turn they are forc'd to run out of Doors. Nay, ſuch is their Superſtition upon the Faſt-Day, that the Men who are allowed to bath, are prohibited to plunge their Heads in the Water, leſt ſome drop of it ſhould enter their Mouth or Ears; and the Women are downright forbid to bath at all, leſt the Water ſhould get in at their lower Parts. Half an hour before Sun-ſet, all above 15 Years of Age repair to the Temple, and in the ſpace of that half hour, cleanſe their Mouths and pick their Teeth very nicely, being furniſh'd by the *Moudins* with Pick-tooths and other cleanſing Inſtruments made of Coco Wood. This done, the *Moudin* makes his Cry three times, and enters the Temple at the head of the People, who then ſay their Prayers, the Women being at the ſame time imploy'd in ſaying theirs at home: When that Service is over they feaſt and make merry with one another. During the *Ramedan* the King entertains all the People at ſeveral times, inviting only Perſons of one and the ſame quality at a time; for they are ſuch religious Obſervers of their Quality, that they will not eat with any Perſons of a different rank. The Nobles &c. entertain their Friends in like manner, and thus do the Men and Boys Feaſt; but the Women, who are not allow'd to go to the Feaſts, ſend only Preſents at Night to one another. The Women bath themſelves in the Evening, at which time the Men are enjoin'd to avoid bathing. During the whole courſe of the *Ramedan*, they faſt after the above-mentioned manner in the Day time, and avoid Sin and Pollution as much as they can; nay, in the Day time the married Men muſt not imbrace their own Wives, and if they do it in the Night, they muſt bath with their Wives, and ſay certain Prayers before the Day comes. If any one breaks any of the faſt Days, he is oblig'd to faſt as many more after the end of the *Ramedan*: In this Month no body will either work or travel be they never ſo poor. The *Pandiare* preaches every Day at three a Clock in the Afternoon, in the King's Palace, or in the Church, or in his own Houſe. After the Sermon is over, they divert themſelves with the Exerciſe of Arms, and ſeveral ſorts of Plays, particularly the Foot-ball: At the ſame time the Women and Girls viſit one another, and have particular ſorts of Plays and Diverſions ſuitable to their Sex. The Intriegues of Love run higher in this Month than in any other; and the Courtſhip conſiſts in ſending to one another Songs and Verſes, inſcrib'd with Bodkins on Coco-leaves, which are as white as Paper. The Youths do likewiſe preſent their Miſtreſſes with Garlands of ſweet ſmelling Flowers, and receive a Counter Preſent of Betel nicely dreſs'd: In fine, they take all poſſible Meaſures to heighten their Mirth and Diverſion. After the Month is over, the Women and Girls are oblig'd to faſt eight Days longer, upon the account of their Menſtrual Flux.

A Poll Tax.

Three Days before it ends, the Bell-man and the Trumpeters go round the Iſland, requiring all the Inhabitants, whether Men or Boys, Women or Girls, to ſend their Names in writing to the *Naybo* of their reſpective *Attollon*, and to pay an Offering of half a Larin a Head, which the People pay very willingly, as a Tribute to God and *Mahomet*; for they imagine, that without the paying of that Tribute, their Faſting would not avail 'em. In this Tax the Parents pay for their unmaried Children, and for their Servants and Slaves; and if any poor Perſon has not the Money to lay down, the King or any rich Man pays for 'em very willingly. The Money ariſing from this Tax is lodg'd in the Hands of four Receivers, one on the behalf of the King, a ſecond for the Clergy, a third for the New Converts, and a fourth for the Poor; one third of it goes to Eccleſiaſtical Perſons, another to the Proſelytes, and the laſt third to the Poor.

The Ydu Feaſt.

When this Lent is over, they celebrate a great Feſtival call'd *Ydu*, which is one of the greateſt New-Moon Solemnities that they have.

Several Feſtivals.

The next New-Moon after that, they celebrate a Feſtival call'd *Mas Ydu*, i. e. a *Great Feaſt*, which laſts three Days. The Day of this New-Moon, is that Day in which the Pilgrims obſerve ſo may Ceremonies before *Mahomet*'s Tomb in *Mecca*.

About the Month of *April* or *May*, at Full-Moon, they have a Solemnity of three Days, call'd *Poyeaöan*, *i. e.* the *Full-Moon*, at which every one carrys ſome Rice along with them, and boils it over a great Fire, being entertain'd at the ſame time with Muſick, Dancing, *&c.* for they date the Arrival of Rice in theſe Iſlands from that Full-Moon.

All-Souls day.

In *June* or thereabouts (for, as I ſaid above, their Months being *Lunar*, do not agree with ours) they obſerve a Feaſt for the Dead with a great deal of Superſtition. On this Occaſion they viſit the Sepulchres of Holy Men, and of their Anceſtors, Relations, *&c.* where they make Offerings and burn Perfumes.

The next Day after that Solemnity is a Day of general Alms-giving, and even the King himſelf gives Alms with his own Hand to the Poor, who upon that Occaſion reſort to *Male* from the other Iſlands.

About *Auguſt* and *September*, they have a Solemnity of two Days, in which they ſend about to one another boil'd Wine with Honey and Coco Milk: This Feſtival is ſaid to take its Riſe from a Miracle that *Mahomet* acted on that Day.

The ſolemnizing of Mahomet's Death.

There remains yet another very ſolemn Night-Feſtival, call'd *Meulude*, which happens about the Month of *October*, being the Night on which *Mahomet* dy'd. Upon this Occaſion they have a large Houſe or Hall of Wood, in ſeveral parts of the Iſland, which is hung within with the fineſt and richeſt Tapeſty, the Floor being cover'd with white Sand and Mats above it, and the Cieling adorn'd with white Cotton Cloth, ſupported with black Strings that run along it like Stripes. In this great Hall hang up ſo many Lamps that 'tis as light as day, and the Smell and Smoak of the Perfumes that they burn, fills the adjacent Air. In the midſt of the Hall, there's a Table cover'd with ſeveral ſorts of Meat and liquid Mixtures. The Women do not aſſiſt at this Solemnity, but the Males repair thither about eight a clock at Night, and ſit down in order according to their reſpective Stations, there being Officers appointed to rank 'em. All the Night long the Prieſts and other Eccleſiaſtical Perſons ſing Songs, which they call the Pſalms of *David*. When Mid-night approaches, the whole Aſſembly falls down flat upon the Ground, as in an Extaſy, and continue in that poſture for ſome time; after which the *Pandiare* and the *Catibes* ſtart up of a ſudden, and all the reſt following their Examples, skip about and leap upon each other as if they were mad. The People are ſerv'd with Betel well dreſs'd, and drink, by 50 Perſons choſen into that Office, which is reckon'd very honourable. When the

Night is almoſt over, the Prieſts give over ſinging and ſay Prayers; after which they all go to the middle of the Hall where the Table ſtands, and every one takes a Plate of Meat and ſome Aromatick Liquors, which they carry home with them and value very much.

The ſolemnity of Marriages.

The laſcivioufneſs of their women.

Their Joyntures.

The forbidden Degrees.

Their frequent and voluntary Divorces.

After their Religious Rites, 'twill be proper to ſubjoin the Ceremony of Marriages and Funerals. Upon a Deſign of Marriage, they addreſs themſelves to the *Pandiare* or *Naylies*, who after the being ſufficiently inform'd and ſatisfied that things really are as they are repreſented, takes the Man by the Hand, and asks him if he is willing to take ſuch a Woman on the Conditions propoſ'd, and (the Woman being always abſent) he likewiſe queſtions her Parents and Relations, upon their Conſent. If they all agree he marries 'em, and calls the By-ſtanders to witneſs their mutual Conſent. Then the whole Company waits upon the Woman at home, and ſeveral other Perſons viſit her, all the Viſiters being entertain'd with Feaſting, Muſick, Dancing, *&c.* The new-married Man makes Preſents to the King and the great Lords, and the Bride pays the like Complement to the Queen and the other Ladies; both of 'em makes Preſents likewiſe to their Relations. But when the King is married he does not give, but receives Preſents from all his Subjects, ſuitable to their Stations, *viz.* Cloth, Garments, Turbands, Victuals, Fruit, Flowers, *&c.* and all theſe Preſents, which in the bulk riſe to a great value, belong to the new-married Queen. A Man may have three Wives if he can maintain 'em, but not more; and if all the three live in one Iſland, he is oblig'd by the Law, to beſtow as many Nights upon one as upon the other; tho' after all, this Law is not obſerv'd; and indeed 'tis a hard Law in that Country, where the Women are ſo laſcivious, that three Men cannot ſatisfie one Woman. The Bridegroom receives no Dowry with his Wife; and is oblig'd not only to be at the Charge of the Nuptial Solemnity, and to maintain her, but to ſettle upon her a Joynture equal to what her Mother and other Anceſtors had. They are ſo nice upon this laſt Condition, that if the Prieſts apprehends that the Man can't afford ſuch a Joynture, he refuſes to marry 'em, notwithſtanding that both Parties require it. But after all, the Bride may renounce either the whole, or part of her Joynture, after marriage, and indeed that is frequently practis'd. Brothers and Siſters, Firſt-Couſins, and thoſe who by way of Friendſhip and Intimacy, have us'd to call one another by the Names of Son or Daughter, Father or Mother, Brother or Siſter; theſe, I ſay, are prohibited to marry. The Males may marry when they will, but a Female Orphan cannot marry till ſhe is 15 Years of Age. Indeed if her Father be alive (for the Mother has no Power) he marries her at ten or eleven Years of Age, and that to the firſt Suitor, whether old or young, provided his Quality is in ſome meaſure ſuitable to hers; for they reckon it a great Sin to keep up their Daughters from the injoyment of a Man. A Man may turn away his Wife; but unleſs ſhe conſents to the Separation, ſhe may demand her Joynture; tho', after all, that Demand is ſeldom made, as being reckon'd a mean and deſpondent Action, and a ſign that the Woman fears that her Merit will never procure her another Husband; on the other Hand, the Woman cannot part from her Husband without his conſent. This ſort of Divorce, which is very frequent, muſt be atteſted by Witneſſes, or elſe they can't have the Benefit of ſecond Marriages. The divorc'd Parties frequently repent of their Separation, and marry again a ſecond, third, or fourth time, but after three Divorces, ſuch Re-marriages are not allow'd, tho' ſuch is the Levity of the People, that they frequently deſire 'em; and in order to elude the Law, they have a common trick of getting ſome profligate Scoundrel to marry the divorc'd Woman, and lie with her one Night without touching her: after which, he quits her before Witneſſes, and ſo ſhe is married again to her former Husband. Such is the frequency of theſe Divorces, that a Man ſhall have 100 Wives; and the Women look upon the multitude of ſeparated Husbands, as a recommending quality for future Marriages. When a Woman is ſeparated from her Husband by death, ſhe muſt mourn four Months and ten Days, before ſhe can marry again; and if the Separation is accompliſh'd by Divorce, ſhe muſt prove, that after that, her Menſtrual has return'd three times, before ſhe offers to marry. This Caution is us'd, for fear ſhe ſhould prove with child to her former Husband.

The Funeral Ceremonies.

The Benefit accruing to the Prieſts.

A yearly Funeral Feaſt.

Their Funeral Ceremonies are ſuperſtitious to a flaming Degree. In the firſt place the Corps are waſh'd by ſix Perſons of the Sex, who buy that Office of the King, and are paid for their Service, then they are wrap'd up in Cotton, and cover'd with fine white Cotton-cloth (which goes afterwards to the Prieſt) the Right-hand of the deceaſed Perſon being laid upon his Ear, and the Left upon his Thigh. This done, the Corps are laid upon the right-ſide in a Coffin of *Candou* Wood, and carry'd to the Burying-place by ſix Relations or Friends, attended by the Women-waſhers, who cry and howl moſt hideouſly. Every Man in his life-time, provides for himſelf a Burying-place, and all the other Neceſſaries for his Funeral; nay, they are ſo ſuperſtitious, that they'll rather ſtarve, than touch the Money they have laid up for the Charges of their Funeral. Beſides the ſix principal Mourners, the other Relations and Neighbours are preſent withont invitation; and upon the march from the Houſe of the deceas'd Perſon to the Grave, they ſcatter Shells for the Benefit of the Poor, to whom they likewiſe diſtribute Bags and Sacks of Rice and Millet. At the ſame time they give to the Prieſt pieces of Gold and Silver, the number of which is proportionable to the Eſtate of the deceas'd Perſon; and theſe Pieces are diſtributed by the Prieſt to thoſe who have aſſiſted in praying for the dead Perſon, and particularly to thoſe of the Eccleſiaſtick Order, who alledge, that they have the only right to 'em. The Prieſts ſing continually, during the whole courſe of the Ceremony, and in the Proceſſion, a Perſon of Quality ſprinkles the Aſſiſtants with a Water made of ſweet Flowers. The Grave is cover'd with a large piece of Silk or Cotton, which upon the Interment goes to the Prieſts of the Temple. When the Corps are laid in the Grave, they turn the Face of the deceas'd Perſon to the quarter that faces *Mahomet*'s Tomb, and then fill up the Grave with fine white Sand, ſprinkling it with Water. When the Ceremony is over, the Relations entertain all the Company with Victuals, and the three following *Fridays* they pray over the Grave, where the Prieſts ſing, eat and pray every Day, till the third *Friday* paſſes, after which a General Feaſt is prepar'd for the Relations, Friends and Prieſts, who pretend that the Soul of the deceas'd Perſon is then convey'd to Paradice. This Feaſt is repeated every Year, and on *All-Souls* Day they throw freſh white Sand on the Grave, and perfume it with burnt Incenſe. The Grave is ſurrounded with wooden Pails, for they reckon it a great ſin to walk over it. They never bury two Corps in the ſame place; for they have ſuch a Reverence for the Bones of the Dead, that even the Prieſts do not dare to touch 'em. If a great Lord dies, the Prieſts ſing for him a whole Year, and are entertain'd every day with Diſhes of Meat and Betel; but if the King or Queen dies, the Ceremony is continued to the Death of the next Succeſſour.

In this Country the Mourners make no alteration in their Habit, only they go bare-headed to the Grave, and continue ſo for a few Days after the Interment. Thoſe who die in fighting with Perſons of a contrary Religion, are buried upon the Spot where they fall, without any ceremony; and in regard that they are accounted holy and happy, neither the Prieſts nor their Friends pray for 'em. They never tranſport Corps out of one Iſland to another; and even the King himſelf is buried where he happens to die.

How they bury thoſe who die at Sea.

If any Perſon dies at Sea, they waſh the Corps and put 'em into a Coffin, which they place upon a float of *Candou* Wood; within the Coffin they put Silver in proportion to his Means, and a written Paper, deſcribing his Religion, and withal praying thoſe who meet with the Corps, to take the Money and bury 'em handſomly.

The Mens Cloaths.

In purſuit of the other Cuſtoms of the *Maldivans*, we come next to their Apparel. The Men tye about their Privities a great Swathe of Cloth, which comes round about, to prevent any diſcovery in working or walking. Above that they have a piece of blue or red Cotton Cloth that reaches to their Knees, and then a larger piece of Cotton or Silk, reaching to their Ankles, and girded with a ſquare Handkerchief, imbroidered with Gold and Silk, which is ſpread upon their Backs and ty'd before. Above theſe they have a little piece of tranſparent and particolour'd Silk, which reaches only to the middle of their Thighs; at laſt they gird themſelves with a great fring'd Silk Girdle, the ends of which hang down before. Within this Girdle on the left ſide they keep their Money and Betel, and on the right ſide a Knife.

Their Knives.

Theſe Knives are made of excellent Steel, the common Sheaths being of Wood, and the Hafts of Fiſh-bone, for the Bone of a Land-creature they will not wear; the richer ſort have both their Hafts and Sheaths of wrought Silver.

Their Arms.

Every one wears a Knife, and eſteems it very much, as being his only Arms; for none but the King's Officers and Soldiers are allow'd to wear any other. Theſe indeed have a wrought Dagger at their ſide, and when they walk along the Streets, a drawn Sword in one Hand, with a Buckler or Javelin in the other.

The *Maldivans* place their chief Ornament in the Silver Chains that hang about their Girdle, and of which the meaneſt Boy or Girl has more or leſs in proportion to their Means; but 'tis only the Perſons of Quality and Fortune that ſhew 'em openly. In theſe they place their chief Treaſure, and commonly they appropriate 'em for the Charge of their Funeral.

A ſweet ſcentedPaint.

The common People are naked from the Girdle upwards, abating for the Feſtival Days, on which they wear Cotton and Silk Jerkins and Weſtcoats, with gilt Copper Buttons. The Sleeves of theſe Coats reach only to their Elbow; for they alledge, that if their Wriſts were ty'd up like ours, they could not have the free uſe of their Arms. The Perſons of Quality do commonly wear ſuch Coats; but ſome have a Cuſtom of covering their Skin from the Girdle upwards, with an odoriferous Paſte, made of the Pouder of Camphy and Sanders, beaten upon a ſmooth Stone, and incorporated with the diſtill'd Water of ſweet ſcented Flowers. They make their Wives or Friends anoint their Backs, &c. with this Paint, and draw various Figures upon 'em; However they muſt not appear with that piece of foppery before the King or be ſeen in his Palace.

Turbants.

The Men of this Country wear upon their Heads red or particolour'd Turbants, ſome of which are of Cotton for the meaner ſort of People, and others of Silk for the Perſons of Quality. The King's Officers or Souldiers have frequently embroyder'd Handkerchiefs on their Heads, which the other Subjects are not allow'd to wear.

Sandals.

Their Feet are always naked, excepting that within doors they uſe wooden Sandals, which they pull off when viſited by a Perſon of a ſuperiour rank; oftentimes their Legs are likewiſe naked.

The Women's Habit.

The Women wear a Coat of Cotton or Silk, which reaches from their middle to their Ankles; above that they have a long robe of Taffato or fine Cotton, reaching to their Feet, without any ſlit beſides the Neck, where 'tis faſtened with two little gilded Buttons; this Robe they pull quite up when they ſuccle their Children.

Bracelets.

Their Arms are loaded from the Wriſt to the Elbow with great Bracelets of Silver, inſomuch that ſometimes they have three or four Pounds of fine maſſy Silver upon 'em, tho' indeed the poorer ſort alloy the Silver with Braſs. The Women of quality have many Chains of Gold or ſtrings of little pieces of Gold upon their Necks, and rich Pendants in their Ears.

Ear-rings.

They have their Ears pierc'd when they are young, not only in the Cap, upon which there hangs an Ear-ring, but in 24 places of the Griſtle, in which they put as many gilded Nails, with a precious Stone or Pearl upon the Head of 'em.

Veils.

When the Women walk in the Streets they cover their Heads with a Veil, and are very cautious of ſhewing their Faces before Men, tho' in the Preſence of Women of a ſuperiour rank, they take off their Veil. They are not allow'd to wear Rings, Jewels, Bracelets or Ear-rings or Chains of Gold, till they ask and obtain leave of the Queen, as the Men do of the King for the ſame Priviledge, which commonly coſts 'em Money. The different quality of the Women is diſtinguiſh'd by the Nature of their Ornaments; for none but Queens and Princeſſes are allow'd to wear Gold Bracelets or Gold Rings on their Arms or Legs; beſides, the Queens put Rings on their fore-Fingers, the Princeſſes and Perſons of the firſt quality do upon their middle-Finger; ſo that all other Women have their Rings upon the Ring-Finger and little-Finger, and the Men have theirs upon their Thumb only. If a Man's Wife begins to wear richer Ornaments than ſhe us'd to do in former times, the Man's Taxes are rais'd, unleſs he be one of the King's Officers or an Inhabitant of *Malé*; for theſe are exempted from all Taxes upon the Head of Apparel.

Foreigners incourag'd.

Forreigners and their Wives are free from the above-mentioned Reflections; for they may wear what they pleaſe as well as the Clergy.

The Women very handſome.

The Women place a great part of beauty in redding the Nails of their Fingers and Toes, which they effect with the Juice of a certain Tree. In a Word, they have very handſome and proper Bodies, and are very careful in ſetting themſelves off with a genteel Habit, and with frequent waſhing and perfuming. Generally ſpeaking, their Complexion turns upon an Olive Colour, tho' ſome of 'em are brown, and others very fair.

Cuſtoms relating to eating and drinking.

The People of this Country have many peculiar Cuſtoms with reference to their way of eating. They reckon 'tis very diſhonourable for a Perſon of a ſuperiour rank to eat with his inferiour; and indeed they ſeldom regale one another, unleſs it be at ſolemn Feſtivals. If they mean to complement a Friend with a Treat, they ſend a cover'd Table with ſeveral Diſhes of Meat to their Friend's Houſe, who is thereby much honour'd; but in their own Houſes they are cautious of eating before others. Before and after eating they ſay Prayers; and their Table is the Floor cover'd with a fine Mat, upon which they ſit croſs legg'd. They feed ſo nicely, that they will not drop one Crumb upon the Floor, nay, not ſo much as a drop of Water, tho' they waſh their Mouth before and after. Inſtead of Table Cloths and Napkings they uſe Banane-leaves.

Gold and Silver Diſhes prohibited.

Their Diſhes are made of Earth or of the *China* Porcelain, which is very common in that Country, Gold or Silver Veſſels being prohibited by the Law; they are all round like Boxes, with an Earthen Cover, above which they put a piece of Silk; for the Piſmires are there ſo numerous and troubleſome, that 'twould be impoſſible to keep Meat without a Cover upon it; nay, the People are ſo nice, that they will not taſte any Meat that has been touch'd by a Flie, Piſmire, or any Inſect or unclean thing, but give it to the Fowls.

A generous Regard to the Poor.

As for the Poor, whom they look upon as the Servants of God, they ſcorn to offer 'em what they will not eat themſelves, and entertain 'em with the beſt Victuals they have. If they ſpie the leaſt crack in a Diſh, they eat no more out of it, upon the Plea of its being polluted. All Spoon-meat they eat with their Fingers, but withal ſo nicely, that they let nothing fall, that being accounted a very martial piece of Civility and Decency. If they have occaſion to cough or ſpit in the time of eating, they riſe from the Table and walk out, for they muſt not do it at Table. They never feed themſelves with their Left-hand, becauſe they make uſe of it in waſhing their Privities. They chooſe to begin their Meals with the eating of a Coco-nut half ripe, and drinking the Water of it, which they ſay is very healthful, and looſens the Body. While they eat they are all ſilent, and make very quick diſpatch; for with them 'tis an unmannerly thing to be long at eating. They take it for a piece of rudeneſs and incivility to drink before they have done eating, and even then they drink but once, either Water or Coco Wine freſh drawn. They drink out of Copper Cups well wrought, with Covers to 'em. After eating and waſhing, they ſerve up a Plate of Betel inſtead of Sweatmeats, for the Fruit is ſerv'd up along with the Meat. They have no ſet Meal times, but eat when their Appetite provokes 'em;

A Man-Cook contemn'd.

and the Victuals are dreſs'd only by the Women; for the Men deſpiſe the Character of a Cook in ſuch a violent manner, that they will not converſe with a Man-Cook, or admit him to a ſhare of their Exerciſes, he being doom'd to the Company of Women.

Superſtitious Cuſtoms relating to the killing of Beaſts.

When they kill a Beaſt for Food, they turn their Faces towards *Mahomet*'s Sepulchre, and ſo cut its Throat in a particular place; after which they ſuperſtitiouſly avoid the touching of it till 'tis quite dead: Their Butchers muſt be ancient and the Fathers of Children. When they awake out of their ſleep, they preſently waſh their Eyes and Face, and rub 'em with Oil, and blacken their Eyelids and Eye-brows; for before the Performance of that Duty, they muſt not ſpeak or bid any one good morrow.

To Waſhing.

They are very careful in waſhing or cleanſing their Teeth, to the end that the Betel and Arecqua may the more readily impreſs their red Colour upon 'em, which they are very fond of. They are always chewing Betel, which they carry about in the plaits of their Girdle, and mutually preſent to one another upon occaſional Salutations. They bath before they enter the Temple, and waſh their Privities with their Left-hand after the natural Evacuations. When they bath at home for their Adventures with their Wives, they plung their Head three times under water; and in regard that they always bath and pray publickly; and that the reſpective Crimes have peculiar Ceremonies calculated for 'em, every Man's Crimes or Miſdemeanours are thus expos'd to the publick view.

To Sailing.

When they ſet out upon a Voyage, they avoid touching or meeting with any body; for if any unluckly Accident befals 'em, they impute it to the Perſon that touch'd 'em. When they go a fiſhing, they muſt not ſalute any, nor bid 'em good morrow.

From the Sun-ſet on *Thurſday*, till three or four a Clock next Morning, they ſuffer nothing to be carried out of their Houſe, but receive all that's brought in. If they fall out one with another, they never rail or throw about Calumnies; for if they did, all the World would fall upon 'em. When croſs'd at Sea, they addreſs themſelves to the King of the Winds (for they do not call him a God) and in every Iſland there's a deſolate by-place, call'd *Siave*, where thoſe who have eſcap'd danger, make Offerings of little Boats and Ships made on purpoſe, and loaded with Gums, Perfumes, Flowers, and odoriferous Woods. They burn the Perfumes, and having ſet fire to the Boats and Ships, turn 'em a-drift, ſo that they float up and down till they are quite burnt: And this they

take

The Magical cure of Diſeaſes.

The Worſhip of the Devil.

take for a Sacrifice that's acceptable to the King of the Winds. But when they cannot eaſily ſet their Boats and Gallies afloat, they kill Hens and Cocks, and throw them into the Sea right afore the Ship they mean to ſail in. They likewiſe pay a Superſtitious deference to an Imaginary King of the Sea; and dare not ſpit to the Windward of the Ship, nor look behind them. All their Boats and Ships are devoted to the Powers of the Winds and Seas, and they keep them as neat and clean as Temples. They place a wonderful vertue in certain Characters call'd *Tavide*, which they wear under their Garments in little Boxes; and ſometimes upon their Arms, Necks, Girdles or Feet, according to the Seat of the diſtemper: For their imaginary vertue is ſaid to conſiſt in curing or cauſing Diſeaſes, procuring Love or Hatred, Safety or Danger, *&c.* Theſe they buy of the Magicians, who are their only Phyſicians. They impute Death, Sickneſs, and all Affliction, to the Devil; and in order to pacify him, make him Offerings of Flowers and Banquets, in a certain place, where they let them conſume, unleſs ſome poor Body has the ſenſe to take them. With the ſame view they offer him Cocks and Hens, which they kill with their Faces directed towards *Mahomet*'s Tomb.

Their Diſeaſes.

Diſeaſes of the Eyes.

Itch.

Tettar.

To give a ſhort view of their moſt common Diſtempers: The firſt in that Claſs is a Fever, which is of dangerous conſequence to Strangers. An epidemical and contagious Diſeaſe call'd *Curiadin*, and not unlike the Small-Pox, viſits them once in ten Years, and ſweeps off a great many. They are very liable to the diſorders of the Eyes; many of them are quite blind, and moſt of them have little Eyes. When they have occaſion to be long in the Sun in the height of the Day, oftentimes they loſe their ſight when the Sun goes down; and for a cure of that infirmity, they take the Liver of a Cock boil'd, and after the writing of certain words and charms upon it, ſwallow it juſt before the Sun ſets. By this Remedy, both I and my Companions receiv'd a ſenſible benefit, tho' we omitted the Magical part. They are very ſubject to the Itch, which they heal with the Oil of Cocoes; and ſome of them are cover'd all over with incurable Tettars, all which is owing to their feeding moſtly upon Salt Fiſh, and their pouring Salt Water upon their Salt Meat.

Hand-worms.

Obſtructions of the Spleen.

Ulcers.

Wounds.

Pox.

Tooth-ach prevented.

In the Winter, at which time they go barefoot, notwithſtanding that it rains continually, a ſort of Hand-worm breeding in the Mud ſeizes upon the Soals of their Feet, and the intervals of the Toes, where they raiſe wheals that degenerate into Ulcers, ſo that they cannot walk. Their whole Body is likewiſe infeſted with theſe Hand-worms. Commonly their Spleens are large, and liable to Obſtructions; and their Bellies are apt to ſwell and be hard, which they take to proceed from their unhealthy Water. In all external Inflamations or Aches they apply Fire, which raiſes an *Eſchar*; and upon that they lay Cotton ſteep'd in Coco-oil, which proves very ſucceſsful. Their Ulcers which happen chiefly in their Legs, are perfectly cur'd by the application of Plates of Copper. As for their Wounds, they cure them very dexterouſly by the application of Ointments, without any Bandages or Tents. They are ſometimes troubled with Catarrhs, Defluxions, and Aches in the Bones. Venereal Diſeaſes are not frequent among them, however they cure them with *China*-wood, without Sweating; and thoſe diſtempers are communicated to them from the *Europeans*. They are altogether unacquainted with the Tooth-ach, which advantage they owe to the continual chewing of Betel, for that fortifies the Gums.

The Education of Children.

All Mothers Suckle.

As ſoon as the Children come into the World, they waſh them for a conſiderable ſpace of time ſix times a Day in cold Water, and then anoint them with Oil. When they void their Excrements, they waſh their Privities with water. All Mothers, even the Queens themſelves, Suckle their own Children; and beſides the Breaſt-milk, feed them with a ſort of Pap made of Rive or Millet bruis'd, and ſteep'd in water, and afterwards boil'd in Milk, and the Sugar of Cocoes. Tho' they never Swaddle their Children, yet I never ſaw any of them deform'd. They rock them in hung Beds of Cord, or in little Chairs hung up in the air, which they ſwing to and again. At the Age of nine Months the Children begin to go; and when they are nine Years old, they commence the purſuit of the Studies and Exerciſes of the Country.

The Learning of the Country.

Their Studies conſiſt in Learning to Read and Write, to underſtand the *Alcoran*, and to know their Duty. They have three ſorts of letters; namely, the *Arabick*, the *Maldivan*, and a third ſort which is commonly made uſe of in moſt Parts of the *Eaſt-Indies*. Their Leſſons are writ down on white Tables of Wood, which they clean and whiten again after they have got their Leſſons by heart; for durable and laſting Writings are done upon Parchment made of the leaf of a Tree call'd *Macare Queau*, that leaf being a fathom and a half long, and a foot broad.

Their way of Writing.

To teach the Children to write, they make uſe of no Paper, but make draughts of Letters with a Bodkin upon ſmooth plain Boards of Wood, cover'd with fine white Sand. The Children have ſuch a profound veneration for their Maſters, that they cannot marry them no more than their own Parents. Some of them, eſpecially the *Moudins*, *Naybes* and *Catiles*, carry their Studies a great length, and acquire great Skill in the *Alcoran*, and the Ceremonies of the Law.

Aſtrology much eſteemed.

The Mathematicks are much eſteem'd in this Country, eſpecially that part call'd Aſtrology, for they always conſult Aſtrologers not only upon Nativities and Births, but upon all Undertakings whatſoever, as Travelling, Building, *&c.*

Their Exerciſes.

As for their Exerciſes, they have Schools for learning the Exerciſe of a Sword and Buckler, of a Bow, of a Gun, and of a Pike; and the Maſters who teach them are much reſpected. They have no ſort of Plays but that of the Foot-ball, which they toſs very dexterouſly. Many of them apply themſelves to Manufactures, for Houſhold-Goods, and other Commodities, which they make very ingeniouſly. But the moſt univerſal, and moſt conſiderable Exerciſe they have, is that of Fiſhing.

The way of fiſhing in the deep Sea.

The Bait is not faſten'd to the hook.

Fiſhing is ſo common an Exerciſe all over the *Maldives*, that there's no ſuch thing as a particular Trade of that nature; for the Gentlemen, and even their King, purſue Fiſhing, as we do Hunting in this part of the World. Every Man there enjoys the natural liberty of fiſhing where and what he pleaſes. The Fiſh which are always taken in the deep Sea, about 6 or 7 Leagues off the Bars of the *Atollons*, are large, and of 7 or 8 ſorts, ſuch as *Benito's*, *Albachores*, *Guiltheads*, &c. which are all much of the ſame taſte and reſemblance, and have no more Scales than a Mackrel. The Inſtruments with which they catch them are, a Line of a fathom and a half of a great Cotton thread, made faſt to a great Cane of very ſtrong Wood; together with a Hook, that in form reſembles the Letter h. The bait is not faſten'd upon the Hook, but thrown about in the Sea; for they drag after their Boat a quantity of ſmall Fiſh like our Roches, which are very numerous among the Banks and Sands, and which are preſerv'd alive in Purſe-nets of Coco-thread. And when they come to the deep Sea, they ſow theſe little Fiſhes about, and throw in their Line; upon which the great Fiſhes perceiving an unwonted quantity of little Fiſh croud upon them in ſhoals, greedily ſwallow the whiten'd Hook as being one of the little Fiſh. The Fiſh that ſwallows the Hook falls off as ſoon as the Line is brought into the Boat, and ſo the Line is thrown in again. At this rate they'll fill their Boat with Fiſh in three or four hours time; and, which is very ſtrange, the Boat is all along under Sail. The Fiſh thus taken are all black, from whence they are called *Cobolly Maſſe*, i. e. *the black Fiſh.*

How they fiſh upon the Banks in the Night-time.

They have another way of Fiſhing in the Night time, upon the Banks that ſurround the *Atollons* at every Full and every New Moon. They convey themſelves to the Banks upon Hurdles, and the fiſhing laſts three days every time. 'Tis perform'd by Lines of hard coarſe Cotton-thread, which is 50 or 60 fathom long, and is blacken'd over with the Bark of a Tree that ſerves inſtead of Pitch, in order to preſerve it from corruption. At the end of this Line they have a Hook, with a Bait faſten'd upon it, after the ſame manner as is uſual among us; by this means they catch a prodigious quantity of large and red Fiſh, ſuch as I never ſaw elſewhere, which eats moſt deliciouſly, and is by them call'd *the King of the Sea*.

In fine, they have ſuch plenty of divers ſorts of Fiſh unknown to us, that 'tis impoſſible to recount or diſtinguiſh them; for beſides the Lines above-mention'd, they have all ſorts of Nets of Cotton-twine, Wheels, and other Inſtruments of Fiſhing. Upon the Flats, near the ſhore, they catch ſmall Fiſh like Pilchards with caſting Nets.

A general fiſhing twice a Year.

At the two Equinoxes of the Year they have a General Fiſhing, which is very remarkable. At thoſe two periods of the Year, as the Tides flow beyond the wonted Bounds, ſo they ebb more than uſually, and uncover ſeveral Rocks and Flats which at other times continue under water. Upon this occaſion the *Maldivans* pitch upon ſeveral dry corners, which they incompaſs with Stones, rais'd like a Wall to a great heighth, being forty paces in circumference, with a door or entrance left that is three paces wide. This done, 30 or 40 of them

Fiſh frighted with the ſhadow of a Line.

ſtretch out all round the Flats a large wide Circle of the great Coco-cords, at each fathom of which they tie a piece of Coco-ſhell dry'd, and that ſupplies the place of Cork in making the Line float. Now the Fiſh incloſ'd within the Circle are ſo ſcar'd with the ſhadow of the floating Line, as if it had a Net underneath it, that inſtead of making their eſcape by ſwimming out underneath it, they fly from it, and by the gradual contraction of the Line are brought into the wall'd Incloſure; the entry of which is thereupon ſtopp'd with all expedition with Faggots of the Boughs and Leaves of Cocoes compacted together to the thickneſs of a Man. After all, the Sea runs out, and leaves the Fiſh on the dry Land. This Fiſhery, which continues 15 days together, produces 10 or 12000 Fiſh. To conclude, I know of no place in all the *Eaſt-Indies* that can vie with the *Maldives* for a rich and plentiful Fiſhery.

The Vertues and Vices of the *Maldivans*.

Having thus diſpatch'd the Learning and Exerciſe of the *Maldivans*, 'twill not now be improper to take a view of their Temper and Inclinations. They are a lively briſk wiſe People, and very diſcreet in moſt of their Actions; they love Arms and Exerciſe, and are not deſtitute of Courage. They diſplay a great deal of Induſtry in Arts and Manufactures, and are polite enough in their Manners. They are Religious to a diſtinguiſhing degree, and Superſtitious beyond meaſure, tho' at the ſame time they are extremely given to Wantonneſs and Debauchery, and purſue the embraces of Women without controul. Adultery, Inceſt and Sodomy, are their common actions, notwithſtanding the ſeverity of their Laws and Penalties. Fornication is accounted no crime, and a young Woman ſuffers no affront for obliging a Friend before Marriage; nay, ſhe will not ſtand to procure the abortion of a ſpurious Birth, or to make away with it if it comes to maturity.

Horrid lewdneſs.

Women impudent.

The impudence of the Women is unparallel'd, and the Men are as vicious as they, tho' indeed they can't outdo them if they would. The Men bend all their thoughts upon the ſpurring up of Nature, and ſcrewing their luſtful Appetites to the higheſt pitch. They'd give their whole Eſtates for a *Recipe* to corroborate drooping Nature, and to enable them for repeated Adventures. The Feats of Letchery engroſs all their Diſcourſes, and their Wives or Whores are their inſeparable Companions. But after all, 'tis plain that they have not Mettle enough to ſatisfie their Wives, which may be imputed partly to the ternary number of their Wives, which makes an unfair odds; partly to the heat of the Climate, which exhales their Spirits, and exhauſts their vigour; partly to their continual Bathing, which unbends the Nerves and Sinews; and partly to the eating of Opium, which palls, clouds and diſpirits them.

Men perform but weakly.

Womens Breaſts reckon'd Privy-parts.

The Women are as cautious in uncovering or mentioning their Breaſts, as they are with reference to their lower Parts; and kiſſing is with them a nicety of the ſame extent with actual Enjoyment. Tho' they are impudent to the laſt degree, yet the regard they have for their Parents and Relations ſtifles it in their preſence; for if a Man talks a little pointedly to a Woman before any of her Relations, they will reſent it ſo far as to proſecute him at Law, and oblige him to own in Court that he takes them for Perſons of Honour, unleſs it be that he declares he did not know of their affinity to the Lady.

A profound regard to Relations.

A Man muſt not enter where a Woman bathes, or is preſent without her Garment; for tho ſhe never takes off the Cloth that ſupplies the place of a Petticoat, yet her Boſom and Breaſts are liſted into the number of her Privy-parts. When a Man is in company of a Woman, if another Man meets them he muſt not ask if ſhe be his Daughter or Wife, but if ſhe be his Kinſwoman, and what degree of Affinity or Conſanguinity ſhe ſtands in to him; for if the Woman be really the Man's Daughter, and the other asks if ſhe is his Wife, he'll take the Queſtion for an inſinuation of Inceſt. While a Woman is under her Menſtrual Flux, ſhe neither bathes nor ſhifts her ſelf; ſhe does not Bed with her Husband; neither does ſhe eat or converſe with any body; only ſhe is allowed to waſh her Mouth and her Hands.

The Women viſit at night.

As I intimated above, the Women ſeldom ſtir abroad in the Days, ſo that they make all their Viſits at Night, being accompany'd with a Man who walks before; and when he ſpies any one approaching, calls out thrice, *Gas*, i. e. *Take care*. Upon this Signal the Man betakes himſelf to the other ſide of the Street, without ſeeming to ſee or know the Woman; nay, if one Woman meets another, ſhe takes to the other ſide of the Way, and does not ſalute her, unleſs ſhe be very intimately acquainted with her. The outer Gate of the Houſes being always open till Eleven a Clock at Night, at which time every body is at home, the Viſitants have no occaſion to knock; and, indeed, the Gates have no Knockers. After entring the outer Gate, and approaching to the Door of the Houſes, which is always open, and ſpread with Tapeſtry of Cotton-cloth, or ſome other Stuff, they cough once; upon which the People of the Houſe come out. In the Iſland of *Male*, the King's Officers and Soldiers cough frequently, to give notice to one another in the dark Streets, for fear of receiving mutual Wounds from their Arms, which are always naked.

The nature of the Government.

We proceed in the next place to take a view of their Publick Government, which is an abſolute and ancient Monarchy, for the King is fear'd and rever'd by all, and every thing depends upon his pleaſure. Under him each *Atollon* has a *Naybe*, or Governour, who is a Prieſt and Doctor of the Law. The *Naybes* govern the inferiour Prieſts, and are intruſted with the adminiſtration of Juſtice, and the management of Religious Concerns. The *Cantons* or *Atollons* being ſubdivided into many Iſlands, each of theſe Iſlands, that contains above 41 Men, is allotted a Doctor call'd *Catibe*, who preſides there in Religious Matters, and rules over the particular Prieſts of the Moſques.

The Offices of the Naybes.

The Catibe.

The Office and Living of the Prieſts.

All theſe Prieſts are imploy'd in Inſtructing the People in the Law, and live upon a certain Portion of Fruits collected from every Inhabitant, and a Salary allow'd them by the King in proportion to their Dignity.

Thirteen Judges in the Kingdom.

The *Naybes* indeed are likewiſe imploy'd in the Adminiſtration of Juſtice; nay, they are the only Judges both in Civil and Criminal Caſes; and 'tis for the ſake of Juſtice, as well as the promoting of Religion, that they make four Circuits in the Year through all the Parts within their Juriſdiction. When they go the Circuits they gather their Dues, and greedily receive Preſents from an infinity of Perſons; ſo that the Circuits raiſe the beſt part of their Incomes.

Pandiare the Supreme Judge.

The *Naybes*, or Thirteen Judges, are under the direction of a Superiour, call'd the *Pandiare*, and in Arabick *Cady*, who reſides in the Iſle of *Male*, and is not only the Supreme Judge of all Cauſes, but likewiſe the Head of the National Church. He receives Appeals from the *Naybes*, but does not paſs Sentence without taking the Advice of four or five *Moncouris*, i. e. Doctors learned in the Law, and divers other Sciences; who are univerſally honour'd and reſpected, there being but about fifteen of them in all the *Maldives*. The Judgment pronounc'd by the *Pandiare* may be revers'd by appealing to the King himſelf, who upon ſuch Occaſions orders Juſtice to be done by ſix principal Officers, theſe being the Managers of the moſt important Affairs of the State.

Six Counſellors of State.

The yearly Circuits.

The *Pandiare* makes a Circuit once a Year through the Iſle of *Male*, as every *Naybe* does in his reſpective *Atollon*, and condemns all to be whipt that can't ſay their Creed and Prayers in the Arabick Tongue, and conſtrue them in the *Maldivan*. When he goes along the Street the Women muſt not ſhew themſelves, for if he ſpies any unveil'd, he orders their hair to be ſhaven.

Each *Atollon* has, beſides the *Naybes*, a Collector of the King's Revenues. Juſtice is diſpens'd in the Houſe of the *Naybe*, or elſe at the *Pandiare*'s Houſe in *Male*; and ſometimes, in caſes of moment, in the King's Palace.

The manner of Writs or Summons.

The Defendant is ſummon'd by Serjeants, call'd *Devaints*, to come before the *Naybe*, by vertue of a ſpecial Letter or Writ from the *Naybe*; but if he lives out of the *Naybe*'s Juriſdiction, he is ſummon'd by Letters from the *Pandiare*, which injoyn him to come from any part of the Realm to the Iſland of *Male*. The *Pandiare*'s Writ is ſerv'd publickly upon the Defendant by the *Calibe*, or Superiour of the Iſland; and if he does not appear at the place appointed, he is not only excommunicated and excluded from eating or drinking with his Neighbours, or coming to Church, but ſeiz'd with main force by a Party of Soldiers.

The trial of Civil Cauſes.

If either Plaintiff or Defendant ſuſpects the partiality of the *Naybe*, they have recourſe to the King, who orders the Cauſe to be tried before unſuſpected Judges. The contending Parties pleads their own Cauſes: In the buſineſs of Right or Title they are judg'd by the Law; and in Allegations of Matter of Fact, the Plaintiff muſt have them atteſted by three Witneſſes, or elſe the Defendant's own Oath will bring him off. In adminiſtring an Oath, the Judge holds up the Book of the Law, and the Evidence is oblig'd to touch it with his Hand, and that not ſuperficially, but ſo that every one may obſerve a real Contract. Whatever is adjudg'd to the Plaintiff, a 12th part of it goes to the Serjeants, but nothing to the Judges. If Women are call'd in as Witneſſes, three of them are reckon'd equivalent to one Man.

Slaves.

Slaves can neither Witneſs nor Plead; and the meaneſt of them, call'd *Allo*, have but one Wife, whereas the reſt are allowed three. By Slaves, they underſtand ſuch only as voluntarily ſell themſelves, or are Imported as Slaves from Foreign places; for a Shipwrack'd ſtranger, that was not a Slave before that misfortune, continues in the injoyment of his liberty. The puniſhment for beating a Slave, is the half of what they inflict for beating a Freeman.

Debtors become Servants.

An Inſolvent Debtor is oblig'd to become a Servant to his Creditor, but not a Slave; and he and his Children after him, continues in the Service till the Debt is work'd out. If he thinks himſelf ill us'd, he may turn himſelf over to another Maſter, who lays down the Money due to the former.

Murderers how proſecuted.

If a Man be murder'd, his Wife can't proſecute the Malefactor, but the Judge obliges him to maintain her Children, and bring them up to a Trade, till they are of Age; at which time they are qualify'd either to forgive or proſecute the murderer, for the State takes no cognizance of Perſonal injuries, unleſs the Parties aggrieved complain of them.

Puniſhments. Whipping the moſt ſevere.

The ordinary puniſhment of Criminals is whipping, which indeed is very ſevere, and frequently mortal; but in ſome Caſes they are baniſh'd to the Southern deſart Iſlands, and in others they are doom'd to the mutilation of a principal Member. The Whips are made of thongs of thick leather, which are a fathom long, two fingers thick, and four fingers broad; five or ſix of them being faſten'd together in a wooden handle. Whipping is the puniſhment of Sodomy, Inceſt, Adultery, Perjury, and Rapes: But over and above that puniſhment, an Adultereſs has her hair cut off; a perjur'd Criminal pays a pecuniary Mulct for the benefit of the Poor; and a Raviſher is oblig'd to give a Dowry to the injur'd Woman. The ſtealing of any thing of value is puniſh'd with the loſs of a Hand, and the diſobeying of the Law with publick Penance; for they are of the Opinion, they can never come at Paradiſe without ſatisfying the demands of the Law. The Sentences pronounc'd by the Judge are executed by the Serjeants, for they have no Hangman or publick Executioners. Tho' Death is by Law intail'd upon Homicide, they never condemn a Priſoner to die unleſs the King expreſly requires it, which ſeldom happens; and when it does, the King ſends his own Soldiers to execute the Sentence, for he reſerves the Power of Life and Death to himſelf alone, whereas the inflicting of other puniſhments lies in the hands of the Judges. Their tenderneſs in not ſentencing Criminals to die, is grounded upon the Plea of not diſpeopling the Country, there being ſo great a number of Criminals whoſe juſt demerit is Death. When the King is Perſonally offended, he makes the Criminal lie on the ground flat upon his Belly, his Arms and Legs being held by four Men, while his Back is ſoundly thraſh'd with a *Bengala* Cane call'd *Rotan*, which takes off the Skin, and leaves a perpetual mark.

Few put to death.

No Writings.

Neither Indictments, Depoſitions, nor Sentences, are put in writing, as being all very ſhort; nay, in Civil Matters the Allegations are never written, unleſs it be in a Suit for a Land, Inheritance, or Coco-trees, which are reckon'd immoveable, then indeed the Judges give Letters ſeal'd with Ink (Wax they do not uſe) for an Evidence of the Perſon's Right to be tranſmitted to Poſterity.

Four ranks of Perſons.

Noblemen.

The Inhabitants of this Country rank'd in four Claſſes, namely the Royal Family; Perſons inveſted with Dignities and Offices; the Nobility or Gentry; and the Common People. The third rank is diſtinguiſh'd from the fourth by their Birth; and the diſtinction is ſo nicely kept up, that the latter dare not ſit in the preſence of the former. If a noble Woman marries a Plebeian, ſhe retains her rank, and upon her account the Children are reckon'd Noble. But a Woman of the loweſt Form can't ennoble her ſelf by marrying a Nobleman. Beſides the Nobles by Birth, there are ſome ennobled by the King, who upon ſuch Occaſions gives them Letters, intitling them to that Privilege, and ſends an Officer round the Iſland to make publication of the promotion. The firſt rank comprehends the King, call'd *Raſquan*; the Queen call'd *Renequillague*; the Princes and Princeſſes of the Blood call'd *Calans* and *Camenaz*; and all who are deſcended of the King's Predeceſſors. The next Station is allotted to the great Officers of the Kingdom; particularly to the *Quilague*, or the King's Lieutenant-General, who commands in the King's abſence; the *Eudequerry*, who always attends the King's Perſon as chief Counſellor; the *Velannas*, who takes care of all ſtrangers, and takes the Rudder off all the Ships that arrive, for fear they ſhould ſet Sail without taking leave; the General of their Forces call'd *Dorimenaz*; the *Manpas* or Chancellor, who affixes to all Letters the King's Seal, *i. e.* the impreſſion of his Name in Arabick ingraven on Silver; the Secretary call'd *Carans*, &c. Theſe Officers have, beſides the Rents of certain Iſlands allotted them, the King's Rice for their Proviſion, (which is a great honour allow'd likewiſe to the Soldiers) and the Toll of the Ships that Traffick to the *Maldives*. The Officers and Soldiers are ſo much eſteem'd, that a Nobleman is not reſpected unleſs he be an Officer; and a Gentleman will hardly paſs for ſuch, without he be liſted into the King's Service.

The King's Miniſters and Officers.

The King's Guards, and other Troops.

The King's Guards conſiſt of 6 Companies of 100 Men apiece, commanded by the 6 ancient Counſellors call'd *Moſcoulis*. Beſides theſe, there are ten large Companies commanded by ten of the Grandees of the Country, which ſerve the King not in fighting, but in the lanching of Ships, building of Palaces, and ſuch other work, being call'd together by the ſound of a Bell. In five of theſe Companies none but Gentlemen are receiv'd, but the other five take in the Common People. Slaves are always excluded, as well as thoſe who work in a Mechanical mean way, as the dreſſing of Coco-trees, &c. and particularly ſuch as ſerve others, or cannot read nor write. Whoever is liſted a Soldier, pays twenty Lovins to the King, and forty to be diſtributed among the Company in which he is to ſerve. To conclude, all Offices are bought of the King, and much coveted by reaſon of the Honour, Authority and Power that attends them; but the Perſons inveſted with theſe Offices can neither ſell nor reſign them.

The Names of the Natives.

The Iſlanders having but one Name, ſuch as *Mahomet*, *Haly*, *Huſſum*, *Aſſan*, *Ibrahim*, &c. are diſtinguiſh'd by their Stations, as Noble, Plebeian, &c. added to their Name, and ſometimes by the addition of the Iſland in which they live.

The King's Palace.

Fountains for waſhing.

Two great Halls.

The Royal Palace is of Stone one ſtory high, and has a great many fine Apartments, tho' without the Ornaments of Architecture. 'Tis ſurrounded with Gardens, in which there are great Fountains and Ciſterns of Water wall'd in, and pav'd with great ſmooth ſtones, and guarded continually to hinder People from waſhing in them, as being reſerv'd for the King and Queen's ſole Uſe. The Palace is divided into ſeveral Courts, each of which has a Well in the middle garniſh'd with fair white ſtones; and in one of theſe Courts the King has two Magazines, one for Ordnance, and the other for Ammunition. At the Palace-gate there's a Guard-Houſe, with many pieces of Ordnance, and other Arms. The Portal is made like a ſquare Tower, and on Feſtival-days the Muſicians ſing and play upon the top of it. Paſſing on from the Gate you come firſt to a Hall, where the Soldiers wait; then to another great Hall, where the Noblemen and Gentlemen attend, for none but the Officers of the Houſhold, with the King and Queen's Slaves or Servants, are allow'd to go farther. The floor of theſe Halls is rais'd three foot from the ground, to avoid the Ants, being neatly boarded with well-plain'd Wood, and cover'd with a ſort of parti-colour'd Mats which they make in theſe Iſlands, and which have ſeveral Characters, and other Figures, work'd upon them. The Walls are hung with ſilk Tapeſtry, as well as the Ceiling, which has pretty Fringes hanging round it. The Noblemen ſit down croſs-legg'd on the Mats which cover the floor of the Hall, obſerving nicely the order of their Dignities. The Gentry of the Iſle of *Male*, and the ordinary Courtiers, who are oblig'd to ſalute the King every day after Noon, ſit in an outer Hall till the King comes forth. The Gentry of the other Iſlands come likewiſe to wait upon the King in the ſame manner, and always bring Preſents with them; for no body ſalutes the King without one. The Chambers and inner Apartments are hung with ſilk Tapeſtry, and inrich'd with gold flowers and branches of divers colours. The Beds in the Palace, and thoſe of all the great Men, are hung with Cords upon a Beam ſupported by two Pillars; and ſo the Perſon is rock'd aſleep. 'Tis uſual among the better ſort of People to make their Servants move and chafe their Bodies when they lie down, and to give them little flaps or gentle blows with both their hands, upon the apprehenſion that it promotes Sleep, and expels the Spleen.

Chambers.

Beds.

The King's Habit.

Commonly the King is Cloath'd with a fine white Robe or Coat of Cotton, reaching to the Girdle, or a little lower, with white and blue Edgings, and made faſt before with maſſy gold Buttons. Then he has a piece of red imbroider'd Tapeſtry, reaching from the Girdle to the Heels, and girded with a long large Girdle of Silk fringed with Gold, and a great Chain of Gold before, upon which there hangs a large Jewel as big as one's fiſt, of the fineſt and moſt precious Stones. He wears likewiſe a Knife made after the faſhion of the

Country, only 'tis richer than ordinary. Upon his Head he has a Cap of Scarlet, that Cloth being ſo much eſteem'd in this Country that none but the King muſt wear it. This Cap is lac'd with Gold, and has on the top of it a great gold Button with a precious Stone. The Grandees and Soldiers wear their hair long, but the King has his Head ſhav'd every Week. His Legs are naked, after the faſhion of the Country; and his Feet are cover'd with Slippers of gilt Copper, imported from *Arabia*, and made like Sandals, which none are allow'd to wear but the Queens, and the Princeſſes of the Royal Blood.

His Retinue when he goes abroad.

When the King goes abroad, the chief mark of Majeſty about him is a white *Umbrella*, which none are allow'd to uſe but ſtrangers, who may have what they will. Upon the ſame Occaſion he has three Pages near his Perſon, one carrying a Fan, another his Sword and Buckler, and the third a Box full of *Bettel* and *Averqua*, which he chews every hour. He is likewiſe attended by a Doctor of Law, who reads in his preſence, and puts him in mind of Religion. This King does not purſue the Diverſions of going abroad, and fiſhing as his Predeceſſors were wont to do, but mews himſelf up in his Palace, and ſpends his time in Careſſing his Queen, giving Audience to his Courtiers, and ſeeing a great many Mechanicks and Artificers work; for he keeps in his Palace Painters, Goldſmiths, Imbroiderers, Cutlers, Joyners, Turners, Armourers, &c. and finds them work. Nay, he works frequently with his own hands, and accounts it a ſin to be idle. He is a Man of a lively quick apprehenſion, and very curious to learn Mechanick Trades. He incourages all ſtrangers that practiſe Arts unknown to his People, and makes inquiry after thoſe that excel in their way.

His eſteem for Mechanick Arts.

His Parade to the Temple.

On *Fridays* he goes in great Pomp to the Temple, being attended by his Guards, (conſiſting of 100 Men) and his ordinary Officers, with the agreeable Muſick of Drums, Flutes and Trumpets. After Service is over, he returns with the ſame Retinue, the Soldiers leaping all along to the ſound of the Muſick, and ſtriking with their Swords on one another's Bucklers, and that in ſuch a ſucceſſive manner as to avoid confuſion. He is likewiſe attended in his return from Church by all the People of the Iſland, and regales with a Dinner the *Pandiare*, *Nayles*, *Catibes*, *Moudins*, Gentlemen and Soldiers. After Dinner he hears Cauſes, and adminiſters Juſtice. Theſe Iſlands affording neither Horſe nor Beaſt, the King walks abroad on foot, unleſs he be carry'd in a Chair upon Slaves ſhoulders; which happens but ſeldom, for he is a brawny ſtrong Man, and chuſes rather to go on foot. In ſpeaking to the King or Queen, or to the Princes of the Royal Blood, and in ſpeaking of them, they have peculiar expreſſions that they dare not apply to others; as when they ſay of another Man *he is aſleep*, in talking of the King they ſay *he takes his reſt*.

The Habit of the Queens.

The Queens wear the ſame ſort of Habit with the other *Maldivan* Women, only their Cloaths are richer. The Noblemen's Ladies and Daughters are oblig'd to wait upon them every evening; and when the Queens go abroad, (which happens but very ſeldom) all the Women in the Iſland run to meet them in their reſpective Diſtricts with Preſents of Flowers and Fruits, the She-Slaves giving notice at a great diſtance before them for all Men to get out of the way. Upon that occaſion, four great Ladies carry over the Queen's Head a Veil of white Silk reaching to the ground; ſo that ſhe is not ſeen. The Queens bathe frequently in the Sea, as well as the other Women; ſuch being the Cuſtom of the Country, which they reckon very conducive to health. For this end they have an Incloſure in the Sea, cover'd with Cotton Cloth, and upon the ſhore a little Houſe, with a freſh water Bath, which they uſe as they come out of the Sea. Daylight is never ſeen in the Queen's Chambers, or thoſe of the Ladies of Quality, for their only light is Lamps burning continually. And the place of the Room where they uſually retire, is block'd up with four or five rows of Tapeſtry, the innermoſt of which neither Man nor Woman dares to pull up without coughing or hemming firſt, and telling who they are. When they undreſs, they pull off only their Robe, for neither Man nor Woman in the *Maldives* dares to throw off the Cloth that ſurrounds their middle.

They bathe in Salt water.

The King's Revenue.

As for the King's Revenue, he has many Iſlands of Crown-Lands, beſides a fifth part of all the Grain and Fruits of the Country, and a Tax of dry'd Fiſh, Shells call'd *Boly*, and Cords of Cocoes, which he lays upon them according to their circumſtances; for he has no Taxes paid him in Money, abating for what is paid as a Purchaſe for Titles and Offices, or for Licenſes to wear fine Apparel. He obliges his People to make him every Year as much Cotton-Cloth as Cloaths his Soldiers, for he gives them Cloaths as well as Pay. His Revenue is further inlarg'd by his Claim to the Goods imported by Shipping; for a Ship no ſooner arrives than the Owners repair to him, and give him an account of their Cargo, out of which he takes what he pleaſes at low Rates, and obliges his Subjects to take it of him again at what price he pleaſes, by way of exchange for ſuch things as he wants; oftentimes he fits out Ships laden with the Commodities of his own Country. All wreck found on the Sea ſhore is immediately brought to the King, for no Subject dares to keep it; no more than Ambergreeſe, call'd by the *Maldivans Gomen*, which is more plentiful here than in any part of the *Indies*, and which is ſo narrowly look'd after, that whoever appropriates it to his own uſe loſes a Hand. In a word, whatever the Sea caſts upon the ſhore is the Kings; particularly, a ſort of Sea-Nuts call'd *Tauacarre*, as big as a Man's Head, which they fancy to grow upon Trees under water. The *Portugueſe* call them *Cocos* of the *Maldives*; 'tis uſed in Phyſick, and is very dear. Their Money is Silver only, and but of one ſort, called *Larins*. However, all Gold and Silver is current here by weight, as 'tis all over the *Indies*; before they take it 'tis try'd in the fire, and every Man keeps Weights for that purpoſe. There's a ſort of Metal named *Calin*, reſembling Tin, much eſteem'd in the *Indies*, but 'tis not current here. Iron-money paſſes no where in the *Indies*, but in the Dominions of the Prince that Coined it. Having but one ſort of Coin, they are forc'd to cut it, by which they loſe the 12th part. Inſtead of ſmaller Coins, they uſe ſometime Shells, 12000 of which makes a *Larin*, and a *Larin* is worth about eight *Sols*, being long like one's finger, and much folded. The King's Name is ſet upon theſe in *Arabick* Letters. Their Gold and Silver is all Imported from abroad, but in their own Markets they often Barter one thing for another.

Sea-Nuts.

Coin.

The Wares they export.

The *Maldives* are well frequented with Merchants; the Commodities they ſend abroad are chiefly the *Cocos*, with which they lade above 100 Ships Yearly. Of this the Cordage is made that ſerves all the Ships of *Arabia*, *Malabar*, and all the *Indies*; they make alſo Oil and Honey of that Tree, and by weaving the leaves of the Tree make Sails. They vend alſo little Shells that contain a Creature in them as great as the end of one's little finger, white, very ſmooth and glittering. They fiſh for them but twice a Month; three days before, and three days after the New Moon, and ſo before and after the Full. The Women gather them in the Sands and Flats of the Sea, ſtanding up to the middle in water. Theſe go only to *Bengala*, the Inhabitants of which eſteem them ſo much, that I have ſeen thirty or forty Ships laden, without any other Commodity bound thither. Tho' in *Bengall* they have enough of other Metals, yet theſe Shells paſs there as Money, and the King and Noblemen hoard up vaſt quantities of them, accounting it part of their Treaſure. They give twenty Meaſures of Rice for a Fardel of Shells, each Fardel containing 12000. They have beſides theſe a ſort of Tortoiſe-ſhells named *Cambe*, which is black and ſmooth, and has many natural figures; 'tis found no where but here, and in the *Philippines*, and goes off beſt in *Cambaia*. Here they make fine Reed-Matts, and Cloaths of Cotton and Silk.

What they import.

In exchange the Merchants import ſome Cotton and Silk Cloaths, a ſort of Oil, *Arecqua*, Iron and Steel, Spices, Porcelane; and, in ſhort, all the Neceſſaries of Life, and yet every thing is cheap, becauſe of the number and frequency of Ships. They import all their Gold and Silver, which they never ſend out again, but lay it up among their Wives Jewels as their chief Treaſure.

The Author's liberty fore-told by a Dream.

To return to our Author, who purſuant to the foregoing account was Priſoner in the *Maldives*, he dream'd he was ſet at liberty, and as ſoon as he awaked made a Vow to undertake a Voyage to St. *James* of *Gallicia*, to give God thanks if it ſo happen'd. Two days after, News came of the approach of 16 Gallies; upon which, the King order'd what Shipping he had to be got ready, but the Enemy were in ſight e'er it could be done. So imbarking his beſt Goods, he thought to ſave himſelf and Women in the Southern Iſles; his haſte was ſo great, he was forc'd to leave his Arms and Ammunition behind. But the Wind failing, the Enemy ſent eight Gallies after him, in an Engagement with which the King was ſlain, and his Wives and Goods taken. The other eight put into the Land, and our Author ſurrender'd himſelf into their hands. They ſtaid till they laded their Gallies with the Booty, and 100 or 120 pieces of Ordnance at their departure; they left all behind at liberty, except the chief Queen's Brother, and the King's Brother-in-Law.

The King ſlain.

I muſt

Vaſt Power of the King of *Bengala*.

I muſt not forget to acquaint you, that when this Author left *Bengala*, the chief King there was raiſing a Million of Men, and ten thouſand Elephants, to oppoſe the *Great Mogul*, who had proclaim'd War againſt him; but having us'd our Author only in relation to the *Maldives*, I've omitted his paſſage from thence to *Bengala*, nor need I now mention the particulars of his return from that place homewards.

The End of De la Val'*s Voyage to the* Eaſt-Indies.

Brief Collections of Voyages, chiefly of Spaniards *and* Portugueſe, *taken out of* Anthony Galvano'*s Book of the Diſcoveries of the World. Publiſhed by* Purchas.

IN the Year 1300. the Soldan of *Cairo* commanded the Drugs and Merchandize of *India* to be carried through the Red-Sea, as they had been formerly; they were unladed on the *Arabian* ſide, and carried by the Pilgrims to *Mecca*. Each Prince receiv'd a Cuſtom for them through whoſe Country they paſs'd, but chiefly the Soldans of *Cairo*, from whence the Wares were carried into *Egypt*, *Lybia*, *Africa*, *Tunis*, *Fez*, *Morocco*, &c. And this was the common way of carrying the *Indian* Drugs, until the *Portugueſe*, by turning the *Cape of Good Hope*, brought them to *Lisbon* by Sea.

The *Canaries*.

In 1344. when *Peter* the Fourth was King of *Arragon*, one *de Cerda* went to conquer the *Canaries*, lying in the 28 degr. of North Lat. whereby theſe Iſles came to be commonly known in *Europe*, and ſpecially in *Spain*.

Madera diſcover'd by *Macham* an *Engliſhman*.

About this time the firſt Diſcovery of *Madera* was owing to the Misfortune of one *Macham* an *Engliſhman*, who ſailing from *England* to *Spain* with a Woman, was driven by a Tempeſt upon that Iſland, where he landed with ſome of his Company, and was left behind by the Men in the Ship, who weigh'd and put to Sea. The Woman died, for whom he built a Chapel, and engrav'd on her Tomb her Name and his, with the occaſion of their coming thither. After this he made a ſmall Boat out of one Tree, and ventur'd with his Men to ſail along the Coaſt of *Africa*, without Sail or Oars: And the *Moors*, among whom he came, wondering much how he came there, preſented him to the King, who ſent him and his Men to *Caſtile*.

Canaries diſcover'd.

In the Year 1395. in the Reign of *Henry* III. King of *Caſtile*, upon the Information which *Macham* gave them, many of *France* and *Caſtile* went to diſcover this Iſland and the great *Canary*, who ſeem to be the firſt that diſcover'd the *Canaries*, and landed in them.

The firſt *Portugal* Diſcoveries.

In 1415. King *John* I. of *Portugal* went from *Lisbon* with his three Sons, and other Nobles, and took the great City of *Ceuta*, which lies between 35 and 36 degr. of North latitude.

Canaries conquer'd.

In 1417. King *John* II. and his Mother *Katherine*, granted to Monſieur *Betancourt* the Government of the *Canaries* with the Title of King: Whither he went with a good Army, and conquer'd *Lancerota*, &c. where they built a Caſtle of Stone, and ſent home Wax, Hides, and other Commodities.

The Monument built by *Macham* found in *Madera*.

In 1418. ſome Gentlemen ſent by *Henry* the King's third Son, ſail'd into a Haven on the Coaſt of *Africa* called *Santo*, where they remain'd two Years: And after that, in 1420. they ſail'd alſo to the Iſland *Madera*, where they found the Monument of *Macham* the *Engliſhman*.

Canaries given to *Spain* by the Pope.

Their ancient Manners and Commodities.

In 1431. the *Canaries* were given to the King of *Caſtile* by Pope *Eugenius* IV. The Iſlands are 7, call'd *Fortunatæ*, lying in 28 degr. of North latitude. The People eat raw fleſh, Till the ground with Ox-horns: The Commodities of them are Wheat, Barley, Wine, Sugar, and certain Birds call'd *Canary-Birds*.

Cape Boiador firſt paſs'd.

In 1434. the ſaid *Henry* ſent out one *Gonſales* and *Gilianes*, who had formerly paſs'd the terrible Cape *Boiadoz*, and went to another Cape beyond it, where they landed, and found the Country inhabited.

Cape Blanco.

In 1441. the ſaid Don *Henry* ſent two Ships, with *Triſtan* in one, and *Gonſales* in the other, who ſail'd to *Cape Blanco* in 20 degrees, and brought *Moors* from thence to inform Don *Henry* of the State of the Country, who were afterwards return'd, and ranſom'd for other *Moors* with curled hair, and ſome Gold; whence the place was call'd *Rio de Oro*, or the *Golden River*.

Rio de Oro why ſo called.

The River *Sanaga* and *Cape Verde* diſcovered.

In 1446. one *Fernandes* of *Lisbon* went to the River *Sanaga*, between 15 and 16 degrees of Lat. and having taken ſome Negroes there, he went on and diſcover'd *Cape Verde* in 14 degrees, where he ſet upon the Land a Croſs of Wood.

Rio Grande.

In 1447. one *Triſtan* paſs'd *Cape Verde* and *Rio Grande*, and went to another Cape lying in 12 degrees North latitude.

Azores firſt Inhabited.

In 1449. Don *Henry* went to dwell in the *Azores*, by whom was diſcover'd the Coaſt of *Africa* from *Cape Non* to the Mountain *Sierra Leona*, in 8 degr. of latitude.

Alcacer taken.

In 1458. Don *Alfonſo*, King of *Portugal*, went into *Africa*, and took the Town *Alcacer*: And in 1461. he built the Caſtle of *Arguin*, and appointed *Mendez* his Governour there.

Guiney let out to farm.

Azila and *Tangier* taken.

In 1469. the King of *Portugal* let out the Trade of *Guiney* to one *Gomez*, for 5 Years, for 200000 Reyes a Year, *i. e.* 138 *l.* 17 *s.* 9 *d.* half-penny *Engliſh* Money, upon condition that he ſhould diſcover every Year 100 leagues. In 1470. this King went into *Africa*, and took the Town of *Azila*, and the City of *Tangier*.

The Iſles *de Poo*, *St Thomas*, and *Del Principe*.

Benin a Kingdom.

In 1471. *John Azen* and *Scouar* found the Mine in 5 degrees of lat. and the next Year *de Poo* diſcover'd the Iſland now call'd after his Name. About this time *Sequeiza* diſcover'd the Iſlands *St. Thomas* and *del Principe*, lying under the Line of the firm Land as far as *Cape Santa Catharina*, lying in 3 degr. South lat. in which is the Kingdom of *Benin*.

Rio de Congo.

In 1484. King *John* II. ſent out *Caon*, who went to the River of *Congo* in 7 or 8 degr. South lat. and from thence to the Tropick of *Capricorn*, ſetting up Pillars of Stone in both places: He return'd to the King of *Congo*, who ſent an Embaſſador to *Portugal*.

Alexandria, *Cairo*, *Tozo*, &c.

Preſter John's Country.

The firſt that ſaw the *Indies*.

In 1487. King *John* ſent *Pedro de Covillan* to diſcover *India* over Land, who went out in *May*, and took Shipping at *Naples* the ſame Year, and went to the Iſle of *Rhodes*; and from thence to *Alexandria*, and ſo to *Cairo*, and the Haven of *Tozo*, in the company of the Caravans. Again he took Shipping at the *Red-Sea*, and went to the City of *Aden*, and from thence to *Cananor* and *Calecut*, and came back again to *Goa*; from whence he ſail'd unto *Sofala*, on the Coaſt of *Africa*, in 20 degrees South lat. to ſee the famous Mines there. And from *Sofala* he turn'd back to *Moſambique*, and to the Cities of *Quiloa*, *Mombaza* and *Melinde*, until he came to *Aden*, and having ſail'd through the *Red-Sea* to *Cairo*: here he receiv'd Letters from King *John*, requiring him to go to *Ethiopia*, and ſo he turn'd back again to *Aden*, and went to the famous City of *Ormuz*, in 27 degrees North lat. where he heard of the Streight of *Perſia*, and of that Country; and there he paſs'd over the *Red-Sea* to *Preſter John's* Country, where he was detain'd till 1520. that an Embaſſador came there from *Portugal*. This *Covillan* was the firſt *Portugueſe* that diſcover'd the *Indies*, and Seas and Places adjoining.

The greater part of *Congo* baptiz'd.

In 1490. the King ſent back the Ambaſſador of *Congo*, who with ſome others of his Company had been baptiz'd in *Portugal*; and when the *Portugueſe* came to *Congo*, the King, and the greater part of his Realm, turn'd Chriſtians, and were baptiz'd.

The firſt that ſail'd by Latitudes.

In 1492. *Ferdinando*, King of *Caſtile*, ſent *Chriſtopher Columbus*, with 3 Ships, to diſcover *Nova Spayna*: He ſet out from *Palos* in *Auguſt*, having with him ſeveral Captains, and 120 more in company; and 'tis ſaid they were the firſt that ſail'd by Latitudes. In his return home he took the Iſles of *Azores*, which offended the King of *Portugal*, but theſe Iſles were given to the King of *Caſtile* by Pope *Alexander*.

Columbus's Voyage.

In 1493. the ſaid *Columbus* ſail'd from *Cadiz* with 17 Ships, and 1500 Men in them, among whom were his two Brethren, and many other Gentlemen, and on the tenth day after their ſetting forth they arriv'd at the *Canaries*, from whence in thirty days they ſail'd to the *Antibes*, of which the firſt Iſland lies in 14 degrees North lat.

Defeada diſcovered. *Las Virgines.* *St. John.* *Jamaica.*

lat. and is diſtant from the *Canaries* 800 leagues, and they call'd it *Defeada*, i. e. the *Deſired Iſland*. After that they diſcover'd many more, which they call'd *Virgines*, which are nam'd *Caribas* by the Natives, who poyſon their Arrows, ſo that a Man dies like a mad Dog. From theſe Iſlands he went to the principal call'd St. *John*, and from thence to *Hiſpaniola*, where he found all the Men dead he had left: And leaving here the moſt part of his People to plant it, and his Brethren *Gors*, he went to diſcover the other ſide of the Iſle *Cuba*, and from thence to *Jamaica*; all which Iſles lie between 16 and 20 degr. of North lat. But when he return'd, he found his Brethren, and the reſt of the company, diſtreſs'd by the Inſurrection of the Natives, whereupon he went back to *Spain* to inform the King of his Adventures.

The Diſcoveries of *John Cabot*.

In 1496. *John Cabot*, a *Venetian*, was ſent out by *Henry* VII. King of *England*, with two Ships and 300 Men, who ſailed Weſtward till they came in ſight of Land in 45 degr. of lat. and then went Northward till they came to 60 degr. of lat. where the Day is 18 hours long. There they met with great Iſles of Ice, and Coaſting along the Land which turn'd Eaſtward, they diſcover'd the River *Defeada*; and then ſail'd back towards the Equinoctial to 38 degr. and ſo to *England*.

Trinidada. *Teſtigos, Cubagna.*

In 1497. *Ferdinando* King of *Spain* ſent out *Chriſtopher Columbus* with 6 Ships, who carried with him two Ships of his own, and ſail'd to *Cape Verde*, and running along by the Line, the firſt Land of the *Antilles* they came to was an Iſland in 9 degr. of lat. which they call'd *Trinidada*; and ſo he enter'd into the Gulf of *Paria*, and came out by the *Dragons-mouth*, and ſteering near the Coaſt he found 3 ſmall Iſles, which he nam'd *Teſtigos*, beyond which lies the Iſle *Cubagna*, where is fiſhing for Muſcle-Pearls, and, as ſome ſay, a Well of Oil. And beyond that Iſle they came to the Iſles *Frailes*, *Rogues*, &c. with other ſmall ones along the Bay; and at laſt to the Point of *Cape de Vela*, having diſcover'd along the Coaſt about 200 leagues, whence they croſs'd over to *Hiſpaniola*.

Moſambique, Mombaſa, Melinde.

In the ſame Year 1497. *Vaſquez de Gama* ſail'd from *Lisbon* with three Ships and 120 Men, and in 14 days came to *Cape Verde*, and the Iſle of *St. Jago*, from whence he ſail'd along the Coaſt beyond the *Cape of Good Hope*, and having erected there Pillars of Stone, he came to *Moſambique*, in 15 degr. of South lat. and thence to *Mombaſa* and *Melinde*, where the King gave them Pilots to conduct them to *India*, and they diſcover'd the Flats of *Padua*.

Calecut.

In 1498. they anchor'd before *Calecut*, and ſailing from thence Northward, they diſcover'd the Coaſt all along till they came to *Angediva*: And in 1499. they ſail'd thence to *Melinde*, and ſo to *Moſambique* again, and the *Cape of Good Hope*, and thence ſailing along the Coaſt they came to *Cape Verde*, and at laſt to *Lisbon*, in 26 Months.

St. Luke. Rivers *Marannon, Amazones, Dulce*

In 1499. one *Pinſon* went from *Palos* at his own Coſt, with the leave of the King of *Caſtile*, to *Cape Verde*, and paſs'd the Line Southward, and diſcover'd the Cape of *St. Auſtin* in 8 degr. of lat. The chief places beſides this Cape where they touch'd, were the Point of *St. Luke* and *Terra de los Humos*, the Rivers of *Marannon*, *Amazones* and *Rio Dulce*, and other places along the Coaſt, till they came to 10 degr. of North lat.

Safe-Haven in *Braſile.* *Sofala.*

In 1500. *Pedro Cabral* ſail'd from *Lisbon* with 13 Ships, and in ſeeking one of his Ships loſt his way, and fell upon the Coaſt of *Braſile*, and put into a Haven which he call'd the *Safe-Haven*, in 17 degr. South lat. From thence he ſail'd towards the Cape of *Good Hope*, and croſs'd over the River *Cochin*, which was not known before, and laded himſelf with Pepper, and in his return diſcover'd *Sofala* on the Coaſt of *Africa*.

Cortereal's Diſcovery.

In the ſame Year 1500. *Gaſpar Cortereal* went with two Ships at his own Coſt from *Tercera*, and ſail'd to a Land in 50 degr. North lat. call'd after his Name, and return'd to *Lisbon*.

The Iſle of *Aſcenſion.* *St. Helena.*

In 1501. *John de Nova* went from *Lisbon* with 4 Ships, and paſs'd the Line to 8 degr. and diſcover'd the Iſle of *Aſcenſion*; and from *Melinde* he croſs'd to the other ſide, where he took lading, and ſo came back and doubled the Cape, and found the Iſland *St. Helena*.

Braſile diſcover'd to 32 degrees.

In the ſame Year 1501. three Ships were ſet out by the King of *Portugal*, which paſs'd the Line, and having ſeen the Land of *Braſile*, in 5 degr. of lat. they went on to 32. and it was very cold.

The Haven of *Zamba*, the *Coradas* and *Carthagena*, the Iſles of *St. Bernard*, &c. diſcover'd.

In 1502. one *Rodevigo Baſtidas* went with two Caravels, and ſteering Weſtward from the *Green Iſland* in the *Antibes* to *St. Martha*, *Cape de la Vela*, and *Rio Grande*, he diſcover'd the Haven of *Zamba*, the *Coradas*, *Carthagena*, and the Iſlands of *St. Bernard*, *Baru* and *Arenas*, and went forward to the Point of *Caribana*, at the end of the Gulf of *Uraba*, which is within ſight of the *Farallones*, hard by the River *Darien*, which is diſtant from the *Cape de la Vela* 200 leagues, lying in 9 degr. North lat.

Veragua and *Rio Grande*, &c diſcover'd.

In the ſame Year 1502. *Chriſtopher Columbus* went a fourth time upon Diſcoveries, and he went firſt to *Hiſpaniola*, *Jamaica*, and the Cape of *Honduras*; from whence he ſail'd Eaſtward to *Gracias a Dios*, and diſcover'd the Province and River of *Veragua*, and *Rio Grande*, and to the River of *Crocodiles*, within four leagues of *Panama*, which runs into the North Sea. And ſo he went to the Iſle *de Baſti mentos*, *Puerto Bello*, and *Nombre de Dios*, *Rio Franciſco*, and the Haven of *Retreat*, and then to the Gulf of *Cabeſa Cattiva*, the Iſles of *Caperoſa*, and laſtly to the Cape of *Marble*, being 200 leagues upon the Coaſt; from whence he turn'd again to the Iſle of *Cuba* and *Jamaica*, where he grounded his Ships much eaten with Worms.

The Iſle *Moſambique.* Cattel fed with dry fiſh.

In the Year 1502. *Vaſques de Gama* went from *Lisbon* with ten Carvels, and from *Cape Verde* he went to *Moſambique*, and was the firſt that croſs'd from that Iſle to *India*: And he diſcover'd another Iſle in 4 degr. of latitude, which he call'd the *Iſle of the Admiral*, where he took his lading of Pepper and Drugs, and left there one *Sodre* to keep the Coaſt of *India* with five Ships. Theſe were the firſt *Portugueſe* that with an Army run along the Coaſt of *Arabia Felix*, which is ſo barren, that Cattel and Camels are maintain'd with dry Fiſh brought from Sea.

Socotora.

In 1503. *Antony de Soldania* diſcover'd *Socotora*, and the Cape of *Guardafu* adjoining to it.

Codego. *Uraba.* Gold Sand.

In 1504. *Baſtidas*, with the leave of *Ferdinando* King of *Caſtile*, went with two Ships to diſcover that part of *Terra firma* where *Carthagena* is, being in 10 degr. and half of North lat. and having landed in *Codego*, he took 600 of the Natives: And going further, he enter'd into the Gulf of *Uraba*, where they found Sand mingled with Gold, being the firſt that was brought to King *Ferdinando*; from whence they return'd to *Santo Domingo* laden with Slaves, but the Natives would not ſell them Victuals.

Forts built in *Quiloa*, &c. *Ceylan.*

In 1505. *Almeida*, Vice-Roy of *India*, went thither with 22 Sail, and when he came to *Quinola* he built there a Fort; and beyond *Melinde* he croſs'd to *Angediva*. In *Cananor* alſo and *Cochin*, he built Forts; to each of which he appointed a Captain. And at *Sofala*, *Peter Anheya* built a Fortreſs, whereof he was made Captain. In this Year the Vice-Roy ſent his Son towards the Iſles of *Maldiva*, and he came to the Iſles now call'd *Ceylan*, and having made Peace with the People there, he came back to *Cochin*, and ſailing along the Coaſt he fully diſcover'd it.

Bezequiche. Iſles of *Triſtan.* *Sumatra.* A Fort in *Sumatra.*

In the Year 1506. *Diego Columbus* ſucceeded his Father *Chriſtopher* as Admiral of the *Weſt-Indies*, and *Triſtan de Acuma* went to *India* with 14 Ships, and by the way caſt Anchor at the Town of *Bezequiche*, and before he arriv'd at the *Cape of Good Hope* in 37 degr. he found certain Iſles now call'd the Iſles of *Triſtan*. *Alvaro Telez* ran ſo far that he came to the Iſle *Sumatra*, and ſo back again to the Cape of *Guardafu*, having diſcover'd many Iſles and Lands, and a Sea never ſeen before by any *Portugueſe*. *Emmanuel Telez* being driven without the Iſle *St. Lawrence*, ran along the Coaſt and came to *Moſambique*; from whence he ſail'd to *Melinde*, and ran along that Coaſt and entred into *Brava*, from whence he croſs'd over to *Socotora*, where he built a Fort, and made one Captain of it.

Cochin. *Polvoreira.*

In 1509. *Lopez Sequeira* went with 4 Ships to *St. Lawrence*, and in the ſame Year he arriv'd in *Cochin*; from whence paſſing between the Iſles of *Nicubar*, he went to the Land of *Sumatra*, and along that Coaſt to the Iſle *Polvoreira*, and the Flats of *Capacia*, from whence he went over to *Malacca*, in two degr. North lat. but becauſe the Natives there kill'd ſome of his Men, he turn'd back to *India*, having diſcover'd in this Voyage 500 leagues. *Sumatra* is the firſt Land where they found Man's fleſh to be eaten. The fleſh of Kine and Hens there is as black as Ink.

Darien. *Golden Caſtile.* *Nombre de Dios.*

In 1508. one *Alfonſo de Hoida* went at his own Charges to conquer *Darien*, and having diſcover'd firm Land at *Uraba*, he call'd it the *Golden Caſtile*, becauſe of the Gold found among the Sand along the Coaſt; and they were the firſt that did this. He went firſt from the Iſle *Hiſpaniola*, and the City *Domingo*, with four Ships and 300 Soldiers, and landed at *Carthagena*, where he was diſtreſs'd by the Natives, who ſlew and eat 70 of his Soldiers; but in the ſame Year, *Diego Niqueſa* having 7 Ships and about 800 Men, came to *Carthagena* and join'd him, where having landed, they aveng'd themſelves of the Natives. In this Voyage *Niqueſa* diſcover'd the Coaſt of *Nombre de Dios*, and went into the Sound of *Darien*;

A Fort in *Caribana.*

Darien ; and when they came to *Veragua*, he went aſhore with his Army, having no hopes of returning to *Hiſpaniola*. *Alfonſo de Hoida* built a Fort in *Caribana*, which was the firſt the *Spaniards* built on firm Land, and another in *Nombre de Dios*, and alſo the Town of *Uraba*.

Hiſpaniola and *Cuba* Peopled with *Spaniards.*

In 1509. *Columbus* went to *Hiſpaniola* with his Wife, who carried with her many other Women, which were there married ; and ſo they began to People the Country, which was afterwards much frequented by *Spaniards*. He plac'd alſo a Lieutenant over the People of *Cuba*, which is a very large Iſle.

The Streight of *Sincapura*. *Odia* chief City of *Siam.*

In 1511. *Alfonſo de Albuquerque* went from *Cochin* to *Malacca* ; and the *Chineſeans* leaving *Malacca* in the ſame Year, to go to their own Country, he ſent with them *Duarte Fernandes* with Letters to the King of *Mantias*, now call'd *Siam*, who paſs'd through the Streight of *Sincapura*, and ſailing North went to *Odia*, the chief City of the Kingdom, lying in 14 degr. North lat. *Fernandes* being the firſt *Portugueſe* the King had ſeen, was much honour'd by him, who ſent back with him Ambaſſadors to *Albuquerque*, who paſs'd over the Land to the City *Tanazerim*, a Sea-Port in 12 degrees, where they embark'd, and ſail'd along the Coaſt to *Malacca*. This Kingdom of *Siam* is 150 leagues long, and 80 broad ; the King can bring into the Field 30000 Elephants.

Pegu.

Peza

One Fitch brought ſome of theſe Bells to *England.*

After this, *Albuquerque* ſent *D'Acuma* with Letters to the King of *Pegu*, who went in a Junk of the Country to the City *Peza*, near the River *Salano*, and many other Villages lying along this River ; and to the Cities *Tanazerim* and *Martanan*, in 15 degr. North lat. and *Pegu* in 17. He was the firſt *Portugueſe* who travell'd in that Kingdom, and gave an account of the Country, and of the People, who wear Bells in their Privities as the *Siamites* do.

The Iſles of *Banda, Malucco.*

Java, Madura.

In the end of 1511. *Albuquerque* ſent three Ships, with 120 Men, to the Iſles of *Banda* and *Malucco*, which paſs'd through the Streight of *Saban* along *Sumatra*, and other Iſles, towards the Eaſt, which they call'd *Salites*. They ſail'd alſo to the Iſles *Palimbam* and *Puparam*, and paſs'd by the noble Iſle of *Java*, and ſteering Eaſtward ſail'd between it and the Iſle *Madura*. Beyond *Java* they ſail'd by another Iſle call'd *Bali*, and came to many other Iſles lying in the ſame Parallel in 7 or 8 degr. South lat. their Courſe along theſe Iſles being above 500 leagues. Beyond theſe there are other Iſles towards the North, inhabited by whiter People, who wear Shirts and Doblet.

Ternate.

Burro, Amboyno, Guliguli.

Anthony de Bron the Admiral, went towards the North to a ſmall Iſle call'd *Ternate*, from the higheſt place whereof fall Sea-flakes like ſtreams of fire. From thence he went to the Iſles of *Burro* and *Amboyno*, and anchor'd in the Haven call'd *Guliguli*, and landed in a Village where the Natives are Man-eaters ; and then croſſing over to a place on the other ſide in 8 degr. they laded Cloves, Nutmegs and Mace, in a Junk brought here.

Mindanao. Malucco.

In 1512. they went from *Banda* towards *Malacca*, and the Junk being loſt on the Flats of *Luzapinho*, nine or ten *Portugueſe* eſcap'd to *Mindanao*, whom the King of *Malucco* ſent for ; and theſe were the firſt that came to the *Iſle of Cloves*, in one degr. North lat.

In the ſame Year 1512. *Albuquerque* went back from *Malacca* to *Goa*, and the Ship in which he went being loſt, a few Men were driven to the Iſles of *Maldiva*, where they firſt ſaw Coco's.

Rio de Plata.

In the ſame Year 1512. *John Solis* went from *Caſtile* to diſcover the Coaſt of *Braſile* : He came to the Cape of St. *Auſtin*, and Coaſting Southward he went to the Port *Lagoa*, and in 35 degr. of South lat. he found a great River, which he called *Rio de Plata*, i.e. the *River of Silver*.

Florida.

In the ſame Year 1512. *John Pence* went with two Ships to find out the Iſle *Boynca*, and the Well there which was ſaid to make Old Men young ; but there was no ſuch thing. He entred into the Iſle of *Bimini*, and diſcover'd a Point of Land in 29 degr. North, which he call'd *Florida*.

The South-Sea.

In 1513. *Vaſco Nunnes Valboa* having heard of the South-Sea, with 290 Men went from *Darien*, carrying ſome *Indians* to be his Guides march'd over Land, and on St. *Michael's-day* came to the South Sea, where he embark'd, tho' he was told of great danger, and came back to Land in ſafety, having taken there ſtore of Gold, Silver and Pearls.

The Streight of *Mecca.*

In the ſame Year *Albuquerque* went from *Goa* to the Streight of *Mecca*, with 20 Ships : He batter'd *Aden*, enter'd the Streight, and winter'd in the Iſle of *Camaran*, being the firſt *Portugueſe* Captain that gave information of thoſe Seas, and of that of *Perſia*.

In 1514. *Pedro d'Avila* went from *Lucar* with his Wife and 1500 Men, in 7 Ships, being the 4th Governour of *Golden Caſtile*, as they nam'd the Countries of *Darien*, *Carthagena* and *Uraba* ; and *Valboa* was made Governour of the South-Sea of that Coaſt.

The Gulf of St. *Michael.*

Iſle of *Pearl.*

In 1515. *Pedro Arias d'Avila* ſent one *Gaſpar Morales* with 150 Men to the Gulf of St. *Michael*, to diſcover the Iſles of *Tararequi*, *Chiapes* and *Tumaccus*. A Cacique, friend to *Valboa*, gave him many Canoes, wherein they ſail'd to the Iſle of *Pearl* ; the Lord whereof at firſt oppos'd their Landing, but being afterwards pacified, he took them home to his Houſe, and was baptiz'd *Pedro Arias*, for which he gave them a Baſket full of Pearls, weighing 110 pounds, whereof ſome were as big as Hazel-nuts, weighing 25, 26, or 31 Carats, every Carat being 4 grains. There was given for one of them 1200 Ducats. This Iſle *Tararequi* lies in 4 degr. lat. towards the North.

An Embaſſy to the King of *Perſia.*

In the ſame Year 1515. *Albuquerque* ſent from *Ormuz* *Fernando Gomez* as Ambaſſador to *Iſmael* King of *Perſia*, who travell'd in it 300 leagues, and reported that it is a pleaſant Country like *France*, and that there are the faireſt Women in the World.

Pepper a great Commodity in *China.*

In 1516. about 100 Years after the taking of *Ceuta*, *Lopez Suarez* being Governour of *India*, one *Fernando Perez* was ſent to *China*, where he received much Pepper ; and after that to *Bengala*, to a Knight call'd *John Calo*. He was the firſt *Portugueſe* that ſaw *Ganges*.

China firſt diſcover'd.

Pekin.

In 1517. the ſame *Perez* went to the City of *Malacca*, and from thence towards *China*, with 8 Sail, 4 *Portugueſes*, and 4 *Malayans*. He went with *Thomas Perez* the Ambaſſador from the City of *Canton*, by Land 400 leagues to the City of *Pekin*, where the King was ; the Province whereof is the biggeſt in the World, extending from 20 to 50 degr. of latitude, *i. e.* 500 leagues in length, and it's ſaid to be 300 leagues broad. *Perez* was 14 Months in the Iſle *de Veniaga*, learning as much as he could of the Country, of which he diſcover'd very much by Land and Sea.

Maldiva.

In 1518. *John Silveira* went to the Iſles of *Maldiva*, and made Peace with them ; and from thence to the River *Ganges*, 100 leagues beyond *Canton*, and diſcover'd the Country and Manners of the People.

Jucatan.

Santa Cruz.

Aſcenſion.

In 1518. *John Griſalva* went with 4 Ships and 200 Soldiers from *Cuba*, to diſcover *Jucatan* ; and in their way they found the Iſle of *Coſmuel* in 19 degrees North lat. and nam'd it *Santa Cruz*, becauſe they came to it the 3d of *May*. They coaſted the Land, and came to an Iſland call'd *Aſcenſion*, becauſe they came to it on *Aſcenſion-day*, and finding no place to go out at, they went round about it to another River, which they call'd the River of *Griſalva*, in 17 degrees lat. where they got Gold, Silver and Feathers.

Panuco.

In the ſame Year 1518. *Francis Garay* went with three Ships from *Jamaica* towards the Point of *Florida*, but when they came on Land the Natives kill'd many of them, ſo that they durſt not ſtay ; whereupon they ſailed along the Coaſt, and came to the River of *Panuco*, 500 leagues diſtant from the Point of *Floride*.

King of *Mexico.*

Tutepec.

In 1519. *Fernando Cortes* went from *Cuba* to *Nova Spania*, with 11 Ships, and 550 Men in them : and the Country of *Tenich* being at War with *Montezuma*, ſent Ambaſſadors to *Cortez* with Preſents, offering him their Country and Friendſhip ; and they which went to *Tutepeck* near the South-Sea, brought ſome Samples of Gold, and prais'd the pleaſant Country, and many good Harbours, but nothing could be done at that time.

In 1520. *Lopez de Sequeir* went to the Streight of *Macca*, in the Iſle of *Macua* in the *Red-Sea*, in 17 degrees North.

Chicbora, Guadalupe, &c.

In the ſame Year, *Vaſquez Aillon* went with two Ships to the Iſles of *Lucayes* to get Slaves, and finding none, they paſs'd along the firm Land beyond *Florida* to certain Countries call'd *Chicbora* and *Guadalupe*, and to the River of *Jordan*, and the Cape of St. *Helen*, in 31 degrees North. The Natives came to the Sea ſide to ſee the Ships, having never ſeen the like before, and the *Spaniards* went on Land and receiv'd ſuch things as they wanted ; but having got many of them into their Ships, they ſet Sail and brought them away for Slaves.

Nicaragua.

St. Vincent.

In 1522. one *Gilgonzales* went with four Ships from the Iſle *Tararequi* in the South-Sea, to diſcover the Coaſt of *Nicaragua*, and eſpecially the paſſage from the South into the North-Sea : And ſailing along the Coaſt, he came to a Haven call'd St. *Vincent*, and there landed 100 Foot and ſome Horſemen, and went 200 leagues within Land, and brought with him 200 Peſo's of Gold, and ſo came back to St. *Vincent*, and thence to *Panama*.

St. John.

In 1522. *Gonzalo Gomez* went from the Iſle *Tidore* towards *Nova Spania*, and wanting Wind they ſteer'd towards the North-eaſt into 16 degrees, where they found two Iſles which they nam'd the Iſles of St. *John*, and in that Courſe they came to another Iſle in 20 degrees, which they nam'd *la Griega*, and after four Months they came into 42 degrees of North lat. where they ſaw Sea-fiſhes call'd Seales; but the Climate was ſo cold, that they turn'd back to *Tidore*.

Teco antipec.

In 1522. *Cortez* deſirous to have ſome Havens on the South-Sea, and to diſcover the Coaſt of *Nova Spania* on that ſide, that he might bring the Drugs from *Malucco* and *Banda*, and the Spicery from *Java*, with leſs trouble, ſent four *Spaniards* with their Guides to *Teco antepec*, and other Havens, where they were well receiv'd, and brought ſome of the Natives to *Mexico*; and *Cortez* afterwards ſent 10 Pilots, who went 70 leagues in the Sea, but found no Haven. One Cacique, or Lord, ſent with them to *Cortez* 200 Men, with a Preſent of Gold and Silver, and other Goods, the Product of the Country.

St. James and *Segura* built.

In 1523. *Cortez* ſent to the Aid of the ſaid Saique 200 Foot and 40 Horſe, who went through the Country and built the City of *St. James*, and the Town of *Segura*, leaving People in them. The Saiques wondred much at the Monſters of the Sea, as they call'd the great Ships.

The Iſles of *St. Michael* and *Borneo*.

In this Year 1523. *Simon de Breu* was ſent to learn the way by the Iſle of *Borneo* to *Malacca*: They went thro' the Streight of *Treminao* and *Tagui* to the Iſles of *St. Michael*, in 7 degrees, and from thence diſcover'd the Iſles of *Borneo*, paſs'd through the Streight of *Cincapura*, and ſo to *Malacca*.

St. Stephano del Puerto.

In the ſame Year 1523. *Cortez* went with 300 Foot, and 150 Horſe, and 40000 *Mexicans*, to *Panuco*, which after ſome reſiſtance was conquer'd; and upon the River near *Chila*, he built a Town call'd *Santo Stephano del Puerto*, leaving in it 100 Foot and 30 Horſe, with a Lieutenant. This Journey coſt 76000 Caſtilians, beſides *Spaniards*, Horſes and *Mexicans*, who died there.

Rio de Palmas.

Rio Montalto.

In 1523. *Francis Garay* having a Grant from *Charles* the Fifth, of the Coaſt of *Florida* to *Panuco*, went with 9 Ships and 2 Brigandines, carrying 850 Soldiers and 140 Horſes to *Panuco*; but hearing that it was Peopled by *Cortes*, he went to *Rio de Palmas*, and having ſent one up that River, he travell'd by Land, and having paſs'd *Rio Montalto*, at laſt he came to *Panuco*, but finding there no Victuals, and having loſt 40 Horſe in an Ambuſh, and 4 of his Ships, he gave over the deſign; and hearing that the Government of *Nova Spania* and *Panuco* was given to *Cortes*, he yielded to him.

Gil de buena Viſta in the Bay of *Aſcenſion*.

In 1523. *Gonzales d'Avila* diſcover'd and Peopled a Town, call'd *Gil de buena Viſta*, in 14 degrees of North latitude, which lies in the bottom of the Bay call'd the *Aſcenſion*, which he knew to be a rich Country.

Alom Hills.

St Jago Quahutemallan.

In 1523. *Alvarado* was ſent from *Mexico* with three hundred Foot, one hundred and ſeventy Horſe, and four Field-pieces, to diſcover and conquer *Quahutemallan*, *Xochuuxco*, and other Towns towards the South-Sea. He went by *Teco antepec* to *Xochuuxco*, and other places, and diſcover'd and ſubdu'd all the Country: In which he found ſome Hills that had Alom, and a Liquor like Oil and Sulphur, of which he made Gun-powder. He travell'd four hundred leagues, and paſs'd ſome Rivers ſo hot that they could not well wade through; and built a City call'd *St. Jago Quahutemallan*. 'Tis ſaid he had the Government of that Country for his labour.

Chamolla.

In 1523. *Godoy* was ſent by *Cortes* to the Town *del Spiritu Santo*, whoſe Captain joyn'd with him and went to *Chamolla*, the chief City of that Province, which being taken all the Country ſubmitted.

Zapotecas and *Niſticas*.

In 1524. the *Zapotecas* and *Nixticas*, and other Countries, were ſubdu'd by *Bangel* with one hundred and fifty *Spaniards*.

St. Martha.

In the ſame Year the Country of *St. Martha* was diſcover'd and conquer'd by *Baſtidas* and *Villa Forte*.

Triumpho de la Cruz.

Nativity of our Lady.

In 1524. *Cortes* ſent one *Chriſtopher Olid* to diſcover and People the Country about the Cape *Higueras* and the *Honduras*; but this *Olid*, when he came to *Cuba*, leagu'd with *Volaſquez* againſt *Cortes*, and landing hard by *Puerto de Cavallos*, in ten degrees North latitude, built *Triumpho de la Cruz*. *Cortes* went from *Mexico* to ſeek *Olid*, with three hundred Foot and Horſe, and carry'd with him the King of *Mexico*, and other Lords; and coming to *Del Spiritu Santo*, ten Guides were ſent him, who gave him a Map of Cotton-wooll, ſhewing the ſituation of the Country from *Xicalanco* to *Naco* and *Nico*, and as far as *Nicaragua*. But when he came to *Izancanao*, he underſtood that the *Mexicans* and their King conſpir'd againſt him, wherefore he hang'd the King and two of the chief Leaders; and ſo he came to *Mazatlan* and *Tiaca*, and to *Nito*, and the Bay of *St. Andrew*, where finding a good Haven, he built a Town call'd the *Nativity of our Lady*. From thence he went to *Truxillo*, where he heard the News of a Sedition in *Mexico*, and he went thither by Sea, after he had travell'd five hundred leagues.

St. Matthew.

In 1525. *Garſia de Loaiſa* went from the *Groyne* with 7 Ships to the Iſles of *Malucco*. He paſs'd by the *Canaries* and came to *Braſil*, where he found an Iſle in two degrees call'd *St. Matthew*: A Pinnace of theirs paſs'd the Streight of *Magellan*, and run along the Coaſt of *Peru* and *New Spain*. The *Malucco's* were kind to them.

Cape *Razo*.

In the ſame Year *Stephen Gomez* went from the *Groyne*, to diſcover the Streight to *Malucco* by the North. 'Tis ſaid he came to Cape *Razo* in 46 degrees North, and thence came back laden with Slaves.

In 1525. *Gomez Sequeira* going from *Malucco*, found ſome Iſles in 9 degrees North, and call'd them after his own Name.

River *Parana*.

Paragioa.

In 1526. *Sebaſtian Cabot*, Son of a *Venetian*, born at *Briſtol*, went from *Sevil* with four Ships towards *Malucco*, which they could not reach becauſe the Admiral Ship was loſt in the Bay of *Patos*, where they made a Pinnace to go up the River of *Plate*; and having run up ſixty leagues to the Bar, they left there their great Ships, and with their Pinnaces row'd up the River *Parana* one hundred and twenty leagues, where they built a Fortreſs, and ſtaid above a Year, and then row'd further till they came to the River *Paragioa*, and perceiving the Country yielded Gold and Silver, they kept on their Courſe; but hearing that a Brigantine which he had ſent before was taken by the Natives, he ſail'd back again, and return'd to *Sevil* in 1530. having diſcover'd about two hundred leagues in this River which is very Navigable.

The Iſles of *Kings*.

In 1527. *Cortes* ſent three Ships to diſcover by the way of *New Spain* the Iſles of *Malucco*, with his Couſin *Saavedra*, who ſail'd from *St. Chriſtophers* in twenty degrees North, to the Iſles call'd by *Magellan* the *Pleaſures*, and thoſe diſcover'd by *Sequeira*, which he nam'd the *Iſles of Kings*; and having loſt two Ships by the way, he ſail'd to the Iſle of *Candiga*, and in 1528. arriv'd at laſt at the Iſles of *Malucco*, and anchor'd before *Galilo*, diſtant from *New Spain* 2050 leagues.

In 1528. *Cortes* having diſcover'd and planted the Country of *Chichimecas*, which was ſaid to be rich in Gold, went to *Caſtile* in great pomp, carrying with him 250000 Marks of Gold and Silver, and was nobly receiv'd by the Emperor at *Toledo*, who made him a Marquis and Governour of *New Spain*.

Papuas.

Iſle of painted People.

Iſle of Palm-trees, or *los Jardines*.

In 1529. *Saavedra* returning towards *New Spain*, had ſight of Land in two degrees South, and ran along it above five hundred leagues, where he ſaw People of black curled hair call'd *Papuas*; but having ſail'd four or five degrees to the South, he return'd towards the North, and diſcover'd an Iſle which he call'd the *Iſle of painted People*. And a little beyond it, in ten or twelve degrees, he found many low ſmall Iſles full of Palm-trees and Graſs, which he call'd *los Jardines*. The Natives wear white Cloaths made of Graſs, never ſaw fire, eat Coco's and Fiſh, dig Boats with ſhells. *Saavedra* perceiving the Weather to be good, ſail'd towards the firm Land and City of *Panama*, there to unload the Cloves and Merchandize he had, which might be carry'd in Carts four leagues to the River *Chagre*, which is ſaid to be Navigable into the North-Sea, not far from *Nombre de Dios*; by which way all Goods might be brought a ſhorter way than round about the *Cape of Good Hope*.

In 1529. one *Tavarez* went from the City of *Ormuz* unto *Balſera*, and the Iſles of *Giſſara*, with ſome Ships of War, and went up to the place where *Tigris* and *Euphrates* meet; and tho' others had ſail'd through that Streight, yet never any before him ſail'd ſo far upon freſh, and diſcover'd that River ſo fully.

River *Maragnon*.

Incenſe-trees.

A great Emerauld.

In 1531. *Dacugna* with ten Ships, nine hundred Foot, and one hundred and thirty Horſe, went to the River *Maragnon*, in three degrees South, being fifteen leagues broad at the entrance, having many Iſles inhabited, wherein grow Trees that bear Incenſe, bigger than in *Arabia*. Gold, rich Stones, and one Emerauld as big as a Man's Hand, was found there. The Natives make their Drink of Dates as big as Quinces.

Mechuacan.

Nova Gallicia.

Compoſtella, &c.

In 1531. one *Guſman* went from *Mexico* towards the North-weſt, with 250 Horſe and 500 Foot, to diſcover and conquer the Countries of *Valiſco*, *Ceimtili quipac*, &c. He went through the Country of *Mechuacan*, where he had much Gold, ten thouſand Marks of Silver, and ſix thouſand *Indians* to carry burdens. He conquer'd many Countries; call'd that of *Valiſco*, *Nova Gallicia*. He built a City which he call'd *Compoſtella*, and another which he nam'd *Guadalaiara*, being the name of the place of his Nativity. He built alſo the Towns *de Santo Epirito*, *de la Conception*, and *de la San Miguel*, in 24 degrees North latitude.

In 1533. *Francis Pizarro* went from the City of *Tumbez* to *Caxamalca*, where he took the King *Attabalipa*; *Alvarado* found Mountains of Snow ſo cold, that ſeventy of his Men were frozen to death, but when he came to *Quito* he begun to inhabit it, and call'd it *St. Francis*.

Mountains of Snow under the Line.

In 1534. *Cartier* a *Britain* went with three Ships to *Cortereali*s, and the Bay of *St. Lawrence*, and ſail'd North to 51 degrees, hoping to go that way to *China*, and bring thence Drugs to *France*. The next Year he went into thoſe Parts, and found plenty of Victuals, many Houſes, and great Rivers. He ſail'd in one River S. W. three hundred leagues, and call'd the Country *Nova Francia*; but finding the Water freſh, he perceiv'd he could not go that way to the South Sea.

Nova Francia.

In 1535. *Triſalva* ſail'd three hundred leagues from *Teco antepec* to the Iſle he call'd *St. Thomas*, in 20 degrees latitude.

In the ſame Year *d'Acuma*, Governour of *India*, built a Fort at *Diu*, and ſent a Fleet to the River *Indus*, which is diſtant from it about one hundred leagues North; he ſent alſo an Army againſt *Badu* King of *Cambaia*.

The Fort of *Diu*.

In 1535. *Alcazava* went from *Sevil* with two Ships, and 240 Men, and entred the Streight of *Magellan*, without touching at *Braſile*; he went to a Haven in 53 degrees South, and was kill'd by his Soldiers.

In 1535. *Mendoza* went from *Cadiz* with 12 Ships and 2000 Men; he died, and his Men built in that River a great Town, wherein are two thouſand Houſes inhabited by *Indians* and *Spaniards*. They diſcover'd and conquer'd the Country till they came to the Mines of *Potoſi*, and the Town *la Plata*, diſtant from them five hundred leagues.

The Mines of *Potoſi*.

In 1536. *Cortez* with 3 Ships ſail'd to a Point which he call'd *St. Philip*, and an Iſle hard by he call'd *St. Jago*. After this he came into the River call'd *Rio San Pedro y San Paulo*, where having loſt two of his Ships by a Tempeſt, he entred into the Gulf now call'd *Mar de Cortez*, or the Gulf of *California*, and went fifty leagues within it, where he had been loſt, if he had not found a Ship at Anchor to ſuccour him. While he was at *Acapulco*, being inform'd by *Francis Pizarro* that *Mango Inga* was riſen againſt him with a hundred thouſand Men, who had kill'd his Brother *John*, he ſent two Ships with Men and Victuals to *Tangarara* in *Peru*, to ſuccour *Francis Pizarro*, which ſail'd from thence along the Line to *Malucco*, and 'tis ſaid they went above a thouſand leagues without ſight of Land, and in two degrees North they diſcover'd an Iſle nam'd *Aſea*, which ſeem'd to be one of the Iſles of *Cloves*; and having ſail'd about five hundred leagues more, they ſaw another which they call'd the *Iſle de los Piſcadores*. Going on in this courſe, they ſaw another Iſle towards the South call'd *Hayme*, and two others call'd *Apia* and *Seri*; but turning towards the North one degree, they anchor'd at the Iſle *Coroa*, from whence they came under the Line to *Meouſum* and *Buſu*, lying in the ſame courſe. The People eat Mens fleſh, and are Witches in all theſe Iſles. Here is a Bird as big as a Crane, which flies not, but runs on the ground like a Deer. From theſe Iſles we came to others call'd *Guelles*, lying one degree towards the N. E. and Weſt from the Iſle *Tenerate*, where the *Portugueſe* have a Fort, being diſtant from it about forty leagues, and from *Moro* 124. From whence they went to the Iſle of *Moro* and the Iſle of *Cloves*, where they cou'd not land without leave from *Galvano*.

St. Jago.

The Gulf of *California.*

Aſea an Iſle.

De los Piſcadores. Hayme, &c.

The Iſle of *Cloves*.

In 1537. *Vadillo*, Governour of *Carthagena*, went with a good Army from *Sebaſtian* in the Gulf of *Uraba*, and from thence to *Rio Verde*, and thence by Land, without knowing any way, to the end of the Country of *Peru*, and the Town of *la Plata*, being twelve hundred leagues. From this River the Country is full of Hills, Trees and Rivers, to the Mountains of *Abibe*, which are ſaid to be leagues broad, and muſt be paſs'd over in the firſt four Months, before the Rains fall which ſwell the Rivers. There are in theſe Mountains Herds of Swine, Lyons, Tygers, Cats, Monkies, and vaſt Snakes; and alſo Partridges, Quails, Pigeons, and other Fowls, and plenty of Fiſh, which they could kill with their Staves. They paſs'd through many Countries, and made great Diſcoveries by Land.

The Mountains of *Abibe*.

In 1538. *Galvano* ſent *Francis de Caſtro* towards the North, to convert as many as he could to the Chriſtian Faith. He himſelf chriſten'd many Lords, of *Celebes*, *Amboynos* and *Moros*, and other places: and *Francis de Caſtro* at *Mindanao*, caus'd 6 Kings to be baptiz'd, with their Wives, Children, and Subjects; moſt of which were call'd *John*, after *John* the Third King of *Portugal*.

Six Kings baptized at *Mindanao*.

In 1539. *Cortes* ſent three Ships with *Villoa*, to diſcover the Coaſt of *Culuacan* to the North, which went from *Acapulco*, and entred into *Cortes*'s Gulf, and ſail'd to 32 degrees, which is at the further end of it, and call'd the place *Ancon de St. Andres*. When they came out of it, they doubled the point of *California*, and going between certain Iſles and the Point, and ſo ſail'd along by it till they came to 32 degrees, whence they return'd to *New Spain*.

Ancon de St. Andres.

From the Cape *Enganno* to the Cape *Liampo* in *Spain*, the ſailing is a thouſand or twelve hundred leagues. *Cortes* and his Captains diſcover'd *New Spain* from 12 degrees South to 32 North, being ſeven hundred leagues. In *New Spain* are many Trees, but the chief of them is the *Meth*, which hath forty kind of leaves like woven Cloths: When they are tender they make Conſerves, Paper, and a thing like Wax; of which they make Mantles, Mats, Shoes and Cordage. The prickles ſerve for Needles, the Juice of the Root is like Syrup, the Fruit is Cocoes, the Rind roaſted cures Sores, and the tops expel Poyſon, being mingled with Incenſe. There are alſo Birds call'd *Vicmalim*, which live of dew and the juice of Flowers: They die or ſleep every Year in *October*, and revive or wake in *April*, when the Flowers ſpring.

The beneficial Tree *Meth*.

A Bird that dies and revives in the Spring.

In 1538, and 1539, *Pizarro* ſent *Baldivia* with many Men to diſcover and conquer the Country of *Chili*, who diſcover'd much Land, and the Sea-coaſt towards the South-eaſt, to 40 degrees and more in latitude. About this time *Alvarado* went to conquer the Province of *Guanuco*, *Chavez* to ſubdue the *Couchincos*, *Vergara* to the *Bracamores*; the *Pizarro's* to ſubdue *Collao* rich in Gold. And thus they ſubdued ſeven hundred leagues of Country.

Chili.

Collao rich in Gold.

Braſile and *Peru* are diſtant almoſt eight hundred leagues Eaſt and Weſt, lying both almoſt in one parallel.

In ſome places of the *Andes* the Earth is of divers colours, as black, white, &c. wherewith they Die. On theſe Mountains grow ſeveral Roots, whereof one heals Sores, but eats ſound fleſh to the bone. Thoſe who live on them are for the moſt part blind of one Eye, by the great cold and heat. There grows in the Fields good Maize and Potatoes, and an Herb call'd Coca, that's always in their Mouths, as in the *Eaſt-Indies* the Herb called Beetle, which they ſay ſatisfieth both hunger and thirſt.

Strange Root.

People blind of one Eye.

From *Tumbez* Southward, they ſay it neither Rains nor Thunders for five hundred leagues of Land, but at ſometimes there falls a little ſhower; and that from *Tumbez* to *Chili*, there are no Hens or Cocks, or Birds of prey, but Ducks, Geeſe, &c. There are Bitterns which fight with the Seals, and pick out their Eyes, that they may not ſee to get into the Water; and *Xacos*, having Wool like Sheep, and a Saddle-back, on which Men ride.

Bitterns fight with Seals.

From the River *Plata* and *Lima* Southward, there are no Lizards nor venemous Vermine, but ſtore of good Fiſh. On the Coaſt of *St. Michael* on the South-Sea, are many Rocks of Salt cover'd with Eggs. On the Point of *Helena*, are Springs of Liquor which ſerves for Pitch and Tar.

Rocks of Salt cover'd with Eggs.

In 1540. *Gonſalvo Pizarro* went out of *Quito*, to diſcover the Iſle of Cinnamon, with 200 *Spaniards*, and 300 *Indians* to carry burdens. He came to *Guixos*, the laſt place govern'd by the Inga's, and paſs'd over ſnowy Hills, where many *Indians* were frozen to death, and found much Snow under the Line. Thence they went to *Cumaco*, where they tarried two Months for the continual Rains. And beyond they ſaw the Cinnamon-trees, whoſe leaves are like Bay-leaves, and the leaves, branches and root, taſte of Cinnamon; but the beſt have certain knops like Acrons, which is a good Commodity. It appears to be wild Cinnamon, and there is much of it in the *Eaſt-Indies*, and the Iſle *Java*. From hence they went to the City *Coca*, and forwards along a River's-ſide being 60 leagues long, without either Bridge or Ford, which in one place had a fall 200 fathoms deep; and a little below this fall they made a Bridge to paſs over to the other ſide, where they came to a Country call'd *Guema*, which had only Fruits and Herbs to eat. Going from hence forward, they met with a People in Cloaths of Cotton-wool, and found Canoes wherein they put their ſick Men, and their Treaſure, truſting them with one *Orellana*; and *Pizarro* went by Land along the River's-ſide, 200 leagues, going at Night with his company into the Boats. When *Pizarro* came to the place where he thought to find the Canoes, and could not hear of them, he was ſo diſtreſs'd, that they were forc'd to eat their Horſes and Dogs, the Country being poor and barren, and the Journey long to *Quito*; in which, 'tis ſaid, that they travell'd 500 leagues without ſeeing the Sun, and being out 18 Months, there were not of 200 that came out, above 10 that return'd to

Cinnamon-trees.

Pizarro's hard Journey.

River of Amazons.

Quito. In the mean time *Orellana* went 500 leagues down the River, and ſaw divers Countries and People on both ſides of it, which is call'd the River of the *Amazons.*

Japan diſcovered.

In 1542. *Diego de Freitas* being in *Siam*, in the City of *Dodra*, chas'd 3 *Portugueſe* in a Ship towards *China*, who directed their courſe towards *Liampo* in 30 degrees, but there fell ſuch a Storm upon their Stern, that it ſet them off the Land, and they ſaw an Iſle to the E. in 32 degrees, call'd *Japan.*

In 1542. *Mendoza*, Vice-Roy of *New Spain*, ſent Captains and Pilots to diſcover the Coaſt of Cape *Euganno*, who ſail'd to the ſnowy Mountains in 40 degrees North, where they ſaw Ships which had the Yards of their Sails gilded, and their Prows laid over with Silver, which ſeem'd to be come from the Iſles of *Japan* or *China*, for they ſaid 'twas but 30 days Sail to their Country.

The Iſles St. Tomas, Cloudy Iſles, and Cloven Rock.

In 1542. *Mendoza* ſent unto the Iſles of *Mindanao* a Fleet of 6 Ships, with 400 Soldiers, and as many *Indians*, under *Lui Lopez* as General. They ſet ſail from the Haven of *Natividad*, in 20 degrees North, and ſteer'd towards the Weſt, where they ſaw the Iſle of *St. Thomas*, and another which they nam'd the *Cloudy Iſle*, and a third call'd the *Cleven Rock*. They ſaw the Iſles diſcovered by *Roca*, *Sequeira* and *Saavedra*, and beyond them they found other Iſles ſtanding round, in 10 degrees.

In *Jan.* 1543. they departed from the ſaid Iſles with all the Fleet, and ſaw other Iſles, out of which came Men in Boats with Croſſes in their hands, who ſaluted them in the *Spaniſh* Tongue, ſaying, *Good morrow Companions*, who were ſome of thoſe that had been Chriſtned by *Caſtro.*

Mindanao.

In *February*, the ſame Year, *Lopez* ſaw that noble Iſle *Mindanao*, lying in 9 degrees, but could neither double it, nor caſt Anchor there, being oppos'd by the Chriſtned Kings, who had promis'd Obedience to *Galvano*; whereupon he ſail'd along the Coaſt, and in 4 or 5 degrees took a ſmall Iſle perforce, which he call'd *Antonia.* In the ſame Year he went to many other Iſles, in 11 or 12 degrees North latitude, where *Magellan* and *Caſtro* had been, which were call'd the *Philippines.* He ſaw alſo the Iſles call'd the *Evil Roads*, the *Two Siſters*, the *Vulcano's*, and *Farfara*, beyond which there is a high Rock which caſts out fire in five places. They found alſo an *Archipelagus* of Iſles, in 15 or 16 degrees, where the People are white, well array'd, and wore Bracelets of Gold. Here alſo were Barks three Cubits long, row'd with Oars; and the Natives told the *Spaniards*, that with them they us'd to go to *China*, which was not above five or ſix days ſailing from thence.

Antonia.

Philippines.

Archipelagus of Iſles.

In 1544. *de Vargas*, Biſhop of *Placenza*, ſent a Fleet from *Sevil* to the Streights of *Magellan*, but none of them could paſs the Streight for contrary Winds, except one Bark, which diſcover'd the Land to *Chirimai* and *Arequipa.*

The Iſle of Moro.

In 1545. *Rui Lopez* and *Giraldo*, with the *Caſtilians*, came to the Iſle of *Moro*, and the City of *Camafo*, where they were well receiv'd by the Kings of *Gilolo* and *Tidore*, and the People of the Country.

In the ſame Year 1545. *Rui Lopez* ſent from the Iſle of *Tidore* a Ship towards *New Spain*; by the South-ſide of the Line they ſail'd to the Coaſt of *Os papuas*, but knew not that *Saavedra* had been there before.

Os papuas.

In 1545. there went a Junk from *Borneo* with a *Portugueſe*, which by contrary Winds was driven Northward, where he found an Iſle in nine or ten degrees that reach'd to 22 degrees of Latitude, which is call'd the Iſle of the *Lucones*; it runs from North to S. W. and lies between *Mindanao* and *China.*

The Iſle of Lucones.

A Letter from Trigantius *a Jeſuit, concerning Affairs in* China *and* Japan.

12 Jeſuits to Japan. 22 to China The Portugueſ give the Engliſh 80000 Rials of Eight to avoid fighting.

‘THree Ships ſail'd from *Lisbon*, *April* 1618. In one of them, call'd *St. Mauro*, were 12 Jeſuits for *Japan*: In another were 22 for *China*, whereof I was one. After five Months and a half ſailing we came to *Goa*, whither the *St. Mauro* came a Month after us. A Fortnight after that the Admiral arriv'd with Diſgrace, becauſe falling in company with 6 *Engliſh* Ships, he choſe rather to pay them 80000 Patacas than engage in a fight; for which Cowardice, he and ſome other Officers were ſent back Priſoners to the King to be puniſh'd.

‘At *Nanquin* Chriſtianity flouriſh'd and encreas'd, until *Xin*, a chief Judge in the third Tribunal, oppos'd it, by ſending many reproachful Petitions ſecretly to the King, and engaging the chief Preſident of the ſaid Tribunal againſt us, to which Court belongs the Cognizance of Foreign Affairs and of Religion. Yet this did not move the King to write any Anſwer, (which with the *Chineſe* is Interpreted a denial) until at laſt the Preſident wrote to the King, that he would baniſh them all out of the Kingdom, except ſuch as were in the Royal City, as by his Office he was oblig'd. This he did, but none of the Magiſtrates executed his Order where the Chriſtians reſided, except *Xin* at *Nanquin*, who Apprehended two Prieſts, a Brother, and others, but durſt not ſend them away before the King's Anſwer, tho' they were often cruelly whipt, and one or two of them died in Priſon. At laſt *Xin* of *Nanquin*, having brib'd the Eunuchs with 10000 pieces of Gold, obtain'd an Order from the King that the Chriſtians ſhould be ſent to *Canton*, which was their own. And two of *Pequin* were honourably diſmiſs'd, but two of *Nanquin* were carried in Cages, and all the reſt continued in the Kingdom. After this the Magiſtrate of *Pequin* was depriv'd, and he of *Nanquin* fell ſick.

Perſecution of the Chriſtians in China.

‘As to the *Japan* Church: After *Daifuſama* obtain'd the Victory over *Fideri*, and tranſmitted the Empire to his Son *Comboſama*, the Church was quiet for a Year and a half; but by the Indiſcretion of ſome at *Nangaſaque* the Perſecution was begun, in which twenty have died for the Faith, and others have been baniſh'd.

Two Comets in Bazain.

‘In *India* things continue in the ſame ſtate. At *Bazain* there was an unuſual Tempeſt; and two Comets were ſeen, whereof one directed his Courſe to the North, and ſo is ſeen this 20th of *December*, 1618.

Extracts out of Trigantius's *Martyrology.*

THE Emperor of *Japan* is he that poſſeſſeth *Tenſa*, the Imperial Province, ſo call'd by the *Chineſe*, of whom the *Japan* Iſlands are a Colony; for that which the *Chineſe* call *Thienbia*, *i. e.* whatever is under Heaven, the *Japoneſe* term *Tenſa*, expreſs'd with the ſame Characters, however differing in pronunciation. *Taicoſama* died 1598. and left *Fideri* his Heir; but *Daifuſama*, with others, being appointed his Tutors, quarrell'd for themſelves in 1600. At laſt *Daifuſama* getting the better, entitled himſelf *Cuboſama*, but left *Fideri* in the beſt Fort of *Japan*, with a tolerable Revenue; and having remov'd the Imperial Seat from *Meaco* to *Surunga*, he married his Son to the Niece of *Nabunanga*, which was next Emperor before *Taicoſama*, and Aunt to *Fideri*, whom he beſieg'd and kill'd in *Oſacca*, fearing leſt he ſhould divert the Inheritance from his Son. For which end he ſet *Fideri* at work, to build his Father's Temple which was conſum'd by Fire, hoping thereby to exhauſt his Treaſures; but when he came before *Oſacca*, with an Army of 200000 he loſt 30000, and was forc'd to raiſe the Siege, in 1615. Yet after this, he return'd with another Army as great as the former, to which *Fideri's* was equal, and in two Battels was defeated; ſo that *Daifuſama* deſpairing of ſucceſs, deſir'd ſome to diſpatch him, rather than he ſhould fall into the Enemies hands. But at laſt, *Fideri's* General thinking the Victory ſure, ſent for him to have the honour of it, who leaving his Captains in haſte, ſo provok'd them by that ſeeming contempt, that they ſet fire to *Oſacca*. Whereupon *Fideri*, to ſave his Relations, return'd to the Caſtle, in which both he and they periſh'd. *Oſacca* was deſtroy'd in 1615. and the Emperor return'd Victorious to *Surunga*, and prais'd his Idols for this Succeſs, which he attributed to his Perſecution of the Chriſtians. But in *March*, 1616. this Triumph was turn'd to his Funerals, and one of his Sons ſucceeded. The Chriſtians had ſome hopes of more liberty after his Death, and perform'd their Religious Offices ſecretly, leſt they ſhould ſeem to Inſult over the Dead. For under pretence of Injuries done by *Portugal*-Merchants, and Contempts of his Imperial Edicts, and the Reports of worſhipping ſome Chriſtian Malefactors that were Executed, (becauſe ſome at their Death had commended them to Chriſt) he had baniſh'd many, and put many to ſeveral cruel kinds of Death. *But one true Cauſe was Jeſuitical Hypocriſy, for they, under pretence of converting Souls, were become Factors for the* Portugal *Merchants, as will appear in part by the Letters which follow from Captain* Saris *and* Cock.

Oſacca beſieg'd and burnt.

Fideri kill'd and Daifu made Emperor.

Cauſes of Perſecuting Chriſtians in Japan.

A Letter concerning ſome later Tranſactions in Japan, *from Mr.* Cocke *to Captain* Saris. *Written at* Firando, December 13. 1622.

Captain Saris,

‘I am inform'd of the greateſt Conſpiracy that ever was heard of in *Japan*, againſt *Soonga Samma* the preſent Emperor, carry'd on by Nine of the greateſt and richeſt Kings and Noblemen in that Empire, *viz.* by *Canzano Figen* the Emperor's Kinſman, having the greateſt Revenue in *Japan*, being worth *per Annum* 200 *Mangoeas*, i. e. 1875000 pounds Sterling, as Mr. *Saris* caſt it up.

By
- *Shimaſzu* King of *Xaxica* and *Liqueas*, the moſt powerful Prince in *Japan*, worth more than 100
- *Micanano Camy*, Son to the Emperor's Eldeſt Brother, worth 70
- *Maſſa Moneda*, King of *Oſhew*, worth 70
- *Yechew*, K. of *Cocora*, worth 34
- *Catto Samma*, King of *J. O.* worth 30
- *Mengamy*, King of worth 35
- *Nancobo*, High Prieſt next to the *Dairo*, worth 1
- *Codgſq*; Secretary, worth 15

Mangocas *per Annum*.

The way of ſumming up the Revenues aforeſaid.

‘Every Mangoca is 10000 Gaca's, and each Gaca is 100 Ganta's of Rice, and each Ganta is about 3 Alepints in *England*. The preſent King of *Firando* has but 6 Mangocas, out of which he maintains 4000 Soldiers, two to keep his Country, and two to ſerve the Emperor, but is able to ſet out many thouſands more. About 6 or 7 Years ago, *Calſa Samma*, this Emperor's 2d Brother, was Diſinherited by his Brother, and ſhaven, and confin'd to a Pagan Monaſtery, expecting when the Emperor his Brother will command him to cut up his Belly.

The *Unicorn* wreck'd on the Coaſt of *China*.

‘Mr. *Sayer* is gone towards *Edo* with Preſents to the Emperor, and arriv'd at *Oſacca* about ten days ago. The *Unicorn*, in which were Mr. *Roberts* and *Pickering*, was wreck'd on the Coaſt of *China*, but the Company ſav'd themſelves, and carry'd part of their Goods aſhore, where they bought two Veſſels, with all neceſſary Proviſions; and one part of the Company went to *Japan*, the other to *Malacca*.

A Letter deſcribing the Government, Country and People of Japan. *Written by Mr.* Hatch, *a Miniſter, to Mr.* Purchas.

SIR,

The Country of *Japan*.

‘THE Country of *Japan* is very ſpacious, conſiſting of ſeveral Iſlands and petty Provinces: It is ſo mountainous and craggy, that a third part of it is not Inhabited or Manur'd. The Soil is not fat enough for Corn and Fruit, which makes the People pitch upon the loweſt and plaineſt places to Till and Dwell in. The Climate is temperate and healthful, free from infectious Airs, but ſubject to fierce Winds, which over-ſet the Ships in the Harbour; and to terrible Earthquakes, which ſhake their Houſes in pieces.

The Government of *Japan*.

‘It is govern'd by an Emperor, who hath 65 Kings under him; and tho' they have but petty Kingdoms, yet all of them aſſume the Royal State and Dignity. There are but five of them of the Emperor's Privy-Council, who are very vigilant in managing all State-Affairs. No Cauſe is brought before the Emperor till firſt the Council is acquainted with it; and if they approve of it he ſhall know it, if not, it is dropt. The Emperor lives in great State, and ſeldom goes to Hunt or Hawk without a thouſand followers. He is much admir'd for contententing himſelf with one Woman, his Wife, whereas his Subjects are ſcarce contented with a hundred Women; of which they make their boaſt. This Emperor hath great ſtore of Silver and Gold: And 'tis reported, that from *Oſacca*-Caſtle were brought to his Court ſome Balls of Gold, ſo great, that 15 or 16 Men can ſcarce carry one of them.

The Emperor's State and Chaſtity.

The Preſents made by the Princes.

‘The Princes of *Japan* impoveriſh themſelves to enrich the Emperor with Preſents, and each of them muſt be either in Perſon, or by a Deputy at his Court, to give an account of all Matters relating to the ſeveral Kingdoms, and keep them quiet. The Emperor, to requite his Princes Preſents, gives commonly ſome Kerrimoons, or Coats, for Gold, Silver, and precious Commodities; and to prevent their growing Rich, he raiſes Taxes on them for building his Caſtles, and repairing his Fortifications.

Oſacca, a Fort very famous.

‘*Oſacca* is the moſt famous Caſtle within the Empire, being compaſs'd round with three ſeveral Walls: The Caſtles at *Edo*, and other places, are Wall'd and Moated about, being two Miles in compaſs. The Noblemen live within theſe Caſtles, and in each of them there is a Store-houſe of Rice. At *Falcata* there is a Wood of Pine-trees three Inches ſquare; in the midſt of which there is a Temple adorn'd with gilded Images, and all ſorts of curious Works.

Cuſtoms of the People.

‘The People are generally courteous, and very punctual in their Ceremonies to ſtrangers: Their common Diet is Fiſh, Roots and Rice; and rarely they kill a Hen, Pig or Duck, to treat their Friends. Their common Drink is Water, which is commonly heated in the ſame Pot that Seethes their Rice. They have Wine and Rack diſtill'd of Rice, of which they drink largely at their Feaſts; and being heated with it, they are very obſtinate and wilful in their anger. Their Laws are ſtrict and ſevere, and know no other puniſhment but Death or Baniſhment. Murder, Theft, Treaſon, Violence of the Emperor's Edicts, are puniſh'd with Death; and ſo is Adultery alſo, if the Parties be taken and convicted, which they ſeldom or never are. In all Cauſes, Civil and Criminal, they proceed according to the Verdict of Witneſſes; and Sentence being once paſt is certainly executed. Criminals ſuffer Death either by Beheading or Crucifying; the Head is cut off with a Catan, and after that the Cavaliers try their weapons, whether they can cut off a Leg or a Limb at a blow. When any one is Crucify'd, his Arms and Legs are ſpread on a Croſs ſet upright, and then one runs him through the Body with a Lance or Spear, where he muſt hang till he rots off.

Their Laws.

‘Every one may change his Name three times, when he is a Child, a young Man, and when he is Old. They have had Writing and Printing for many Years; a ſingle letter ſtands for a Word, and, as it is variouſly plac'd, ſtands for ſix or ſeven. They have ſeven ſorts of letters, and each Alphabet has forty eight; they cannot pronounce *D*.

‘They obſerve no Sabbath, but certain Feaſts-days, as the 1ſt or 15th of the Moon, but the 9th is held accurſed; and therefore they never begin any buſineſs of importance on that day.

‘They keep the Day of their Parents death ſo ſtrictly as a Faſt, that they will not touch nor eat any thing that has Blood.

From Wingham *in* Kent,
Nov. 25. 1623.

Arthur Hatch.

An Abſtract of Mr. Cæſar Frederick's Indian Obſervations for Eighteen Years.

The way from *Venice* to *Ormuz*.

IN 1563. he went from *Venice* to *Aleppo*, and from thence, with ſome Merchants of *Armenia*, to a City call'd *Bir*; thence to *Bagdat*, and ſo to *Baſora* and *Ormuz*.

The Election of the King of *Ormuz*.

Ormuz hath a Moor King of the Race of the *Perſians*, who is created by the Captain of the Caſtle in the Name of the King of *Portugal*; he is choſen out of the Blood Royal, and ſweareth to be true and faithful to the King of *Portugal* as his Lord and Governour. After which, he is brought with great Pomp to the Royal Palace in the City. He keeps a good Train, and has ſufficient Revenues, and is defended by the Captain of the Caſtle; without whoſe Leave he cannot go abroad.

Diu.

From hence, going for *Goa*, I came to *Diu*, a ſtrong City, of great Trade, in *Cambaia*, where the *Chriſtians* and *Moors* (with the leave of the *Portugueſe*) lade many Ships with Goods brought from *Cambaietta*, another City in *Cambaia*, in ſmall Barks, becauſe no great Ships can go thither for the ſholes in the water, which are 100 miles about, in a Gulf call'd *Macareo*, i. e. the race of a Tide. *Cambaietta* is a fair City, and when he was there was in ſo great Calamity, that the *Pagans* were forc'd to ſell their Children to the *Portugueze* for 8 or 10 Latins apiece, *i. e.* 10 or 13 *s.* 4 *d.* There is a vaſt Trade at the New and Full Moon, when the Tides are higher, for then very many Barks come in, and are laded with all ſorts of Spices, *China* Silk, Elephants Teeth, Velvets of *Vercini*, *Chickinos*, which are pieces of Gold worth 7 *s.* Sterling, and other Commodities; ſuch as Cloth, white and painted, Indigo, Ginger, Myrobalans, Agats, Hematites, and natural Diamonds.

Cambaietta.

Womens Bracelets.

When he was at *Cambaietta*, he ſaw an infinite number of Artificers employ'd in making of Bracelets for the Women, who break them off when their Relations die, and buy new ones.

Coco tree moſt profitable.

There come every Year to *Chaul*, from *Cochin* and *Lananor*, ten or fifteen Ships laden with Nuts, and Sugar made of them call'd *Gingra*. The Tree on which they grow is call'd the Palm-tree, which is the moſt profitable Tree in the World, for with the Wood of it they build Ships, with the Fruit of it, which are Nuts, they make Wine, and of the Wine Sugar. Out of this Tree there runs a white Liquor in the Spring, which being diſtill'd with Fire makes a ſtrong Liquor, and being put into Buts with a quantity of *Zibibbo*, in a little while becomes perfect Wine. Of the Nuts, after this, they make Oil; of the Bark they make Cables; of the Boughs, Bedſteds; of the Leaves cut ſmall and woven, they make Sails and fine Mats; of the outer rind of the Nut they make Ockam to caulk Ships; and of the hard Bark, Spoons and other Veſſels for Meat.

A good Sale for Horſes.

In 1567. he went from *Goa* to *Bezeneger*, the chief City of *Narſinga*, 8 days Journey from *Goa* within Land, in company with two other Merchants, which carried with them three hundred *Arabian* Horſes to the King of that Country; and as they went out of *Goa*, the Horſes paid Cuſtom 42 Pagodies apiece, *i. e.* 6 *s.* 8 *d.* for in theſe Countries *Arabian* Horſes are valued from 300 to 1000 Ducats.

Bezeneger Sack'd.

In 1565. the City of *Bezeneger* was ſack'd by four Kings of the Moors, who could not take it but by the treachery of two of the chief Captains under the King of *Bezeneger*, who commanded about 80000 Men; and after theſe Kings had ſearch'd the City ſix Months they left it.

Merchants Gull'd.

After theſe Mooriſh Kings were gone, one *Temiragio* a Tyrant came to the City to repeople it, and invited all Merchants to bring Horſes to it, promiſing to give them what price they would; upon which account the two foreſaid Merchants brought their Horſes, but after he had got great numbers he paid for none.

Wives burn with their Husbands.

While he ſtaid at *Bezeneger* ſeven Years, he obſerv'd among other Cuſtoms of the *Gentiles*, that when a Nobleman or Woman die they burn their Bodies; and if a married Man die, the Wife muſt burn her ſelf alive with the Body of her Husband, which is done with much pomp and ceremony. For ſhe having appointed a day for her burning, goes out that Morning early on an Elephant or Horſe, apparel'd like a Bride, and is carry'd round about the City deck'd with Jewels and Flowers, having a Looking-glaſs in one hand, and an Arrow in the other, ſinging all the way, That ſhe is going to ſleep with her dear Spouſe. Thus accompanied with her Relations, about One or Two a Clock ſhe goes out of the City to the place for burning of Women, where there is a great ſquare Cave full of dry Wood, and hard by it a Pinacle four or five ſteps up. When the company is come there, they make ready a great Banquet, where the Woman eats with the reſt of the company as joyfully as if it were her Wedding-day; and the Feaſt being ended, they ſing and dance for ſome time. But when ſhe is certified the Fire is kindled by her Order, ſhe leaves the Feaſt, and goes with her Husband's neareſt Kinſman to the Bank of the River *Nigondin*, where ſhe ſtrips her ſelf of her Jewels and fine Cloaths, and gives them to her Parents or Kindred; and then covering her ſelf with a Cloth, ſhe throws her ſelf into the River, ſaying, *O wretches, waſh away your ſins.* After ſhe is come out, ſhe goes with her Husband's Kinſman to the Pinacle of the ſquare Cave, where the Fire is made, and having talk'd to the People, another Woman anoints her Head and all her Body with Oil, and then throws the Pot and Woman into the Fire; whereupon the People round about the Cave, throw at her great pieces of Wood to haſten her death. And after this, all their mirth is turn'd into bitter howling and weeping. When any great Man dies, his Wife, with all his Slaves, with whom he has had Carnal copulation, burn themſelves with him. Among the meaner ſort of People, the Wife claſps the dead Husband about the Neck, until a Maſon builds a Wall round about them; and ſhe being ſtrangled, the Wall is finiſh'd over their Heads, and ſo they lie buried both together.

After what manner.

Another way of Wives dying with their Husbands.

About ſix days Journey from *Bezeneger* is the place where they get Diamonds, which is a large Plat of ground compaſs'd with a Wall, which they us'd to ſell for ſo much a foot ſquare, and dig for Diamonds; whereof the leſſer are for them, and the bigger for the King. But they have not got any there now of a long time, becauſe the rightful King being put to Death, there is great diviſion in the Kingdom, and *Bezeneger* is left almoſt deſolate. This City is 24 Miles in compaſs, in which there is a very ſtately Palace for their Kings, having nine Gates, which are kept with a Guard of Porters. After two Months he went for *Goa*, in the company of two *Portugal*-Merchants, with two Palankins or Litters, and eight Falchines to carry them. He bought two Bullocks, one to ride on, and the other to carry his Proviſion, which they ride on there like Horſes; but the Burden-Bullock grew weak and cou'd not go, and the other going through a River, got to a little Iſle in the middle, where I could not come at him, and ſo I was forc'd to travel on foot till I met with ſome Falchines to carry my Victuals. At laſt he got ſafe to *Ancola*, which is Tributary to the King of *Bezeneger* to *Goa*. The Merchandize from *Bezeneger* are *Arabian* Horſes, Velvets, Damasks and Sattins, China, Saffron and Scarlets. And for their Commodities, they have in *Turky* Jewels, and Pagodies, which are Ducats of Gold. The Apparel in this City is Velvet, Sattin, Scarlet, and long Hats made of them: They have Breeches like the *Turks*, and at their Ears great plenty of Gold hanging.

Men ride on Bullocks, and uſe them as Pack-Horſes.

Their Winter is our Summer.

At *Ancola*, one of my Companions ſtaid all Winter, which begins there in *May* the 15th, and laſts to the end of *October*, but I went for *Goa* with ſome Merchants and Soldiers in a Palankin, with eight Falchines to carry me; and from *Goa* I went for *Cochin*, which is a Voyage of 300 Miles. Between theſe two Cities there lie three Forts belonging to the *Portugueſe*, call'd *Onoz* and *Mangalor*, and *Bazelor*, where is good ſtore of Rice that's carried to *Goa*. And from thence you go to *Cananor*, out of which Kingdom, when they are at peace with the *Portugueſe*, is carried *Cardamomum*, Pepper, Ginger, and great quantities of *Archa*, a Fruit about the bigneſs of a Nutmeg, which the *Indians* eat with the Herb Bettel, made up with the Lime of Oyſter-ſhells; which, they ſay, makes the ſpittle red, and gives them a ſtomach. From *Cananor* you go to *Cranganor*, a Country full of Thieves, who divide the Spoil with the King of *Calicut*; ſo that there is no ſailing there but with great Ships well arm'd.

Forts of the *Portugueſe*.

Bettel much eaten in the Country.

From

Cochin the chief place for Spices and Pepper.

From *Cranganor* we came to *Cochin*, 15 Miles diſtant, the chief place that the *Portugueſe* have in the *Indies*, where is the greateſt Trade of Spices, Drugs, and all other Merchandize; and within the Land is the Kingdom of Pepper. In *Cochin* there are two Cities, whereof one belongs to the King of *Portugal*, and the other to the King of *Cochin*, a *Pagan*, in whoſe Country are many Chriſtians of *St. Thomas*'s Order. All Chriſtians through the *Indies*, that come from the Weſt, are call'd *Portugueſe*; and they that marry in *Cochin* have Offices, and great Privileges, in the two Commodities they deal with in that place, which are Silk that comes from *China*, and Sugar that comes from *Bengala*, for the married Citizens pay no Cuſtom for theſe Commodities, and for others only 4 *per Cent.* whereas all ſtrangers pay 8 *per Cent.* to the King of *Portugal*.

Amochi and *Nairi*.

The King of *Cochin* keeps but 70000 Men in Arms, whereof ſome are call'd *Amochi* and *Nairi*, who are deſperate Fellows, and run upon any danger for the honour of their King. They go naked from the Girdle upwards, with Targets and naked Swords, and have their Wives in common. The King's Children here do not inherit after their Father, becauſe perhaps they were begot by ſome other Man, but the Sons of the King's Siſter, or ſome other, who are certainly of the Blood Royal.

The *Nairi* and their Wives make ſo great holes in their Ears, that one may put his arm into them.

Coulam.

Chriſtians.

The Ships go from *Cochin* to *Portugal* every Year, on the 5th of *December* or *January*. From *Cochin* we went to a Fort call'd *Coulam*, 72 Miles diſtant, and from thence to Cape *Comori*, where endeth the Coaſt of the *Indies*: And along this Coaſt to the low Land of *Chiloa*, for 200 leagues, the People are Chriſtians.

The way of fiſhing for Pearls.

The prizing of Pearls by Caracks, each of which is four grains.

The Sea that lieth between the Coaſt from the Cape *Comori* to *Chilao*, they call the fiſhing for Pearls, which begins in *March* or *April*, and laſts 50 days, but every Year they change the place. When the time of Fiſhing draws near, they ſend good Divers to diſcover where the greateſt heaps of Oyſters lie under water, and right againſt that place they make a Village with Houſes, and a Bazazo of Stone, which ſtands as long as the Fiſhing-time laſts, and is furniſh'd with all Proviſions. The Fiſhermen are all Chriſtians, and pay a Duty to the King of *Portugal* and the Friars of *St. Paul*, and are defended from Rovers with three or four Fuſts. I ſaw the manner of their fiſhing, which is this: Three or four Barks go together, with 7 or 8 Men in a Bark, and anchor in 15 or 18 fathom water, the ordinary depth of that Coaſt; and then they caſt a Rope into the Sea with a ſtone faſten'd to the end of it, and one that hath his Ears and Noſe well ſtopt and anointed with Oil, and a Basket under his arm, goes down by the Rope to the bottom of the Sea, and fills the Basket as faſt as he can, and when it is full he ſhakes the Rope, and his Fellows in the Bark hale him up with the Basket. And thus they go one by one, until they have laden the Bark with Oyſters, and at Evening they come to the Village, where they lay their heap of Oyſters diſtant from one another, and when the fiſhing is ended, every company ſits round their own heap and opens them, and gather all the Pearls they can find in them; on which the *Chitini*, being expert in them, ſet a price, according to their Caracks, Beauty and Goodneſs, thoſe that are round and large being of greateſt value, and there are Merchants ready to buy them all at the prices ſet.

In this Sea of fiſhing for Pearls, there is an Iſle call'd *Manar*, between which and *Zeilan* all Goods are firſt carried in ſmall Ships for the ſhallowneſs of the Chanel, and then laded into great Ships to go for the *Indies*; but thoſe that go thither Eaſtward paſs by the Coaſt of *Coromandel*.

Zeilan.

The cutting and gathering of Cinnamon.

Zeilan is an Iſle bigger than *Cyprus*, diſtant from Cape *Comori* 120 Miles over-thwart, wherein there grows fine Cinnamon, Pepper, Nuts and Arochoe. There alſo they make great ſtore of Cairo for Cordage, and there grow cryſtal Cats-eyes. I ſaw the manner of gathering Cinnamon, which is this: We went to a Wood about three Miles from the City, where was ſtore of Cinnamon-trees among other wild Trees; and in the Month of *March* and *April*, when the ſap goes up to the top, they cut the Bark off the Tree from knot to knot, and then take it away, laying it in the Sun to dry, and the Tree dieth not, but has a new Bark againſt the next Year, and that which is gather'd every Year is the beſt Cinnamon. And in this Wood there groweth alſo much Pepper.

Negapatan.

St. Thomas's House.

From *Zeilan* we went to *Negapatan*, and from thence towards the Eaſt 150 Miles; We came to the Houſe of *St. Thomas*, a Church much eſteem'd by the *Pagans*, for the many Miracles which are reported to be done by that bleſſed Apoſtle; near to which Church the *Portugueſe* have built a City, which is one of the faireſt in that part of the *Indies*.

In *Andeman* are Caniballs.

As I return'd in 1566. I went from *Goa* to *Malacca*, which is 1800 Miles, and paſs'd through the Chanel of *Nicubar*, and from thence to *Pegu*; there is an infinite number of Iſles call'd *Andeman*, which are inhabited with Savage People that eat one another, and if any Ship be loſt on theſe Iſles, every Man in it is eaten up. As I came from *Malacca* through the Chanel of *Sambrero*, I paſs'd that way, and there came two of their Barks laden with Fruit to our Ship; they would neither come into our Ship, nor take Money for the Fruit, but when we let down into their Bark ſome pieces of old Linen, they faſtned to the Rope ſo much Fruit as they thought them worth, which we hal'd into our Ship.

Siam.

Siam was beſieg'd in 1567. by the King of *Pegu*, 21 Months, with an Army of 1400000 Men, and was taken by treachery, one of the Gates being left open for him to enter in: Whereupon the Emperor of *Siam* poyſon'd himſelf, and his Relations and Nobles were carried Captive to *Peru*, where I was when the King return'd in triumph, with many Elephants laden with Gold, Silver and Jewels, and Noble Priſoners.

I went from *Malacca* to *St. Tome*, on the Coaſt of *Coromandel*, but going away in the Night without Leave, we made no Proviſion of Water, and could not take any in for 42 days, till we arriv'd at *Oriza*, 500 Miles beyond *St. Tome*, and many of our Men were ſick, and died for want of Water.

The Kingdom of *Oriza*, and the River *Ganges*.

Strong Tides.

When *Oriza* was govern'd by its lawful King, 25 or 30 Ships were uſually laden every Year in that Port with Rice, white Cloth, Butter, Lacca, Pepper, Ginger, Mirabolans, Cloth of Herbs; but ſince that time it has been conquer'd by the *Great Mogol*, who ſets a great Cuſtom on the Commodities. From *Oriza* I went towards *Bengala*, and having row'd along the Coaſt 54 Miles, we enter'd into the River *Ganges*; and we row'd to *Satagan* from the mouth of that River, when the Tide flows, for there is no rowing againſt the ſtream, which is very ſwift. By the way there is a Port call'd *Buttor*, where they make a Village for Trade, and burn it when the Ships go off.

The Commodities laden in *Satagan*.

The People worſhip *Ganges*.

The ceremony of their Burial.

In the Port of *Satagan* 30 Ships are uſually laden every Year with Rice, Lacca, Sugar, Long Pepper, Oil of *Zezelyne*, and other Commodities. Here the Merchants buy and fraight Ships, with which they travel up and down the River *Ganges* to Fairs, and make great profit. The People here within Land worſhip the River *Ganges*, for when any one is ſick he is brought to the Bank of it, where they make a ſmall Cottage, and every day wet him with the water, whereof many die; and when they are dead, they half roaſt their Body with a Fire made of Sticks, and then, with an empty Jarr tied about their Neck, they throw them into the River.

From Port *Piqueno* I went to *Cochin* and *Malacca*, and thence I ſail'd for *Pegu*, being 800 Miles diſtant; and after three Months our Ship was without Victuals, and the Pilot told us we were not far from *Tanaſary* in *Pegu*, which we found not to be true.

Tanaſary.

Nype Wine good for the Pox.

Strange Tides

The King's Palace in *Pegu*.

Four white Elephants kept.

Tanaſary is ſituate on a Rivers-ſide, which runs into the Sea; and there is a Village call'd *Mirgim*, in whoſe Harbour every Year they lade ſome Ships with *Verzine*, *Nypa*, *Benjamin*, Cloves, Nutmegs and Mace, which come from the Coaſt of *Siam*. But the greateſt Merchandize is *Verzina* and *Nypa*, which is an excellent Wine made of the Flower of a Tree call'd *Nyper*, whoſe Liquor they diſtil, and the Drink is clear, good for the Stomach, and is a certain Remedy for the *French-Pox*: For tho' the Perſon be rotten with it, this Liquor will cure him if he drinks good ſtore of it, as I ſaw prov'd in a Friend, whoſe Noſe began to drop away. From the ſaid River, having endur'd great hardſhip for want of Victuals, and thence to *Martavan*, from thence we went in Barks like our Pilot-Boats, which go as ſwift as an Arrow out of a Bow when the Tide runs with them, but when it turns they draw to a Bank, and lay the Barks on high in the Land. The ſudden encreaſe and decreaſe of the Water makes a horrible noiſe, which they call a *Macareo*. At laſt we arriv'd at the City of *Pegu*, in the Kingdom of the ſame Name, where the Merchants have all one Houſe call'd *Godom*, in which they put their Goods of value. There is a new City beſides the old, in which is the King's Palace, Wall'd and Moated about; the Lodgings within are of Wood gilded, with fine Pinacles, and much curious Work, cover'd with Plates of Gold. The King of *Pegu*, among his other Titles, is call'd the King of the white Elephants, whereof he keeps four, every one of which is kept in a Houſe gilded all over, and is ſerv'd in Veſſels of Silver and Gold. He has 4000 Elephants of War, and to their upper Teeth is faſten'd Pikes of Iron, wherewith they fight. They hunt them by riding on Female Elephants, who draw in the wild Males by the ſmell of their Tail into a Trap; and when they are alone, they rage till they are weary, and then are forc'd into a Houſe, where they are tam'd.

The great ſtrength of the King of *Pegu*.

The great ſtrength of the King of *Pegu* conſiſts in his Elephants when they go to Battel, for they ſet on their backs a Caſtle of Wood, bound on with Bands under their Bellies, and in this Caſtle four Men ſit to fight with Harquebuſſes, Bow and Arrows, Darts and Pikes. They keep good order in their Armies, having 4 ſeveral Squares of Elephants, Horſemen, Harquebuſſers and Pike-men, but their weapons are naught except their Harquebuſſes, which are excellent, and ſome Ordnance of good Metal. He is the greateſt King on Earth, for he hath 26 Kings under him, and can bring into the Field a Million and a half of Men. He has no Navy by Sea, but for People, Dominions, Gold and Silver, he far exceeds the Great *Turk*; for he hath divers Magazines full of Treaſure, and he is Lord of the Mines of Rubies, Saphires and Spinels. Near his Palace there is an unvaluable Treaſure in a Court Wall'd round, which every one may ſee. In one Houſe there is a very large Statue of a Man in Maſſy Gold, and on his Head a Crown of Gold beſet with Rubies and Saphires, and round about him are four little Children of Gold. In another is a Statue of Silver, which is as high as the Roof of a Houſe, and has a Crown on his Head like the firſt. In the third there's a Statue of Braſs, with the like Crown on his Head: And in a fourth there's a Statue of *Ganza*, (which is a mixture of Copper and Lead) with the like Crown on his Head as the firſt.

He is the greateſt King on Earth for Armies and Riches.

The Order of Juſtice.

The King ſits every Day in Perſon on a high Tribunal, to hear the Suits of his Subjects, who bring their Supplications, written with a ſharp Iron on long leaves of a Tree, and Preſents according to the value of their Suit. The Secretary reads their Petitions before the King, who commands to take the Preſents if he grants their deſire; but if he refuſes it, he takes no Preſent.

The Commodities ſold in *Pegu*.

The moſt valuable Commodity that's brought to *Pegu* comes from *St. Tome*, which is Cloth made of Bombaſt, ſo woven and painted, that the more it is waſh'd the colours are the more lively; which is ſo highly valu'd in *Pegu*, that a ſmall Bale of it is worth one or two thouſand Ducats. There goeth alſo from *St. Tome* a Ship laden with Yarn died red with a Root, ſo that it never changes the colour; and if it ſets out *September 6.* they make a ſure Voyage, but if it ſtays ſome days after the 6th, they are catch'd with contrary Winds, which blow in one place three or four Months.

There goes alſo from *Bengala* another Ship laden with Bombaſt of all ſorts to *Pegu*. From *Malacca* to *Martavan*, there come ſmall and great Ships laden with Pepper, China, Camfora, and other Wares. From *Mecca* the Ships bring Woollen Cloth, Scarlet, Velvet, Opium and Chickino's. From *St. Tome* going to *Pegu*, (which is 300 miles) they ſail up a River to *Coſmin*, where the King's Officers come and take the note and marks of all the Merchants Goods, and convey them to the King's Houſe at *Pegu*, until they have receiv'd the Cuſtom. All Merchants that travel through the *Indies* muſt take all manner of Proviſions with them, for there are no Inns in that Country. From *Coſmin* to *Pegu* they ſail in ſix hours with the Flood, and in eight days to *Macceo*, 12 miles from *Pegu*, where they lade their Goods on Carts drawn with Oxen, and the Merchants are carried in a Litter call'd *Deling*. The Cuſtom of *Pegu*, and Fraight thither, is about 20 or 22 *per Cent*.

Merchants carry Proviſions becauſe there are no Inns.

Brokers Law for Bankrupts.

There are in *Pegu* eight Brokers, who are oblig'd to ſell all Commodities that come there at the current price: they have two in the hundred, and are bound to make good the Debts of the Goods; and if payment be not made, the Creditor may ſhut up the Debtor in his Houſe, and if he is not able, the Creditor may take his Wife, Children and Slaves, and ſell them. The current Money in this Kingdom is call'd *Ganza*, which is ſtamp'd not by the King but the Subjects; and with that Money you may buy Gold, Silver, Rubies, and Musk, for there is no other Money current among them.

Ganza the Money, and the way of taking it.

This *Ganza* goeth by weight of *Byza*, which makes a hundred weight of *Ganza*, which is about half a Ducat; and this *Byza* is always the ſame, tho' the price of Gold and Silver varies. He that Winters there muſt take all his payment in *Ganza*, wherewith he may buy and ſell every thing: and when he takes this Money, he muſt give it to a publick Weigher, and two *Byza's* a Month; and he is bound to make it all good, otherwiſe the Merchant may be deceiv'd in the weight and falſeneſs of the Money.

Merchandize that goes out of *Pegu*.

This Money is ſo heavy, that 40 *Byza's* is a good Porter's Load, and it muſt be paid by the Common Weigher of Money for the Merchant that buys any thing. The Merchandize that go out of *Pegu*, are Gold, Silver, Rubies, Saphires, Spinels, Benjamin, Long Pepper, Lead, Lacca, Rice-Wine, and ſome Sugar; for tho' they have abundance of Sugar-canes, many of them are eaten by the People and the Elephants. Beſides that, many of them are ſpent in making a Covering for their Pagods, which they plaiſter with Lime, and over-lay with Leaf-gold every fifteen Years; which makes Gold the dearer in *Pegu*.

Rubies cheap.

There are four Brokers of Jewels and Rubies, who have them all in their hunds, and in ſuch quantities, that they ſell them very cheap. When the Merchant has agreed for them he may carry them home, and take the advice of other Merchants; and if he does not like his bargain he may return them, without any loſs: Which is counted ſuch an affront by the Brokers, that they commonly afford good Penniworths, eſpecially to thoſe that underſtand not Jewels, to keep up their Credit.

Their ſecret way of making bargains.

At the buying of theſe Jewels, many Merchants are preſent; but the bargain is made between the Broker and the Merchant, by holding their hands under a Cloth, and touching the Joints of their fingers, to ſignify what is ask'd and bidden, which the ſtanders by know nothing of, becauſe it might breed a Controverſy among them.

Touffon a great Storm at Sea.

Intending to return to *Venice*, I went aboard a Ship of *Bengala*, and met with a cruel Storm call'd *Touffon*, (which happens every ten or twelve Years in theſe Seas) which carried away our Sails, Yards and Rudder, and forc'd us to throw our Maſt over-board. After this Storm we diſcover'd an Iſland call'd *Sondiva*, where we had plenty of ſalted Kine, wild Hogs, Hens and Rice, at cheap rates. From *Sondiva* we went to *Chatigan*, and thence to *Ormuz*, where I and Mr. *Berettin* fraighted a Bark to go for *Baſora* for ſeventy Ducats, and there we ſtaid forty days waiting for a Caravan of Barks, which conſiſts of twenty five, or thirty, becauſe in the Night we faſten our Barks to the banks of the River, and then we muſt keep a ſtrong Guard to ſecure our Goods from Thieves; and at laſt we arriv'd at *Babylon* in fifty days. And there we ſtaid four Months, until the Caravan was ready to go over the Deſert for *Aleppo*, and bought a Tent, and Horſes and Mules, and Victuals for them. We had alſo thirty two Camels laden with Commodities, at two Ducats a Camel, and three Men to ſerve us by the Way for five Ducats a Man. The Caravan travels twenty Miles a day, and reſts about Two in the Afternoon. We wanted no Water becauſe it rain'd, and we eat freſh Mutton every day, having bought twenty Sheep at *Babylon*, which the Shepherds that came with us with their Flocks did keep, and kill for us. In thirty ſix days we paſs'd over the Deſert to *Babylon*, and ſaw neither Houſe, Trees nor People. The Caravan has certain Stations where the Wells are; and there always goes with it a Captain to do Juſtice, and every Night a Watch is kept about it. From *Aleppo* we went to *Tripely*, and thence to *Venice*, where we arriv'd *November* 5. 1581.

The way of providing to go over the Deſert from *Babylon* to *Aleppo*.

The way of recovering the Goods of the Dead in theſe Countries.

When you travel in the *Indies*, you muſt always keep your Will about you; and there is a Houſe of the *Portugueſe*, call'd the School of *Santa Miſericordia*, where it may be Regiſtred. Among the *Moors* (i. e. the *Mahometans*) and *Pagans*, there goes always a Captain along with you to do Juſtice, who has Authority to recover the Goods of thoſe that die in their Voyages, if their Wills be Regiſtred in the ſaid Schools.

There goeth alſo in theſe Voyages ſome Merchants, who are Commiſſaries of the School of *Miſericordia*, that if any Merchant die, and hath given Order in his Will that the School of *Miſericordia* ſhall have his Goods to ſell them, they ſend the Money by Exchange to the School of *Miſericordia* in *Lisbon*, with that Copy of his Will; and from *Lisbon* they give Intelligence to any Part of *Chriſtendom*, and the Heirs of ſuch a one coming thither, with a Teſtimonial that they be Heirs, ſhall receive there the value of the Goods without loſs. But every Chriſtian that dies in *Pegu*, loſeth a third part of his Eſtate to the King and his Officers, but the reſt is honeſtly paid.

Gaſparo Balbi *his Voyage to* Pegu, *and Obſervations there gather'd out of his* Italian *Relation*.

A River of red Water.

A Fountain of Pitch.

IN 1579. *Balbi*, a Jeweller of *Venice*, travell'd with the Caravan from *Aleppo* towards *Bagdat*, and came by the way to *Bir*, or *Abir*, on the Banks of *Euphrates*, where we met with great Cold and Snow in *January*, and there embark'd our Goods for *Felugia*; and thence to *Elder*, the River *Cabur* of a red colour, *Elerſi* and *Giuba*, near which is a Fountain of Pitch, wherewith the Natives build their Houſes, daubing it on the boughs of Trees, and at laſt to *Felugia*, and thence paſſing by the Ruins of *Old Babylon* we came to *Bagdat* in 49 days from *Bir*.

Tigris ill ſcent.

A hot deadly Wind.

In *March* 1580. we embark'd from *Bagdat* towards *Balſara*; and at *Encaſerami*, each Mariner caſt a whole Bisket for Devotion to one buried there: And there the River *Tigris* had a very noiſome ſcent, and we were in danger by a Whirlpool. At *Corno* we met with a very hot Wind, which ſtrangled four of our Company; and thence we came to *Balſara*. The reſt of this Voyage to *Negapatan* is here omitted.

The Jeſuits Miracle, a caſual accident.

Stinking Devotion.

Deſperate Men.

In *May* 1582. we ſail'd to *St. Thomas*, ſituate in thirteen degrees and half, wherein are three Chriſtian Churches; and that belonging to the Jeſuits is ſaid to be finiſh'd by a Miracle, for when Money fail'd, the Sea caſt up a piece of Timber, of the ſame length with the Church, which ſerv'd for that end. Without this City is another Inhabited by *Pagans*, who bury the Wife alive with the Husband, and worſhip the figure of a Cow and a Serpent. And the *Bramins*, with the aſhes of Cows-dung burnt, daub the *Pagans* Forehead and Noſe, which out of Devotion to the Cow they will not waſh off that day. The worſhippers of a Pagod having liv'd a whole Year in carnal Pleaſures, are wont to cut off pieces of their own fleſh, and ſhoot them up in the air; and when they can live no longer, they cut their own throat, and ſo ſacrifice their Body to the Pagod. Some People from *Chiava* ſtand in the way with a weapon, and kill as many as they can, until ſome body kills them, being weary of their Life.

I ſaw one Cuſtom there which is us'd by thoſe who make a Vow to a Pagod, and they are drawn up with hooks faſtned to their ſhoulders to the top of a high Tree with a Croſs-bar, where having ſaluted the Pagod three times they let them down, and colour the Tree with their Blood, in reverence to the Pagod; which they do to obtain health, or any thing elſe.

They have another Feaſt by Night: When in a Street full of light, three or four take one another by the hands, and having Baskets full of Rice and Milk, they caſt the Meat behind them, and ſays the Devil eats it; but they never look back leſt they die, as they think they ſhall.

Dangerous Tygres.

On the 5th of *October* we came to *Coſmi*, in ſixteen degrees one third, where are many Parrots, wild Boars, Apes and Tygres, which often devour Men and Beaſts by Night.

Audience before the King.

His Bounty.

After this I came to the Old City of *Pegu*, in ſixteen degrees one third, where I and the Druggerman, or Interpreter, having three times fallen proſtrate on the ground, were admitted to the preſence of the King, where I preſented ſome Emeralds to my Interpreter, who having made his Rombee, *i. e.* his Reverence, gave them to the King's Interpreter, and ſo they came to the King's hand; and then being ask'd I told him my Name, whence I came, what *Philip* King of *Portugal* was, and what a Victory the *Venetians* had obtain'd over the *Turks*, making a Rombee at every word: And the King gave me a Cup of Gold, and five Pieces of *China* Damask; and order'd me to be paid out of his Treaſury, and that my Goods ſhould be Tax-free.

Terrible Execution.

Combat of Kings.

400000 Men ſlain.

The King of *Avna* conſpir'd againſt the King of *Pegu*, his Nephew, with his chief Courtiers, who ſent to *Avna* one of his Domeſticks, to clear himſelf from all ſuſpicions conceiv'd againſt him; but he was murder'd by *Avna*, who truſted to the Grandees of *Pegu* for Victory. Whereupon the King of *Pegu* declar'd War againſt *Avna*, and Order'd his Grandees to be Impriſon'd, and to be burnt alive on a large Scaffold, with their Wives and Children; which I ſaw, hearing with great pity their lamentable ſhrieks and cries. And after this, he encamp'd without the City with 300000; where I ſaw the King upon an Elephant cover'd all over with Gold and Jewels, with a Sword ſent from *Goa*, and while the Guards fought one another, he fought the King of *Avna* hand to hand, firſt with Harquebuſſes, then with Darts, and at laſt with the Sword, and his Elephant having broke his right Tooth with charging that of *Avna*, he ſo engag'd with the other Elephant, that the King of *Pegu* kill'd the King of *Avna*, and mounted on his Elephant, his own being kill'd. And when the Army of *Avna* ſaw their King dead, gave over fighting and begg'd Pardon, which the King of *Pegu* granted, and found upon a Muſter that he had loſt 200000 Men, which loſs was little leſs than that of *Avna*.

The Voyage of Mr. Ralph Smith, *Merchant of* London, *to* Ormuz, *and ſo to* Goa *in the* Eaſt-Indies; *to* Cambaia, Ganges, Bengala; *to* Bacola *and* Chonderi, *to* Pegu, *and* Jamahay *in the Kingdom of* Siam, *and back to* Pegu; *and thence to* Malacca, Zeilan, Cochin, *and all the Coaſt of the* Eaſt-India.

Ormuz barren, but of great Trade.

Womens ſtrange Apparel.

IN 1583. I *Ralph Fitch*, Merchant of *London*, went with Mr. *Newberry*, *Leeds* and *Storey*, for the *Eaſt-Indies*, and having paſs'd through *Tripoly*, *Aleppo*, *Birra* and *Felugia*, we came to *Babylon*, or *Bagdat*, which is a place of great Traffick for ſtrangers, being the way by which the Caravans paſs to *Perſia*, *Turkey* and *Arabia*. Here are great ſtore of Victuals which are brought down the River *Tigris*, upon Rafts made of Goats Skins, blown full of Wind, and Boards laid upon them. From thence we came to *Baſora*, which ſtands near the Gulf of *Perſia*, and is a Town of great Trade for Spices and Drugs that come from *Ormuz*; and there is great ſtore of Wheat, Rice and Dates, wherewith they ſerve *Babylon* and *Ormuz*, and all the Parts of *India*. From *Baſora* we came to *Ormuz*, where there grows nothing but Salt, being furniſh'd with all Neceſſaries from *Perſia*, about twelve Miles diſtant; yet here is a great Trade of Spices, Drugs, Silk Tapeſtry of *Perſia*, ſtore of Pearls, which come from *Baharim*, and *Perſian* Horſes which ſerve all *India*. The Women here wear on their Noſes, Ears, Necks, Arms and Legs, many Rings ſet with Jewels, and a long Bar of Gold on the ſide of their Noſes. Here we were put in Priſon, and ſent to *Goa*, and by the Way we came to *Na-Malucco*, a place of great Trade for Spices, Drugs, Silk, Elephants Teeth, *China*-Ware and Sugar. Here they worſhip a Cow, and will kill nothing that has life, and burn their dead Bodies, for fear that the Worms that are bred of them ſhould lack ſuſtinance.

Goa.

Bellargan.

Gulconda.

When we came to *Goa* we were caſt into Priſon, and examin'd before the Juſtice, who charg'd us to be Spies, but could prove nothing againſt us: whereupon we were ſet at liberty finding Sureties, to whom we paid 2150 Ducats, which we could not have again, but were threatned with the Strapado; and therefore we ran away, and went on foot two days in great fear, having no Guide. The firſt Town we came to is call'd *Bellargan*, where is a great Market of Diamonds, Rubies, Saphires, and many other ſoft Stones. From thence we went to *Biſapor*, where the King keeps his Court, and there is great ſtore of Gold and Silver; and then to *Gulconda*, where be the Diamonds of the old Water.

Bellapore.

Agra and *Fatipore* great Cities.

In theſe Parts is a Port call'd *Muſulipatan*, whither come many Ships out of *India*, *Pegu* and *Sumatra*, laden with Pepper, Spice, and other Commodities. Thence we went to *Bellapore*, a populous Country, where is good ſtore of Cotton-cloth, Corn and Rice. Here we found Boys of eight or ten Years, and Girls of five or ſix, married, who feaſt, pipe and dance, on the Day of Marriage, but lie not together till they are ten Years old; which they do for this reaſon, That if the Husband dies, and the Wife be burn'd with him, the Children may have a Father-in-Law to bring them up. Thence we came to *Mandovay*, and ſo to *Agra* and *Fatepore*, where the Great *Magor* keeps his Court. In theſe two Cities the King keeps a thouſand Elephants, thirty thouſand Horſe, fourteen thouſand tame Deer, eight hundred Concubines; either of them is bigger than *London*. Hither is a great reſort of Merchants from *Perſia* and *India*, and much Merchandize of Silk, Cloth, Rubies, Diamonds and Pearls; Mr. *Newberry* went homewards, and I left Mr. *Leeds*, the Jeweller, in *Fatepore* with the King, who gave him a Houſe, five Slaves, and 6*s.* a Day.

Superſtitious Cuſtoms of Bramins.

From *Agra* I went to *Satagam* in *Bengala*, in company with 180 Boats laden with Salt, Opium, Lead, Carpets, and other Commodities, down the River *Jemena*. Here the *Pagans* eat no fleſh, nor kill any thing; they pray in the water naked, dreſs their Meat and eat it naked, and for their Penance they lie flat upon the Earth, riſe up and turn themſelves thirty or forty times, lift up their hands to the Sun and kiſs the Earth. The *Bramins* mark themſelves with yellow powder, and ſo do their Men and Women mark themſelves in the face.

Pilgrims go to the River *Ganges*.

From *Agra* I came to *Prague*, where *Jemena* enters into the River *Ganges*. Here be many Beggars highly valued by the People: I ſaw one who could cover his Privities with the hair of his Head, and his nails were two Inches long, waited on with eight or ten, who will not ſpeak to the King. Thence we went to *Bannaras*, where is great ſtore of Cotton-cloth and Saſhes; hither come *Pagan* Pilgrims from far Countries, to worſhip their Images ſtanding in Houſes by the River *Ganges*, which are made like Lyons, Leopards, Monkies, Peacocks and Devils. They waſh themſelves early in the River, and give ſomething to the Old Men that ſit there praying; and then they go to their Images, and give them of their Sacrifices, while the Old Men are praying, and ſo they are Holy. They throw water upon great carved Stones, and then lay upon them Rice, Wheat or Barley. They alſo go down into a Well to waſh themſelves, that their Sins may be forgiven, for they ſay God waſh'd himſelf there. They never pray but in the water, and then waſh themſelves over Head, and drink of the water three times, and ſo go to the Idols in the ſaid Houſes; and ſome of them are fann'd in warm Weather, eſpecially one, who they ſay gives them all things.

Pythagorean Superſtition.

Cloth of Graſs.

From *Bannaras* I went to *Patanaw* down the River *Ganges*, where they dig deep Pits in the Earth, and waſhing the Earth in great Bowls, they find Gold in it. Here is a great Trade of Cotton-cloth, and Sugar, which they carry hence to *Bengala*, much Opium, and other Commodities. From *Patanaw* I went to *Tanda*, in the Country of *Bengala*, where there is a great Trade of Cotton, and thence to the Country of *Couche*, 25 days Journey Northwards, where they have much Silk, Musk, and Cotton-cloth. They kill nothing, but have Hoſpitals for Sheep, Goats, Dogs, Cats, Birds, and all living Creatures, and keep them when old till they die. If a Man bring any thing alive thither, they give Money for it, and keep it in their Hoſpitals. Their ſmall Money is Almonds, which they often eat. Thence I return'd to *Hugeli*, in 23 degrees North Latitude, call'd *Porto Piqueno'*; whence I went to *Angeli* in *Orixa*, where there is much Rice, Cotton-cloth, and Cloth of Graſs call'd *Terva*, Sugar and Pepper, whither they come from *India*, *Sumatra*, *Malacca*, and lade with theſe Commodities.

Cow-tails ſold dear.

About four days Journey from *Couche* is a Country call'd *Bottanter*, and the City *Bottia*, where are Merchants that come from *China*, *Muſcovy* or *Tartary*, to buy Musk, Cambals, Agats, Silk, Pepper and Saffron. They cut the Tails of their Kine, and ſell them very dear, for they are much us'd for bravery in *Pegu* and *China*. From *Chatigan* in *Bengala* I went to *Bacola*, *Serrepore* and *Sumergan*, in all which places there is great ſtore of Cotton-cloth.

From *Serrepore* in 1586. I went to the Bar of *Negrais*, and ſo to *Pegu*, and within three days we came to *Coſmin*, where the Houſes are high built for fear of Tygres; here are great Figs, Oranges, Coco's, and other Fruit. Within the Bar the People live in Boats, which they call Paroes. From *Coſmin*, paſſing by *Medon*, *Delu*, *Cirion*, *Macao*, we came to *Pegu*, which was deſcribed before.

Tallipoies, or Prieſts of *Pegu*.

Their Ordination.

In *Pegu* there are a great many Tallipoies and Prieſts, which preach againſt all Abuſes in their Kiacks or Churches; when the People enter into them, they waſh their feet with Water that ſtands at the Door, and then lift up their hands to their Heads, firſt to the Preacher, and then to the Sun, and ſo ſit down. After they have been at School till they are twenty Years old, they are examin'd by *Rouli* the High Prieſt, whether they will leave their Friends, and the company of Women, to take upon them the Habit of a Tallipoie? And if they be content, they ride upon a Horſe richly Apparell'd, with Drums and Pipes; and after that they take the Habit of a Tallipoie, and become Prieſts. They go about with a great Pot, and ask nothing; but when they come to the

Door,

Their way of begging. Their Feaſts of the Moon.

Door, the People give them ſomething or other. They keep their Feaſts by the Moon, and the greateſt when it is New-moon; and then the People ſend Rice, and other things, to the Kiack, with which all the Tallipoies of that Church feaſt. When they preach, the People carry Gifts into the Pulpit, which one ſitting by receives from them.

At *Caplan* are Rubies.

Caplan in *Pegu* is the place where they find Rubies, Saphires and Spinels, which are dug out of ſome high Hills; but none may come near the Pits but the diggers.

Round Balls us'd in Mens Privities.

In *Pegu*, and all the Countries of *Ava*, the Men wear little round Balls in their Privy Members; for which they cut the Skin, and put on in one ſide, and another in the other, when they are about 25 Years old. This is ſaid to be done to prevent Sodomy, to which they were before addicted.

The Bramas, who are of the Kings, have a black ſpot in their Skins, which none but they uſe.

They have no Beards, which they pluck out with Pincers; they black their Teeth, becauſe a Dog's are white.

A ſtrange Tryal of Suits.

If they have a Suit in Law which cannot eaſily be determin'd, both Parties go into the water with Poles; and he that dives longeſt under water wins the Suit.

Voyage to *Japan*.

600000 Cruſado's employ'd in *China*.

When the *Portugueſe* go from *Macao* in *China* to *Japan*, they carry much white Silk, Gold, Musk and Porcelane, and bring from thence nothing but Silver. They have a great Carack which goes there every Year, and brings from thence above 600000 Cruſado's; and all this Silver of *Japan*, and 200000 Cruſado's more, they employ with great profit in *China*, from whence they bring good Musk, Silk, Copper, Porcelane, and many other things. When they come to *Canton* in *China*, they muſt remain but certain Days, and muſt lie at Night in their Boats.

Gold.

Laban is an Iſle among the *Java's*, whence come the Diamonds of the new Water, which they find in the River, for the King will not ſuffer them to dig the Rock: And the King hath a Maſs of Earth which is Gold, that groweth in the middle of a River; and when the King wants Gold, he cuts part of the Earth and melts it, out of which comes Gold.

From *Malacca* I return'd to *Martavan*, and ſo to *Pegu*, and thence to *Cochin*, where I took Shipping, and went to *Bengala* and *Ceylon*, where the King keeps a Guard of a thouſand Men, and the People burn Cinnamon-wood, and have ſtore of Rubies, Saphires and Spinels, of the beſt ſort; and thence to *Coulam*, *Cochin*, *Goa* and *Ormuz*, which places have been above deſcribed.

Rubies and Saphires.

Pepper.

Pepper grows in many Parts of the *Indies*, eſpecially about *Cochin*: The Shrub is like our Ivy-tree, which twines about ſome Tree or Pole to keep it up. They gather it green, but when dry 'tis black.

Ginger.

Ginger groweth like Garlick, the Root is Ginger, and groweth in many Parts of *India*.

Cloves.

Cloves come from the *Molucco's*; their Tree is like our Bay-tree.

Nutmegs and Mace.

Nutmegs and Mace grow together, and come from the Iſles of *Banda*; the Tree is like our Walnut-tree.

White Sandol is a very ſweet Wood; it comes from the Iſle of *Timor*.

Camphire.

Camphire is very precious among the *Indies*; that which is compound comes from *China*, but the beſt from *Borneo*.

Lignum-Aloes comes from *Cochin-china*; Benjamin from *Siam* and *Jangomes*.

Long-Pepper grows in *Bengala*, *Pegu*, and the Iſles of the *Java's*; and Musk comes from *Tartary*.

Amber.

Amber is thought by moſt Men to come from the Sea, and they find it on the ſhore's ſide.

Rubies.

Rubies, Saphires and Spinels, are found in *Pegu*.

Diamonds.

Diamonds are found in *Biſnagar*, *Agra*, *Della*, and in the Iſles of *Java's*.

The beſt Pearls come from *Baharim*, the worſe from *Piſcaria* and *Agnam*, on the South Coaſt of *China*.

Spodium, and many other Drugs, come from *Cambaia*.

But to return to my Voyage: From *Ormuz* I went to *Baſora*, and ſo to *Babylon*; and thence by Land I came to *Moſul*, which ſtands near to *Niniveh*, wholly ruin'd now. And thence to *Merdin* and *Orfa*, where the *Moors* have a great Opinion of *Abraham*, who they ſay did once dwell there. Thence I went to *Bir*, and ſo to *Aleppo* and *Tripoly*, where I found an *Engliſh* Ship, in which I came to *London* in 1591.

Indian *Obſervations, gather'd out of the Letters of* Nicolas Pimenta, *Viſitor of the* Jeſuits *in* India, *and many others of that Society.*

Audience before the King of *Gingi*.

WE went for *St. Thomas* in 1597. travelling twelve days in a pleaſant Country; but ſo many and prodigious were the Idols we met with in their Temples, that Superſtition ſeem'd to contend with Ambition. And by the way we ſaw *Cidambaran*, the Mother-City of Superſtition, whither the *Naichu*, or King of *Gingi* was come, who commanded us to be brought into his preſence. Two hundred Brachmans went before us to ſprinkle the Houſe with Holy water, and prevent Sorcery againſt the King, whom we found lying on a Silk Carpet, with a great Chain hanging from his Neck, ſet with Pearls and Gems all over his Breaſt, and his long hair ty'd up, and adorn'd with Pearls. He entertain'd us kindly, and offer'd us Beetle to chew, and diſmiſs'd us with Gifts of Cloth wrought with Gold.

The miſeries of *Pegu*.

The King of *Pegu*, Father of the preſent, was the mightieſt King that ever reign'd there, for he ſubdu'd twelve Kingdoms to his Empire, and could bring into the Field 1060000 Men, taking one out of ten. He reign'd 36 Years in ſo great plenty, that a hundred Ships laden with Rice would not have been miſs'd in his Store; and he had ſuch plenty of Gems, that a Man might have laid out in one Month many Talents of Gold on them. But in his Son's time, by the Murders and Oppreſſions of his Subjects, and the Invaſions of Foreign Enemies, there are found in that Kingdom only a few Men, who, with the King, have betaken themſelves to the Caſtle, which, with Women and Children, are ſaid not to exceed 7000. And in late times they have been reduc'd to ſuch extremity of want, that they did eat Man's fleſh, and ſold it at the publick Shambles; Parents ſpar'd not their own Children, and Children devour'd their Parents. For *Martavan*, a fruitful Country, which yielded yearly a threefold Harveſt, is now made deſolate by the *Siamites*; and *Cochin* and *Malacca*, abounding in Grain, Gold, Silver, Braſs, Rubies and Gems, are loſt. And the King of *Pegu* being beſieg'd by the Kings of *Tangu* and *Arracan*, deliver'd himſelf up (being unable to hold out longer) to the King of *Tangu*, who caus'd him to be beheaded with his Queen and his Son. And after this he went to the Tower, where the King's Treaſure was kept, which was ſo great, that he loaded ſix hundred Elephants, and as many Horſes, with Gold and Gems only, leaving the Silver behind him, which the King of *Arracan* ſeiz'd, exceeding three Millions, beſides many Braſs-Guns in the Caſtle.

The vaſt Treaſure of the King of *Pegu* ſeiz'd.

An Ape worſhipt.

The *Jeſuits* ſay there is a Temple of *Perimal*, in which the *Pagans* worſhip an Ape, whom they report to have been a God, and for ſome Offence to be transform'd into an Ape; and that he leap'd over the Waters upon ſome occaſion, and at every leap made a Hill of Sand for himſelf.

Feaſt of *Perimal*.

Another *Jeſuit* mentions their Superſtitious Opinion about the Sun's Eclipſe, caus'd like that of the Moon, when the Dragon, one of their Conſtellations, biteth them; and therefore they faſt all that day, crying out, The Dragon devoureth the Sun. At the Feaſt of *Perimal* there was ſuch a concourſe of People, that that day's Offering amounted to 200000 Ducats, the King, Queen and Courtiers, being preſent. The Idol call'd *Perimal*, which is a gilded Poll, with an Ape at the foot of it, was drawn by ten thouſand Men, about Midnight, a Mile and a half. The Feaſt of *Cows* was ſolemniz'd a

Month before, for they hold *Perimal* to be the Son of a Cow. 'Twas ſaid the King of *Biſnagar* would make War upon the King of *Tanagor*, but his Death prevented it, his three hundred Concubines being buried with him, who willingly leapt into the flames.

Linſchotten's *Voyage to* Goa, *and Obſervations on the* Eaſt-Indies, *Abridg'd.*

Goa deſcrib'd.

GO A is the chief City of the Oriental *Indies*, in the poſſeſſion of the *Portugueſe*, where the Archbiſhop, the Viceroy, the King's Counſel and Chancery reſide, and govern all other places in the *Indies* ſubject to them. It is the Staple for all *Indian* Commodities, whither all Merchants reſort to buy or ſell, from *Arabia*, *Armenia*, *Perſia*, *Cambaia*, *Bengala*, *Pegu*, *Siam*, *Malacca*, *Java*, *Molucca*, *China*, &c. it lieth in 15 degrees North, and is above three Miles in circumference, being compaſs'd about with a River; on the North-ſide is the Land of *Bardes*, which is high Land, under which the *Portugueſe* anchor, and lade and unlade their Ships. This Land is ſubject to the *Portugueſe*, and is full of Villages inhabited by *Canarys*, who for the moſt part are Chriſtians, but go naked, only covering their Privy-members, and is full of Palm-trees whereon grow Coco's. On the South-ſide is the Land of *Salſette*, planted with People and Fruit like the Land of *Bardes*. Theſe two Lands are Lett by the King of *Portugal*, and the Rents of them pay the Yearly Stipends of the Archbiſhop, Cloyſters, Prieſts, and other the King's Officers. The Town has fair Houſes and Streets, with Gardens and Orchards full of *Indian* Fruits, and hath all ſorts of Cloyſters and Churches as *Lisbon*, only it wanteth Nuns.

The Laws of *Goa*.

The *Portugueſe* here uſe the ſame Laws, in Spiritual and Temporal Cauſes, as in their own Country. There dwell and traffick in the City ſome of all Nations, as *Indians*, *Heathens*, *Mahumetans*, *Jews*, *Armenians*, &c. and every one enjoys the liberty of his Religion, only the *Pagans* are forbidden to burn their Dead, and marry publickly: But if any one hath been Chriſtned, and after that uſes *Pagan* Superſtition, or teaches Hereſy, he is liable to the Inquiſition.

The Soil.

The Iſle is very hilly and barren, and hath nothing to maintain it ſelf but a few Cattel, Hens, Goats, Doves, *&c.* All their Neceſſaries come from *Salſette* and *Bardes*, from *Cambaia*, and the Coaſt of *Malabar*. They have but one Well of freſh Water, a quarter of a Mile without the City, which is carried by Slaves and ſold, to ſerve all the Inhabitants.

The *Portugueſe* there are many of them married to *Indian* Women, and the Children born of them are call'd *Meſtico's*, but the Children of the *Portugueſe* are call'd *Caſtico's*, and they incline to a yellowiſh colour, and in the third Generation they become like Native *Indians*.

The Traffick.

There is daily Traffick to *Bengala*, *Pegu*, *Malacca*, *Cambaia*, *China*; and there is a Meeting of all Nations like a Fair, whither come Gentlemen, as well as Merchants, to buy or ſell *Indian* Commodities. At this Leylon or Outcry, there are Cryers who go about with Gold Chains, Jewels, Pearls, Rings; and Slaves, Men and Women, young and old: all which are daily ſold there at a certain price. As alſo *Arabian* Horſes, Spices, Drugs, ſweet Gums, fine Coverlets, and many curious things out of *Cambaia*, *Bengala* and *China*. And when any one dies, his Goods are here ſold, to do Juſtice to Orphans and Widows. Some get their living by their Slaves, both Men and Women, whereof ſome have 12, 20 or 30, for the Men ſell freſh Water about the Streets for Money, and the Women make all ſorts of Conſerves, and fine Needle-work, and ſell them, and the uſe of their Bodies too, for Money; all which they bring home to their Maſters. Others trade in the exchange of Money, and buy Rials of Eight when the Ships come from *Portugal*, which they ſell in *April*, when the Ships go for *China*, at 25 or 30 in the Hundred profit: And then they receive a Money brought from *Ormuz* call'd *Larrins*, which they exchange again with the *Portugueſe* at 25 *per Cent.* profit for Rials of Eight, who carry theſe *Larrins* with them to *Cochin* to buy Pepper, and other Wares.

There are but two ſorts of People in *India*, married Men and Soldiers, as they call all the common ſort of People. The married Men keep 5, 10, or 20 Slaves, in their Houſe, according to their Quality, who wait upon them with a Hat or Veil when they go abroad, to keep off the Sun or Rain. They are very nice in their Ceremonies of ſaluting one another, and if any one fail in thoſe Punctilio's, they either beat him unmercifully, or cauſe him to be ſtabb'd by their Slaves; for which no redreſs is to be had.

Of the Marriages, and other Cuſtoms of the *Portugueſe* and *Meſtico's*.

When any one is married, there are fifty or a hundred Horſe that ride in good order to the Church, and then follow the Parents and Friends; and in the laſt row the Bridegroom between two Goſſips, and the Bride between two Commeres, upon whom, as they return home again, the People looking out of the Windows throw Roſe-water, with Roſes and Sugar-comfits. Their Slaves having plaid upon Shalmes and Trumpets all the way, take their leave of the Company when the married Couple come to their Houſe, where they ſit at a Window and ſee the Horſemen run ſeveral courſes. After which they go off with the Goſſips, who wiſh them much Joy, leaving only three or four of the neareſt Friends and Relations to dine with the Bride and Bridegroom.

The ſame Ceremonies they uſe at a Chriſtning; but then one on foot carries a Silver Veſſel full of cracklings, with a Wax-candle ſtuck with Gold or Silver, for an Offering: and another carries a Silver Salt-cellar and Lamp, with rich Towels; and the Commeres, with the Midwife and Child, are carried in Litters.

The Soldiers live ten or twelve in a Houſe, and have but one Suit of Cloaths among them, which is wore by one that goes abroad, and then the reſt ſtay at home. They get Money by ſerving in the Fleet, or by revenging the Affronts done to Gentlemen, or by fulfilling the Luſts of the Women, who reward them well.

Of the *Portugueſe* and *Meſticos* Women, their Manners and Cuſtoms.

The *Portugal*, *Meſtico's* and *Indian* Chriſtian Women, ſeldom go abroad except it be to Church, or to viſit a Friend, and then they put on very coſtly Apparel, with Bracelets of Gold and Rings upon their Arms, beſet with precious Jewels and Pearls. The Men are ſo Jealous of them, that they ſuffer no Man that comes to their Houſes to ſee their Wives or Daughters, or to dwell in the Houſe where they are, tho' he be a Friend or near Relation: But moſt of the Women have one or two Soldiers for their Gallants, whom their Slaves fetch to them by night; and ſometimes they Lie with them in the preſence of their Husbands, to whom they give the Juice of *Deutroa*, which makes them ſenceleſs, but as ſoon as their feet are waſh'd with cold Water they revive.

The Womens Luſt and Skill in Poyſon.

They are very Skilful in preparing Poyſon to kill their Husbands, which ſometimes lies in the Body for ſix Years without doing any hurt, and ſometimes kills them in one, two or three Years, Months, or Days, as they deſign'd it.

The Men's Revenge.

And tho' there are many Women diſpatch'd by their Husbands every Year, if they be either taken in Adultery, or ſtrongly ſuſpected of it, yet this does not hinder them from purſuing their pleaſures; but, on the contrary, they eſteem it a great honour to die a Sacrifice to Love. They are very cleanly, and waſh their Bodies all over at leaſt twice a day, and rub them with ſweet Herbs, and Sanders ſteep'd in Water; they are no great workers, but are continually chawing Beetle and Arrequa by Day and Night, which they alſo give to their Husbands, with Cloves, *&c.* to increaſe Letchery.

Of the Viceroy and his Treaſure.

Every three Years there is commonly a new Viceroy ſent to *Goa*, where he gathers a great Treaſure, partly by the Revenues allow'd him by his own King, and partly by the rich Preſents that are ſent to him from the neighbouring Kings.

Of the Heathens, *Ind* and other ſtrangers in *Goa*.

In the City of *Goa* there are many Heathens, *Moors*, (who are *Mahumetans*) *Jews*, and many ſtrange Nations, which have every one their ſeveral Cuſtoms and Superſtitions. The *Moors* eat all things except Swines-fleſh, and when they die are buried like the *Jews*. The Heathens, as *Decanyns*, &c. being dead, are burnt to aſhes; and if they be Gentlemen or Bramens, their Wives are burnt with them. Some of the Merchants eat all things, except Cows and Buffles, which they eſteem Holy; others eat not any thing that hath Life or Blood, as the *Guſazates* and *Banians* of *Cambaia*. Moſt of them pray to the Sun and Moon, yet acknowledge a God that created all things, and that there is another Life after this, wherein Men ſhall be rewarded according to their Works. They have Images call'd Pagods, cut in uggly ſhapes, to whom they Offer, and ſay that they were holy Men when alive, and that they are now Interceſſors between them and God. The Devil often anſwers them out of theſe Images, whom they honour for fear he ſhould do them hurt. When any Maid is married, they bring the Bride before their Pagod, made with a Pin of Ivory-bone, and there the neareſt Kindred by force make the Image take the Bride's Maiden-head, which the Bridegroom takes as a great honour done to him. They commonly pray the whole Day to the firſt thing they meet with in the Morning, be it a Hog, or any thing elſe; but if a Crow happens to be the firſt thing they ſee, they look upon it as ſo bad an Omen, that they will not ſtir out of doors all that day upon any account. They pray to the New Moon when ſhe firſt appears, and in their Travels offer to their Pagods on every Hill, after they have waſh'd their feet in a Ciſtern that ſtands always near them, Fruits, Rice, Hens, &c. which the Bramen takes away, and makes the People believe the Pagod hath eaten it. They feaſt them with ſound of Trumpets, and great Fires, for fourteen days, before they go into a Ship, that they may have a good Voyage. The like they do at their Return, at their Feaſts, Marriages, &c.

Of their Religion, and uggly Idols.

A Hog god.

There are in *Goa* many rich Heathen Merchants, who ſell all kind of Silks and Sattins, and *Banians* who have all ſorts of Wares from *Cambaia*, and of precious Stones; but thoſe who Till the ground are a ſort of Chriſtians, who retain ſtill many of their Pagan Superſtitions, and all the Money-changers, or Xaraffo's, are Chriſtian *Jews*.

Of the times of the Year in *India*.

Winter begins through the whole Coaſt of *India*, from *Cambaia* to Cape *de Comorin*, on the laſt of *April*, and begins with Thunder and Lightning; after which follows a conſtant Rain night and day till *September*, and then Summer begins, and it continues fair Weather till the laſt of *April*, and all the Ships which could not ſtir out in the Winter, are made ready to ſail to all places. The Eaſt-wind which cometh from the Land, blows always from Midnight to Noon; and then the Weſt-wind, which comes from the Sea, blows conſtantly until Midnight. When it is Winter from *Diu* to the Cape of *Comorin*, on the other ſide of that Cape, call'd the Coaſt of *Choramandel*, it is Summer, tho' they lie under the ſame Degrees, and are but a few Miles diſtant; and which is more ſtrange, as Men travel by Land from *Cochin* to *St. Thomas*, which lies on the ſame Coaſt, they find it clear Sun-ſhiny Weather on one ſide of the Hill of *Ballagate*, and ſtormy Wind, Rain and Thunder, on the other ſide of the Hill. So it is alſo on the Coaſt of *Arabia Fœlix*, clear Weather on one ſide of the Cape of *Roſalgate*, and Rain on the other. The Days, both Summer and Winter, are alike long, only there is an hours difference at the Change.

Conſtant Winds.

Summer and Winter under the ſame Degree.

Of the *Bramens*, the Prieſts of their Pagods, their Manners.

The *Bramens* are the moſt eſteem'd among the *Indian* Heathens, for they ſerve in the chiefeſt places about the King, and are the Prieſts of the Pagods. They eat not any thing that hath life, but feed upon Herbs and Rice; and will not be let Blood for any Sickneſs, but heal themſelves by Herbs and Ointments. The Women have but one Cloth about their Bodies, which reacheth down to their Knees, and have Rings through their Noſes, about their Legs, Necks and Arms, and upon each Hand ſeven or eight of them, which are made either of Silver, or more commonly of Glaſs. When a *Bramen* dies, his Body is burnt with ſweet Spices and much Oil, and commonly the Wife is burnt with him.

Of the *Guzarates* and *Banians* of *Cambaia*.

The *Guzarates* and *Baniens* are of the Country of *Cambaia*, and many of them dwell in *Goa*, *Diu*, *Chaul*, *Cochin*, and other places of *Indie*, for they traffick in all kind of Wares, as Corn, Cotton, Linen, Rice, &c. but chiefly in all ſorts of precious Stones, in which they have great Skill. They eat not any thing that hath Life or Blood in it, neither would they kill any ſuch thing for all the World. They will give Money to Chriſtians for Fowls and Beaſts, which are to be kill'd, to ſave them alive. In *Cambaia* they ſet Pots of Water in the High-ways, and caſt Corn on the ground to feed the Birds and Beaſts; nay, they have Hoſpitals to cure them of any ails, and when they are heal'd let them fly or run away. They eat no kind of Herbs that hath any red in it, and drink nothing but Water. If their Proviſion happens to fail when they go from *Goa* to *Cochin*, they will rather ſtarve than eat with Chriſtians.

Of the *Canaras* and *Decanyns*.

The *Canaras* and *Decanyns* are of the Country of *Decam*, commonly call'd *Ballagate*, and many of them live in *Goa*. They eat all things except Kine, Hogs and Buffles, Fleſh and Fiſh. They account the Ox, Cow or Buffle, to be Holy, with whom they eat and ſleep in their Houſes as if they were rational Creatures, and thereby think they do God good Service. Every one follows his Father's Trade, and marries with the Daughters of ſuch Tradeſmen, to whom they give Bracelets and Earings, for the Sons inherit all; and in other Cuſtoms and Ceremonies they reſemble the *Bramens*. They commonly farm the King's Revenues, in *Bardes*, *Salſette* and *Goa*; and when any queſtion ariſes in Law, they plead their own Cauſe without any Counſel. And when they take an Oath as a Witneſs, they ſtand in a Circle of Aſhes, ſtill laying Aſhes on their bare Heads; and with one Hand on their Head, and the other on their Breaſt, they ſwear by their Pagod to tell the Truth.

Their way of taking an Oath.

The *Canaryns* and *Corumbyns* of *India*.

The *Canaryns* and *Corumbyns* are thoſe that Till the Land, and live very poorly. They ſow the Rice upon low grounds, which in the Winter-time is cover'd with Water; and upon that the *Canaryns* maintain themſelves in their little Straw-houſes, which are ſo low, that a Man muſt creep in and out. Their Women are commonly deliver'd of a Child all alone, who lay the Child upon a Fig-leaf, and then go about their buſineſs. Their Children go naked till they are ſeven or eight years old, and nothing is done to them but only waſh'd in a little cold Water. In their Marriages and Religion they follow the *Canaras*.

The *Arabians* and *Abexins* in *India*.

There are many *Arabians* and *Abexins* in *India*. The *Arabians* are *Mahometans*; and of the *Abexins*, ſome are *Mahometans*, ſome a ſort of *Chriſtians* of *Preſter John's* Country. The Chriſtian *Abexins* have on their face four burnt marks in the form of a Croſs, one in their Forehead, one on each Cheek, and one under the nether-lip. Theſe *Arabians* and *Abexins* ſerve as Sailors in Ships for a ſmall hire, and commonly have their Wives and Children in the Ship with them, and dreſs their Meat by themſelves, which is Rice ſodden in Water with Salt Fiſh. They have a chief Boatſwain, who is call'd *Mocadon*; he bargains with the Owners of the Ships for ſo many Sailors, and receives the Money monthly for their Wages, which he pays to every particular Sailor.

Of the *Caffares*, their Manners and Cuſtoms.

The black People, or *Caffares*, of the Land of *Moſambique*, and along the Coaſt of *Ethiopia*, go commonly all naked, and have all their Bodies ſear'd with Irons like raſed Sattin; and ſome of them file their Teeth as ſharp as Needles. They account themſelves very fair, and deſpiſe all white Men as Monſters and uggly People, in whoſe colour they repreſent the Devil. When they kill any of their Enemies in a Battel, or take Men Priſoners, they cut off their Privy-members, which being well dry'd they lay at the King's feet, and the King orders them to be deliver'd again with thanks, and that they ſhall be accounted as Knights; all which Members they tie upon a ſtring like a Bracelet, and when they marry, or go to Weddings or Feaſts, the Bride, or Wives of thoſe Knights, wear the Chain of Men's Members about their Neck, which is counted with them as great an Honour, as with us to wear the Garter.

A coſtly Chain for Women.

Great numbers of theſe *Caffares* are carry'd into *India*, and ſold at low rates, eſpecially in a time of Dearth, when they will exchange Children of eight or ten Years for five or ſix Meaſures of Rice, or ſell them for three or four Ducats a-piece; and ſome come with their Wives and Children, to ſell themſelves for Slaves.

Of the *Malabars* and *Nayre's* in *India*, with their Manners and Cuſtoms.

The *Malabars* dwell on the Sea-coaſt between *Goa* and Cape *Comorin*; they are very black, and of a ſmooth Skin, which they anoint with Oil. Their hair grows very long, which they tie up on their Heads with a Lace; and the laps of their Ears being open'd hang down to their ſhoulders, which with them is a great beauty. They are ſo letcherous, that few Girls of ſeven or eight Years old have their Maiden-heads. Of theſe *Malabars* there are two ſorts, one call'd *Nairos*, who are Gentlemen and Soldiers, and are oblig'd to carry Arms night and day, that they may be always ready to ſerve the King. Some carry a naked Rapier or Cutlaſs in their Right, and a Target in their Left Hand, or a Bow and venemous Arrows upon their ſhoulder; others carty long Pikes, or Muskets, with a lighted Match wound about their Arms. None of them are married, but they freely Lie with the *Nayro's* Daughters, or any other Women, though they be married; and leaving their Arms at the Door, they go into any Houſe where they have a mind, and Lie with the Wife or Daughter, and then come and take their Arms at the Door, which ſtands open all the time, none daring to hinder them, or trouble the Woman with whom they have to do.

As they walk the Street, they cry *Po, Po, i. e.* ſtand out of the way, for if any of the *Polyaſſes*, (who are the other ſort of *Malabars*) or any Man of another Nation, happen to touch them, they run him through, and then waſh themſelves with much ceremony before they eat, or converſe with other *Nayro's*.

But a *Portugueſe* having ſlain a *Nayro*, in a Duel fought on purpoſe to decide the quarrel, it was agreed between the two Nations, That the *Nayro's* ſhould give place to the *Portugueſe*.

The *Nayro's* wear the Nails of their Hands very long, the better to gripe a thing in their hands, and to ſhow that they are Gentlemen. The Captains and Officers among them wear a Gold or Silver Bracelet above their Elbows, to diſtinguiſh them from others, and are guarded by other *Nayro's* when they go abroad. If they deſerve Death, they are ſecretly diſpatch'd at the King's Order by other *Nayro's*.

At their Dwelling-place, they have a Well of Water dug in the High way, wherein Men and Women waſh themſelves every Morning from Feet to Head, which though green and ſtinking, yet being Conjur'd by the *Bramens* with many Ceremonies, is thought of ſo great Vertue, that without it they would be Unclean and full of Sin.

Their Sons are not their Heirs, for they uſe all Women when they will, and know not who is their own Son; and the *Bramens* alſo have the King's Wives at their pleaſure, and do him great Honour when it pleaſeth them to Lie with his Queen; but their Siſter's Sons are their Heirs, becauſe they are ſure of their Mothers.

The common People of the *Malabars*, call'd *Polyas*, are the Labourers, Fiſhermen, and ſuch like, who live poorly, and wear no weapon. In other things they follow the Cuſtoms of other *Indians*.

Of the *Moors* and *Jews* in *India*.

There are great numbers of *Jews* and *Moors* at *Goa*, *Cochin*, and in all places of *India*: Amongſt the *Indians* they have their Churches, Synagogues, and Meſquita's, wherein they uſe all Ceremonies according to their Law; but in places where the *Portugueſe* govern, they muſt not openly uſe any of them. And if it be found that they mingle any Chriſtian Ceremonies with theirs, both Men and Women die for it, unleſs they turn Chriſtians. Moſt of them are of a white colour, and many come from *Paleſtine*, and ſpeak good *Spaniſh*.

The *Moors* alſo have their Meſquitos, wherein they pray: They waſh their Feet before they go into the Church, in a Ciſtern of Water that ſtands at the Door, and in the Church they fall down proſtrate on their faces, and with their hands lifted up make faces. They are Circumcis'd like the *Jews*, and eat no Swines fleſh: They have no Images in their Churches, but only ſome round Pillars, on which ſome *Chaldean* Letters, taken out of the Alcoran, are graven. They will not ſuffer Chriſtians to enter into them, unleſs they put off their Shoes; and if you ask what Saints they pray to, they will tell you, That they do not pray to Stocks and Stones, but to the living God; and that the *Portugueſe* and Heathens, who worſhip Images of Wood and Stone, are all of one Religion.

Of their Pagod.

In the Kingdom of *Narſinga*, or the Coaſt of *Choromandel*, there ſtandeth a Pagod very great and rich, which is ſo highly eſteem'd, that many Pilgrimages are made to it from all the Countries round about. Upon a large Cart drawn by four Elephants, there is a Seat whereon this Idol ſits, and under it ſit the Kings Wives, which play upon all Inſtruments; which Cart is drawn forth with great Devotion at Fairs, Feaſts, and Proceſſions, for ſome of the People out of Zeal cut out pieces of their own fleſh, and throw them before the Pagod. Others lay themſelves in the way for the Cart to run over them, and are cruſh'd to pieces; who for that are accounted Holy Martyrs, and all the Parts of their Body are kept as Relicks.

In all the Villages where the *Indians* dwell, there are carved Pagods of moſt helliſh ſhapes; but we found in one Village a Church of Stone, wherein there was nothing but a Table hanging in the middle, and the Image of a Pagod painted, having many Horns and long Teeth hanging down to the Knees; and beneath his Navel, ſuch another Face with Horns and Tusks, having a Triple-crown'd Mitre on the Head of it. It hung before a Wall, which made a Partition from another Chamber, and in the middle of the Wall there was a little Door, before which ſtood a Calf of Stone, on which one of our company leap'd and fell a laughing, for which we begg'd pardon of the *Bramen* to prevent miſchief. This Door being open'd, we ſaw what they count their Quire, which is cloſe Vaulted like a Lime-kiln, and admits no light but by the Door; on each ſide of which there is a Furnace within the Wall, having certain holes to let the ſmoke of the Fire enter into that place, wherein the Offerings are made of Rice, Fruits, Hens, *&c.* which makes the place very foul and ſtinking. But in this Quire there hung at leaſt a hundred burning Lamps, in the middle whereof ſtood an Altar cover'd, firſt with Cotton, and over that with pure Gold; under which ſate the Pagod of Gold, about the bigneſs of a Puppet, which we ſaw brought out of his Cell, and ſet in a Palankin, born by the chief Men of the Town, all the reſt following with great Devotion, with ſound of Trumpets, and other Inſtruments. And having gone round about a Field, they brought him to the Stone Ciſtern that ſtands before the Church-door, and waſh'd him in that ſtinking water, and then ſhut him up in his Cell, with all his Lamps, to make good cheer with the Offerings they left behind them, wherewith the *Bramen* feaſted inſtead of the Pagod.

All the way as we went we found Pagods of Stone, under certain Covers, before which all Travellers fall down and ſay their Prayers, and Ciſterns of Water to waſh their feet. By theſe Pagods commonly ſtand two little Furnaces, with a Calf or Cow of Stone, before which they ſet their Offerings of ſuch things as are to be eaten, of which we found ſome ſtanding in every place, but had no ſtomach to taſte of them, but we could not ſufficiently admire the monſtrous ſhapes of their Idols, which we found every where.

Of all kind of Beaſts and Fowls in *India*.

All over *India* there are great ſtore of Cattel, as Oxen, Kine, Sheep, Hogs, Goats, Kids, *&c.* which are very cheap; but the fleſh, by reaſon of the heat, is not ſo well taſted as in *Europe*. There are Sheep of five Quarters, the tail being as great and fleſhy as any of the other Quarters, but their fleſh is not counted ſo good as that of Hogs.

They have ſome Bats ſo vaſtly great, that the *Canaryns* are forc'd to watch them for the miſchief they do to Trees and Herbs.

There is a prodigious number of black Crows, which came in at the Window, and take the Meat out of the Diſh when the People are at Dinner; one of them, in my ſight, took the Cotton out of my Ink-horn, and blotted all the Paper upon the Table. They ſit upon Buffles backs, and pick all the hair off them, ſo that they are forc'd to ſtand in the water up to the Neck to get rid of them.

There are ſome Rats as big as young Pigs, ſo that the Cats dare not touch them, which dig down Walls and Houſes: There are alſo other little reddiſh Rats which ſmell ſweet like Musk.

There is an incredible number of Ants, which deſtroy all the Meat and Clothes they come at, ſo that they are forc'd to ſet their Cupboards and Cheſts upon Ciſterns full of water to keep them off. The like Ciſterns ſome uſe under their Beds and Tables, and to preſerve their *Canary*-Birds, and other Fowls.

They are alſo plagu'd with Moths and Worms, which deſtroy all their Clothes and Papers; and with Baratta's, twice as big as Bees, which eat up all ſweet and fat things, and ſtain all their Clothes with their Eggs.

There is a Bird call'd Noyras, which comes from *Molucca*, that ſurpaſſeth all other Birds for beauty, and ſpeaks like a Parrot; it claws Men with the Tongue upon the Head and Beard, the Ears and Teeth, to make them clean; but they cannot be brought alive into *Portugal.*

They have Elephants in many places of *India*, which the Merchants hire of their Keepers to draw Pipes, Buts, or Packs of Goods. When they are chid for not drawing ſtrongly, they will ſometimes refuſe help, and burſt themſelves with ſtriving. They are mad all the Winter when it rains, and are kept tied to a great Tree till the rain ceaſes, and then they come to themſelves. Their Docility and Ingenuity is ſo well known that I need not deſcribe it.

The Rhinoceros is not in *India*, but only in *Bengala* and *Patane*; it hath a ſhort horn upon the Noſe, whereof the hinder-part is bigger, and towards the end it is ſharper, and ſo by ſome it is thought to be the right Unicorn. The horns in *India* are much eſteem'd, and us'd againſt Poyſon, and many Diſeaſes: His Teeth, Claws, Fleſh, Skin and Blood, nay, his very Dung and Water, are us'd for curing many Diſeaſes, and I my ſelf have found them good by Experience. But there is a great difference among the Rhinocerots as to their value, which the *Indians* can diſcern, which is ſuppos'd to ariſe from the different Herbs they feed upon in *Bengala*, which gives them great vertue, for ſome of them are ſold for two or three hundred Pardaws, and others for three or four Pardawes a-piece.

Of the Fiſhes in *India.* Fiſh in *India* is very plentiful, as Shads, Soals, *&c.* and are commonly eaten with Rice, which is inſtead of Bread. Crabs are very great and good; and contrary to what it is with us, they are empty at Full Moon, and full at New Moon. Fiſh is ſo cheap, that with the value of a Stiver one may buy as much as will ſerve five or ſix Men for a Meal.

When our Ship lay at *Cochin*, we let down one of our Sailors, with a Rope about his middle, to place the Rudder on the hooks, and while he hung with half his Body in the Water, there came a Shark which bit off one of his Legs at one bite; and when he put down his Arm to feel his wound, it bit off his Arm above his Elbow, and alſo a piece of his Buttock.

A monſtrous Fiſh. There was a monſtrous Fiſh taken in the River of *Goa*, of the bigneſs of a middle-ſiz'd Dog, with a Snout like a Hog, and four Feet like an Elephant, wherewith it run on the Floor, grunting like a Hog. The whole Body was cover'd with Scales of a Thumb's breadth, harder than Iron; and when we ſtruck him, he roul'd himſelf up like a round Ball ſo cloſe, that we could not by any means open him again, which at laſt he did and run away.

When a Ship was ſailing from *Moſambique* into *India*, with a fair Wind, ſteering their Courſe towards the Equinoctial Line, it was much wondred at by thoſe who took the height of the Sun for a Fortnight, that inſtead of leſſening their Degrees, they found themſelves every Day further backward than they were, until at laſt the Boatſwain ſpied a great broad tail of a Fiſh, that had winded it ſelf about the Beak-head of the Fiſh, the Body of it being under the Keel, and the Head of it under the Rudder, ſwimming in that manner, and drawing the Ship with her againſt the Wind and their right Courſe, which we, with much ado, ſtruck off with Staves, and then the Ship went right on.

There are by *Malacca* certain Shell-fiſh, ſo great and heavy, that two ſtrong Men can hardly, with a Lever, draw one of them after them: And to the South of *Goa*, at a place call'd *St. Peter*'s *Sand*, there are Crabs ſo great and numerous, that Men are forced to keep a good Watch to defend themſelves, for if they get one in their Claws it coſts him his Life.

Of the Fruits, Trees and Plants in *India.* *Ananas* is a Fruit of the beſt taſte in all *India*, which was at firſt brought by the *Portugueſe* from *Braſil* and planted there, but now is grown very common: They are as big as a Melon, of colour red and greeniſh, and grow about one third of a Fathom high from the ground. When they eat them they pull off the Shell, and the Juice taſtes like ſweet Muſk.

Jaaca's grow on Trees like Nut-trees by the Seaſide, not upon the ſmall branches, but upon the trunks or great branches; they are as big as a great Melon, and much like it in ſhape, the Fruit within is in husks, like Cheſnuts, each of which has a Nut white and yellow, and very ſweet.

Manga's grow upon Trees like Jaaca's, in ſize and colour like a great Peach, having a bigger ſtone and better taſte. It ſerves for Food to the common People and Slaves, being ſalted in Pots, and eaten with Rice; they are like the white *Spaniſh* Olives, and much of the ſame taſte.

Caions grow on Trees, and are in ſize and ſhape like Pears, but inſtead of a Stalk they have a Cheſnut, which muſt be roaſted before it be eaten, elſe it makes your Tongue ſmart.

Jambo's grow on Trees like Palm-trees, are white and red, of a ſweet ſmell and taſte, both pleaſant and wholſome. The Tree bears Fruit three or four times a Year, and when the leaves fall off on one ſide, and the Fruit is ripe, the other ſide begins to have leaves and to bloſſom.

Jangomas grow on Trees, and are in ſize, colour and taſte, like our round Plums.

There is a Fruit that came out of the *Spaniſh Indies* call'd Papaios, which is very like a Melon, and will not grow but when there are two together, *i. e.* Male and Female. The Male Tree never yields Fruit, but only the Female; and when they are parted they yield none at all. Oranges, Limons and Citrons, are very good and plentiful. They have very few Grapes, and ſweet Herbs and Flowers, but they have great abundance of Cucumbers, Radiſhes and Melons.

Indian Figs there are many, and of divers ſorts, ſome ſmall, ſome great. That on which they grow may be rather call'd a Cane than a Tree, the Bark of it being like a Hair-Sieve, which within is full of large leaves, that by degrees ſhoot upwards, till the Tree comes to its full growth. Out of the midſt of theſe leaves grows a Flower with a long Stalk, which grows full of Figs, bearing at leaſt two hundred in cluſters like Grapes. The Tree bears but one bunch at a time, and being cut down, out of the root preſently grows another, which within a Month beareth Fruit, and ſo continueth to do all the Year long. They are very plentiful in all places, and yield the greateſt part of the Food of the Country. When they are eaten, they pull off the Shells; the Garden Figs are thicker and more common, but thoſe that are thinner are better for ſmell and taſte. The Figs of *Cananor* are dried, and carry'd over all *India.*

Of the Palm-tree whereon the *Indian* Nut call'd Cocus grows. The Palm-tree is the moſt profitable Tree of all *India*; it grows tall and ſtraight, is a Span thick, and hath no branches but in the top where the leaves grow, under which grow the Coco's, commonly ten or twelve together. Theſe Coco's are firſt planted, out of which ſpring the Trees, and when they are about a Man's height they plant them again, and dung them with aſhes, and they yield Fruit in a few Years.

The Wood of this Tree, tho' it be ſpungy, is good for many uſes, for in *Maldiva* they make whole Ships of it, without any Iron-nail, for they ſow the pieces of Wood together with the Cords that are made of the Cocus; they make Ropes and Cables of the ſame Tree, and Sails of the leaves, call'd *Olas.* They ſerve alſo to make *Canaryns* Houſes, and Hats to carry over their Heads, and Mats to cover Palankins. The Nuts or Coco's are as great as an Oſtridge-Egg, and are cover'd with two husks, whereof the outmoſt is hairy, and of it they make all their Cables and Ropes, call'd *Cairo*; and it ſerves inſtead of Ocam or Tow, to ſtop all Crevices in Ships, and keeps them cloſer in Salt water. Of the inner husk they make Drinking-Cups, of which we have ſome here. The Cables ſerve as well as thoſe of Hemp, if they be waſh'd every Fortnight in the Sea. The Fruit, when it is almoſt ripe, is call'd *Lanba*, and within is full of water white and ſweet, which increaſes the longer the Cocus in on the Tree, but when the Fruit is ripe the water thickens, and is not ſo pleaſant Drink as that which comes of the *Lanba.* With the Milk of theſe Nuts they ſeethe the Rice, which is the Sauce of their Meat; and ſometimes they dry it, and carry it out of *Malabar* to *Cambaia* and *Ormuz*, and other places, to traffick with it. And ſometimes they make Oil of it, which is very good to eat; either of the green Nuts ſtamp'd with water and preſs'd, or of the dried Cocus, which is call'd *Copra*, both which are accounted Medicinal. When they have no mind to any Cocus, they cut the Bloſſoms away, and bind a round Pot ſo cloſe to the Tree that no air can enter in, which in a little time is fill'd with Water call'd *Sure*, that taſtes like ſweet Whey. If this Water ſtands but one hour in the Sun it is good Vinegar: when it is diſtill'd it is excellent *Aqua-vitæ*; and being diſtill'd a ſecond time it is call'd *Vraca*, and is very good Wine, and is the only Wine in *India*. The *Portugueſe* put to a Pipe of it three or four Hands of Raiſins, (every Hand being twelve pound) and leaving the Bung open, and the Pipe not full, it boils like Water over a Fire for fourteen or fifteen days, and then becomes in colour and taſte like red *Portugal* Wine, wherewith there is a great trade to *Bengala*, *Malacca*, *China*, and other places, every Pipe in *Goa* being worth thirty Pardawes. Of the foreſaid *Sura* being boil'd, or ſet in the Sun, they alſo make a brown Sugar. The innermoſt part of the Tree is call'd *Palmito*, which is thin and white, having many plaits and folds which is us'd by the *Indians* for Paper, whereon they write when it is green; and after it is dry, the ſame folds continue, and 'tis impoſſible to get the letters out, which are printed in it with an Iron-Inſtrument call'd *Olla*. And thus are all their Writings made.

Of the *Duryoen*, a Fruit of *Malacca*.

Duryoen is a Fruit that groweth only in *Malacca*, and is eſteem'd the beſt for taſte in the World, tho' it ſmells like rotten Onions when firſt open'd. It is outwardly like a Melon, and like it in its partitions within, wherein is the Fruit which contains the Nuts as big as Peach-ſtones: It taſtes like *Mangiar blanco*, made of Hens fleſh diſtill'd with Sugar.

Of the Tree *Arbore de Rays*, or the Root tree.

When *Arbore de Rays* groweth and ſpreadeth branches, they are full of Roots, and grow downwards, and take faſt root again in the ground; and ſtill the more the Branches ſpread, the more Roots ſhoot downwards, ſo that ſometimes it covereth forty paces, and, as ſome ſay, extends to a Mile's compaſs, and is ſufficient to ſhadow a thouſand or three thouſand under it. It hath no Fruit good for any thing but for the Birds to eat.

Near *Cochin* there are Trees call'd *Angelina*, ſo thick, that of the Wood in one piece, without ſeam or joynt, there are made Skiffs call'd *Tones*, which will lade twenty or thirty Pipes of Water; the Wood is harder, and will laſt longer than Iron. There are alſo Sugar Canes and Bamboo's, which have a pith that is Medicinal. Theſe Bamboo's grow very high, and are as thick as a Man's Thigh.

Of the Tree call'd *Arbore Triſte*.

Arbore triſte is ſo call'd, becauſe it never bears Bloſſoms but in the Night-time, for when the Sun ſets there is not one Bloſſom to be ſeen, but within half an hour there are as many Bloſſoms as the Tree will bear, which ſmell very ſweet; and when the Sun riſes the Bloſſoms fall off, and the Leaves ſhut themſelves cloſe together. If you cut off a branch, and ſet it in the ground, it preſently takes root, and in few days has Bloſſoms.

Beetle.

Beetle is a Leaf a little larger than Orange-leaves, planted by Sticks, upon which it climbs up like Ivy. The leaves keep long green, and are ſold by the Dozen, and every Man and Woman in all *India* eats every day a dozen or two of them, for they are continually chawing them by night and day: And becauſe they are bitter, they are eaten with a Fruit call'd *Arecca*, which is like a Nutmeg, and groweth upon Trees like Palm-trees, whereof one ſort being cut in the middle is white and red, another makes the Mouth black and red, and a third ſort makes them light-headed for a little time. With this Fruit they mix alſo a Cake of the Tree call'd *Kaate*, and ſome powder of Oyſter-ſhells, which they ſprinkle upon the Beetle; and when they chaw all this, they ſwallow down the Juice and ſpit out the reſt. They think they cannot live a Day without it; and they ſay 'tis good for the Maw, the Teeth and Gums, and againſt Scurvy.

Of the Herb *Dutrea*, and the Plant call'd *Herba-ſentida*.

Dutroa is an Herb very common in *India*, and groweth in every Field; the Leaf of it is ſharp printed, and indented on the edges. The Bloſſom is like that of Roſemary, out of which groweth a bud like the bud of Poppy, wherein are ſome kernels like thoſe of Melons, which being ſtamp'd and put into any Liquor or Meat, whenever it is eaten or drunk, makes a Man ſometimes laugh like a Fool, without any ſenſe of what is done before him; and ſometimes makes him ſleep for 24 hours as if he were dead, but if in that time his feet be waſh'd with cold water he comes to himſelf.

There is another Herb in *India* call'd the *Senſitive Herb*, which ſhrinks up and cloſes the leaves if any Man touches it, as long as he ſtands by it; but as ſoon as he is gone, it opens the leaves and looks freſh again.

At one end of *Goa*, where Oxen, Sheep, and all kind of Cattel are kill'd for Meat, there is a place where all the Horns of Beaſts lie ſcattered up and down; for beſides that no body uſes them, 'tis counted a great affront to the *Spaniards* and *Portugueſe* to have any Horns, or to ſhow a Horn to another, or throw it before his Door, for that is to call him Cuckold, which he would revenge by killing the Offender, and Juſtice there will ſeverely puniſh. Now theſe Horns having lain a certain time ſtick faſt in the Earth, and the inner-part of the Horn taketh root, as if it were a Tree, whereof I have ſeen many pull'd up that had Roots two or three Spans long, which was never ſeen in any other Place of the World.

Of the Spices, Drugs and Plants in *India*, for Apothecaries and Druggiſts.

Pepper is planted at the foot of another Tree, commonly of the *Arecca*, and grows upon the Tree like Beetle or Ivy. The Leaves of it are green and ſharp pointed; it grows in bunches like Grapes, but thinner, and ripens in *December* and *January*, when it is gather'd. The Long-Pepper grows in *Bengala*, and is as long as a Needle, but a little thicker; without it is of an Aſhy-colour, but within ſomewhat white, with ſmall Seeds. The White and Black Pepper in taſte and form are alike, but the White is ſtronger and leſs plentiful than the Black.

Cinnamon.

Cinnamon-trees are commonly as great as Olive-trees, with leaves like Citron-leaves. They have white Bloſſoms, and a Fruit as big as black *Portugal*-Olives, whereof Oil is made, which is us'd for many things. The Tree hath two Barks, whereof the ſecond is the Cinnamon, which is cut off in four-ſquar'd pieces, and ſo laid to dry; if it be not well dried it is of an Aſh-colour, if it be too much dried it is blackiſh, but when it is well dried it is reddiſh. After this Bark is taken away, within three Years the Tree hath another Bark as it had before. The Trees grow of themſelves without planting, in the open Fields, like Buſhes: The beſt is in the Iſle of *Seylon*, but that in the Coaſt of *Malabar* not half ſo good; in both places there are whole Woods full of Cinnamon-trees. There is an excellent Water diſtill'd from Cinnamon while it is half green, which is very pleaſant to the Taſte and Smell, but very hot and ſtrong. It is much us'd in *India* and *Portugal* againſt the Cholick, and other Diſeaſes; the Water made of the Bloſſoms is not ſo good.

Ginger.

Ginger grows in many places, but the beſt is in the Coaſt of *Malabar*; it grows like thin Reeds, two or three Spans high, the Root whereof is Ginger, and is much us'd for Sallads while it is green. They dry it by covering it with Pot-earth, to ſtop up the holes, and preſerve it from Worms, which would deſtroy it. Tho' it is little eſteem'd in *Indie*, there is much of it ſhipp'd off to the Red-Sea, as to *Ormuz*, *Arabia* and *Aſia*.

Cloves.

The Trees whereon Cloves grow are like Bay-trees, the Bloſſoms at firſt white; then they have the pleaſanteſt ſmell, and are green, and at laſt red and hard, which are the Cloves. They grow very thick, and when they are dried their right colour is a dark yellow, but they are ſmoak'd to make them black; and thoſe that are left on the Tree ungather'd, are call'd the Mother of Cloves. The Stalks are commonly gather'd and mingled with them, but they are ſever'd in thoſe that are ſent to *Portugal*. The Cloves are of ſo hot a nature, that no Graſs grows near the Trees on which they grow; and when they are made clean, a Pail of Water, or any other Liquor in the Chamber where they are cleans'd, will within two days be dried up, as I have often ſeen. And ſo whenever unſpun Silk of *China* lies upon the Floor, which is a Foot or two above ground, it ſucketh up quickly all the Water that covers the Floor, tho' it touches not the Silk, which is a trick us'd to make the Silk heavy when it is ſold.

Nutmegs.

The Nutmeg-tree is ſomewhat leſs than a Peach-tree, which hath round Leaves, and grows in *Banda* and *Java*; from whence they are carried to *China* and *Malacca*, and *India*. The Fruit is like a great round Peach, the inner-part whereof is the Nutmeg, which hath a hard ſhell cover'd over with the Flower call'd Mace, wherein the Nut lieth looſe.

Cardamomum.

Cardamomum is a Spice much us'd in *India* to dreſs Meat withal, and chaw upon: The husks are like thoſe of Panick, having ten or twelve grains of Berries,

ries, which is the Cardamom; whereof ſome is great, ſome ſmaller. It grows on the Coaſt of *Malabar*, and in *Java*.

Lac. *Lac* is brought from *Pegu* to *Sumatra*, and from thence is carried to the Red-Sea, *Perſia* and *Arabia*. In *Pegu* there are very great Piſmires, which fly up the Trees, on which there is a Gum which the Piſmires ſuck up, and then make the *Lac* round about the branches, as Bees make Honey and Wax; and when it is full, the Owners break off the branches, which being dry'd they ſhrink, and the *Lac* remains behind. The Crums that fall upon the ground they melt together, which has ſome filth in it, and ſo is not ſo good. The *Lac* as it comes from the Tree is of a dark red colour, but when it is beaten to powder they mix all ſorts of Colours with it, as red, black, green, &c.

Benjamin. *Benioin* groweth much in *Syan*, *Sumatra* and *Java*, upon high Trees full of branches, with a thick Stem in the middle; whence proceeds the Gum call'd *Benioin*. When the Tree is young it yields the beſt, which is of a blackiſh colour, and a very ſweet ſmell, and is call'd the *Benjamin of Flowers*; but the ſecond, call'd *Benjamin of Almonds*, is not ſo good, being mix'd with white Flowers.

Frankincenſe and Myrrhe. Frankincenſe and Myrrhe are Gums from Trees, which grow in *Arabia-Felix* and *Alexin*.

Sanders. White and yellow Sanders, which are the beſt come from *Tymor* near *Java*, which hath whole Woods of them, from whence it is carried to *India*, and other Countries; but the red Sanders grow moſt in *Choromandel*. The Trees of Sanders have Fruit like Cherries, of no value, but the Wood is the Sanders.

Snakewood. Snakewood is the Root of a low Tree of a whitiſh colour, and bitter in taſte, which being bruis'd in Water or Wine is good againſt burning Fevers, Cholick, Worms, and ſpecially againſt the ſtinging of Snakes; whence it has its name. It was firſt found out by a little Beaſt call'd *Quil*, which is of the ſize and nature of a Ferret, and being bit by a Snake, heals it ſelf by this Wood in *Seylon*, where there is great ſtore of theſe Ferrets and Snakes.

Lignum-Aloes. *Lignum*-Aloes abounds moſt in *Malacca*; the Trees are ſomewhat greater than Olive-trees. The beſt, and that which ſmells moſt, is the innermoſt part of the Wood, and is call'd *Calamba*, which is heavieſt and yields moſt moiſture, and is ſo much eſteem'd, that it is ſold by weight againſt Silver and Gold. The *Palo daguilla* is next to it in eſteem; but there is another ſort call'd *Wild Aquilla*, which is us'd for burning the Bodies of the Bramens; and being coſtly, is accounted as great an honour with them as with us to be buried in Tombs of Marbel-ſtones. Theſe Woods are much us'd in *India* for Beads and Crucifixes, which are held in great Veneration.

BOOK III.

A
DESCRIPTION
OF
AFRICA, and all its Provinces.

Taken from JOHN LEO and MARMOL.

CHAP. I.

Containing a General Deſcription of the Limits, Soil, Product and Climate of the Country: Together with the Original, Tribes, Cuſtoms, Language, Religion, Conſtitution, Vertues and Vices of the reſpective Inhabitants.

John Leo's Account of the Name, Bounds and Diviſion of *Africa*.

AFRICA, is by the *Arabians* call'd *Iphrithia*, either from the Wood *Faraca*, i. e. *to divide*, with regard to its being divided from Europe by the *Mediterranean*, and from *Aſia* by the *Red Sea*, or elſe from *Ifricas*, a Prince of *Arabia Fœlix*, who being diſpoſſeſs'd of his own Country, by the King of *Aſſyria*, croſs'd the *Nile*, and ſettled with his Troops in the Neighbourhood of *Carthage*; for which Reaſon, the *Arabians* and Ancient Geographers took that part of *Africa* for the whole.

As to its ancient Bounds, 'twas reckon'd to have ſome Rivers ſpringing from a Lake in the Deſart of *Gaogo*, on the South, *Nilus* on the Eaſt, on the North, the Coaſt extended from *Non*, the out-moſt Sea Town of *Lydia*, to the Mouth of the *Nile*, and the Ocean to the Weſt.

Ancient *Africa* was commonly divided into four parts, namely, *Barbary*, *Numidia*, *Libya*, and *Negro-land*.

Barbary. *Barbary*, extends it ſelf from the out-moſt Point of the Mountains of *Atlas* (near *Meſſa*) to the Streight of *Gibralter*, and paſſing along the *Mediterranean* Sea, to Mount *Meies*, about 300 Miles from *Alexandria*, is bounded on the South with that ſide of the *Atlas*, which faces the *Mediterranean*. This Country is the beſt part of all *Africa*, its Inhabitants being brown and tauny, but withal a civil and well-govern'd People. 'Tis divided into four Kingdoms, namely, *Morocco*, *Fez*, *Telenſtin* or *Tremizen*, and *Tunis*. The firſt of theſe Kingdoms is divided into ſeven Provinces, namely, *Hea*, *Sus*, *Guzula*, the Territory of *Maroco*, *Ducoala*, *Aazcora*, and *Tedles*: The ſecond into other ſeven, namely, *Temeſne*, the Territory of *Fez*, *Azgara*, *Elabat*, *Errif*, *Garet*, and *Elcauz*: The third into three, *viz*. the *Mountains*, *Tenez*, and *Algezer*: And the fourth into four, namely, *Bugia* (which was a Kingdom of its ſelf, till its Principal City was taken by *Ferdinando*, King of *Caſtile*) *Conſtantina*, *Tripolis* in *Barbary*, and *Ezzaba*.

Numidia. The ſecond part of *Africa* is call'd by the Latins *Numidia*, and by the *Arabians Beledulgerid*, or *the Land of Dates*, as being the Country of *Africa*, that produceth moſt of that Fruit. Its Boundaries are, on the Eaſt the City of *Eloacat*, about 100 Miles diſtant from *Egypt*, on the Weſt the Town of *Non*, on the North the South ſide of *Atlas*, and on the South the ſandy Deſarts of *Libya*. This is the ſorrieſt Country in all *Africa*, and by reaſon of the Remoteneſs of its Inhabitants, is ſcarce dignified with the Name of a Kingdom; particularly *Teſſet*, one of its Cities, lies at almoſt 300 Miles diſtance from any Inhabitants, and does not contain in it ſelf 400 Families. However its three principal Regions are, *Segelmeſſe*, upon the Confines of *Mauritania*; *Zeb*, oppoſite to *Bugia*; and the Territory of *Biledulgerid*, extending to the Kingdom of *Tunis*. The firſt has but one City of the ſame Name; the ſecond includes theſe five, *Percara*, *Elberh*, *Neſta*, *Taolac* and *Deuſin*: and the third as many, namely, *Teozar*, *Capheſa*, *Nefreoa*, *Elchamid* and *Chalbis*.

Libya. The third part of *Africa* is call'd by the Latins *Libye*, and by the *Arabians Sarra*, i. e. a *Deſart*. Its Bounds are the *Ocean* on the Weſt, the *Nile* on the Eaſt, *Numidia* on the North, and *Negro-Land* on the South. 'Tis divided ito five parts, namely, *Zanega*, *Gauzige*, *Terga*, *Leuta* and *Berdeoa*, ſo called from the five Tribes of *Numidians* that inhabit it.

Negro Land. The fourth and laſt part of *Africa*, viz. *Negro-Land*, is bounded by *Gaoga* on the Eaſt, *Gualata* on the Weſt, and *Libya* on the North, but its Southern Boundaries are yet unknown. In this Country there's a famous River, call'd from it *Niger*, upon the Banks of which its moſt fertile Countries are ſeated. This River, which empties its ſelf into the Weſtern Sea, takes its Riſe Eaſtward, out of a Deſart call'd *Negros Sea*, or elſe out of a certain Lake, which ſome will have to ſpring from the *Nile*, after its confinement under the Earth for a conſiderable ſpace. This *Negro-Land* contains a great many Kingdoms, fifteen of which I viſited my ſelf, namely, *Gualata*, *Chinea*, *Melli*, *Tombuto*, *Gogo*, *Guber*, *Agadez*, *Cano*, *Caſena*, *Zegzeg*, *Zanfara*, *Guangara*, *Barno*, *Gaoga*, and *Nube*. Theſe Kingdoms had formerly their reſpective Kings, but now they are ſubject, the greateſt part of 'em, to the King of *Tombuto*, a leſſer part to the King of *Barno*, and the reſt to the King of *Gaoga*. They are parted from one another, either by the River *Niger*, upon which moſt of 'em lie, or elſe by ſome ſandy Deſart. They lie cloſe by one another, and are the common Road for the Merchants, who travel from *Gualata* to *Alcair* or *Cairo* in *Egypt*. Beſides theſe, this Country has other Kingdoms upon the South Frontiers, namely, *Bito*, *Temiam*, *Dauma*, *Medra* and *Gorhan*, which are inhabited by a rich induſtrious and juſt ſort of People.

Marmol's General Deſcription of *Africa*.
The Names.

This part of the World which is call'd *Africa*, takes its Name from one of its own Provinces, where *Carthage* once ſtood. Some *African* Authors ſay, the Name was deriv'd from *Melec Iſiriqui*, an *Arabian* Prince, who being outed of his own Country, ſettl'd in the Eaſt Parts of *Barbary*, as being a fertile Country, and fit for Paſturage.

Ancient *Africa*.

Ptolomy gave this whole Country the Name of *Libya*, and divided it into twelve parts, namely, *Mauritania* (divided into *Ceſarienſis* and *Tingitana*) *New Numidia*, the Province of *Africa*, *Cyrenaick*, *Libya*, *Marmarica*, *Lower Egypt*, *Thebais*, *Inner Libya*, and the two *Ethiopia's*. The moſt Southern Part of *Africa*, known to *Ptolomy* was *Mozambick*, which lies in 14 Degrees South Latitude; ſo that what we call *New Africa*, extending from that to the Cape of *Good Hope*, was unknown to *Ptolomy*, and the Knowledge of it was owing to the *Portugueſe* Diſcoveries. As for the *African* and *Arabian* Geographers, they were yet leſs acquainted with the true Extent of this Country; for they not only join *Egypt* to *Aſia*, calling it *Mezra*, but leave out all that Tract of Land that lies between the *Nile*, the *Red-Sea*, and the Ocean. In deſcribing the Boundaries of *Africa*, they begin with the Extremity of *Nubia*, and the firſt Arm of the *Nile* in *Æthiopia* near *Egypt*, following that River down to the *Mediterranean*-Sea, about 15 Leagues to the Eaſt-ward of *Alexandria*; and from thence coaſting on to the Streights of *Gibralter*, from whence they run along the Weſtern Ocean to the Cape of *Non*, that ſeparates the white *Africans* from the black: After that they coaſt on till they arrive at the Mouth of the River *Zayre*, and then trace that River up to a Lake in the Deſart of *Jaoga*, whence it riſes: From this Lake they return to *Nubia* and the *Nile*, where they firſt ſet out. 'Tis likewiſe obſervable, that theſe Geographers give quite different Names to the Provinces, Gulfs and Capes from thoſe recorded by *Ptolomy*. The Occaſion of the Alteration may be this, When the *Arabians* ſettl'd in *Africa*, they alter'd the Names of Places, in order to extinguiſh the very Memory of the firſt Inhabitants; and upon the Declenſion of their Empire, the *Africans* revolting againſt them and recovering their former Seats, did the ſame with reſpect to them. Beſides, ſeveral Provinces have been laid waſte, and ſeveral Cities deſtroy'd, that had a Being in *Ptolomy*'s time, not to mention, that ſeveral others have been built and planted ſince.

The *African* and *Arabian* Geographers differ from *Ptolomy*.

The Limits of modern *Africa*.

The true Bounds of *Africa* lies thus; From the Mountain of *Aytuacal*, call'd by the *Ptolomy*, the *Great Atlas*, you paſs to the City of *Meſſa* in the Province of *Sus*, then to Cape *d' Aguer* and Cape *Non*, and after that to the River *Senega*, which ſevers the Whites from the Negroes. Next comes *Geneoa*, and the Province of *Jaloſes*, which extending a great way along the Ocean, leads you to *Moſala*, inhabited by the *Barbacines* or *Berberes* (as the *Arabian* Authors call 'em) through which there runs a great River, that enters the Sea by two Mouths, and gives an Opportunity of ſailing far up into the Country. The next in order is *Gambu*, call'd by *Ptolomy* *Eſtacharu*, and water'd with another deep River that receives Veſſels above 300 Leagues up; then the Province of *Caſa-Manſe*, and that of *Papan*, water'd by a great River call'd the *Iſlettes*, from two little Iſlands, peopled with Negroes, that ſtand in its Mouth. After theſe we meet with the Province of *Biafar*, where *Riogrande* empties it ſelf into the Sea, being ſo call'd, for that it is the greateſt of all, and receives ſeveral Navigable Rivers. Having paſs'd *Biafar*, we came to *Cocolu*, inhabited by the *Maluces*, and to the River *Vagues* alias *Tabite*, which the *Portugueſe* Veſſels ſail ſeveral Leagues up. From thence we paſs to the Country of *Sape*, watered by two great Rivers, namely, *Caluz* and *Caceres*, where the Inhabitants of the *Canaries* come to traffick with the Negroes. Next are the Rivers *Marive* and *Siragliona*; and beyond that the *Gold Coaſt*, whence the *Portugueſe* import great quantities of Gold, having a Fort there to ſecure that Trade. From thence we advance to the Coaſt of *Malagette*, which extends it ſelf to the Kingdom of *Manicongo*, where the River *Zayre* ſwell'd with ſix great Rivers, falls into the Sea. From this Kingdom to the Cape of *Good Hope*, there are great Deſarts, and two Capes, namely, Cape *Negro*, and Cape *Peron*. Having paſs'd the Cape of *Good Hope*, we turn up to the Coaſt of *Zanguebar*, upon which we meet with Cape *Anguillas*, the River *Fumos*, the Province of *Alcgoa*, Cape *Corientes*, Cape St. *Sebaſtian*; and farther up *Sofala*, a long Province, ſurrounded with a great River, call'd *Zambere*, that divides it ſelf into two Arms, and incloſes it like an Iſland. This Province is follow'd by the Kingdom of *Angos*, and then by the Cape of *Mozambick*, call'd by *Ptolomy* the Promontory of *Praſe*, in *French* Cape *Verd*. In this place the *Portugueſe* have a Port for refreſhing the Ships that go to the *Eaſt-Indies*. Paſſing *Mozambick*, we coaſt on to the Province of *Quyloa*, and then to that of *Mambaze* and *Melind*, where the great River *Obii*, call'd by *Ptolomy* *Ratt*, falls into the Sea. Next in order are *Magadochzo*, *Adea*, *Adel*, and Cape *Guardafu*, the moſt Eaſtern point of *Africa*. Beyond theſe are the Province of *Debas*, and the Mouth of the Streight of the *Red Sea*, from whence the *Abiſſinian* Coaſt extends to *Sues*, the uppermoſt Port in that Gulf, and the Boundary of *Egypt* to that ſide. Then we croſs an Iſthmus about 16 Leagues long, reaching from the bottom of the *Arabian* Gulf to the *Mediterranean* Sea. This done, we deſcend by the *Nile* to the City of *Damiette*, where that River enters the Sea; then turning to the Weſt-ward, we paſs by *Alexandria*, the Coaſt of the Deſart of *Barza*, Cape *Meſurate*, *Tripolis* of *Barbary*, *Carthage* and the Coaſt of *Tunis*. A little farther are *Gigery*, *Tidelez*, *Algiers*, the Ruines of *Ceſarea*, *Sargiel* and *Quyva*, all Maritime Places of the Kingdom of *Tremeſen*. Then we advance to the Streights of *Gibraltar*, and entring the Ocean from whence we ſet out, meet with the Cities of *Tangier*, *Arzile*, *Machamor*, and the other Ports of the Kingdom of *Fez*. Advancing thence to *Morocco*, we came in ſight of the Cities of *Adzamor*, *Mazagan*, *Safi*, *Teſtani*, and *Meſſa*, where this Deſcription commenc'd. And thus you have a Circumſtantial Account of the Circumference and Limits of *Africa*.

The Diviſon of *Africa*.

Being thus bounded, it is divided into ſix parts, viz. *Barbary*, *Biledulgerid*, *Sahara*, Lower-*Æthiopia*, *Egypt*, and High-*Æthiopia*.

Barbary.

Barbary is ſeparated from *Biledulgerid*, by a long Tract of Mountains, running from Eaſt to Weſt, call'd by *Ptolomy* the Great *Atlas*, and by the Natives *Ayduacal*. *Ptolomy* places it in 8 Degrees Longitude, and 26 ½ Degrees Latitude. The Little *Atlas* is another Ridge of Mountains, running from the Streight of *Gibralta* to the Neighbourhood of *Bone*. *Barbary* is ſo call'd, either from *Ber*, a Name given to that Country before it was peopled, whence the Inhabitants were afterwards call'd *Bereberes*, or from ſome of the Inhabitants, who call'd themſelves *Barbares*, and are ſtill poſſeſs'd of a City call'd *Barbara*, and a large Tract of Lands in *Genehoa* and *Zinque*; or, as ſome will have it, the Name muſt be deriv'd from the *Romans*, who chriſten'd it ſo by reaſon of the Barbarity of their Language. This Country contains four large Kingdoms, namely, *Morocco*, *Fez*, (both included in *Mauritania Tingitana*) *Tremeſen* or *Mauritania Ceſariana*, and *Tunis*, which contains the Country that was properly called *Africa*.

Biledulgerid.

Biledulgerid, the ſecond part of *Africa*, was call'd by the Ancients *Getulia* or *Numidia*, from *Nomades*, i. e. *Shepherds*; for the Inhabitants of that Country, are always wandring after their Flocks, and live in little Sheds made of the Branches of Trees, call'd by the Ancients *Maphalia*. The moſt Eaſtern Part of *Numidia* was by *Ptolomy* call'd *Libya Cirenaica*, or *Pentapolis*, becauſe it contains five large Cities.

Sahara.

Sahara, the third part of *Africa*, ſignifying *Deſarts*, is the moſt inconſiderable part of *Libya Interior*, which according to *Ptolomy*, included likewiſe *Numidia* and Lower *Æthiopia*.

Lower Æthiopia.

The fourth part of *Africa* is call'd Lower *Æthiopia*, or *Beled-Ala-Abid*, or the Land of Negroes. 'Tis larger than all the above-mention'd parts put together, and is not only well peopl'd, but water'd with very large Rivers that empty themſelves into the Sea. Its Bounds are, the Ocean on the Weſt, the Country of the *Abiſſines* on the South, on the Eaſt *Æthiopia* near *Egypt*, and on the North the Deſarts of *Sahara*.

Egypt.

Egypt, the fifth part of *Africa*, is by *Ptolomy* join'd to *Marmarica*, but the *African* Authors exclude it, or at leaſt its Eaſtern Part from *Africa*. 'Tis call'd by the *Arabians*

rabians Meſra, by the Jews Mezraim, and by the Natives Elzumet. Its Limits, according to the Africans, are, the Deſarts of Barca, Libya, and Marmarica, on the Weſt, thoſe of Aſia on the Eaſt, the Mediterranean Sea on the North, and Æthiopia near Egypt on the South.

Higher Æthiopia.

The laſt part of *Africa*, call'd Higher *Æthiopia*, comprehends the Kingdoms of the *Abiſſines*, and all the Provinces terminating upon the *Arabick* or *Red-Sea*, together with that Country which is call'd *Æthiopia* above *Egypt*, where the Kingdom of *Nubia* or *Neuba* lies. This Country extends it ſelf from the Mouth of the *Red-Sea* Southwards, to the Mountains of *Telme*, or the Golden Mountains under the Equinoctial Line. Its Northern Limits are the *Nile*, *Nubia*, and the lower and moſt Weſtern part of *Geneova*; to the Weſt it borders upon *Negro-land* or Lower *Æthiopia*. There are ſeveral Kingdoms in this Country, the Prince of which, tho' diverſify'd by their Sects, Language, Cuſtoms, and Colour, are all tributary to the Emperour of the *Abiſſines*, who poſſeſſes the greateſt part of it. It contains above 700 Leagues in length, and is very near as large as all *Spain* and ancient *Gaul*.

John Leo's Account of the Inhabitants of *Africa*.

In ancient Times *Negro-land* was the only inhabited Country of *Africa*, at leaſt *Barbary* and *Numidia* were for many Ages deſtitute of Inhabitants, till the Tawny People ſettled in that Country, who were call'd by the name of *Barbar*, an *Arabick* Word, probably deriv'd from *Barbara*, i. e. to *Murmur*, becauſe the *Arabians* look'd upon the *African* Language as an articulate ſound of Beaſts. Others will have *Barbar* to be only the Repetition of *Bar*, i. e. *Deſart*, ſuppoſing *Bar-Bar*, *To the Deſart*, *To the Deſart*, to have been the Word among *Ifricus*'s Followers, when they fled out of *Arabia Fœlix*.

Five Tribes of Tawny *Mores*.

Theſe Tawny *Mores* are divided into five Tribes, namely, the *Zanbagi*, inhabiting the Weſtern and Southern part of Mount *Atlas*; the *Muſmudi*, inhabiting the Provinces of *Hea*, *Sus*, *Guzula*, and the Territory of *Maroco*; the *Gumeri*, poſſeſſing the *Barbary* Mountains upon the *Mediterranean* Sea; and the River *Rif*, which takes its Riſe near the Streights of *Gibralter*, and runs Eaſtward to *Tremeſen*, or *Mauritania Cæſarienſis*; the *Haoari* and *Zeneti*, who are diſpers'd all over *Africa*. Theſe Tribes are diſtinguiſh'd from one another by certain Marks, and wage continual War among themſelves. In former Times they had their Habitations and Tents in the Fields, every one favouring thoſe of their own Tribe, and labouring for their mutual and common Benefits. The Governours of the Country attended their Droves and Flocks, and the Citizens followed Husbandry, or ſome manual Art. *Ibnu Raceo*, who writes of the Genealogies of the *Africans*, divides theſe People into 500 ſeveral Families. Tho' their Poſterity is run out into innumerable Branches, and at that great diſtance from one another, yet they retain one Language, call'd by them *Aquel Amarig*, i. e. *The Noble Tongue*, which is the true *African* Language, and branded by the *Barbarians* for a barbarous Tongue. The *Gumeri*, and moſt of the *Haoari*, underſtand the *Arabick*, by vertue of their long Acquaintance with the *Arabians*.

Several Languages among the Negroes.

As for the *Negroes*, they have ſeveral Languages, particularly the *Sungai*, which is current in *Gualata*, *Tombuto*, *Guinea*, *Melli*, and *Gago*, and another call'd *Gubir*, commonly ſpoken in *Guber*, *Cano*, *Caſena*, *Perzegreg*, and *Guangra*. *Borno* has a peculiar Language, reſembling that of *Gaoga*, as well as *Nube*, whoſe Speech bears great affinity to the *Caldean*, *Arabian*, and *Egyptian* Tongues. All the Sea Towns from the Mountains of *Atlas* to the *Mediterranean*, ſpeak *Arabick*, excepting *Maroco* and the *Inland Numidians*, who ſpeak the *Barbarian* Tongue. About *Tunis* and *Tripoli*, they ſpeak *Arabick*, but very corruptly.

How the *Arabians* came to invade *Africa*.

To underſtand how the *Arabians* came to ſettle in *Africa*, we muſt know, that in the 400th Year of the *Hegeira*, *Hutmen* the Mahometan Califa and Patriarch of *Arabia*, ſent an Army of 80000 Men to *Africa*, under the command of one *Hucba Hibnu Nafich*, who to avoid the People of *Tunis*, whom he dreaded, travell'd into the Deſarts, and built *Cairoan*, about 120 Miles from *Carthage*. 'Tis true, the *Mahometan* Prieſts forbad the *Arabians* to croſs the *Nile*, but this factious *Califa* permitted them to go becauſe one of his Noble-men had rebell'd againſt him, and uſurp'd a great part of *Barbary*. After that, the *Califa Elcain* ſent another Army of 80000 Men, under the command of one *Geboar*, whom of a Slave he had made a Counſellor. This *Geboar* conducting the Troops through the Deſarts of *Egypt* and *Barbary*, defeated the *Vice-Califa* of *Egypt*, and recover'd all *Numidia* and *Barbary*; and to cover the Garriſons he had left in *Barbary*, from the Incurſions of the *Califa* of *Bagdet* out of *Aſia*, built a City call'd *Alchair*, and afterwards *Cairo*, which he wall'd round, and which is ſaid to have increas'd ſo prodigiouſly, that it out-ſtrip'd all the Cities of the World for Buildings and number of Inhabitants. After that, while *Califa Elcain* was preparing for a War againſt the *Califa* of *Bagdet*, the Vice-Roy of *Barbary* betray'd all *Barbary* into the Hands of the *Califa* of *Bagdet*, who thereupon made him King of all *Africa*. *Elcain* being much diſcourag'd with his Loſs, was told by one of his Counſellors, that if he would ſuffer the *Arabians* to invade *Africa*, they would not only do him good Service, but likewiſe preſent him with a large Sum of Gold for their Licence, eſpecially conſidering, that they were then grown ſo populous, that *Arabia* was not able to maintain them. *Elcain* knew very well, that the *Arabians* would ſo waſte all *Africa*, as to render it equally unprofitable, either for himſelf or for his Enemies. However his Kingdoms being in great danger, he permitted all the *Arabians* who would pay him Ducats a piece to go and invade *Africa*. Upon which ten Tribes of *Arabia Deſerta* join'd by ſome of the Inhabitants of *Arabia Fœlix*, invaded *Africa*, amounting in all to about 50000 Men in Arms, beſides their Women and Children, and innumerable Droves of Cattle. Theſe *Arabians* having travers'd the Deſart between *Egypt* and *Barbary*, firſt laid ſiege to *Tripolis*, a City of *Barbary*, which being Maſter'd, they ſlew a great part of the Citizens, the reſt eſcaping by flight. Then they took the Town of *Capes* and after a Siege of ſix Months *Cairacan*, putting all to the Sword. By this means they came to poſſeſs all that Country, and continu'd their Poſſeſſion, till one *Joſeph* the Son of [illegible] mounted the Throne of *Morocco*. This *Joſeph*, the firſt King of *Morocco*, expell'd the *Arabians* out of *Cairaon*, and prefer'd the Friends of the late King of *Africa* to the Government. However the *Arabians* poſſeſs'd the adjacent Regions, and liv'd upon robbery and ſpoil. But *Manſor* the fourth King of *Morocco*, oppos'd the Friends of the late King of *Africa*, and in conjunction with the *Barbarians*, ſubdu'd 'em. This *Manſor* ſettled moſt of the *Arabians* in the Weſtern Dominions of *Africa*, allotting to the better ſort *Duccala* and *Azgara*, and to the reſt *Numidia*. But afterwards he planted the *Numidian* Slaves in that part of *Numidia* which he had allotted to the *Arabians*, and brought thoſe of *Azgara* under his Subjection. For the *Arabians* being then out of the Deſarts, were like Fiſhes out of the Water; and the *Barbarians* planted upon the Mountains of *Atlas* in the Plains prevented their Return to the Deſarts, which they often endeavour'd. Being thus humbl'd, and confin'd to Villages, Cottages, and Tents they apply'd themſelves to Huſbandry and pay'd a large Tribute to the King of *Morocco*. Indeed the *Arabians* of *Duccala*, being a great body, exempted themſelves from the Tribute. When *Manſor* firſt tranſplanted theſe *Arabians* to the Weſt, he left a Body of 'em at *Tunis*, who after his death, became Lords of *Tunis*, and continued ſuch, till they reſign'd their Government to the People call'd *Abu-Haf*, upon condition of receiving from them half the Revenue thereof, which Condition is ſtill obſerv'd. After that theſe *Arabians* multiplying in innumerable ſwarms, and not being able to live upon the ſtipulated Revenue, betook themſelves to Robberies, Murders, and other Ravages, inſomuch, that no Merchants could paſs that way, without endangering both his Goods and Life. Some of 'em indeed are in pay with the King of *Tunis*, for bringing the Merchants ſafe through, which they do effectually; but then they oftentimes conſtrain the Merchants to give them great ſums of Money over and above their Pay.

Cairo built.

The Progreſs of the *Arabians* in *Africa*.

The Tribes of the *Arabians* in *Africa*.

To be ſhort, the *Arabians* that inhabit *Africa* are drawn up in three Claſſes, viz. *Cachin*, *Hilel*, and *Machil*. *Cachin* is divided into three Tribes or Nations, viz. *Etheg*, *Sumait*, and *Sahid*; and *Etheg* is ſubdivided into the Families of *Delleg*, *Elucuntefig*, and *Subair*, which are diſpers'd into ſeveral places. *Hilel* is branch'd out into the People of *Benihemir*, *Reib*, *Suſien*, and *Chuſain*; under *Benihemir* are the Lineages of *Huroam*, *Hucben*, *Habram*, *Muſſein*; under *Reib* theſe, of *Devead*, *Suaid*, *Aſgeg*, *Elehywith*, *Euedri* and *Gaſam*. *Machil* has three Tribes, viz. *Maſtar*, *Hutmen*, and *Haſſau*; under *Maſter* are *Ruchen* and *Selim*; under *Hutmen*, *Elbaſi* and *Chinau*; under *Haſſau*, *Dewigheſſen*, *Dewigmanſor*, and *Dewibubaidulla*; and each of theſe have their reſpective Subdiviſions. All theſe Tribes are ſo widely diſpers'd, that it is not poſſible to trace their diſtinct Seats.

Cachin and its Subdiviſions.

To begin with that of *Cachin*; *Etheg* was the nobleſt and moſt illuſtrious Tribe of all the *Arabians*, being planted in *Duccale* and *Tedles*, by *Almanſor*. Tho' they are able to raiſe 100000 Men, many of which are Horſe, yet the Kings of *Portugal* and *Fez* have often maul'd them. The Tribe *Sumait* poſſeſſes that part of the *Libyan* Deſart, that's oppoſite to the Deſart of *Tripoli*. It raiſes 80000 Men, moſt Foot, and frequently invades *Barbary*. *Sabid* poſſeſſes the *Libyan* Deſart, is ſtrictly allied with the King of *Guargala*, raiſes 150000, moſt Foot, and ſupplies all the Cities of that Country with Fleſh, being mew'd up in their Deſarts in Winter. Moſt of the Tribe *Dellig* inhabits *Cæſarea*, ſome of 'em the Frontiers of *Bugia*, who have a Yearly Allowance from their next Neighbours, and a ſmaller number *Acdes* and part of Mount *Atlas* being ſubject to the King of *Fez*. *Elmunleſig*, call'd by latter Writers *Elcaluth*, inhabits *Azgar*, raiſes 8000 Horſe, and pays Tribute to the King of *Fez*. *Sobair* enjoyns a great part of *Numidia*, takes pay of the King of *Tremeſen*, is able to raiſe 3000 Warlike Horſes, and having many Camels lies all Winter in the Deſarts. Part of this Family poſſeſſes the Plain between *Sala* and *Mecnes*, being 4000 Warlike Horſe ſtrong, and applies it ſelf to Husbandry, paying a yearly Tribute to the King of *Fez*.

Hillel and its Branches.

As for the ſecond Principal Tribe call'd *Hilel*; *Benibemir* poſſeſſes the Frontiers of *Tremeſen* and *Oran*, has always in readineſs 6000 Horſe, takes pay of the King of *Tremeſen*, and ſcours the Deſart of *Tergoraziu*: *Harva* are Savages, Strangers to War, but devoted to Robbery. They have 2000 Horſe poſſeſſing the Borders of *Muſtuganim*, but never peep out of the Deſarts. *Hucban* lives in the Neighbourhood of *Melin*, and takes pay of the King of *Tunis*; they are an inhumane People, and their Strength lies in 1500 Horſe. *Habrum* are planted between *Oran* and *Muſtuganim*; they are Tributary to the King of *Tremeſen*, and can ſcarce make 100 Horſe. *Muſſim* poſſeſſes the Deſart of *Muſila*, and purſues Theft and Robbery. *Riech*, living in the Deſarts of *Libya* near *Conſtantina*, is a Warlike Nation, that poſſeſſes Ample Dominions in *Numidia*, has 5000 Horſe at command, and receives pay of the King of *Tunis*. *Suaed* poſſeſſes the Deſart adjoyning to *Tenez*, and receives pay of the King of *Tremeſen*, being a People of great dexterity, both in Wars and other Actions. Part of *Azgeg* inhabits *Garet*, and part of 'em poſſeſſes that part of *Duccala* that joins *Azaphi*. *Elcheret*, a barbarous inhuman Tribe, poſſeſſes *Heliu*, in the Plain of *Sabidim*, and commands Tribute from *Hea*. *Enedri* inhabits the Plains of *Hea*. *Garfa* having neither King nor Governour, are diſpers'd among the other Families, and are employ'd in carrying Dates from *Segelmus* to *Fez*, and bringing Commodities from Fez to *Segelmes*.

Machil and its Dependants.

To come to the laſt Tribe call'd *Machil*. *Ruchen* poſſeſſes a ſmall Deſart between *Dedes* and *Forcala*: 'Tis not rich, but boaſts of 8000 Warlike Footmen, that run more ſwiftly than any Horſe, let the Journey be never ſo long. *Selim* have a great Juriſdiction upon the River *Darha*, and great plenty of Camels: They are very rich, and trade every Year to *Tombuto*, and have always 3000 Horſe in readineſs. *Elbaſi*, lives upon the Sea-Coaſt near *Meſſa*, and does not raiſe above 500 Horſe, being altogether unacquainted with War or Dependance; the one part of them planted near *Azgara*, is ſubject to the King of *Fez*. *Chinau* are ſubject to the King of *Fez*, being a Warlike People, able to raiſe 2000 Horſe. *Dewibeſſen* has ſeveral Deſcendants, known by the Names of *Dulein*, *Berbun*, *Vode*, *Racmen*, and *Hamrum*. *Dulein* having neither Dominions nor Pay, are Poor Robbers, that range among the People call'd *Zanbaga* in the Deſarts of *Libya*, and carry Cattle to *Dara* to be exchang'd for Debts: They have 4000 Horſe and 6000 Foot, and are equally Strangers to Gallantry, and neatneſs of Apparel. *Berbun*, a numerous People, without any other Riches but Camels, inhabits the *Libyan* Deſart, in the Neighbourhood of *Sus*, and commands the City of *Teſſet*, which is ſcarce ſufficient for the few Horſe that they have. *Voden* poſſeſſes the Deſart between *Guaden* and *Gualata*, is able to raiſe 60000 good Souldiers, but very few Horſe, commands the *Guadenites*, and puts the Duke of *Gualata* under Tribute. *Racmen* inhabits the Deſart near *Hacha*, and being rich in Poſſeſſions, has above 12000 Men fit for Arms, but few Horſes. In the Spring they uſually travel to *Jeſſet*, where they have always buſineſs. *Hamrum* poſſeſſes the Deſarts of *Tagavoſt*: It raiſes above 8000 Men, moleſts the People of *Non*, and puts the Neighbours under Contribution. The Tribe of *Dewimanſor* has five Branches, namely, *Debeucrum*, in the Deſart oppoſite to *Segelmes*, where the Plenty of Dates alone is able to maintain them, who put *Segelmes*, *Todgatan*, *Terbelbelt* and *Dara* under Contribution, and bring into the Field 3000 gallant Horſemen; *Menebbe* in the ſame Deſart, a moſt valiant Nation, able to raiſe 2000 Horſe, that commands the two Provinces of *Metgara* and *Retebbe*, and receives Tribute of *Segelmes*. *Huſein*, poſſeſſing divers Caſtles and rich Cities, upon the Mountains of *Atlas*, which 'tis thought the Vice-Roys of *Marini* gave 'em in conſideration of their Service, a rich honeſt ſort of People, able to raiſe 6000 Horſe, and uſing many other *Arabians* for Servants; and *Albahuſein* in the Deſart of *Eddara*, living in great miſery in their Tents, where they have ſcarce ſufficient Suſtenance. The Tribe of *Dewibubaidulla* has the following Branches, viz. *Gharrag* in the Deſarts of *Benigomi* and *Tighig*, a People given to Theft and Robbery, Stipendaries to the King of *Tremeſen*, and able to raiſe 4000 Warlike Horſes; *Herdeg*, poſſeſſing the Deſart call'd *Haugad*, near *Tremeſen*, able to raiſe 500 Horſe, and minding only Rapine and Stealth, and having neither Juriſdiction nor Pay of any Prince; *Teleb*, conſiſting of 3000 Horſe inferiour to no other Nation, who inhabit the Plain of *Algezer*, and were Maſters of the famous Cities of *Algiers* and *Tedelles*, till in our Days *Barbaraſſa*, the *Turk* diſpoſſeſs'd them, and cut off their principal Heads; and laſtly *Geboan*, ſcatter'd among the People of *Glorrag* and *Hedig* in the quality of Servants.

Cachin and *Hilel* deſcended from *Iſmael*.

So much for the Branches of the three Principal Tribes of the *Arabians*, two of which, namely, *Cachin* and *Hilel*, being originally of *Arabia Deſerta*, derive their Pedegree from *Iſmael* the Son of *Abraham*, and the other call'd *Machil*, ſpringing from *Arabia Fœlix*, traces its Original to *Saba*. Tho' the *Mahometans* give the Preference to the *Iſmaelites*, yet ſeveral Epigrams and Dialogues have been writ both *pro* and *con* upon the comparative Nobility of their Extraction. The Ancient *Arabians* that were before the time of the *Iſmaelites*, were call'd by the Ancient Hiſtorians *Arabi-Arabia*, i. e. *Arabians of Arabia*; but the *Iſmaelites* were call'd *Arabi-Mus-Araba*, i. e. *Arabians ingrafted in Arabia*, as being bred and born elſewhere. Thoſe which came after them to *Africa*, were call'd *Muſteahgemi*, i. e. *Barbarous Arabians*, becauſe they joyn'd in with Strangers, and corrupted both their Speech and Manners.

Additions to *John Leo's* Deſcription of the Ancient Inhabitants of *Africa*, out of *Marmol*.

Of all the parts of *Africa* after the Deluge, *Egypt* was firſt inhabited by *Mexraim*, the Son of *Ham*, and Grandſon of *Noah*, and was call'd after his Name. Sometime after *Æthiopia* was peopled by *Chus* another of *Cham's* Sons, and *Libya* by *Futh*, a third Son, from whom it derived the Name of *Futeia*. *Sabatha* the Son of *Chus*, peopl'd the Deſarts between *Numidia* and *Negro-land*, as *Tut*, another of *Cham's* Grand-children did that of *Mauritania Tingitana*. The *African* Authors aſſure us, that *Barbary* and *Numidia* have been long inhabited, but they are not agreed upon the firſt Inhabitants. Some ſay, an *Aſiatick* People expell'd their own Country, and finding no Security in *Greece*, went and peopled *Barbary*. Others alledge, that the People of *Phœnicia* in *Paleſtine*, being expell'd their own Country by the *Aſſyrians*, and coldly receiv'd by the *Egyptins*, paſs'd on to the Deſarts of *Africa*, where they ſettl'd.

Barbarians a Colony of the *Sabeans*.

But the *African* Authors of the beſt note aſſur'd us, that the firſt Inhabitants of *Barbary* and *Numidia*, now call'd *Barbarians*, were five Colonies or Tribes of *Sabeans*, that came thither along with *Melec Iſirqui*, a Prince of *Arabia Fœlix* mention'd above, to which 600 Families of *Berebers*, and the greateſt Lines of all *Africa*, owe their Original. Theſe Tribes did firſt people the Eaſtern Parts of *Barbary*, from whence they diſpers'd themſelves over moſt of *Africa*, retaining the name of *Berebers* from *Barbary*, their firſt Habitation; whereas the former Inhabitants of *Tingitana*, *Numidia* and *Libya*, were call'd *Chilohes*. Tho' theſe five Tribes liv'd firſt of all in Tents of the Fields, yet when they came to War with one another, thoſe who were defeated and rob'd of their Flocks, fled from the Plains, where the Conquerours remain'd to the Mountains, where mixing with the Ancient *Africans*, *Chilobeans*, and *Getulians*, they built Houſes to ſcreen themſelves from the Weather.

Berebers, ſome live in the Fields ſome in Houſes.

This occaſion'd the Difference between the *Berebers* that live in the Fields and thoſe that dwell in Houſes, the former of which, have the Preference for Riches and Power, tho' both of 'em are equally zealous in keeping up their Ancient Cuſtoms, and celebrating the Honour of their Original. Three of theſe five Tribes, namely, the *Muſmudi*, *Zeneti*, and *Zanhaga*, have reign'd ſeveral times in *Barbary*, *Numidia*, and *Libya*, upon the Declenſion of the Empire of the *Arabians*; for before that they were only govern'd by Heads or Leaders for each Community, call'd *Cobeila's*, and were ſeveral times worſted by foreign Nations. The Kings of *Tunis* and *Tremeſen* are deſcended of theſe Tribes, and theſe Crowns continued in that Line till the *Turks* was poſſeſs'd of 'em. The other two Tribes, namely, *Gomeri* and *Haoari*, were Maſters of ſeveral Provinces, tho' they did not arrive at the Dignity of Crowns: So that it is manifeſt, that all the Kings that reign'd in *Africa*, from the Declenſion of the Empire of the *Arabians*, were deſcended of theſe five Tribes.

The People call'd *Azuagues*.

Beſides theſe, there was a noted People in *Africa* call'd *Azuagues*, who are now ſcatter'd up and down the Provinces of *Barbary* and *Numidia*, and moſt of 'em are Shepherds, tho' they have ſome Artizans among 'em, that make Linen and Cloth. They live upon Mountains and Hills, and neſtle in little Holes and Chinks; and notwithſtanding their extream Poverty, are commonly Tributary to the Kings or *Arabians*. The *African* Authors ſay they are *Phenitians* expell'd by *Joſhua* the Son of *Nun*, who being deny'd Admiſſion by the *Egyptians*, paſs'd on to *Libya*, where they built *Carthage* 1268 Years before *Chriſt*: And a long time after that, if we credit *Ibni-Abraqu yq*, a great Stone was found there with theſe Words engraven upon it in the *Punic* Language, *We fled hither from the Preſence of that Notorious Robber,* Joſhua *the Son of* Nun: Before the Arrival of this People, *Aſclepius* and *Hercules* had reign'd in *Africa*. But after the firſt Deſtruction of *Carthage*, before it was rebuilt by *Dido*, this People retir'd to the Weſt part of *Barbary*, under *Hannon* their Leader, and there built *Liby-Phœnician* Cities, in which they ſtill continu'd when the *Romans* invaded *Africa*. Some ſay that Country was call'd *Mauritanian* from them, becauſe they call'd themſelves *Mauri* or *Maurophori*. However 'tis certain the *Azagues* are a warlike induſtrious People, and very formerly very puiſſant.

Expell'd *Phœnicia* by *Joſhua*.

Their Language.

Their Language is that of the *Berbers*, tho' they likewiſe ſpeak *Arabick*, eſpecially thoſe of 'em that frequent the Neighbourhood of *Lorbut* upon the Frontiers of *Tunis*, where they have a perpetual Traffick. Their principal Reſidence is in the Provinces of *Tremeſen* and *Fez*.

Victories.

But the moſt puiſſant Branch is ſeated between the Kingdom of *Tunis* and *Biledulgarid*, from whence they have ſeveral times had the confidence to attack the Kings of *Tunis*, and not many Years ago defeated the Governour of *Conſtantina*, who mean'd to ſubdue them. By vertue of that Victory, their Leader became one of the moſt puiſſant Soverains in *Africa*. At preſent he is known by the Name of *Cuco*, and wages perpetual War with the *Turks*.

Religion.

Christians diſtinguiſh'd by the Mark of a Croſs.

This People boaſts of being originally Chriſtians, and diſtinguiſh themſelves from the *Mahometans*, by not ſhaving their Beards nor cutting their Hair as they do. By an ancient Cuſtom they make a blew Croſs upon their Cheek or Hand with an Iron, which they take to be a Mark of their Original. But the true Occaſion of that Cuſtom was this, When the *Romans* and *Goths* reign'd in *Barbary* and *Numidia*, they exempted the Chriſtians from all Tribute; And for as much as every body had a trick of calling himſelf a Chriſtian when the Commiſſaries came to collect the Taxes, to avoid all Miſtakes, thoſe who were really Chriſtians, were ordered to have a Croſs engraven upon their Cheek or Hand. Upon that Occaſion the *Azuagues* did ſo, and continued the Profeſſion of Chriſtianity till the Arrival of the *Arabians*. There are other *Africans* that likewiſe carry ſuch Marks, but by the proceſs of time, inſtead of Croſſes they make other Figures, with no other Deſign but to denote the Antiquity and Nobility of their Extraction. The *Arabian* Girls alſo have, by way of Ornament, upon their Breaſts, Hands, Arms, and Legs, ſeveral Figures of a blew colour made with a Lancet; but theſe Figures are different from thoſe of the *Azuagues*. As for the other Inhabitants of *Africa*, we muſt call to mind that *Zabatha* the Son of *Chus*, peopled the Deſarts of *Libya Interior*, and the Inhabitants were call'd after him *Sabatheans*, and are divided into five Tribes, viz. *Senega*, *Zuenzigar*, *Terga*, *Berdoa*, beſides a poor miſerable ſort of People, that inhabit the rough and barren places upon the Confines of *Negroland*.

The Nomades or Numide.

Theſe the *Grecians* call *Nomades*, and the *Latins Numide*. They live in Tents like the *Arabians*, and run up and down after their Camels. Thoſe of *Senega* live upon the Weſtern Coaſt, extending eaſtward to *Tegaza*, northward to *Sus*, *Hacha*, and *Dara*, and ſouthward to *Gualata* and *Tombut*. Theſe *Zuenzigues* or *Guanezeries*, extend from the Frontiers of *Tegaza* on the Weſt, to the Deſart of *Hair* on the Eaſt, on the North to the Provinces of *Segelmes*, *Tebelbeled* and *Benigoray*, and on the South to the Kingdom of *Guber*. Thoſe of *Terga* extend from *Hair* on the Weſt, to *Iguil* on the Eaſt, and from the Deſarts of *Agadez* on the South, to that of *Tuat* and the Province of *Tegorarin* and *Meſzab* on the North. Thoſe of *Lempta* extend from *Iguidi* on the Weſt to *Berdoa* on the Eaſt, and from *Cano* in *Negroland* on the South, to *Tecourt*, *Guerguelau*, and *Gademm* on the North. Thoſe of *Berdoa* run from thence Eaſtward, to the Frontiers of *Angela*, and are bounded on the North by the Deſarts of *Fez* and *Barca*, and *Bomo* on the South. Some *African* Hiſtorians ſay, the race of *Semega* did and does ſtill reign in *Meli*, *Tombut*, and *Agadez* in *Negroland*. Each of theſe Families has a reſpective *Cheque* or Prince; and, which is very remarkable, they never War or quarrel with one another about the Diviſion of their Lands.

The Manners and Cuſtoms of the *African* People, from *Leo*. Their Garments.

The five Tribes of the *Numide* are equally Strangers to Civility or Laws. They cover about half their Body with a piece of narrow courſe Cloth; ſome of 'em wrap a piece of black Cloth about their Heads, in the form of a Turkiſh Turbant, part of which, like a Mask, covers all the Face but the Eyes. The better ſort wear a Jacket of blue Cotton, with wide Sleeves, the Cotton being imported from *Negroland*.

Manner of Riding.

They have no Beaſts fit to ride upon but Camels, which Nature has furniſh'd with a ſort of Saddle between their Necks and the Bunch upon the hinder part of their Backs. Sometimes they lay their Legs acroſs upon the Camel's Neck; and ſometimes they make uſe of a Rope caſt over his Neck for Stirrops. Their Spurring conſiſt in pricking the Cammel's Shoulders with a Goad faſten'd to the end of a Truncheon of a Cubit's length. Their Bridles are a Ring of Leather faſten'd to a hole boar'd thro' the Griſtle of the Camel's Noſe, with which they curb 'em very eaſily, as ſome do the Buffloes in *Italy*.

Beds.

Their Beds are Mats made of Sedge and Bulruſhes.

Tents.

Their Tents are commonly cover'd with a coarſe ſort of Camblet, or with a rough ſort of Wool, which commonly grows upon the Boughs of their Date-Trees.

Way of eating.

Their only Food is Camel's Milk and dry'd Fleſh ſteep'd in Butter and Milk. For their Breakfaſt they drink up a great Cup of Camel's Milk; and for Supper they take a piece of the above-mention'd Fleſh in their Fiſh, and ſo eat it up, drinking afterwards out of the Palms of their Hands, the Broth in which 'twas ſteep'd, in order to promote Digeſtion, and after that a Cup of Milk. The better ſort, who cover their Heads and Faces with the black Cloth mention'd above, remove the Mask when they put the Meat into their Mouths, and immediately cover their Mouths again; for which Cuſtom they offer this Plea, that as Vomiting is undecent, ſo is eating with an uncover'd Mouth. While their Milk laſts, *i. e.* for the Spring of the Year, they never mind Water, nay, ſome of 'em waſh neither Hands nor Face; and in like manner their Cammels never drink any Water ſo long as they can feed upon Graſs.

Buſineſs.

Their whole Imployment is Hunting or Theiving; but they cannot tarry above three Days in one place, for want of Paſture for their Camels.

Government.

Notwithſtanding their unacquaintedneſs with Civility or Laws, they tender Homage and Obedience to a Prince that governs 'em.

Learning.

But they're altogether ignorant of Learning, and deſtitute of Vertue; nay, ſuch is their contempt of liberal Sciences, that they can neither condeſcend to purchaſe 'em at the Expence of quitting their Deſarts, nor brook the Converſation of Learned Men. A Man of Senſe and Prudence is a *Phœnix* among them.

Judges.

If any one means to commence a Law Suit againſt his Neighbour, he muſt ride five or ſix Days before he can meet with a Judge; Tho' after all, if any Judge would condeſcend to live amongſt 'em, they'd make him a good Allowance, perhaps 1000 Ducats a Year, ſome more, ſome leſs.

Women.

Their Women are groſs, corpulent, and ſwarthy, ſmall waſted, and fat about their Breaſts; they are modeſt in their Speech and Geſtures. Whoever offers 'em more than a bare Kiſs, endangers his Life; for the Men can by no means brook a whoriſh Wife; nay, ſuch is their nice Jealouſy, that it frequently prompts 'em to murder one another in a very ſavage manner.

Liberality and Hoſpitality.

This People are noted for their generous Liberality. When any Travellers paſs the Deſarts, they neither repair to their Tents, nor travel upon the High-way. If any *Caravan* or Company of Merchants paſſes thoſe Deſarts, they muſt pay to the Prince a piece of Cloth worth a Ducat for every Camel's Load. I remember I once travel'd with ſome Merchants thro' the Deſart *Araon*, and there met with the Prince of *Zanaga*, who after the Receipt of his Cuſtom, carry'd the Merchants to the place of his Reſidence, and there entertain'd 'em very handſomely. We ſtay'd with him two Days, and convers'd with him and his Courtiers frequently, by the Intervention of an Interpreter. He entertain'd us with great plenty of roaſted and boyl'd Fleſh, particularly roaſted Oſtriches (which he had hunted and taken by the way) ſerv'd up in Wicker Servers, and ſeaſon'd with ſeveral Herbs and Spices; beſides the Fleſh of Camels, of which he kill'd ſeveral every day, notwithſtanding our Remonſtrances to the contrary, alledging, That ſmall Cattle was too mean Entertainment for ſuch unfrequent Gueſts as we. He regal'd us likewiſe with Bread made of Milk and Panicke, the Taſte of which was very pleaſant and ſavoury. For the King had laid up great ſtore of Corn for the Entertainment of Strangers, tho' his own Country bears none; and for that Reaſon neither he nor his People eat of it, unleſs it be when they ſacriſice at the Feaſt of the Paſſover, and other Feaſts. He did not eat with us himſelf, but order'd ſeveral Religious and Learned Men to make us welcome, who fed only on the Fleſh and Milk without Bread; our conſtant Deſert was plenty of Milk and Dates. On the third day we took leave, and he accompany'd us to the place where we overtook our Camels and the reſt of our Company that we had order'd to go on while we went to the King's Reſidence. What we have ſaid of the Cuſtoms of this Nation, may be apply'd to the other four Tribes of the *Numida*.

The Cuſtoms of the *Arabians* in *Africa*.

As for the *Arabians*, their Cuſtoms vary according to their reſpective Seats. Thoſe who are ſeated between *Numidia* and *Libya* are very valiant, but live in great Want and Miſery. They commonly exchange Camels in *Negro-land*, and have great plenty of Horſes, call'd by the *Europeans Barbary-horſes*. They take great delight in hunting Deer, Wild Aſſes, Oſtriches, and the like. The *Arabians* which inhabit *Numidia*, have a peculiar Talent of ſetting forth their Love Intreagues, Hunting Adventures, Combats, and other memorable Actions in Rhime. They are naturally generous, but dare not make any ſhew of Wealth by their Liberality, for fear of the daily Inconveniences that oppreſs 'em. They diſlodge the Native *Numidians* of the Deſarts they now poſſeſs, *i. e.* thoſe which border upon the Land of *Dates* or *Biledulgerid*, and about that time the *Getuls* and *Numidians* fled to the Frontiers of *Negro-land*.

The *Arabians* between Mount *Atlas* and the *Mediterrnean*.

The *Arabians* between Mount *Atlas* and the *Mediterranean*, are much wealthier than thoſe. Their Horſe-meat is better, as well as their Cloaths and Tents. Their Horſes are better ſhap'd and more corpulent, tho' not ſo ſwift. Their Husbandry is rewarded with great increaſe of Corn. Their Flocks of Cattle are almoſt innumerable, ſo that they can't live juſt by one another for want of Paſture. But after all, they are far from being generous and liberal, and are more barbarous than thoſe which inhabit the *Numidian* Deſarts. Part of theſe, dwelling in the Territory of *Fez*, are ſubject to the King of *Fez*. The reſt in *Morocco* and *Duccala*, continued a long time free from Exaction and Tribute, till being attack'd by the King of *Portugal* on one hand, and the King of *Fez* on the other, they were reduc'd to the extremity of Famine, and thereupon offer'd to ſubmit to any one that would ſupply their Neceſſities. Thus they became Slaves to *Portugal*, and were almoſt totally extirpated out of *Duccela*.

The *Arabians* upon the Borders of *Tremiſen* and *Tunis*.

Thoſe who inhabit the Deſarts bordering upon the Kingdoms of *Tremizen* and *Tunn*, may be call'd Noblemen and Gentlemen, upon the compariſon with the reſt. The King of *Tunis* pays great Revenues every Year to their Governours, who deſtribute the ſame among the People, and that renders their Peace and Mutual Concord firm and inviolable. They have a notable Dexterity in making Tents, and in breeding and keeping Horſes. They continue in the Deſarts all Winter; in the Spring they hunt with wonderful ſucceſs; and in the Summer they approach to *Tunis*, in order to have their Pay, and to provide themſelves with Bread, Armour, and other Neceſſaries. I have ſeen in their Tents, tho' not without danger, greater quantities of Cloath, Braſs, Iron, and Copper, than the richeſt Ware-houſes of ſome Cities can match. They have ſome ſhew of Civility, but upon occaſion will ſteal very dexterouſly. Their Language is pure and elegant. They take great delight in Poetry, and indeed their Verſes are very fine; and the Governour treats their beſt Poets with a diſtinguiſhing Reſpect and bounty.

The Habit of their Women.

Their Women are very gorgiouſly attir'd, according to the Cuſtom of that Country. They wear Linen Gowns died black, with exceeding wide Sleeves; over which they ſometimes caſt a Mantle of the ſame Colour, or of blue, the Corners of it being very artificially faſten'd about their Shoulders with a fine Silver Claſp. They have Ear-rings, for the moſt part of Silver, beſides many Rings upon their Fingers, and ſome Scarfs or Rings about their Arms and Ankles. Their Faces are cover'd with Masks, which they pull off only to their Relations. They accompany their Husbands to the Wars, in order to chear up and hearten 'em, and to avoid the Trouble and Affliction of their Abſence, and ride upon Camels, having Wicker Saddles ſo contriv'd, as to be fit only for one Woman to ſit upon. The Maids paint their Faces, Breaſt, Arms, Fingers and Legs, for Ornament's ſake; but the married Women abſtain from counterfeit Colours. Sometimes indeed they make uſe of Hen's Dung and Saffron, to paint a round ſpot about the breadth of a French-Crown, in the Balls of their Cheek, a triangle upon their Eye-brows, and the reſemblance of an Olive leaf upon their Chins. But upon the Uſe of theſe Ornaments, which are highly eſteem'd by the *Arabian* Poets, and reckon'd Incentives to Venery, they are ſeen by none but their Husbands and Children.

The *Arabians* between *Barbary* and *Egypt*.

The *Arabians* inhabiting the barren Deſarts between *Barbary* and *Egypt* live in great Miſery and Want. They are not without Camels and other Cattel, which they exchange for Dates and Corn, but they have very little Fodder. The Soil produces no Corn; and all the Labour and Induſtry of the Inhabitants of ſome few Villages is only rewarded with a plentiful Harveſt of Dates; beſides, they are a numerous multitude. When they come to *Sicily* to buy Corn, their Money falls ſhort, they leave their Sons in pawn in great numbers, many of which turn Chriſtians; and if the Money be not paid on a certain Day, the *Sicilians* claim their Sons for Slaves, and put a Ranſome upon 'em, amounting to the triple or quatriple of the Debt. For which Reaſon they take all the Strangers they meet, and after having ſtrip'd 'em of all they have, ſell 'em to the *Sicilians* for Corn; nay, ſometimes they pour warm Milk down their Throats, and hang 'em up by the Heels to make 'em vomit up their Gold, in caſe they have ſwallow'd any to prevent their coming at it; and upon that account the Merchants which Traffick to *Africa*, keep above 500 Miles off of their Country, eſpecially towards the Sea-Coaſt. In fine, they are a rude, Forlorn, beggarly and ſlav'd Crew.

Shepherds inhabit the Mountain *Atlas*.

There are many *Africans* who are diſpers'd about the Mountain *Atlas*, living altogether the Life of Shepherds or Drovers, which pay Tribute either to the King of the Country where they dwell, or elſe to the *Arabians*; excepting only thoſe which inhabit *Temeſna*, who are very powerful and independant. Moſt of 'em ſpeak the ſame Language with the other *Africans*, only thoſe who lie near *Urbs* (a City in the Neighbourhood of *Tunn*) ſpeak the *Arabian*.

A puiſſant People between *Numidia* and *Tunn*.

Farther, the Region which divides *Numidia* from *Tunn*, is inhabited by a ſort of People who oftentimes wage War with the King of *Tunis*, and in the 915 Year of *Mahomet's Hegeira*, routed the King of *Tunn*'s Army, and ſlew his Son who commanded 'em. From that time their Fame ſpread it ſelf into all places, and many of the King of *Tunn*'s Subjects revolted from him to them, inſomuch that the preſent puiſſance of the King of this People, is ſcarce to be parallel'd in all *Africa*.

The Religion and Letters of the ancient *Africans*.

The Ancient *Africans* had magnificent Temples, dedicated to the Honour of the *Sun* and *Fire*, which they worſhip'd, and kept a perpetual Fire in 'em. Thoſe of *Libya* and *Numidia* worſhip'd ſome certain Planet, with Sacrifices and Prayers. But thoſe of *Negro-land* worſhip'd *Guibimo*, i. e. *The Lord of Heaven*, and that by a natural Inſtinct without the Influence of any Teacher. After that, the Jewiſh Law prevail'd among 'em for ſome Years, till they imbrac'd Chriſtianity; which at laſt they exchang'd for Mahometaniſm, in the 208th Year of the *Hegeira*, being at that time inveigled by *Mahomet*'s Diſciples, inſomuch that they put to death all the Jews, Chriſtians, and Profeſſours of the *African* Religion that were then found among 'em. But in proceſs of time, their Civil Diſſentions mov'd 'em to neglect *Mahomet*'s Law, and revolt from the *Califa* of *Badget*; for which they were ſeverely puniſh'd by the *Mahometan Califa's*. However the *Africans* that dwell near the Ocean, are, all of 'em very groſs Idolaters. The *Arabian* Hiſtorians agree, that the *Africans* us'd only *Roman* Letters, but others alledge that they had peculiar Letters of their own, which were loſt when the *Italians* firſt fell upon *Africa*: For, that when the *Africans* revolted from the *Califa* of

Badget, the *Mahometan Califa's* cauſ'd all the *African* Books to be burnt, upon the apprehenſion that the knowledge of Arts and Sciences prompted 'em to contemn *Mahomet*'s Law. And the ſame Fate befel the *Perſian* Books and Letters, their knowledge in Natural Philoſophy and Idolatrous Religion being reckon'd by the *Mahometan* Prelates, an Incentive to the contempt of the Precepts of *Mahomet*.

'Tis true, all the Cities of *Barbary* uſe only Latin Letters, whether in Verſe or Proſe; but that does not argue that the *Africans* in times paſt might not have peculiar Characters, by which they deſcrib'd their Exploits, eſpecially if we conſider with *Ibim Rachich*, that as 'tis certain they had a peculiar kind of Speech, ſo 'tis not to be imagin'd that they borrow'd Characters unſuitable to their Mother Tongue. Probably the *Romans*, when they ſubdued *Barbary*, aboliſh'd the uſe and memory of the ancient *African* Characters, in order to raiſe the Fame and Reputation of the *Roman* People, by introducing *Roman* Letters.

Additions to the foregoing Head, out of *Marmol.*

The *Arabians* of *Numidia* and *Libya* are of a frank hoſpitable Humour, and value their Reputation; but they are miſerably poor, as well as the Natives of that Country. They are not only Lovers of Poeſie, but likewiſe of natural Philoſophy and Eloquence. The Poems they make, are ſet to their Tabors, Lutes and Violins, and ſung along with them; nay, many of 'em ſing, play and compoſe all at once. The *Arabians* that live in *Barbary*, between Mount *Atlas* and the *Mediterranean*, are a People of leſs courage, and more barbarous, than thoſe of the Deſarts; tho' at the ſame time they entertain and regale Strangers without any Reward. The *Arabians* in *Morocco* being divided among themſelves when the King of *Portugal* took the Towns of *Safi* and *Azamor*, moſt of 'em were forced to offer themſelves as Slaves to the *Portugueſe*, and ſell their Wives and Children for Bread. A ſmall handful of 'em retir'd further into the Country, under the conduct of *Cherif*, who at laſt made himſelf Maſter of a Province, and at preſent all the Inhabitants of that and the neighbouring Provinces are his Vaſſals. The *Arabians* who inhabit the Deſarts upon the Frontiers of *Tremizen* and *Tunis* came to *Tunis* in the Summer, to have their Pay from the King of *Tunis*, but continue with their Flocks in the Deſarts all Winter, becauſe they afford Graſs in that Seaſon. In the Spring they are much taken up with Hunting and Hawking, being furniſh'd with excellent Dogs and Falcons. Their Women accompany 'em to the Field when they are engag'd in a War.

The Cuſtoms of the *Arabian* Women in *Africa*.

The Girls adorn ſeveral places of their Body with blue ſpots made with Vitriol and the point of a Launcet, and the *African* Girls follow their Example in that point. But the married Women do not diſguiſe their natural colour; only they black their Eyebrows, and make ſome black ſpots upon their Cheeks, Forehead and Chin, with the Soot of Gall-nuts and Saffron.

The Arms of the *Arabians*

All the *Arabians* that live towards the Weſt, where the Kingdoms of *Fez* and *Morocco* lie, do commonly carry Spears about twenty five hands long, which are made of Beech, for they have none of Aſh but what are brought from *Europe*, and are ſo much valued, that they are ſold for twenty Crowns. They likewiſe make uſe of Bucklers made of a ſort of Buff, of which they have a great deal. Their Kings are very curious in making Magazines of Arms, in which there are a great many Coats of Armour and Headpieces. Moſt of their Swords are imported from *Chriſtendom*, and are very dear; for thoſe they make in the Country are neither of good Steel, nor well temper'd for want of Water fit for that purpoſe. There are ſome Horſemen among 'em that carry

Their way of fighting.

Croſsbows, and manage 'em very dexterouſly. They uſe no Muſquets or Piſtols, neither do they love 'em. When they go upon a Skirmiſh, they take the Saddles or Coverings off their Horſes, that they may ſit with more freedom, and be leſs incommoded by the Wind when they wheel. They affect rich Harneſs and Trappings mightily, and thoſe who have 'em never ride without 'em. Some Horſemen carry ſix or ſeven Javelins, which they throw ſo dexterouſly, that they'll hit a ſmall Mark at forty paces diſtance; and their Horſes turn and wheel with an unimaginable celerity.

The *Arabians* who live towards the Eaſt, from the Kingdom of *Tremeren* to the Deſarts of *Barca*, carry Pikes about forty or fifty hands long, which are ſteel'd at both ends for puſhing both backwards and forwards, and the moſt dangerous Wounds they give is upon a Retreat; for when an Enemy purſues 'em cloſe, they lay the Pike upon the left Arm, and dart it back upon him when he leaſt thinks of it: this they do with ſo much agility, that one of 'em would be hard enough for twelve Horſemen upon a Plain. The better ſort of theſe Pikes are made of a black, hardy and weighty Root, which they bring from the Deſarts of *Libya*, and which the heavier it is, is reckon'd the better for that uſe. Thoſe who uſe theſe Pikes carry no Bucklers, but ſometimes the Javelins I mention'd above. Headpieces and Coats of Armour are only us'd by the Spearmen, becauſe they would hinder the Pikemen to turning ſo nimbly as they commonly do. Some of 'em carry Croſsbows; for they uſe no Fire-arms, eſpecially upon Horſeback.

Thoſe of *Tremeren* and *Fez* go beyond all the reſt in the Goodneſs and Ornaments of their Horſes; and thoſe who live further to the Weſt, are more nimble, and have ſomewhat in 'em that's nobler and greater.

They commonly fight on Horſeback; but ſome of their *Cheques*, eſpecially thoſe of *Tremeren*, have of late years made ſome Muſquetiers, who ſerve only to frighten the *Arabians*, that are wonderfully afraid of Fire, for they cannot make uſe of Guns without running into diſorder: And indeed they have a peculiar way of fighting upon all occaſions, for they never fight in a Body, but as ſoon as they are attack'd, they diſperſe and charge the Enemy upon ſeveral Quarters. In a word, they are ſo handy and expert in the management of their Arms, that they fall preſently in with the Enemy upon all hands, and retire or advance with incredible celerity.

When they engage with the *Chriſtians*, they aim chiefly at their Horſes, as knowing that themſelves, being in Armour, are not ſo eaſily wounded.

Their Superſtition.

As for the ancient Cuſtom and Superſtition of the Inhabitants of *Africa*, the ancient *Africans* in *Barbary* continued in the idolatrous adoration of the Sun and Fire, till the Year 349, (the 387th of *Cæſar*'s Calendar) at which time they were converted to Chriſtianity. This People, after long Wars and many Battels with the *Arabians*, were at laſt vanquiſh'd by 'em. The Negroes of lower *Æthiopia* worſhip'd ſome the Sun, others the Moon, others the Stars, others again Water or Fire, and ſome the firſt living thing they met upon their going abroad. Thoſe of *Æthiopia* the higher worſhip'd the God of Heaven, under the name of *Guiguime*, till they embrac'd the *Jewiſh* Religion, which hapned when the Queen of *Sheba* or *Maguede* was inſtructed by *Solomon* in the Law of *Moſes* and the Prophets. Some of the Inhabitants of lower *Æthiopia* did likewiſe receive the *Jewiſh* Religion, and continued in it till the Queen of *Candace*'s Eunuch, baptiz'd by St. *Philip*, taught 'em the Chriſtian Faith. After that, in the Year 1067, (the 469th of the *Hegeira*) *Tabaya*, the Son of *Abubequer*, invading lower *Æthiopia*, gave an opportunity to the Mahometan Doctors to impart their Religion, particularly to the Inhabitants of *Libya* and *Geneova*, bordering upon *Egypt* and the Deſarts of *Libya*, among whom there are ſeveral *Alfaqui's* and *Alcaroniſts* to this day. Thoſe of the lower *Æthiopia*, that live towards the Sea-ſide, are moſt brutiſh Idolaters, and deſerve the title of Monſters rather than that of Men; tho' ſome few of 'em have been converted to Chriſtianity ſince the *Portugueſe* extended their Navigation to that Coaſt. The *Egyptians* were firſt Idolaters, then Chriſtians and Monothelites, after which the greateſt part of 'em took up with *Mahomet*'s Law.

Their Letters.

As for the Letters in uſe amongſt the ancient *Africans*, tho' all the ancient Writings to be found in *Africa*, before the arrival of the *Arabians*, are in Latin or Gothick Characters, as the modern are in Arabick, yet that does not argue that the ancient *Africans* had no peculiar Letters; for it cannot be thought ſtrange, that they ſhould loſe their Letters, after paſſing ſo many Ages under the Yoke of divers Nations, who were of different Religions.

Leo's account of the Soil and Climate of *Africa*.

After the Cuſtoms and Manners of the *Africans*, we come to their Climate and Soil, and the natural Conveniencies or Inconveniencies of their Country.

The Mountains of *Barbary*.

Barbary and its Mountains are more ſubject to cold than heat, for Snow accompanies almoſt every gale of Wind. Theſe Mountains have plenty of lofty Trees, Fruits and Beaſts, but little Corn, ſo that the Inhabitants live moſtly upon Barley Bread; and the Springs or Rivulets deſcending from them are muddy, and repreſent the quality and taſte of the Ground they glide from. The little Hills and Valleys lying between theſe Mountains and Mount *Atlas* abound with Corn, being water'd with Rivers, which run from the *Atlas* to the Mediterranean Sea; they are not ſo plentifully repleniſh'd with Woods, but are more fruitful than the plain Countries between the *Atlas* and the Ocean.

Of *Atlas*.

The Mountains of *Atlas* are very cold and barren; they are cover'd on all hands with Wood, and afford but little Corn; they give riſe to almoſt all the Rivers in

Africa, and their Springs are cold even in Summer, inſomuch that they'll ſtupifie ones Hand, if it be held there for any time. Some parts of theſe Mountains are leſs cold than others, and well inhabited; but the inhabited places are either cold to an extremity, or very rugged: Such are thoſe oppoſite to *Temeſca*, upon which the Winter North-wind is ſo furious, and the Snow ſo copious, as to deſtroy all the People and Cattle; for which reaſon the Merchants carefully avoid that Road in the Winter time, for one Nights Snow will drown not only Men and Carts, but even the very Trees.

Snowy places dangerous.

I remember (ſays *John Leo*) that as I travel'd towards the *Atlas*, in the company of ſeveral Merchants, a cold and ſnowy Hail fell upon us in *October*, about Sun-ſetting, upon which meeting with eleven or twelve Horſemen, whom we took to be *Arabians*, upon their perſwaſion we left our Carts, and follow'd them, in hopes of being conducted to a ſecure place. We rode on quietly till midnight, at which time one of the *Arabians* ſtripp'd me naked, in queſt of my Money; but finding none about me, (for I had buried it in a certain place by the way) they ſaid in a jocoſe way, That *they had ſtripp'd me only to try how hardy I was in enduring Cold.* After that, we continued our wandring Journey, and in a ſhort time heard the bleating of Sheep, upon which we directed our courſe to the place from whence the ſound came; and leading our Horſes thro' thick Woods, and over ſteep and craggy Rocks, to the great hazard of our Lives, came at laſt to a Cave where ſome Shepherds had with much labour ſhelter'd themſelves and their Cattel, and had kindled ſwinging Fires to guard off the extream Cold.

Upon our firſt arrival the Shepherds were afraid the *Arabians* meant 'em harm; but afterwards being convinc'd that the extremity of Cold forc'd us thither, they entertain'd us very kindly, with Bread, Fleſh and Cheeſe, and after Supper we all went to ſleep before the Fire. Our Horſes they lodg'd in another Cave, and gave 'em good ſtore of Hay. After two days the Snow ceas'd, and the Shepherds clear'd the Door of the Cave, which the Snow had block'd up, this done, we mounted our Horſes, and were directed by the Shepherds how to avoid the Snowy depths; however, the clear Sunſhine of that day diſpel'd the Snow and Cold of the preceding days. At length we came to a Village near *Fez*, where we receiv'd Advice, that our Carts were left drown'd in the Snow: Upon this, the *Arabians* who had defended our Carts from Thieves, and conducted our ſelves, took my Horſe from me, and carried off a *Jew* of our company as their Priſoner, till they ſhould be rewarded for the pains they had taken.

The Soil of *Numidia.*

To return, the Country beyond the *Atlas* is hot and dry; it affords plenty of Dates, but no Corn; what Rivers it has ſpring from the *Atlas*, ſome of which are dried up by the Sands, and others gather into Lakes.

People kill'd by Thirſt in the Deſarts.

In that part of *Numidia* which borders upon *Libya* we met with barren naked Hills, the lower parts of which afford only unprofitable Thorns and Shrubs; theſe Hills have neither Springs nor Rivers, nor indeed any Water, unleſs it be in ſome few Pits and Wells, which the very Inhabitants ſcarce know of, for moſt of their Water is brought to them by Merchants, upon Camels Backs, eſpecially in thoſe parts which lie upon the Road from *Fez* to *Tombuto*, or from *Tremizen* to *Agad* or *Agadez*; ſo that 'tis dangerous travelling that Road for fear of periſhing by Thirſt. 'Tis true indeed, that between *Fez* and *Tombuto* there are Pits ſurrounded with the Hides or Bones of Camels, but when the South Wind blows, theſe are oftentimes ſtopt up with Sand. In this Extremity ſome have a way of relieving themſelves by killing their Camels, and ſqueezing Water out of their Entrails.

In the Deſart call'd *Azaoad* there are two Monuments of Marble, the Inſcription of which ſets forth, that a wealthy Merchant travelling that way, gave ten thouſand Ducats to a Carrier for a Cup of Water, but that not being ſufficient, both of 'em died for thirſt.

The Soil of *Negro-land* and *Libya.*

The Land of Negroes is extream hot, but well moiſten'd by the River *Niger*, ſo that it abounds with Cattel, Corn, Cocao's, Cucumbers, Onions, and ſeveral other Herbs and Fruits; it has no Trees but ſome great ones, which bear a bitter Fruit like a Cheſnut, call'd *Goron.* Neither this Country nor that of *Libya* have any Mountains, but they preſent us with ſeveral Fens and Lakes, occaſion'd (as 'tis reported) by the Inundations of the *Nile.*

The Climate of *Barbary.*

After the Soil of *Africa*, we come to the Climate. In *Barbary* the ſtormy cold weather begins about the middle of *October*; in *December* and *January* the cold is greater, but not very ſharp, unleſs it be in the Mornings; *February* mitigates the cold, but brings ſuch inconſtant weather, that it changes perhaps five or ſix times a day: In *March* the North and Weſt Winds blow, and the Trees are adorn'd with Bloſſoms: In *April* the Fruit are form'd, and the Cherries ripen towards the latter end of it: In *May* the Figs are gather'd, (tho' the greateſt plenty of Figs and Peaches is in *September*) and the Grapes are ripe about *Midſummer*: About the midſt of *Auguſt* they begin to dry their Grapes in the Sun, in order to make Raiſins, and if the unſeaſonable weather overtakes 'em before they have dried all, they make Wine and Muſt of the reſt. Their Harveſt for Honey, Pomegranates, and Quinces falls in *October*, as their Olive-harveſt does in *November*; their Olive-trees are ſo tall, that they cannot get at the Olives by a Ladder, but beat off the very Boughs with long Poles. Some great Olive-trees bear Olives which, being unfit for Oyl, are eaten when ripe.

Their *Spring* begins on *Febr.* 15, and ends *May* 18, all which time they have moſt pleaſant weather. They take it for a fatal Omen, if no Rain falls from *Apr.* 25. to *May* 5, for the Rain of that ſeaſon is call'd *Naiſan*, i.e. *Water bleſſed of God*, and ſome religiouſly preſerve it in Veſſels.

Their *Summer* extends from *May* 18. to *Auguſt* 16, and for the moſt part is attended with hot and clear weather, unleſs it be ſometimes that a fatal Rain falls in *July* and *Auguſt*, upon which a mortal Peſtilence enſues.

Their *Autumn*, in which the heat is moderate, commences *Auguſt* 16, and terminates *November* 16, from which time they reckon it Winter till *Febr.* 15.

They fix their *Equinoxes* upon *March* 16. and *Sept.* 16. For their *Solſtices* they reckon upon *June* 16. and *Dec.* 16. The Interval of time between *Aug.* 15. and *Sept.* 15. is by them call'd *the Furnace of the Year*, in regard it brings to maturity their Figs, Quinces, and ſuch other Fruits. They hold it for a firm truth, that every Year has forty extream hot Days, commencing from *June* 12, and as many extream cold following *Dec.* 12.

The Seaſons of the Year nicely diſtinguiſh'd.

Upon the Mountains they begin to plough in *October*, but in the Plains they delay it till the beginning of Winter. In fine, they have ſuch ſetled Rules relating to the Seaſons of the Year, as are not only regarded in the buſineſs of Husbandry and Navigation, but in that of finding the Houſes and Places of the Planets; and theſe are the firſt Documents they give to their Children. Theſe things they are ſo well vers'd in, that many Country People, that know nothing elſe, can diſpute learnedly of Aſtrology, and all their computations relating to Law or Religion, are taken from the courſe of the Moon. However, they ow'd their firſt Knowledge of Aſtrology to the *Latins*, as appears from their calling the Months of the Year by the Latin Names, and from a great Book call'd *The Storehouſe of Husbandry*, that was tranſlated out of Latin into their Language when *Manſi* was Lord of *Granada*; tho' indeed the Latin Tongue, as it ſtands at this day, does not afford words for a great many particulars contain'd in the three Volumes of that Book.

Their Year differs eleven days from that of the *Romans*, for they allow to ſix Months thirty Days each, and to the other ſix but twenty nine, which makes in all three hundred fifty four days. At divers times they have Feſtivals and Faſts.

This Country (viz. *Barbary*) is infeſted, about the end of Autumn, all Winter and a great part of the Spring, with boiſterous Winds, Hail, and terrible Thunder and Lightning, and in ſome places it ſnoweth very much. The Eaſt, South and South-Eaſt Winds happening in *May* and *June*, prejudice their Corn and Fruit mightily, and ſo does the Snow, eſpecially if it falls in the day-time, when the Corn begins to flower. So much for the Climate of *Barbary*.

The Climate of the *Atlas* Mountains.

Upon the Mountains of *Atlas*, where Snow continues all the Year round, they reckon it Winter from *October* to *April*, and Summer from *April* to *October*; ſo that they divide the Year only into two parts.

Of *Numidia.*

In *Numidia* they have Winter from *September* to *January*; they reap their Corn in *May*, and gather their Dates in *October*, unleſs the *September* Rain ſpoils them. If there falls but little Rain upon the Mountains of *Atlas*, the *Numidian* Rivers grow dry, and the Fields are parch'd and barren for want of their due watering; ſo that a dry *October* and *April* ſignifie a ſorry Crop: and indeed all the Corn that grows in *Numidia* in one Year, does ſcarce ſuffice the Inhabitants for half a Year: But they have great plenty of Dates, which ſucceed beſt in a Droughth, and theſe they give to the *Arabians* in exchange for Corn.

Of *Libya.*

In the *Libyan* Deſarts they have incredible plenty of Graſs and Milk, when a change of Weather happens about the midſt of *October*, and it continues to rain for all *December*, *January*, and ſome part of *February*, the Country being then well ſtor'd with Lakes and Fenns, 'tis the beſt Seaſon for the *Barbary* Merchants to travel to *Negroland*.

Of Negroland. *Negroland* is neither benefitted nor injur'd by rain. 'Tis render'd extream fruitful by the Water which falls from certain Mountains, and by the overflowing of the River *Niger*, which increaſes for forty days from *June* 15, and then decreaſes as many. During its inundation, one may go over all the Country in a Bark, tho' not without great danger.

The Conſtitution and Humour of the Africans; *the Diſeaſes they are ſubject to; together with their Vertues and Vices. From* John Leo.

The Period of their Lives. IN *Barbary* 65 or 70 Years is the common Period of their Lives; only in the Mountains ſome live to 100 and above, retaining all the while, a vigorous, active Conſtitution of Body. In *Numidia* they live a long time, only their Eyes become wonderful dim, and they looſe their Teeth very ſoon; the firſt of which Infirmities perhaps is owing to the Duſt and Sand that the Eaſt Winds toſs in the Air, as the latter may be to their continual feeding upon Dates. The *Libyans* are ſhorter liv'd; perhaps the moſt healthy among 'em may live to 60 Years, but at the ſame time they are very lean and thin. The Negroes live not ſo long as any of the other *Africans*, but are very ſtrong and active; they are ſtrangely addicted to Venery, and their Teeth continue ſound till their dying day. In fine, the *Barbarians* are of a weaker Conſtitution than any of the reſt. The Children, and ſometimes the ancient Women of *Barbary*, are ſubject to an incurable ſhedding of the Hair.

Their Diſeaſes. The common Diſeaſes of that Country are the Head-ach without a Fever, the Toothach, which ſome impute to their drinking of cold Water immediately after hot Pottage. Pains of the Stomach, call'd by them Pains of the Heart; Gripings, proceeding, perhaps, from the continual uſe of cold Water; Pains in the Bones, and the Gout, occaſion'd by their going bare-foot, and ſitting upon the bare ground. In the Spring-time they ſit very much upon the Ground, upon which thoſe of a ſanguine Complexion, are frequently ſiez'd with a Cough.

Neezing. Upon *Fridays*, on which they aſſemble to hear the *Mahometan* Sermons, if any one neezes in the Church, every one neezes to bear him company; ſo that they never leave neezing till the Sermon is done; and he that goes to hear the Sermon, gets but little good of it, the Noiſe being ſo very great.

The Pox. In *Barbary* the *French-Pox* is for the moſt part fatal. This Diſeaſe begins with a ſwelling and languiſhing, and at laſt breaks out into Ulcers. Some of the *Barbarians* have been cur'd of it, only by travelling to *Numidia* or *Negroland*, where the Air is very temperate and wholſome, and the ame of that Diſeaſe is ſcarce known. It was not known among any of the *Africans*, till the *Jews* being expell'd *Spain*, fled to *Africa*, where their Wives receiving Promiſcuous Embraces, contracted the Diſtemper, and ſo it ſpread all over the Country. For this Reaſon they call it the *Spaniſh Pox*, tho' in *Tunis*, *Egypt*, *Syria*, and *Italy*, it goes by the Name of the *French-Pox*.

The Women of *Barbary* and *Negroland* are ſubject to the Falling-Sickneſs, which they, by way of Excuſe, give out for Poſſeſſion with a Spirit.

Rupture. The *Rupture* or *Hernia*, is not very common among the *Barbarians*, but the *Egyptians* are mightily troubled with it, probably by reaſon of their eating ſo much Gum and Salt Cheeſe. The *Egyptian* Children are ſubject to the Falling-Sickneſs, which leaves 'em when they grow up.

Plague. The Plague ſweeps off great numbers of the *Barbarians*, every tenth, fifteenth, or twentieth Year; for which they have no other cure, but rubbing the Sore with Ointments made of *Armenian* Earth. But it ſcarce viſits *Numidia* once in 100 Years, and in *Negroland* the Name of it is not ſo much as known.

The Vertues of the *Africans*. Knowledge of Mathematicks. The *Arabians* in *Barbary*, who live upon the Mediterranean Coaſt, were in former times great Purſuers of Mathematicks, Philoſophy, and Aſtrology, but theſe Arts were quite extinguiſh'd about 400 Years ago, by the chief Profeſſors of their Law and Religion, whom they honour as Petty Gods. They go frequently to Church to repeat ſome formal Prayers, eſteeming it unlawful to waſh ſome of their Members on the Day they ſay theſe Prayers, tho' at other times they waſh their whole Bodies. They are very ingenious in Mathematical Inventions and in Building.

Sincerity. Some Latin Authors do 'em injuſtice in charging them with Fraud and Guile, for they are very honeſt and ſincere, and great Lovers of Simplicity and Truth in others, and for their own part will rather dye than break their Promiſe. No Nation in the World is ſo ſubject to Jealouſy, for they will rather looſe their Lives, than ſuffer any Affront upon the ſcore of their Women. Riches and Honour they covet inſatiably.

They travel all the World over, and trade in *Egypt*, *Arabea*, *Ethiopia*, *Perſia*, *India*, and *Turkey*, meeting every where with eſteem; for they never profeſs any Art without being perfectly well verſ'd in it.

Modeſty. Baudy and Indecent Expreſſions are heinous Crimes among them. They will not ſuffer a Youth to ſpeak or hear any thing of Love Matters, eſpecially in the Company of his Superiours.

Integrity. As for the *Arabians* which dwell in Tents and bring up Cattle, Their Devotion, Valour, Civility, Hoſpitality, Veracity, and Integrity of Life, is inferiour to none. And the ſame is the Character of the *Mores* and *Arabians* that inhabit *Libya*. The white or tawny *Mores* are ſteddy Friends, and all their aim is to lead a pleaſant eaſy Life, upon which ſcore they are as happy as any People of *Africa*. They give honourable Allowances to Profeſſours of Religion and liberal Arts. Such are the Vertues of the *Africans*; but their Vices are yet greater.

The Vices of the *Africans*. The Inhabitants of the Cities of *Barbary*, are very proud, cholerick, needy, and covetuous, and never forget Injuries. They always ſpeak with an angry loud Voice, and are always quarreling with one another. They are ſo unmannerly and clowniſh, that no Stranger can obtain their Familiarity or Friendſhip.

Credulity. Their Credulity is ſuch, that they'll believe Impoſſibilities; and ſuch is their Ignorance of Natural Philoſophy, that they impute all Natural Phænomena's to a Divine Power. They are Men of no reach or head, and are ty'd to no Laws or Rule of Life, being without either Judges or Lawyers. Their Governours treat 'em like Dogs; and for want of Money-Changers, no Merchant can trade with them at a diſtance.

Peeviſh Gueſts. They vouchſafe no Entertainment to Strangers, upon any Conſideration whatſoever; and are very apt to forget Benefits.

Ingratitude. In fine, they are ſo avaritious and covetuous, that they are eternally peeviſh and uncivil. The Shepherds of that Country are a miſerable, poor, wretched Crew, addicted to nothing but Theft, Deceit, and brutiſh Cuſtoms. Their Batchelours keep company with ſeveral Ladies, till they light upon one that they like for a Wiſe; ſo that few can pretend to marry a Maid.

Irreligion. This People have no Religion; Churches or Prayers they know nothing of; In a Word, they lead a ſavage and brutiſh Life.

Robbery. As for the *Numidians*, all of 'em are quite deſtitute of any ſociable Principles; Treaſon, Treachery, Murder, Theft, and Robbery, are the Buſineſs of their Life. Their mean ſlaviſh Temper prompts 'em to ſerve the *Barbarians*, as Dung Farmers, Scullions, Oſtlers, or in any other other Servile Capacity. In like manner, the Inhabitants of *Libya*, neglecting all Arts and Sciences, apply their Minds only to Theft and Violence. The ſcene of their Lives is only miſerable, lawleſs, and diſorderly. There is no Villany ſo black, that they will not undertake upon the Proſpect of Gain. They ſpend their Days in Hunting, Warfare, or lewd Practiſes; and uſe neither Shooes nor Garments. The Negroes are likewiſe Strangers, not only to Arts, but to Senſe and Reaſon: Their Life is a Copy of that of the wildeſt Beaſts, moſt of their Women being common, unleſs it be in the Principal Towns and Cities, where, 'tis probable, Civility may in ſome meaſure take place.

Additions to Chap. I.

Containing a Deſcription of the Rivers of Africa. *Taken from* Marmol.

The famouſeſt Rivers of *Barbay.*
Sus River.

SUS, the firſt River of *Barbary*, lies on the Weſt ſide of that Kingdom, and the Province of *Sus* takes its Name from it, which ſome take for the Iſland in which the Palace of *Autheus* and the Gardens of the *Heſperides* were ſeated: However it ſeems very probable, that this was *Ptolomy*'s *Una*, which he places in eight Degrees Longitude, and 28 Degrees 30 Minutes Latitude. This River riſes out of the great *Atlas*, between the above-mention'd Province and that of *Hea*, and gliding to the Southward, traverſes the Plains of *Sus*, from whence it repairs to the Sea near *Guerteſſen*. It waters the moſt fertile and moſt populous places of that Country, and ſupplies the Inhabitants with Trenches or Ditches, with which they moiſten the Sugar-cane Fields. In Winter it ſwells to that height, that 'tis ſcarce fordable in any part; tho' in Summer 'tis fordable almoſt every where.

Tenſift River.

Near to the City of *Animmey*, in the Province of *Morocco*, there ſprings from the great *Atlas* another River, call'd *Tenſift*, which traverſes the Province of *Duquela*, and falls into the Ocean near *Safi*, being firſt join'd by ſeveral Rivers from the Mountains, namely, *Ecifelmel*, *Hueduefuſa*, and *Agmet*. The *Tenſift* is deep, but in Summer is fordable in ſome places not far from *Morocco*, 'tis cover'd with a Stone Bridge, which has fifteen great Arches, and is one of the ſtatelieſt Structures in all *Africa*, being built (as'tis ſaid) by *Jacob Almanſor*, King and Pontiff of *Morocco*. *Budobus*, the laſt King of the *Almohade* Family, pull'd down three of theſe Arches, with a Deſign to prevent *Jacob* the firſt King of the *Benemerinis*, from beſieging *Morccco*, tho' it did not avail him; and thoſe Arches are not yet rebuilt. *Ptolomy* calls the Mouth of this River *Aſama*, and places it in ſeven Deg. Long. and 32 Deg. Lat. In Mount *Gugidrine*, a part of the great *Atlas*, there ſprings two Rivers, which traverſing the Plains of *Eſcura*, diſembogues in the River call'd *Huedela-Abid*. Each of theſe Rivers is call'd *Teceut*, and when they join, they aſſume the Name of *Tevecin*, i. e. *Limits*. The Gutters and Ditches drawn from 'em, render the adjacent Fields very fertile.

Tevecin River.

Huedala-Abid River.

Huedala-Abid, i. e. The *River of Negroes* or *Slaves*, ſprings from *Animme*, a Mountain of the great *Atlas*, between the Provinces of *Eſcura* and *Tedla*, and traverſing rugged Rocks, and deep dark Valleys, runs to the Northward, where its Chanels ſinks ſo low, that it affords no moiſture for the adjacent Fields. After that, 'tis ſwell'd by the Acceſſion of the *Tevecin*, and other ſmall Rivers, and diſembogues in the *Ommirabi*, not far from a very broad Ditch call'd *Megerat Eſſa*, i. e. The *Flat Ditch*. This River is very deep, eſpecially in *May*, when the Snow melts off the Mountains.

Ommirabi.

Between the Province of *Tedla* and the Kingdom of *Fez*, there riſes from the great *Atlas*, a great River call'd *Ommirabi*, which runs thro' the Plains of *Adacſam*, and paſſing thro' a narrow Valley, is adorn'd with a Bridge built by *Abuchaſten*, the fourth King of the *Benemerina*. After that it turns to the Southward, and traverſing the Fields which ſeparate the Province of *Tremeſen* from thoſe of *Tedla* and *Duguela*, empties it ſelf in the Ocean near *Azamor*, being firſt join'd by the River of *Negroes*, and by *Derna*, another River that falls likewiſe from the Mountains. This is only fordable in Summer, and that where it ſpreads out upon the Plains; in other places the Inhabitants ſwim a-croſs it upon bundles of Reeds bound up with blown Balls of Leather, for there's no Bridge upon it. It affords ſuch plenty of Shad-fiſh, as ſerves to ſupply the City of *Morocco* and the adjacent Provinces, beſides what is exported to *Andaluſia* and *Portugal*. The Seaſon for fiſhing in this River, falls commonly upon the middle of *May*: and it turn'd to a great account to the King of *Portugal*, while he was Maſter of *Amazor*. But at preſent the *Xeriff* appropriates the Right of that Fiſhery to the Chriſtian Merchants. *Ptolomy* calls this River *Ruſibides*, and places its Mouth in 6 Deg. 40 Min. Long. and 32 Deg. 30 Min. Lat. The Entry of it is ſo difficult, that it oblig'd the King of *Portugal* to abandon *Azamor*.

Barregreg River.

Barregreg, a great River, ſprings from the great *Atlas* in the Kingdom of *Fez*, and falls into the Ocean near *Gibraltar*. *Ptolomy* calls it *Sala*, and places it in 6 Deg. 10 Min. Long. and 34 Deg. 10 Min. Lat. Its Mouth is ſo foul for Ships, that it ſerves for a Barriar to guard the Inhabitants from the Chriſtians.

Beht and *Bebet* Rivers.

From the great *Atlas* in the Kingdom of *Fez*, there ſprings two Rivers, call'd *Beht* and *Bebet*, which fall with a rapid Current over ſteep Mountains into the Plains of *Azgar*, and there are turn'd into Lakes full of Fiſh. Upon the ſides of theſe Lakes great numbers of *Arabians* feed their Cattel, and by the frequent eating of Butter and Fiſh, which they have in great plenty, are cover'd with a ſort of Leproſy. Several of the Inhabitants of *Fez* and *Mequinez* reſort to theſe Lakes to drink of the Water, which is of excellent uſe againſt the Stone.

Sulu River.

Sulu, one of the greateſt Rivers in all *Barbary*, derives its Source from *Cililgo*, a Mountain of the great *Atlas* in the Province of *Cus*. After its Deſcent into the Plains, it paſſes at the Diſtance of a Mile and half from *Fez*, and having ſever'd the Provinces of *Habat* and *Azgar*, falls into the Ocean near the City of *Mamor*, not far from the Streight of *Gibraltar*.

Guarga River
Ador River.

It is join'd by ſeveral Rivers, particularly *Guarga* and *Ador*; but thoſe who aſſert, that it receives the River *Fez*, and ſeveral others, from the Country of *Tezar*, are much miſtaken; for they ſalſely ſuppoſe, that the *Sulu* takes its Riſe from the Mountains of *Gaiaſa* and *Zarahamuni*. Tho' the *Sulu* be a very great River, yet 'tis fordable in ſome places, unleſs it be in Winter and Spring, at which time the Inhabitants croſs it in Barks. This River affords ſuch plenty of Fiſh, eſpecially Shad-fiſh, that it ſupplies *Fez*, and ſeveral other Towns in that Province. Its Mouth is capable to receive very large Veſſels, and if the Inhabitants of that Country were induſtrious, they might make it navigable up to *Fez*, and ſo ſink the Price of their Corn, which is now brought over land from *Azgar*. *Ptolomy* calls it *Subura*, and places its Mouth in ſix Degrees 20 Min. Long. and 34 Deg. 28 Min. Lat.

Lucus River.

Lucus, a great River, ſprings from the Mountains of *Gomera*, and turning to the Weſtward, traverſes the Provinces of *Aſgar* and *Habar*, after which it runs near *Aſcaſar-Quivir*, and after forming Lakes that abound in Fiſh, falls into the Ocean near *l' Arays*, where theſe two Provinces join. The Port of *Arays* lies in its Mouth, and is reſorted to by the Chriſtians, who import thither European Commodities; but the Entry is ſo difficult, that they run a great riſque, unleſs they have a very expert Pilot. *Ptolomy* calls this River *Liſſa*, and places its Mouth in ſix Deg. 20 Min. Long. and 35 Deg. 15 Min. Lat.

Melulo River.

Melulo, another great River, riſes out of the great *Atlas* near the Town of *Dubudu*, and traverſing the parch'd Deſart of *Teoreſt* and *Tafrata*, falls into the *Mulucan*, which is likewiſe a great River which ſprings from the great *Atlas* in the Province of *Cus*, and paſſing to the Weſtward of *Taſaſa*, falls into the Ocean not far from that place. This laſt River is very broad, but eaſily fordable in Summer in ſeveral places. The Chriſtians were wont to row up this River in Barks cover'd with Leaves, in order to ſurpriſe the Mooriſh Fiſher-men, for its Mouth is plentifully ſtock'd with excellent Fiſh. *Ptolomy* call's it *Molocat*, and makes it to lie in ten Deg. 45 Min. Long. and 34 Deg. 45 Min. Lat.

Mulucan River.

Muluya.

Muluya ſprings from the *Atlas*, and directing its courſe Northward, diſimbogues in the Mediterranean Sea near *Onus*; *Ptolemy* calls its mouth *Mala*, and places it in 11 d. 10 m. Long. and 35 d. 50 m. Lat.

Ziz and *Hued-babra* Rivers.

Ziz and *Hued-babra* are two Rivers, the firſt of which ſprings from the great *Atlas*, and the ſecond riſes in the Kingdom of *Tremeſen*, near *Mobeſcar*: they fall with a joynt Stream into the Mediterranean, near the Ruins of the ancient *Arzea*, and aſſume the name of *Sirat*, from the Plain thro' which they paſs. The puiſſant *Arabs*, call'd *Bemamir*, live upon the Banks of *Sirat*, and frequently make Excurſions as far as *Oran*.

Feſue River.

A ſmall River call'd *Feſue* ſprings from the great *Atlas* near the ancient *Numidia*, and joyns the Mediterranean about ſeven leagues to the Weſtward of *Oran*. It affords very few Fiſh, and at preſent is call'd *Areſgol*. *Ptolemy* gives it the name of *Siga*, its mouth being ſeated in 21 d. Long. and 34 d. 40 m. Lat.

Mira River.

Mira is a pretty great River, which runs from its ſource in the great *Atlas* thro' the barren Plains in the neighborhood of *Bathaba*, and turning Northward, falls into the Mediterranean not far from *Arzea*. Of late years the Moors call it *Cena*, from the name of a *Moabite* that repeopled *Bathaba* after its being deſtroy'd by the *Benimerims*. *Ptolemy* calls it *Quilemat*, and allots to its mouth 13 d. of Long. and 34 d. of Lat.

Chilef River.

Chilef is a great River, that runs from its ſource in the Mountains of *Guanceris*, thro' the Deſart-Plains between *Tenes* and *Tremeſen*; and turning Eaſtward, joyns the Mediterranean near *Moſtagan*. There's very good fiſhing in its mouth, which *Ptolemy* ranks in 14 d. 15 m. Long. and 33 d. 40 m. Lat. under the name of *Cartena*.

Celef River.

Celef is a great River, that ſprings from the great *Atlas*, and grazing along the Fields of *Metigia*, falls into the Mediterranean about five leagues to the Weſtward of *Algiers*. It aſſumes the name of *Aſafran*, near its mouth, which *Ptolemy* places under the name of *Quinalak*, in 16 d. 40 m. Long. and 33 d. 20 m. Lat.

Ceſaya River.

Ceſaya, another River in *Barbary*, takes its Riſe from the great *Atlas*, and traverſing the Fields of *Metigai*, enters the *Mediterranean* on the Eaſt ſide of *Algiers*, not far from the Ruines of *Mitafus*, call'd by the *Africans* *Temendafuſt*. *Ptolomy* ranks its Mouth, under the Name of *Sava*, in 18 Deg. 10 Minutes Long. and 33 Deg. 20 Min. Lat.

Hued Iter River.

Hued-Iter, is a great River that riſes out of the great *Atlas*, upon the Frontiers of *Numidia*, and running from thence Northward, enters the Mediterranean Sea, on the Eaſt ſide of the Ruines of *Metaſus*, and affords very good Fiſhing. *Ptolomy* calls it *Serbet*, and places its Mouth in 19 Deg. 30 Min. Long. and 32. Deg. 50 Min. Lat.

Hued-el-Quivir River.

Hued-el-Quivir, ſprings likewiſe from the great *Atlas* in the Province of *Zeb*, and paſſing thro' very high Mountains, falls into the Mediterranean near *Bugia*. When it rains, or when the Snow melts, it ſwells very much. 'Tis full of Fiſh, but the Inhabitants of the adjacent Country love the Sea-fiſh better. The Chriſtians call it *Zinganor*, and *Ptolemy* gives it the name of *Naſaova*, placing its mouth in 22 d. 10 m. Long. and 32½ d. Lat.

Sef-Gemar River.

Among the remaining Rivers of *Barbary*, we meet with *Sef-Gemar*, a great River that ſprings from Mount *Aouraz*, in the Province of *Bugia*; and after waſhing the Walls of *Conſtantina*, falls Northward into the Mediterranean Sea. This River ſeparates *Mauritania Cæſariana* from the Province of *Africa*. *Ptolemy* calls it *Ampſagus*, and places its mouth in 26 d. 15 m. Long. and 31 d. 45 m. Lat.

Tadock River.

Tadock is another River that riſes out of the *Atlas* near *Conſtantina*, and falls into the Mediterranean about a league to the Eaſtward of *Bona*. About a quarter of a league above its mouth we meet with ſome Remains of *Hippona*, of which St. *Auguſtine* was Biſhop, and which *Ptolemy* places in 30 d. 20 m. Long. and 32 d. 25 m. Lat.

Hued-yl-Barbar River.

There's another great River in *Barbary* that goes by the name of *Hued-yl-barbar*, and ſpringing from the great *Atlas* near *Lorbus* in the Kingdom of *Tunis*, makes ſo many windings and turnings thro' theſe Mountains, that thoſe who travel from *Bona* to *Tunis* are oblig'd to croſs it twenty five times, without the conveniency of either Bridge or Boat for ſo long a courſe; at laſt it falls into the Mediterranean near the Port of the *Taburc*, about ſix leagues from *Bugga*. *Ptolemy* calls it *Rubricata*, and places its mouth in 30 d. 45 m. Long. and 35 d. 20 m. Lat. Great quantities of Coral are found upon the brinks of this River.

Megerada River.

To conclude our Account of the Rivers in *Barbary*, we ſhall mention only three more, namely, *Megerada*, *Capes*, and *Magro*. *Megerada* is a very great River; its Source lies in the great *Atlas*, upon the Confines of *Zeb*, not far from *Tebſa*; it runs with many windings to the Northward, and falls into the Mediterranean thirteen leagues to the Weſtward of *Tunis*: in the time of Rain it ſwells mightily, which ſtops Travellers ſometimes for five or ſix days, for there's neither a Bridge nor a Boat upon it. *Ptolemy* gives it the Name of *Bragada*, and places its mouth in 38 d. 40 m. Long. and 30 d. 45 m. Lat.

Capes River.

Capes takes its riſe from Mount *Bacaliſa*, in the Deſarts of *Libya*, and falls into the Sea near the City of *Capes*: The Water of this River is ſalt, and when 'tis drawn up is ſo hot, that it muſt ſtand in the Air to cool for above an hour before 'tis drinkable. *Ptolemy* calls it *Triton*, and aſſigns to its mouth 38 d. 40 m. Long. and 30 d. 45 m. Lat.

Magro River.

Magro deſcends from the great *Atlas* near Mount *Meyes* and croſſing the ſandy Deſarts, diſimbogues in the Sea near *Tripoli* in *Barbary*. *Ptolemy* calls it *Cinifa*, and places its mouth in 42 d. 25 m. Long. and 31 d. 30 m. Lat. So much for the Rivers in *Barbary*.

The Rivers of Biledulgerid.

The moſt noted Rivers in *Biledulgerid* (alias *Numidia* or *Getulia*) are *Dara*, *Ziz* and *Guir*.

Dara River.

Dara is a very great River; it ſprings from the great *Atlas* upon the Confines of the Province of *Eſcura*, and directing its courſe to the South, traverſes the Province of *Dara*, to which it owes its Name, being pleaſantly ſhaded on each ſide with very tall Date-trees; after that it enters the Deſart of *Sahara*, and ſpreads out into great Lakes, round which the *Numidiæ* ſtraggle with their Cattle in the Spring-time, upon the account that their Camels find there a great deal of very good Graſs. In Summer this River becomes ſo dry, that one may paſs it on foot in ſeveral places without being wet; but after Rain it ſwells ſo high, that 'tis not fordable by either Foot or Horſe, and runs ſo rapidly, that a Boat cannot croſs it. Its Chanel is very hollow and uneven, and in the time of the great heat the Water is bitter and brackiſh.

Ziz River.

Ziz is another great River, that ſprings from the ſame Mountains, and paſſing from thence to the neighborhood of *Garci-luyn* in the Kingdom of *Fez*, traverſes the Territories of *Quenena*, *Matagara*, *Reteb* and *Segelmeſſe*; after which it enters the Deſarts of *Sahara*, and runs thro' the Palm-trees, till it comes near the City of *Sugaybila*, where it makes a freſh appearance, and forms a great Lake in the middle of the Sands. This Lake has no Habitation round it, but is reſorted to by wild Beaſts.

Guir River.

Guir is likewiſe a great River that ſprings from Mount *Atlas*, and paſſing thro' the ſandy Deſarts of *Libya* and *Sahara*, is there converted into a Lake, round which a great many Societies of *Arabs* and *Africans* are wont to ſtraggle with their Flocks.

The Rivers of Negro-land.

Niger River.

Sahara, the third part of *Africa* has no Rivers. As for the fourth, *viz.* *Negro-land*, we there met with the famous River of *Niger*, call'd in Arabick *Hued-Nichar*, or the *black River*. Some alledge, that the *Niger* and the *Nilus* are two Branches of the River *Geen*, which deſcends from the terreſtrial Paradiſe; and that the firſt of theſe Branches deriv'd its Name from the Negroes, among whom it paſſes: But the *Arabians* take the *Niger* to be a part of *Nilus*, which runs under-ground to the Lake of *Nubia*, and then turning Weſtward, forms another Lake call'd *Nigritis*; after which it is ſwell'd by the acceſſion of ſeveral Rivers, and marches with great windings to the Weſtern Ocean, into which it falls by two Chanels, the one call'd *Senega*, and the other *Gambra*. The firſt of theſe ſeparates *Sahara* from the Negroes on the Weſt ſide; and, which is very wonderful, the People that live on the South ſide are black, robuſt and proper Perſons, and the Country is fertile and admirably well ſhaded with Trees; whereas on the North ſide the Inhabitants are little and Mulattoes, and ſome of 'em white and puny, the Soil being nothing but a barren dry Sand. The mouth of the firſt Branch (namely, *Senega*) is very deep, and above half a league broad, but the other is ſomewhat ſmaller. Theſe two Branches form an Iſle, which has great Banks of Sand before it, that ſhoot out a league into the Sea. The Tide, which flows and ebbs every ſix hours, runs above twenty five leagues up the Country, and no Ships can come up without the Flood, becauſe the Sand-beds are then cover'd. The moſt conſiderable Negroes live upon the brinks of this River, and of the other Rivers which fall into it. It overflows and decreaſes at the ſame time and after the ſame manner with the *Nilus*; and when the overflowing ſeaſon comes, the Negroes go up and down in Barks, which are neither ſo well built nor ſo ſtrong as thoſe of *Egypt*. *Ptolemy* affirms, that the *Niger*, in conjunction with the *Mandrus* and *Thalamantis*, forms the Lake *Nigritis*; and that it divides to the Northward into two Arms, that march towards the Mountains of *Uſſegula* and *Sagapula*; after which it forms (according to him) a third Arm, which runs to the Eaſtward above the Lake of * *Libya*: But *Leo Africanus* affirms the contrary, and his relation is confirm'd by the Merchants that go up this River from *Gualata* and the *Geloſes* to *Grand Cairo*, for they aſſure us that all its Branches run to the Weſtward.

The Country of the Negroes is water'd by ſeveral other Rivers, moſt of which were diſcover'd by the *Portugueſe*, who ſail two or three hundred leagues up the Country, in order to traffick. Of theſe elſewhere.

---

* This Lake is 15 d. Long. and 16 d. 10 m. broad.

Nilus River.

Nilus retains the ſame Name both in *Africa* and *Europe*; 'tis the greateſt of all the *African* Rivers, and for that reaſon the *Ethiopians* call it *Abanhi*, i. e. *Father of Rivers*. The Ancients took it for a Branch of *Gehon*, which deſcends from the terreſtrial Paradiſe; and indeed that Opinion is countenanc'd by ſeveral Authors, particularly by *Lucan*, *lib*. 10. who brings in the *Egyptian* Prieſts diſcourſing at large upon that Head; but, it ſeems, the Ancients were not well acquainted with its Source; for ſome pretend that the Lakes from which it ſprings derive their Original from the Snow that falls from the Mountains of the Moon; others alledge, that theſe Lakes riſe at a great diſtance from each other in the Deſart; others again maintain, that the Head of the River comes from the above-mention'd Mountains, and falling off the ſteep Rocks with a violent ſhock, makes a Gap in the Earth, and conveys it ſelf to theſe Lakes by ſubterranean Chanels. But Experience baffles all theſe Opinions, and our modern Diſcoveries make it out, that the Water which falls from the Mountains of *Luna* are the true ſource of the *Nile*, and that the Snow and Rain is the occaſion of its Inundation.

Theſe Mountains are at preſent call'd the Mountains of *Beht*, i. e. *a Confluence of Waters*. They are a ridge of Mountains, extending from the Equinoctial Line to the Kingdom of *Eſceva*, and running acroſs the Kingdom of *Gogiana*, both of which Kingdoms lie in upper *Ethiopia*: They are higher than any other Mountains, whether in *Africa* or *Europe*, and are perpetually cover'd with Snow and Ice: Foraſmuch as they lie under the Tropick of *Capricorn*, when the Sun ſhines upon 'em in a perpendicular line, the Snow and the Ice melts, and falls with a precipitant current into the abovemention'd Lakes. Now the acceſſion of this Water joyn'd to the Rain that falls very plentifully in upper *Ethiopia* in the Month of *May*, occaſions the overflowing of the *Nilus*; but the Inundation does not appear in *Egypt* till towards the middle of *June*, by reaſon (as the *Abyſſins* ſay) that this acceſſory Flood muſt have ſo much time before it can reach *Egypt*. The *Ethiopian* Merchants that trade to *Nubia* and *Egypt* tell you, that the exact Source of this River cannot be found out, by reaſon that Mount *Beht* and the adjacent Fields are ſurrounded by large buſhy Foreſts, and Deſarts repleniſh'd with wild Beaſts; ſo that one cannot approach 'em without the hazard of their Lives. They add, that the Waters run from that Mountain to the Southward with a continued encreaſe, and form a great Lake that ſeems to have no current: That ſeveral Rivers iſſue from the South ſide of this Lake, ſome of which direct their courſe to the Eaſt, and others to the Weſt, and form ſo many Arms and Lakes, that one would wonder from whence ſuch a quantity of Water ſhould ſpring: That the *Ethiopians*, upon the loſs of their Camels in thoſe Deſarts, purſue 'em ſometimes two or three hundred leagues to the Southward, and ſtill find the Rivers ſpread out into Arms and Lakes after the ſame manner. Upon this purſuit the *Ethiopians* meet with deſart and barren Mountains, in which (according to *Moſandi*) they find the richeſt Emeraulds, call'd by them *Dubenis*, and Savages that avoid the converſation of other Men.

Catadupes.

The firſt Lake form'd by the *Nile* is call'd *Safa*, and has above twenty Iſlands, inhabited by *Abyſſins*, who are Vaſſals to the Emperour of *Ethiopia*. The *Nile* glides gently from this Lake, and afterwards with a rapid current traverſes the whole Country of that Emperour, and grazes upon *Negro-land*, without being confin'd to a Chanel, till it arrives at certain Mountains where the Cataracts of *Meſar* or the ancient *Catadupes* are plac'd: Each ſide of it is inhabited by ſeveral Nations of Negroes, who ſow upon its Banks the Grains of *Binque*, commonly call'd the *Nile Grains*, and by the *Arabians*, *Baladur*.

After the paſſing of the abovemention'd Cataracts, the *Nile* ſpreads out in breadth, and runs with a gentle ſtream, but is not either fordable or navigable in any place, till it arrives at the Iſland of *Meroe*, call'd by the *Egyptians*, *Naulebaal*, i. e. *the Mother of good Ports*; by the Natives *Seula*, and the *Abyſſins*, *Saba*; in which place ('tis ſaid) the Queen of *Sheba*, that viſited *Solomon*, had her reſidence. Some Authors alledge, that ſhe could not reign here, becauſe there was a Law in *Ethiopia* againſt the Succeſſion of Females to the Throne; [for this reaſon, 'tis probable, ſhe was not of *Ethiopia*, but of *Arabia*, which goes by the name of *Ethiopia* in Scripture; and hence 'tis that *Moſes*'s Wife is call'd an *Ethiopian*:] but 'tis anſwer'd, that ſhe might be a Queen by Marriage, and not by Succeſſion. The Queen of *Candaces* was likewiſe Soveraign of this Country, and ſent her Eunuch with Offerings to *Jeruſalem*, where St. *Philip* baptiz'd him.

Iſle of *Meroe*.

The Iſland of *Meroe* is very large, and contains at preſent three Kingdoms, the Soveraigns of which differ from one another in their Religion and Cuſtoms, and ſometimes wage War one againſt another with incredible Cruelty. The moſt puiſſant of theſe Kings is a *Mahometan*, and has his reſidence on the Weſt ſide of the Iſland; the ſecond, being a Negro and a follower of Idolatry, lives on the North ſide; and the third, who reigns on the South ſide, is an *Abyſſinian* Chriſtian, ſubject to the Emperour of *Ethiopia*.

Siena.

After the *Nile* paſſes this Iſland 'tis navigable, and in the ſpace of fifteen days the Boats go from thence to the City of *Guaguera*, call'd by the Ancients *Siena*, where, according to the allegation of the Poets, the Rays of the Sun fall in a perpendicular line, and caſt no ſhadow at Noon. This is the firſt Frontier of *Egypt* upon the Confines of *Nubia*, below which the *Nile* affords a very ſafe Navigation. In fine, the *Nile* falls into the Mediterranean by ſeveral Chanels, oppoſite to the Iſland of *Cyprus*. As for the Inundation of the *Nile*, and the other circumſtances that attend it, we refer the Reader to *John Leo*'s Deſcription of *Egypt*.

CHAP. II.

Containing a particular Account of the Kingdom of Morocco; *from* John Leo.

The Limits of *Hea*.

IN deſcribing the ſeveral Kingdoms of *Africa*, we ſhall ſet out from the Weſt, and ſo advance Eaſtward. The moſt Weſtern Province of *Morocco* is bounded with the Ocean on the Weſt and North, with the Mountains of *Atlas* on the South, and on the Eaſt with the River *Effinalo*, which ſprings out of the 'foreſaid Mountain, and falls into the River *Tenſift*, dividing *Hea* from the next Province.

Its Soil.

Product.

This Country is uneven and rugged, full of rocky Mountains, Woods and Rivers; 'tis very rich, and well Peopled, and affords plenty of Deer, Hares, Goats and Aſſes, but few Sheep, Oxen or Horſes, and very little Fruit:

The Inhabitants, their Food, Attire, and Qualities.

The Inhabitants feed upon unleaven'd Barly-bread, baked in a ſort of an Earthen Pan in the form of a Cake. Their Cloathing for the moſt part is a Woollen Coverlet (call'd *Elchiſe*) not unlike the *Italian* Blankets, wrapt about 'em, and girt with a Woollen Girdle about their Hips. The Batchelors always keep their Beards ſhaven, but the married Men ſuffer their Hair to grow. Here is nothing to be found of Virtue or Learning, unleſs it be ſome ſmall knowledge of the Laws of the Country, which ſome few pretend to. They have neither Phyſician nor Surgeon, unleſs it be a ſort of Surgeons who are imploy'd in circumciſing their male Children: When any illneſs ſeizes 'em, they cauterize the affected part with red-hot Irons. They have no regard to Juſtice, and when any of 'em travels abroad, he takes along with him a Wife or a Whore, or a religious Perſon of the Country he goes to. The few Horſes this Country affords are ſo nimble and mettled, that they will climb like Cats over the ſteep and craggy Mountains; they are always unſhod, and together with the Aſſes ſerve to till the Ground.

Tedneſt a City of *Hea*.

Its Hoſpitality.

The ancient City of *Tedneſt* (one of the Cities of *Hea*) was built by the *Africans* upon a moſt beautiful large Plain, and ſurrounded with a lofty Brick Wall. It affords no Inns or Publick Houſes, ſo that a Stranger (being a Merchant, muſt find out an Acquaintance to lodge with, or if he has none, the Inhabitants caſt lots who ſhall entertain him; and let his Condition be never ſo mean, he meets with a hoſpitable and honourable Reception; only upon his Departure he muſt beſtow a Compliment upon his Landlord, to make him the more welcome at his next Return. A Stranger that is not a Merchant, may pitch upon any great Man's Houſe to lodge in, and is oblig'd to make no Compliment at his Departure. If a Beggar or Pilgrim paſſes that way, he is entertain'd in a Hoſpital, built at the publick Charge, for the Relief of the Poor.

Its Temple.

In the midſt of the City there ſtood an ancient magnificent Temple of a huge bigneſs, which is ſaid to have been founded when the King of *Morocco* was Soveraign over that Country. This Temple has a great Ciſtern in the midſt of it, and a great many Prieſts and Religious People belong to it. There are ſeveral other Temples in this, which are but little, but withal very neat and clean. About 100 Families of *Jews* liv'd in it; but in the 920th Year of *Hegeira*, it was ſeen to lie in ruines, being only reſorted to by Ravens and other Birds.

Teculeth.

At the Foot of an Hill, 18 Miles Eaſtward from *Tedneſt*, ſtands *Teculet*, a Town containing about 1000 Houſes, a ſtately Temple, four Hoſpitals, and a Religious Monaſtery. It has a famous Port upon the Ocean, call'd *Gos*, which renders it richer than *Tedneſt*. The adjacent fertile Fields ſupply it with great plenty of Corn and Pulſe: 'Twas deſtroy'd by the *Portugueſe* in the Year 1514.

Hadecchis.

Eight Miles ſouthward of *Teoulet*, ſtands the City of *Hadecchis* upon a Plain, containing 700 Families. Its Walls, Churches, and Houſes, are all built of Freeſtone. It has yearly Fairs, laſting for 15 Days, at which they ſell great ſtore of Cattle, Butter, Oil, Iron and Cloth to the neighbouring Nations. The Women of this City are white, fat, and very comely; and their Husbands are ſo brutiſhly jealous, as to attempt to murder whoſoever does but talk with 'em. They have no Judges, no Learning, nor any Diſtinction of Worth among the Citizens; ſo that he who is richeſt rules as a King. Their Religious Matters are manag'd by *Mahometan* Prieſts, who are exempted from all Taxes. The *Portugueſe* ſack'd this Town in the 922 of the *Hegeira*.

Sack'd 1513.

Ilenſugaghen.

Eight Miles to the South of *Hadecchis*, on the top of a high Mountain, ſtands *Ilenſugaghen*, containing 200 Families, which carries on a perpetual War with its Neighbours in a moſt bloody and barbarous manner. 'Tis utterly a Stranger to Juſtice and Honeſty; for it has neither Prieſts, Judges, nor Lawyers. In a word, no People under Heaven are more treacherous and wicked, Their Mountains, tho' deſtitute of Fruit, afford great plenty of Honey, which ſerves 'em both for Food and Traffick, but the Wax of it they throw away, being ignorant of its Uſe.

Teſegdelt.

Twelve Miles to the South of *Teyent*, ſtands *Teſegdelt* upon the top of a Mountain, fortified naturally with a high Rock inſtead of a Wall, and containing above 800 Families. 'Tis ſurrounded with moſt pleaſant Gardens and Orchards, repleniſh'd with all ſorts of Trees, eſpecially Walnut-Trees. The Inhabitants are rich, and pay no Tribute to the *Arabians*, with whom they wage eternal War. They have great plenty of Horſes. For Civility and Hoſpitality, they come ſhort of no People whatſoever, there being Watchmen ſet at every Gate, to conduct all the Strangers that come, either to the Houſe of their Acqaintance, if they have any, or to a publick Inn, where they are entertain'd according to their quality, upon the publick Charge. They are religious Obſervers of their Words, but mightily ſubject to Jealouſy. In the midſt of the Town they have a ſtately Temple, to which a certain number of *Mahometan* Prieſts belong. The neighbouring Villages lodge their Corn in this City, where 'tis defended from the Excurſions of their Enemies.

Tagteſs.

Having paſs'd *Teſegdelt* 14 Miles, we come to *Tagteſs*, an ancient round City, ſtanding upon the top of a Hill, which has winding Steps hewn out of the hard Rock, upon its Sides. The Inhabitants have no other Water, but what their Women fetch from a River that runs by the Foot of the Hill about ſix Miles off, tho' when view'd from the City, it ſeems to be not above half a Mile off. The way leading to this River is very narrow, being cut out of the Rock in the form of a pair of Stairs. This Country is much infeſted with Locuſts, which devour their Corn, and ſometimes cover the whole Surface of the Ground.

Eitdeuet.

Fifteen Miles to the South of *Tagtes*, ſtands *Eitdeuet*, a Town inhabited by *Jews*, who derive their Extraction from King *David*, tho' they have exchang'd their own Law for the *Mahometan*. The Lawyers of this place are admirably well vers'd in their Laws and Conſtitutions, which are collected into one Volume, call'd *Elmudeuana*, and commented upon by a famous Author, call'd *Melic*.

The Caſtle of Hea.

Eighteen Miles from *Eitdeuet*, and about half a Mile from *Teſegdelt*, there ſtands a Caſtle call'd *Culeihat Elmurid*, i. e. *The Rock of Diſciples*, built on the top of a Mountain, which is ſurrounded with divers other Mountains, of equal height with it ſelf, and cover'd with craggy Rocks and huge Woods. The Caſtle is only acceſſable by a narrow Path upon one ſide of the Mountain. 'Twas built but lately by *Hemar Seyeff*, a *Mahometan* Preacher, who by making ſeveral Innovations in Religion, drew after him a great number of Diſciples and Sectaries, and at laſt became a cruel Tyrant. His Government laſted twelve Years, and at the end of which he was ſlain by his own Wife, for lying with her Daughter by a former Husband. Upon that his Ignorance and Wickedneſs was detected, and the Inhabitants of the Country ſlew all his Diſciples and Sectaries, excepting his Grand-ſon, who defended the Caſtle, notwithſtanding a whole Year's Siege, and to this Day (ſays *Leo*) moleſts the People of *Hea* with continaal War, living upon Robbery and Spoil, which he affects, partly by ſome Horſe-men, who purſue the Travellers that paſs by the Caſtle, and partly by Gunners, who fire upon 'em at a diſtance, the High-way being almoſt a Mile off from the Caſtle. However he is ſo hated by the People, that he has no footing without the above-mention'd Mountain. He has carry'd his Grand-father's Body to be honourably inter'd in the Caſtle, and ador'd by his People as a God.

A noted Mahometan Apoſtat.

The Inhabitants of the Mountains of Hea.

A Ridge of the Atlas.

The greateſt part of the People of *Hea* dwell upon Mountains. One part of 'em (call'd *Idenacal*) inhabit that part of *Atlas*, which runs from the Ocean Eaſtward to *Igilingigil*, and divides *Hea* from *Sus*. The breadth of this Ridge is three Days Journey. 'Tis well ſtock'd with Country Villages and Inhabitants, who feed upon Barley, Goats-Fleſh, and Honey; and wear neither Shirts nor any ſew'd Garments, being altogether unacquainted with Needle Work. What Apparel they have hangs by a Knot upon their Shoulders, being faſten'd with Silver Buttons of an Ounce weight. Their Women wear three or more Silver Rings upon their Ears The richer ſort of People wear Silver Rings on their Fingers and Legs, but the poorer have only Rings of Iron or Copper. This Country affords Horſes, of a ſmall ſize, but wonderfully ſwift; and great ſtore of Wild-Goats, Hares, and Deer; and yet the Inhabitants are not given to Hunting. It abounds with Fountains and Trees, eſpecially Walnut Trees. The Inhabitants frequently ſhift their Seats, for moſt of 'em live after the *Arabian* Way. Their Arms are broad crooked Daggers, and Swords as thick as Sythes. 'Tis ſaid they are able to lead 20000 Men into the Field upon occaſion. They have neither Judges, Prieſts or Temples; and being altogether unacquainted with Learning, perſue nothing but Lewdneſs and Villany.

Demenfera.

Another Mountain in the Country of *Hea*, call'd *Demenfera*, is likewiſe part of *Atlas*, and runs Eaſtward from the above-mentioned Ridge about 50 Miles, dividing part of *Hea* from *Sus*. 'Tis well ſtock'd with moſt barbarous Inhabitants, who have Horſes in great plenty, and frequently wage War with the neighbouring *Arabians*. They have a great many Noblemen or Governours, to whom the reſt are very obedient. They have no Towns nor Caſtles, but only ſome Villages or Cottages, where the better ſort reſide. The whole Country abounds with Springs, which run into a River call'd *Siffaia*. Their Apparel is decent; and they are very induſtrious. They poſſeſs great Quantities of Iron, which is exported to other places. There are a great many *Jews* in this Country, who ſerve as mercenary Souldiers, and are call'd by the other *Jews* in *Africa*, *Carraum*, i. e. *Scripture-men*, for they rejected Tradition. It affords plenty of Box, Maſtich, and high Walnut-trees. They have a kind of Olives, call'd *Argans*, from which, together with Walnuts, they expreſs a very bitter Oil, and uſe it both in their Lamps, and by way of Sauce to their Meat. 'Tis ſaid this People can lead into the Field 25000 expert Soldiers.

Gebelelbadith.

The Mountain of *Iron*, commonly call'd *Gebelelbadith*, and lying within the Territory of *Hea*, is not to be accounted any part of *Atlas*. It extends from the Ocean Southward to the River *Tenſift*, and divides *Hea* from *Duccala* and *Morocco*: The Inhabitants are call'd *Regraga*. This Hill, which is full of waſte Deſarts, abounds with clear Springs, Honey, and Oil *Arganick*; but it affords little Corn or Pulſe. The Inhabitants are all very devout and religious, but few of 'em are rich. A great many *Hermites* live upon the top of the Mountain, who drink Water, and feed only on the Fruit of ſome Trees; and whatever theſe *Hermites* do, is eſteem'd a Miracle. Their Puniſhment of Theft or any other Crime, is immediate

mediate Baniſhment for a certain ſpace of Years. Being of a quiet peaceable Temper, they chooſe rather to pay Tribute to their Neighbours the *Arabians*, than to repulſe their Invaſions by War. So much for the Region of *Hea*.

The Limits of *Sus*.

Next in courſe is the Province of *Sus*, beginning Weſtward from the Ocean, Southward from the ſandy Deſarts, Northward from the utmoſt Town of *Hea*, and Eaſtward from the River *Sus*. To begin from its Weſtern Point. Upon the Sea-ſhore, where *Atlas* takes its Riſe, the ancient *Africans* built three ſmall Towns, at the diſtance of a Mile from one another, which were all call'd by one Name, viz. *Meſſa* (i. e. *Houſe of Prayer*) and ſurrounded with a white Stone Wall.

Meſſa.

Sus River.

Through theſe three runs a great River call'd *Sus*, which gives name to the Country, and in Summer is ſo low, that one may paſs it on foot. The greateſt Wealth of the Inhabitants of this Country (where the three Towns ſtand) conſiſts in Dates; for they have plenty of Palm-trees; but their Dates are not worth much, becauſe they will not keep above a Year. They all apply themſelves to Husbandy in *April* and *September*, at which times the River ſwells, or if it does not, their Harveſt is good for nothing. Their Corn is ripe in *May*: Their Grounds are very ſandy, ſo that Cattle is very ſcarce among 'em.

Its Temple much eſteem'd.

Not far from the Sea-ſide they have a Temple, the Rafters and Beams of which are made of Whale Bones; for Whales of a monſtrous ſize are oftentimes caſt up dead upon that Shore. The common People imagine, that by a ſecret Power beſtow'd by God upon the Temple, no Whale can paſs by it without immediate Death: But the Truth of the Matter is, that on either ſide of the Temple, there are Rocks that ſhoot two Miles into the Sea, and wound the Whales when they light upon 'em. They keep a Whale's Rib of an incredible length for a Miracle, which lying upon the Ground with its convex part uppermoſt, makes an Arch, the Head of which cannot be reach'd by a Man upon a Camel's Back. This Rib (ſays *John Leo*) is ſaid to have layn there a hnurded Years before I ſaw it. Their Hiſtorians affirm, that a Prophet who propheſy'd of ***Mahomet***, came from this Temple; and ſome do not ſtand to aſſert, that the Prophet *Jonas* was caſt forth by the Whale upon the Shoar of *Meſſa*. Upon this Shore there is great ſtore of Amber to be found, which the *Portugueſe* and *Feſſan* Merchants buy very cheap (i. e. leſs than a Ducat *per* Ounce). Some ſay 'tis made of Whales Dung, and others of *Sperma Ceti*, which being harden'd by the Sea, is caſt upon the next Shoar.

Monſtrous Whales.

The Original of *Amber*.

Teyent.

Not far from *Sus*, ſtands *Teyent*, which contains 4000 Families. The adjacent Country produces plenty of Grain, Barley, Pulſe and Dates, as alſo of Sugar, only for want of the being acquainted with the way of preſſing, boyling and preparing it; what they have is black and unſavoury, and the *Morocco*, *Fez*, and *Negroland* Merchants buy up what they can ſpare. The only Money they uſe, is the Gold dig'd out of their own Grounds; for they have no Silver but what goes towards their Womens Ornaments: The leaſt Iron Coin they have weighs almoſt an Ounce. Figs, Grapes, Peaches, and Dates, are the only Fruits that thrive upon that Soil.

Cordouan Leather of *Morocco*.

The famous *Cordouan* Leather of ***Morocco***, is dreſs'd here, where 12 Hides coſt ſix Ducats, and eight at *Fez*. The South part of this Country is diſpeopl'd, and ſubject to the neighbouring *Arabians*; but the North part lying towards the *Atlas*, is well ſtor'd with Towns, Villages, and Hamlets.

A River running thro' a Temple.

In the midſt of this City, there ſtands a ſtately Temple, call'd *The Greateſt*, or *The Chiefeſt*, thro' which runs a branch of the River *Sus*. Each quarter of the City has its peculiar Governour, choſen every three Months; and theſe Governours act as States of a Commonwealth. They are perpetually engag'd in War, which renders 'em rough and unpoliſh'd.

Tarodant.

The next Town in *Sus* is *Tarodant*, which contains above 3000 Houſes. When the Family of *Marin* ſway'd the Scepter of *Fez*, this was the Seat of the King of *Fez* his Vice-roys. Their preſent Government is lodg'd in the Hands of four Noble-men, elected every ſix Months.

Tedſi.

At the diſtance of 30 Miles Eaſtward from *Tarodant*, 60 from the Ocean, 20 from *Atlas*, and three from the River *Sus*, we meet with *Tedſi*, a very great Town, built many Years ago by the *Africans*, in a moſt pleaſant fertile place, abounding in Corn, Sugar, and wild Wood, and reſorted to by many of the *Negroland* Merchants. The Citizens cultivate Peace and Civility, and have a very flouriſhing Commonwealth, govern'd by ſix Magiſtrates, who are choſen by lot every ſixteen Months. There are a great many *Jews* in this City, who are very expert in the Goldſmith, Carpenter, and ſuch like Trades. It has a weekly Market every Munday, which draws in great numbers of *Arabians*, both from the Valleys and Mountains. It is adorn'd with a ſtately Temple, and maintains at the publick Charge, many Prieſts and Doctors of the Law.

Taganoſt.

The greateſt City in *Sus* is *Taganoſt*, containing above 8000 Families, ſurrounded with a rough Stone Wall, and lying 60 Miles from the Ocean, 50 to the Southward of *Atlas*, and ten Miles of the *Sus* River. 'Tis ſaid the *Africans* built it. 'Tis never without Civil Wars, the Inhabitants being divided into three Factions, one of which the *Arabians* always ſide with, according as their Pay goes. They have great plenty of Corn and Cattle, but their Wool is very coarſe. They make a ſort of Garments, which are exported once a Year to *Tombute*, *Gualata*, and other places in *Negroland*: They have a Market twice a Week. Their Attire is in ſome meaſure decent; and their Women are beautiful; but the Men being deſcended of black Fathers and white Mothers, are of a tawny ſwarthy Complexion.

The Mountains of *Sus*. Mountain *Hanchiſa*.

As for the Mountainous parts. The Mountain *Hachiſa*, ſtretching from the *Atlas* almoſt 40 Miles Eaſtward, is inhabited by valliant Foot-men, one of whom will encounter with two Horſe-men. It produces Barley, and plenty of Honey, but no Corn. 'Tis never without Snow, and yet the Inhabitants are ſo hardy as to wear but one ſingle Garment all the Year round. The Mountain *Halem* beginning Weſtward from that Mountain, runs Eaſt to the Region of *Guzula*, and South to the Plains of *Sus*. 'Tis furniſh'd with plenty of Horſes, and inhabited by a valliant People, who wage eternal Civil Wars, upon the account of ſome Silver Mines, out of which the prevailing Party digs Silver, and diſtributes it equally among the Partiſans.

Mountain *Halem*.

The Limits and Soil of *Morocco*. Its Cities.

The third Province of the Kingdom of *Morocco*, is that call'd *The Region of Morocco*, extending Eaſtward from the Mountain of *Neſiſa* to the Mountain *Hadimes*, and Northward to the Eaſt Border of *Hea*: Its Form is almoſt triangular. The whole Country is a moſt fertile green Plain, well ſtock'd with Cattle. As for its Towns and Cities.

Teneſſa.

About eight Miles to the Eaſt of the River *Aſiſinual*, ſtands *Teneſſa*, upon a Hill of *Atlas*, call'd *Ghedmin*. The Inhabitants till the Ground upon the ſide of the Mountain, and pay a third part of the Product by way of tribute to the *Arabians*. But they dare not till the excellent fertile Plain at the Foot of the Hill, for fear of the plundering *Arabs*.

New Delgumuba.

A large and impregnable Fort lately built, call'd *New Delgumuchn*, ſurrounded on all hands with Mountains, ſtands about 40 Miles from *Morocco*, upon the top of a Mountain, under which ſprings *Aſiſinual*, i. e. *The River of Noiſe*, ſo call'd, becauſe it breaks out of the ſide of a Hill with a hideous Noiſe, and makes a very deep Gulf. This Fort contains almoſt 1000 Families, being well ſtock'd with a civil People, that wear decent Apparel, and cultivate Mechanick Arts. About 14 Miles to the Weſt of *Delgunnuba*, upon a part of *Atlas*, ſtands a City call'd *Imizmizi*, near to which lies the Road over the Mountains to *Guzula*, known by the Name of *Burre*, i. e. *A Way ſtrew'd with Feathers*, alluding to the Snow that often falls there, apparently in the form of Feathers rather rather than Snow.

Imizmizi.

Burre.

Not far from hence there's a fair large Plain, of 30 Miles extent, producing incomparable Corn, but a great part of it is uninhabited, by reaſon of the Depredations of the *Arabians*, and the Souldiers of *Morocco*.

The City of *Morocco*.

About 14 Miles from *Atlas*, and ſix from the River *Tenſift*, upon a very large Field, ſtands *Morocco*, one of the greateſt Cities in the World; founded (as 'tis ſaid) in the 424 Year of the *Hegeira*, by *Joſeph* the Son of *Teſfin*, King of the Tribe of *Luntuna*, when he march'd to the Region of *Morocco*. The Buildings of this City are ſtately and artificial beyond expreſſion. In the Reign of King *Hali*, the Son of *Joſeph*, it contain'd above 100000 Families, being adorn'd with 24 Gates, and a very thick ſtrong white Stone Wall, beſides a great many Temples, Colleges, Bathing Places, and Inns, built after their own Faſhion.

The great Temple of *Hali*.

The moſt magnificent of all their Temples, is that in the midſt of the City, built by *Hali* the Son of *Joſeph*, the firſt King of *Morocco*, whence 'tis commonly call'd the Temple of *Hali ben Joſeph*. *Abdul-Mumen* his Succeſſour pull'd down this ſtately Edifice, and rebuilt it more ſumptuouſly than before, in order to ſink his Predeceſſour's Fame, and eternize his own; but he miſs'd his aim, for it ſtill bears the name of *Hali*. The ſecond Tyrant built another Temple near a Rock in the City, which his Grandſon *Manſor* enlarg'd to the extent of 50 Cubits every way, and adorn'd with Pillars imported from *Spain*. The Roof of this Temple was cover'd with Lead, and at every Corner were Leaden Pipes, which convey'd the Rain Water down to a Ciſtern or Vault below the Temple, of equal bigneſs with the Temple it ſelf. The Steeple is built of hard ſmooth Stone, in the form of an Amphitheatre, being above 100 Ells round, and higher than the Steeple of *Bononia*. The Stairs of the Steple are ſeven Hands broad, and well lighted with Windows, that are contriv'd to be wider within than without. The Steeple riſes to a Spire, in the form of a Sugar-loaf, about two Spears long and 25 Ells in compaſs, which has three Galleries that they get up by wooden Ladders. On the top of a Spire ſtands a Gold Half-moon, upon an Iron Bar, with three Golden Balls of different ſizes underneath, the greateſt of which is plac'd loweſt and the leaſt higheſt. From the top of this Steeple one may deſcry the Promontory of *Azaphi*, which lies 130 Miles off, and carry his Eye above 50 Miles into the plain Country. The inſide of this Temple is but ordinary, but the Arches of the Roof is very artificial. This great Temple is never frequented by the People but on *Fridays*; and that part of the City where it ſtands is now uninhabited, whereas in former times (as 'tis reported) there were above 100 Bookſellers Shops under its Porch. In fine, the third part of the City is at preſent uninhabited, and there is not now one Bookſeller in the whole Town.

The occaſion of the decay of *Morocco*.

Tho' 'tis not above 500 Years ſtanding, yet the Inconvenience of continual Wars, and the frequent Alterations of their Magiſtrates, have brought it to decay. In the Reign of *Abraham* King *Hali*'s Son, one *Elmabeli*, a Highlander, and a *Mahometan* Prieſt, rebell'd againſt his Natural Sovereign, and having levy'd his Army, intercepted his Return to the City of *Morocco*, and oblig'd him to fly to the Mountains of *Atlas*. After which the King came to *Oran*, and finding no Relief there, mountted his Horſe, and taking his Queen behind him, fled to a Rock upon the Sea-ſhore, where he threw himſelf, his Queen and his Horſe headlong. In the mean time *Elmabeli* dy'd, and *Abdul-Mumen* his Succeſſour beſieg'd the City of *Morocco* for a whole Year, and at laſt took it, upon which he kill'd *Iſaac* the Son of King *Abraham*, with his own Hands, and order'd all the Souldiers and a great part of the Citizens to be put to the Sword. This Man's Poſterity reign'd from the 516th to the 668th Year of the *Hegeira*, at which time they were diſpoſſeſs'd by a King of the Tribe call'd *Marin*. This Family of *Marin* kept their Court at *Fez*, and govern'd *Morocco* by Vice-roys. They continued in the Government till the 785 yeat of the *Hegeira*. This City of *Morocco* has Vines, Palm-trees, large Gardens, and very fruitful Corn Fields within the Walls; but the Ground without the Walls lies unmanur'd, upon the account of the Excurſions of the *Arabs*.

The King and Queen thrown headlong over a Rock.

The Caſtle of *Morocco*.

It has an impregnable large Caſtle within it, the Walls, Towers and Gates of which, are of pure Marble. Within this Caſtle ſtands a ſtately Temple, with a lofty Steeple, and a Golden Half-Moon, with three Golden Spheаrs on the top of it, weighing together 130000 Ducats. Some Kings have attempted to take down theſe rich Spheаrs, but their Deſign was always baulk'd by ſome great Misfortune or other. This Caſtle contains likewiſe a great Colledge, that has 30 Halls belonging to it, one of which ſtanding in the middle, is very large, and admirably well painted and carv'd, being the place allotted for the publick Lectures, while Learning flouriſh'd among 'em. All their Porches and Roofs were of painted glittering Stone, call *Ezzulleia*. In the midſt of this Colledge they have a moſt pleaſant clear Fountain, encloſ'd with Walls of white poliſh'd Marble. In former times there were a great many Students in it, who had their Diet and Cloathing given them *gratis*, and ſeveral Profeſſours, who had, ſome 100, ſome 200 Ducats a year, and admitted of no Hearers, but ſuch as were perfectly well verſ'd in the Arts they profeſs'd Further, The Caſtle has likewiſe twelve Courts of curious Buildings within it. The firſt was the Apartment of above 500 Chriſtians, who always attended the King, carrying Croſs-bows before him. The ſecond was call'd *The Houſe of Affairs*, being the Lodgings appointed for the Lord Chancellour and the King's Privy Council. The third was call'd *The Court of Victory*, in which the Armour and Ammunition was lodg'd. The fourth was allotted to the King's Maſter of Horſe, having three Stables adjoining, each of which contain'd 200 Horſe, and large Conveniencies for the keeping of Straw, Barley and Corn. The Corn is lodg'd in ſeveral Rooms, each of which will contain above 300 Buſhels. Theſe Rooms have a whole in the Roof, to which the Beaſts laden with Corn, aſcend by Stone Steps, and ſo the Corn is put in at that hole; and when they want to take out any Corn, there are other holes below, out of which it runs upon the firſt opening. The other Courts are employ'd for the lodging of the King's and Noblemens Sons, the King's Concubines, and other Ladies of Honour, and the King's Guard, the Reception of Ambaſſadours, &c. Among theſe there's a ſquare Building, containing ſeveral Galleries with ſtately Glaſs Windows, in which ſeveral Hiſtories are curiouſly painted. Upon that ſide of the Caſtle that is next the Fields, you have the proſpect of a very pleaſant large Garden, adorn'd with all ſorts of Trees. Not far from the Garden there's a Park wall'd round, in which Elephants, Lions, Stags, and all kinds of wild Beaſts were kept, only the Lions had a peculiar Apartment, call'd to this Day, *The Lions Den*. This ſumptuous Structure had a Magnificent Porch of excellent Marble, in the midſt of which a Lion of Marble ſtood upon a Pillar, and threw out of his Mouth clear Chriſtal Water into a Ciſtern. Each corner of the Porch was adorn'd with a Leopard of party colour'd Marble, that naturally repreſents its ſpots. This ſort of Marble is not to be found any where but in a certain place of *Atlas*, about 150 Miles off. Such was the Magnificence of this noble Structure, in the time of *Manſor*, who built it, which at this day affords only Neſts to the Fowls of the Air. Such an Edifice became ſo great a Prince as *Manſor*, whoſe Dominions reach'd from *Meſſa* to *Tripolis* in *Barbary*, and who was Lord, not only of all the Kingdom of *Granada* in *Spain*, but of a great part of *Caſtile* and *Portugal*. 'Twas in his Son's time that the Succeſs of the Chriſtians made way for the decay of *Morocco*; and after his death the Civil Diſſentions between his ten Sons, gave the People of *Fez*, call'd *Marini*, an Opportunity of uſurping the Government, and leaving this famous City expos'd to the Inſults of the *Arabs*, who have reduc'd it to extream Miſery.

A noble Colledge within it.

The Porch of the Caſtle.

The Greatneſs of King *Manſor*.

Agmet.

Another Town in the Region of *Morocco*, is that call'd *Agmet*, built by the ancient *Africans*, upon the top of a Hill, about 24 Miles off *Morocco*. While *Muachidin* was Prince of it, it contain'd 6000 Families; the People were noted for Civility, and the Town boaſted of Plenty and Magnificence, having in its Neighbourhood plenty of Vines, pleaſant Gardens, a River at the Foot of the Hill, the Water of which looks always white, and a Field by it that yielded a fifty fold Increaſe every Year. But now it's only Inhabitants are Wolves, Foxes, Deer, and other wild Beaſts.

The Mountains of *Morocco*. *Niſiſa*.

The moſt Weſtern Part of the Region of *Morocco*, is the Mountain of *Niſiſa*, which divides it from *Hea*, and which is both well peopled and exceeding fertile in Barley, notwithſtanding that its top is continually cover'd with Snow. The Inhabitants of this place are Strangers to Civility; they gaze at any Stranger that comes among 'em. I ſtay'd there two Days (ſays our Author) and being clad in white, which is the uſual Garb for the Learned Men of our Country, the Mob came about me, and being ſurpriz'd at the white Garment, handled it ſo often, that inſtead of white it became black in a little time.

M. *Semede*.

This Mountain is ſeparated by the River *Seſſana* from another Mountain of 20 Miles extent Eaſtward, call'd *Semede*, inhabited by a People unacquainted with good Laws, Civility or Honeſty. It enjoys plenty of Springs, and is always cover'd with Snow. In this Country (ſays our Author) I was forc'd to eat Barly-meal mingled with Water, and ſtale tough Goats Fleſh, and to lye upon the bare Ground; and it being the Cuſtom there, that whatever Stranger comes amongſt 'em, he is conſtrain'd to decide the Controverſies of the Inhabitants. I was forc'd to ſtay there nine Days to decide their Quarrels, after which, by way of Recompence, they plac'd me in a Church Porch, and after a ſhort Prayer, preſented me, ſome with a Cock, ſome with Nuts and Onions, ſome with a handful of Garlick, and the richer ſort with a Goat, for there is not a farthing of Money in the Country. This done, they ſent 50 Horſe to conduct me upon the Road, and defend me from Robbers.

Strangers Judges.

M. *Seuſana*.

Where *Semede* ends, the Mountain *Seuſana* begins, the top of which was never without Snow: It ſends forth a River of the ſame name. The brutiſh Inhabitants wage eternal War with their Neighbours, but their only Arms are Slings, out of which they throw Stones with a wonderful dexterity. They feed upon Barley, Honey, and Goats-Fleſh. The Walls of their Houſes are of rough Stone and Lime, and the Roofs are thatch'd. A great many *Jews* live among 'em, and exerciſe Mechanick Trades, ſuch as Maſon Work, making of Soap, Iron Hooks, and Horſe-ſhooes. Neither do they want learned Men and Lawers, whoſe Counſel they uſe at all times. This Mountain is much infeſted with Robbers as well as the laſt I mention'd.

M. Hantea. The higheſt Mountain I ever ſaw, is that call'd *Hanteta*, which at the firſt view I took to be Clouds. Its top is always cover'd with Snow. The ſides of it are deſtitute of Herbs or Trees, and might afford plenty of excellent white Marble, if the ſloathful ignorant Inhabitants knew but how to hew and poliſh it. Here are many ſumptuous Pillars and Arches deſign'd by the King's of *Morocco*, for ſupporting Water Conduits; but the Violence of the Wars hinder'd 'em to put their Deſigns in execution. Many of the *Carrain Jews* follow Mechanick Trades in this place, and pay great Sums to the Governour of the Mountain for their Licence.

The Province of *Guzzula.* The fourth Province of the Kingdom of *Morocco* is *Guzzula*. Its Limits are *Ilda* a Mountain in *Sus* to the Eaſt, *Atlas* to the North, and *Hea* to the South. 'Tis inhabited by a numerous ſavage People, that abound in Cattle, but want Money. Some Villages in this Province contain above 1000 Families. It has excellent Iron and Copper Mines. Having no King nor Laws, nor form of Government, they are continually at war one with another; only they obſerve three Days truce every Week, which a Hermite that they rever'd, enjoyn'd to 'em; and once a Year they have a Fair for two Months, during which time they give free Entertainment to all Merchants that come either to ſell or buy, and obſerve a Truce among themſelves, appointing Captains out of each Faction, to preſerve the Peace and Security of the Fair, and to puniſh Thieves who immediately upon their Conviction, are ſlain like Bruits, and their Carcaſſes are thrown out to the Dogs and Fowls.

Province of *Duccala. Azapi.* We come next to the Province of *Duccala*. Its Towns are *Azapi*, upon the Shore of the Ocean, containing 4000 Families, of a barbarous ignorant People, that know not how to till, ſow or plant the fertile Soil they poſſeſs.

Centum Putei *Centum Putei*, ſtanding upon a Rock of excellent Marble, ſo call'd from the number of Pits or Caves in its Suburbs, which preſerv'd Corn 100 Years from corruption; and inhabited by a ſloathful People, there being no Mechanicks among 'em, excepting a few *Jews*.

Azamur. And *Azamur*, ſeated on the Mouth of the River *Ommirabib*, by the ſide of the Ocean, containing 5000 civil and decently apparell'd Families, who live in peace one with another. The Inhabitants of *Azamur* are mightily given to Sodomy. The *Jews* ſurrender'd this City to the King of *Portugal*, upon the Condition of Security to themſelves; ſo that this is now the Reſidence of the *Portugueſe* Merchants. Tho' the Gardens and Orchards about it bring forth nothing but Figs, yet they have plenty of Pulſe and Corn, and ſuch abundance of Fiſh, as brings 'em in 6 or 7000 Ducats a Year. Their Seaſon of Fiſhing laſts from *October* to *April*.

The Green Mountain. In this Province we meet with a very high Mountain, call'd *The Green Mountain*, which extends from the River *Ommirabib* to the Hills of *Haſara*, and ſeparates *Duccala* from ſome part of *Tedles*. 'Tis rough and woody, and affords great ſtore of Acorns, Pine-apples, and a red Fruit, call'd *Africano*. It ſhews a great many Fountains, Mahometan Altars, and the Ruins of ancient Houſes, built by the *Africans*. Several Hermites live upon this Mountain, and feed only upon what the Woods afford, for they lie at the diſtance of 25 Miles from any Town.

The Province of *Hazcora. Tagodaſt.* The ſixth Province of this Kingdom is *Hazcora*, in which we meet with *Tagodaſt*, a Town ſtanding upon the top of a Mountain, ſurrounded with other four, the ſpace between theſe and the Town being full of large, pleaſant and fruitful Gardens. Here the Quinces are incredibly big, and the Vines ſhooting round the Boughs of Trees, make moſt delicious Walks. The Grapes are red, and for their bigneſs are call'd Hens Eggs, in the Language of the Country. They have plenty of Oil, which they export to the adjacent Cities, and excellent Honey, both white and yellow. Their Fountains are very numerous, and joining in one Stream, ſerve their Water-mills. The Inhabitants have ſome meaſure of Civility. Their Women are handſome, and ſet out with Silver Jewels. They have among 'em Judges, Prieſts, great numbers of Gentlemen, and a great many Tradeſmen. Their Leather, of which they have abundance, they export to *Fez* and *Mecnaza*. Under the Town lies a fertile Plain, almoſt ſix Miles long, for which they pay tribute to the *Arabians*.

Within five Miles of that Town, ſtands *Elgiumuah*, on the top of a high Mountain, containing 500 Families, beſides as many more in the Villages upon the Mountains. 'Tis enrich'd with innumerable Springs, pleaſant Gardens, tall Walnut-trees, and excellent Iron Mines, which afford 'em plenty of Horſe-ſhooes. A great many Trades-men live in this Town, ſuch as Smiths, Leather-dreſſers, *&c.* The adjacent Hills yield Barly and Olives in great abundance. Elgiumuha

As for *Tedles*, the laſt Province of *Morocco*; its chief Town is *Tefza*, built by the *Africans* upon the ſide of Mount *Atlas*, about five Miles off the Valley, and taking its Name from the excellent Marble (*Tefza*) of which its Walls are built. Many rich Merchants reſide in it, beſides 200 Families of Jewiſh Tradeſmen and Merchants. Several outlandiſh Merchants trade to it for black Mantles with Hoods, call'd *Ilburnus's*. It entertains many Judges and Prieſts, and has ſeveral Mahometan Temples. The Inhabitants are decently cloath'd; their Women are handſome and graceful; their Coins of Gold, bears no Image or Superſcription. They pay the King of *Morocco* 20000 Ducats a Year. The Province of *Tedles. Tefza.*

In this Province is Mount *Magran*, having the Region of *Farcali* on the South, Mount *Seggheme* on the Weſt, and Mount *Dedes* on the Eaſt. Tho' 'tis always cover'd with Snow, the Inhabitants have ſuch Droves of ſmall and great Cattle, that they are oblig'd to move from place to place, and carry their Houſes along with 'em upon Mules, for they are made of the Bark of Trees, ſupported with ſlender Spares: Only during the Spring they continue in one place, and to defend their Cattle from the cold, lodge 'em in the night time in Cottages cover'd with the Boughs of Trees, near which they kindle great Fires, and if the Wind blows hard, the Cattle are ſometimes endanger'd by the Fire. Lions and Wolves never ceaſe to moleſt 'em. M. *Magran.*

Another high and cold Mountain in this Province, is Mount *Dedes*. It extends from Mount *Magran* on the Weſt, as far as Mount *Adeſan*, and on the South Borders upon the Plains of *Todga*, being almoſt 80 Miles long; 'tis full of Fountains and Woods. The Ruines of an old City are to be ſeen upon the top of it, with ſome Inſcriptions upon the Stones that the Inhabitants do not underſtand. This I take to have been the ſame City, that *Seriſſo Eſſacalli*, an Hiſtorian, calls *Tedſi*, and places near to *Segelmeſſe* and *Dara*. The Inhabitants of this Mountain are very barbarous. Moſt of 'em dwell in Caves under ground, and likewiſe lodge their Cattle in Caves, which are full of Salt Petre, but they know not the uſe of it. Some of 'em have Houſes built by pailing one Stone above another, without any Morter; but there's no Town or Caſtle in all the Country. They have nothing to feed upon but Barley Meal boyl'd with Water and Salt, which they call *Elbaſid*. They have large numbers of Aſſes and Goats, and their very Houſes are tainted with the ſtench of Goats Their Garments ſcarce cover half their nakedneſs. They are wonderfully haunted by prodigious ſwarms of Fleas. Having neither Judge, Prieſt, nor Governour, they ſteal from one another, and quarrel upon the leaſt occaſion. Few Merchants viſit 'em, becauſe they have no Commodities to ſell; and if any one imports Goods among 'em, he muſt pay a fourth part for Cuſtom, and runs the riſque of having all taken from him, unleſs he be conducted ſafe by their Captain. Their Women are a ſlovenly miſerable crew, and their Toil and Slavery is greater than that of *Aſſes*. M. *Dedes*,

Additions to Chap. II.

Collected out of Marmol.

The Province of *Hea.*

Morocco, the moſt Weſtern Kingdom of all *Barbary*, is bounded by the Ocean on the Weſt, the River of *Sus* on the South, Mount *Atlas* on the Eaſt, and the River of *Ommirabi* on the North.

Hea, the moſt Weſtern Province of *Morocco*, is ſo craggy and mountainous, that it nouriſhes few other Beaſts beſides Goats, very large Hares, and Aſſes, which are very numerous there.

Its Products.

It produces great quantities of Barley, but no Corn. What traffick the Inhabitants have, is owing, not only to their Goats, but to their Bees, from which they gather a great quantity of Wax, and ſell it to the *Europeans*. The Natives are a warlike People, but withal very brutiſh and uncivil. Tho' their Valleys being well watered with Springs and Rivers, might make good Vineyards and Gardens, yet they neglect both. Neither do they plant Olive-Trees, for what Oil they uſe is made of the Kernel of a certain Fruit that grows upon a thorny Tree call'd *Erquen*. This Fruit is as big as a large Apricock; it contains nothing but a Stone cover'd with a Skin, and when 'tis ripe, ſhines like a Star in the Night-time. The Goats feed upon it, but are not able to break the Stone; ſo that the Natives gather the Stones in their Folds, and from the Kernels draw an Oil, that both ſtinks and taſtes very rank. The Inhabitants are ſo brutiſh, that not one among 'em can read, excepting a few *Alfaqui's*, whoſe Example and Precepts are a ſtanding Law to the reſt; for tho' they are all *Mahometans*, yet they know nothing either of *Mahomet* or his Sect. They wear no Shirts, becauſe they have no Linen, but what is bought up at *Morocco* or *Safi*, for the uſe of the Courtiers and Ladies of Quality. They have neither Hats nor Caps upon their Heads, but only woolen Rowlers about half a Foot broad, which they run five or ſix times about their Heads, in the form of Turbants. The fineſt of theſe Welts or Fillets are of Cotton-Cloth ſtrip'd with red, with Taſſels hanging down on each ſide like a Fringe, but the *Alfaqui's* wear, by way of diſtinction, red Caps imported from *Toledo* or *Cordoua*. The young Men ſhave their Face and Head, but married Men ſuffer not only their Beards to grow, but likewiſe a Tuft of Hair upon the Crown of the Head, by which (ſay the *Arabians*) the *Mahometans* will be diſtinguiſh'd on the Day of Judgment. Thoſe who live in Cities have a decenter Garb than the reſt; for they wear Doublets of colour'd Cloth, with long Skirts and half Sleeves, with a great many Buttons upon the Breaſt, and over it a Caſſock that's ſomewhat finer. Their Women have long and large Linen Shifts, and a ſort of Veil or Mantle, call'd *Haygue*. Within doors, if they are Ladies of Quality, they cover themſelves with a Cloth that's half Linen half Silk, and faſten it upon their Breaſts with a Silver Buckle. Upon their Arms they have Silver Bracelets, and large Silver Rings upon their Ankles, beſides three or four large Ear-rings of Gold, or Silver, or Iron, according to their Ability. The People of Faſhion lie in Coverings of ſhag'd Tapiſtry, lying ſeveral Plaits of it underneath 'em, and leaving a piece to cover 'em: But the common People have nothing to lye upon but Mats made of Bulruſhes, or ſome Goats Skins, and cover themſelves with their Cloaths. The Men are of a robuſt Conſtitution, and infinitely jealous of their Wives, who are commonly handſome, and of a clean, white and amorous Complexion.

Oil of *Erquen*

The Habit of the Country

Their Diet.

Their ordinary Food is Barley Meal, which they either bake into Cakes, either in an Oven or in an earthen Pan, and eat it hot with Butter or Honey, or the Oil of *Erquen*, or ſometimes with Goats Fleſh ſtew'd. Sometimes they boil the Meal with Milk or freſh Butter, and ſo eat it, calling it *Hacua*: But their *Hacida* is a piece of Paſte or Dough boil'd with Water and Salt, and having a hole in the middle of it, fill'd with Butter or Oil, in which they dip their Bread when they eat it, and then drink up the Broth.

They eat with their Right-hand, and why.

When they eat, they ſit down, both Men and Women, upon the Ground, and the earthen Veſſels being plac'd in the middle, grapple up the Victuals with their Right-hand, accounting it unlawful to eat either with Spoons or with the Left-hand, that being the Hand with which they waſh themſelves when they go about their Devotion; when they have done eating, they wipe their Fingers by rubbing 'em againſt the other Hand or their Arms; for they uſe neither Napkins, nor Towels, nor Handkerchiefs; and when they waſh their Hands, they hold 'em in the Air till they dry of themſelves. Their Women are commonly imploy'd in grinding their Meal in little Stone Hand-mills; for notwithſtanding the Advantage of excellent Rivers falling down from the Mountains, they have no ſuch thing as Water-Mills. They know no ſuch thing as Soap, for they whiten their Linen with a ſort of Herb call'd *Gazul*.

All this Province is very well peopled, being full of large Villages ſtock'd with a turbulent ſort of People, who liv'd in eternal war with one another, till the Government fell into the Hands of the *Xeriffs*; for they liv'd at large, and neglecting the Meaſures either of Law or Juſtice, were impatient under Controul.

Their Arms.

Their Arms are three or four Darts with ſharp Steel Points, and a ſharp Poinard bow'd like a Sickle, which cuts on the inner ſide, and three or four Slings ty'd about their middle. They knew nothing of Guns or Croſs-bows, till within theſe few Years, that the *Xeriff* call'd them to aſſiſt him in the Wars. Their Horſemen carry Spears with Leathern Targets, and Cutelaxs's made like Sickles.

Their way of fighting.

In fighting they always betake themſelves to ſteep and unacceſſable places, from whence they tumble down Stones upon their Enemies; and upon an Attack they make ſuch a noiſe, that one would take 'em to be much more numerous than they are. What has been ſaid of the Manners and Cuſtoms of the Inhabitants of *Hea*, may be apply'd to all the Mountaneers of *Barbary*.

The City of *Tedneſt*.

The Metropolitan of all *Hea*, is the City of *Tedneſt*, waſh'd by a River that riſes in its Neighbourhood, the Banks of which are beautify'd with fruitful Trees and all ſorts of Kitchin Herbs. Both its Houſes and Walls are built of Wood and ſquare Lays of Earth, cemented with Plaiſter.

Moſt of the Inhabitants of this City are Shepherds and labouring Men, who ſpend their time in the Fields. The reſt are Trades-men, particularly Shooe-makers, Taylors, Carpenters, Lock-ſmiths, to which we may add ſome Jews that are Gold-ſmiths, and ſome Merchants, who ſell the coarſe Cloth made in the Country, and trade in the Linen Cloth imported from *Safi*, where the *European* Merchants exchange it for Wax and Leather. This City has leſs Polity than any other City in all *Barbary*, for it has neither Baths, Inns, Colleges nor Hoſpitals, excepting one for the poor People that paſs that way.

Severe Taxes upon the Jews.

About 200 Families of *Jews* live in a ſeparate quarter of the City, where they are allow'd to obſerve the Meaſures of their own Law, and pay a Ducat a Head to the Governour, beſides the extraordinary Taxes which are ten times heavier upon each of them, than upon the richeſt Merchant of the City; and after all, they are uncapable of being the Proprietors of Houſes or Lands, or any other immoveable thing. *Tedneſt* has been deſtroy'd ſeveral times, particularly when the *Almuhades* maſter'd *Morocco* and *Abdulmumen*, after an obſtinate Siege, reduc'd it to ſuch extremity, that it became a Receptacle to wild Beaſts. But the adjacent Country being fertile and pleaſant, 'twas ſoon after rebuilt and repeopled, and render'd it ſelf famous by declaring firſt for the *Xeriffs*. Upon which *Xeriff Mahomet* pitch'd upon it for the place of his Reſidence, and adorn'd it with a ſumptuous Palace, with fine Gardens and Water-works adjoyning. 'Twas his place of Arms againſt the Chriſtians of *Safi* and *Azamor*, who infeſted his Provinces under the conduct of *Tacaya Aten Tafuf*, an *African* Captain, and Vaſſal of the King of *Portugal*.

The Portugueze take Tedneſt. A. D. 1514

This Captain being a mortal Enemy to the *Xeriffs*, and a particular Friend to *Nugno Fernandez de Atayde*, General of the *Portugueze* Army, and the braveſt Officer of his time, join'd with him (*A. D.* 1514) in marching againſt *Xeriff Mahumet*, who was then at *Tedneſt*, accompany'd by his two Sons, and the Flower of his Army. Upon their Approach at the Head of 400

The Xeriff retakes it.

Chriſtian Horſe, 3000 Moriſh Horſe, and 800 *Arabian* Foot; the *Xeriff* march'd out of *Tedneſt* with 4000 Horſe, and meeting the Van-guard, commanded by the *African* Captain, was routed before the *Portugueze* General come up with the Rear. In this Battle he loſt 800 Men, beſides 200 Priſoners, and upon that, he and his two Sons betook themſelves to flight. The Victors having poſſeſs'd themſelves of a Booty of 3000 Head of Cattle ſmall and great, beſides a great many Horſes, Camels and Mules, march'd up to the City, and took it without any Oppoſition. After that it continued in the Hands of the King of *Portugal*, as well as many other places in that Country, till the *Xeriff* having drawn together an Army, recover'd it; ſo that his Poſterity enjoys it to this Day.

The Town of Agobel.

Agobel, a ſmall fortified Town, not far from *Tedneſt*, was likewiſe taken by the above-mention'd General, who was the firſt that ſcal'd the Walls, and by his Perſonal Braveries, not only animated his Men, but aſtoniſh'd his Enemies: But the *Xeriff* has ſince retaken it, for it always follow'd the Fortune of *Tedneſt*.

Alguel a Town.

Alguel, a ſtrong Town in this Country, ſtanding on the top of a ſteep Mountain, was attack'd by the *Portugueſe*, but they did not carry it.

Teculeth.

Teculeth, another City in this Country, has a ſmall Harbour, with an old Caſtle call'd *Aguz*, upon the Mouth of the *Diura*, which *Ptolomy* places in 7 Deg. 20 Min. Long. and 31 Deg. 40 Min. Lat. Both the Houſes and Walls of this Town are built of Earth. 'Twas firſt ſack'd and diſpeopled by *Abduimumen*, and afterwards (*A. D.* 1514) by the *Portugueſe*. But ſince that the *Xeriff* have repeopled it, and indeed the Inhabitants are both civiler and richer than thoſe of *Tedneſt*; for the adjacent Plains are very fertile, and the Mountain affords great Hives of Bees, the Wax of which they ſell to the *European* Merchants.

Teſgdelt.

Teſgdelt is look'd upon as the Key of the whole Province; and the Governour appointed by the *Xeriff*, to collect his Revenues and adminiſter Juſtice, reſides in it.

Culeybat Elmuhayden.

The Caſtle call'd *Culeybat Elmuhayden*, built by *Omar* the *Mahometan* Preacher, was a great annoyance to the Neighbours, by reaſon of the Robberies and Excurſions of his Grandſon, till at laſt he came to an Accommodation with the *Xeriffs*, and paid 'em homage.

Teſtana.

Upon the point of the Promontory of *Hea*, that ſhoots out into the Ocean, there ſtands a little Town call'd *Teſtane*, with a pretty good Habour, where the *European* Merchants uſe to land. 'Twas formerly call'd *Hercules*'s Port, which *Ptolomy* places in 7. Deg. 30 Min. Lon. and 30 Deg. Lat. It has Walls and Towers built of Brick and Free-ſtone, and was once a Sovereign Republick, and maintain'd a Garriſon upon the Cuſtom of 10 *per Cent.* of the Wax, untann'd Leather, Indigo, and other Goods that were exported or imported. At preſent 'tis ſubject to the *Xeriff*, and kept under by a Governour and a Garriſon. The Inhabitants are very white, and liberal to Strangers. They have large places ſet apart for Bee-hives.

The Province of Sus.

The ſecond Province of *Morocco* is *Sus*, which contains the greater part of the whole Kingdom. The beſt part of this Country is a Plain, lying to the Weſtward along the River *Magarib*, which waters it, and is convey'd by Conduits to the reſpective Villages.

Its Inhabitants.

The Inhabitants of this Province are richer and more civiliz'd than thoſe of *Hea*; for beſides their large ſtocks of Corn and Cattle, they have dealt in Sugars, being provided with Sugar Mills ever ſince the Reign of the *Xeriffs*, which is the moſt profitable Trade in all *Morocco*. When the *Xeriffs* conquer'd *Mauritania Tingitana*, the eldeſt Brother gave the Kingdom of *Sus* to the younger, upon the condition of paying homage; which he did for a while, till at laſt he outed his elder Brother, and made himſelf Maſter, not only of all *Mauritania Tingitana*, but of ſeveral Provinces in *Numidia* and *Libya*.

Commodities

This Country affords good Indigo, Allum, and the beſt ſort of Lattin, which goes by the name of *Suſi*, not to mention the *Geneova* Slaves, and the *Tibar* Gold, call'd by the Negroes *Narnaqui*, which are brought from thence by Caravans every Year.

Tejent.

Among the remarkable places of this Province, we muſt take notice of *Tejent*, or *Techeit*, where they make great quantities of fine Sugar, ever ſince a *Jew* that was turn'd *More*, taught 'em how to prepare it, by the Aſſiſtance of ſome Priſoners that the *Xeriff* had took at Cape *d' Aguer*. The Inhabitants of this place are very proud, and were always quarreling among themſelves while they enjoy'd their Liberty. But about 100 Years ago ſome of 'em uſurp'd the Government, and upon the Commencement of the *Xeriffian Adventures*, the then Governour married his only Daughter to a *Genoueſe* Merchant that had turn'd *Mahometan*; and this Merchant was ſo much belov'd by the People, that after the Death of his Father-in-Law, he ſucceeded to the Crown, and being a Friend to the *Xeriffs*, allow'd 'em to paſs thro' his Country upon their march to *Hea*. The eldeſt Son and Succeſſour of this Merchant was the braveſt alive that the *Xeriffs* had, and they confided moſt in him. His Grandſon is at preſent Lord of *Chechuan*. Theſe Princes imbelliſh'd the City very much, and at this Day the Inhabitants are very rich, and live at their eaſe. However they have among 'em above 200 Jewiſh Merchants and Trades-men.

Tarudant.

Twelve Leagues to the Eaſt of *Tejent*, we fall in with *Tarudant*, call'd by the Mores *Teurant*, which is not inferiour to the reſt in Magnificence and Commerce. When the *Benimerins* maſter'd *Mauritania Tingitana*, they imbelliſh'd it, and made it the Seat of their Viceroys. After their fall, it recover'd its Liberty, and was govern'd by four Magiſtrates elected every ſix Months, till the *Xeriffs* poſſeſs'd themſelves of it, under the Pretence of waging War with the Chriſtians at Cape *d' Aguer*. At preſent (ſays our Author) 'tis well fortified, and one of the principal Cities in all *Africa*; in which the *Xeriff* lodges his Magazines, his Arſenal, and the greateſt part of his Treaſure, as being the ſecureſt place in the Country. Some ſay the *Xeriffs* were the Founders of it, but the Antiquity of its Walls and Buildings, and the Teſtimony of Hiſtorians, are ſufficient Evidence that it was built by the ancient *Africans*.

Tedſi.

Tedſi was likewiſe much improv'd by the *Xeriffs*; for it ſubmitted voluntarily to them, when it was govern'd by ſix Magiſtrates choſen every ſixteen Months, upon which they eſtabliſh'd a Court of Judicature in the City, and render'd it one of the richeſt and moſt conſiderable Towns on that ſide the *Atlas*. The ſame was the Fate of the great City of *Taganoſt*.

Cape d'Aguer

Within theſe few Years there was a ſmall Town built at the Foot of the Cape of Mount *Atlas*, call'd *Cape d' Aguer*, and formerly *Cape d' Uſagre*, which *Ptolomy* places in ſeven Deg. 30 Min. Long. and 29 Deg. 15 Min. Lat. This place has a good Harbour, where large Ships may ride. It owes its Original to *Diego Lopez de Seguera*, a *Portugueze* Gentleman, who built a Caſtle there to ſecure his Fiſhery. This Caſtle was call'd *Saint Croix*, and by the Mores *Dar Kumia*, i. e. *The Houſe of a Chriſtian.* But K. *Dom Manual* perceiving that this Caſtle might be of great importance in ſecuring the Navigation of thoſe Seas, and carrying on the Conqueſt of *Africa*, bought it of the Gentleman, and having enlarg'd it, fortified it like a City, with Stone Walls and Bulwarks. Here the *Portugueze* kept a Garriſon, which aſſiſted by their *Arabian* and *African* Vaſſals, made many ſucceſsful Excurſions into the Country: And indeed nothing has contributed more towards the aggrandiſing of the *Xeriffs*, than the *Portugueze*, their looſing this and their other Poſſeſſions in *Africa*. *Muley Hameh* laid ſiege to this place, in the Year 1536 for ſeven Months together, and after the Loſs of 13000 Men, took it upon the accidental blowing up of a Barrel of Powder, which was under a Bulwark, and made a great breach in the Wall. At that time the *Portugueſe* Governour had a Daughter that was married to one *Don Jon de Carval*, a Man who ſignaliz'd his unparell'd Courage, by killing 30 *Mores* with his Sword in one Engagement, and fighting upon his Knees after he was wounded in both his Legs, inſomuch that the *Mores* were forc'd to kill him at a diſtance with Darts, for no body durſt venture to come near him.

Taken by the Xeriff.

The Venture and Conſtancy of a Portugueſe Lady.

When the victorious *Xeriff* ſaw his Lady (*Dogna Mencia* by Name) he was ſo charm'd with her Meen and Beauty, that he inſtantly offer'd to lie with her; and upon her refuſing to grant that Liberty, he threatn'd to make two Negroes hold her by force till he ſatisfied his Paſſion. In this Extremity the Lady conſented, upon condition that he ſhould marry her, and allow her to continue a Chriſtian. After that, the *Mores* were uneaſy upon her enjoyment of the Priviledges of a Chriſtian, inſomuch that he was forc'd to deſire her to pretend to be converted to *Mahometaniſm*. She being then big with Child comply'd with his Requeſt; and after her Delivery (as the Report goes) both ſhe and her Child were poyſon'd by the *Xeriff*'s other Wives. But before her Death, ſhe proteſted in the preſence of ſome Chriſtian Slaves, that ſhe dy'd a Chriſtian, and had ever been ſuch, but that ſhe could not refuſe to make a Shew of the contrary, upon ſeveral Conſiderations tending to the Benefit of the Chriſtians, and eſpecially of her Father who was then in priſon. This ſhe deſir'd them to make known to the World: And ſince her Death, the *Xeriff* ſent her Father-in-Law and ſome Chriſtian Slaves back to *Portugal*, and furniſh'd him with Horſes, Equipage and Money.

The Province of *Morocco*.

The third Province of *Morocco* bears the Name of the whole Kingdom, but formerly 'twas call'd *Bocano Emero*, and its Capital City was *Agmet*, before the building of *Morocco*, which is now the Metropolitan, not only of that Province, but of all Weſt *Barbary*. The Inhabitants of this Province who live in Towns and Villages, are a cunning People; they carry on a ſort of ſmall Traffick,, and are cloath'd decently enough in their way. They have numerous Troops of Horſe, beſides Muſkateers and Croſs-bowmen on foot. But the Inhabitants of the Mountains are of the ſame Kidney with thoſe of *Hea*.

Agmet.

Agmet, which was once the Metropolitan, and is now a heap of Ruines, is call'd by *Ptolomy Emere*, in his Map of *Libya*, and plac'd in 9 Deg. 20 Min. Long. and 29 Deg. 30 Min. Lat. The moſt remarkable thing about that place, is a Lake that receives all the Water that deſcends from the Mountain, and is equally deep all over, notwithſtanding that 'tis prodigious large and extream deep, which renders it very obnoxious to Storms.

The City of *Morocco*.

The City of *Morocco* is the pleaſanteſt and beſt ſituated City in all *Africa*.

The Original and Antiquity of the City.

In ſome of its ancient Buildings we find Tables of Alabaſter, with Inſcriptions in *Arabick* Letters, importing, that they were built by the Tribe of *Luntuna*, in the Reign of *Joſeph Abu Techifien*, who to carry on the Work with more expedition, imploy'd 30000 Slaves in the building of it, and made it the place of his reſidence. 'Tis ſurrounded with delicate Walls made of Chalk and Sand mix'd with a fat ſort of Earth, which renders the Cement ſo hard, that if you ſtrike upon it with a Pickax, it caſts fire like Flint: And conſidering the uncommon height of theſe Walls, 'tis very remarkable, that there is not ſo much as one breach in 'em, notwithſtanding that the City has been ſeveral times ſack'd. The Contrivance of this Town ſpeaks the Skill and Ingenuity of its Architects. It has 24 Gates, and once contain'd 100000 Inhabitants. In a word, in the Reign of the *Luntunes* and *Almohedes*, 'twas, without diſpute, the greateſt and richeſt City in all *Africa*. I have ſeen (ſays our Author) a piece of Alabaſter as high as a Man, plac'd upon an ancient Tomb, with this Inſcription in *Arabick*. *I was* Ali *the Son of* Atia, *who commanded 100000 Men, poſſeſe'd 10000 Horſe, and in one Day cauſed 101 Pits to be digged for watering of them. I married 300 Girls, and always faithful and victorious; being of* Jacob Almanſor's *24 Generals. The 40th Year of my Age put an end to my Life. May whoever reads this Epitaph, pray to Gad to pardon me.*

The Puiſſance of the ancient *Mores*.

This juſtifies what Hiſtorians aſſert of the Puiſſance of thoſe Princes, who have croſs'd over ſo often to *Spain* with ſuch numerous Armies; for here we ſee one General commands 100000 Men.

A ſtately Temple.

Not to mention the great Temple of *Hali* and the King's Palace; there's a large magnificent Temple in this City, which was built by *Abdulmumen*, and much improv'd and beautify'd by *Jacob Almanſor* his Grandſon, who carry'd the Gates, and ſeveral other Ornaments of the great Church at *Seville* as Trophies to *Morocco*, and adorn'd this Temple with 'em, as well as with two Bells that he brought out of *Spain*; for the *Mores* uſe no Bells. The Spire of this Temple has upon it four Balls of Gold faſten'd upon an Iron Spike, the loweſt and largeſt of which will hold eight Meaſures of Corn, the next four, and ſo on in proportion. The Body of the Ball is of Copper, which is cover'd with a thick plate of *Fibar* Gold; and the *African* Hiſtorians alledge, that one of *Jacob Almanſor's* Wives ſold her Jewels, in order to make 'em. But the vulgar People fancy, that ſome Spirits brought them thither, and ſtill guard 'em, which has ſcar'd ſeveral of their Kings from medling with 'em in Caſes of Extremity. When King *Nacer Bucheritus* was attack'd on all hands by the *Arabians*, the *Portugueſe* and the King of *Fez*, he would fain have taken 'em down, and pay'd his Troops with 'em; but the Inhabitants remonſtrated, that rather than the Honour of their City ſhould be ſo far ſunk, they and their Children ſhould be expos'd to ſale. However the *Xeriff Muley Hamet* took down the uppermoſt Ball but lately, and ſold the Gold of it for 25000 Piſtols of pure Gold; after which, to appeaſe the People, he caus'd the Copper Body to be guilt, and put up in its place, and hang'd up upon the Spire of the Steeple, the Jewiſh Goldſmith who had taken off the Gold by his Orders. But the *Alfaqui's* gave it out, that 'twas the Guardian Spirits of the Golden Balls that had taken up the Jew and hang'd him there. Not long after, that Prince loſt both his Crown and his Life, and the People imputed his Misfortune to his Sacriledge, ſo that no body has ſince offer'd to touch 'em.

The Avarice of the *Xeriff*.

The Superſtition of the People.

The Hiſtory of the *Muſarabians*.

In ancient times there were two large Apartments in this City, which were ſet apart for the Chriſtians that they call'd *Muſarabians*, whom the King of *Morocco* imploy'd to ſerve him as Souldiers, and allow'd to live there with their Wives and Children, in the free Exerciſe of their Religion. Theſe Chriſtians were call'd *Muſarabians*, not from their ſerving *Muſa* after the defeat of King *Roderick*, but from their Knowledge of the *Arabick* Tongue. They were brought from *Spain* by *Jacob Almanſor*, for a Guard to his Perſon, and commonly their number amounted to 500 Horſe, well mounted and well paid. They continued a long time in this Service, till *John* I. King of *Caſtile*, recall'd 'em to *Spain*, and beſtow'd on 'em large Poſſeſſions and Priviledges. The Name of *Muſarab* is ſtill made uſe of in ſeven Pariſh Churches at *Toledo*, where the *Muſarabian* Service and the *Gothick* Ceremonies do ſtill take place.

Several Saints ſuffer Martyrdom.

In the Year 1219, *S. Belaid* and five more went to *Morocco* to preach in this place, but the *Mores* condemn'd 'em to martyrdom, becauſe they inveighed againſt the *Mahometan*. And *Don Pedro*, the King of *Portugal's* Son, being then at *Morocco*, carry'd their Reſiques to *Caimbra*. Since that, the *Muſarabians* had ſuch an Intereſt with the King, that they obtain'd leave for erecting a Convent of Grey Friars; upon which, ſeveral *Franciſcans* came from *Spain*, and preach'd there; but by the Inſtigation of the *Alfaqui's*, they all ſuffer'd martyrdom.

The King's Magazine.

In the ſame place where theſe two Palaces ſtood, are the preſent *Xeriff's* Magazines, where they make 4600 weight of Powder, and ſeveral ſorts of Arms, every Month. But in the Year 1569, a clap of Thunder ſet fire to the Powder, and burnt, not only the Magazine, but ſeveral Neighbouring Houſes.

The *Jews* ſeparated from the *Mores*.

Formerly the *Jews* had a place allotted 'em to live in, near the heart of the City, but the preſent King tranſported 'em to a remoter corner, in order to ſeparate 'em from the *Mores*. The place of their preſent Reſidence is wall'd round, having only one Gate that leads to the City, and another that leads to their Church-yard. Moſt of theſe *Jews* are Gold-ſmiths, and ſome are Merchants and other Tradeſmen. The richeſt among 'em are thoſe that manage the Revenues of Governours and of the King's Children; for the *Mores* love to entruſt the management of their Incomes to the *Jews*, and find their account in it. All the *Jews* pay a Ducat a head, beſides the ordinary Taxes.

The Place and the Manner of Execution.

About the middle of the City we meet with a large wide place, with a Plot of Earth in the middle of it, rais'd higher than the adjacent Shops and Houſes. This is the place where the Criminals are executed, and 'tis never without ſeveral Gybits, upon which ſome hang by the Feet with their Throats cut, ſome are left to dye in that poſture without cutting their Throats, and others are hung up by one Arm with their Bellies ripp'd open. This is the way of puniſhing Criminals when there is no Plaintiff; but if there be any Plaintiff, he executes Juſtice himſelf, either by ſmothering the Criminal, or cutting his Throat, or running him thro with a Spear, or ſelling him for a Slave, or ſuffering him to buy his Life for a ſum of Money.

Noble Aquæducts.

One of the moſt remarkable things in this City, is a lofty Edifice, containing a general Ciſtern for Water, which ſhews how puiſſant theſe Infidels have been in former times. It receives 400 Aquæducts, which lye very deep in the Earth, and were digg'd (as ſome ſay) by 20000 Chriſtian Slaves. Some ſay, the Water of theſe Aquæducts come ſix Leagues off, from a River that ſprings out of Mount *Atlas*, the Channel of which is cover'd all the way to the City, ſo that no body can diſcover whence the Water comes. To diſcover the truth of the matter, ſeveral Kings have put Men into the Aquæducts with Lights in their Hands, in order to trace the ſource, but all of 'em pretended they could not get along, ſome for one obſtacle, and ſome for another. However the preſent *Xeriff* has within theſe few Years digg'd great Pits about two or three Leagues off the City, where the Ground begins to riſe; and having gather'd all the Water into a Ciſtern, conveys it by an Aquæduct into the City, the Pits and their Avenues being ſhut up; ſo that in caſe of a Siege, no body can trace the Aquæduct, or know whence the Water comes, in order to cut it off; and probably all the former Aquæducts were of the ſame nature. The *Xeriff* that now reigns, has lately drawn a Canal upon the Eaſt ſide of the City, from Mount *Agmet* to *Morocco*, which ſerves above 50 Mills in a plain one after another, and Waters ſeveral Gardens kept by the *Andaluſian Mores* on its Banks. For the *Xeriff* parcell'd out Lands to 'em upon that

The *Andaluſian Mores*.

quarter, allowing 'em pay like Souldiers; and 'tis from thence that they come to *Salè*, and infeſt the Spaniſh Coaſt with the light Galleys that are commonly in that River. Their Leader is an *Andaluſian More*, call'd *Dogali*, i. e. The Cheat; and at *Morocco* they have a ſeparate quarter for themſelves, which is call'd *New Orgive*, becauſe the firſt that came thither were of that City.

The Humour and Cuſtoms of the Citizens.

The Inhabitants of *Morocco* are a proud ſort of People, and mortal Enemies to the Chriſtians. They ſpeak the *Bereberes* Language. They wear Caſſocks of colour'd Cloth, embroyder'd down to the Feet with ſmall pieces cut out like Lozenges; over theſe they have Veſts of fine Camlet or Silk, and worſted Stuffs. They have Shirts and Drawers of white Cloth, and Scarlet Caps with ſmall Turbants. The Women are very civil and airy. Their Garments are either of Silk, or of fine Linen, and reach down to their Feet. They wear no Drawers as the Women of *Fez* do, and never ſtir abroad, unleſs it be to Church, or upon a Viſit; and when they go to a Bath, they cover their Faces very carefully, that they may not be ſeen. But after all, they are very coquette, and their Husbands are very jealous. The Citizens feed higher than thoſe of *Sus*; for beſides plenty of Corn, Meat, Butter, and Dates, they have great ſtore of Fowls and Veniſon, and all the Niceties that *Europe* affords. At preſent the Town is very populous, and improves every Day, by vertue of the Prince's Favour.

The Province of *Geſula*. A celebrated Fair.

The next Province is that call'd *Geſula*, the Inhabitants of which are a barbarous quarrelſome crew.

They have a celebrated Fair once a Year, that commences on *Mahomet's* birth-day, and laſts for two Months. During this Fair, they entertain above 10000 foreign Merchants, and obſerve a very regular Order, notwithſtanding, that at other times they are the moſt bruitiſh turbulent People in all *Africa*. They are moſtly Copper-ſmiths and Tinkers, and were the firſt that diſcover'd to the *Africans* the way of melting and caſting Iron. They liv'd formerly without any form of Government, but at preſent they are ſubject to the *Xeriffs*, who favour 'em upon the account of their faithful Services, and their keeping Foot-Guards which carry Firelocks. Their Cuſtoms are much of a piece with thoſe of *Hea*.

The Province of *Duguela*.

The fifth Province of *Morocco* is *Duguela*, which is 30 Leagues long and 24 broad. Its Limits are the River of *Tanſift* on the Weſt, the River of *Ommirabi* on the Eaſt, the Ocean on the North, and *Morocco* on the South. It affords plenty of Corn and Cattle. Moſt of it lies in Plains, inhabited by wrandring *Arabians*, and by *Bereberes*, ſome of whom likewiſe wander from place to place, and others fix in Houſes and Villages.

Safia a *Liby-Phœnician* City.

Poſſeſs'd by the *Portugueſe*, who afterwards abdicate it.

One remarkable City in this Province is *Safia*, call'd by the *Africans*, and by the *Portugueſe Aſaphi*. Some affirm, that 'tis one of thoſe Cities which *Hanno* the *Carthaginian* General built in *Libya*, by the Senate's Order, and which from thence were call'd *Liby-Phœnician* Cities. It has very good Walls, but is of no great Strength, by reaſon that it lies under the view of ſeveral riſing Grounds. In ancient times it was ſubject to the Kings of *Morocco*, and in that State its Trade was better than afterwards, for the *Spaniſh* Merchants imported Cloth, Linen, and other Goods, in exchange for their Wax, Indigo, Gums, and other Commodities. But upon the Declenſion of the Reign of the *Menimerini*, it ſhook off their Yoak, and one of their own Citizens uſurp'd the Government; upon which they fell into Civil Wars, and one of the Factions calling in the *Portugueſe* to their aſſiſtance, occaſion'd their Subjection to the Crown of *Portugal*. Tho' the Garriſon of this place reduc'd a great part of the adjacent Country, and carried ſeveral important Victories, yet the *Portugueſe*, after the loſs of Cape *d' Agner*, being apprehenſive of the growing Power of the *Xeriffs*, thought fit to abandon it, eſpecially conſidering that 'twas a place commanded by the neighbouring Mountains, and that it could not be well reliev'd by Sea, by reaſon of its bad Harbour; and not to mention that it coſt more than 'twas worth. While the *Portugueſe* were Maſters of *Safia*, they deſtroy'd *Cernu Miatbir*, and ſeveral other Villages and Caſtles in this Province, that depended upon *Safia*.

Azamor taken and abdicated by the *Portugueſe*.

Azamor, another City in this Province, is by ſome reckon'd one of the *Liby-Phœnician* Cities. 'Twas formerly call'd *Cuſa*, and plac'd by *Ptolomy* in ſix Deg. 40 Min. Long. and 32 Deg. 45 Min. Lat. Before the *Portugueſe* were Maſters of it, 'twas a rich neat Town; for it drove a great Trade, eſpecially in Fiſhing. It continued in the *Portugueſe* Hands 32 Years; after which they deſerted it, and remov'd their Troops, Artillery, and Ammunition to *Mazagan*. Their Plea for their Abdication was, that 'twas over-aw'd by an adjacent Hill, and the Mouth of the River was very dangerous for their Shipping; beſides, that the keeping of it was very chargeable. Upon their Removal, the *Xeriff* repeopled it by ſending two *Alfagui's* to dwell in it that were in great repute for their Sanctity. But ſoon after the Governour of *Mazagan* ſurpriz'd it in the Night-time, and ſent the two *Alfagui's* and the Governour Priſoners to *Portugal*. From that time the *Mores* durſt not offer to replant it; ſo that it became a Receptacle for wild Beaſts. At this Day the *Xeriff* farms the Fiſhery of the Shads to ſome Chriſtian Merchants at a very dear rate, but they are not in ſafety if they come aſhoar.

Mount *Benimager*.

About four Leagues to the Eaſt of *Safia*, there's a high Mountain, call'd by the Ancients the Mountain of the *Sun*, at preſent *Benimager*, where 300 *Mores* upon Horſeback ſhelter'd themſelves for ſome time, when the *Portugueſe* were Maſters of *Safia*, and made Excurſions upon the Chriſtians; but at laſt they were reduc'd. At this Day the Inhabitants of the Mountain are ſubject to the Governour of *Safia*.

The Green Mountain.

Another Mountain in that Province, is that call'd *Julel Hadra*, or the Green Mountain, which was very well peopled in the time of the *Almohades*, but ſince the Devaſtations of the *Benimerini's*, is only inhabited by Hermites and viſited by Pilgrims. The many Springs that iſſue from its Rocks, form a great Lake at the Foot of the Mountain, which is wonderfully ſtock'd with Eels, Trouts, Barbels, and a ſort of large white Fiſh call'd *Bognes*, which taſts very ſweet. But the moſt remarkable thing of all, is the multitude and diverſity of Fowls and Veniſon, for certainly there is not ſuch plenty of Game in all *Africa*, as upon this Mountain.

The Province of *Hazcora*.

Having diſpatch'd *Duguela*, we proceeded in order to *Hazcora*, the next Province, which was formerly call'd *Dominet*. Its Limits are the Green Mountain on the North, the River *Animmey* on the Weſt, the *Negroland* River on the Eaſt, and on the South ſome Mountains of the *Atlas*, which it receives into its Boſom, and which furniſhes the City of *Morocco* with Vines, Olives, and all ſorts of Fruits, that City being 20 Leagues diſtance to the Weſtward. 'Tis inhabited by *Africans*, who are deſcended of one of the Branches of the Tribe of *Muſamoda*, from whom it took the Name of *Hazcora*. The Inhabitants are richer than thoſe of *Duguela*, as being leſs diſquieted by the *Arabians*; and cultivate a fertile Country, abounding with Corn and Cattle. They carry on a conſiderable Traffick; for they make good Cloth, and dreſs Leather very well. They uſed the ſame Arms with the *Berebers* upon the Mountains of *Hea*, till of late, that they have learn'd the Uſe of Croſs-Bows and Fire-locks. Such of 'em as live in Towns, reſemble the Citizens of *Morocco* in their Habit, Cuſtoms, and way of living; But the Inhabitants of the Mountains are more brutiſh. Upon the Declenſion of the Empire of the *Benemerini's*, the Towns of *Almedine* and *Elemedin*, (both in this Province) ſet up for two Soveraign Republicks, and wag'd continual War with one another, till the Year 1516, at which time they ſubmitted to the King of *Fez*, who put an end to their mutual Jars.

Almedine. *Elmedin*.

The Province of *Tedla*.

Tedla is the laſt and moſt Eaſtern Province of *Morocco*. Tho' 'tis ſmall, yet 'tis enrich'd with good ſtore of Corn, Oil, and Cattle, and wealthy Inhabitants. Thoſe who inhabit the Mountains, are *Bereberes* of the Tribe of *Muſamoda*; but the Valleys are poſſeſs'd by two Lines of *Arabians*, each of which will raiſe 9000 Horſe. The Province is of a triangular Figure, and lies between the River of *Negroes* and the River *Ommirabi*. 'Twas ſubject to the *Benemerini*, while they were Maſters of *Mauritania Tingitana*; but upon the declenſion of their Reign, it fell into the Hands of the King of *Fez*, tho' at the ſame time it belong'd to the Kingdom of *Morocco*. At preſent it peaceably obeys the *Xeriffian* Family.

CHAP. III.

Containing John Leo's *Deſcription of the Kingdom of* Fez.

The Limits and Diviſion of the Kingdom of *Fez.*

THE Limits of the Kingdom of *Fez*, are the River *Ommirabih* on the Weſt, the River *Mulvia* on the Eaſt, the Ocean and Mediterranean on the North, and the Ridge of *Atlas* on the South. It owes the Title of a Kingdom to the Family of *Marin*, who getting the upper hand, fix'd their Reſidence in the City of *Fez*. This Kingdom is divided into ſeven Provinces, namely, *Temeſne*, the Territory of *Fez*, *Azgar*, *Elhalet*, *Erna*, *Garet*, and *Elchanz*, of theſe in order.

The Limits and Revolutions of *Temeſne*

The Frontiers of *Temſne*, are, the River *Ommirabib* on the Weſt, the River *Baragrag* on the Eaſt, the *Atlas* on the South, and the Ocean on the North. 'Tis all over a plain Country, being in length from Weſt to Eaſt 80 Miles, and in breadth 60. It contain'd 40 great Towns and 300 Caſtles; and was always reckon'd the head of the ſeven Provinces of *Fez*. In the 323d Year of the *Hegeira*, one *Chenlim* a Mahometan Apoſtate, ſetting up for a Prophet, perſwaded the People to pay no Homage to their Prince; and after a War with the King of *Fez*, had his Title to the Province confirm'd by a Treaty of Peace. Accordingly he and his Succeſſours govern'd it almoſt 135 Years; till *Joſeph* King of the Tribe *Luntuna*, having built *Morocco*, ſent *Mahometan* Doctors to retain the Governour and his People, and perſwade 'em to pay Homage to the King of *Morocco*. For upon that, the People ſlew the Ambaſſadours, and the Governour march'd with 50000 Men againſt *Joſeph*; but *Joſeph* in the mean time invaded *Temeſne*, where he put Man, Woman and Child to the Sword, and levell'd all their Towns and Caſtles with the Ground. On the other Hand, the Governour of *Temeſne* with his 50000 Men fled to *Fez*, upon the News of which, the King of *Fez* ſurrounded 'em near the River *Buragrag*, and they being conſtrain'd to run up the craggy Mountains and Rocks, moſt of 'em were either drown'd in the River or thrown head-long from the Rocks, the havock laſting for the ſpace of 10 Months. *Temeſne* being thus bereft of her People, became the Habitation of wild Beaſts, and continued ſuch, till 150 Years after that King *Manſor* returning from *Tunis*, gave the Poſſeſſion of it to ſome *Arabians* that he had brought with him. Fifty Years after, King *Manſor* being outed of his Kingdom, theſe *Arabians* were diſpoſſeſs'd of *Temeſne* by the Tribe of *Luntuna*, and reduc'd to extream Miſery. Afterwards the Kings of the Family of *Marin* gave it to the People of *Zenete* and *Haoara*, who enjoy it to this day.

The Cities of *Temeſne*, viz. *Anfa*.

Among the Towns of this Province, the moſt famous is *Anfa*, the moſt pleaſanteſt Town in all *Africa*, built by the *Romans* on the Coaſt of the Ocean, 60 Miles North of *Atlas*, and Eaſt of *Azamur*. The Inhabitants are civil and wealthy. They wear a decent Apparel, and trade with the *Portugueſe* and *Engliſh*. The adjacent Country is very fertile, the Plain round it being almoſt 80 Miles over. In ancient times it had many learned Men, and was adorn'd with ſtately Temples and Palaces, rich Shops and Ware-houſes, and charming Gardens, which to this day yield great plenty of Melons and Citrons, and theſe being ripe by the middle of *April*, are carried to *Fez*, where the Fruits do not ripen ſo ſoon: But now the *Portugueſe* have laid it waſte.

Rebat.

The next Town is *Rebat*, ſeated on a Rock upon the Coaſt of the Ocean, juſt by the Mouth of the River *Baragrag*; ſo that it has the Ocean on one ſide, and the River on the other. 'Twas built but lately by *Manſor* King of *Morocco*, while he poſſeſs'd *Granada* and a great part of *Spain*, as being a convenient Frontier, from whence he might, upon occaſion, pour in Forces upon the Chriſtians, from whom *Morocco* lay at a great diſtance. He adorn'd it with Temples, Palaces, Colleges, Hoſpitals, Baths, Shops, &c. and built a Tower without the Walls on the South ſide, the height of it exceeds that of any Building I ever ſaw; ſo that from the top of it, Ships may be deſcry'd at a vaſt diſtance. 'Tis built after the faſhion of the Tower of *Morocco*, only its winding Stairs are broader, for three Horſes may go up abreaſt. He gave all Trades-men and Merchants a yearly Allowance proportion'd to their Buſineſs, by which means *Rebat* came in a little time to be better furniſh'd with Artiſans and Merchants, than any other Town in *Africa*. Here us'd *Manſor* to remain with his Troops from *April* to *September*, and in regard the Sea runs ten Miles up the River, which makes all the Water in the Town brackiſh, he ſupply'd the Town with freſh Water from a Fountain 12 Miles off, raiſing the Aquæducts archwiſe like thoſe of *Rome*, and diſperſing the Water over the Town in ſeparate Pipes. But after *Manſor*'s death, this noble Water-work was demoliſh'd in the Wars between the *Marin* Family and *Manſor*'s Succeſſors, and the Town has dwindled ever ſince, inſomuch, that ſcarce the tenth part of it is now ſtanding. The ſame *Manſor* caus'd *Sella* to be wall'd round, and for the conveniency of his Army, built in it a noble Hoſpital, a ſtately Palace, and a magnificent Temple, within which was a pretty Chapel, where he order'd his Corps to be inter'd. Accordingly he was buried there, and not only the honourable Branches of his own Family, but even the Kings of the *Marin* Family lie inter'd in the ſame place.

A noted Water Conduit.

Thagia.

The next Town in this Province is *Thagia*, which is famous for the Sepulchre of one that is ſaid to have wrought many Miracles againſt the fury of Lions, and was accounted a great Prophet. After the ſolemnizing of Eaſter, the People of *Fez* make an annual Viſit to this Tomb, which lies at the diſtance of 120 Miles from *Fez*. They perform this Pilgrimage in 15 Days, carrying their Tents and other Neceſſaries along with 'em; and the Pilgrims are ſo numerous, that one would take 'em for an Army.

The Territory of *Fez*.

The ſecond Province of this Kingdom, is that call'd *The Territory of Fez*. It extends almoſt 100 Miles in length, from the River *Buragrag* Eaſtward, to the River *Inauen*. Its Northern Limit is the River *Subu* or *Cebu*, and the Southern is the *Atlas*. It abounds in Corn, Fruit, and Cattle, as much as any other Country.

Sella.

In this Province the firſt Town we meet with is *Sella*, the Buildings of which have a ſtately ſhew of Antiquity, being ſupported by Marble Pillars: The Temples are very magnificent, and the Shops are built under large Porches, with an Arch at the end of every row, to divide (as 'tis reported) one Trade from another. The *Genouſe*, *Venetians*, *Engliſh*, and *Dutch*, are wont to trade with them. The adjacent Grounds being ſandy and unfit for Corn, yield plenty of Cotton, and the Inhabitants weave it very fine. Fine Combs are likewiſe an uſeful Commodity in this place; for they have a great deal of Box and other Wood fit for that Purpoſe. They have Judges, Arbitrators, and a very regular form of Government.

The City of *Fez*.

The principal City of this Territory, and indeed of all *Barbary*, is *Fez*, which was built *An. Dom.* 786. by one *Idris Antimahumitan*. Some think the occaſion of its Name was the finding of Gold (in Arabick *Fez*) where its Foundation was laid.

Idris its Founder.

Idris the Founder, liv'd in the time of *Aron*, a *Mahometan* Patriarch, and deriv'd his Extraction from *Mahomet* himſelf, both by the Father and the Mother's ſide: For after the death of *Mahomet*, when the War commenc'd between *Umene* and the Family of *Hali*, one of the laſt Family continued at *Elmadina*, and left behind him two Sons, who growing into favour with the People of *Elmanin*, were thereupon perſecuted; and the one being taken and hang'd, the other (whoſe name was *Idris*, made his eſcape into *Mauritania*). This *Idris* dwelt upon Mount *Zaron*, about 30 Miles from *Fez*, and govern'd that Country both in Civil and Religious Matters. *Idris* dying without lawful Iſſue, left one of his Maids big with Child, who had been converted from the *Gothick* to the *Mores* Religion. The Maid being brought to bed, the People chriſten'd him *Idris*, after his Father, elected him for their Prince, and took care of his Education. The Child being train'd up by a ſkilful Captain, came to be famous for valiant Exploits when he was but fifteen Years of Age. This enlarg'd his Dominions and Family, upon which he took up a Reſolution to build a City, and for that end pitch'd upon the Ground where *Fez* now ſtands, by reaſon of its plenty of Springs, and the Conveniency of an adjacent River and Wood. Accordingly upon the Eaſt Bank of the

River a Town was built, that might contain 3000 Families. After the death of this *Idris*, his Son built another Town on the oppoſite Bank of the River. About 180 Years after, a Civil War broke out between the two Towns, that laſted 100 Years, at the end of which, *Joſeph* King of *Morocco*, put the two Princes to death, ſlew 30000 of the Inhabitants of the two Towns, and having demoliſh'd their Walls, united 'em into one by a Bridge. This being the Metropolitan of all *Africa*, 'twill be proper to give a particular Account of the State 'tis in at this day, i. e. *A. D.* 1526.

A particular Account of the Town of *Fez*.

It ſtands upon great and little Hills, without any Plain round it. The River enters the Town by two Branches, one on the South ſide, the other on the Weſt. Thus it diſperſes it ſelf all over the City, and is convey'd in Conduits and Pipes, to every Temple, Colledge, &c.

Their Houſes.

And moſt of the Houſes are built of fine Bricks and Stones curiouſly painted. Their Portals and the ſides of the Windows are made of party colour'd Brick, like *Majorca* Stone. The Roofs of their Houſes they adorn with Gold, Azure, and other fine Colours. The Roofs are of Wood, and ſquare, ſo that Carpets may be laid upon 'em in Summer. Some Houſes are two, and ſome three Story high; the middle part is uncover'd, and the Chambers are built on every ſide with fine Stair-caſes. The Chamber Doors are very high and wide, and in great Houſes are made of fine carv'd Wood. Each Chamber hath a Preſs or Cabinet contriv'd in the Wall, and curiouſly painted. In like manner, the Beams and Joyces of the Chambers are all curiouſly painted.

Water Conduits.

Some Houſes have ſquare Ciſterns of Brick, about ſeven Cubits broad, twelve Cubits long, and ſeven Hands high; upon the ſides of which are Cocks that convey the Water into Marble Troughs. When the Conduits are full, the overflowing Water runs by certain Pipes into theſe Ciſterns, and when the Ciſterns are full, 'tis carry'd by other Paſſages to the Common Sewers, and ſo to the River. Theſe Ciſterns are always kept ſweet and clean, and are never cover'd but in Summer, at which time Men, Women and Children bath in 'em. Upon the tops of their Houſes, commonly they have Turrets, with pleaſant Rooms in 'em, where the Women divert themſelves in having a view of almoſt the whole City.

Mahometan Temples.

In this Town there are 700 *Mahometan* Temples and Chapels, fifty of which are very ſumptuous and ſtately; their Roof are of Joyces and Planks, like thoſe of the *European* Churches; the Floor is cover'd with Mats, neatly ſew'd together, as well as the Walls for a Man's height. Each Temple has a Steeple, where a Man ſtands and calls the People to Prayers. Thoſe that call to Prayers in the Day-time have no Profit, but that of being exempted from Taxes; but they who call in the Night-time, receive Wages from the Prieſt of the Temple, as well as the Door Keepers. For the Prieſt of the Temple (who is always but one) receives all the Revenues, and defrays the occaſional Charges of Lamps and Servants.

The chief Temple.

The chief *Mahometan* Temple, call'd *Caruven*, is a Mile and a half about, including the Buildings that retain to it. It has 31 very large and high Gates. Its Roof is 150 *Florentine* Cubits long, and 80 broad. The Steeple, which is very high, is ſupported bp 20 Pillars in the breadth, and 30 in length. It has Galleries on the Eaſt, Weſt, and North ſides, which are 40 Cubits long, and 30 broad; and under theſe Galleries is the Storehouſe for Oil, Candles, Mats, and other Neceſſaries. There are 900 Lights in it every Night, and ſome Braſs Candleſticks, that have Sockets for 1500 Candles, which are ſaid to be made of the Bells that the King of *Morocco* took from the Chriſtians. Several Pulpits are ſet round the Walls of the Temple, from which the *Mahometan* Doctors inſtruct the People, not only in *Mahomet*'s Law, but in Moral Philoſophy. The Winter Lectures begin ſoon after Sun-riſe, and continue for the ſpace of an Hour. The Summer ones continue from the going down of the Sun, till within an hour and a half of Night. None read in Winter but the noted Doctors, but in Summer private obſcure Perſons read. All theſe Lecturers or Profeſſours have yearly Salleries. The Prieſt of this great Temple, his Buſineſs is only to read Prayers, and diſtribute Corn and Money to the Poor every Feſtival Day. The Treaſurer of this Church has a Ducat a Day allow'd him, and eight Clerks under him, with the Allowance of ſix Ducats a piece *per* Month. There are other ſix Clerks, who receive the Rents of the Houſes, Shops, &c. retaining to the Temple, and have the 20th part of what they collect for their Pains; beſides 20 Bayliffs, who overſee the manuring of the Grounds, and managing the Lime Kilnes, and Brick Kilnes, &c. belonging to the Temples without the City Walls, who have three Ducats a Month.

Its Revenues.

The Revenues of this Temple amount to 200 Ducats a day, a great part of which is laid out upon the Particulars abovemention'd, and upon the Reparation of the Temple and its adjoining Houſes. The Surpluſage is imploy'd in the maintenance of the other Temples that want Livings, and promoting the good of the Common-wealth. In our time the King demanded an immenſe Sum of the Prieſt of that Temple, and never repay'd it.

The Colleges in *Fez*.

There are ſeveral ſtately Colleges in this City, the Walls of which are of Marble and Free-ſtone, and the Inſide curiouſly painted and carv'd. One of theſe, erected by King *Habutlenen*, has an excellent Marble Fountain, with a large Ciſtern, and a ſtream of Water running thro' a Court in a Channel of Marble and *Majorca* Stone. The Gates of this College are of Braſs curiouſly grav'd, and the Doors are of Wood well carv'd. Near that are three cover'd Walks, with ſquare Piazza's overlaid with Gold, Azure, and other Colours. In ſome places there are Verſes in great black Letters, ſetting forth the Antiquity of the College and the Merit of its Founder. The Chapel has a Pulpit, with nine Steps or Stairs made of Ivory and Ibony. 'Tis computed that this noble Structure ſtood the King in 480000 Ducats. The other Colleges are ſomewhat like this, each of 'em being furniſh'd with Lecturers and Profeſſours, who read, ſome in the Forenoon and ſome in the Afternoon. In former times the Students had Diet and Cloth for ſeven Years, but now they have nothing *gratis* beſides their Chamber, for the War of *Sahid* deſtroy'd many Poſſeſſions, by which Learning was encourag'd; ſo that now the greateſt College has not 200, and the next 100 Ducats a Year, for the maintenance of the Profeſſors. And 'tis probable the Suppreſſion of Learning is the occaſion of the irregular Government, not only of this, but of all the Cities in *Africa*. At preſent the Colleges have no Students but Strangers, and ſuch as live upon the Charity of the City. When the Profeſſours goes to read, one of the Audience reads a Text, and he harangues upon it. Sometimes the Students have Diſputes before the Profeſſours.

The Hoſpitals of *Fez*.

Both the Town and Suburbs have noble Hoſpitals, in which every Stranger is entertain'd upon the publick Charge. The Incomes of theſe Hoſpitals were very large, till the War with *Sahid*, at which time the King ſold their Properties, alledging, that they were the Gifts of his Predeceſſors, and promiſing to make Reparation upon the concluſion of the War; but the King dying ſuddenly, there was no Reparation made: So that at this Day there are no Strangers entertain'd, but ſuch as are Scholars or Gentlemen; and 'tis only the poor decay'd Citizens that meet with any Relief from the Hoſpitals. There is one Hoſpital indeed for ſuch Strangers as are ſick, where they have their Diet and Women to attend 'em, but no Phyſician and no Medicines; and one Apartment of this Hoſpital is allotted for Lunaticks and Mad-men, where they are bound in ſtrong Iron Chains, and ſeverely laſh'd when they offer any Extravagance.

Their Baths.

The next thing remarkable in this City is their Baths, which are both pretty and magnificent, being all of one form, tho' not of equal bigneſs. Here are two Baths, each of which has four Halls, with Galleries without, rais'd four or five Steps higher, where the People ſtrip themſelves. When any Perſon bathes, he goes firſt thro' a cool Hall, where the Water is luke warm, then thro' a hotter Room, where he is cleans'd and waſh'd, and at laſt is put into a third Hot-houſe, where he ſweats as long as he pleaſes. The fire that heats the Water, is made only of the Dung of Beaſts parch'd in the Sun. The Womens Baths are ſeparate from thoſe of the Men; or if they both uſe the ſame Bath, 'tis at different Hours; for while Women are bathing, a Rope is hung out at the outer Door, ſignifying that no Man muſt enter; nay, a Husband is not admitted to ſee his Wife in the Bath. When Men enter, they cover their Privities with a Linen Cloth. Before any one baths, he is laid upon the Ground (or a Carpet for the richer ſort) and anointed with a certain Ointment, his Body being clean'd with Inſtruments made for the Purpoſe. After bathing, the Men and Women together divert themſelves with Muſick, Singing and Feaſting. Theſe Baths belong to the Temples and Colleges, and raiſe, ſome 100, ſome 150 Ducats a Year. The Servants and Officers attending the Baths, have a peculiar Cuſtom of marching on a certain Feſtival Day out of Town, with Trumpets and Pipes, and there gathering a wild Onion, which they put into a Brazen Veſſel, cover'd with a Linen Cloth dip'd in Lee, and ſo carry it to the Hot-houſe, and hang up the Veſſel, over the Door, as a lucky Omen to the Bath. This I take to be the Remains of ſome ancient Sacrifice, among the uncivilis'd *Mores*,

The Inns of *Fez.*

This City contains almoſt 200 Inns; the greateſt of theſe are in the principal part of the City, near the great Temple; each of which is three Story high, and contains above 120 Chambers, with a Gallery to each Chamber. Every Inn is accommodated with a Fountain, Water-pipes, and Sinks to carry off the Filth. But after all, the Entertainment they give to Strangers is but very ſorry, for they have no Beds, unleſs it be a coarſe Blanket and a Mat, and no Victuals, unleſs the Stranger goes to the Market and buys it. The Office of Chamberlain and Cook is perform'd by Poor Citizens Widows, who are entertain'd in the Inns upon Charity. The Inn Keepers are all of one Family, call'd *Elchera.* They ſhave their Beards, and not only wear the Habit of Women, but imitate them in their Speech and Actions. Every one of theſe has a Concubine, that he entertains as a lawful Wife: Theſe Concubines are not only ugly, but notoriouſly lewd, and none but lewd Perſons do either frequent the Inns, or keep company with the Inn Keepers; for they buy and ſell Wine openly, and are prohibited to enter the Temple or Exchange, or any Bath.

The Mills.

There are ſome thouſands of Mills in this City, which do all belong to the Temples or Colleges; every Mill ſtands in a large Room upon a ſtrong Poſt.

The Trades and Shops.

Each Trade has a peculiar place allotted to it, and that moſtly about the great Temple. There you may ſee 80 Scriveners Offices together, 30 Book-ſellers Shops, 50 Fruit Shops, where all ſorts of Fruit are to be had, 50 Shoe-makers, beſides Shoe Merchants, ſeveral Braziers, and Wax Merchants, who are very ingenious in their way. Here are a few Merchant Factors, and next to them is the Herb Market, where moſt of the Taverns are, becauſe People love to drink Wine under the green and ſhadie Boughs; after them come the Milk-Sellers, who vent 25 Tuns of Milk a day; then the Cotton Sellers, then thoſe who deal in Hemp and Ropes, then the Girdlers, the Sadlers, (who cover Saddles with incomparable Leather) and the Sword-cutlers, next are the Potters, and thoſe who ſell Salt and Lime; paſſing theſe you come to the Porters Street. Theſe Porters are ſo loving a Corporation, that they maintain the Widows and Orphans of their own Members. They have a Conſul or Governour, who parcels out ſome ſet Buſineſs to part of 'em every Week, and at the Weeks end, the Profit of the Work is equally divided among the Work-men. The Cooks and Victuallers are next. Then you come to a ſquare Houſe covered with Reeds, where 500 Sacks of Peaſe and Turnips are ſold in a day. Every one cannot buy theſe of the Country People, there being a particular number qualified for that Office, who pay Tole and Tribute to the Cuſtom-Houſe Officers. On the North ſide of the Temple, they ſell Fritters and Cakes fry'd in Oil, whence the place is call'd, *The Place of Smoak.* At the ſame place they ſell roaſted Fleſh, fry'd Fiſh, and a ſort of Bread bak'd with Honey. The Fleſh is not roaſted upon a Spit, but in an Oven, with another Oven underneath it, in which the Fire lies, ſo that the upper Oven is free from ſmoak and exceſſive heat. They ſell of theſe Fritters and Cakes to the value of above 200 Ducats a Day. Then follow the Shambles, where the Butchers ſell their Fleſh by weight. They kill no Beaſts within the Shambles, there being a place alloted for that uſe near the River; and after the killing, they cannot bring it to the Shambles, till they have ſhewn it to the Governour of the Shamblers, who ſets down the Price of each Joint in a piece of Paper, the Butcher being oblig'd to ſhew that Paper when he ſhews his Meat, and not to ask more. Then you paſs on to the Market for coarſe Cloth, there being 60 Criers, who carry the Cloth about, telling the price of it, as 'tis adjuſted by the Cuſtom Houſe Officers, who receive Cuſtom for it. After that to the Cage Makers, who make Coops and Cages for Poultry, of a certain hard Reed; for every Citizen brings up a great many Hens and Capons, which are always pen'd up in Coops, to prevent the fowling of their Houſes. Next to them is the Market for Thread and Linen Cloth. On the Weſt ſide of the Temple, are 150 Taylors Shops, ſeveral Laundreſſes, Stirrup-makers, Spur-makers, Pipe-makers, *&c.* Beyond them there ſtands a Rock or Mount, with a Walk leading from thence to one of the King's Palaces, where the King's Siſters or ſome of his Relations are wont to live. In the next place you advance to the Exchange, which may well be call'd a City, for 'tis wall'd round, and has twelve Gates, with an Iron Chain before every Gate, to keep out Horſes and Carts. 'Tis divided into ſeveral Parts or Wards, two of which are allotted to ſuch Shoe-makers as ſerve only Noble-men and Gentlemen with Shooes, and two to the Silk Merchants and Haberdaſhers of ſmall Wares. The other parts are taken up by thoſe who ſell European Linen or Woolen Cloth, Silk, Stuffs, Caps, Mats, Cuſhions, *&c.* and eſpecially by thoſe who ſell Smocks, and other things for Women, who are reckon'd the richeſt Merchants in all *Fez.* On the North ſide of the Exchange, there's a Palace appointed for the Grocers and Apothecaries, fortified on both ſides with two ſtrong Gates, and guarded in the Night-time by armed Watch-men with Lanthorns and Maſtives. The Apothecaries can make neither Syrups, Ointments nor Electuaries, thoſe being made and ſold by Phyſicians, whoſe Houſes for the moſt part join to the Apothecaries; but few People mind either the Phyſician or his Medicines. However the Apothecaries Shops are the gloriesteſt Shops I ſaw any where. Juſt by the Apothecaries, follow the Comb-makers, Turners, Upholſterers and Poulterers, who, tho' they are but few, are provided with all ſorts of Fowl; then the Makers of Cork Slippers for the great Men to walk abroad in when 'tis foul weather; theſe Slippers have very fine upper Leathers, and being trim'd with Silk, will coſt, ſome one, ſome ten, ſome twenty five Ducats a pair. Their fineſt Slippers are made of the black and white Mulberry Tree, of the black Walnut Tree, and the Jujuba Tree; but the Cork ones laſt longeſt. Adjoining to theſe are ten Shops of *Spaniſh Mores,* who make Croſs-Bows; and thoſe who make Brooms of a certain wild Palm Tree, which are carried about Streets and exchang'd for Bran, Aſhes and old Shooes; the Bran is ſold again to Shepherds, the Aſhes to the Blechers of Thread, and the old Shooes to the Coblers. The next are the Smiths and the Coopers, who make and ſell great Veſſels in the form of a Bucket, and Corn Meaſures. The Corn Meaſures muſt be try'd and approv'd by an Officer appointed for the Purpoſe, who receives a Farthing a piece as his due: Then you come to the Makers of certain Langols or Withs, which the *Africans* put upupon their Horſes Feet. The Dyers live by the River ſide, and have each of 'em a clear Fountain or Ciſtern to waſh their Silk Stuffs in. The Makers of Bulwarks and Trenches, live over againſt the Diers in a very large place, which being planted with ſhady Mulberries, is very pleaſant in Summer. Next to them are the Farriers, then the Black-Smiths, and at laſt the Whitſters of Linen Cloth. And here ends the Weſt part of the City, which in former times was a ſeparate City from that on the Eaſtern Bank of the River, that was firſt built.

An Account of the Eaſtern part of *Fez.*

The Eaſtern part of *Fez* is beautify'd with noble Palaces, Temples, Colleges and Houſes; but it has not ſo many Shops and Trades-men as the Weſtern part. Some it has, but then they are of the meaner ſort, and are diſpers'd all over the City. Here is a Corn Market with divers Granaries for Corn, and 520 Weavers Houſes handſomely built, which yielded great Rents. By report, there are 20000 Weavers and as many Millers in it, and a great many Houſes for the ſawing Wood, in which Service the Chriſtian Captives are employ'd, their Earnings being return'd to their Owners. Theſe Chriſtian Slaves have no Days of reſt but *Fridays,* and eight Days of the Year, on which the *Mores* ſolemnize their Feaſts. In this Eaſtern part there are ſeveral publick Bawdy Houſes, which the great Men, and ſometimes the Governours of the City countenance; and great Taverns, where Whores are kept for occaſional Service. It has above 600 clear Fountains, wall'd round, and carefully kept up, the Water of which is convey'd by Pipes to each Temple, College, Hoſpital, and Houſe. This Fountain Water is preferrable to that of the River; for oftentimes in Summer the River Ciſterns are dry, and when the Conduits are cleans'd, the River Water muſt of neceſſity be turn'd off. Beſides, 'tis cooler and pleaſanter in the Summer-time, tho' in the Spring 'tis quite otherwiſe. Theſe Fountains have their Source for the moſt part from the Weſt and South. The North part is Mountainous and full of Marble Rocks, in which are Caves where Corn may be kept for many Years; ſome of 'em being ſo large as to contain 200 Buſhels. The Proprieter of theſe Caves lets them out every Year, for one *per Cent.* of the Corn they'll hold.

Pleaſant Gardens in the South part.

As for the South part of *Fez,* 'tis not half inhabited, but its Gardens abound with Fruits and Flowers of all ſorts, and the Noble-men chooſe to live here from *April* to *September*; for every Garden has a Houſe belonging to it, and a Chryſtal Fountain encompaſs'd with Roſes and odoriferous Flowers.

Weſt-

The Caſtle.

Weſtward, that is, towards the King's Palace, there ſtands a noble Caſtle, built by the King of the *Luntune*'s Family, where the Kings of *Fez* kept their Court before that Palace was built; but now 'tis the Reſidence of the Governour of the City.

The Priſon.

In this Caſtle there's a large Priſon for Captives, ſupported by many Pillars, which will hold 3000 Men in one Room; for in *Fez* one Priſon ſerves for all, without any diſtinction of Rooms.

The Government of the City. Their Judges.

To give ſome Account of the Government, Conſtitution, and Cuſtoms of this great City. The Governour of the City is Judge both in civil and criminal Matters, and pronounces the Sentence by word of mouth, for he has no Clerk. Beſides him, there's a Judge of the Canon Law, who adjuſteth what relates to the *Mahometan* Religion. A third Judge ſits and gives Sentence upon Marriage and Divorce; from theſe there lies an Appeal to the High Advocate. The Criminal is puniſh'd in this manner, After he has receiv'd 100 or 200 Stripes before the Governour, the Executioner puts an Iron Chain about his Neck, and leads him ſtark naked (his Privities only excepted) thro' all parts of the City, from midnight till two a-clock in the Morning, and a Serjeant follows the Executioner, proclaiming his Crime to the People. This done, they put on his Cloths and bring him back to Priſon; Sometimes ſeveral Offenders are led thro' the City together. For every Criminal the Governour receives a certain Duty upon his firſt Impriſonment, and one Ducat and a half upon his Condemnation; ſo that he gets a great deal of money by condemning Priſoners. Beſides theſe Perquiſites, he has ſeveral Poſſeſſions, one of which yields him 7000 Ducats a Year; upon which account he is oblig'd upon occaſion, to levy and maintain 300 Horſe for the King's uſe. The Judges and Barriſters of the Canon Law, are prohibited by the Law of *Mahomet* to take any Fee, or to earn Money otherwiſe than by their Prieſthood and the reading of Lectures. A great many Advocates and Proctors of this Profeſſion are very dull and illiterate. The Serjeants or Officers who lead the Criminals about the City, are but four in number, and have no other Sallery but a certain Fee from the Criminal, proportion'd to the Crime, bating that they are allow'd to ſell Wine and keep Whores.

The Puniſhment of Criminals.

The Cuſtoms and Taxes.

The Cuſtoms and Taxes of the City are collected only by one Man, who pays the King 30 Ducats a day, and has his Subſtitutes to watch at every Gate, and ſometimes to go out and meet the Carriers; ſo that nothing can paſs without paying the Cuſtom. If any thing be catch'd upon concealment, the Owner pays double. The general proportion of the Cuſtom is two *per Cent.* of the intrinſick Value; But Onyx Stones, great quantities of which are brought hither, pay a fourth part, and Wood, Corn, Oxen, and Hens, pay nothing. The ſame Collector is Governour of the Shambles, and if he finds any Bread ſhort of the due weight, he cauſes the Baker to be ſoundly drub'd, and led in contempt up and down the City.

The Cuſtom of the inhabitant. Their Apparel.

The Citizens of *Fez* wear a decent Habit. Over their Shirts they have narrow half ſleev'd Jackets, and over theſe a wide Garment cloſe before, which in the Spring is commonly made of outlandiſh Cloth. Upon their Heads they have thin Caps, which do not cover their Ears; theſe Caps are cover'd with a Scarf, which is twice wreath'd about, and then hangs down in a Knot. They wear neither Stockings nor Breeches, but when they ride a Journey in the Spring, they put on Boots. The Doctors and ancient Gentlemen wear a Garment with wide Sleeves, not unlike that of the Gentlemen of *Venice*. The common ſort of People are for the moſt part clad in coarſe white Cloth. The Women have nothing but their Smocks on in Summer, but in Winter they wear a wide Garment like the Mens. When they go abroad they put on long Breeches that cover their Legs, and have a Veil hanging down from their Heads, that covers their whole body. Their Faces are mask'd, their Ears adorn'd with Gold Earings and precious Jewels, and their Arms and Legs with Bracelets and Rings of Gold or Silver, according to their quality.

Their Diet.

As for their Diet. The Gentlemen have freſh Meat every Day, and the common People twice a week. They take three Meals a day; they breakfaſt upon Fruit and Bread, or upon a thin Pap made like Furmety, or in Winter upon the Broth of ſalt Fleſh thicken'd with coarſe Meal. For Dinner, they have in Winter, Meat, Salleds, Cheeſe and Olives, but in Summer they have better Cheer. They ſup in Summer upon Bread, Melons, Grapes and Milk, in Winter upon boyl'd Meat, and upon *Cuſcuſu*, i. e. a lump of Dough ſet firſt upon the Fire in Veſſels full of Holes, and then temper'd with Butter and Pottage; ſome have roaſt Meat. When they eat, they ſit upon the Ground at a low uncover'd naſty Table, and uſe neither Knives nor Spoons. Tho' their *Cuſcuſu* is ſerv'd up all in one Diſh, they take it out with their ten Talons. They tear and devour their Victuals like hungry Dogs. They ſeldom drink till their Paunch is well ſtuff'd, and then they'll ſwill down a whole Bowl full of cold Water. The Doctors are a little more orderly at their Meals, but not much.

Ceremony of Marriage.

In the Buſineſs of Marriage, the Bride and Bridegroom, accompanied with their Parents and Relations, and two Notaries go to Church, where the Nature of the Dowry and the Particulars of the Contracts are ſet forth before all that are preſent. Then the Bridegroom entertains all the Gueſts with a noble Feaſt of Fritters, or Bread fry'd with Butter, and temper'd with Honey and of roaſt Meat. After that, the Bride's Father makes ſuch another Entertainment.

The Bride's Dowry.

As for the Bride's Dowry, among the meaner ſort, her Father uſually gives her 30 Ducats, a Woman Slave of 15 Ducats price, a party colour'd Garment embroyder'd with Silk, ſome Silk Scarfs or Jags to wear upon her Head inſtead of a Hood or Veil, a pair of fine Shooes, two pair of fine Startups, and a great many little Trinkets made of Silver and other Metals, ſuch as Combs, Perfuming Pans, Bellows, &c. Tho' the Father promiſes but 30 Ducats for her Dowry, yet ſometimes they'll give her the Value of 200 or 300 Ducats in Cloth and other Ornaments, for Houſes, Fields and Vineyards are ſeldom diſpos'd of that way. Beſides the above-mention'd Particulars, they beſtow upon the Bride three Gowns of fine Cloth, three Gowns of Silk or Camlet, or ſome other valuable Stuff, Smocks curiouſly wrought, fine Veils, and other embroyder'd Garments, beſides fine Pillows and Cuſhions, four fine Carpets or Coverlets, to ſpread upon the Preſſes and Cup-boards, two coarſe ones for Beds, and two of Leather to lay upon the Floor of the Bed Chambers; ſome Rugs 20 Ells long, and three Quilts ſtuft with Flocks, about 10 Ells long, one half of which they lay under 'em in the Night-time, and cover themſelves with the other half. To theſe add eight Silk Coverlets, embroider'd on the upper ſide, and lin'd underneath with Linen and Cotton, and ſome woolen Hangings, with pieces of gilt Leather, and Jags of party colour'd Silk ſow'd upon 'em, and a Silk Button on every Jag to faſten the Hangings to the Wall. In fine, they ſtrive to out-do one another in making rich Preſents to their Daughters, and ſome Gentlemen have ruin'd themſelves by ſo doing.

The Manner of her going home.

When the Bridegroom is ready to carry home his Bride, they put her into a large wooden Cage cover'd with Silk, in which ſhe is carry'd by Porters, the Bridegroom's Relations going before her with Torches, and the Bride's Kins-folks following after her with the ſound of Trumpets, Pipes, Drums, and a great number of Torches. Having thus made a Proceſſion thro' the Market-place, and paſs'd the great Temple, the Bridegroom ſheers off and makes the beſt of his way home. Upon the Bride's arrival, her Father, Brother, and Uncle conduct her to the Bridegroom's Chamber Door, where they deliver her to his Mother. As ſoon as ſhe enters the Bed-Chamber, the Bridegroom toucheth her Foot with his, and ſo they go together.

The Tryal of her Virginity.

In the mean time a Woman ſtands at the Chamber Door, to whom the Bridegroom reaches a Cloth ſtain'd with the Blood of the Bride's Virginity, as ſoon as he has enjoy'd her. This Cloth ſhe ſhews to all the Company, proclaiming the Bride's Purity and Innocence; upon which ſhe and her Companions are honourably entertain'd, firſt by the Bridegroom's Parents, and then by the Bride's. But if no Marks of Virginity appear, the Bride is turn'd home to her Father with diſgrace, and the Marriage declar'd *Null*. As ſoon as the new married Man goes abroad (which commonly happens on the ſeventh Day after marriage) he buys a great many Fiſhes, which his Mother or ſome other Woman ſuperſtitiouſly caſts upon his Wife's Feet. The next Morning after the Bride's going home, a Company of Women dreſſes and combs the Bride, and paints her Cheeks with Vermillion, and her Feet with a black Dye. Then another Feaſt inſues, the Bride being ſeated on a high place, in view of all the Company. The preceding Night is ſpent in dancing, the Women dancing alone, and all of 'em one by one. At the end of each Dance they reward the Muſicians; and if any one means to honour the Dancer, he bids him kneel down, and faſtens pieces of Money all over his Face, which the Muſicians take off for their reward. At the ſame time there are Minſtrels and Singers preſent, who entertain the Company, ſometimes with Inſtrumental and ſometimes with Vocal Muſick;

ſick; but if the Bride be a Widow, the Solemnity is not near ſo great.

The Circumciſion of their Children.

They likewiſe make ſolemn Feaſts at the Circumciſion of their Male Children, which is on the 7th day after their Birth; upon that Occaſion every one gives a Preſent to the Circumciſioner, by laying Money on a Lad's Face that comes along with him; after which, the Youth calling every one by his name, returns 'em thanks; this done, the day is ſpent with all the Mirth imaginable; but at the birth of a Daughter they are not ſo much mov'd. The People of this Country, on their Feſtival Days obſerve a great many Ceremonies inſtituted by the Chriſtians, without knowing their Original or meaning.

Their other Feaſts.

Upon Chriſtmas they eat a Sallad made of divers Herbs; and that night boil all ſorts of Pulſe, which they feed upon as nice Food. Upon New-Year's-Day the Children ſing at Gentlemens Doors in Masks, and have Fruit given 'em for a Reward. On St. *John* the Baptiſt's Day they make Bonfires of Straw. When the Childrens Teeth begin to grow, they ſolemnize a Feaſt call'd by the Latines *Dentilla*. Inlike manner their Rites of Divination and Soothſaying ſeem to be borrow'd from the Chriſtians.

Their Funerals.

When Husband, Father, Brother or Relation dies, a Company of Women related to the Perſon deceas'd, put on Sack-cloth and cover their Faces with Dirt; then having call'd ſome Men dreſs'd in Womens Apparel, with four ſquare Drums, they ſing at the noiſe of theſe, a Funeral Song in praiſe of the deceas'd, giving hideous Screeks at the end of every Verſe, and tearing their Hair, and beating their Cheeks and Breaſts, till they are cover'd all over with Goar. This Superſtition, which prevails more among the common People than the Gentry, continues for ſeven Days together, at the end of which, they intermit Mourning for forty Days, and then renew it in the ſame manner for three Days more. In the mean time the Widow's Friends come to comfort her, and ſend her divers Diſhes of Meat, for they dreſs no Meat in the Mourning Houſe, till the Corps are carried off. The Woman her ſelf that looſeth Husband, Father, or Brother does not attend the Funeral.

Their Games.

The moſt uſual Game among the Citizens of *Fez* is the Cheſſe, which they have had time out of mind.

Their Poets.

They have very good Poems in their own Language, moſt of which treat of Love. Their Poets write commentary Verſes upon *Mahomet* every Year, eſpecially upon his Birth-day, on which, early in the Morning, they recite their Verſes to a numerous Audience from the Governours; and he whoſe Verſes are moſt applauded, is proclaim'd Prince of the Poets for that Year. During the Proſperity of the *Marin* Family, the King us'd to regale all the learned Men of the City, and hear the Recital of their Verſes, upon which they gave 50 Ducats apiece to all the Poets, excepting the very beſt, who received as a Royal Gify 100 Ducats, a fine Horſe, a Woman Slave, and the Robes that were then upon the King's Back. But that Cuſtom fell, together with the Splendour of the *Fezzan* Kingdom, 150 Years ago.

Their Grammar Schools. The *Alcoran* learn'd by heart.

In this City there are almoſt 200 Schools, like great Halls, for the Inſtruction of Children; there they are taught to write and to read, not only out of a Book, but out of a certain great Table, and go over the *Alcoran* again and again, till they have got it by heart, which they uſually compaſs in the ſpace of ſeven Years. Then their Maſters read to 'em ſome part of *Orthography* and Grammar; but this is better taught in the Colleges. When a Boy has perfectly learn'd the whole *Alcoran*, his Father invites all the Boy's School-fellows to a Treat, and his Son rides thro' the Streets to the Banquetting Houſe, in rich Cloaths, upon a fine Horſe, accompanied by the reſt of his School-fellows on Horſe-back, who ſing divers Songs to the Praiſe of God and *Mahomet*. The Governour of the Royal Cittadel is oblig'd to lend his Father the Horſe and the rich Apparel. The Father's Relations are all preſent at the Feaſt, and every one of 'em makes ſome ſmall Preſent to the School Maſter, but the Father gives him a new Suit of Cloths; for the School-Maſters have but ſmall Salleries; and even when the Children have learn'd but part of the *Alcoran*, their Fathers reward their Maſters according to their Quality. The Boys of theſe Schools uſe likewiſe to celebrate a Feaſt upon *Mahomet*'s Birth Day, upon which occaſion every one brings a Torch to the School. Theſe Torches, ſome of which weigh 30 Pound, are ſet round with divers ſorts of Wax, and being lighted betimes in the Morning, burn till Sun-riſing. In the mean time the Praiſes of *Mahomet* are celebrated in Songs, and as ſoon as the Sun riſes, the Solemnity is at an end. This Day's Solemnity turns to a good account to the School-Maſters, for ſometimes they ſell the remaining Wax of the Torches (which the Boys Fathers provided) for 100 Ducats, and ſometimes for more. Both theſe Schools and the Colledges have two Holy Days every Week. The Maſters pay no Rent for their Schools, they being erected for that uſe many Years ago.

Three ſorts of Diviners.

The Fortune-tellers and Diviners are very numerous in this City. There are three ſorts of 'em, one ſort uſes Geomantical Figures, others pour a drop of Oil into a Glaſs of clear tranſparent Water, in which they pretend to ſee whole Armies of Devils, ſome travelling, ſome fighting *&c.* and to receive Reſponſes from theſe Devils, by a nod of their Head, or ſome motion of their Hands or Eyes. Many of the Citizens are ſo infatuated with theſe Vanities, that they ſpend great Sums upon 'em. The third ſort are Witches, who pretend to Familiarity with Devils, calling ſome of 'em red, ſome white, and ſome black; and when they read ones Fortunes, perfume themſelves with certain odoriferous things, alledging, that then they are poſſeſs'd with the Devil they call'd for. After which, they change their Voice, and counterfeit the Devil ſpeaking within 'em. Theſe Cheats are by the wiſer ſort of People call'd *Sabacat*, i.e. ſuch as commit unnatural Venery with thoſe of their own Sex; for they make it their buſineſs to inveigle handſome Women, and perſwade 'em to receive their unnatural Embraces, upon the Plea of obeying the Devil's Command. Nay, ſome Women are ſo taken with the abominable Vice, that they'll feign themſelves ſick, and ſend their Husbands for theſe Monſters, under the Pretence of having their Deſtiny read to 'em: And oftentimes the Witches will perſwade the Husband that his Wife is poſſeſs'd with a Devil, and cannot be cur'd without entring into their Society; upon which the credulous Husband entertains the damn'd Crew at a ſumptuous Feaſt, and with a Solemnity forſooth, commits his Wife to their brutiſh Management. But other Husbands are ſo wiſe, as to beat the Devil out of their Wives with a good Cudgel, and under the pretence of Poſſeſſion, to deceive the Witches themſelves.

Witches.

Conjurers.

There is yet another kind of Juglers or Conjurers, call'd *Muhazzaim*, who are ſaid to caſt out Devils with great ſucceſs, and in performing it, to repeat theſe Words, *It is an Airy Spirit.* They draw certain Characters upon a heap of Aſhes, or ſome ſuch place, then they draw certain Signs upon the Hands and Forehead of the Party poſſeſs'd, and perfume him after a ſtrange manner. This done, they enquire of the Devil how he enter'd the Perſon, what he is, and by what name he is call'd, and at laſt commands him to come forth.

Cabaliſts.

There are others that work by a certain Cabaliſtical Rule, call'd *Zairagia*, which is thought to be natural Magick. They draw many Circles within a great one, and drawing the Diameters of the firſt Circles, mark down the two Poles and the Eaſt and Weſt quarters. About the circumference of the firſt Circle, they paint the four Elements, then having divided this Circle and the next into four parts, they divided each four parts into ſeven, diſtinguiſh'd with certain *Arabick* Characters. In the third Circle they mark down the ſeven Planets, in the fourth the twelve Signs of the *Zodiack*, in the fifth the twelve Latine Names of the Month, in the ſixth the 28 Houſes of the Moon, and in the ſeventh the 365 Days of the Year, and about the convexity thereof, the four Cardinal Wines. Then they take one Letter of the Queſtion propos'd, and multiply it by all the above-mention'd Particulars; the Product of all they divide after a certain manner, placing it in ſome Room or other, according to the quality of the Character, and as the Elements requireth wherein the ſaid Character is found without a Figure; this done, they mark that Figure which ſeemeth to agree with the ſaid Number or Product, and proceed with it as they did with the former, till they have found 28 Characters, of which they make one Word, and of this Word the Speech is made that reſolveth the Queſtion. The Speech always turn'd into a Verſe of the firſt kind, which the *Arabians* call *Ethauil*, conſiſting of eight Stipites and 12 Chords, according to the *Arabian* Metre. This Art of the *Cabbala* (ſays our Author) never errs, and tho' it be accounted natural, yet I never ſaw any thing that has more affinity with ſupernatural Knowledge. However the Cabbaliſts are in great eſteem, and their Art is very difficult to be learn'd. I ſaw (continues our Author) two thirds of a pav'd Marble Court, (in King *Abulaman*'s College at *Fez*) that was 50 Ells ſquare, taken up with one of their Figures; and at *Tunis* I met with juſt ſuch another Figure. I never ſaw but three Profeſſours of this wonderful Art, one at *Tunis* and two at *Fez*. Indeed I have ſeen

Books of the Cabbaliſtick Art.

two Expoſitions of the Precepts of the Art, with a Commentary writ by one *Margian*, and another by *Ibnu Callim* an Hiſtorian.. Any of theſe Men may ſee it if he will but go to *Tunis*. However the Law of *Mahomet* prohibits this and all other kind of Divination, and the Cabbaliſts are perſecuted by the *Mahometan* Inquiſition.

A noted Mahometan Sect.

In this City we meet likewiſe with ſome learned Men, that call themſelves Wizards and Moral Philoſophers; and are rever'd by the common People as Gods, notwithſtanding that they depart from *Mahomet*'s Law in ſeveral things, for inſtance, in allowing the Expreſſion of Love Matters in Songs. This Sect (which is but one of a great many among the *Mahometans*) ſprang up about 80 Years after *Mahomet*. The Author of it was *Elheſen Ibnu Abelhaſer*, born in *Baſra*, who gave his Followers certain Precepts, but left no Writings behind him. about 100 Years after, one *Elharet Ibnu Eſed*, of *Bagaded*, a famous Doctor of that Sect, left his Diſciples whole Volumes of Writings: upon that the *Mahometan* Patriarchs condemn'd his Followers. About 60 Years after, a famous Profeſſour that headed the Sect, being condemn'd to die as well as all his Followers, wrote to the Patriarch, deſiring Leave to diſpute the Caſe with the Doctors of the Law, and offering to undergo Death willingly if they convicted him of an Errour. Accordingly a Free Conference was granted, and the Profeſſour put the Doctors to ſilence; upon which the Patriarch revers'd the Sentence, and caus'd Colleges and Monaſteries to be erected for him and his Followers; But after 100 Years, the Emperour *Mabicſah* of the *Turkiſh* Line came thither, and perſecuted the whole Sect. Upon which they fled to *Cairo* and *Arabia*, and were diſpers'd here and there, till the Reign of *Caſelſah*, Grandſon to *Malicſah*, whoſe Favourite *Nidam Elmule* reſtor'd 'em, and by the help of one *Elgazzuli*, a very learned Man, who had written upon that Controverſy, reconcil'd 'em with the Lawyers upon theſe Terms, That the Lawyers ſhould be call'd the *Preſervers* of *Mahomet*'s Laws, and the Sectaries the *Reformers* of the ſame. This Union laſted till the 756 Year of the *Hegeira*, when *Bagadel* was ſack'd by the *Tartars*, at which time thoſe Sectaries ſwarm'd over all *Aſia* and *Africa*, and had ſtrengthen'd their Party, by admitting none into their Society but Men of learning, but now the Caſe is alter'd. They deſpiſe all Learning as ſuperfluous, deriving the Knowledge of the Truth from Revelation alone; and departing from the Meaſures of their Anceſtors, who obſerv'd the Law very ſtrictly, purſue Feaſting, Laſcivious Songs, and all ſenſual Pleaſures. 'Tis true, they'll tear and rend their Garments, pretending to be raviſh'd with a fit of divine Love; but that's rather owing either to their Gluttony, for every one of 'em devours more Meat at a time, than is ſufficient for three Men; or elſe to their unlawful and filthy Paſſions, which they diſplay too openly when invited to Feaſts; for if any one happens to fall down drunk, their Diſciples preſently take him up, and ply with him laſcivious Kiſſes. Hence the *Hermits Feaſt* became a Proverb among the People of *Fez*, pointing at thoſe Maſters who make their Diſciples their Minions.

Mahometan Hereticks.

There are ſome *Mahometan* Sects, that depart not only from the Law but from the Creed of the other *Mahometans*, who brand them for Hereticks. Some aſſert, that a Man by good Works, Faſting, &c. may attain to the nature of Angels, and purify himſelf beyond all poſſibility of ſinning any more. This Pitch of Purity they do not pretend to reach, till they have run the rounds of 50 Diſciplines or Sciences; alledging, that God will not impute to 'em what Sins they commit, before they arrive at the fiftieth Degree. This Sect upon its firſt appearance, waſted themſelves with faſting and Pennance, but ſoon after they gave way to licentious Humours. *Iſſebrauar de Sebranard*, one of their own Party, has publiſh'd their form of living, which is very ſevere: And *Ibnul Farid* has given an account of their Religion, by way of Allegory, in excellent Verſes, which they always repeat at their Feaſts, and which are reckon'd the moſt refin'd piece that has appear'd in their Language theſe 300 Years. They take the Heavens, the fix'd Stars, the Elements, and the Planets, to be one God; they allow every Man to worſhip what he pleaſes, pleading, that no Religion whatſoever is erroneous. They alledge, that God pitch'd upon one Man call'd *Elcorb*, and by infuſion, made him equal to himſelf in Knowledge. When this *Elcorb* dies, another is choſen in his room, out of a Company of 40 Men, whom they call *Elauted*, i. e. *A Stock of a Tree*. There are 70 Electors appointed for this Purpoſe, and 765 Candidates, who are capable of being qualified as Electors, when vacancy happens among the 70.

Unaccountable Lewdneſs.

By an order of the Sect, theſe 765 are oblig'd to live incognito; ſo they range almoſt all the World over in a naſty beggarly Habit, as if they were Strangers to all Humanity; and without any regard to Shame or Modeſty, raviſh Women in publick Places, tho' at the ſame time their Holineſs is cry'd up by the People; *Tunis* and all *Egypt* is full of theſe Miſcreants. In *Alcair*, I ſaw one of 'em raviſh a very handſome Woman in the Market-place, as ſhe was coming out of a Bath; upon which the infatuated Mob poſſeſs'd with a notion of the Adulterer's Sanctity, who, as they thought, did not commit, but ſeem'd to commit the Sin, crowding about the Woman to touch her Garment as a holy thing, and even the Cuckold her Husband return'd thanks for the Adventure to his falſe God, in feaſting and Acts of Charity. The Magiſtrates would have puniſh'd the foul Adultery, but they were afraid of the Mob.

Strange Credulity.

Another Sect.

There are other Sectaries, who may be properly call'd Cabbaliſts; theſe faſt very ſtrictly, and abſtain from the Fleſh of Animals, confining themſelves to a particular Food and Habit. They have very ſet Prayers for every Hour of the Day and Night, calculated according to the variety of Days and Months; and theſe they are oblig'd to rehearſe. They carry about with 'em ſquare Tables, with Characters and Numbers engraven upon 'em; and pretend to derive the Knowledge of all Things from the Angels, with whom they have daily Conferences. They have among 'em a Catalogue of 99 Vertues, which they are contain'd in the Name of God.

Hermites.

Another Sect among the *Mahometans*, are Obſervers of a Rule call'd *Suvach*, i. e. *The Rule of the Hermits*. Theſe inhabit Woods and ſolitary places, and have no other Food than what the wild Deſarts afford. In fine, *Elefacni* has publiſh'd a particular Account of all the principal *Mahometan* Sects, which are 72 in number. At this Day, there are but two principal Sects of *Mahometans*, namely, that of *Leſhari*, diſpers'd over all *Africa*, *Egypt*, *Syria*, *Arabia*, and *Turkey*, and that of *Inianía*, which the *Sophi* of *Perſia* has eſtabliſh'd in his Country by force of Arms.

Seventy two Mahometan Sects.

Searchers for Treaſure.

In this City of *Fez*, there is a ſet of Men that make it their Buſineſs to ſearch for Treaſure under the Foundations of old Houſes. They are continually at work about the Caves and Dens without the City Walls; for they are perſwaded, that when the *Romans* were forc'd to retire from *Africa* to *Spain*, they hid much of their Treaſure in the Bowels of the Earth, becauſe they could not carry it off; only they apprehend, that this hidden Treaſure is ſo enchanted by the Art of *Magick*, that without that Art it cannot be found out. They'll tell you they ſaw Gold or Silver in ſuch a Cave, but could not dig it out for want of Perfumes and Enchantments fit for the Purpoſe. Upon the Influence of this Deluſion, they turn up the Foundations of the old Houſes and Sepulchres, paying for what Damage they do, and look upon all Books of the Art of digging Gold, as divine Oracles.

Alchimiſts.

The Alchymiſts in like manner make a noiſe in this place. They are a parcel of naſty Fellows, that ſtink of Sulphur and other Steams; they aſſemble every Night at the great Temple, where they diſpute of their falſe Opinions. A great many learned Books of their Arts are in great eſteem, particularly the Works of one *Geber* a *Grecian* by birth, who lived 100 Years after *Mahomet*, and renounc'd his own Religion. This Author has a dark allegorical way of writing, Another Author of that Faculty, who was Secretary to the *Soldan* of *Bagaded*, has publiſh'd a large Volume, entituled *Albegrebi*, and one *Muhairibi* of *Granade*, has writ the Principles of their Art, upon which a learned *Manmuluch* of *Damaſcus* wrote a Commentary more intricate than the Text it ſelf. There are two Families of theſe Men at *Fez*; one beats their Bains for the *Eliſſir*, i. e. a Matter which colours Braſs and other Metals; the other ſeeks after the multiplications of Metals.

Coiners.

But their true Trade is coining of falſe Money, and for that Reaſon there are but few Alchimiſts in *Fez*, that have not their Hands cut off.

Mountebanks.

There is yet another ſort of raſcally Fellows about this Town, whom the *Italians* call *Curmatori*, who ſing comical Songs in the Streets, accompanied with Drums, Harps, and Citterns, and ſell *Charms* to the People under the Notion of Preſervatives.

Of the ſame Kidney are another Gang in this Town, who carry dancing Monkeys up and down, and have Snakes round their Necks and Arms: They likewiſe pretend to foretel Fortunes, and lead Stone Horſes up and down the City, which they allow to cover Mares for a certain price.

Such is the State of this beautiful City, in which the Gentlemen, Doctors and Judges, keep at a great diſtance from the common Citizens. The City is moſt commodiouſly ſituated; for, tho in Winter the Streets are ſo durty that one cannot walk in 'em without Startups, yet their Conduits throw in abundance of Water to waſh off the Dirt; and where there are no Conduits, the Dirt is carry'd off to the River in Carts.

The Suburbs of *Fez*.

The chief Suburb of this City lie at the Weſt end, and contain almoſt 500 Families of poor Trades-men, Day Labourers, Water-bearers, Mountebanks, and Whores. In this place there are above 150 Caves or Cellars of fine Marble, where the Noblemen of *Fez* us'd to lay up their Corn; for the leaſt of 'em will contain above 1000 Meaſures of Corn: But at preſent they lie empty and open, and Walls are built before 'em to prevent the Peoples falling into 'em. This Suburb is the very Sink of the City; for there any one may freely ſell Wine or keep a Baudy-houſe. After the 20th Hour the Tradesmens Shops are ſhut up, and every one goes to ſot in the Tavern.

An Appartment for Lepers.

There is another Suburb ſeparate from this, where 200 Families of Lepers live, under the management of a Governour, who collects ſome yearly Revenues from the Noble-men for their Uſe, and ſuffers 'em to want for nothing. This Governour is by his Office oblig'd to purge the City of all Leprous Perſons, and ſhut 'em up there. A Leper's Children enjoy his Eſtate after his Death, but if he dies without Iſſue, part of his Eſtate goes to the Lepers common Stock, and part to the Governour.

Places for Burials.

There are likewiſe without the Walls of the City, ſeveral Fields, appropriated by ſome Noble-men for the burial of the Dead. The common Graves have a long triangular Stone upon 'em, but the Noblemens has one Stone at his Head and another at his Feet, with Epitaphs inſcrib'd upon 'em.

Tombs of the Kings of Fez.

The Tombs of ſeveral Kings of the *Marin* Family, artfully made of fine Marble, with Epitaphs upon 'em, are to be ſeen in a Palace that ſtands upon a Hill on the North ſide of the City, and indeed they are Majeſtick and Pretty beyond expreſſion.

New Fez.

New Fez, is a place added to *Old Fez* by King *Jacob*, for the accommodation of his Court. 'Twas divided by King *Jacob* into three parts; one contain'd his own Palace and the Noble-mens Houſes, to every one of which he allotted a pleaſant Garden; not far from his Palace he built a ſtately and ſumptuous Temple; in another part of the City he built a large and fair Stable for the King's Horſes, and appointed a Market place, extending from the Weſt to the Eaſt Gate, which is a Mile and a half, Shops being plac'd on each ſide.

Goldſmiths.

The third part is now the apartment of the *Jews*; for moſt of the Goldſmiths in *New Fez* are *Jews*, who carry their Plate to *Old Fez*, and there ſell it at a higher rate than the Weight, which is a Priviledge not allowed in *Old Fez* to *Mahometans*, as being uſury.

Jews.

Theſe *Jews* dwelt once in *Old Fez*, but being all robb'd by the *Mores* upon the death of one of their Kings, King *Abuſabid* order'd 'em to remove to *New Fez*, and doubled their yearly Taxes. Accordingly they at this Day poſſeſs a long Street in *New Fez*, and have many Shops and Synagogues, their number being wonderfully enlarg'd ſince they were expel'd *Spain*. The Street where they now live, was the place allotted for the King's Guard in former times, but now the Kings have no Guards. Theſe *Jews* are diſpis'd by every body; they are not allow'd to wear Shoes, but only a ſort of Socks of Sea Ruſhes. They wear black Turbants on their Heads; or if they uſe a Cap, they muſt tack a piece of red Cloth to it. They pay the Kings of *Fez* 400 Ducats a Month. About 140 Years after the building of this new City, it was ſurrounded with impregnable Walls, and adorn'd with Temples, Colleges, Palaces, and other Buildings

Water-Engines.

Without the Walls, the River Water is rais'd by huge Wheels and Engines, invented by a *Spaniard*, which turn round but once in 24 Hours. By this means 'tis carry'd over the Walls into Ciſterns, from whence 'tis convey'd in Pipes to the Temples, Palaces and Gardens. This was effected ſcarce 100 Years ago; for before that the City was ſupply'd with Water from a Fountain ten Miles off, by the means of a Conduit invented by a *Genoueſe*, that was the King's Favourite. To conclude, there are few Gentlemen in this new City, excepting ſuch as retain to the Courts; for the bulk of the Inhabitants are Tradesmen, who contemn the Courtiers ſo much, that they will by no means ſuffer them to marry their Daughters.

Having thus diſpatch'd the City of *Fez*, and what relates immediately to it, 'twill be proper, before we diſmiſs this Subject, to give a brief Account of the Kings of *Fez*, and their Court, which is kept in *New Fez*.

Africa knows no ſuch thing as Elective Princes, or the calling of a foreign Prince to a Throne. *Mahomet's* Law confin'd all ſecular Power to the *Mahometan* Patriarchs and Prelates; but in proceſs of time, the Authority of the Patriarchs declin'd: and the Ringleaders of the People, that ranged up and down in Deſarts, invaded civiliz'd places, and by force of Arms, gave 'em Princes contrary to *Mahomet's* Law. The Families of *Zenzta*, *Luntuna*, and *Marin*, are Inſtances to this Purpoſe.

The Officers of the King's Court.

As for the Kingdom of *Fez*, as ſoon as any Prince is proclaim'd King there, he ſingles out one of his Peers for a Chief Counſellour, and beſtows on him one third of all the Revenues of the Crown. Then he nominates another to be Secretary, Treaſurer and High Steward of his Houſhold. After that, he appoints a Captain of the Horſe or of the Guards, who commonly live with their Horſes in the Fields: In the laſt place he nominates a new Governour of the City. Some time after, he ſends Commiſſioners and Deputies to govern the *Highlanders* and *Arabians* that are ſubject to him; and appoints Collectors of the Revenues of the Crown; and nominates a certain number of *Keepers* or *Guardians* (as they call 'em) giving to every one of 'em a Caſtle or Village, by which they may maintain themſelves in Peace, and be ſerviceable to him in time of War. This King maintains, beſides his Guards, a Troop of Light Horſe-men, who live upon the King's Proviſions while they ſerve in the Field; but in time of Peace, the King gives 'em Corn, Butter, and powder'd Fleſh for the whole Year. Money they ſeldom finger; but the King provides entirely for their Horſes, and Cloths them once a year. Thoſe who look after their Horſes, are Chriſtian Captives, who go ſack'd in great Chains and when the Army removes, are carry'd upon Camels Backs. The Camels are taken care of by an Officer appointed for the Purpoſe, who diſpoſes of the Paſture as he pleaſes, and looks after the King's Furniture, that's carry'd upon their Backs. Another Officer is the Purveyor, who provides and diſtributes Corn to the King's Houſhold and his Army. In time of War he has ten or twelve Tents to lay up Corn in, and ſends every Day freſh Camels for new Corn. Another Officer is the Groom of the Stables or Maſter of Horſe, who provides for the King's Horſes, Mules, &c. being furniſh'd with all Neceſſaries by the Steward. There is likewiſe an *Overſeer of the Corn*, who provides Provender for the Beaſts, and being accountable to the High Steward as Clerk under him, who keeps an exact Account of what is laid out. The King of *Fez* has alſo a Captain over 50 Horſe-men, who may be call'd Purſuivants, for they execute the King's Orders; an Officer of great Authority, who in the King's Name, can force the Judges to do juſtice, and put their Sentences in execution, and can both impriſon and puniſh the Principal Noble-men. A Chancellour, who keeps the great Seal, and writes and ſigns the King's Letters. A Governour of the King's numerous Footmen, who always attends him. A Commiſſary for the Baggage of the Army, who takes care to carry the Tents of the Light Horſe-men upon Mules, and the Tents of the other Souldiers on Camels. A Maſter of the Ceremonies, who ſits at the King's Feet in the Senate Houſe, and commands each Member to ſpeak according to his Dignity. Add to theſe a Company of Standard Bearers, who upon a March, carry their Colours wrap'd up, only he that goes before the Army, has his Banner diſplay'd. Every one of this Company is particularly well acquainted with the Fords of Rivers, and the Paſſages thro' Woods; for which Reaſon they are for the moſt part the Guides of the Army. There are a great many Drummers in the Army, who beat with a Bull's Pizzle, upon certain Drums of Braſs as big as a great Kettle, the lower part of which is narrow, and the upper broad, being cover'd with a Skin. Theſe Drummers ride on Horſe-back, having always a great weight on one ſide to counterpoiſe the weight of the Drum on the other. Their Horſes are very ſwift, for the *Mores* account it a great diſgrace to loſe a Drum; and the Drums make not only a lould but a terrible noiſe, ſuch as affects both the Men and the Horſes. The Muſicians that attend the Army are not pay'd by the King; for the Cities are bound to ſend a certain number of 'em to the Wars, who are admitted or not admitted to the King's Table, according to their Behaviour in the Field. All the Women Servants in the King's Houſhold are Negro Slaves, tho' the Queen is always a White. Some *Spaniſh* and *Portugueſe* Women Captives, are likewiſe kept about the Court, having Eunuchs who are Negro Slaves, that

The Revenues of the Crown.

watch 'em very narrowly. Notwithſtanding the King of *Fez* his large Dominions, his Revenues will ſcarce amount to 300000 Ducats a Year, the fifth part of which does not come to him. Moſt of his Incomes are paid in Corn, Cattle, Oil and Butter, which fetch but little Money. In ſome places they pay 1 ¼ Ducat *per* Acre, in other places a whole Farm pays no more. In ſome Regions every head pays as much as a whole Families does in another: And indeed the Citizens of *Fez* are more diſſatisfied at the Payment of the Taxes than at any thing elſe. By the Law, a *Mahometan* Prince (unleſs he be a Prieſt) can exact no more than what was ſettled by *Mahomet*, viz. 2 ½ *per Cent.* of the ready Money, and $\frac{1}{10}$ of all their Corn: And of that a part is to be imploy'd in relieving the Poor, and carrying on neceſſary Wars. But the ſecular Princes neglect *Mahomet*'s Model, have not only conſum'd theſe Taxes, but exacted greater; and at this Day all the Inhabitants of *Africa* are ſo oppreſs'd with daily Exactions, that they ſcarce have where withal to feed and cloth themſelves; and upon that Conſideration no Man of Senſe or Honeſty will either converſe or entertain a Courtier, or accept of a Preſent from him, preſuming that all his Poſſeſſions are the Product of Theft and Bribery. In time of Peace, the King maintains 6000 Horſe, 500 Croſs-bows, and as many Musqueteers, who lie within a Mile of his Perſon when he goes a Progreſs; but at *Fez* he has no occaſion for ſo ſtrong a guard. When he wages War with the *Arabians*, he obliges the *Arabians* that are ſubject to him to find him a great Army of Men upon their own Foot, and theſe Men are better Souldiers than his own. There is but little Pomp or Ceremony about his Perſon; neither does he care for it, unleſs it be upon Feſtival Days, or when neceſſity requires it.

When the King is to ride out, the Maſter of the Ceremonies ſend Meſſengers to give notice to his Relations, his Nobility, Senators, Captains, Guardians, and Gentlemen, who immediately draw up in a Body before the Palace Gate.

The order of the King's Retinue.

Upon the King's coming out of doors, the Meſſengers put the Retinue in the following Order. The Standard Bearers go firſt, then the Drummers, then the chief Groom of the Stable with his Attendants, then come the King's Penſioners, his Guard, his Maſter of Ceremonies, his Secretaries, his Treaſurer, his chief Judge, his Captain-General, three Officers, one carrying his Sword, another his Shield, and a third his Croſs-Bow, and at laſt the King himſelf, accompanied by his Chief Counſellor and ſome other Peer; his Foot-men march on each ſide of him, one carrying a pair of Stirrups, another his Partiſan, the third a Covering for his Saddle, the fourth a Halter for his Horſe, another his Slippers, which are very fine; and as ſoon as the King diſmounts, the Cover and Halter are put upon his Horſe. After the King follows the Captain of the Foot-men, then the Eunuchs, the King's Family, the Light-horſe, and in the Rear of all the Croſs-Bows and Fire-locks. Upon ſuch Occaſions, the King's Cloths are but very thin and ordinary, but his Retinue is very fine; Beſides, the Law of *Mahomet* prohibits any Prince to wear a Crown, Diadem, or any ſuch like Ornament upon his Head.

The manner of his Encampments.

When the King encamps with his Army, his own great Tent, which is 50 Ells ſquare, is firſt pitch'd. This Royal Pavilion has four Gates kept by Eunuchs, and on each corner of the ſquare a Spire of Cloth, with a gliſtering Ball on the top of it. There are divers other Tents within the Pavilion, particularly one for the King, ſo contriv'd, that it may be eaſily remov'd from place to place; next to the Pavilion are the Tents of the Noble-men and the King's Favourites, then the Lodgings of the chief Guard, made of Goats Skins after the *Arabian* Faſhion, and in the midſt of all, the King's Kitching and his Pantry. The Light Horſe-men lie near the Pavilion; and next to them are the Stables, where their Horſes are wonderfully well fed; without the Circle are the Baggage-men, Butchers, Victuallers, &c. Whoever comes to the Camp, muſt come no farther than the quarter for the Baggage-men; for the Royal Pavilion is ſo environ'd on all Hands by the Lodgings of the Guard and other Tents, that 'tis very hard to get at it. Some Watch-men are ſet to guard the King's Pavilion all night long, as well as the Stables, but they are ſorry helpleſs Fellows without Arms, and ſometimes ſo negligent, that not only Horſes have been ſtole, but Enemies have been taken in the King's Tent that came with a Deſign to murder him. The King lives the greateſt part of the Year in the Fields, both for the ſafe guard of his Kingdom, and for keeping his *Arabian* Subjects in obedience. His Diverſions are Hunting and playing at Cheſs.

Mount Zarbon.

To return. About ten Miles from the City of *Fez*, lies a noted Mountain call'd Mount *Zarbon*, which is ten Miles broad and 30 long. It bears plenty of Olives, but at the ſame time is crowded with wild Woods. There are about 50 Sheep-folds and Caſtles upon it, and the Conveniency of its ſituation between *Fez* on the Eaſt and *Mecnaſe* on the Weſt, renders the Inhabitants very rich. The Women of that Country are clad in Wolen, and adorn'd with many Silver Rings and Bracelets. The Men are brave, and noted for the taking of Lions, of which they ſend a great many to the King of *Fez*, and theſe the King hunts in this manner.

Hunting of Lions.

Several little Cells in which a Man may ſtand upright, are made in a large Field, and ſecur'd with ſtrong Doors. In each of theſe an armed Man is plac'd, who ſhewing himſelf to the Lion, and upon the Lion's approach ſhutting himſelf up, inflames his Fury; upon which a Bull is let looſe upon him, and if the Bull kills the Lion, the Sport is at an end, but if the Lion kills the Bull, all the Men in the Cells (who are commonly tweve in number) jump out upon him, being armed with a Javelin and a Pike of a Cubit and a half long. If the armed Men ſeem to be too hard for the Lion, the King orders their number to be diminiſh'd; and if they appear to be too weak, he and his Company ſhoots at the Lion with their Croſs-bows, from a high Hill where they ſtand to ſee the Show. But it oftentimes happens that ſome of the Men die, and all are ſeverely wounded before their Croſs-bows kill the Lion. Thoſe who encounter the Lion, receive ten Ducats apiece, and a new Garment; but 'tis only the Men of known Valour, and ſuch as come from Mount *Zelagi*, that are honour'd with the Employment.

Gualili.

A Town call'd *Gualili*, ſtands upon this Mountain, which became very populous after it was repair'd and replanted by *Idris* the Elder, who lies buried there, and whoſe Sepulchre is ſuperſtitiouſly viſited by almoſt all the People of *Barbary*; for they look upon him as a great Patriarch. Afrer the death of that *Idris*, his Son being wholly bent upon the building of *Fez*, neglected *Gualili*.

Pietra Roſſa.

Upon the ſide of the Mountain, there's a ſmall Town call'd *Pietra Roſſa*, which ſtands ſo near the Foreſt, that the Lions come tame in, and pick Bones off the Street, without hurting any body.

Caſtle *Shame.*

At the Foot of the Mountain near the high Road, leading from *Fez* to *Macneſe*, there ſtands Caſtle *Shame*, ſo call'd from the ſhameful covetuouſneſs of the Inhabitants. 'Tis reported, that the Inhabitants invited the King to diner as he was paſſing by, in order to get the ignominious Name alter'd, and next Morning prepar'd for his Breakfaſt a couple of Rams, and ſome large Veſſels full of Milk and Water, preſuming that the King would not know but that it was all Milk: Upon which the King perceiving the Milk to be half Water, ſmill'd and ſaid, *What Nature hath given no Man can take away.*

Province of *Azgar.*

The third Province is that of *Azgar*, in which are many Lions, and thoſe ſo timerous, that the Voice of a Child will fright 'em; whence *The Lion of Azgar* became a Proverb, ſignifying a cowardly *Braggadocia*.

Province of *Habat.*
Arzilla.

As for the Province of *Elhabet* or *Habat*, it contains within its Bounds the great City of *Arzilla*, built by the *Romans* upon the Shore of the Ocean, about 70 Miles from the Streights of *Gibraltar*, and 140 from *Fez*. In ancient times it was ſubject to the Prince of *Ceuta*, who was tributary to the *Romans*, and afterwards was taken by the *Goths*, who reſtor'd the Prince of *Ceuta* to his former Government. But in the 94th Year of the *Hegeira*, the *Mahometans* took it, and kept it 200 Years, till the *Engliſh* (a) upon the Sollicitation of the *Goths*, beſieg'd it with a huge Army, and put all the Citizens to the Sword. The Deſign of the *Goths* was only to draw the *Mahometans* out of *Europe*, for they being Chriſtians, were Enemies to the *Engliſh*, who worſhip'd Idols. Some time after this Diſaſter, the *Mahometan* Patriarchs of *Cordoua* being Sovereigns of *Mauritania*, rebuilt, enlarg'd, enrich'd and fortified *Arzilla*; the Inhabitants of which diſtinguiſh'd themſelves by their Riches, Learning and Valour. The adjacent Fields are fertile, only their diſtance from the Mountains, occaſions a great want of Wood, which is in ſome meaſure ſupply'd by Coals brought from *Harais*.

(a) Theſe ſeem to be *Danes*, who in thoſe times infeſted *England*, *Germany*, *France*, and *Italy*, and being at that time beaten out of *England*, were call'd *Engliſh*.

Taken by the *Portugueſe.*

In the 882 Year of the *Hegeira*, this City was ſurpriz'd and taken by the *Portugueſe*, who carry'd the Inhabitants Priſoners to *Portugal*, and among the reſt, *Mahumet* the preſent King of *Fez*, together with his Siſter, both of 'em being Children. *Mahumet* continu'd ſeven Years in *Portugal*, and learn'd the *Portugueſe* Language perfectly well; at laſt his Father ranſom'd him for a great ſum of Money, and the Son being afterwards preferr'd to the Throne, endeavour'd to retake *Arzilla* from the *Portugueſe*, and gain'd his Point ſo far as to maſter the Town, and oblige the *Portugueſe* to retire to the Caſtle and promiſe to ſurrender in two Days. But in the mean time *Pedro de Navarro* came up with a potent Fleet and rais'd the Siege. After that the *Portugueſe* fortified the City on all ſides, ſo that the King of *Fez*, who often attack'd it, was always repuls'd.

Tangier.

The next Town that comes in our way, is the great and ancient City of *Tangia*, call'd by the *Portugueſe Tangiara*, which the *Romans* built upn the Shoie of the Ocean, when they; ſubdu'd the Kingdom of *Granada* or *Boetica*.

Ceuta.

Then comes *Septa*, call'd by the Latines *Civitas*, and by the Portugueſe *Ceuta*, and built by the *Romans* upon the Streights of *Gibraltar*. In former times it was the Metropolitan of all *Mauritania*, and being much valued by the *Romans*, was both civiliz'd and well peopled in their time. After that, the *Goths* maſter'd it, and kept it, till the *Mahometans* invading *Mauritania*, ſurpriz'd it, at the ſame time that the *Mores* conquer'd *Spain*. After that, it came to be the famouſeſt City of all *Mauritania*, both for Civility and number of Inhabitants. It was adorn'd with Temples and Colleges, and reſorted to by Men of Learning, Students and Trades-men. Their Mechanicks, eſpecially the Braziers, went beyond all others. The adjacent Fields are but barren, which makes the Corn dear: but they are well ſtor'd with pretty Villages, eſpecially in that part which from the abundance of Vines, is call'd *The Vineyards*. From hence you have a noble Proſpect of the *Spaniſh* Coaſt, and may even diſcern moving Animals there, the diſtance being but 12 Miles.

Taken by the *Spaniards* and *Portugueſe*.

But in late times this noble City was raz'd by *Habdulmumen*, the King and Patriarch, who likewiſe baniſh'd the principal Inhabitants; and not long after it was ſack'd by the King of *Granada*, who carry'd the Nobles and chief Citizens in captivity to *Granada*; and at laſt, in the 818 Year of the *Hegeira*, 'twas taken by the *Portugal Armada*, and all the Citizens abandon'd it. The cowardly and unactive King of *Fez*, who neglected to ſuccour it, was by the juſt Judgment of God, brought to condign Puniſhment, he and his ſix Sons being murther'd ſoon after by his own Secretary, whoſe Wife he had endeavour'd to debauch; and the Baſtard Son, who was ſpar'd and ſucceeded him, was in like manner ſlain by his own People, and was the laſt of the *Marin* Line.

The King of Fez and his ſix Sons murder'd.

Mount *Quadres*.

Mount *Quadres*, in this Kingdom, is famous for the birth of *Hellul*, who diſtinguiſh'd himſelf by his valiant Exploits againſt the *Spaniards*, and at laſt was kill'd in *Catalonia*, *A. D.* 1160. at a Battle, in which 60000 *Mores* fell, and none eſcap'd but the King and a few Noblemen. After that Battle, the *Spaniards* were ever ſucceſsful againſt the *Mores*.

60000 *Mores* kill'd.

Province of *Erif*. *Velles de Gumera*.

We come next to the Province of *Erif*, the ancient Town of *Bedis*, call'd by the *Spaniards*, *Velles de Gumera*, ſtands upon the Shore of the Mediterranean in this Province, and contains 600 Families. It has no drinking Water, but one Well in the Suburbs, juſt by the Sepulchre of one that was once very famous among them; and this Well they dare not make uſe of in the Night-time, becauſe 'tis full of Leeches. However 'tis adorn'd with a ſtately Temple, and ſo overſtock'd with Fiſh, that they give 'em away *gratis*, eſpecially to any one that helps to draw up a Net, for one Man is not able to do it. The Fiſh they take are Pilchards, and theſe they ſalt and ſend to the Mountains to be ſold. A long Street in this Town is inhabited by *Jews*, many of whom ſell excellent Wines; nay, in a calm Evening the Citizens are wont to divert themſelves with ſinging, and the drinking of Wine in their Pleaſure Boats upon the Sea.

A Iſle poſſeſs'd by the *Spaniards*.

Being expos'd to the fire of a Fort that King *Ferdidando* of *Spain*, built upon an Iſland within a Mile of the Town, they implor'd the aid of the King of *Fez*, who accordingly ſent out an Army, moſt of which never return'd. The *Spaniards* kept the Iſle for ſeveral Years, till the Year 1520, in which a *Spaniard* provok'd by the Governour, who had taken his Wife from him, betray'd it into the Hands of the *Mores*, and all the *Spaniards* were put to the Sword, excepting the Traytor, who was well rewarded.

Province of *Garet*.

The Province of *Garet* is divided into three parts; the firſt contains the Towns and Cities, the ſecond the Mountains, and the third the Deſarts.

Mount *Beni-* [illegible]

The Mountains are Mount *Beniguazenal* and Mount *Beni Meſgalda*. The former has a Town upon it indifferently well peopled, and provided with many Judges and Lawyers, and all ſorts of Trades-men, particularly Linen Weavers. The adjacent Fields are wonderfully fertile in Grapes, Quinces and Citrons, which are all ſold at *Fez*. This Town has a good Market, frequented by the Inhabitants of the Neighbouring Mountains. On the top of this Mountain, there's a Cave that perpetually throws up Fire, and conſumes Wood to Aſhes.

Mount *Beni-meſgalda*.

The Inhabitants of Mount *Beni Meſgalda* maintain many Doctors of the *Mahometan* Law, and ſeveral inferiour Students, for which Reaſon their Taxes are but very ſmall in compariſon with their Neighbours. Theſe Doctors drink all the Wine themſelves, and perſwade the People that 'tis unlawful for them to drink it.

Melila.

Among the Towns of this Province, we muſt take notice of *Melila*, the Inhabitants of which being threatned by the *Spaniſh Armada*, and finding the King of *Fez* his Succeſſours but weak, deſerted the Town, and fled with their Effects to the Mountains of *Buthein*; upon which the Feſſon General, in reſentment of their cowardice, and in order to leave nothing for the *Spaniards*, burnt down all the Houſes and Temples. However the *Spaniards* poſſeſs'd themſelves of the Town, waſte as it was, *A. D.* 1487, and built a ſtrong Caſtle upon it, ſince which time they have repaird the Walls and continue in poſſeſſion of it to this Day.

The Deſart of *Garet*.

The Deſarts of *Garet* are bounded by the Mediterranean Sea on the North, the Deſarts of *Chauz* on the South, the Mountains I mention'd but now on the Weſt, and the River of *Mulvia* on the Eaſt, being 60 Miles long and 30 broad. There's no Water in theſe Deſarts, but that of the River *Mulvia* us'd to retire in Summer, upon which many *Arabians* as well as a fierce People call'd *Batalisa*, have great ſtore of Horſes, Camels and other Cattle, and wage perpetual War with the *Arabians* that border upon 'em.

Province of *Cheuz*. *Dubdu*.

The laſt Province in this Kingdom is that of *Cheuz*. The Town of *Dubdu* ſtanding in this Province, was poſſeſs'd by one *Mahumet*, who adorn'd it with many fine Buildings, and reform'd the Government of the Town, being diſtinguiſh'd by his Civility to Strangers. This *Mahumet* having a Deſign to wreſt *Fezza* out of the Hands of the King of *Fez*, and to go diſguis'd in a Country Habit to the Market-place of that Town, in hopes that the Towns-men would make an Inſurrection, the King of *Fez* came to know of the Plot, and marching againſt *Dubdu* with a vaſt Army, encamp'd at the Foot of the Mountain. In the mean time 6000 of the Inhabitants of the Mountain lay in ambuſh among the Rocks, and after the *Fezzan* Souldiers had gone up the difficult Paſſages of the Mountain a pretty way, ſo that they could not conveniently get back again, ſallied out and kill'd 3000 of 'em. But the King of *Fez* not mov'd, advanc'd with 500 Croſs-bows and 300 Firelocks to make a new Attack: Upon which *Mahumet* finding himſelf not able to ſtand out any longer, diſguis'd himſelf in the Habit of an Ambaſſadour, and went and deliver'd a Letter with his own Hand to the King. Being ask'd by the King what he thought of *Mahumet* the Governour of *Dubdu*; he anſwer'd, that he thought he was mad in offering to withſtand his Majeſty. Then the King threatned to tear him in pieces as ſoon as he was Maſter of the Town; upon which the feign'd Ambaſſadour ask'd if his Majeſty would not receive him into favour upon a ſubmiſſive Acknowledgment of his Offence. His Majeſty promis'd upon that Condition, not only to forgive him, but to give his two Daughters in marriage to his Sons, and for his further Security, back'd his Promiſe with a ſolemn Ooath, in the preſence of four of his Principal Nobility. Upon this, *Mahumet* fell down at the King's Feet, and diſcovering himſelf, humbly beg'd Pardon for his Offence, and the King made good his Promiſe. This happen'd *Anno Dom.* 1495.

Fezza.

Fezza is another City within this Province, which ſtands upon the Road from *Garet* to *Caſaſan*, at the diſtance of 50 Miles from *Fez*, 130 from the Ocean, and ſeven from the *Mediterranean*. In former times it contain'd 5000 Families. Its Palaces, Temples, and Colleges are in ſome meaſure pretty, but the other Buildings are very ordinary. A ſmall River runs thro' the chief Temple, that ſprings out of the *Atlas*; and ſometimes when the Citizens quarrel with their Neighbours, theſe incommode 'em very much, by cutting off this River, and turning it into another Channel, for then they have nothing but ſtinking Water, and are forc'd to ſtrike up a Peace. For Riches, Civility and Populouſneſs, this City is reckon'd the third City of the Kingdom. The Chief Temple is greater than that at *Fez*; beſides which it has three Colleges, ſeveral Baths, and a great many Hoſpitals. Each Trade in this place has a peculiar place allotted to it, as well as in *Fez*. The Inhabitants go beyond thoſe of *Fez*, in Valour and Generoſity; and there are a great many learned and rich Men among 'em. The adjacent Fields are extream fertile. The Plains without the City Walls are very large, and enrich'd rich'd with many pleaſant Brooks, that ſerve to water their Gardens, which are ſtock'd with all ſorts of Fruit.

Their Vines produce great plenty of ſweet Grapes, of which the *Jews* (there being 500 Families of 'em in this City) make as good Wine as any in *Africa*.

An old Man rever'd.

In this place, ſays our Author, I ſaw a very ancient Man, that they rever'd as a God, inſomuch, that the People of *Fez* came 50 Mile off to ſee him; and this old Gentleman, who had the Art of deluding the People, was prodigiouſly rich in Fruits, Grounds, and other Commodities that they had given him.

Soffroi. Tame Lions.

Soffrei is another Town in this Country, which has a Temple with a River running thro' it, and an excellent Fountain at the Door. There's a Foreſt juſt by it, where the Lions are very tame.

Ham-Liſnan.

Publick Adultery in a Temple.

There's a Town in this Country call'd *Ham Liſnan*, near to which the *Africans* had a Temple, that in the time of their Idolatry, they reſorted to in whole Shoals in the Night 'time; and after the Performance of Sacrifice, us'd to put out the Lights, and divert themſelves with promiſcuous Embraces. The Children that were begotten in this adulterous way, were brought up by the Prieſt of the Temple, and ſet apart for ſacred Service: But the Women that acted a part in this foul Action, were prohibited to lye with any Man for a Year after.

Numen Giunaibe a Dancing-road.

Not far from another Town call'd *Numen Giunaibe*, there's a Road, which whoever paſſes without dancing and leaping, falls into an Ague.

Mount *Beni-Jeſſenten.*

The Mountain jubject to the Governour of *Dubdu*, is call'd *Bemi Jeſſenten*, and is inhabited by a unhuman, baſe, beggarly crew. Their Houſes and Shoes are made of Sea-ruſhes. *Panick* is the only thing that grows upon the Mountain, of which they make Bread and other Victuals; but at the Foot of it Grapes, Dates, and Peaches grow plentifully in Gardens. They dry their Peaches in the Sun, cutting 'em into quarters, and throwing away the Stones; and theſe are accounted a choice Rarity after a Years keeping. They have ſome Iron in Mines, of which they make blunt pointed Daggers and Horſe-Shooes, which ſometimes ſerves 'em for Money, for that's a ſcarce Commodity upon the Mountain. Their Women are proud of Iron Rings on their Fingers and Ears, and are ſcandalouſly rigg'd; for they ſtay moſtly in the Woods, where they keep Goats and gather Fuel.

Mount *Selelgo.*

Another Mountain in this Province, call'd *Selelge*, is inhabited by a People who deſcend to the Valleys every Spring, carrying their Houſes of Sea-ruſhes along with 'em, and continue there till about the end of *May*, at which time the *Arabians* coming from the Deſarts in queſt of Fountains and moiſt places for their Cattle, diſlodge 'em. But in the Winter theſe *Arabians* reſort to Woods, and warm places to ſhelter their Camels, which cannot bear cold. This Mountain is well ſtock'd with Lions, Leopards, and Apes. It gives riſe to *Subu* the greateſt River in all *Mauritania*, and has a ſtream of Water that runs ſo rapidly, as to carry a Stone of 100 weight along with it.

Mounts *Beni-Jaſga.*

The River *Subu* ſeparates Mount *Selelgo* from Mount *Beni Jaſga*, the Inhabitants of which are a rich and civil People. They have a way of pullying People over from one Mountain to the other, in a great Hamper that will hold ten Men, that being faſten'd to a Rope which runs from a ſtrong Poſt on one ſide, to another on the oppoſite ſide; but this airy Bridge is not always very ſafe. This Mountain affords plenty of Oil, great ſtore of Cattle, and very fine Wool, of which the Women make Cloth as fine as Silk, and ſell it at *Fez* for a great Price.

Mount *Centopozzi.*

Mount *Centopozzi*, boaſts of a great many ancient Houſes, and a bottomleſs dry Pit, into which ſome People have been let down by a Rope with Torches in their Hands, who report, that below 'tis divided into a great many Rooms, and that at laſt they come to a large artificially hewn out of a Rock, and encompaſs'd with a Wall that has four Doors leading to ſome narrow places, where are Springs of Water. Some of theſe bold Adventurers have loſt their Lives, in the Diſcovery; for if their Lights happen to be put out by any ſudden blaſt of Wind, they can by no means find the place where the Rope hangs, and ſo die by famine. 'Tis ſaid that three Men being let down, came to the four Doors above-mention'd, where they parted, one going one way, and the other two another. After the two that kept together had gone on one fourth of a Mile, one of their Lights was put out by ſwarms of Bats; at length they came to the Springs, where they found the Whites of Dead Men, and five or ſix Candles, ſome of which were freſh and ſome waſted with long lying. Then they return'd the ſame way they came, and were ſcarce gone half way, when a ſudden blaſt put out their other Light, upon which they were ſcrambling among the Ropes, and after many fruitleſs Attempts, loſt all Hopes of finding their way. In the mean time their Companions that tarry'd at the Mouth of the Cave expecting their return, let down ſome of their own number to ſee what was become of 'em; and theſe Men having Lights in their Hands, and making a great Noiſe, found 'em out at laſt, and brought 'em up. But the third that went by himſelf was not found at that time; he wander'd up and down in a forlorn Condition, and at laſt hearing a noiſe like the barking of Dogs, made up to 'em, and met four ſtrange new-born Beaſts, with a Dam not unlike a ſhe Wolf, which fawn'd gently upon him with her Tail. Soon after that he began to perceive a glimmering of light, and ſo found his way out. But now-adays this famous Pit is fill'd with Water to the very Mouth.

Mount *Gunaigel Gherben*,

Near this Mountain is Mount *Gunaigel Gherben* (the Mountain of Ravens) which is full of Woods and Lions, and has no Inhabitants, perhaps by reaſon of its extream coldneſs. Here is a very high Rock, the top of which is frequented by infinite numbers of Crows and Ravens, whence 'tis thought, the Mountain deriv'd its Name. Sometimes the terrible northerly Wind bring ſuch abundance of Snow upon this Mountain, that thoſe who travel from *Numidia* are loſt in it. Every Summer the Neighbouring *Arabians*, call'd *Beni-Eſſen*, reſorted to this Mountain for the Benefit of its cool Water and pleaſant Shades, notwithſtanding its being over-run with Lions and Leopards.

Mount *Ziz.*

The laſt Mountain I ſhall mention, is Mount *Ziz*, inhabited by a parcel of Thieves and Robbers, who are continually moleſting the *Arabians*, and are ſo ſpiteſul as to throw their Camels over the Rocks.

Tame Serpents.

In this place the Serpents are ſo inoffenſive, that they come to peoples Houſes at dinner-time, and gather the Crumbs under the Table, without offering any violence, unleſs they be injur'd.

Additions to CHAP. III.

Out of Marmol.

THE Kingdom of *Fez* is the ſecond or eaſtern part of *Mauritania Tingitana*, being ſever'd from *Morocco* or the Weſtern part, by the River *Ommirabi*. It contains ſeven Provinces, the moſt weſtern of which is *Temeſen*, a Province, that after many Revolutions, came to be poſſeſs'd by the People of *Zenete* and *Haoara*, who are commonly call'd *Chavians*, and not only live in Tents like the *Arabians*, but ſpeak broken *Arabick*, tho' at the ſame time they are an *African* Nation. In former times this People were ſo powerful, that they could bring into the Field 50000 150000 Foot; but their continual Wars with the Kings of *Fez*, and of *Morocco*, and with the *Portugueſe*, added to a three Years Plague and Famine, have reduc'd 'em to that extremity, that at this day they are Vaſſals to the *Xeriff*, and cannot raiſe above 8000 Horſe and 50000 Foot: Their Cavalry is good, but their Infantry does but little. However they are ſo proud, that they ſit uneaſily under the Yoak, and take all Occaſions to revolt, skipping from one Kingdom to another with their Tents and Flocks. Their Women are white, and proud of their Beauty and gay Apparel, particularly of Jewels and Trinkets of Gold and Silver hanging about their Neck, Ears, and Arms. The Country is very well qualified both for Corn and Paſture, but the Inhabitants manure only what lies juſt by their Inhabitations.

Behima a fattening Herb.

In the Fields there grows an Herb call'd *Behima*, that fattens Horſes and Cattle in 12 or 15 Days, but kills 'em after it ſhoots forth a bearded Ear, for which reaſon they keep their Cattle from it in that Seaſon. This Province was once beautified with numerous Towns and Caſtles; but now there remains nothing but the Walls of ſome Towns without any Houſes, within which the Inhabitants incamp in Winter.

The Province of Fez.

The Province of *Fez*, is the next in order, purſuant to our wonted Method, by proceeding from Weſt to Eaſt. Both the Mountains and Valleys between *Fez* and *Mequinez*, are inhabited by *Bereberes*, and by *Holots*, which is a mixture of *Africans* and *Arabians*, and not to mention the other puiſſant *Arabians*, who poſſeſs all the Fields between *Fez* and the Sea, where they wander up and down, and find excellent Paſture for their Flocks. The Country that lies between the City of *Fez* and the *Great Atlas*, is not ſo well peopled, being inhabited only by poor *Arabs*, who pay ſome Acknowledgment to the King and the Citizens of *Fez*, for what Lands they poſſeſs.

Sala.

Fez is now the Metropolitan of this Province, but in the time of the *Goths*, *Fella* or *Sala* was entituled to that Honour. The latter was built either by the *Romans*, or by *Hanno* the *Carthaginian*, and is enrich'd with a tolerable Harbour, the Mouth of which is ſomewhat dangerous. It has been famous for Galleys or Rovers that infeſt the European Coaſt, ever ſince a *Granada More* retir'd thither. In former times 'twas very rich and populous, and committed ſeveral Ravages upon the *Europeans*, which provok'd *Alphonſus* the Wiſe, King of *Caſtile*, to take it *A. D.* 1263. But ſoon after 'twas retaken by the firſt King of *Fez*, of the *Benemerini* Family. However theſe ſudden Revolutions brought it ſo low, that it never recover'd its ancient ſplendour. At preſent 'tis defended by a Governour, with 300 Horſe and ſome Firelocks.

Tifelfet.

About four Miles from the Ocean, we met with the Ruines of the ancient City of *Tamiſidis*, now *Tifelfet*, which *Ptolomy* places in 7 Deg. Long. and 34 Deg. 15 Min. Lat. It has thick Foreſts in its Nighbourhood, where furious Lions reſort, and attack Paſſengers, eſpecially in the Night-time; for which Reaſon there is a Houſe cover'd with Earth upon the Road, where the purſued Traveller may be ſhelter'd from their fury.

Mequinez.

At the diſtance of 17 Leagues from *Sella*, not far from Mount *Atlas*, lies a large City, which containing above 8000 Inhabitants, which is now call'd *Mequinez*, and which *Ptolomy* places under the Name of *Silda*, in ſeven Deg. 50 Min. Long. and 34 Deg. 15 Min Lat. It has good Walls and large Streets, and ſtands in a very fertile Country. The Inhabitants are proud and ſtout, and mortal Enemies to the *Fezzans*. They derive their Extraction from *Mecca*, and apply themſelves for the moſt part to Traffick. The Kings of *Fez* are wont to beſtow this place as a Portion upon the Cadets of their Family, tho' ſometimes they have had occaſion to repent it.

The City of Fez.

Fez, the Metropolitan of all *Africa*, is call'd the Court of the Weſt, as *Conſtantinople* is entitled that of the Eaſt. 'Twas call'd *Fez* from the River it ſtands upon, which has ſuch rich and verdant Banks, that it merited the Name of *Huet-Fez*, i. e. *The Golden River*.

Bulibilis.

That part of it which was firſt built, and ſtands upon the Eaſt Bank of the River, is the ſame with what *Ptolomy* call'd *Bulibilis*, and plac'd in eight Deg. 15 Min. Long. and 33 Deg. 40 Min. Lat. But that part which was built ſince upon the Weſtern, is the chief Body of the City. It has ſeven Gates, and is divided into twelve Wards, each of which is commanded by one of the principal Citizens, who like a Colonel, takes to ſee them provided with Arms, at the Peoples Charge.

Its Force.

Upon occaſion they can raiſe 30000 Soldiers, among whom the *Mooriſh Spaniards* that retir'd from *Granada* and *Andeloufia*, are much the braveſt, for the reſt mind nothing but their Eaſe and Pleaſure.

Its peculiar Priviledge.

The firſt King of *Fez* vouchſaf'd to the City the diſtinguiſhing Priviledge of not being oblig'd to ſtand out againſt an Enemy, when the King is not able to keep the Field; ſo that they are not ty'd up to a vain and dangerous Fidelity to a Prince that is not able to defend 'em, but may prevent the Ruin of their City by an early Surrender. For this Reaſon, their Kings are always very ſtrong in Horſe, that they may be able to keep the Field upon all Occaſions.

Temples.

This great City has many fine Temples, Colleges, and other Structures. The principal Temple, call'd *Caruvin*, is the richeſt and greateſt in all *Africa*. Within its compaſs, there's a College, where they teach their Theology, and the other Arts and Sciences.

The Great Mufti.

The Rector of this College, is commonly the moſt learned Man in the Country; his Title is *Mufti*, and all other *Alfagui's* receive their Orders from him as from a Biſhop, and depend upon him for the Solution of their Doubts and Difficulties. He us'd to receive the Revenues of the Church, which amount to 80000 Ducats a Year; but the *Xeriff* that now reigns, ſaves him that Trouble, in taking up the whole Revenue, and providing him with what is neceſſary for himſelf and the other Officers of the Temple.

Colleges.

There are ſeveral other Colleges in *Fez*, in which they teach Grammar, Rhetorick, *Mahometan* Theology, Philoſophy, Orthography, Mathematicks, and other Sciences: In former times they taught *Negromancy*, but that has been prohibited theſe ſeveral Years.

Schools.

There are above 200 Schools in the City, where they learn to read, notwithſtanding that the *Arabick* Grammar and Orthography are taught in the Univerſities.

Inns.

Not to mention their Hoſpitals; their Inns for the Accommodation of Strangers, are very large and well built; The beſt of 'em are near the great Temple, where the Chriſtian Merchants and the honeſter ſort of People are lodg'd, but the reſt are Houſes of notorious lewdneſs; their Keepers are diſſolute Ruffians, and entertain Whores, Boys, Robbers, Aſſaſſins, and all the Miſcreants of the City; nay, which is very ſtrange, they are free in thoſe places from the Hands of Juſtice. The Inn-Keepers, who go by the Name of *Bedis*, pay a round Sum every Year to the Governour for his Licence, and as often as the Army marches under the command of the King or the Prince, they are oblig'd to ſend ſome of their number, to attend the Officers of the Retinue, and dreſs their Meat.

Mills.

The River which paſſes thro' *Fez*, has a great many Mills upon it, out of which the King has half a Rial for every Mine (or two Buſhels) of Corn that is ground there.

East Fez.

So much for the Weſtern part of *Fez*; The Eaſtern is chiefly conſiderable for its Manufacture of Linen Cloth, and Silk.

New Fez.

As for *New Fez*, or the King's Court (which may be call'd a third part of this great City) 'twas chriſten'd the *White City* by King *Jacob*, its Founder; tho' now it has aſſum'd the Title of *New Fez*. All the Inhabitants beſides the King and his Court, are Perſons of no great Figure; for thoſe who have either Riches or Quality, are not very fond of being known at Court. The Prince who built this place, has ſpar'd nothing to render it a place of Conveniency and Safety, tho' after all it might eaſily be taken, partly becauſe it lies expos'd to eaſy Attacks in ſeveral places, and partly becauſe it wants Ramparts and Platforms for planting the Artillery, not to mention that it contains ſuch a number of uſeleſs Mouths as would quickly reduce it to famine in caſe of a Siege. At preſent 'tis conſtantly guarded by 2000 Firelocks on Foot, and 1500 Horſe well mounted, and provided with Artillery and Ammunition.

The Suburbs of Old Fez.

The Weſt end of *Old Fez* is join'd by a Suburbs, containing about 300 Families, where Ruffians and Debauchees reſort, and eſcape juſtice; for the Houſes are built juſt upon the brink of the River, and as ſoon as a Magiſtrate or Officer appears, they croſs over and get into a thick Wood on t'other ſide of the River, where 'tis impoſſible to find 'em.

Not far from this place, there's an Apartment of 60 Houſes, with an Hoſpital for leprous Perſons; for Lepers, and indeed all Perſons that are ill of incurable Diſeaſes, are prohibited to walk the Streets; nay, the Lepers are not ſuffer'd to continue at their own Houſes, but forc'd into the Hoſpital.

Above 120 Families of Whites live at a ſmall diſtance from thence upon the ſide of the River, where they have an admiral Green for bleeching Cloth, which is green all the Year round, and waſh'd by a Cryſtal Stream, for the Water of the River is ſo clear, that in Summer one may count the ſmall Flints at the bottom.

Mount Zalag.

At the diſtance of a League from *Fez*, there's a fertile Mountain call'd *Zalag*, which produces the beſt Grapes in all *Africa*. Moſt of the Citizens of *Fez* have their Eſtates upon this Mount, and the Inhabitants are very rich, being for the moſt part Husband-men and Gardeners.

Lampta.

The chief Town is *Lompta*, which ſtands juſt under the Ruines of an ancient City, that ſeems to have been built by the *Romans*, and probably was *Ptolomy's Aebrifis*, which he places in nine Deg. 20 Min. Long. and 34 Deg. 15 Min. Lat.

M. Zarhon.

Darel Hamara.

Zarhon is another large and well peopled Mountain in the Neighbourhood of *Fez*, where we meet with a Town built by the *Romans*, call'd *Darel Hamara*, that ſeems to be *Ptolomy*'s *Septicenna*. In this place (ſays our Author) I ſaw a Lion come into the Town and ſnatch up a little Child; upon which the Child's Siſter, that was not above twelve Years of age, run after him, and beat him till he drop'd the Child; So great is the Influence of Cuſtom as to tame the fierceſt of Creatures, and render Men fearleſs of any Hurt from 'em.

Gemaa.

Upon the Road between *Fez* and *Mequinez*, there was a ſmall Town, call'd by the Inhabitants *Gemaa*, and by *Ptolomy Gontiana*, which was ſtrong both by Art and Nature, but was diſpeopl'd and demoliſh'd by the laſt King, but one of the *Benemerini*'s Family, as being only a Neſt of Robbers and profligate Scoundrels.

M. Tagat.

Tagat, a ſtrong and narrow Mountain, to the Weſt of *Fez*, is the laſt place I ſhall take notice of in this Province. That ſide of it which faces the City of *Fez*, is cover'd with Vines, moſt of which belong to the Citizens of *Fez*.

Finding Treaſure by Magick.

Some poor *Fezzians* come every Winter and dig in this Mountain in queſt of ſome Treaſure that they imagine the *Romans* to have left behind 'em. They alledge, that this Treaſure is enchanted, and cannot be had without Magick, and are great Admirers of ſuch Books as treat upon that Subject. So much for the Territory of *Fez*.

The Province of *Aſgar*.

Aſgar is the third Province of the Kingdom of *Fez*. Its name ſignifies, *Flying the Sea*; for 'tis alledg'd, that 'twas once cover'd with the Sea, which has ſince retir'd. It extends from the River *Burregreg* on the Weſt, to the Mountains of *Errif*, *Zarkon*, and *Zalag*, on the Eaſt, and from the Ocean on the North, to the River of *Bunacer* on the South, being in length 27 Leagues, and in breadth 20. 'Tis the richeſt Province in *Africa* for Corn, Cattle, Wool, Butter and Leather, and provides the City of *Fez* with theſe Commodities. In former times it had ſeveral rich Towns and Villages, which are now demoliſh'd; and is inhabited at preſent by two puiſſant Races of the *Arabians* of *Mauritania Tingitana*, who are the King of *Fez* his Vaſſals, and oblig'd to furniſh him with a certain number of Troops. Their Cavalry is very brave, but if the Campagn be tedious, and plunder ſcarce, they commonly take the firſt opportunity of ſliding home.

El Arays.

El Arays, an ancient Sea-Town in this Province, was very populous before the Chriſtians were poſſeſs'd of *Arzilla*, at which time the Inhabitants deſerted it, till 'twas fortified by *Muley Nacer*, for a Frontier againſt the Chriſtians of *Tangier* and *Arzilla*. It has a good Harbour for ſmall Ships, in which the *Portugueze* Governour of *Arzilla* burnt, and took ſeveral Mooriſh Veſſels, *A. D.* 1504. Moſt of the Inhabitants are Colliers, and the chief Traffick of the place conſiſts in Coals, Cotton and Shads, taken in the River *Liſſe*, upon the Mouth of which the Town ſtands.

Alcaſ. Quivir, or the Great Palace.

Alcaſar-Quivir, another Town in this Province, ſignifying in *Arabick The great Province*, was built by the fourth King of the *Almohada* Family. The occaſion was this: The King loſt his way in hunting among a great many Lakes and Moraſſes, and was forc'd to ſtand under a Tree with his Horſe in his Hand a great part of the Night; at laſt he ſpy'd an Eel Fiſher-man, who ſhelter'd him under his ſhead, and conducted him thro' the Marſhes, to the great danger of his life. Upon this the King ask'd him what reward he would have; The Fiſher-man reply'd, that the moſt agreeable Reward to him, would be a Houſe built in that place, where he and his Family might be lodg'd. Accordingly the King built a rich Palace upon the ſpot, where he came ſometimes to divert himſelf with hunting, and made the poor Man Houſe-keeper. At the ſame time he gave ſuch Priviledges and Immunities to all that would build about it, that in a ſhort time 600 Inhabitants ſettled there, and the Town was fortified. 'Twas call'd *Alcaſar-Quivir*, i. e. *The Great Palace*, to diſtinguiſh it from *Alcaſar-Saguer*, i. e. *The Little Palace*. The Inhabitants are a good humour'd ſort of People, and ſince the Abdication of *Arzilla* by the *Portugueſe*, are poſſeſs'd both of Peace and Riches. The River *Liſſe* runs ſo near the Town, that ſometimes upon an Inundation, it ſweeps away the Houſes.

The Province of *Habat*.

Habat, the fourth Province of the Kingdom of *Fez*, extends from the Fens of *Aſgar* on the Weſt, to the Mountains of *Erriff* on the Eaſt, and from the Ocean on the North, to the River *Erguile* on the South, being in length (*i. e.* from Eaſt to Weſt) 27 Leagues, and in breadth 35. The plain Country lies all upon a level being rich in Corn and Cattle, and water'd with ſeveral great Rivers that ſpring from the Mountains and diſembogue in the Ocean. The *African* Hiſtorians take great notice of this Province, as being the moſt noted Diſtrict of the whole Country, and known formerly by the name of *Tianitena*, where the *Romans* and *Goths* built more Cities than in any other part. But ſince the building of *Fez*, the better ſort of the Inhabitants are remov'd thither, in order to avoid the laſh of the War, the *Portugueſe* having poſſeſs'd themſelves of the principal Towns all along the Coaſt.

Amergue.

At the diſtance of three Leagues from the ſide of *Erguile*, there ſtood a Town call'd by the Inhabitants *Amergue*, and by *Ptolomy*, *Tocoloſia*.

Tenzert.

Tenzert or *Tebart*, another Town in this Province, plac'd by *Ptolomy* under the name of *Triſidis*, in nine Deg. Long. and 33 Deg. 20 Min Lat. was built by the *Romans* upon a riſing Ground. *Aben Gezar* ſays in his Geography that 'twas founded by the Giants, and that in his time, they found in ſome ancient Tombs, ſeveral Skulls that were two Foot every way.

Beſara.

Another Town in this Province was *Bezat*, *Beſia*, or *Beſara*, where the Kings of *Fez* us'd to ſpend the Summer, upon the account of its cool Waters and ſhady Woods, and its lying conveniently for Hunting. But this and the two foregoing Towns were level'd with the Ground by *Caim*, the Schiſmatick Califa, in the Wars with *Idris*.

The Agreeable.

About three Leagues from the Ocean, we meet with an Iſland in the *Liſſe*, call'd by the *Portugueſe*, *The Agreeable*, upon which the King of *Portugal* built a Fort, but was afterwards oblig'd to abandon it, when the King of *Fez*, purſuant to the Advice of a Deſerter, ſtopp'd the courſe of the River, by cutting down the Wood that grew on its Banks, and throwing it in, and turn'd the Water into another Channel that join'd the old one about half a Mile below the Fort.

Arzilla.

Arzilla, a very ancient ſtrong and well ſituated City, belonging to this Province, is placed by *Ptolomy* under the name of *Zilia*, in ſix D. 30 Min. Long. and 35 D. 10 Min. Lat. 'Twas a ſtrong Frontier for the *Portugueſe*, while they kept their Footing in *Africa*.

Tangier.

The next place we come at is the ancient City of *Tangier*, call'd by the *Romans Tingidin*, which was built by the *Romans*, upon the Mouth of the Streights, and afterwards taken by the *Goths*, who annex'd it to the Government of *Ceuta*. It continued in their Hands till the taking of *Arzilla* by the *Mahumetans*. During that ſpace of time, 'twas a ſplendid place, adorn'd with an Univerſity, and reſorted to by a great many Noblemen and Gentlemen. Its Houſes are very fine, and ſeveral Governours of *Mauritania Tingitana*, choſe it for the place of their Reſidence. The adjacent Valleys being admirably well water'd, were imbelliſh'd with Gardens, Vineyards, and Houſes of pleaſure. The Inhabitants being a warlike People, infeſted the Coaſt of *Europe*; upon which account the King of *Portugal* ſent his Son, (*A. D.* 1437) to beſiege it. But the King of *Fez* coming to relieve it, and great numbers of the *Portugueſe* Gentry being loſt in ſeveral Engagements before the Town, the Prince was forc'd to come to a Treaty with the Mooriſh King, and promiſe to ſurrender *Ceuta*, upon the Condition, that the King of *Fez* ſhould releaſe all the Chriſtian Priſoners. At the ſame time he could not avoid the delivering himſelf as an Hoſtage, till the King of *Portugal* ſhould ratify the Treaty. However 'tis ſaid, he privately diſſwaded the King from ratifying it, chooſing rather to die in captivity than to ſee Chriſtendom bereft of the Key of the Streights. For this Reaſon the King of *Fez* us'd him very roughly, upon which he ſicken'd and died. After that *Alfonſus* King of *Portugal* went in Perſon to beſiege *Tangier* (*A. D.* 1463.) and after ſeveral unfortunate Engagements, was forc'd to return without compaſſing his end. But in the Year 1471. the King of *Fez* being diverted by Wars in his own Country, and King *Alfonſus* being Maſter of *Arzilla*, the Citizens of *Tangier* ſaw themſelves expos'd, and dreaded that King *Alfonſus* would take that Opportunity to revenge upon them the many Loſſes and Miſadventures he had ſuffer'd before their City. Upon this Apprehenſion they privately abdicated *Tangier*, and ſo the King of *Portugal* became the peaceable Poſſeſſour of a place that had coſt him ſo much Blood and Pains, for ſo many Years together. From that time the Kings of *Portugal* aſſum'd the Title of Kings, both of this and the other ſide of the Sea; and the important Conqueſt was celebrated by Proceſſions, not only in *Portugal*, but in *Andalouſia*, *Granada*, and *Caſtile*.

Alcaſar-Saguer.

Alcaſar-Saguer, is another Town in this Province, ſtanding upon the narroweſt part of the Streights of *Gibraltar*, and enrich'd with a convenient Harbour. *Jacob Almanſor* built it for the conveniency of croſſing from thence over to *Spain*, which is but three Leagues ſailing. Being provided with Woods all about it, the Inhabitants us'd to fit out Rovers that infeſted the Coaſt of *Europe*, and were very troubleſome to the Ships that paſs'd the Streights. In the Year 1458, *Alphonſus* King of *Portugal* took it after an obſtinate Siege; and tho' the King of *Fez* laid Siege to it twice with great vigour, continued ſtill Maſter of it, till he thought fit upon the conſideration of the Charge and the ſmall Profit that attended ſuch Conqueſts, to quit this and all his other Poſſeſſions in this Country, excepting *Ceuta*, *Tangier*, and *Mazagan*.

Near to this place a River diſcharges it ſelf into the Sea, which *Ptolomy* calls *Valona*, placing the Mouth of it it ſeven Deg. Long. and 35 Deg. 50 Min. Lat.

Ceuta.

As for *Ceuta*, which was once the moſt conſiderable City, not only in this Province, but in all *Mauritania Tingitana*. Some take it to be the ſame with *Ptolomy*'s *Eſſiliſſa*, plac'd by him in ſeven Deg. 30 Min. Long. and 35 Deg. 56 Min. Lat. Hiſtorians ſay, that 'tis the beſt air'd place in all *Africa*, and upon that Conſideration the richeſt Families repair to it from all quarters. There are ſeveral Mountains in this Province, inhabited by *Bereberes* of the Tribe of *Gomera*, who live after the ſame manner with their Neighbours, bating, that they drink Wine, contrary to *Mahomet*'s Law. Theſe are a hardy robuſt ſort of People; but their heavy Taxes keep 'em miſerably poor. They are mortal Enemies to the Chriſtians, and were the beſt Troops that the Kings of *Granada* had in the *Spaniſh* Wars.

The Province of *Errif*.

The next Province in order is that of *Errif*, extending from *Tetuan* on the Weſt, along a Plain, above 50 Leagues long, to the River *Nocer* on the Eaſt, and from the Mediterranean Sea on the North, to the Province of *Fez* on the South. This Country is inhabited by *Bereberes*, who are very proud of their Valour, and enrich'd with fine Gardens, Olives, and all ſorts of Fruit. There are but ſix Towns in the whole Province; for moſt of the Inhabitants live in ſmall Villages and Hamlets ſcatter'd here and there, among the Rocks and Mountains, which are unſufferably cold, in ſo much, that both the Men and Women that live there, have great ſwoln Chops occaſion'd by the cold. Their Houſes are built of Earth, and cover'd with the Leaves or Rinds of Trees.

Targat.

Targat is one of the Cities of this Province, which *Ptolomy* call'd *Tagat*; and which is environ'd by rugged cold Mountains, and Forreſts repleniſh'd with Apes. The Inhabitants of this place are great Drunkards and very brutiſh. They live by fiſhing, and ſome ſay they have Fiſh enough to ſupply half the Kingdom of *Fez*. It ſtands upon the Mediterranean Shore, but has no Harbour, the whole Coaſt being nothing but an open Road.

Vellez de Gomera.

The next Town is *Vellez de Gomera*, inhabited by a drunken barbarous Crew, who being well accommodated with Wood and a good Harbour, us'd to fit out Galleys to infeſt the Coaſt of *Europe*.

Pegnon de Velez.

To prevent their Excurſions, the *Spaniards* built a Fort call'd *Pegnon de Velez*, upon a Rock in the Sea, within 700 Paces of the Shore. This Fort was afterwards betray'd into the Hands of the *Mores*, who continued in Poſſeſſion of it till the *Turks* maſter'd it, at the ſame time that *Salarraes*, Governour of *Algiers* poſſeſs'd himſelf of *Fez*. After that, the *Spaniards* attempted to retake it, and after one or two ſucceſleſs Expeditions, took it at laſt, in the Year 1564; ſo that 'tis now in the *Spaniſh* Hands, and defended by a good Garriſon, who are well provided with Artillery and Ammunition.

Tellez.

The other Towns in this Province are *Tellez*, inhabited by poor Fiſher-men, who fly to the Mountains upon the leaſt apprehenſion of an Invaſion.

Tagaza.

Tagaza ſtanding upon a River of the ſame name, the Mouth of which *Ptolomy* places under the name of *Talud*, in eight Deg. 30 Min. Long. and 35 Deg. Lat.

Gebha.

Cape of Olives.

Gebha, a ſmall wall'd Town upon the Mediterranean Shore, near to which the Cape of *Olives*, ſo call'd from the multitude of wild Olives that grow upon it, and plac'd by *Ptolomy* in nine Deg. Long. and 34 Deg. 56 Min. Lat.

Megeyma.

And *Megeyma* or *Mezemme*, call'd by *Ptolomy Acrat*. There are many Mountains in this Country, the Inhabitants of which are all *Bereberes*, of the Tribe of *Gomera*.

Mount *Chechuan.*

The moſt remarkable of theſe Mountains is that call'd *Chechuan* or *Seſavon*, the pleaſanteſt Mountain in all *Africa*, and adorn'd with a Town of the ſame name, which is ſurrounded with ſeveral Springs, Gardens, and fertile Fields. This place is famous for the Exploits of *Ali Barrax*, who by his Valour, render'd himſelf Maſter of this and the neighbouring Mountains, and bore the like of King of *Cherchuan*. He made ſeveral Inroads upon the *Portugueſe* Frontiers, and having obtain'd frequent Victories, lodg'd all the Spoil in the Town of *Chechuan*. In his time the People (who are of a warlike and brave Temper) were exempted from Taxes; and he was confirm'd in the Poſſeſſion of that State, by *Abu Sayd* King of *Fez*; but his Poſterity was confirm'd by *Abdala* to *Morocco*, where they live miſerably, and the Seignory was beſtow'd upon the Grandſon of *Mumen Belelche*, who ſtill poſſeſſes it under the Title of *Xeriff*, and obliges the People to pay Tribute.

The Province of *Garet.*

Garet, the ſixth Province of the Kingdom of *Fez*, are the Province of *Erriff* and the River *Melula* on the Weſt, the Kingdom of *Tremeſen*, and the ſame River on the Eaſt (This River ſevers *Mauritania Cæſariana* from *Tingitana*) the Mediterranean on the North, and the Mountains in the Deſarts of *Numidia* on the South. 'Tis a dry barren Country, not unlike the Deſarts of *Libya Interior*.

Melila.

It has but few Towns, the moſt remarkable of which is *Melila* or *Milila*, taking its name from the plenty of Honey and Wax. It ſtands upon a Plain at the bottom of a Gulph, being commanded by a Mountain on its Weſt ſide, and was call'd *Ruſſadira* by *Ptolomy*, who allots it 10 Deg. 10 Min. Long. and 34 Deg. 45 Min. Lat. It has large Territories and very conſiderable Iron Mines, and was once a very rich and populous City. 'Twas render'd famous by the *Romans*, while they were Maſters of *Mauritania Tingitana*. After their departure, the *Goths* poſſeſs'd it, till the arrival of the *Arabians*, who enlarg'd its former Splendour, by ſettling a great many Merchants and Trades-men in the place. Many Years after the Schiſmatick *Califa* of *Carouan* took it by Capitulation. And in the Year 1482, His Catholick Majeſty perceiving that the Citizens fitted out Privateers and Galleys that infeſted the Coaſt of *Europe*, ſent the Duke of *Medina Sidonia* to take poſſeſſion of the Town, which accordingly he did, and built a Cittadel to defend it. It continued in the *Spaniſh* Hands till of late, that it return'd to the King of *Fez*.

About half a League off to the Eaſt of *Melila*, there's a Lake ſeven Leagues round, where 1000 Galleys may ride very ſafely. About 18 Years ago (ſays our Author) there was a Paſſage made between this Lake and the Sea, at the Foot of a Rock that makes a Barr, which in ſome places is pretty broad. When the Tide flows, ſeveral Galleys abreaſt may enter here; but when 'tis low Water they muſt enter one by one, and be conducted by an experienc'd Pilot. When the Eaſt or North Wind blows hard, they ſometimes riſe above the Bank, and leaves Water in ſome hollow places upon the top of the Rock, of which the Chriſtians are wont to make Salt Pits.

About half a League from the Lake there's a place of Strength call'd *Zangaran*, where the preſent *Xeriff* keeps three or four hundred Firelocks to ſecure the *Arabians* that feed their Flocks along the Lake, from the Invaſion of the Chriſtians, and from the Turkiſh Pyrats.

Caſaſa.

The next Town in this Province is *Caſaſa*, built upon a Cape of the ſame Name, which *Ptolomy* calls *Metagonita*, and places in 13 Deg. 30 Min. Long. and 34 Deg. 56 Min. Lat. It has a good Habour, where the *Venetian* Galleys us'd to touch; and the Merchants of this place carry'd on ſo great a Trade, that the King of *Fez* was conſiderably enrich'd by its Cuſtoms. 'Twas taken by the *Spaniards*, and afterwards betray'd into the Hands of the *Mores*, by three of the Garriſon that the Governour had diſoblig'd. Upon the News of which, the Governour of *Melila* ſent ſome Troops by Sea to recover it, but the *Mores* having put the *Spaniſh* Gariſon to the Sword, put on their Coats, and ſo march'd out in diſguiſe to meet the Recruits, who taking them for *Spaniards*, came on ſhore, and were all cut to pieces. At preſent 'tis level'd with the Ground, and there remains nothing but a ſtrong Caſtle ſtanding upon a Rock, that cannot be undermin'd.

Tezote, a ſmall Town, ſtanding upon the point of a ſteep Rock, about three Leagues from *Melila*, is now the head Town of the Province, and guarded by 300 Foot and 60 Horſe, under the command of a Governour; for if the *Turks* ſhould take it, they would maſter the whole Province.

The Province of *Cutz.*

The laſt or moſt eaſtern Province of the Kingdom of *Fez*, is that call'd *Cutz*, i. e. *Much*. It contains a larger Tract of Ground than any two Provinces in the Kingdom, and perhaps derives its Name from thence, being 80 Leagues in length from the River *Gureygure* to that of *Eſaga*; for it includes all the Mountains of *Great Atlas* that lie between theſe Rivers, together with a great part of the Plains of *Numidia*, and the Mountains that border upon *Libya Interior*. Some ſay this Province was divided into three parts, which were confer'd by the firſt Kings of *Fez*, upon three Branches of the *Benemerini's* that were their Allies, and ſince that, have defended themſelves againſt the *Turks* and the Power of the *Xeriffs*. However 'tis certain, that of late they have made themſelves Allies, or rather Vaſſals to the Kings of *Fez*, who has a particular reſpect for 'em, upon the account of their brave Nobility, that has all along kept up the Independency of the Province, in oppoſition to the Lords of *Tremeſen*. The whole Province lies among Mountains, and does not touch upon the Sea.

Teurert.

It contains ſeveral Cities, particularly *Teurert*, an ancient Town built by the ancient *Africans* on the top of a Mountain, ſurrounded with fertile Fields, which was formerly one of the Principal Cities in *Mauritania*, and receiv'd Tribute from all the *Arabians* in the adjacent Deſarts, but is ſince diſpeopled by the Wars of *Tremeſen*.

Hadagia.

Hadagia, a large City, ſtanding upon an Iſland, made by the Rivers *Mululo* and *Mulucan*, which was deſerted by the Inhabitants, when oppreſs'd by the *Mahometan Arabians* on one hand, and the Armies of *Fez* and *Tremeſen* on the other.

Gafaſa.

And *Garcis* or *Gafala*, a Town ſtanding upon a Rock, in which the *Benemerini's* lodg'd their Magazines before their Acceſſion to the Imperial Crown, and which they have ſince ruin'd upon a Revolt of the Citizens. *Ptolomy* places the laſt in the Maps of *Libya*, in 11 Deg. Long. and 32 Deg. 40 Min. Lat.

Dubudu.

Dubudu, a great ſtrong City in this Province, was built by the *Benemerini's*, upon the ſide of a high Mountain, being only acceſſable by a ſteep and difficult Road; and was govern'd by the Deſcendants of that Family, till 1563, at which time the *Xeriff* that now reigns, poſſeſs'd himſelf of it.

Tezza.

The chief City of this Province is *Tezza*, which *Ptolomy* calls *Teyſor*, allotting it nine Deg. Long. and 33 Deg. 10 Min. Lat. Not to mention *Soffroy*, which is enrich'd by its Oil, and *Umen Genuabo*, which was built for the Security of the Road, from *Fez* to *Numidia*.

The remaining Towns in this Country are *Mezdaga*, call'd by *Plini Mululeca*, and by *Ptolomy Molocat*. *Benibuhalul*, call'd by *Ptolomy Ceuta*; and *Mehidia*, founded by *Mehedi*, a famous *Mahometan* Preacher. As for the Mountains in this Province, they are all inhabited by the *Zeneta's* who have all along wag'd War with the *Turks* of *Tremeſen*.

CHAP. IV.

Containing John Leo's *Deſcription of the Kingdom of* Tremeſen.

The Limits of *Tremeſen.*

THE Limits of *Tremeſen*, call'd by the *Romans Cæſaria*, are, the Rivers *Zha* and *Mulvia* on the Weſt, the Great River on the Eaſt, the Deſart of *Numidia* on the South, and the Mediterranean on the North; being 380 Miles long, and 25 broad. It was poſſeſs'd for ſome time by the *Romans*, but afterwards return'd to its ancient Sovereigns, call'd *Bien Habduguad*, who continued in poſſeſſion of it for 300 Years, after which time the Poſterity of *Zeyen* injoy'd it for almoſt 380 Years, but not without frequent Moleſtations from the King's of *Fez* and *Tunis*. Its lying ſo near the *Numidian* Deſarts, exposes it to the Inroads of the *Arabians*; and tho' the Kings of *Tremeſen* have frequently endeavour'd by great Gifts, to procure the Friendſhip of the *Numidians*, yet they could never ſatisfie the *Numidian* Avarice. Tho' 'tis not ſafe travelling thro' this Country, yet a great many Merchants reſide in it, either becauſe 'tis the Road to *Negroland*, or becauſe it joins to *Numidia*.

Its former and preſent State.

It has two famous Ports, viz. *Oran* and *Merſalcabir*, which were much frequented by the *Venetians* and the *Genouſe*, and which were both taken by *Ferdinend* King of *Spain*. This provok'd the Inhabitants to dethrone *Abuchemmeu*, who reign'd then, and prefer another, who was afterwards miſerably ſlain by *Barbaroſſa* the *Turk*, that conquer'd the whole Kingdom. However *Abbuchemmu* receiving Succours from the Emperour *Charles* V. diſpoſſeſs'd *Barbaroſſa*, and retriev'd his Crown, allowing liberal Rewards to the *Spaniſh* Officers, and a large yearly Revenue to the Emperor as long as he liv'd. But *Habdulla* his Brother and Succeſſour, confiding in *Solyman* the *Turk*, refus'd to pay the Emperours Tribute, and continues to this Day (*A. D.* 1526.) in poſſeſſion of the Kingdom. The Sea-Coaſt of this Country is in ſome meaſure fertile, but the Southern and greater part of it is dry, barren and unmanur'd. The Deſart of *Angad*, its Weſtern Frontier, is eighty Miles long and five broad, being well ſtock'd with Roes, Deer, and Oſtriches.

Ned Roma.

To give ſome account of the Towns and remarkable places in this Country. *Ned Roma* (i. e. *like Rome*) an ancient City, built by the *Romans* while they were Maſters of *Africa*, ſtands upon a large Plain, about 12 Miles from the Mediterranean Sea. Hiſtorians ſay it reſembled *Rome* every way, and from thence deriv'd its Name: But at this Day the Ruines of the *Roman* Buildings are ſcarce to be ſeen; the Wall indeed is yet ſtanding, and ſome places of the Town are lately rebuilt, there being in it a tollerable number of Inhabitants, particularly Weavers of Cotton-Cloth, who are exempted from all Taxes. 'Tis ſurrounded with fertile Fields, and a great many Gardens planted with the Trees, that bear the *Carobs*, which is a Fruit not unlike *Caſſia Lignea*, that the Inhabitants of the Suburbs feed upon.

The City of *Tremeſen.*

Suffers a ſeven Years Siege.

Their King taken Priſoner.

The great City of *Tremeſen*, the Seat of the Kings, was once very regularly govern'd. It ſtood out a ſeven Years Siege carry'd on by *Joſeph* King of *Fez*. In the time of that Siege, the Citizens being reduc'd to the greateſt Extremities by Famine, petition'd the King to ſurrender; but the King ſhewing them what his own Fare was, *viz*. boil'd Horſe-fleſh and Barly, they were ſatisfied, and the next Day reſolved to ſally out upon the Enemy, accounting it more honourable to die in battle for the defence of their Country, than to live ſuch a miſerable life. In the mean time they receiv'd the unexpected News of *Joſeph* his being kill'd by one of his own Men; upon which they march'd with greater courage againſt the Enemy, who was then in confuſion, and defeated 'em. About 40 Years after, *Abulheſen* King of *Fez* built a Town within two Miles of the Weſt end of *Tremeſen*, and after a Siege of 30 Months, took it, and carried their King to *Fez*, where his Head was cut off, and his Carcaſe thrown upon a Dunghil. But after the Declenſion of the *Marin* Family, *Tremeſen* was recruited, and the number of its People enlarg'd to 12000 Families. The Buildings of this place are not ſo ſtately as thoſe of *Fez*, but every Trade has a ſeparate place allotted to it as well as at *Fez*. It has many fine Temples, to which *Mahometan* Prieſts and Preachers belong; beſides five very ſumptuous Colleges, a great many Inns, and ſeveral handſome Baths, tho' indeed Water is not ſo plentiful here as at *Fez*. There are many Conduits in it, but their Fountains, which are not far from the City Walls, may eaſily be ſtop'd by an Enemy.

Jews in it.

A great part of the City is inhabited by *Jews*, diſtinguiſh'd from the other Citizens by Turbants upon their Heads, who were formerly very rich, but now are extream poor, by reaſon of their being robb'd of all they had upon the death of King *Abubaddilla*, in the 923 Year of the *Hegeira*. The City Wall is very high and ſtrong, having five great Gates upon it, with a Guard of Soldiers and Cuſtom Houſe Officers at each Gate.

The King's Palace.

The King's Palace, ſtanding upon the South ſide of the City, has two Gates, one leading to the Fields, the other to the City, at which the Captain of the Guard ſtands. This Palace, which is very large, is ſurrounded with high Walls, and beautified with Fountains and pleaſant Gardens. The South part of the City is inhabited by Jews, Lawyers, and Notaries, beſides a great many Students and Profeſſours, which have Allowances from the five Colleges.

Four ſorts of Citizens.

In fine, the Citizens are divided into four Claſſes, *viz*. The Trades-men, who live a ſecure, quiet, and merry life; The Merchants, who are juſt, generous and publick ſpirited

Men, and very genteel in their Cloaths, and trade for the moſt part with the Negroes: The Souldiers, who are perſonable brave Fellows, and honourably paid; for they have three ! *Italian* Ducats *per* Month; And Scholars, who live meanly while they are Students, but after the obtaining a Doctor's Degree, are preferr'd to be either Profeſſours, Notaries, or Prieſts. The adjacent Country is beautified with charming Seats, where the Citizens retire in Summer. There they enjoy all the Pleaſures that fine Paſtures, clean Fountains, and all ſorts of Fruit can give. Almonds, Peaches, Melons, and Citrons, are very plentiful. As for the Figs, they dry 'em in the Sun, and keep 'em till Winter.

The magnificence of the King's Palace.

The King of this Country is not to be ſeen or ſpoken with by any, but his principal Noble-Men, who ſerve in Offices proportion'd to their Dignity. The King's Lieutenant is the principal Officer, who levies the King's Armies, and ſometimes heads 'em. The ſecond is chief Secretary, the next is the High Treaſurer, then the Almoner, then the Captain of the King's Guard, who draws up the Guard at the Palace Gate, as often as the Noble-men are admitted to his Preſence. The meaner Officers are, the Maſter of the King's Stables, the Overſeer of his Saddles and Stirrups, and his Chamberlain, who never attends but when the King gives Audience to any of his Courtiers, for at other times his Office is perform'd by the King's Wives, together with ſome Chriſtian Captives and Eunuchs. Sometimes the King rides out upon a ſtately Horſe, with coſtly Furniture; but, unleſs it be in time of War, he has not above 1000 Men with him. Tho' his Dominions are but ſorrily peopled, yet he reaps great Profit of the Goods of that paſs thro' his Country, from *Europe* to *Æthiopia*.

Hubbed.

The next Town is *Hubbed*, where the numerous Inhabitants are for the moſt part Cloath Dyers. One *Sidi Bu Mediam*, a Holy Man, to whom they pay Divine Reverence, was buried here, and has a Monument over him, to which they aſcend by Steps. One of the Kings of *Fez*, built in this place a ſtately College and a Hoſpital, for the entertainment of Strangers.

Baltah. A famous Hermite.

The Plain of *Baltha*, which lies likewiſe in this Country, was inhabited till lately, that a famous *Hermite* ſettled there, who pays no Taxes, and yet has in his Poſſeſſion 500 Horſe, 10000 ſmall Cattle, 2000 Oxen, and reaps every Year 8000 Buſhels of Corn, beſides four or five thouſand Ducats, that are ſent him every Year from divers parts of the World. He maintains 500 Diſciples at his own Charge, who have nothing to do but to read a few Prayers a day; for which Reaſon Diſciples come to him from all parts of *Africa* and *Aſia*, and return home after they are inſtructed in ſome Ceremonies. He has about 100 Tents ready pitch'd, ſome of which are deſign'd for Strangers, others for Shepherds, and the reſt for his own Family; for he has four Wives, and a great many Women Slaves that go very fine; and in like manner his Sons have their Wives and Families; ſo that the whole Family may amount to 500 Perſons. He is much reſpected by the King of *Tremeſen*, and by the *Arabians*, and is a great Admirer of Magick, tho' he does not practice that Art.

Oran.

The Town of *Oran* was built many Years ago by the *Africans*, upon the Mediterranean Coaſt, about 140 Miles off *Tremeſen*. 'Tis grac'd with many ſumptuous Temples, Colleges, Hoſpitals, Baths and Inns; being ſurrounded with high impregnable Walls, and having a noble Plain on one ſide, and Mountains on the other. Moſt of the Inhabitants were Weavers, and the reſt liv'd upon their Eſtates, being a courteous hoſpitable ſort of People. They make all their Bread of Barly, becauſe the adjacent Country produces but little Corn. In former times it was much frequented by the Merchants of *Catalonia* and *Genoua*. The Citizens were always quarrelling with the King of *Tremeſen*, and would not accept of any Governour, for they choſe one of their own Burgo-maſters, to be the chief Judge of Civil and Criminal Cauſes. The Merchants of the Town fitted upon their own Charge, out ſeveral Brigandines, which committed many Pyracies upon the Coaſt of *Catalonia*, *Genoua*, *Majorca*, and *Minorca*; ſo that *Oran* was crowded with Chriſtian Captives.

Taken by Spain.

In order to ſet theſe Captives at liberty, *Ferdinand* King of *Spain* laid ſiege to the Town, and while the *Mores* ſallied out upon him and left the Town deſtitute, his Men got into it, and put moſt of 'em to the Sword, in the 916 Year of the *Hegeira*.

Merſalcabir, a great Harbour.

The next Town we meet with, is *Merſalcabir*, i. e. *A Great Haven*, where an infinity of Ships may ride ſafely in the greateſt Storm; perhaps there is not ſuch another Harbour in the World. Upon the Apprehenſion of a Storm, the *Venetian* Merchants us'd always to put in here, and ſend their Goods to *Oran* in other Veſſels. The *Spaniards* maſter'd it at length as well as *Oran*.

Breſch.

Another Town call'd *Breſch*, is well ſtock'd with Inhabitants, who are moſtly Weavers, and commonly paint a black Croſs upon their Cheeks, and two upon the Palms of their Hands; which as I ſaid before, is a Cuſtom as ancient as the Gothiſh Invaſion.

Serſel.

Serſel, built by the *Romans* upon the Mediterranean Coaſt, was afterwards taken by the *Goths*, and at laſt by the *Mahometans*. Its Wall which is very high and ſtrong, is eight Miles round. The *Romans* built a magnificent Temple in that part of it which faces the Mediterranean, the inſide of it being all Marble.

Algiers.

Became tributary to Spain.

The City of *Geſeir*, i. e. *an Iſland*, ſo call'd from its nearneſs to the Iſles of *Majorca*, *Minorca*, and *Jeniza*, was founded by the *African* Family of *Meſgano*, whence in former times 'twas call'd *Meſgana*; the *Spaniards* call it *Algier*. It contains 4000 Families, every Trade living apart from the other. It has noble ſtrong Walls and ſumptuous Buildings. The Temples, Baths and Inns are all very fine; but the nobleſt Structure of all is the Temple upon the Shore. The Waves of the Sea beat upon a part of the Town Wall, upon which there's a very pleaſant Walk. The Gardens in the Suburbs are clad with all ſorts of Fruit. The Water they uſe is deriv'd from a River that runs by the Eaſt end of the Town, and has a great many Mills upon it. This City has a glorious Proſpect of plains about it, eſpecially of one call'd *Meteggeia*, which is 45 Miles long and almoſt 30 broad, and abounds with all ſorts of Grain. 'Twas many Years ſubject to the King of *Tremeſen*; but the Citizens perceiving that the King was not able to defend 'em, and that the King of *Bugia*, who lay nearer them, was more capable of doing 'em either an Injury or a Kindneſs, offer'd him a voluntary Tribute. Some Years after they began to commit Pyracies upon the adjacent Iſlands in the Mediterranean; upon which *Ferdinand* King of *Spain* fitted out a Fleet, and built a Fort upon a Rock within Gun-ſhot of the City. Then the *Algerines* ſent an Embaſſy to the King, and obtain'd a ten Years truce upon the Condition of paying him a yearly Tribute. But not long after, *Barbaroſſa* the *Turk* being oblig'd to break up a Siege of *Bugia*, becauſe the approaching Seaſon of Sowing made all the Husband-men of his Army deſert him, ſet on fire 12 Galleys with his own Hands, that lay in the River but three Miles from *Bugia*, and retir'd to the Caſtle of *Gegel*, in their Neighbourhood; And it happen'd at the ſame time that *Ferdinand* died. Upon this, the *Algerines* perceiving *Barbaroſſa* to be a brave General, and an Enemy to the Chriſtians, refus'd to pay any more tribute, and choſe *Barbaroſſa* to be Captain General of all their Forces. *Barbaroſſa* being thus entruſted, privately murder'd the Governour of the City, and uſurp'd the whole Government himſelf. Some time after, the Emperour *Charles* V. ſent two Armies to take *Algiers*, the firſt of which was deſtroy'd upon the Plain of *Algiers*, and the ſecond far'd but little better. But ſince that *Barbaroſſa* was kill'd at *Tremezen*, and his Brother *Cairadin* ſucceeded to the Government of *Algiers*.

Temendfuſt.

The *Algerine* Ships ride ſafeſt in the Harbour of *Temendfuſt*, that being a commodious Haven for them. The Town of that Name was deſtroy'd by the *Goths*, and the greateſt part of the Wall of *Algiers*, was built with the Stone which came from the Wall of that Town.

Medua.

As for *Medua*, 'tis inhabited by a People of no learning, who give a very honourable Reception to any learned Man that comes among 'em, and oblige him to decide all their Differences. In that Town, ſays our Author, I got above 200 Ducats in the ſpace of two Months, and was ſo charm'd with the pleaſantneſs of the place, that if my Buſineſs had not call'd me away, I had continued there all my life time.

Additions to CHAP. IV.

Taken from Marmol.

The Limits of *Tremeſen.*

TRemeſen the third Kingdom of *Barbary*, is divided into four Provinces, namely, *Tremeſen*, *Tenez*, *Algiers*, which is the proper *Mauritania Cæſariana*, and *Bugia*, which ſome throw in to the Kingdom of *Tunis*.

The nature of the Country.

Moſt of the Country is dry, barren and Mountainous. The City of *Tremeſen* is encompaſs'd with wide Deſarts, only on the North ſide, or between the Town and the Sea, there are good Fields which are fertile in Corn, Paſture and Fruits. The Weſt of all the four Provinces is crouded with Mountains abounding in Corn and Cattle, and inhabited by a valiant People.

A Character of the Inhabitants.

The Cities of the Kingdom of *Tremeſen* are few in number, but well ſituated; and the Citizens live very honourably, having a great trade with *Guinea*, *Numidia*, and other places. The *Arabians* in the Deſarts are very numerous, and care but little for the Kings of *Tremeſen*, for they retire at pleaſure to the *Numidian* Deſarts, where the King cannot purſue 'em: So that they live independantly, and receive a Penſion from the King for keeping the Country in peace: and when they have a mind to't, they make an Inſurrection, and ſide with the Party that bids higheſt. The Inhabitants of the Mountains are Men of Bravery; their Arms, Habit, and way of living, are better than thoſe of *Mauritania Tingitana*; they are more acquainted with Muſquets, and leſs inveterate againſt the Chriſtians, with whom they have more commerce; neither are they ſo bigoted and ill natur'd as the Mountaneers of *Morocco*. Theſe Provinces were always plagu'd by the *Arabians* of the Deſarts, and the Kings of *Tunis* and *Fez*; but at this Day almoſt all of 'em are ſubject to the *Turks*.

The Province of *Tremeſen.* *Angad* a Deſart.

To begin with the Province of *Tremeſen*; Its Weſtern Frontier is a large barren Deſart call'd *Angad*, which is 28 Leagues long and 18 broad. This Deſart (being the Road from *Tremeſen* to *Fez*) is frequented by ſome vagabond *Arabian* Robbers, and whoever paſſes that Road, muſt bribe the Captain of the firſt Gang he meets with, who will give him a Spear with a ſmall Standard for a Paſport. In Summer the King of *Tremeſen* hires ſome of 'em to keep the Road clear; but in Winter they retire with their Flocks to *Numidia*, and go to gather Dates in *Zahara*, upon which the other Inhabitants of the Deſarts have an uncontroul'd range, and render the Paſſage very dangerous.

Zezil.

At one ſide of this Deſart, there's a Town call'd *Zezil*, or *Izli*, which is ſaid to be built by the *Romans*, and which *Ptolomy* places under the Name of *Giva*, in 14 D. 30 Min. Long. and 32 Deg. 30 Min. Lat. *Joſeph* the firſt Prince of the *Benemerini* Line, raz'd and diſpeopled it; after which, 'twas repeopled by ſome *Moravites*, to whom, both the King of *Fez* and the *Arabians* are ſo kind, as to demand no Contribution; but after all, the Country is ſo very barren, that they have but a miſerable life.

Ned Roma.

Ned Roma, an ancient City in this Province, is ſaid to be the ancient *Salema*, to which *Ptolomy* allots 12 Deg. 10 Min. Long. and 33 Deg. 20 Min. Lat.

One.

One was a Sea-port in this Province, where the *Venetian* Merchants us'd to touch as they went to *Tremeſen*; but in the Year 1533, the Emperour *Charles* V. laid it in Aſhes for harbouring the *Corſairs* that infeſted the *Spaniſh* Coaſt. It ſtood in the Neighbourhood of a Mountain that affords good Iron Mines.

Cape *One.*

The Cape of this Mountain, which goes now by the name of Cape *One*, was by *Ptolomy* call'd the *Great Cape*, and plac'd in eleven Deg. 30 Min. Long. and 35 Deg. Lat.

Areſgol.

Areſgol, another Sea-port, was once the Metropolitan of *Tremeſen*, being built upon a high Rock, almoſt ſurrounded with the Sea. *Ptolomy* calls it *Siga Colonia*, and moſt Authors agree that this is the ancient *Cirta*, ſo often mention'd in the *Roman* Hiſtory. 'Twas firſt demoliſh'd by the Schiſmatick *Califa* of *Carnan*; after which, the brave *Almanſor* rebuilt it as a convenient Poſt for the paſſage of his Armies. When the *Almoravides* came to be great both in *Africa* and *Spain*, they laid it in rubbiſh again; after which the *Almohades* rebuilt it, and at laſt the *Benemerini's* compleated its Ruin.

Tremeſen.

The Ruins of *Algeroſſe* gave riſe to the great City of *Tremeſen*, call'd by *Ptolomy Tenriſi*, and by the Natives *Telimicen*; for before the fall of *Areſgol*, 'twas only a ſort of a Fortreſs to oppoſe the Inhabitants of the Deſarts. 'Tis pleaſantly ſituated upon a noble Plain, and its Streets and Houſes are very regularly rang'd; for which reaſon the Kings of *Tremeſen* pitch'd upon it for a place of their Reſidence. The Government of this City is much of a piece with that of *Fez*. The Merchants trade chiefly to *Guinea*, from whence they import *Tibar* Gold, Ambergrice, Muſk, Civet, and other Commodities, and commonly get Eſtates in two or three Voyages. The Trades-men make rich Tapeſtry, Caſſocks, Jackets and Mantles, ſome of which are ſo fine, that they do not weigh above ten Ounces; beſides the beſt Harneſs and Furniture for Horſes that *Africa* affords: By this means they earn a very handſome Livelyhood. Their Habit, Diet, Feſtivals, and other Cuſtoms, are the ſame with thoſe of *Fez*. In former times the Kings of this Country liv'd very magnificently, and were the ancienteſt and moſt conſiderable Princes in all *Africa*. They never expos'd themſelves to publick view but on *Fridays*, when they went to the Temples.

The King of *Tremeſen* his Revenues.

They never kept a ſtanding Army but in time of War, for their Revenues were ſo ſmall, that three Years Incomes would not maintain one Year's War. The Cuſtoms were the chiefeſt Article of the Revenue, which they ſcrew'd beyond the Precepts of their Religion; for whereas the firſt *Califa's* demanded only two ½ *per Cent.* upon all Goods, and ten *per Cent.* if they were Jews or Chriſtians, theſe Princes pleading Poverty, and the Neceſſity of maintaining a War with the Chriſtians, laid ſeveral Impoſts upon the Import and Export of Goods. While the *Venetian Galeaſſes* us'd to unload at *Oran*, their Revenue amounted to above 600000 Crowns a year, one half of which was imploy'd in paying the Troops, and the other in defraying the Charges of the King's Houſhold; and the Surpluſage was laid up to ſupply the occaſional Neceſſities of War. But of late the Revenues is wonderfully encreas'd; for tho' the Cuſtoms of *Oran* are ſunk, thoſe of *Algiers* have roſe ſo prodigiouſly, that the Incoms of that Port alone, amount to above a Million of Gold every Year; for all the rich Commodities of *Barbary*, *Numidia*, *Libya* and *Negroland*, are imported thither by land upon Camels; and the Harbour is always crouded with European Veſſels brought in by the *Corſairs*.

The Revolutions of *Tremeſen.*

The Kings of this Country pay'd Homage to the Emperour *Charles* V. till King *Abdala* being over perſwaded by the *Turk* and ſome *Califa's*, diſcontinued the Payment of the uſual Tribute. After the death of *Abdala*, his youngeſt Son *Hamet* being declar'd King by the People, the eldeſt implor'd the Emperour's aid, in reſtoring him to the Throne of his Anceſtors, offering the ſame Terms of Vaſſalage as were before. Accordingly the Emperour accompliſh'd his Reſtoration; but the Inhabitants of the City were ſo diſoblig'd by the Ravages of the *Spaniards*, that they took occaſion to ſhut the Gates upon him, after he had march'd out to meet his younger Brother, who approach'd at the Head of an Army: Thereupon *Hamet* was again declar'd King, who refus'd to pay tribute to the Emperour. But in the Year 1546, the *Turks* of *Algiers* having taken poſſeſſion of *Tremeſen*, the King was forc'd to ask Succours of the Emperour, which he obtain'd after giving up his two Daughters as Hoſtages for the Performance of the Condition. The *Spaniſh* Succours having diſlodg'd the *Turks*, *Muley Hamet* return'd to his Throne, and enjoy'd it peaceably. After his Death *Muley Haſcen* his Brother, was ſet upon the Throne by the Aſſiſtance of *Salbarraes*, Governour of *Algiers*, who had ſtipulated, that all the Forts in the Country ſhould be put into his Hands. But in four Years time the Inſolence of the *Turks* mov'd *Muley Haſcen* to beg the Emperour to diſlodge 'em; upon which, the *Turks* perceiving his Deſign, rais'd the *Arabians*, and the Inhabitants againſt him, and expell'd him the Kingdom. Since that time the *Turks* have continued Maſters of this Country.

Tremeſen ſubject to the *Turks.*

To return to the Cities and Towns in the Province of *Tremeſen*. Here we meet with *Hilbet*, call'd by *Ptolomy Emmeniaria*, and built by the *Romans*.

Tefezara, to which *Ptolomy* gives the Name of *Eſtazila*.

Beni-Araz, which is the ſame with *Ptolomy*'s *Villebourgh*.

Tezela, known formerly by the Name of *Ariana*.

Agobel, which is *Ptolomy*'s *Victoria*.

Miſtagna.

Miſtagan, an ancient Sea-port Town, ſtanding upon the ſide of a Hill, which Count *d' Alcandete*, the *Spaniſh* General attack'd thrice, as being the Key of the Country, and in the laſt Attack loſt his life; and *Arzel* alias *Arcenaria Colonia*, built by the *Romans*.

Oran.

Oran, one of the ancienteſt and richeſt Cities in all *Mauritania Cæſariana*, ſtands upon the Shore. 'Twas call'd by the *Africans Guabaran*, and by the *Romans Unica Colonia*, lying in 12 Deg. 30 Min. Long and 34 Deg. Lat. Since the *Spaniards* took it, they always repuls'd the *Turks*, who attack'd it ſeveral times, and have made it a very uſeful Frontier.

The Province of *Tenez.*

The ſecond Province of the Kingdom of *Tremeſen*, is that of *Tenez*. Its Limits are the Province of *Temeſen* on the Weſt, that of *Algiers* on the Eaſt, *Mount Atlas* on the South, and the Mediterranean Sea on the North. The whole Country is well ſtock'd with Corn and Cattle.

The City of *Tenez.*

The Capital City bears the Name of the Province, and ſtands upon the ſide of a Mountain, at the diſtance of half a League from the Sea, being half way between *Oran* and *Algiers*. The Inhabitants are a ruſtick groſs ſort of People; however they ſupply *Algiers* and other places with Corn, Barley, Wax, Honey, &c. When *Mahumet Benizeyen*, King of *Tremeſen*, his eldeſt Son ſucceeded to the Crown, and the two younger Brethren rebelling againſt him, the youngeſt poſſeſs'd himſelf of this City, and aſſum'd the Title of King of *Tenez*: But his Succeſſour was outed by *Barbaroſſa*, and the *Turks* are ſtill Maſters of it; for 'tis one of the Dependencies of *Algiers*, and enlarges its Revenue conſiderably.

King of *Tenez.*

Breſcar.

Breſcar, another City in this Province, call'd by *Ptolomy Campi Germani*, was founded by the *Romans*. The Inhabitants of this place maintain'd their Liberty above 100 Years, in oppoſition to the Lords of *Tenez*, till *Barbaroſſa* ſubdued 'em, ſince which time they have been ſubject to the *Turks*. The adjacent Country is well ſtock'd with Cattle, Corn, Barley and Lintſeed, and produces the beſt Figs in *Africa*.

Sargel.

The remaining Cities in this Province, are *Sargel*, or *Ptolomy*'s *Camichi*, the Revenue of which riſes for the moſt part from their Silk Worms, and which is famous for the having *Barbaroſſa*'s Fleet burnt in their Harbour by the *Spaniards*, in the Reign of *Charles* the Vth.

Miliana.

Miliana, alias *Magnana*, built by the *Romans*, and enrich'd with numerous Springs, and great plenty of excellent Walnut, Citron and Orange Trees.

Mezuna.

Mezuna, or *Ptolomy*'s *Colonia novi Caſtri*, where ſeveral *Roman* Antiquities and Inſcriptions are to be ſeen, and which was reduc'd from a rich to a very low Condition, by the Schiſmatick *Califa* of *Carouan*.

Cæſaria.

And *Cæſaria*, call'd by the Natives *Tignident*, which was much imbelliſh'd by the *Roman* Emperours, and was once one of the moſt populous Cities in *Africa*, the Track of its Walls being three Leagues in Circumference. While the *Arabs* lorded over *Africa*, *Cæſaria* was much reputed for its riches, and for its Univerſities, which produc'd great Poets and excellent Philoſophers. After that it fell into the Hands of *Idris*'s Family, who poſſeſs'd it 150 Years, till the Year 959, in which *Abdala* demoliſh'd its Houſes, Walls and Temples, and cruelly put to death all the Citizens that were of *Idris*'s Opinion; ſo that there's nothing of it now ſtanding, but two ancient Temples, one of which has a very high Stone Monument, call'd *Coborummia*, i. e. The Sepulchre of the *Roman*, where 'tis ſaid Count *Inlian*'s Daughter was interr'd. From the top of this Monument one may deſcry a Ship 20 Leagues off. In the Year 1555 *Salbarraes* attempted to pull it down, hoping to find ſome Treaſure in it, but when they lifted up the Stones, there came a ſort of black poiſonous Waſps from under 'em, which caus'd immediate death wherever they ſting'd, and upon that *Barbaroſſa* drop'd his Deſign.

The Province of *Algiers.*

The third Province of this Kingdom, is that of *Algiers*, bounded by *Tenez* on the Weſt, *Bugia* on the Eaſt, the great *Atlas* on the South, and the Mediterranean Sea on the North: This Country abounds with Corn and Cattle. The Valleys are inhabited by puiſſant and rich *Arabians*, and the Mountains by warlike *Berebers* and *Azuagues*, who have ſeveral Firelocks and a great many Horſe among 'em. There are but few Cities in this Province that we can give any account of; for the ancient Cities were demoliſh'd in their Wars with the *Arabians*, and with ſome private Princes; and tho' the Ruins of 'em are ſtill viſible in ſome Places, yet we are at a loſs to know ſo much as their Name.

The City of *Algiers.*

The Metropolitan is *Algiers*, which, as ſome ſay, the *Romans* chriſten'd *Julia Cæſaria*, for the honour of *Julius Cæſar*. This was a famous City in all times; the *Romans* imbelliſh'd it mightily, and the *Turks* have ſince enrich'd it with the Spoil of Chriſtendom. *Paul Diacre* affirms, that in the time of the *Vandals*, 'twas demoliſh'd by a Tyrant, and ſoon after rebuilt: It ſtands upon the ſide of a very high Mountain. Its Walls, which are of Stone, and ſurrounded with a very deep Ditch and Bulworks, riſe gradually along the ſide of the Hill, and run to a point upon the South end, where an old Caſtle ſtands that is deſcry'd at Sea at a great diſtance. Paſſing this Caſtle you ſtill aſcend about one fourth of a League, till you come at a Fort with four Baſtions, built by the *Turks*, where they have always a Governour and 300 Men. The Houſes of this City begin at the Sea ſide, and riſe by degrees upon the aſcent of the Mountain, which makes a noble ſhew; for one does not intercept the view of the other. They are very well built, and the Streets are very regular. Upon the Land ſide the City is ſurrounded with rugged Rocks, the South ſide of which gives a noble Proſpect of wide fertile Plains. Juſt by the Harbour there was a ſmall Iſland, upon which *Ferdinand* King of *Spain*, built a Fort call'd *Pegnon*; but to render the Harbour ſafer and larger, *Salbarrees* has ſince join'd that Iſle to the Continent by a Peer, built of the Stones of ſome ancient Buildings brought from *Metafus*. At preſent *Algiers* is the richeſt City in all *Africa*, and improves every Day upon the wreck of the *Spaniſh* naval Forces, and the Spoil of Chriſtendom; for the very Cuſtoms of its Port amount to an immenſe Sum, more than all the Revenues of the Kingdom of *Tremeſen*.

There are ſeveral Mountains in this Province, inhabited by a warlike People, who being rich in Corn, Cattle and Horſes, own no Soveraign, and pay tribute to none.

The Mountain and Town of *Cuco.*

Among theſe Mountains, which are all deriv'd from the *Great Atlas*, that call'd *Cuco* alias *Eguiliandalus*, is the moſt celebrated. 'Tis only acceſſable by one Paſs, which may be defended with Stones againſt a whole Army. It has a ſtrong wall'd Town about it, that gives name to the whole Mountain; and ſeveral other Villages inhabited by ſeveral Clans, which are only ſo many Branches of one Line, and have each of 'em their reſpective Heads. One of theſe leading Men being deſcended of a good Family, and allied to that Governour of *Algiers* that *Barbaroſſa* kill'd, proclaim'd himſelf King of *Cuco*, and wag'd perpetual War with the *Turks*, till *Barbaroſſa* married one of his Daughters. After that he made Peace with the *Turks*, and became very powerful; for he maintains 500 Firelocks, and 1500 Horſe, beſides a great many Foot-Souldiers, arm'd after the faſhion of the Country. The Inhabitants of this Mountain have a particular averſion to the *Jews*. It affords good Salt-Petre Mines, from which the Natives make Powder, being ſupply'd with Brimſtone from *Europe*. They have likewiſe good Iron Mines, and make Swords, Spears, &c. only they have no Steel, no more than the reſt of *Barbary*. Several Monkeys frequent the Woody parts of the Mountain.

A King of *Cuco.*

Bugia, is (according to ſome) the fourth Province of the Kingdom of *Tremeſen*; for the Deſcription of which, we refer the Reader to the Additions to the enſuing Chapter.

CHAP.

Chap. V.

Containing John Leo's *Deſcription of the Kingdoms of* Bugia *and* Tunis.

The Revolutions of *Bugia*.

IN ancient times *Bugia* was under the Government of the King of *Tunis*, who at his death, left *Bugia* to one Son, *Tunis* to another, and *Biledulgerid* to a third. *Habdulhaziz* (ſo the Son that inherited *Bugia* was call'd) reign'd for many Years in *Bugia*, till *Ferdinand* King of *Spain* diſpoſſeſs'd him.

The City of *Bugia*.

The ancient City of *Bugia* was built by the *Romans* (as ſome think) upon the ſide of a high Mountain near the Mediterranean Sea, and ſurrounded with high majeſtick Walls. If it were all inhabited, it might contain 24000 Families, whereas the part that is now inhabited has not above 8000. The Houſes, Temples and Colleges have a ſtately aſpect, and the Town maintains a great many Profeſſours of Law, and of natural Philoſophy. They have a large fair Market-place, and Monaſteries, Inns and Hoſpitals, built after their faſhion. The Streets are all upon the aſcent and deſcent; and at the uppermoſt part of the Town there ſtands a ſtrong Caſtle, well wall'd, with ſuch curious carving upon the Paiſter and Timber work, as is ſaid to have coſt more than the Wall it ſelf. The rich Citizens us'd to fit out Galleys that infeſted the *Spaniſh* Coaſt, which provok'd the King of *Spain* to ſend *Pedro de Navarra* with a Fleet of 14 ſail againſt them. Upon his arrival, the People, together with their King, being diſſolv'd in luxury, and unacquainted with War, deſerted the City, and left all its Riches and Plenty for an eaſy Booty to the *Spaniſh* Admiral.

Taken by the *Spaniards*.

Gegel.

The Town of *Gegel* ſtands upon an impregnable Mountain, by which means the Inhabitants always avoided the paying of Tribute to the Kings of *Buga* and *Tunis*; but at length they ſurrender'd themſelves to *Barbaroſſa*, who demanded no other Duty of 'em, than the Tenths of their Corn and ſome particular Fruits.

Nicaus.

Nicaus, another Town in this Country, is inhabited by a rich generous People, that go very neat in their Cloaths. They have a magnificent Temple, a publick Hoſpital for the Entertainment of Strangers, and a College, the Students of which have their Diet and Apparel *gratis*. Their Women are black hair'd, and have delicate ſmooth white Skins, by vertue of their frequent uſe of Baths. Their Houſes, which are but one ſtory high, are very neat, and have each of 'em a Garden water'd with pleaſant Fountains, and adorn'd with Damask-Roſes, Myrtles, Camomil, and other Herbs and Flowers, beſides ſhady Arbours.

Conſtantina.

The City of *Conſtantina* ſtands upon the South ſide of a very high Mountain, and is ſurrounded with ſteep Rocks, under which runs the River *Suſegmare*, that ſerves for a Town Ditch. The ſtrength, height, antiquity and beauty of the Walls, is ſufficient proof that the *Romans* were the Founders of the City. It contains above 8000 Families, and has large ſtately Gates; but 'tis only acceſſable by two narrow Paſſages, one on the Eaſt and another on the Weſt ſide. It has a great Temple, two Colleges, and three or four Monaſteries that are built very ſumptuouſly. The Inhabitants are a frank ſort of Men; they aſſign a ſeparate place for every Trade, and have among 'em a Company of Merchants, ſome of whom ſell Cloth and Wool, others ſend Oil and Silk to *Numidia*, and others truck Linen-Cloth and other Goods for Slaves and Dates; for this laſt Commodity is cheaper here than in any other part of *Barbary*. The Kings of *Tunis* commonly confers the Government of *Conſtantina* upon his eldeſt Son.

Triumphal Arches taken for Caſtles of Devils.

About a Mile and a half off the City, there's a Triumphal Arch, of the ſame form with thoſe at *Rome*, which the vulgar People take for a Caſtle where Devils had their reſidence, till the *Mahometans* came and expell'd 'em.

Snails taken for Devils.

There's likewiſe a hot Bath among the Rocks, in the Neighbourhood of the City, which is full of Snails (*Marmol* calls 'em Tortoiſes) and theſe Snails the credulous Women take for Devils, imputing all Diſeaſes whatſoever to their influence; and pretend to avert their malign Influence, by killing a white Hen, and carrying it on a Platter with the Feathers on to the Bath, where they leave it. But ſome that are ſharp ſet will watch till the Women are gone, and rob the pretended Devils of their Hen.

Another remarkable thing is a Fountain of cold Water, a pretty way out of the Town to the Eaſtward, with a Marble Monument juſt by it, that has ſuch Hieroglyphical Emblems upon it, as are to be ſeen at *Rome*. This the Mob takes to have been a Grammar School transform'd into Marble, upon the account of the Vices and Lewdneſs both of the Maſters and *Boys*. From the City to the River they deſcend by Stairs hewn out of the Rock; and juſt by the River there's a little Houſe cut out of the Rock ſo artfully, that the Roof, Walls and Pillars are all one continued Subſtance; and here the Women of *Conſtantina* waſh their Linen.

Hippo.

After *Conſtantina* we come to *Bona*, alias *Hippo*, where St. *Auguſtine* was Biſhop. 'Twas ſubdued by the *Goths* and afterwards laid in Aſhes by *Hutmen*, the third Patriarch after *Mahomet*.

Beld-Elhuneb

After many Years, the Ruins of this City furniſh'd Stones for the building of a new Town, about two Miles off, call'd *Beld-Elhuneb*, i. e. *The City of Jujubes*, for that Fruit is very plentiful thereabouts, and the Inhabitants dig it in the Sun and keep it till Winter. It contains almoſt 300 Families, but all the Buildings are very pitiful excepting one Temple which ſtands next the Sea. The Inhabitants are Merchants and Tradesmen, and have a weekly Market every *Friday* without the Walls, which is well frequented. Here is a great deal of Linen-Cloth wove, moſt of which is carry'd to *Numidia*. There's a place in the Sea not far from this Town, that affords great quantities of Coral, which the *Genoueſe* procur'd liberty to fiſh for from the King of *Tunis*, upon the Conſideration that this People knew not how to fiſh for it; but they would never ſuffer the *Genoueſe* to build a Caſtle near the place to defend 'em from the Pyrates, which the King had allow'd 'em to do; for it ſeems the *Genoueſe* did once before maſter the Town by ſuch a Stratagem as that.

Tedeſſa.

The next Town is *Tedeſſa*, the Buildings of which are very ſorry, tho' it has the beſt high Wall I ever ſaw, the Stones of it being much like thoſe upon the *Coloſſa* at *Rome*. A great River runs thro' part of the City; and there are Marble Pillars in divers places, with Inſcriptions in Latin Letters, beſides other ſquare Pillars of Marble that are cover'd with Roofs: The adjacent Plains are dry, but very fertile in Corn. There's a Hill near the Town, which is full of great Caves: and theſe the common People take for the ancient Habitations of the Giants: But 'tis certain the *Romans* made theſe Caves by taking the Stones of the City Walls out of the Rock. Walnut-trees grow as thick as a Wood within five Miles of the place. The Inhabitants are an unhuman, covetous, brutiſh Gaug; for which reaſon *Eldabag* an elegant *Arabick* Poet, falls very foul upon 'em with Satyrical Invectives. They ever rebell'd againſt the King of *Tunis*, and kill'd all the Governours he ſent 'em. For which Reaſon, the preſent King, upon his Journey to *Numidia*, ſent Ambaſſadours to ſee how they ſtood affected with him; and they inſtead of ſaying, *God ſave the King*, anſwer'd, *God ſave our City Walls*. This provok'd the King ſo far, that he ſack'd the City, put ſeveral of the Inhabitants to death, and made ſuch havock, that it has remain'd deſolate ever ſince.

Urbs full of *Roman* Antiquities.

The Town of *Urbs* in this Province, is likewiſe full of *Roman* Antiquities, i. e. Images of Marble, and Inſcriptions in Latin Characters. Tho' it had excellent Walls, and was a place where the *Romans* lodg'd moſt of their *African* Treaſure, yet the *Goths* aſſiſted by the *Mores* took it, and laid it waſte. 'Tis now inhabited again, but deſerves rather the Name of a Village than a Town.

The City of *Carthage*.

Here we meet with the famous and ancient City of *Carthage*, built, according to ſome, by the People that came out of *Syria*, according to others, by a Queen, or, as ſome will have, by a Colony that came from *Barca*. The principal *Romans* and *Goths*, together with the

Inhabitants of *Tripoly* and *Capes*, retir'd to *Carthage*, when the *Mahometans* maſter'd theſe two places; and after many Skirmiſhes it was taken. After that it continued deſolate, till one *Elmahdi* a *Mahometan* Patriarch brought in a new Colony, which did not take up the 20th part of that vaſt City. The Ruines of its Walls are ſtill to be ſeen, as well as a Conduit that conveys Water to the City from a Mountain 30 Miles off. The Gardens on the Weſt and South part of the City are numerous, and clad with all ſorts of Fruit, which is vented at *Tunis*. The adjacent Plains are very fertile, but not large; for the North ſide is hem'd in with a Mountain, the Sea, and the Gulph of *Venice*; the Plains of *Benſart* give bounds to the Eaſt and South ſides. At preſent (i. e. *A. D.* 1526) this City is mighty low, containing about 500 ſorry Houſes, and not above 25 Shops. The miſerable Inhabitants, who are oppreſs'd with ſevere Taxes, are great Pretenders to Religion, and withal unſufferably proud, moſt of 'em being either Gardeners or Husband-men.

The City of *Tunis*.

The decay of *Carthage* occaſion'd the riſe of *Tunis*, in Latin *Tunetum*, which was built by the *Africans* upon a Lake, at the Diſtance of 12 Miles from the Mediterranean: In ancient times 'twas call'd *Tarſis*, after the name of a City in *Aſia*.

Its Revolutions.

Soon after the *Carthaginians* had remov'd to *Tunis*, upon the Aprehenſion of an Invaſion from *Europe*, they were over-perſwaded by *Hucba Utmen*, the fourth *Mahometan* Patriarch, to ſubmit to the Prince of *Cairon*. After a great many Years it ſubmitted to *Abdul-Mumen* King of *Morocco*, and continued peaceably under the Government of the Kings of *Morocco*, till the death of King *Joſeph*, the Son of *Mahumet Ennaſir*, who was defeated by the King of *Spain*. At that time 'twas beſieg'd and half deſtroy'd by the *Arabians*; upon which Occaſion the King of *Morocco* ſent one *Habduluahidi*, a brave General, born at *Seville* in *Spain*, who reliev'd 'em, and receiv'd their yearly Tribute. His Son *Abu Zaccheria*, an eloquent wiſe Man, ſucceeded him, and built a Caſtle upon a high Ground, in the Weſt part of the City, which he adorn'd with fair Buildings and a beautiful Temple. This Prince left great Riches to his Son *Abu*, who inſolently refus'd to be tributary to the Kings of *Morocco*, becauſe he ſaw 'em decaying, there being at that time mutual Diſſenſions between the Kingdoms of *Morocco*, *Fez*, and *Tremeſen*; nay, he march'd to *Tremeſen* and demanded Tribute of the Inhabitants, and upon the earneſt Sollicitation and large Preſents of the Kings of *Morocco*, enter'd into a league with him.

The King of *Tunis* ſaluted King of *Africa*.

Upon that he return'd to *Tunis* in great triumph, and was ſaluted King of all *Africa*, there being no *African* Prince equal to him at that time: And ever ſince, *Tunis* has throve ſo well, that 'tis now accounted the richeſt Town in all *Africa*. The Son and Succeſſour of this King, added lofty Buildings to the Suburbs, and built two Streets, one without the *Suvacca* Gate, containing 300 Families, and another without the *Bedel manera* Gate, in which the Chriſtians of the King's Guard have their abode, and which contain'd above 1000 Families. Without the Gate call'd *Bebel babar*, which lies next the Sea, there's a third Street, where the *Genoueſe*, *Venetians*, and all other Chriſtian Merchants reſort.

The number and Cuſtoms of the Citizens.

The number of the Inhabitants of this populous City amounts to 10000 Families (*Marmol* makes 'em 20000) each Trade having a peculiar place allotted to it, but few of 'em are rich. Here the Linen Weavers are very numerous, and their Linen is much valued all over *Africa*. The Women have a ſtrange way of Spinning, for they let down their Spindle at a Window, or thro' a hole in the Floor of an upper-Room, and the weight of the Spindle makes the Thread very clean and even. The Merchants, Prieſts, and Doctors, are decently cloath'd with Turbants upon their Heads, cover'd with Linen Cloth, but the Courtiers and Souldiers have no Linen upon their Turbants. All ſorts of Grain are very ſcarce in this place, becauſe the Incurſions of the *Arabians* ſcare the Inhabitants from tilling the adjacent Grounds, and they are ſupply'd with Corn from *Urbs*, *Beggia*, and *Bona*. They ſow a ſmall quantity of Barley and Corn on ſome few Fields in the Suburbs that are wall'd round; but the Ground is ſo dry, that they are forc'd to raiſe Water out of Pits, with a Wheel turn'd round by a Mule or a Camel, and diſperſe it over the ſurface of the Ground by Troughs and other Conveyances. They bake excellent Bread in Mortars, leaving the Bran and the Flower together. All the Water in the City is rain Water; in the Suburbs indeed there's a Fountain of ſalt Water, which is ſold up and down the City, and reckon'd wholſomer and fitter to be drank than rain Water; and ſome other Wells of good freſh Water, which are reſerv'd only for the uſe of the King and his Courtiers.

Their Buildings.

Here's a ſtately Temple richly endow'd, beſides ſeveral other Temples that have ſmaller Revenues, and Colleges and Monaſteries maintain'd at the publick Charge. One of theſe Monaſteries was built and provided with large Revenues by the King of *Tunis*, for the Benefit of a holy Society, call'd *Sidi el Dabri*, who go up and down the Streets bareheaded and barefooted, carrying Stones about with 'em. Their Houſes are well painted and carv'd, and built of excellent Stone; but Wood to carve upon being very ſcarce, moſt of their Painting is done upon Plaiſter, and their Chamber Floors are pav'd with a ſhining ſort of Stone. They are but one ſtory high, and have all of 'em two Gates, one leading to the Street, and the other to the Office Houſes, with a large Court between, where the Merchants receive their Friends and talk of Buſineſs. Their Women have a decent Habit, and when they go abroad, are veil'd or mask'd, having their Fore-heads cover'd with a Linen Cloth, which is join'd to another that they call *Setfari*. They wrap ſo much Linen about their Heads, that they ſeem like Giants Heads. Whatever they have or can earn, they beſtow it upon Perfumes and ſuch other Vanities: Some of 'em are forc'd by poverty to turn Whores. The Inhabitants of this place make frequent uſe of a compounded Confection, call'd *Lhaſis*, an Ounce of which is a great incentive to Venery, and ſets 'em a laughing and dallying as if they were half drunk.

The King of *Tunis*'s Court.

Before we diſmiſs this Subject, 'twill be proper to take ſome notice of the Court of *Tunis*. As ſoon as the King dies, his Son or next Heir ſucceeds to the Crown, and all the Noble-men, Prieſts, Doctors, and Judges, take an Oath of Allegiance to him. Then the chief Officer of the Court, who goes by the Title of *The Munaſide*, i. e. *The Vice-roy*, gives to the new King, an Account of all that he did in his Predeceſſour's Reign; upon which the King orders him to beſtow Offices upon the Noble-men, according to their reſpective Dignity. Another principal Officer is the *Meſuare* or General, who at his own pleaſure, raiſes, pays, and heads the Army. The next is the *Caſtellan* or Governour of the Caſtle, who guards the King's Perſon, and inflicts Puniſhment on the Priſoners in the Caſtle, as if he were King himſelf. The fourth Officer is the Governour of the City, who adminiſters Juſtice, and puniſhes Criminals. The fifth is the *Secretary*, who writes and gives Anſwers in the King's Name, and has the Privilege to open all Letters, excepting ſuch as are ſent to the *Caſtellan*, or to the Governour of the City. The ſixth is the *Chief Chamberlain*, who provides Furniture for the Palace, gives Orders to all the Houſhold, calls the Counſellours by a Meſſenger, and has acceſs to the King when he pleaſes. The ſeventh is *The High Treaſurer*, who receives the Revenues of the Crown, and with the King's Conſent, pays 'em in to the *Munaſide*. The preſent King has many Devices to ſcrew Money out of his Subjects: He lives ſometimes in his Palace, and ſometimes in Gardens among his Concubines, Muſicians, Stage-Players, *&c.* but the Muſicians are always brought into his preſence hood-wink'd like a Hawk.

El-Mahdia.

Paſſing *Tunis*, we arrive at *El-Mahdia*, a Town upon the Mediterranean, founded in our time by *Mahdi*, the firſt Patriarch of *Cairaon*, with a noble Harbour, and fortified with ſtrong Walls, Towers, and Gates. This *Mahdi*, pretending to be deſcended of *Mahumet*, ingratiated himſelf ſo much with the People of this Country, that by their aſſiſtance he was made Prince of *Cairaon*, after which, perceiving that ſome were uneaſy under his tyranny, and ready to conſpire againſt him, he built this Town for a ſafe Refuge in caſe of neceſſity. Accordingly, when *Beiezid*, a *Mahometan* Prelate appear'd before *Cairaon*, he fled to this new Town, where he made a brave defence, and kill'd *Beiezid*.

Cairaon.

Now *Cairaon* alias *Careen*, is a great City, ſtanding upon a ſandy Plain that bears neither Trees nor Corn, at the diſtance of 36 Miles from the Mediterranean, and 100 from *Tunis*. 'Twas built by *Hucba*, General of the Army that *Hutmen*, the third *Mahometan* Prelate, ſent out of *Arabia Deſerta*; and was deſign'd for a place of ſafety where the *Arabians* might lodge their ſpoil. That General ſurrounded it with a very ſtrong Wall, and adorn'd it with a ſumptuous Temple, the Pillars of which are very ſtately. He govern'd *Cairaon*, till *Qualid* the *Califi*, who then reign'd at *Damaſco*, ſent *Muſe* in his place. *Muſe*, after many ſucceſsful Adventures againſt the *Africans*, and againſt the *Goths* in *Spain*, who was turn'd out upon the death of that *Calife*, and one *Jezul* ſucceeded him; after whom, his Son, Brother, and Nephews ſucceeding in order, govern'd *Cairaon*, till the Family of

Qualid were deveſted of the *Califa* Dignity, at which time the *Mahometan Califa's* remov'd from *Damaſco* to *Bagaded.* In that Juncture, one *Elagleb* was appointed Governour of *Cairaon*, and his Poſterity enjoy'd that Government for 170 Years. In *Elagleb's* time *Cairaon* became ſo populous, that a Town call'd *Recheda* was built juſt by it, in which he and the Court reſided.

Sicily conquer'd by the Governour of *Cairaon.*

The ſame Prince added the Iſland of *Sicily* to the Dominions of *Cairaon*; ſo that in his time 'twas a redoubled City. This City was once very famous for the ſtudy of the *Mahometan* Law, and produced the greateſt Lawyers in *Africa*; but at laſt 'twas deſtroy'd, and tho' 'tis now rebuilt, yet 'tis far ſhort of its former ſplendour; for its only Inhabitants are Leather-Dreſſers, who ſend Leather to the *Numidian* Cities, and truck it for *European* Cloth.

Elhamma. A Hot River. The Lake of Lepers.

Another remarkable place in this Country is *Elhamma*, thro' which there runs a River of hot Water, that makes a Lake not far from the Town call'd the *Lake of Leapers*, from its ſovereign vertue in curing all ſorts of Leproſies. This Water has a ſulphureous taſte, and does not at all quench thirſt; however the Inhabitants uſe it for drink, having ſet it a cooling almoſt a whole day. The ſource of this River lies a Mile and a half to the South of the Town.

The Iſle of *Gerbi.*

Here we muſt take notice of the Iſland of *Gerbi*, which is a plain ſandy Ground, about 18 Miles in compaſs, lying near the *African* Continent, and producing great plenty of Dates, Vines, Olives, and other Fruit.

Old Tripolis.

We proceed in order to *Old Tripolis*, which was built by the *Romans*, and afterwards taken by the *Goths*. At laſt the *Mahometans* took it after a Siege of ſix Months, and the Citizens were either kill'd or carry'd Priſoners to *Egypt* and *Arabia*.

New Tripolis.

Old Tripolis being thus deſtroy'd another City of that name, was built upon a ſandy Plain, that bears great plenty of Dates, and ſurrounded with a Wall. In this new City the Houſes exceed thoſe of *Tunis*, and a peculiar place is aſſign'd to each Trade. Here Corn is extream dear, by reaſon of the barrenneſs of the adjacent Fields; and they have no other Water than rain Water. They have ſeveral ſtately Temples and Colleges, and an Hoſpital for the entertainment of Strangers as well as their own Poor. Their Fare is only Dumplings made of Barley Meal; for he's a rich Man there that can command a buſhel or two of Corn. The Citizens are moſt of 'em Merchants; for its nearneſs to *Numidia*, *Tunis*, *Sicily* and *Malta*, renders it a convenient place for trade: It has likewiſe a great many Weavers.

This City has always been ſubject to the King of *Tunis*; but at the ſame time that the King of *Fez* forc'd the City of *Conſtantina* to open their Gates to him, and carry'd the King of *Tunis* Priſoner to the Caſtle of *Ceuta*, the *Genoueſe* ſack'd *Tripolis*, and cary'd off the Inhabitants in captivity. Upon this the King of *Fez* gave the *Genoueſe* 50000 Ducats for the Town; but after they had ſurrender'd the Town to the King, they found moſt of their Ducats to be Counterfeit. After that *Abuſelim* King of *Fez* reſtor'd the King of *Tunis* to his Throne, and his Poſterity enjoy'd it, till King *Abubar* was kill'd in the Caſtle of *Tripoli* by his own Nephew, who afterwards uſurp'd the Government, till he was kill'd in a Battle with *Habdul Mumen*, who thereupon became Lord of *Tripolis*. He was ſucceeded by his Son *Zacharias*, who within a few Months dy'd of the Plague; and after him came his Couſin *Mucamen*, whom the Citizens expell'd upon the account of his tyranny, and prefer'd to the Throne a Citizen. This Citizen govern'd for a time with a great deal of diſcretion and modeſty, but at laſt prov'd a Tyrant, and was murther'd by his own Relations.

Then the Citizens forc'd the Government upon a certain Noble-man that had retir'd from the World and liv'd like a Hermit, and his Poſterity continued in it, till *Pedro de Navarra* the *Spaniſh* General, took the City, and ſent the Governour and his Son-in-law Priſoner to *Meſſina*. After ſome years impriſonment, the Emperour *Charles* V. reſtor'd the Government to his former liberty: But ſince that the Chriſtians have deſtroy'd the Town.

Additions to CHAP. V.

Taken from Marmol.

The Kingdom of *Bugia.*

BUgia, the moſt Eaſtern Province of *Mauritania Cæſariana*, is bounded by *Algiers* on the Weſt, the Province of *Africa* on the Eaſt, the Mediterranean Sea on the North, and *Numidia* on the South. *Ptolomy* and ſeveral other noted Authors, make it a Province of *Tremeſen*; and others again, upon the conſideration that the King of *Tunis* gave the Crown of *Bugia* to his Son, look upon it as an Appendage of the Kingdom of *Tunis*. The bulk of the Country is mountainous, and moſt of the Inhabitants taking the Advantage of their ſteep and almoſt inacceſſible Seats, maintain an independant liberty. They are not only ſtout, and Affecters of Magnificence and Honour, but likewiſe rich in Cattle, and have a great many Firelocks and Horſemen among 'em. The Valleys are poſſeſs'd by the *Arabians*, who ſtraggle up and down with their Tents, and have many Fire-arms.

The City of *Bugia.*

Bugia, the Metropolitan of the Kingdom, contain'd in the time of its ſplendour, above 20000 Families. 'Twas firſt deſtroy'd by *Caim* the Schiſmatick *Califa*; after which 'twas repeopled, but could never arrive at its primitive ſplendour. However the Citizens liv'd in peace and eaſe while *Abdulazis* (the King of *Tunis's* Son) was their Sovereign, till they provok'd the King of *Spain* to take poſſeſſion of the City. The *Spaniards* continued Maſters of it for 35 Years; but *A. D.* 1555, *Salbarraes* Governour of *Algiers*, took it by capitulation, for which the *Spaniſh* Governour was beheaded when he return'd to *Spain*. Since that time the *Turks* have ſtill kept a Governour and a good Gariſon in the place.

Nazava River.

On the Eaſt ſide of *Bugia* a ſmall River enters the Sea, call'd by *Ptolomy Nazaava*, and by *Pliny Navar*. This River paſſes between the Mountains of *Cuco* and *Abez*, and upon the melting of Snow, ſwells prodigiouſly. 'Tis well ſtock'd with Fiſh, but the People have ſuch plenty of Fiſh upon the Sea-ſide, that they do not mind theſe. While *Bugia* was in the *Spaniſh* Hands, no Veſſel could enter the River, by reaſon of a Bank of Sand in its Mouth: But the very ſame Year that *Salbarraes* took the Town, it rain'd ſo violently, that the Waters ſweep'd off the Bank, ſo that large Veſſels may now ſail up the River, and be ſhelter'd from all Winds excepting the North Wind.

Necaus.

Necaus, another City in this Province, ſo well ſituated and adorn'd with Gardens, Fountains, and all ſorts of Fruit-Trees and Flowers, that 'twould be one of the pleaſanteſt Cities in all *Barbary*, if the tyrannizing *Turks* did not oppreſs it in an outragious manner. *Ptolomy* plac'd it under the name of *Vaga*, in 18 Deg. Long. and 31 Deg. 40 Min. Lat.

Mount La-Abes.

Among the Mountains of this Kingdom that call'd *La-Abes* is moſt noted, which derives its name from the plenty of Ruſhes that grow upon it. In the Year 1550, this Mountain was commanded by one *Abdelaſis* alias *La-Abes*, who was one of the braveſt Warriours in all *Africa*. There being an everlaſting hatred between the Inhabitants of Mount *Cuco* and thoſe of *LaAbes*, *Abdelaſis* join'd with the *Turks* at the time that *Cuco* declar'd againſt 'em; and his Aſſiſtance prov'd of great Importance to them. At laſt the *Turks* being inform'd by *La-Abes* his Vaſſals, that he mean'd to revolt and make an Inſurrection, deſign'd to empriſon him; but he ſeeing thro' the Deſign, made his eſcape upon a very ſwift Horſe. After that he made head againſt the *Turks*, and fortified the Avenues of his Mountain, and after ſeveral ſucceſsful Engagements, was at laſt kill'd in battle, by the united Forces of the *Turks* and the King of *Cuco*. Such was the end of that brave *African*, who always wore two Coats of Mail one above another, with a Spear, a Buckler, and a Cutelax. He was ſucceeded by his Brother *Mocoran*, who at this day puts his Neighbours the *Arabians* under contibution in ſpite of the

Turks and the King of *Cuco*, with whom he wages perpetual War.

The King-dom of *Tunis*.

The fourth and moſt eaſtern Kingdom of *Barbary*, is that of *Tunis*. If you exclude *Bugia*, its Limits are *Mauritania Cæſariana*, the Province of *Bugia*, and the River *Amſaga* on the Weſt, *Egypt* on the Eaſt, the Mediterranean on the North, and Mount *Atlas* on the South. 'Tis divided into four Provinces, namely, *Conſtantina*, *Tunis*, *Tripoli* of *Barbary*, and *Zeb*, which includes part of the ancient *Numidia*. The greateſt part of the Country, is only a wide extended Plain, upon which ſeveral powerful Societies of *Arabians* and *Africans* follow a vicious life. The Kings and Lords of the above-mention'd Provinces, have always endeavour'd to keep up an Alliance with theſe Strowlers, and have enough to do to ſatiſfie 'em, by giving them part of their Revenue. To take a view of the Provinces in order.

The Province of *Conſtantina*.

If we ſet out from the Weſt, the firſt Province of the four is *Conſtantina*, called by *Ptolomy New Numidia*, and bounded by *Bugia* on the Weſt, *Africa*, properly ſo called, on the Eaſt, the Mediterranean Sea and the Gulf of *Numidia* on the North, and Mount *Atlas* on the South.

The remarkable Cities in this Province are theſe following.

Col.

Col, an ancient City built by the *Romans*, called by *Ptolomy Coloſſus*, and inhabited by a courteous civil People, who trade with the *Europeans* in Wax, Leather, and other Commodities.

Eſtora.

Eſtora, or *Ptolomy*'s *Ruſicada*, the Port of *Conſtantina* ſtanding upon the Gulph of *Numidia*.

Sucaycada.

Sucaycada, built by the *Romans* upon a high Mountain, between which and *Conſtantina* there's a Cauſey twelve Leagues long, pav'd with black Stones.

New Bona.

New Bona, or *Bedel el Agneb*, where *Charles* V. kept a Garriſon, and which is now ſubject to the *Turks*.

Biſert.

Biſert or *Beuſert*, called by *Ptolomy Utica*, ſtanding upon a Lake or Bay, and inhabited by Fiſher-men, who are very poor, but at the ſame time ſtubborn, proud and rebellious, which has frequently occaſion'd their ruin. When *Barbaroſſa* took *Tunis*, they revolted from their King, and receiv'd a *Turkiſh* Gariſon; upon which the Emperour *Charles* V. being ſollicitated by their King, beſieg'd 'em both by Sea and Land, and puniſh'd 'em ſeverely for their Rebellion. *Muley Haſcen* ſaid of them, that neither Love nor Fear could influence them to be faithful.

Tedeſſa.

Tedeſſa, an inland Town, goes beyond all the Towns of *Barbary* in good Walls, plenty of Walnuts, and excellent Fountains, and is valuable for nothing elſe.

The City of *Conſtantina*.

The chief City of this Province is *Conſtantina*, which revolted frequently from their Governours, appointed by the King of *Tunis*, and in the Year 1568, reſented the Inſolence of the *Turks*, by cutting the *Turkiſh* Governour and Gariſon in pieces. After that, the Governour of *Algiers* took it by ſtorm, and oppreſſed them more than ever.

The Mountains of *Conſtantina*.

The Mountains of this Province are inhabited by a brave warlike People, that have always maintained their liberty, but are never without Wars among themſelves, occaſioned by a Cuſtom allowed of by their Religion, of unmarrying Women in one Mountain, and marrying them again in another. They are able to bring 40000 brave Fellows into the Field, and if they were unanimous, might conquer a great part of *Africa*.

The Province of *Tunis*.

The Province of *Tunis*, or *Africa*, properly ſo called, is bounded by *Conſtantina* on the Weſt, *Tripoli* on the Eaſt, Mount *Atlas* on the South, and the Mediterranean Sea on the North. This is a large Province, and contained ſeveral Towns and Villages, moſt of which were deſtroyed by the *Arabians* when they invaded *Africa*.

Utica.

Near to a Port called *Porto Farina*, where the Emperour *Charles* V. his Army landed when he attacked *Tunis*, we perceive the Ruins of an ancient City, which ſome take to have been *Utica*, ſo famous for the death of *Cato*.

Carthage.

Upon the ſame Coaſt are the Ruines of *Carthage*, which ſtood upon a Plain, but included within its Bounds a Mountain, where the chief Fortreſs ſtood, and where there is now a Tower, called by the Chriſtians *The Rock of Maſtinaca*, and by the *Africans Almenare*. The *Greek* and *Latin* Authors give ſuch jarring Accounts of the time and manner of its Foundation, that it can ſcarce be determined. It was deſtroyed by *Scipio Africanus*, and afterwards by *Genſerick* King of the *Vandals*. In the proceſs of time the Succeſſours of *Mahomet* razed it again, after which, it was repeopled in ſome meaſure by a *Mahometan* Patriarch, and at laſt totally ruined by the *Arabians*, in their Wars with the Kings of *Tunis*: So that now there remains nothing of that ancient and glorious City, but a pitiful Village called *Marſa*, which one of the Kings of *Tunis* has lately adorned with a ſtately Temple and a College, there being in the Neighbourhood of it a Palace and Gardens, where the Kings of *Tunis* divert themſelves in Summer.

The City of *Tunis*.

The great and ancient City of *Tunis*, the Metropolitan of the Kingdom, was built by the *Arabians* that firſt invaded *Africa*, under the conduct of *Melec Ifriqui*. The Inhabitants are very civil and tractable, but few of them are rich. They feed commonly upon Barley Meal kneeded and boiled with Water and Salt, and afterwards ſoaked in Oil or Butter. About this City there are great Nurſeries of Olive, Citron, and Orange Trees. The Kings of *Tunis* had a very ſplendid Court, and many Officers of the Houſhold: Within the Palace they were ſerved by Women and Eunuchs. Their Life Guard conſiſted of 1500 Horſe, and 100 Firelocks, moſt of them *Muſ-Arabians* or Renegadoes, whom they truſted and encouraged very much. They were likewiſe by 150 old Gentlemen, experienc'd both in Civil and Military Affairs, of whom the King took advice in Matters of Importance, and who ſerved in the Army in the quality of *Maſhals de Camp*. Their way of eating, giving Audience, and other Cuſtoms, are the ſame with thoſe of the Court of *Fez*. But the ſplendour and grandeur of this Court was extinguiſh'd by *Barbaroſſa*, when he took poſſeſſion of *Tunis*; for after that, when *Muley Haſcen*, by the aſſiſtance of the Emperour *Charles* V. recover'd his Throne, he was ſcarce able to ſatisfie the *Arabians*; and now that the *Turks* are again poſſeſs'd of *Tunis*, his Son *Hamida* is forc'd to retire to the Fort, upon the Neck of the Lake call'd *Golett*, and ſolicit *Philip* II. to reſtore him to his Throne. The Lake upon which *Tunis* ſtands, receives the Sea by a narrow Neck, that a Galley cannot paſs with her Oars ſpread. Upon the mouth of this Channel, there was a ſquare Tower or Cuſtom-houſe, which *Barbaroſſa* fortified when the Emperour *Charles* V. appeared before *Tunis*: But the City it ſelf is expos'd on ſeveral quarters, eſpecially to the Weſt, and its chief ſtrength conſiſts in the number of the Inhabitants. The Lake is three Leagues long, and two Leagues broad, and is full of Banks of Sand.

Suſa.

Suſa, another Sea Town in this Province, ſtands upon a riſing Ground, and is cover'd by a ſtrong Caſtle upon the Land-ſide. Some ſay 'twas founded by the *Romans*, and was formerly a very populous and noted place, known by the name of *Sagul*, to which *Ptolomy* allots 36 Deg. Long. and 32 Deg. 20 Min Lat. 'Twas the reſidence of *Occuba* the *Mahometan* General; and his Palace, with ſeveral other noble Edifices, and a magnificent Temple, are ſtill ſtanding. When *Barbaroſſa* took *Tunis*, it ſubmitted to the *Turks*, and afterwards refus'd to obey *Muley Haſcen*, when *Barbaroſſa* was diſlodg'd. Upon this the Emperour *Charles* V. ſent out a Fleet that beſieg'd and took *Suſa*, and reduc'd it to the King's obedience. Soon after, the light unſteaddy Inhabitants revolted, and being once more reduc'd, revolted a ſecond time, till the arrival of the *Spaniſh* Fleet upon that Coaſt, upon which they expell'd the *Turks*, tho' they afterwards receiv'd them again, and are now ſubject to them.

Moneſter.

Coaſting along from *Suſa* to the Eaſt, we fell in upon *Moneſter*, an ancient City, built by the *Romans*, upon a pleaſant ſpot of Ground, and defended by noble high Walls. Its frequent Revolts from the Kings of *Tunis*, occaſion'd its being ſack'd by the *Spaniards*; and the repeated Depredations of the *Mores*, *Turks*, and *Chriſtians*, have reduc'd it to a poor condition. At preſent 'tis ſubject to the *Turks*, as well as the other places upon that Coaſt.

Mehedie.

The great and famous City of *Africa* ſtands upon the ſame Coaſt, at the diſtance of eight Leagues from *Moneſter*. 'Twas fortified by the Chiſmatick Califa of *Carouan*, who chriſten'd it *Mehedie*, and is the ſame with the *Adrumettum* of the *Romans*. It ſtands upon a point of Land that ſhoots out into the Sea, and joins the Continent by a ſmall Neck, which is but 350 Paces over, and has a Caſtle upon it, with ſix Towers; the Walls of this City are 40 Foot thick. While the *Romans* poſſeſs'd it, 'twas a place of great ſplendour; after which, the Succeſſours of *Mahomet* raz'd it to the Ground, and rebuilt it, and adorned it with the above-mentioned Fortifications. Upon the Declenſion of the Califa's of *Carouan*, the *Sicilian* Pyrates took poſſeſſion of it, and chriſtened it *Africa*. Then the Chriſtians were Maſters of it, till it was conquered by a *Morocco* King, of the *Almohada* Line: After which, it was ſubject to the King of *Tunis*, but frequently

quently revolted, and had actually ſhaken off the Yoak when *Dragut* the famous Admiral of the Pyrates ſurprized it, and was received as their Prince. Upon this, the Emperour *Charles* V. finding that the Pyrates were much encouraged by having *Mebedia* for a place of ſhelter, ordered his Generals to beſiege it; accordingly they took it, and laid both the Town and its ſtrong Fortifications in Aſhes.

Carouan.

The laſt City we ſhall take notice of in this Province, is *Carouan*, call'd in *Arabick Cayraven*, which is not only the fineſt City in all *Africa*, but the firſt that the *Mahometans* built in it, for which reaſon the Kings of *Tunis* are inter'd there in the Great Temple. When *Barbaroſſa* took *Tunis*, this City being miſerably oppreſs'd by the King of *Tunis*, receiv'd a *Turkiſh* Gariſon; and when *Barbaroſſa* was worſted, choſe the chief *Alfaqui* of the Great Temple to be their King. This new King contracted an Alliance with the King of *Tunis*, and aſſiſted the Emperour's Forces in taking *Mebedia*, and refus'd to aſſiſt *Dragut*. In reſentment of this Affront, *Dragut* with ſome of the *Alfaqui's* and Citizens, conſpir'd together, and having kill'd the King, brought the City into ſubjection to the *Turks*, whom it now obeys.

The Province of *Tripoli.*

Tripoli, the thir'd Province of this Kingdom, is bounded by *Tunis* on the Weſt, the Mediterranean on the North, the Province of *Ceyret* on the Eaſt, and *Numidia* on the South. Moſt of this Province is nothing but ſandy Deſarts, tho' indeed it has ſome Mountains inhabited by *Berebers*: The whole is now ſubject to the *Turks*. To give ſome Account of the moſt remarkable Towns.

Capez.

Capez, the firſt City that the *Romans* built in *Africa*, ſtands upon a Gulph of the Mediterranean Sea, near the Mouth of a River of hot Water, which *Ptolomy* ſettles in 38 Deg. 40 Min. Long. and 32 Deg. 45 Min. Lat. 'Twas ruin'd, firſt by the Succeſſours of *Mahomet*, and afterwards by the Califa of *Carouan*, and ſince that, 'twas ſtill kept under, by the Excurſions of the *Arabs*. At preſent 'tis inhabited by a few Fiſher-men and Day-labourers.

Tripoli.

Tripoli, alias *Trebeliz*, or *Tarabilis*, the Metropolitan of this Province, was built, as ſome ſay, by the *Romans*, or, as others will have it, by the *Phœnicians*, in memory of a Town in *Syria* of the ſame Name. The *Arabians* raz'd it after a Siege of ſome Months; and a great many Years after, the *Africans* built *New Tripoli*, which is ſaid to ſtand more to the South than the old: for it is alledged, that the Sea being higher than the Land, has encroached upon all the Coaſt of *Tunis*, and overflowed large Tracts of Ground that were formerly cover'd Houſes, and a fertile Product. Upon the ſame Plea it is affirm'd, that tho' the Country round *Tripoli* is now ſo barren and ſandy, that it produces nothing but Dates, yet in former times, the Banks of Sand to the South, were fertile Plains. After *Charles* V. had taken *Tripoli*, he gave it to the Knights of *Malta*, who were then diſpoſſeſs'd of *Rhodes*: and in a few Years the *Turks* took it from them, and are ſtill Maſters of it. While this City was in its ſplendour, it was reckoned equal to *Tunis* in riches. *Ptolomy* places it under the Name of *Great Leptis*, in 41 Deg. 25 Min. Long. and 31 Deg. 40 Min. Lat.

Tachore.

About four Leagues to the Eaſt from *Tripoli*, there's a large Plain call'd *Tachore*, which is repleniſh'd with ſeveral Villages and Fruit-trees. When the Chriſtians maſtered *Tripoli*, the Citizens fled to this Plain, and one *Morataga* a *Turk*, declared himſelf King of it. At preſent it is one of the Dependancies of the Government of *Tripoli*.

Mecellat.

Another Province annexed to *Tripoli*, is *Mecellat*, called by the Ancients *Great Syrtis*, and by the *Arabians Ceyret el quivir*. Add to that *Meſrate*, called by the Ancients *Cyrenaica*, or *Pentapolis*, which runs along the Coaſt of the Mediterranean.

Iſle of *Querquenes.*

Before we take leave of this Province, we muſt take notice of the Iſlands of *Querquenes* and *Gelves*. The former is a dry Soil, and the Current about it is ſo ſtrong that a Galley with Oars can ſcarce put in into the Shoar. Count *Pedro de Navarre* the *Spaniſh* General, put in here after a violent Storm, and having order'd a Detachment of Men to go aſhoar and clean ſome Wells, in order to draw Water out of 'em, one of the Men being beat by the Colonel who commanded the Party, made his eſcape in the night-time, and while the reſt were aſleep, brought down the *Mores* upon 'em, who cut in pieces the whole party, conſiſting of 450 choice Men.

Iſle of *Gelves.*

As for the Iſlands of *Gelves*, it was called by the Ancients *Meniſſa*, from a Town upon it of the ſame name, and *Ptolomy* places it under the name of *Lotofagina*, in 39 Deg. 30 Min. Long. and 31 Deg. 20 Min. Lat. The Succeſſors of *Mahomet* ruined this Iſland, at the ſame time that they deſtroyed *Tripoli* and *Capez*, which belonged to the *Romans*; and the Walls and Ruins of the two Cities (viz. *Guerra* and *Meniſſa*) beſides ſeveral Forts built by the *Romans*, are ſtill to be ſeen upon it. Since that time it was repeopled, and ſome Hamlets or Villages were built upon it; and in the Year 1284, *Roger de Lorie*, the King of *Arragon*'s Admiral conquered it, and his Poſterity, aſſiſted by the Kings of *Naples* and *Sicily*, continued Maſters of it for ſeveral Years, tho' not without frequent Moleſtations from the Natives, and from the Kings of *Tunis*. In proceſs of time, it became tributary to the Kings of *Sicily*; but the *Mores* aſſiſted by the *Genoueſe* and *Neapolitans*, took off that Yoak, and ſoon after became tributary to the King of *Arragon*: At laſt they revolted from the King of *Arragon*, and when the *Spaniards* took the City of *Africa*, *Dragut* the famous *Turkiſh* Pyrate retired to the Iſland, which is ſtill ſubject to the *Turks*.

As for the *Zeb*, the fourth Province of the Kingdom of *Tunis*, which lies to the South of *Tunis*, and ſhoots into *Numidia*, we ſhall take occaſion to ſpeak of it under the head of *Numidia*; for tho' the greateſt part of it is ſubject to the Kings of *Tunis*, yet 'tis not properly any part of *Barbary*.

CHAP. VI.

Containing John Leo's *Deſcription of* Numidia *and* Libya.

The Towns of *Numidia.* *Teſſet.*

IN deſcribing the Cities and Towns of *Numidia*, I ſhall begin with *Teſſet*, an ancient Town not far from the *Libyan* Deſarts, containing 400 Families; it is ſurrounded with Brick Walls and ſandy Plains. Some few Fields juſt by the Town bear ſome Dates, Millet-ſeed, and Barley, which the wretched Inhabitants uſe for Food. They pay a heavy Tribute to the *Arabians* in the adjacent Deſarts, and trade with *Negroland* and *Guzula*, in ſo much that they are ſeldom at home. Their Men are Blacks, and void of all learning; indeed their Women, who are ſomewhat whiter, take care to teach their Children the firſt Rudiments of Knowledge, but before they can attain to any Perfection, they are put out to work: Some of the Women ſpin and card Wool, and the reſt live idly: The richeſt Men in the Country have but very few Cattle. All over *Numidia*, they plough the Ground with a Horſe and a Camel.

Guaden.

The next Town is *Guaden*, inhabited by a wretched barbarous People, who are black, and live in ſuch enmity with their Neighbours, that they cannot go abroad with ſafety. They eat no Fleſh but Oſtriches, and a certain wild Beaſt call'd *Elamth*, which they take by hunting; for they keep their Goats for the benefit of the Milk: The Ground produces nothing but Dates.

The Province of *Dara.*

In this Country we meet with the Province of *Dara*, which is very narrow, extending it ſelf from Mount *Atlas* almoſt 250 Miles Southward. The Inhabitants dwell upon the River *Dara*, which in Summer is ſo low, that one may paſs over it on foot, but ſometimes overfloweth like a Sea. If this Inundation happens in the beginning of *April*, it is a certain forerunner of great plenty, if otherwiſe, a great ſcarcity of Corn enſues. The Villages, Hamlets, and Caſtles upon the Bank of this River, are ſurrounded with Brick Walls; and all their Planks and Joyces are made of nothing elſe than the ſpungy flexible

Wood of Date Trees. The Fields on either ſide of the River, for the ſpace of 5 or 6 Miles, produce great plenty of Dates, ſome of which are worth a Ducat *per* Buſhel, and others with which they feed their Horſes and Camels, are ſcarce worth a quarter ſo much. 'Tis obſervable of Date-Trees, that ſome of them are Male and ſome Female; That the Male bear only Flowers, and the Female Fruit; and that the Date Trees prove ſtark naught unleſs the Boughs and Flowers of the Male be join'd to the Female. The Inhabitants of *Dara* eat no Bread but upon Feſtival Days, and feed only upon Barley and ſuch other courſe Meat, particularly the unpalatable Fleſh of Camels and Goats, and that of Oſtriches, which taſts not unlike our Cocks, only it is tougher and ranker. The Caſtles of this Province are inhabited by Goldſmiths and other Trades-men.

Beni-Sabib.

The principal Town called *Beni-Sabib*, and inhabited by a brave generous ſort of People, is divided into two parts, which are headed by their reſpective Governours, and oftentimes quarrel with one another, eſpecially when they moiſten their Arable Grounds, by reaſon of the ſcarcity of Water. When they happen to fall out, they have the neighbouring *Arabians* to aſſiſt them, allowing them half a Ducat a Man *per* Day. In time of peace, they apply themſelves to the uſe of Guns and other Weapons, and indeed they are very expert Gunners. If a Merchant come among them, they'll entertain them for a whole Year, without asking any thing, only if he makes them a Preſent, they'll not refuſe it. Indico grows very plentifully in this Province, which is an Herb like wild Woad, that they exchange with the Merchants of *Fez* and *Tremeſen* for other Goods. Moſt of their Corn is imported from *Fez* and other Countries. They have a few Goats and Horſes, and feed the former with the Powder of Date-Stones, which fattens them, and increaſes their Milk. Their Horſes are fed with Dates, and a ſort of Herb, called by the Neapolitans *Farfa*. Their Women are fair, fat, and eaſily courted, and keep ſeveral Negro Slaves.

Province of *Segelmeſſe.*

We come next to the Territory of *Segelmeſſe*, extending it ſelf almoſt 20 Miles from North to South, along the River of *Ziz*, and containing, beſides Villages and Hamlets, about 350 Caſtles, one of which, call'd *Tenegent*, contains above 1000 Families, moſt of them Trades-men; another call'd *Tebuhaſen*, is the moſt populous place in all the Country, and much frequented by Merchants; and the third call'd *Mamun*, is reſorted to by ſeveral Merchants, both *Jews* and *Mores*. Theſe three Caſtles have three ſeveral Governours, who maintain a mutual enmity, calling ſome lewd *Arabians* to their aſſiſtance, and frequently deſtroy one anothers Water-Channels which water their Fields, and fell down their Date Trees. They coin both Silver and Gold Money; their Silver Coin weighing four Grains apiece, bears the Proportion of eighty to one of their Gold. The *Jews* and *Arabians* in this Country are burdened with heavy Taxes. Some of their principal Men are exceeding rich, and trade very much to *Negroland*, where they exchange the Commodities of *Barbary* for Gold and Slaves. Their chief Food is Dates, excepting ſome places where Corn grows. All this Country is over-run with Scorpions, but there are no Flies in it. In Summer it is exceeding hot, at which times their Rivers are ſo dried up, that they're forc'd to uſe ſalt Water drawn out of Pits.

After the Deſtruction of *Segelmeſſe*, they ſurrounded the whole Territory with a Wall that was 80 Miles in compaſs, to prevent the Incurſions of Horſe-men. While they were united among themſelves, they retain'd their liberty, but upon their ſpliting into Factions, their Wall was demoliſh'd, and each Party calling in the *Arabians* to their aſſiſtance, became ſubject to them by degrees.

The Town of *Segelmeſſe.*

As for the Towns of *Segelmeſſe*, it is ſaid that *Alexander* the Great, built it for the relief of his ſick and wounded Souldiers, but I cannot find that ever he came into this Country. It ſtood upon a Plain near the River *Ziz*, and was ſurrounded with ſtately high Walls. It had good Buildings, magnificent Temples and Colleges, and a great many Conduits for the River Water, which was raiſed by Wheels. The Air of this place is very moiſt in Winter, but otherwiſe it is temperate and wholſome enough. It was ſubject to the Family of *Zontena*, till King *Joſeph* of the Family of *Lantuna* diſpoſſeſs'd them. About 25 Miles from *Segelmeſſe*, upon the Road to *Dara*, there ſtands a ſorry Caſtle, built and guarded by the *Arabians*, who exact one fourth part of a Ducat for every Camel's Load, from all the Merchants that paſs that way.

The Caſtles of *Fighting.*

At the diſtance of 150 Miles from *Segelmeſſe*, are three Caſtles of *Fighting*, ſtanding upon a Deſart that abounds wonderfully with Dates. The Women of this place weave a kind of Cloth in form of a Carpet, which is ſo fine that a Man would take it for Silk, and this they ſell at an exceſſive rate at *Fez* and *Tremeſen*. As for the Men, who are very ingenious, part of them trade to *Negroland*, and the reſt ſtudy at *Fez* till they attain the Degree of a Doctor, upon which they return to *Numidia*, where they are made either Prieſts or Senators, and prove moſt of them Men of great Wealth and Reputation.

Province of *Tegorarin.*

The *Numidian* Deſart contains likewiſe the great and large Country of *Tegorarin*, in which there are 50 Caſtles, and above 100 Villages, and great plenty of Dates: The Inhabitants are rich, and trade to *Negroland*: Their Fields are very fit for Corn, but at the ſame time they are very much parcht, inſomuch, that ſcarce any Cattle can live upon them. A few Goats indeed are kept there for the benefit of their Milk; but there is no Fleſh in the Country, excepting that of Camels, which the *Arabians* import, and which the Inhabitants eat, after it is mingled with ſalt Tallow imported from *Fez* and *Tremeſen*. They allow Strangers Houſes to dwell in, requiring no other Rent but their Dung, which being voided within doors, is kept very carefully, as well as that of their Camels, *&c.* for the benefit of their Ground.

Techort.

About 300 Miles from *Tegorarin*, we fall in upon the ancient Town of *Techort*, built by the *Numidians* upon a Hill, by the Foot of which runs a River with a Draw-Bridge over it. 'Tis defended by a Rock on one ſide, and a Stone Wall on the other. All the Buildings, excepting a magnificent Temple, are of Brick dried in the Sun. The Inhabitants, amounting in number to 2500 Families, are moſt of them either Gentlemen or Trades-men. Having great plenty of Dates, they exchange them for Corn imported from *Conſtantina*. They entertain all Strangers *gratis*, and are very liberal in their Gifts to them; nay, they have ſuch reſpect for them, that they'll rather marry their Daughters to them than their fellow Citizens, allowing ſome portion of Land by way of Dowry. *Hubdulla* their preſent Prince, is a brave, generous and courteous Man.

Peſcara.

Peſcara (another Town in the *Numidian* Deſart) is remarkable for the abundance of Scorpions, which occaſion preſent death wherever they ſting, and upon that account the Inhabitants live out of town in the Country all Summer. The Kings of *Tunis* were Soveraigns of this place, till the death of *Hutmen*, upon which it fell into the hands of a *Mahometan* Prieſt.

Denſen.

Denſen is likewiſe remarkable for ſome Monuments of Antiquity, not unlike Sepulchres, in which pieces of Silver Money are found.

Capſa.

The laſt place I ſhall take notice of is *Caplſa*, an ancient Town built by the *Romans*, and headed by a peculiar Governour, till the Califa *Hutmen* ſacked it and demoliſh'd its Walls: But the Caſtle remains ſtill, and is a place of great ſtrength, for its Walls are 25 Cubits high, and five Cubits thick, and are built of fine Stone, ſuch as is in *Veſpaſian*'s Amphitheatre at *Rome*. At this day the Town, which is very populous, has nothing in it but ſorry Houſes, excepting the Temple and a few other Buildings. The Inhabitants are a barbarous unhoſpitable Crew, and upon that ſcore, deſpis'd by all the other *Africans*. They are not only oppreſs'd by the daily Exactions of the King of *Tunis*, but continually ſubject to Fevers, occaſion'd by their unhealthy Air: They wear Shooes made of Bucks Leather. The Streets are pav'd with black Stones like thoſe of *Naples* and *Florence*; and in the middle of the Town, there are ſeveral large and ſquare deep Fountains, the Water of which is ſo hot, that it is not fit to be drunk till it has ſtood two or three hours to cool. The adjacent Fields abound with Citrons, and the beſt Dates and Olives in the whole Province.

Libya.

Zanhaga.

Having thus diſpatch'd *Numidia* we proceed to *Libya*. The moſt weſtward of its Deſarts is that of *Zanhaga*, extending in length, from the Ocean to the Salt-pits of *Tegaza*, and in breadth, from *Sus* to *Negroland*. 'Tis ſo dry and barren, that in 100 Miles, you will ſcarce find a drop of Water, and what you have is ſalt, and drawn out of Wells.

Agadez.

Not far from a Town call'd *Agadez*, there is great ſtore of Manna, which the Inhabitants gather in ſmall Veſſels; they mingle it with Water, eſteeming that a noble Liquor, and put it into their Pottage, in which caſe its refrigerating Vertue is ſuch, that it prevents the Diſeaſes which the unhealthy corrupt Air would otherwiſe occaſion.

Tegaza.

In the Region of *Tegaza*, there is a great deal of Salt, whiter than Marble, which is dig'd by Strangers out of Pits, and ſold to Merchants, who carry it upon Camels to *Tombuto*, where Salt is very ſcarce. Theſe Miners or

Diggers live in little Huts plac'd at the Mouth of the Pits, and are oftentimes ſtarv'd if the Merchants happen to come too late with their Victuals, for they work at the diſtance of 20 Days Journey from any inhabited place. Sometimes the South Eaſt Wind blinds them, ſo that they are in great danger of their Lives.

Berdeoa. In the heart of the *Libyan* Deſart, we meet with a Region call'd *Berdeoa*, containing three Caſtles and five or ſix Villages, abounding with excellent Dates. Theſe three Caſtles were diſcover'd thus. A Caravan of Merchants having loſt their way, were conducted by a blind Man, who knew the ſeveral Countries by the ſmell of the Sand, and when he came within forty Miles of this Region, predicted by the ſmell, that they were not far from an inhabited place. Accordingly within three Days, they fell in with the three Caſtles, and forcing open their Gates, got a ſufficient quantity of Water to relieve their Neceſſity; for the Inhabitants were ſo aſtoniſh'd at the ſight of them, that they ſhut their Gates and refuſ'd them Water.

The moſt eaſterly part of the *Libyan* Deſart, is that call'd *Lenata*, extending from *Angela* to the *Nile*. *Lenata.*

Another Region of this Deſart, is *Alguechet*, lying at the diſtance of 120 Miles from *Egypt*, and inhabited by barbarous but very rich Blacks, for they dwell in the way between *Egypt* and *Gaoga*. They have three Caſtles and many Villages, abounding with Dates. Tho' they are tributary to the neighbouring *Arabians*, yet they have a Governour of their own. *Alguechet.*

Between *Numidia* and *Libya*, there's a Region call'd *Nun*, which borders upon the Ocean, and is inhabited by a beggerly People, in many Villages and Hamlets. It produces only an unſavoury ſort of Dates, for it bears neither Corn nor Barley. *Nun.*

Additions to CHAP. VI.

Collected from Marmol.

A Character of the Inhabitants of Numidia. THE Inhabitants of *Getulia* or *Numidia*, were call'd by the *Greeks Phœnicians*, and afterwards *Nomades*, among whom thoſe whole live on the weſtern ſide are moſt conſiderable; but there are ſeveral other Nations of *Berebers* and *Arabians* among them. Their riches conſiſt in Dates and Cattle, for they have very little Corn, the Defect of which is ſupply'd by their Dates, for they are the beſt in *Africa*, eſpecially upon the Eaſt Quarter. Perhaps *Homer* pointed to theſe Dates, when he ſpoke of a Tree in this Country call'd *Lotth*, the Fruit of which is no ſooner taſted, than it makes People forget their Country, and unwilling to return, like *Ulyſſes*'s Companions. The *Arabians* of *Numidia* frequent the Deſart of *Zahara*, and oftentimes make Incurſions into *Barbary*, for they live chiefly by robbery, and for that Reaſon the Kings of *Morocco*, *Fez*, *Tremeſen*, and *Tunis*, keep ſtrong Garriſons upon the Frontiers of that Deſart.

Upper Sus. The Weſtern part of *Numidia*, extending from Cape *Aguer* to Cape *Nun*, is call'd *Upper Sus*. This Country is inhabited by *Berebers*, divided into Tribes, who lodge themſelves in Forts and places of ſtrength, being a warlike People, and breed great numbers of Horſe and Cattle. It affords plenty of Corn and Barley, and in ſome places Citrons, Oranges, and other Fruits.

Teſſet. The ancient *Africans* built a ſmall Town call'd *Teſſet*, upon the Weſt of *Zahara*, in which the *Xeriff* that now reigns, maintains a Garriſon to defend the poor Inhabitants from the Incurſions of the *Arabians* in thoſe Deſarts, to whom they paid Tribute and Homage in former times.

To the North of *Zahara* they built four wall'd Towns, at the diſtance of a League one from another, upon a ſmall River, that never runs but in Winter. *Ufaran.* Theſe Towns are call'd *Ufaran*, and are not only in ſome meaſure civiliz'd by trading with the Chriſtians, but likewiſe inhabited by ſeveral Trades-men, who make excellent Copper and Lattin Veſſels; for the fineſt ſort of Lattin, that they call *Criny*, is made from ſome Copper Mines, in a Mountain of the *Great Atlas*, upon the South ſide of this place; and the preſent *Xeriff* has a Caſtle here, the Governour of which receives that Metal, and gives it out to the Work-men.

Aca. Upon the Frontier of the *Senegues*, there are three ſtrong Towns call'd *Aca*, and inhabited by the *Hibeles*, or a Race of *Arabians* that arriv'd in *Africa* in the Reign of *Carin* the *Califa* of *Carouan*. This quarter, which was formerly rich, was diſpeopled by Civil Wars, till a *Morabite* appeas'd their Heats, after which, he and his Poſterity govern'd it under the Soveraignty of the *Xeriffs*.

Dara. *Dara*, a noted Province of *Numidia*, was formerly overaw'd by the *Arabians* of *Uled Celim*, a rich and puiſſant People, that ſpend the Winter in the Deſarts, and ſtraggle up and down *Numidia* in the Spring; but at preſent 'tis ſecur'd from their Incurſions, by a Gariſon which the *Xeriff* keeps in *Beni-Sabih*.

Segelmeſſe. The Province of *Segelmeſſe*, which is above 40 Leagues long, is inhabited by *Berebers*, whoſe Eyes are always inflam'd in Summer, by reaſon of the extream heat. The Town of *Segelmeſſe* ſeems to have been built by a *Roman* Captain that conquer'd all *Numidia*, as far as *Meſſa*, and for that reaſon 'twas chriſtened *Sigillum Meſſa*, i. e. *The Seal of his Conqueſt*.

Upon a Sandy Plain in *Numidia*, we fall in with a wall'd City, call'd *Tafilet*, inhabited by a rich genteel ſort of People, who make the fineſt Leather or Buff Targuets, as well as Silk-Stuffs, and fine Tapeſtry; and trade with the *European* and *Barbary* Merchants, in Indigo and Goats Leather. All the Dates imported to *Spain*, come from this place, for the *Xeriff* does not allow their being exported from any other quarter. *Tafilet.*

The Province of *Tegorarin* was formerly inhabited by rich Jewiſh Merchants, whom the Natives maſſacred, *A. D.* 1492. When I was in *Africa* (ſays our Author) this Province was govern'd by its peculiar Governours, who were perpetually jarring with one another; for the *Xeriff* who had maſter'd the whole Country from *Nun* upon the Ocean to *Tegorarin*, had not then poſſeſs'd himſelf of it. *Tegorarin.*

Techort, was ſubject firſt to the Kings of *Morocco*, after that to the Kings of *Tremeſen*, then to thoſe of *Tunis*; at laſt it had a Prince of its own, namely, *Abdala*, whoſe Revenue came to 200000 Ducats a year; for this Town receives Contribution from all the Villages and Caſtles round it, to the extent of 30 or 40 Leagues. This Prince was taken off by an Inſurrection of ſome *Turks* whom he had taken into his Service; upon which they were ſubject to the *Turks*, till the *Xeriff Mahemet* reduc'd 'em to his former obedience. *Techort.*

Querquelen, a very ancient *Numidian* City, was firſt imbelliſhed and enriched by the firſt King of the *Lantuna's*, who ſet out from thence in purſuit of the Conqueſt of *Barbary* and *Spain*. The Inhabitants of this place are a very civil People, and acquainted with commerce; for the Commodities of *Barbary* are here exchang'd for thoſe imported from *Negroland*. Moſt of 'em are Blacks, not that the Climate occaſions it, but that they lye with *Negroe* Slaves, who bear black Children. *Querquelen.*

This City, and the Country between it and the Deſart of *Libya*, was the Kingdom of that *Juba*, who ſided with *Pompey* in oppoſition to *Cæſar*, and laid violent hands on himſelf, to prevent his falling into the Hands of the Conquerour. *Juba's Kingdom.*

The City of *Zama*, in which that Prince lodg'd his Treaſure when he accompanied *Pompey* to the Field, is now call'd *Biſcara* or *Peſcara*, and pays Homage to the *Turks*. *Zama.* *Biſcara.*

And the Tract of ground, extending from *Biſcara* to the Iſle of *Gelves*, is the *Biledulgerid* properly ſo call'd, from which all *Numidia* derives its preſent Name, and which is a hot dry Country, affording a vaſt product of Dates, but no Corn. *Biledulgerid properly ſo call'd.*

The moſt remarkable City in *Biledulgerid*, is *Caſſa*, an ancient City built by the *Romans*, who defended it againſt the *Arabians*, till the arrival of *Occuba*, who ſtorm'd it and demoliſh'd its Walls.

The Province of *Zeb.*

The Province of *Zeb*, which we mention'd under the head of *Tunis*, as being a Dependancy of that Kingdom, is a part of the Deſart of *Numidia*. 'Tis bounded by the Deſart of *Mazila* on the Weſt, the Mountains of *Bugia* on the North, the Province of *Biledulgerid* on the Eaſt, and the Deſart between *Techort* and *Querquelen* on the South.

Meſzeb.

The Capital City was call'd *Meſzeb*, and ow'd both its Foundation and its Deſtruction to the *Arabian* Schiſmaticks. The Country is cover'd with burning Sands, and infeſted with Scorpions and other Serpents, the bites of which are mortal. *Biſcara*, which we mentioned but now, is one of the Cities of this Province.

The Kingdom of *Libya Interior*, or *Zahara.*

We come now to the third part of *Africa*, call'd *Libya Interior*, and by the *Africans Zahara*, which is a ſandy Deſart, producing neither Trees nor Fruit, and inhabited in ſome places by a few miſerable Savages, who feed upon Manna and Graſhoppers dry'd in the Sun. Theſe Graſhoppers are ſo numerous, that they darken the Skie like a Cloud, and leave neither Corn nor Verdure behind 'em; and when they mean to fly away, they lay their Eggs in the Ground, that give riſe to others without Wings, which were worſe than the former, for they gnaw the Barks of Trees, and occaſion a Famine wherever they reſort. They come from *Arabia*, from whence they paſs, firſt to *Egypt*, after that, they croſs the Deſarts of *Libya*, and invade *Numidia* and *Barbary*, and ſometimes *Spain*: But after all, *Libya* is not barren all over, it has ſome places and Lakes, upon which the *Halecbes* or *Abyſſins* dwell. The reſt of the Country is frequented by *Arabians*, who chriſten the ſeveral places they viſit, according to the nature of the Soil. They give the Name of *Sebel* to a Sandy Ground that bears no Verdure, and *Azgar* to that which affords Buſhes or Greens, and *Zahara* to the great ſtony Sands. The moſt populous part of the Country, is that towards the *Niger*, by reaſon of their Commerce with the Negroes, eſpecially thoſe of *Tombuto*. In former times the Inhabitants of *Libya* were call'd *Sabatheans* from *Zabatha* the Son of *Chus*, and Grand-child of *Noah*, and the ancienteſt of them are thoſe call'd by *Strabo*, *Abaches*, and by the Natives *Halaches* or *Habeches*; however they are a lazy brutiſh People. The Country is dry and parch'd, affording neither Rivers nor Fountains, nor indeed any Water, excepting that of ſome few Lakes and ſalt Wells, which are ſo ſcarce, that the Merchants who travel from *Numidia* to *Negroland*, have Camels along with them that carry nothing but Water; and oftentimes when they come to theſe Wells, they are cover'd and fill'd with Sand, upon which they are forc'd to kill their Camels, and drink the Water that's found within 'em; for a Camel drinks as much at a time as ſerves him for 12 or 15 Days. To prevent the filling of the Water-pits, the Merchants us'd to line them on the inſide with Camel Bones, and cover the Mouths with Camel Hides; and they have ſuch expert Guides, as can find out the Pits, tho' cover'd with great heaps of Sand; for ſometimes the Eaſt Wind blowing in the Summer, raiſes ſuch a Deluge of Sand, as drowns not only the Wells, but the Men and the Camels, to the height of a Pike. If it rains in this Country from the middle of *Auguſt* till *February*, the Graſs grows plentifully upon the ſides of the Lakes, and the Merchants have not only the Advantage of meeting frequently with Water, but likewiſe with Milk and Butter at eaſy rates; but if it be a dry Seaſon, both the Merchants and the Inhabitants ſuffer very much; for the Drought is always accompany'd with great Winds that toſs up Mountains of Sand.

Senega.

The People of *Libya* are divided into five Tribes or Societies, the firſt of which (ſetting out from the Weſt quarter) is that call'd *Senega*, an ancient and puiſſant People, who have reign'd in *Ethiopia*, and of whom ſome of the preſent *Negroland* Kings are deſcended. Theſe are black, and ſcorch'd by the Sun which paſſes thro' their *Zenith* when 'tis in the Tropick of Cancer; and feed for the moſt part upon Milk and wild Goats. The Country which they inhabit, lies upon a level, and affords neither Houſe, Mountain, Wood, nor River, by which Travellers ſhould take their Marks; ſo that they are oblig'd to follow the Conduct of the Winds, Stars, and Fowls, eſpecially Ravens and Vultures, which reſort to inhabited places for the ſake of Carion.

Cape Bojador.

Upon the Coaſt of this Country there's a Cape call'd *Bojador*, where the *Portugueſe* ſtop'd for a long time, when they purſued the Diſcovery of this Coaſt; for at the head of the Cape they met with an Ebb-Tide, that carry'd them ſix Leagues back, and the Water caſt up by the Banks of Sand, made a noiſe like that of a boyling Pot. At that time our Navigatours were but Coaſters, and durſt not keep ſo wide of the Cape as to avoid the Tyde; for which reaſon, when they meet with an inacceſſible Coaſt, they cry'd out, that the Sea was navigable farther; and the doughty Pretenders to the Knowledge of Nature, alledg'd forſooth, that theſe ſcorch'd Seas were not ſo deep as the frozen or cold ones, upon the Plea, that the Sun exhal'd the ſweet Water ariſing from the Centre of the Earth, and that the ſalt Water came from the North. This put a ſtop to all further Diſcoveries, till *John Gonſal* and *Triſtan Vas*, two *Portugueſe*, were driven by a Storm upon the Iſland of *Porto Sancto*; after which *Giles Yagnes* boldly doubled the Cape, which *Ptolomy* calls *Ganarien*, and which he chriſten'd *Bojador*, with reference to the Lands ſhooting back above 40 Leagues more to the North, than the Coaſt it leaves behind it. The Diſcovery of this Cape was in thoſe days reckon'd a mighty buſineſs.

The River of *Gold.*

At the diſtance of 54 Leagues beyond the Cape, the Sea ſhoots up a great way into the Land, and is call'd the *River of Gold*, becauſe the *Portugueſe* got ſome *Tiber* Gold in this place, by way of ranſome for ſome *Mores* they had taken Priſoners, and this was the firſt Gold they had met with in that part of the World.

White Cape.

Beyond that is the *White Cape*, which was diſcover'd *A. D.* 1441, being a point of Sand that appears white at a diſtance. From this place the Coaſt begins to take another Courſe, and makes a Gulf to which the Current tends.

Iſles of *Arguin.*

At the diſtance of 12 Leagues from the Cape, we meet with the Iſles of *Arguin*, ſo call'd from a Fort that the King of *Portugal* built upon one of them.

Senega River.

Paſſing farther we meet with the Mouth of the *Niger*, in 15 Deg. Lat. diſcover'd by the *Portugueſe A. D.* 1445. This is a Branch of that River that ſeparates the Whites from the Blacks, and the Deſarts of *Libya* from thoſe of *Benbays* and *Chelofes*. 'Tis call'd *Senega* at its Mouth, deriving its Name from a Lord among the Natives, with whom the *Portugueſe* had their firſt Traffick; but within the Country it has ſeveral Names given it by the ſeveral Inhabitants upon its Banks, particularly *Senedec*, *Dengnech*, *Maye*, *Colle*, *Tec*, which laſt it retains to its very Source. *Ptolomy* takes the riſe of this River from the Lake *Quelonides*, and that of *Nuba*; and, which is very ſtrange, notwithſtanding that it runs ſo far, it has not ſo large a Current of Water, as another Branch call'd *Gamber*, which runs by the way of *Cantor*, and has ſeveral Iſlands repleniſh'd with Animals and Reptiles, but is not navigable all over, eſpecially in one place about 150 Leagues from its Mouth, where there is ſo great a Water-fall, that one may paſs underneath without being wet. The *Senega* Water is white, but at a place call'd *Bufitembo* (i. e. White and Red) it is joyn'd by a River call *Labamar*, the Water of which is red: And the Negroes alledge, that theſe two Waters are of ſuch contrary qualities, that they prove Emetick when they're mix'd, tho' ſeparately they have no ſuch effect.

Tegaza.

Another *Libyan* Territory is that call'd *Tegaza*, in which there's a ſalt Quarry among Mountainous Rocks; and perhaps 'tis one of theſe Mountains that *Herodotus* points to when he ſpeaks of a Mountain between the *African Thebes* and *Hercules*'s Pillars.

Iguidi.

Iguidi is another, where *Cato* winter'd after his long Journey.

Angela.

Angela is the only *Libyan* Territory that ſtill retains its ancient Name, being plac'd by *Ptolomy* in 52 Deg. 30 Min. Long. and 28 Deg. Lat. It extends it ſelf like a ſlip to the Mediterranean, over againſt the *Syrtes*, and 'twas there that *Cato* paſs'd with his Troops in queſt of *Juba* after *Pompey*'s death. *Herodotus* places his ſecond ſalt Pits in this Territory. It abounds with Palm Trees, and is mightily incommoded with Serpents, which ſome of the Natives can kill with their Spittle.

Pentapolis.

Upon the Frontier of this Region, facing towards *Egypt* and the Sea, we meet with the Province of *Cyrene* or *Pentapolis*, all the Cities of which are now deſtroy'd, excepting *Ptoleman*.

Cyrene.

Cyrene, which gives name to the whole Province, was built by the *Greeks* under the conduct of *Arceſilas* the Son of King *Batus*, who by the Aſſiſtance of the *Egyptians*, ſubdued the *Carthaginians* that mean'd to expel him, and enlarg'd his Empire. This Province is now frequented by a puiſſant ſtock of *Arabians*, who make above 30000 Horſe and an infinite number of Foot, and deſtroy'd all the Cities and Villages. *Cyrene* was the firſt City that *Cato* took by ſtorm after the death of *Pompey*, but he did no injury to the place. The whole Province is now call'd *Libya Cyrenaice*, but in ancient times it went by the name of *Futheye*, from *Futh* the Son of *Cham*, from whom the Eaſtern *Libyans* derive their Original.

CHAP. VII.

Containing a Deſcription of Negroland: From John Leo.

The firſt diſcovery of *Negroland.*

MOST of *Negroland* lay undiſcover'd, till the 380th Year of the *Hegeira*, at which time a certain *Mahometan* made the Diſcovery. At that time 'twas inhabited by a numerous, barbarous, and brutiſh People, who were equally ignorant of Government and Husbandry, whoſe only Employment was to keep Cattle, whoſe Garments and Beds were the Skins of Beaſts, and who obſerv'd no Reſtraint upon promiſcuous Embraces: The Negroes keep at home and wage War with no other Nation. Some worſhip the Sun, others the Fire, and ſome (particularly the Inhabitants of *Gaoga*) approach nearer to the Chriſtian Faith. The firſt who brought 'em under ſubjection, was, *Joſeph* King of *Morocco*; after whom, they became ſubject to the five *Libyan* Tribes, and learn'd of them the *Mahometan* Law, and ſeveral Handicraft Trades, as well as the *Barbarian* Language, from the *Barbary* Merchants that traded thither. But the preſent King of *Tombuto*, being a *Negroe* by birth, ſlew the *Libyan* King, uſurp'd the Kingdom, and by a 15 years War, conquer'd large Dominions; after which, he concluded a League with his Neighbours, and exhauſted his Treaſure by a Pilgrimage to *Mecca*. *Negroland* lies between two Deſarts, one towards *Numidia*, and another extending it ſelf ſouthward to the Ocean, which is inhabited (ſays our Author) by an infinity of Nations unknow to us. Our Knowledge of this Country extends only to 15 Kingdoms, which are theſe following.

Their Government.

Gualata a Kingdom.

Gualata contains only three great Villages, with ſome Granges and Date Fields. It lies 300 Miles South from *Nun*, 500 North from *Tombuto*, and 200 from the Ocean. 'Twas once the Reſidence of the *Libyan* Governours, and at that time frequented by the *Barbary* Merchants, who in the Reign of Prince *Heli*, remov'd to *Tombuto* and *Gago*, and upon that *Gualata* was reduc'd to extream miſery. At preſent it has a Prince of its own, who is tributary to the King of *Tombuto*. The Inhabitants are black, and very friendly to Strangers: They ſpeak a Language call'd *Sungai*, and cover their Heads, ſo that the Face in both Sexes is almoſt hidden: They have no Form of a Common-wealth, but lead a very miſerable life. Fleſh is very ſcarce among them, but they have plenty of Millet, and a ſort of round white Pulſe, the like of which I never ſaw in *Europe*.

Maiz.

Ghinea.

To the North of *Gualata*, lies the Kingdom of *Gheneoa*, alias *Genni*, or *Ghinea*, extending from the Mouth of the *Niger*, 250 Miles along it. It abounds with Barley, Rice, Cattle, Fiſh, and Cotton, which laſt Commodity they exchange for *European* Cloth, Armour, &c. Their Coin is moſtly of Gold, without any Inſcription; in the way of retail they uſe Iron Pieces, weighing, ſome a Pound, ſome half a Pound, and ſome a quarter. This Country produces no Fruit; for what Dates they have, is imported from *Gualata* or *Numida*. Here is neither Town nor Caſtle, but only a large Village, where the Prince and principal Men reſide, their Houſes being built of Chalk, and cover'd in the Roofs with Straw. The Inhabitants are clad in black or blew Cotton, with which they likewiſe cover their Heads; but white Cotton is the Garb of the Prieſts and Doctors of the Law. In *July*, *Auguſt* and *September*, the over-flowing *Nile* ſurrounds it as an Iſland; and during that Seaſon, the *Tombuto* Merchants import their Goods in Carous made of one Plank, which they row all day, and at night make faſt to the Shoar, lodging themſelves upon land.

Melli a Kingdom. Melli a Village.

To the Northward of *Guinea* lies the Region of *Melli*, which runs almoſt 300 Miles along a River that falls into the *Niger*. It takes its name from *Melli*, a large Village, containing above 6000 Families. The Country abounds with Corn, Fleſh, and Cotton, and is well repleniſh'd with Trades-men and Merchants, who are rich and well ſtock'd with Commodities: The King entertains all Strangers very honourably. There are a great many Temples in the Country, as well as Prieſts, and Profeſſours, who read their Lectures in the Temples, there being no Colleges in the Country. In fine, this People go beyond all the other *Negroes* in Senſe, Civility, and Induſtry; and embrac'd *Mahomet*'s Law, while they were ſubject to the Uncle of *Joſeph* King of *Morocco*, whoſe Poſterity continued in that Soveraignty, till *Izchia* put 'em under a ſevere tribute.

Tombuto.

Tombuto is another Kingdom in this Country, ſo call'd from *Tombuto*, a Town, founded (as they ſay) by King *Menſe Suleiman*, in the 620 Year of the *Hegeira*, at the diſtance of 12 Miles from one of the Branches of the *Niger*. At preſent this Town has no Houſes, but only Cottages built of Chalk, and thatch'd. Indeed it has a ſtately Temple built of Stone and Lime, and a Princely Palace, built by an excellent Work-man of *Granada*. 'Tis well ſtock'd with Merchants and Trades-men, eſpecially Weavers of Linen and Woolen Cloth, and even the *European* Cloth is imported hither by the *Barbary* Merchants. All the Women of this Country, excepting the Maid Servants, cover their Faces, and ſell all ſorts of Victuals. The Merchants are ſo rich, that the preſent King married both his Daughters to two of them. When the *Niger* overflows, they convey the Water of it by Conduits into the Town; however they have great plenty of freſh Water Wells. They have great plenty of Corn, Cattle, Milk and Butter, but very little Salt, that being imported by land carriage from *Tegaza*, which is 500 Miles off, inſomuch that a Camel's Load will coſt 80 Ducats. The rich King of *Tombuto* has a ſplendid Court, and a great many Plates and Scepters of Gold, ſome of which weigh 1300 Pound. When he goes abroad or to the Field, he rides upon a Camel led by one of his Noble-men, and all his Souldiers are on Horſe-back. Whoever is admitted to an Audience of the King, muſt fall down at his Feet, and throw Earth about his Head and Shoulders. His ordinary Guard is 3000 Horſe-men, and a great many Foot, that ſhoot poyſon'd Arrows. He not only baniſhes all *Jews* from his City, but confiſcates the Goods of the Merchants that deal with them. He gives large Allowances to Judges, Prieſts, Doctors and other learned Men; and the deareſt Commodity in the City is Manuſcripts brought from *Barbary*. His Coin is of Gold without any Inſcription, ſix pieces and ⅔ weighing an Ounce; but in petty Bargains they uſe Shells imported from *Perſia*, 400 of which are worth a Ducat. The Citizens are a jolly genteel ſort of People; they keep a great many Slaves of both Sexes, and ſpend a great part of the Night in ſinging and dancing up and down the Streets. The City is much expos'd to fire, for in five Hours time I have ſeen above half of it laid in aſhes: It has no Gardens nor Orchards round it.

Cabra a Village.

About 12 Miles from *Tombuto*, we fall in upon *Cabra*, a large unwall'd Town, ſtanding upon the *Niger*, where the Merchants imbark for *Guinia* and *Melli*. The Inhabitants and Buildings of this place are not inferiour to thoſe of *Tombuto*. They are govern'd by a Judge or Vice-roy, appointed by the King of *Tombuto*. The ordinary Food, both in this place and *Tombuto*, is a nauſeous mixture of Fleſh, Fiſh, Milk and Butter, which gives riſe to many Diſeaſes, and ſo leſſens the number of the People.

Kingdom of Gagoa. Gago.

About 400 Miles to the South of *Tombuto*, ſtands a large unwall'd Town call'd *Gago*, from which the Kingdom of *Gagoa* takes its Name. All the Houſes in this place, excepting the King's Palace, are very mean, but their Merchants are very rich, for they have a great Market for *Barbary* and *European* Cloth. Here Corn and Fleſh, Melons, Citrons, and Rice, are very plentiful; but Wine, Trees, and Fruit, are ſcarce: They have excellent Springs of ſweet Water. On the Market-Days they have a place appointed for the ſale of Slaves, where a Child or one of 15 Years of age will go for ſix Ducats. The King has a Guard both of Horſe and Foot, and entertains a great many Concubines and Wives in a private Palace, which are kept by Eunuchs. He decides all their Controverſies in Perſon; but at the ſame time has about him Treaſurers, Secretaries, Auditors, and other Officers. All ſorts of Commodities are imported thither in great quantities, and fetch great prices; an *European* Horſe bought for ten Ducats, will riſe to 40 or 50 in this place; the coarſeſt *European* Cloth will fetch four Ducats an Ell; and the *Venice* or

Turkey Scarlet Cloth is worth 30 Ducats. Swords, Spurs, Bridles and Spears, are likewiſe very dear; but above all, Salt is much the deareſt. Beſides this Town *Gagoa* contains nothing but Villages and Hamlets, inhabited by Husbandmen and Shepherds, who in Winter cover their Bodies with the Skins of Beaſts, and their Feet with Shoes of Camels Leather; but in Summer are all over naked, excepting their Privities. They are kept miſerable by heavy Taxes, and are unacquainted with Learning or Civility.

Guler.

The Kingdom of *Guler* lies almoſt 300 Miles to the Eaſt of *Gago*; 'tis ſurrounded with high Mountains, and inhabited by Shepherds. Here is great ſtore of Cattle, only they are ſmaller than in other places. Upon the Inundation of the *Niger*, the whole Country is under Water, and at that time the Inhabitants ſow their Seed in the Water. The chief place of this Kingdom, is a great Village, containing almoſt 6000 Families, and frequented by all ſorts of Merchants, where a certain King kept his Court, who in my time was ſlain by *Izchia* King of *Tombuto*.

The Kingdom of *Agadez.*

The Kingdom of *Agadez* is inhabited by Shepherds, who dwell in Huts made of Boughs, and carry 'em upon Oxen from place to place. Whoever pleaſes the Inhabitants of the Deſart beſt, is ſure to be King of this Country.

The Kingdom of *Cano.*

About 500 Miles to the Eaſt of the *Niger*, we come up with the large Kingdom of *Cano*, inhabited for the moſt part by Herds-men. It abounds with Corn, Rice, and Cotton, with Deſarts and wild woody Mountains, well ſtor'd with Springs of Water, and with Citrons and Lemons, which taſte much like thoſe we account the beſt. In the heart of the Kingdom there ſtands a Town of the ſame name, inhabited by rich Merchants and a civiliz'd People, the Houſes of which are for the moſt part built of Chalk. In ancient times their King was a Puiſſant Prince, but now he pays a third part of his yearly Revenue to the King of *Tombuto*.

The Kingdom of *Caſena.*

The next Kingdom is *Caſena*, lying to the Eaſt of *Cano*, which is a mountainous and barren Country, yielding nothing but Barley and Millet Seed. The Inhabitants of this Kingdom are very black, having large Noſes and blabber Lips. They are oppreſs'd with famine, and dwell in very ſorry Cottages, and have not above 300 Families in any one Village. Formerly they had a King of their own, whom *Izſchia* King of *Tombuto* ſlew, and upon that they became tributary to him.

The Kingdom of *Zegzeg.*

The Kingdom of *Zegzeg* lies at the diſtance of 150 Miles from *Caſena*; its South Eaſt part borders upon *Cano*. Tho' its Plains are intolerably hot, yet its Mountains are extream cold, inſomuch, that in Winter, the Inhabitants (who are a rich trading People) are forc'd to keep great fires under their Bedſteads when they go to ſleep. Their Fields being well water'd, are very fertile. They have been ſubject to the King of *Tombuto* ever ſince he kill'd their own King.

The Kingdom of *Zanfara.*

The Eaſt part of *Zegzeg* is join'd by the Kingdom of *Zanfara*, which abounds with Rice, Millet and Cotton; and is inhabited by a tall ſort of People, who are extream black, broad fac'd, and very barbarous. Their King was likewiſe kill'd by *Izchia*, to whom they are now tributary.

The remaining Kingdoms in the Land of *Negroes*, are *Guangara*, *Berno*, *Gaoga*, and *Nubia*, of which in order.

The Kingdom of *Guangara*

Guangara joins the S. E. part of *Zanfara*: Being infeſted by *Izchia* on the Weſt, and the King of *Borno* on the Eaſt, it has now loſt all its Trade with foreign Nations. However there lies to the South of it, a Country that affords great ſtore of Gold, from whence the *Guangara* Merchants bring large Burdens upon the Slaves backs, the Ways being unpaſſable by Camels. Theſe Slaves uſually travel ten or twelve Miles a day, and carry a prodigeous weight, not only of Merchandiſe, but of Proviſions for the Merchants and the Souldiers that guard them.

The Kingdom of *Borno.*

The large Province of *Borno*, extends Eaſt from *Guangara* 500 Miles, at the diſtance of 150 Miles from the ſource of the *Niger*, and joins the Deſart of *Set* on the South, and that towards *Barca* on the North. The Inhabitants of this Country have Garments and Beds of Skins in Winter, but in Summer they only cover their Privities with a piece of Leather. They are not diſtinguiſh'd from one another by Proper Names, but by Nick Names taken from their Stature, Fatneſs, or ſome other Quality; for they have no profeſſion of Religion: their Wives and Children are common, and in a word, the whole Scene of their Lives is brutiſh. They are govern'd by a puiſſant Prince, who is lineally deſcended from the *Libyan* People, call'd *Bardoa*, and is prodigious rich; for all the Veſſels at his Table, his Spurs, his Bridles, and the Collars of his Dogs, are all of pure Gold. He wages perpetual War with a certain People that live beyond the Deſart of *Sen*, who in former times invaded his Kingdom, and waſted a great part of it; but ſoon after the King made his Repriſals, by purchaſing great numbers of Horſes from the *Barbary* Merchants, at the rate of fifteen and ſometimes twenty Slaves in exchange for one Horſe; for then he invaded the Enemies Country, and brought off Captives enough to pay for his Horſes.

The Kingdom of *Gaoga.*

The Kingdom of *Gaoga* has for its Limits, *Borno* on the Weſt, *Nubia* on the Eaſt, *Egypt* on the North, and a Deſart extending to the *Nile* on the South. The Inhabitants, eſpecially the Mountaneers, cover nothing but their Privities, and are a very inhuman barbarous Crew. Their Houſes being made of Boughs and Rafters, are much expos'd to fire. They have great ſtore of Cattle, and attend them very carefully. The Prince of this Country pays a great deal of Reſpect to all learned Men, eſpecially thoſe deſcended from *Mahomet*. While I was at this Court (ſays our Author) a Noble-man of *Damiatia* preſented him with a fine Horſe, a *Turkiſh* Sword, a Royal Robe, and ſeveral other things, that coſt about 150 Ducats at *Cairo*; upon which, the King return'd him a Compliment of five Slaves, five Camels, 500 Ducats, and 100 very large Elephants Teeth.

The Kingdom of *Nubia.*

The Limits of *Nubia*, are *Gaoga* on the Weſt, the *Nile* on the Eaſt, the Deſart of *Goran* on the South, and *Egypt* on the North. The *Nile* is not navigable between this Kingdom and *Egypt*, for in ſome places a Man may wade over it on foot.

The principal Town in this Country is *Dangala*, which contains 10000 Families, and affords plenty of Civet and Saunders. The whole Country abounds with Ivory, being well ſtock'd with Elephants, as well as with Corn and with Sugar, which the Inhabitants know not how to uſe. It produces a ſort of ſtrong Poyſon, a Grain of which divided among ten Perſons, will kill them all in ¼ of an Hour. An Ounce of this Poyſon is ſold to foreign Merchants for 100 Ducats; but whoſoever ſells it without the King's Knowledge, is immediately put to death, and the Buyer pays not only as much to the King as to the Seller, but likewiſe is oblig'd upon an Oath not to uſe it in the Kingdom of *Nubia*. The Inhabitants are call'd *Bugiba*, and are a baſe miſerable People, living only upon Milk and the Fleſh of Camels, and of ſuch Beaſts as are taken in the Deſarts.

In former times they had a rich Town, with a convenient Haven upon the *Red Sea*, call'd *Zibid*, juſt oppoſite to the Harbour of *Zidem*, which is 40 Miles diſtant from *Mecca*. But about 100 Years ago the *Soldan* deſtroy'd it, upon the account of ſtopping ſome Goods that ſhould have been carried to *Mecca*.

Additions to Chap. VII.

Containing Marmol's *Account of* Lower Æthiopia *or* Negroland.

Æthiopia divided.

ÆThiopia ſurpaſſes all the other parts of *Africa*, not only in the extent of Provinces and multitude of Inhabitants, but likewiſe in the diverſity of Animals and plenty of Gold. The ancient Geographers repreſent monſtrous Men as the Inhabitants of this Country; but their Repreſentation is fabulous, unleſs they mean'd to point to the monſtrous Barbarity of their Humour. The *Hebrews* call it *Cus*, and the Ancients divided it into the *Lower* and *Upper Æthiopia*. 'Twas call'd *Æthiopia* rather from the black colour of its Inhabitants, than from *Ethiope Vulcan*'s Daughter, as the Poets alledge. In *Lower Æthiopia* or the Country of *Negroes* (which *Ptolomy* comprehends in *Libya Interior*) the *African* Geographers take notice only of *Quequin* and *Carnim*, from whence 'tis probable they had no perfect Knowledge of the reſt of the Country. All the Provinces adjoining to *Zahara* are at this day *Mahometans*, for in the Year 980, during the reign of the *Almoravides*, ſeveral *Mahometan* Doctors planted their Religion among them. The richeſt and moſt civiliz'd People among 'em, are thoſe call'd by the *Arabians Genevo*, who live along the *Niger*, and ſo have the Benefit of converſing with Foreigners that come thither to trade. Thoſe who live along the Coaſt, are likewiſe in ſome meaſure civiliz'd, ſince the *Portugueſe* have dealt with them, as well as the Inhabitants of *Manicongo*, who have embrac'd the Chriſtian Religion. But the Inland Provinces (many of which are unknown to us) are inhabited by a parcel of Brutes in a human Shape. Theſe multiply ſo prodigiouſly, that their Off-ſpring would in time cover the whole Face of the Earth, were it not for a Wind that viſits them once in 60 Years, and ſweeps off whole Shoals of them in Beds of Sand. Theſe *Negroes* are perpetually at war one with another, and whatever Priſoners they take, whether Men, Women or Children, they ſell them all to the *Africans*, *Arabians*, and *Portugueſe* that trade to that Coaſt, receiving in exchange, Horſes, Cloth, Linen, Oil, Wine, and other *European* Commodities.

The Nature of the Soil.

As for the Country it ſelf, 'tis hot and in ſome meaſure moiſt, by reaſon of the neighbourhood of the *Niger*, and ſeveral other, which make large Lakes when they overflow. Along the *Niger* and towards the Frontiers of *Zahara*, there's neither Hill nor Mountain, but great Lakes ſurrounded with Woods, where Elephants and other wild Beaſts reſort in great numbers, and excellent Paſture along the Lake and River ſides. In theſe places the *Negroes* ſow a great deal of Millet, tho' indeed their chief Food is the Root call'd *Guame*. The Country produces no Fruit, ſuch as *Barbary* affords, tho' it has ſome very tall Trees, that bear a Fruit like Cheſnuts. Corn and Barley will not grow here, for beſides that the Soil is too hot, it never receives any Rain but in three Months of the Year, viz. *July*, *Auguſt* and *September*: But it produces plenty of Peaſe as big as large Filbeards and party colour'd, Beans of an extraordinary large ſize, and of a ſhining red colour, Chiches, Cucumbers, Gourds, Citrons and Pot Herbs. They ſow their Seed in *July*, and have their Harveſt in *September*, for at that time the Water overflows and decreaſes again. When they go about their Husbandry, four or five of them get together, and with a Spade or Shovel, raiſe up the Ground very ſuperficially, this done, they throw in the Seed. They have no Vines, but they make a ſort of Wine of a Liquor call'd *Migol*, that diſtils from certain Date-trees, and reſembles your pale red Wine. Each Tree being wounded in three or four places with an Ax, will yield three or four quarts in the ſpace of 24 Hours. When this Liquor is firſt drawn, 'tis very ſweet, but after three or four Days, its Sweetneſs abates, and it becomes more palatable, but if it ſtand longer, 'twill turn ſoure like Vinegar. 'Tis an agreeable Liquor enough, and if it be not diluted with Water, will fuddle one.

As for the Kingdoms of *Negroland*, that lie along the *Niger*, or between the Ocean and *Egypt*, viz. *Gualata*, *Guinee*, *Melli*, *Tombuto*, *Gago*, *Guber*, *Agadez*, *Cano*, *Caſſena*, *Zegzeg*, *Zanfara*, *Gangara*, *Borno*, *Gaoga*, and *Nubia*; Theſe, I ſay, are ſufficiently accounted for in *John Leo*'s Deſcription; ſo that it remains only to give ſome account of that part of *Lower Æthiopia*, that lies upon the Weſtern Ocean, and the Diſcovery of that Coaſt made by the *Portugueſe*, which the Reader may expect under a ſeparate Head.

Chap. VIII.

Containing John Leo's *Deſcription of* Egypt.

The Limits of Egypt.

EGypt is a noble and famous Province, bounded on the Weſt by the Deſarts of *Bauca*, *Numidia*, and *Libya*, on the Eaſt by the Deſarts that lie between it and the *Red Sea*, on the North by the *Mediterranean Sea*, and on the South by the River *Nile* and the Territory of the *Bugiba's*, being very narrow in breadth, but 450 Miles long. Its narrowneſs is occaſion'd by the *Nile* its Diviſion into ſeveral Streams and Channels, for the Intervals between the Banks of the *Nile* and the foregoing Limits, are very narrow. 'Tis a plain fertile Province, adorn'd with pleaſant Greens and Meadows, and abounding in Geeſe and other Fowls. The uſual Food in that Country is new ſalt Cheeſe, and ſoure Milk which does not go down well with Strangers, tho' 'tis much valued by the Natives. The Country People are of a brown ſwarthy Colour, but the Citizens are white. Their Garments are long with ſtrait Sleeves and Waſtes; their Turbants (call'd by the *Italians Dulipans*) are round and high: The common People wear Garments of party colour'd Cotton in Summer, but in Winter they uſe a certain Garment lin'd with Cotton, which they call *Chebre*: As for the Merchants and chief Citizens they wear *European* Cloth. In general, all the Inhabitants are of an honeſt, chearful and liberal Diſpoſition.

The whole Province is divided in three parts, namely, *Erriff*, extending from *Cairo* to *Roſetto*, *Sabid* (i. e. the *Terra Firma*) extending from *Cairo* to the Land of the *Bugiba's*, and *Maremna* or *Bechria*, lying upon that Branch of the *Nile* that waſhes *Damiata* and *Teneſſe*. *Sabid* goes beyond the other two in plenty of Corn, Cattle, Flax and Fowl; but its Inhabitants having no Converſation with Strangers, unleſs it be a few *Ethiopians*, are much leſs civiliz'd than thoſe of the other Provinces adjacent to the Sea, which are frequented by the Merchants of *Europe*, *Barbary*, and *Aſſyria*. *Maremna* abounds with Cotton and Sugar.

Egypt is call'd by the *Hebrews Meſraim*, from *Meſraim*, the Grandſon of *Cham* the Son of *Noah*, of whom the Inhabitants pretend to be deſcended, by the *Arabians Meſre*, and by the Natives *Chibith*, upon the Plea that *Chibith* was the firſt Man that built Houſes and eſtabliſh'd a

Form of Government in it. Moſt of the true *Egyptians* are now gone, for ſince they embrac'd the *Mahometan* Religion, they have blended themſelves with the *Arabians* and *Mores*. The Kingdom was firſt govern'd by Kings of the *Egyptian* Race, who bore the Title of *Pharaoh*, and after ſome time *Ptolomy*, and ſeem to have been great Princes. After that, 'twas ſubdu'd by the *Romans*, and under their Government embrac'd Chriſtianity. Upon the diviſion of the Empire, it came into the Hands of the Emperours of *Conſtantinople*, and was afterwards wreſted from them by the *Mahometans*, in the time of the *Califa Homar* II. who allowed the People a Liberty of Conſcience, and demanded nothing from them but tribute. Before the Conqueſt of *Egypt* by the *Romans*, the Nobility dwelt in the Cities of *Sahid*, after which, they remov'd to the *Maritime* Province of *Erriff*, and dwelt in *Alexandria*, *Roſetto*, and other Cities that ſtill retain the *Latin* Names: But when the *Mahometans* got the Aſcendant, they retir'd to the Inland Province to avoid the Deſcent of the Chriſtians.

The Climate is hot and unhealthy: It rains there but very ſeldom, and when it does it occaſions dangerous Rheums, Fevers, and a ſwelling of the Privy Members, imputed by Phyſicians to the frequent eating of Salt Cheeſe and Beef. The Plague is ſometimes very rife, eſpecially at *Cairo*, where it ſometimes ſweeps off 12000 Souls a day. And as for the *French Pox*, no Country under Heaven is more moleſted with it. In Summer the heat of the Sun is ſo unſufferable, that no Man could live there, if they did not build high Towers oppoſite to their Houſes, which being open at top and bottom, draw down a Wind that refreſhes and cools the Air. They reap their Corn in *April* and thraſh it immediately.

About the middle of *June*, the *Nile* commences its Inundation, which increaſes 40 Days and decreaſes as many, and during that ſpace, the Towns of *Egypt* are only acceſſible in Boats and Barges, and the Stream or Channel of the River is then navigable by large Veſſels, containg 6 or 7000 Buſhels of Corn, beſides ſome hundreds of Cattle; but at the ſame time theſe Veſſels muſt only go along with the Stream, for that they cannot ſail againſt it.

The Cities of Egypt.

As for the Cities and Towns of *Egypt*, I ſhall only deſcribe ſuch as ſtand upon the principal Channel of the *Nile*, for the other part of *Egypt* (ſays our Author) are not included in *Africa*.

Beſiri.

Beſiri, an ancient City, built by the *Egyptians* upon the Mediterranean Sea, had once ſtrong Walls and ſtately Buildings, but upon the taking of *Alexandria* by the Chriſtians, 'twas abdicated by the Inhabitants. It has a great many Date-trees about it, but at preſent there's no body to take care of them.

Alexandria.

Alexandria, founded by *Alexander the Great*, upon a Promontory that ſtretches into the Mediterranean, was in former times, a large, ſtrong and beautiful City, but after it became ſubject to the *Mahometans*, it lay in a manner deſolate, till a crafty *Mahometan* Patriarch made the vulgar People believe, that by a Prophecy of *Mahomet*, ample Indulgences were granted to ſuch as would inhabit or promote the Intereſt of that City; for upon that, ſtrangers crouded into it from all Corners, and adorn'd it with Houſes, Colleges, and Monaſteries for the Relief of Pilgrims. The City has four Gates, one of which facing the Mediterranean, is always beſet with Searchers and Cuſtom-houſe Officers, who exact a Duty, not only upon Goods, but upon all ſorts of Money, and ſearch Strangers to their very Shirts. It has two Havens, one call'd *Marſa el Bargi* (i. e. *The Port of Caſtle*) upon the Key of which there ſtands an impregnable Caſtle, and in which the *European* Ships ride; and another call'd *Marſa Eſſal Sela*, i. e. *The Port of the Chain*, where the *Barbary* Ships take ſhelter. A *Mahometan* pays $\frac{1}{10}$, and a *Jew* $\frac{1}{10}$ of all Goods imported or exported, excepting ſuch as are carried over land to *Cairo*, which pay nothing at all. At preſent the only inhabited part of the City, is that next the Haven, and that which faces *Cairo*; for 'twas laid deſolate by the King of *Cyprus*, who was maſter of the Town for ſome time, till the *Soldan* diſlodg'd him; after which it roſe by degrees to its preſent ſtate. In this City we meet with ſeveral Earthen Veſſels of great antiquity, upon a high Mount form'd like the *Teſtaccio* at *Rome*, upon the top of this Mount, there ſtands a Turret, where an Officer watches in order to give notice to the Cuſtom-houſe of the arrival of Ships, and has a certain Allowance for his Intelligence; but if any arrives and eſcapes his view, he pays double to the Exchequer for his Negligence. Without the City there's a large Sluice, which lets in the Water of the *Nile* upon its Inundation, and conveys it to large Vaults or Ciſterns, of which each Houſe in the City has one under it; and oftentimes the Corruption of the Water in theſe Ciſterns occaſion many Diſeaſes in the Summer. In the Neighbourhood of this Sluice, there are ſome ſmall Gardens, but the Fruit they produce is a great Inſtrument of Sickneſs; and indeed the Ground upon which *Alexandria* ſtands being very ſandy, is equally unquallified for Gardens, Vines, or Corn; for the City is ſupply'd with Corn from places 40 Miles diſtant. Six Miles Weſt from *Alexandria*, we meet with a very tall and thick Pillar, call'd by the *Arabians Hemaduſſaoar*, i. e. *The Pillar of Trees*, and ſtanding upon a point of Land that ſhoots out beyond the Haven. Among ſome ruinous Monuments within the City, there ſtands a little Houſe with a Sepulcher, which is much rever'd, and frequently viſited by *Mahometan* Pilgrims, upon the plea, that according to the *Alcoran*, it contains the Body of *Alexander the Great*, the High Prophet and King (as they term it). Part of this City is inhabited by ſeveral Chriſtian Merchants and Mechanicks, who have a Church of their own, that was once honour'd with the Body of St. *Mark*, till the *Venetians* ſpirited it away to *Venice*. Theſe Chriſtians are call'd *Jacobites*, and pay tribute to the Governour of *Cairo*.

Roſetto alias Roſet.

Roſetto (the next City in order) ſtands upon the Eaſt Bank of the *Nile*, not far from its Mouth. 'Twas built by a Slave of one of the *Mahometan* Patriarchs that govern'd *Egypt*, and is famous for its excellent Baths and Springs whether hot or cold.

Thebes.

Thebes has ſtately Houſes, but not above 300 Families of Inhabitants, moſt of whom are Husbandmen, ſo that in the day time there's nothing to be ſeen in the Streets but handſom Women. 'Tis well ſtock'd with Corn, Rice, Sugar, Grapes, Figs, Peaches, and a delicious ſort of Fruit, call'd *Muſe*. In the Out-parts of this place we meet with many ancient Monuments, bearing *Latin*, *Greek*, and *Egyptian* Inſcriptions, and an infinity of ruinous places, not to mention its Stone Walls of a great depth, from whence we conclude that in former times 'twas a very large City.

Fuoa.

At the diſtance of 40 Miles from *Roſetto*, we fall in with *Fuoa*, in the Neighbourhood of which, there's a Plain well ſtock'd with Sugar Canes, but their Product is not true Sugar, but a ſort of Honey like Soap, which is us'd all *Egypt* over. In this place the Women have ſuch liberty, that they may range abroad all day, provided they return at Night.

Over againſt *Fuoa*, the *Nile* makes an Iſland call'd the *Golden Iſland*, which produces all ſorts of fruitful Trees, except Olives.

Deretto.

The moſt noted place for Sugar is *Deretto*, the Inhabitants of which are very rich, for they pay 200 *Saraffi's* or pieces of Gold *per* Day, to the Men they imploy in boyling and preparing the Sugar, and 100000 *Saraffi's* a year to the *Soldan*, for the Liberty of refining it. The City is adorn'd with a very pretty Temple, and a great Houſe like a Caſtle, where they boil and refine their Sugar.

The famous City of Cairo.

We come next to the City of *Cairo*, which is reputed to be one of the greateſt and moſt famous Cities in the Univerſe. The Word *Cairo* is a Corruption of the *Arabick El Chabira*, i. e. *A Commanding Miſtreſs*. The City was built in ancient times by *Gehoar Chetib*, a *Dalmatian* Slave, who likewiſe built the famous Temple call'd *Gemi-Haſhare*. At preſent (*A. D.* 1526) it contains only 8000 Families, of Noblemen, Gentlemen, and Merchants, that ſell and import Goods from all places. It ſtands upon a beautiful Plain, in the Neighbourhood of Mount *Meccatum*, at the diſtance of two Miles from the *Nile*. 'Tis ſurrounded with ſtately Walls, and fortify'd with Iron Gates. The principal Street is adorn'd with magnificent Palaces and Colleges, pleaſant Baths, and ſumptuous Temples, particularly the Temple of *Gimith Elbechim*, the third Schiſmatick *Califa* of *Cairo*. The next Street, call'd *Beinel Caſrain*, is fill'd with Cooks, Victuallers, who ſell delicate Waters made of all ſorts of Fruits in fine Veſſels made of Glaſs and Tin, Confectioners, Fruiterers, and others who ſell Eggs, Cheeſe and Pancakes, fry'd in Oil. The next Street is allotted to the chief Mechanicks, beyond which ſtands a College built by *Ghauri* the *Soldan*, that was kill'd in a Battle with *Selim* the great *Turk*. Not far from the College are the Shops for the fineſt Linen Cloth, particularly that call'd *Moſal*, i. e. of *Ninov*, which is exceeding broad and fine, and of which the Noblemens Shirts are made, as well as the Scarfs they wear upon their Dulipans. Next are the Mercers, who ſell the richeſt *Italian* Stuffs; then the Woolen-drapers, who ſell *European* Cloth. Upon the Way that leads to the Gate *Zuaila*, which fronts the *Nile*, there's a famous Exchange

Gemi-Haſhara i. e. The Glorious Temple.

three Story high, call'd *Canen Halidi*, in which the *Perſian* Merchants reſide, and vent Spices, precious Stones, and ſuch other coſtly Wares. After that, you come to a Street, where the Perfumers ſell vaſt quantities of Civet, Musk, Amber, *&c.* and the Stationers ſell delicate ſmooth Paper. The next Street is inhabited by Gold-ſmiths, moſt of whom are *Jews*, and very rich; but paſſing that you come to the Upholſterers and Brokers, who ſell things of great value (not Coats or Cloaks, but rich Furniture for Houſes, *&c.*) at ſecond hand. I ſaw (ſays our Author) a rich Pavillion bought out of one of the Shops, the very Pearls of which were ſold for 10000 *Saraffi's*. Among the other remarkable things of this City, we muſt not forget the ſtately Hoſpital built by *Piperus* the *Soldan*, where all ſick Perſons are entertain'd, and provided with Phyſicians and all other Neceſſaries. The Revenues of this Hoſpital amount to 200000 *Saraffi's* a year, and the Hoſpital is Heir to all the Sick that die in it.

The Suburbs of *Cairo.* *Bed Zuaila.*

This City has very conſiderable Suburbs; one of 'em call'd *Bed Zuaila*, commencing from the *Zuaila* Gate, contains 12000 Families, and many of its Inhabitants kept Shops in the City as well as there. 'Tis adorn'd with a ſtately Colledge, which is ſo ſtrong, that the Members of it have oftentimes rebell'd, and pretended to hold out againſt the City and the *Soldin*'s Caſtle, which is but half a Bow ſhot off. This Caſtle ſtanding upon the ſide of Mount *Muchattim*, is ſurrounded with lofty impregnable Walls, and contains ſuch Palaces as are fine beyond expreſſion: They are pav'd with excellent Marble, their Roofs are guilded and curiouſly painted, their Windows are adorn'd with divers colours, and their Gates are neatly carv'd, and beautified with Gold and Azure. Some of theſe Palaces are are ſet a-part for the *Soldan* and his Family, and others for his Wife's Family, and for his Concubines, Eunuchs, and Guards. But at preſent they lie in Raines, being deſtroy'd by *Selem* the *Great Turk*.

Gemeh Tailon.

Another Suburb call *Gemeh Tailon*, was built before the Foundation of *Cairo*, by one *Taylon* a very wiſe Man, ſubject to the *Califa* of *Bagdet*, and Governour of *Egypt*, who leaving the old City, adorn'd this Quarter with an incomparable Palace and a magnificent Temple. A great many Merchants and Tradeſmen, eſpecially the *Barbary Mores*, dwell here.

Bed Elloch.

The next part of the Suburbs is *Bed Elloch*, which lies at the diſtance of a Mile from the Walls of *Cairo*, and contains almoſt 3000 Families, and is adorn'd with a great Palace and a ſtately College. When the *Mahometan* Sermons and Worſhip are over, the common People of *Cairo*, with the Whores and Bauds, reſort to this place, as well as the Stage-Players, and thoſe who teach Camels, Aſſes, and Dogs to dance.

Dancing Aſſes.

The dancing of Aſſes is diverting enough; for after he has frisk'd and caper'd about, his Maſter tells him, that the *Soldan* meaning to build a great Palace, intends to imploy all the Aſſes in carying Mortar, Stones, and other Materials; upon which the Aſs falls down with his Heels upward, cloſing his Eyes, and making his Belly to ſwell as if he were dead: This done, the Maſter begs ſome aſſiſtance of the Company to make up the Loſs of his dead Aſs; and having ſpung'd as much as he can get, gives 'em to know, that truly his Aſs is not dead, but only being ſenſible of his Maſter's neceſſity, play'd that trick to procure ſome Provender. Then he commands the Aſs to riſe, who ſtill lies in the ſame poſture, notwithſtanding all the Blows he can give him; till at laſt he proclaims, that by vertue of an Edict from the *Soldan*, all the handſome Ladies were bound to ride out as next day upon the comelieſt Aſſes they could find, in order to ſee a triumphal Show, and to entertain their Aſſes with Oats and *Nile* Water; for the Words are no ſooner pronounc'd, than the Aſs ſtarts up and prances and leaps for Joy: But immediately the Maſter gives out, that his Aſs was pitch'd upon by the Warden of their Street to carry his deform'd and ugly Wife; upon which, the Aſs lowers his Ears and limps with one of his Legs as if he were lame. Then the Maſter alledging that his Aſs has a kindneſs for handſome Women, commands him to ſingle out the prettieſt Lady in the Company, and accordingly he makes his choiſe, by going round and touching one of the handſomeſt with his Head, upon which, the Company divert themſelves by laughing and pointing to the Aſſes Sweet-heart.

Another ſort of Juglers that frequent this place, are thoſe who carry Birds about in Cages, which after the receiving of a Fee, bring out a Scroul in their Beaks, determining the good or ill Fortune of the Perſon that addreſſes 'em; and even I (ſays our Author) having ill Fortune predicted to me by theſe Diviners, found it to be in effect worſe than their Prediction. The ſame place is reſorted to by Fencing-Maſters and Ballad-ſingers. To return to the Appendages of *Cairo*.

Bulach.

At the diſtance of two Miles from the City Walls, upon the Bank of the *Nile*, ſtands *Bulach*, containing 4000 Families, many of whom trade in Oil, Corn, and Sugar, and adorn'd with ſtately Temples, Palaces, and Colleges.

The Port of *Cairo.*

Its beſt Houſes are rang'd along the River ſide, where they have a noble poſpect of Barks, perhaps 1000 in the Autumn, this being the Port for *Cairo*, and the reſidence of the Cuſtom-Houſe Officers, for the Goods imported from *Alexandria* and *Damiata*, tho' indeed the Cuſtom of theſe Goods is but little, in regard that they have paid already upon their firſt unloading, whereas the Commodities imported from the inland parts are taxed to the full.

Carusa.

About two Miles from the City Walls, juſt by Mount *Mucatim*, ſtands *Carusa*, which once contain'd 2000 Families, tho' at preſent moſt of it is laid waſte, and is noted for magnificent Tombs, adorn'd with lofty Arches, which the Citizens of *Cairo* adore as the Monuments of Saints, and viſit every *Friday*, beſtowing liberal Alms, and covering the Pavements with rich Carpets.

Mifrulbetich.

In this Catalogue, we may liſt the ancient unwall'd City of *Mifrulbetich*, built upon the ſide of the *Nile* by *Hamre*, General to *Homare*, the ſecond *Mahometan* Patriarch, being the firſt that the *Mahometans* built in *Egypt*. It contains 5000 Families, and is adorn'd with the bulky and lofty Temple of *Hamare*, beſides ſeveral ſtately Palaces and Noblemens Houſes. In this place there is a Cuſtom-houſe for all Goods imported from *Sachid*. 'Tis famous for the Sepulchre of *Nafiſſa*, a *Mahometan* Saint, deſcended of *Heli Mahomet*'s firſt Couſin. This Saint ſeeing her Family depriv'd of the *Mahometan* Patriarchſhip, left *Cufu* a City of *Arabia Fœlix*, and came to live here, where the People canoniz'd her for a Saint, out of regard, partly to the innocence of her life, and partly to her relation to *Mahomet*; and when the Schiſmatick Patriarchs of her Family maſter'd *Egypt*, they built her a noble Tomb or Shrine, adorn'd with Silver Lamps and many other coſtly Ornaments. All the *Mahometans* in this Country pay their yearly Oblations to the Shrine, and no Stranger comes to *Cairo* without adoring and preſenting it with an Offering. Theſe Oblations amounting to 100000 *Saraffi's* a year, are given, partly for the relief of *Mahomet*'s poor Relations, and partly for the maintenance of the Prieſts attending the Shrine, who delude the People with counterfeit Miracles, in order to ſcrew up their generoſity. When *Selim* maſter'd *Cairo*, he took out of this Sepulcher 100000 *Saraffi's* in ready Money, beſides the Silver Lamps, Chains, Carpets, *&c.* Not far from this place are the magnificent Tombs of the *Soldans*, the Arches of which are very lofty, and from which, one of the late *Soldans* has made a Walk inclos'd by two high Walls leading to the City Gate, with Turrets of a great height at the ends of the Walls, calculated for directing the Merchants that come from the Port of Mount *Sinai*. At the diſtance of a Mile and a half from theſe Tombs, we come to a Garden in a place call'd *Amalthria*, which is ſurrounded with a ſtrong Wall, and which no Man is allow'd to enter without a particular Licence from the Governour, becauſe the only Balm Tree in the World grows in it, in the midſt of a large Fountain, having a ſhort Trunk, and Leaves like Vine-Leaves, only they are not ſo long. 'Tis ſaid, that if the Water of this Fountain ſhould happen to be diminiſh'd, the Tree would decay and wither.

The Iſle of Meaſure.

Over againſt the old City, the *Nile* makes an Iſland in the midſt of it, call'd *Michias*, i. e. *The Iſle of Meaſure*, in which the ancient *Egyptians* found an Invention to foreſee the plenty or ſcarcity of the inſuing Year, from the inundation of the *Nile*. This Iſland is well inhabited, containing 500 Families; The point or end of it is beautify'd with a ſtately Palace and a pretty Temple. Upon the other ſide there ſtands a lone Houſe, with a ſquare Ciſtern 18 Cubits deep, into which the *Nile* Water is convey'd by a Sluice under ground, and there being a Pillar in the middle of it which is divided by Marks into as many Cubits as the Ciſtern has in depth, ſome Officers appointed by the Senate, attend there when the *Nile* begins to overflow, in order to obſerve how much it riſes every day, the Meaſure of the Increaſe being publiſhed in the Streets by Boys with yellow Scarfs upon their Heads, who receive daily Rewards from all ſorts of Perſons while that Service laſts. Now 'tis obſerv'd, that if the Water riſes to the 15th Cubit of the Pillar, a plentiful Year inſues; if it ſtops between the 12th and

15th we may expect but a ſorry crop, if it ſtops between the 10th and 12th. Corn will be ſold for ten Ducats a Buſhel, but if it riſes to the 18 Cubit, the overbearing moiſture will occaſion a great ſcarcity, and if the 18th be ſurmounted, *Egypt* is threatned with an univerſal deluge; ſo that during the Inundation, the People are imploy'd in praying and giving of Alms, and the Boys directed by the Officers to proclaim the daily increaſe, ſtill charge the People to fear God. Foraſmuch as the *Nile* increaſes forty Days and decreaſes as many, when the 80th Day paſſes, the price of Victuals and Corn is regulated by the Clerk of the Market according to the foregoing Signs, but while the Inundation laſts, every one may ſell Corn at what rate he pleaſes, for which reaſon 'tis very dear in that Seaſon. After the adjuſting of the Market Rates, a great Solemnity is celebrated over all *Cairo*, with Torches and a thundering noiſe of Trumpets and Drums. Each Family feaſts upon Confections and Dainties in a Barge of their own, ſet out with rich Carpets and Coverings. At the ſame time the *Soldan* attended by his Courtiers, repairs to the great Conduit or Sluice, and breaking down the Walls with an Ax, gives entrance to the Water of the *Nile*, which runs ſo impetuouſly thro' that and all the other Sluices, that *Cairo* looks like another *Venice*, and then one may row in a Boat all over *Egypt*. This Solemnity of feaſting in Barges continues for ſeven Days and ſeven Nights, during which ſpace, the Tradeſmen, purſuant to a Cuſtom of the *Egyptians*, ſpend in Perfumes, Flambeau's, Confections, Muſick, *&c.* all that they ſav'd the preceding Year.

The Cuſtoms and Humours of the Citizens of *Cairo*.

The Citizens of *Cairo* are a jolly chearful People, but apt to promiſe more than they can perform. Tho' Merchandiſe and Mechanical Arts flouriſh among 'em, yet they never travel. All liberal Arts and Sciences they neglect in a manner, excepting the Law, the Students of which fill all their Colleges, but few of 'em attain to any perfection in that way. The Citizens wear in Winter Cloth Garments lin'd with Cotton, and in Summer fine Shirts, with Garments of Linen curiouſly wrought with Silk or of Camblet over 'em; upon their Heads they have great Turbants cover'd with *Indian* Cloth. The Women adorn their Fore-head and Neck with Pearl Frontlets and Chains, and their Heads with a rich ſmall Bonnet, about a ſpan high. Their Gowns are made of Woolen Cloath with ſtrait Sleeves, and curiouſly embroyder'd with Needle Word, and over them they caſt Vails of the fineſt Cloth of *India*. Their Heads and Faces are cover'd with a kind of black Scarf, thro' which they ſee others, themſelves being unſeen: Upon their Feet they wear fine Shoes and Slippers, ſomewhat after the *Turkiſh* faſhion. Theſe Women are ſo ambitious and haughty, that they diſdain to Spin or dreſs Meat, which obliges their Husbands to buy their Victuals ready dreſt at a Cook's Shop, for very few dreſs Meat in their own Houſes, unleſs it be ſuch as have a great Family. The Wives are allow'd the Liberty of going abroad in their fine Apparel and rich Perfumes, and goſſiping where they pleaſe. They ride for the moſt part upon Aſſes, which are broken to ſuch a pace, that they'll go eaſier than a pack'd Horſe, and adorn'd with rich Furniture, being led by a Boy and ſeveral Footmen running by 'em. In this City, as well as in divers others, a great many Hagglers ſell all ſorts of Victuals up and down, and ſome ſell Water, carrying it about in Leathern Bags upon Camels Backs, for the City lies two Miles off the *Nile*; but the Water that is to be drunk, is ſold for a Farthing a Draught, out of handſome Veſſels, that have a Braſs Cock upon 'em, and drunk in a cup of Myrrh or Chryſtal.

Others ſell Chickens and other Fowls by Meaſure, which they hatch after a ſtrange manner; for they put the Eggs into Ovens moderately hot, which in the ſpace of ſeven days turn them into Chickens. The meaſure by which they ſell them is bottomleſs, ſo that when 'tis full, they lift it up over the Basket of the Buyer, into which the Chickens fall. The Cook-ſhops are open very late, but the other Tradeſmen ſhut up ſhop before ten a Clock, and then walk abroad to divert themſelves. Their common Diſcourſe is very rank, being tainted with Smut and Ribaldry. Oftentimes the Women complaining before of their Husbands incapacity to ſatisfie their Paſſion, obtain a Divorce purſuant to *Mahomet*'s Law. If any of the Artiſans invents a new and ingenious piece of work, he is carri'd in triumph from Shop to Shop, and receives ſome Money at every place, being clad with Cloth of Gold, and attended by Muſicians. I ſaw one (ſays our Author) that was thus honour'd for the making of a Chain that would bind a Flea.

The religious Sects.

Among the ſeveral religious Sects in this City, there is one of the *Mores* call'd *Chenefia*, which lives upon Horſe-fleſh, and for whoſe uſe the Butchers buy up all the founder'd lame Horſes they can hear of. This Sect prevails very much among the *Turks*, the *Mamalukes*, and the People of *Aſia*, however the *Turks* do not innure themſelves to the eating of Horſe-Fleſh, tho' they lie under no prohibition to the contrary. In *Egypt* and the City of *Cairo*, four ſeveral Sects are tolerated, which differ from one another both in Canon and Civil Laws, tho' all of them are Retainers to *Mahomet*: For there were four Men in the World, that by vertue of their great learning and ſubtlety, pretended to make particular Inferences from *Mahomet*'s general Precepts, and wreſting them to their own reſpective Senſe of things, gave riſe to four *Mahometan* Sects.

The *Jews* of *Cairo*.

As for the Government of *Cairo*; It has four chief Judges who decide Cauſes of importance, and four Inferiour Judges in each Street, who take cogniſance of petty Quarrels. From the four principal Judges there lies an Appeal to the Governour of the Sect *Eſſefichia*, who is the nigheſt Judge of all; for every Sect has a ſubordinate Judge of its own, who inflict ſevere Puniſhments upon all that tranſgreſs the Rules and Canons of their Religion: But at the ſame time the four Sects are very charitable and reſpectful to one another; and to ſpeak the Truth of the Matter, tho' they differ very much in their Liturgy and other Reſpects, yet they all agree in following the Canons of *Maſhari*, the principal Doctor of the *Mahometans*, which are receiv'd over all *Africa* and moſt part of *Aſia*, excepting the Dominions of the *Sophi* of *Perſia*, and for that ſame very Reaſon the other *Mahometans* account him an Heretick.

Puniſhments of Criminals.

As for the Puniſhments inflicted in this City on Malefactors, Thieves are hang'd, Murderers are cut in two thro' the middle, and the upper part of the Body is thrown into a Fire of unſlak'd Lime, where it remains alive for a quarter of an Hour, ſpeaking and giving Anſwers to the By-ſtanders; Rebels or ſeditious Perſons are flea'd alive, in which caſe the Criminal continues a long while in unexpreſſible Torment, for he does not die till the Executioner touches the Navel with his Knife, and that he dare not do till the Magiſtrate ſtanding by gives him orders: After the fleaing of the Criminal, his Skin is ſtuff'd with Bran till it reſembles the Shape of a Man, and carried upon Camels Backs thro' every Street, and there the Crime is publiſh'd. As for Perſons impriſon'd for Debt, and uncapable to pay it, the Governour of the Priſon pays their Creditours, and ſends them bound in Chains and accompanied with Keepers to beg from door to door, the Alms redounding to him, and they being allowed a very ſorry maintenance.

I ſhall conclude with one remarkable Cuſtom in this City, namely, that of ſome ancient Women, who cry up and down the Streets in an unintelligible manner, and are imploy'd to circumciſe Women according to *Mahomet*'s Law; but that Ceremony is only obſerv'd in *Egypt* and *Syria*.

The Dignity of the *Soldan*.

Before we take leave of this Subject, 'twill be proper to take notice of the Dignity and Power of the *Soldan*, which indeed was very great, tho' in the Year 1517, 'twas utterly ſunk by *Selim* the *Great Turk*. The Dignity of *Soldan* was wont to be beſtow'd upon one of the nobleſt *Mamalukes* ever after the fall of the Family of *Saladin*, whoſe name was ſo terrible to the Chriſtians. Theſe *Mamalukes* were originally Chriſtian Children ſtole out of *Circaſſia* by the *Tartars*, and ſold at *Caffa*, a Town in *Taurica Cherſoneſus*, where they were brought by ſome *Cairo* Merchants, and afterwards ſold to *Saladin* the *Soldan*. The *Soldan* obliging theſe Slaves to abjure their Baptiſm, caus'd them to be inſtructed in the *Arabick* and *Turkiſh* Language, and train'd up in Military Diſcipline; and being thus qualified for Poſts of Honour, they at laſt arriv'd at the Dignity of a *Soldan*. This *Saladin*, originally an Aſiatick Prince, was call'd in, together with his Father, by the City of *Cairo* to protect them againſt the laſt King of *Jeruſalem*, who threatned 'em with Deſtruction; and having diſlodg'd the Chriſtians of *Jeruſalem* and all *Syria*, made away with the Schiſmatick *Califa* of *Cairo*, whoſe Predeceſſours had continued Lords of that City for 230 Years running, and reduc'd the City to the obedience of the *Califa* of *Bagdet*, who was its true and lawful Governour. The Schiſmatical *Califa's* being thus ſuppreſs'd, *Saladin* quarrell'd ſoon after with the *Califa* of *Bagdet*, and made himſelf Soveraign of *Cairo*; and in regard that a great part of his Forces was cut off by War and Peſtilence, apply'd himſelf to the buying of *Circaſſian* Slaves from the King of *Armenia*. Theſe Slaves having abjur'd Chriſtianity, and being taught the *Turkiſh* Language, which was *Saladin*'s Mother

ther Tongue, increas'd ſo much both in Valour and Number, that they became expert Generals, and upon the decay of the *Saladin* Family, choſe *Piperis* one of their own Number, to be their Soveraign *Soldan*. This Cuſtom was afterwards obſerv'd ſo religiouſly, that neither the *Soldan*'s own Son nor any other *Mamaluk* could attain to that Dignity, unleſs he had firſt been a Chriſtian, and abjur'd his Faith, and learn'd to ſpeak perfectly the *Circaſſian* and *Turkiſh* Languages.

Under the *Soldan* there were ten great Officers: The next to him was the *Eddaguadare* or Vice-roy, who nominated and turn'd out Magiſtrates or Officers. The third was the *Amir Cabir* or General, who levy'd Armies, and appointed Garriſons for the Caſtles and Cities, and was empower'd to lay Money out of the *Soldan*'s Treaſure as he ſaw occaſion. The fourth was the *Nai Baſſa*, or Lieutenant of *Syria*, who pay'd the *Soldan* ſome thouſands of *Saraffi's* a Year. The fifth was the *Oſtadar* or Steward of the Houſhold, who provided Victuals and other Neceſſaries for the *Soldan* and his whole Family. The ſixth was the *Amiri Achor*, or Maſter of the Horſe and Camels. The ſeventh Office was that of ſeveral *Mamaluk* Colonels, who conducted his Forces againſt the Enemy. The eighth was that of ſome Centurions over the *Mamaluks*, who always attend the *Soldan* when he rode abroad or exercis'd his Arms. The ninth Officer was the Treaſurer; The tenth the *Admir Sileh*, or the *Soldan*'s Armour Keeper. The eleventh the *Teſtecana*, or Maſter of the Wardrope, who diſtributed Robes of Gold, Velvet, Silk, &c. according to the *Soldan*'s appointment, for the *Soldan* always gave Cloaths to thoſe whom he prefer'd to any Dignity.

The City of *Chanca*. So much for the famous City of *Cairo*: Upon the Road from *Cairo* to Mount *Sinai*, we come up with *Chanca*, a City ſtanding upon the entry of a Deſart, about ſix Miles from *Cairo*, and adorn'd with ſtately Houſes, Temples and Colleges. All the Fields between *Cairo* and *Chanca* produce great plenty of Dates, but between *Chanca* and Mount *Sinai*, which extends to 140 Miles, there is no place inhabited. Two great Roads, one leading to *Syria* and the other to *Arabia*, paſs thro' this City. It has no Water but what remains in ſome Channels after the Inundation of the *Nile*, and when theſe Receivers or Chanels are broke down, the Water runs out into the Plains, and there makes a great many ſmall Lakes, from whence 'tis convey'd back by certain Sluices, into the Ciſterns of the City.

Munia. The City of *Munia*, built by the *Mahometans*, ſtands upon the ſame ſide of the *Nile*, at the diſtance of 180 Miles from *Cairo*. It abounds with Dates and all ſorts of Fruit, and the Inhabitants enrich themſelves by trading to *Gaoga* in *Negroland*. 'Tis adorn'd with fine Temples and other Buildings, and ſhews to this Day divers Ruins of the ancient *Egyptian* Buildings.

Manf-Loth. *Manf-Loth*, another *Egyptian* Town, there are ſome very large and high Pillars and Porches, bearing *Egyptian* Inſcriptions. Near the *Nile* we ſee the Ruins of a ſtately Building, which ſeems to have been a Temple in times paſt, where ſome Silver, Gold and Lead Medals are ſometimes found, bearing Hieroglyphick Notes on one ſide, and ancient Kings on the reverſe. The adjacent Fields are fertile, but the heat of the Sun is very ſcorching, and the Country is much infeſted with Crocodiles, which perhaps was the occaſion that prompted the *Romans* to abandon that place.

Azioth. *Azioth*, founded by the *Egyptians* upon the *Nile* ſide, 250 Miles from *Cairo*, is very remarkable for the huge Bulk and variety of old Buildings and Epitaphs engraved in *Egyptian* Letters. At preſent moſt of it lies deſolate, tho' 'tis ſtill inhabited by Noblemen and wealthy Citizens, and contains almoſt 100 Families of Chriſtians, beſides a Monaſtery without the City, where 100 Monks reſide, that eat neither Fiſh nor Fleſh, but only Herbs, Bread and Olives, and ſome liquoriſh Morſels made up without Fat. This Monaſtery is very rich, and entertains all Strangers for three Days, being provided for that end with great ſtore of Pigeons, Chickens, and the like.

Iclmin the ancienteſt City in Egypt. The ancienteſt City in all *Egypt*, is *Iclmin*, built by *Ichmia*, the Son of *Miſraim* the Son of *Chus*, upon the Aſiatick Bank of the *Nile*, at the diſtance of 300 Miles Eaſt from *Cairo*, and raz'd to the very Foundation by the *Mahometans*, when they firſt began to uſurp the Government of *Egypt*, for they tranſported the Pillars and beſt Stones to the other ſide of the *Nile*, where they built *Munſia*.

Munſia.

Georgia a Monaſtery. *Georgia*, a famous Chriſtian Monaſtery, ſo call'd from St. *George*, ſtood at the diſtance of ſix Miles from *Munſia*. 'Twas inhabited by above 200 Monks, who enjoying large Territories and Revenues, were very kind to Strangers, and ſent the Surpluſage to the Patriarch of *Cairo*, to be diſtributed by him among the poor Chriſtians: But about 100 Years ago, all the Monks died of the Plague; upon which, the Prince of *Munſia* ſurrounded the Monaſtery with a Wall, and being charm'd by its pleaſant Gardens, ſituated amidſt beautiful Hills, went and liv'd in it himſelf. At laſt, upon the Sollicitation of the Patriarchs of the Jacobites, the *Soldan* caus'd another to be built in its room, for the maintenance of thirty Monks.

Chian. *Chian*, a little City built by the *Mahometans* near the *Nile*, is now inhabited only by the Chriſtians call'd Jacobites, who imploy themſelves in Husbandry, or in bringing up Chickens, Geeſe, and Doves.

Barbanda. *Barbanda*, founded by the *Egyptians* upon the *Nile*, was laid waſte by the *Romans*, and moſt of its Ruins were carried to *Aſua* alias *Siene*, where we find divers huge Structures and Sepulchres with *Egyptian* and *Latin* Epitaphs. Several pieces of Gold and Silver Medals, and Fragments of Emeralds are found in the Ruins of *Barbanda*.

Aſua.

Cana. Over againſt *Barbanda*, ſtands the ancient City of *Cana*, built by the *Egyptians*, ſurrounded with Brick Walls, and inhabited by Husbandmen, by which means it abounds with Corn, and furniſhes *Medina* and *Mecca* with that Commodity. The Goods ſent from *Cairo* to *Mecca*, are brought againſt the Stream to *Cana*, from whence they are carried by Land over the Wilderneſs to *Choſſir*, a Port upon the *Red Sea*, which is at leaſt 120 Miles off.

Aſſuan. The laſt City I ſhall mention, is the great and populous City of *Aſſuan*, built by the *Egyptians* upon the *Nile*, about 80 Miles Eaſt from *Aſna*. It ſtands upon a fertile Country, and its nearneſs to *Nubia* gives the Citizens the opportunity of a great trade. It joins likewiſe to the Frontiers of *Æthiopia*, and is not far from the Deſart that lies upon the Road to *Suachen*, a Port upon the *Red Sea*. The Citizens being extreamly ſcorch'd with the Summer Sun, are of a ſwarthy brown colour, and mingled with the People of *Nubia* and *Æthiopia*. The City ſhews many Buildings of the ancient *Egyptians*, and very high Towers, which the Natives call *Barba*. Beyond this City, the *Nile* diſperſing it ſelf into very ſmall Lakes, becomes innavigable; and there we meet with neither City nor Habitation of any account, excepting a few Villages of Blacks, whoſe Speech is a Medley of the *Arabian*, *Egyptian*, *Ethiopian* Languages, and who live in the Field after the *Arabian* way, being ſubject to the People call'd *Bugiha* (alias *Troglodytæ*) for *Aſſuan* is the utmoſt Limit of the *Soldan*'s Juriſdiction.

Additions to CHAP. VIII.

Collected from Marmol.

The Original of the Soil of Egypt.

SOme Authors, and particularly *Herodotus*, who gives a large Account of the Cuſtoms, Buildings, and Ceremonies of *Egypt*, have been of opinion, that the whole Country was once cover'd with the Sea, which retreated by degrees, and in the mean time the overflowing of the *Nile* continued ſo long, and brought down from *Ethiopia* ſo much Earth and Mud, as form'd the pleaſant and fertile Fields that *Egypt* now boaſts of. This ſeems to be a reaſonable Conjecture; for the Soil of *Egypt* differs very much from that of its Neighbouring Provinces, as being black, fat and heavy, whereas that of the other parts of *Africa* is red and light, that of *Arabia* ſtony and white, and that of *Syria* friable and duſty. Beſides, *Herodotus* acquaints us, that the Prieſts of *Vulcan* gave him to know, that in the Reign of *Meris*, the *Nile* riſing eight Cubits higher, laid the whole Country under water, whereas at preſent it muſt encreaſe 18 before it can overflow the Country, which is an Evidence, that the Mud remaining after the Inundation of the *Nile*, has by degrees rais'd the whole Country. *Ptolomy*, (whom we here follow in throwing all *Egypt* into *Africa*) divides *Egypt* into two parts, namely, the Upper and the Lower; the Lower is call'd by the *Latines Oden*, and by the *Greeks Delta*, from its triangular Figure reſembling that Letter; ſome rank it among the Iſlands, for in effect 'tis one. Upper *Egypt* is call'd *Thebais* from the City of *Thebes*, ſo much celebrated by *Homer*, (Iliad. 9.) which boaſted of 100 Gates, and 20000 Horſe beſides Infantry. The Kings of *Egypt* kept their Court there, which they afterwards remov'd to *Memphis*, and at laſt to *Alexandria*.

The Diviſion of Egypt.

Its Limits.

In a word, the whole Country of *Egypt* (as we here take it) extends on the Eaſt to the Frontiers of *Gaſa* and *Syria*, on the Weſt to the Deſarts of *Barca*, *Marmarica*, and *Libya Interior*, on the North to the Mediterranean Sea, and on the South to *Nubia* and *Æthiopia* above *Egypt*. This Country is but very narrow; its broadeſt part lies towards the Mediteranean, where the Branches of the *Nile* make a *Delta*; for higher up 'tis much narrower, being bounded by the Mountains of *Arabia*, out of which the Stones of the *Egyptian* Pyramids were digg'd, and 'tis upon the *Arabian* ſide of *Egypt* that the Trees grow which bear Incenſe. On the Weſt 'tis limited by a Ridge of Mountains, call'd by the Ancients the *Punick* or *African* Mountains. Now all the Country that lies between theſe two Mountains is *Egypt*, and ſeems to have been formerly cover'd with the Sea, the Country below *Memphis* being overflown by the Mediterranean, and that near the *Arabian* Gulph by the *Red Sea*; ſo that at that time, the diſtance between theſe two Seas was not great. Upon the top of ſome of the higheſt Mountains that lie oppoſite to *Cairo*, one may deſcry Oyſter-ſhells and Sand among the Rocks, which confirms that the Sea reach'd ſo far once. At preſent inſtead of the ſalt Water, that of the *Nile* overflows every year, between the two Ridges of the Mountains as far as 20 Leagues (more or leſs, according as the Inundation is) on either ſide.

Egypt cover'd with the Sea.

The Original of the Egyptians.

The ancient *Egyptians* took themſelves to be the firſt of human race; but in the Reign of *Pſammeticus*, they diſcover'd that the *Phrygians* were ancienter than they; for according to *Herodotus*, that Prince, after ſeveral Enquiries into their Antiquity, order'd two new-born Infants to be bred up in a Deſart among the Cattle, without allowing 'em any commerce with Men, and charg'd the Shepherd to obſerve narrowly the firſt Word that they pronounc'd. In proceſs of time, the two Children taking the Shepherd by the Hand, cry'd *Betcho*, which is the Phrygian Word for Bread, and upon that, the *Egyptians* yielded the Plea of Antiquity to the *Phrygians*. Others ſay, that Prince put the two Children into a cloſe Tower and cut out the Nurſe's Tongue, and the firſt Word they ſpoke was *Betcho*. The *Egyptians* were the firſt that divided the Year into twelve Months, purſuant to the Courſe of the Stars, and by that Computation out-did the *Greeks*, who made an Intercalation of a Month every three Years.

The Ingenuity and Superſtition of the ancient Egyptians.

They were a very ingenious People, but ſuperſtitious to an exceſſive degree, and great Idolaters. 'Tis to them that the *Greeks* owe the name of the twelve Gods. They invented Idols, Altars, and the other Appendages of Divine Worſhip, and preſerv'd the memory of things by carving Animals upon Stones. They were very fond of Ceremonies and vain Pomp, and celebrated the Feſtivals of their Gods in ſeveral places. The Temple of *Diana* ſtood in *Bubaſte*, that of *Iſis* or *Ceres* in *Buſiris*, that of *Minerva* in *Samos*, that of the *Sun* in *Heliopolis*, that of *Latona* in *Buto*, that of *Vulcan* in *Memphis*, and that of *Mars* elſewhere. They were ſo ſuperſtitious as to revere the Fowls and Quadrupeds as ſacred Beings, and erect Sepulchres for 'em in places appropriated to each Species. At preſent there are none of the ancient *Egyptian* Race left, unleſs it be ſome Chriſtians who conceal their Extraction, and follow the ancient Superſtition and Ceremonies. The Country is now in the Hands of the *Grand Seignior*, who diſpoſſeſs'd the *Mahometan Soldans*.

Alexandria.

To take a ſhort view of the moſt noted Cities in *Egypt*. *Alexandria* was contriv'd by *Democritus* the Mathematician, by the Order of *Alexandria* the *Great*, and built by *Ptolomy* the Son of *Lagus* Governour of *Egypt*. *Alexandria* order'd three *Alexandria's* to be built, one upon the *Tanais*, another in *India*, and this in *Egypt*, which was much more noted than any of the other two. In the time of the *Ptolomy's*, 'twas the Seat of the Kings of *Egypt*. It had two Harbours with a Cauſey or Peer running out between 'em, upon which *Cæſar* had a ſharp Engagement with the Inhabitants, and finding himſelf overpower'd leap'd into a Boat, and when he found that a ſinking into the Sea, where he ſwam 200 Paces, holding up his writing Tables with one Hand to prevent their being wet. Upon the point of this Peer *Ptolomæus Philadelphus* erected a Light-houſe to direct Ships in the night time, for the Mouth of the Harbour is very difficult.

A great Pillar.

The great Pillar that ſtands about ſix Miles to the Weſt of the City, caſts a ſhadow of 47 Paces at Noon, and reſembles St. *Peter's* Steeple at *Rome*. It has a round Ball at the top, which ſeems to have been the Sepulchre of ſome *Roman*. The *Arabians* ſay 'twas built by the *Ptolomy's* for the Security of the City, and to magnifie their Conqueſt, fabulouſly alledging, that it had an enchanted Steel Glaſs upon it, the Vertue of which was ſuch, that when it was laid open it burnt all the Ships that paſs'd, and that they broke this Glaſs when they became Maſters of the place, and remov'd the Pillar.

St. Mark beheaded in Alexandria.

In one of the Streets within the City there's a large round Stone, of four Spans diameter, painted like Jaſper, with a hole in the middle, like a Mill-Stone; and 'tis ſaid by the Inhabitants, that St. *Mark* was beheaded in this place, for he liv'd and preach'd at *Alexandria*, which occaſion'd the erecting of a Patriarchſhip in that City, and ſuch Confluences of Confeſſors, Martyrs and Hermites, as outnumber'd the reſt of the Inhabitants.

'Twas in this place that the Patriarch *Jacob* gave birth to the Hereſie of the *Jacobites*, who circumcis'd themſelves. An *Egyptian* Prieſt (ſays our Author) ſhew'd me a place in this City, where Philoſpohy and Aſtrology were taught by the greateſt Maſters in the time of *Alexandria* the *Great*; for theſe Sciences had flouriſh'd among them a long while, when the *Greek* Letters were introduch'd into *Egypt*. To prevent the expoſing of Sciences to every one's view, they taught by way of Characters and *Hieroglyphicks*, which they learn'd from the *Ethiopians* that reign'd in *Egypt*. This Method of teaching by Figures was likewiſe obſerv'd by the Cabbaliſts, the *Magi* in *Perſia*, the *Chaldeans* in *Aſſyria*, the *Brachmins* in *India*, the *Gymnoſophiſts* in *Æthiopia*, the firſt *Philoſophers* in *Greece*, and the *Druides* in *Gaul*. *Homer*, *Orpheus*, *Henopides*, *Pythagorus*, *Democritus* and *Plato* ſtudied here, and tranſported their Philoſophy to *Greece*. In fine, *Alexandria*, lies at the diſtance of four days Journey from *Cairo*, and in former times ſupply'd *Europe* with Spices, and the other rich Commodities of *India* and *Arabia Fœlix*; for they were firſt unloaded at *Aydeb* upon the *Red Sea*, and convey'd upon Camels to *Cairo*, from whence they were brought by the *Nile* to *Alexandria*; but ſince the *Portugueſe* have diſcover'd the Navigation to *India*, the Commerce of this City is mightily impair'd. The City lies, according to *Ptolomy*, in 63 Deg. 30 Min. Long. and 31 Deg. 8 Min. Lat. At preſent the *Grand Seignior* keeps a *Turkiſh* Garriſon in it, and ſome Galleys in the Harbour for the ſecurity of the Coaſt.

Boquir. *Boquir*, a Sea Town, lying three Leagues Eaſt of *Alexandria*, ſeems to be *Ptolomy's Canopus*, which he ſtates in 60 Deg. 55 Min. Long. and 31 Deg. 6 Min. Lat. 'tis now in ruins. The Coaſt upon which it ſtood is very dangerous, for ſeveral Ships coming from the Coaſt of *Syria* are caſt away upon it in the night time.

Anthius. The *Romans* built a Town call'd *Anthius*, formerly *Antedon*, upon the Eaſtern Bank of the *Nile*, where great Alabaſter Tables with Latin Inſcriptions are ſtill to be ſeen.

Thebes The ancient City of *Thebes*, mention'd by *Homer* in his Iliads, ſtood upon the weſtern Bank of the *Nile*, and was once the place of Reſidence for the Kings of *Egypt*. Some ſay the *Greeks* built it, others ſtand up for the *Romans*, but 'tis moſt probable that the *Egyptians* were the true Founders. This place ſtands in one of the two *Thebais's* mention'd by *Ptolomy*, who gives the Capital City the name of *Lycopoli*, in 6. Deg. 46 Min. Long. and 28 Degrees Lat. (in this Province ſtood *Thebes*) and that of the other *Dioſpolis* or *Jupiter*'s City, ſituate in 62 Deg. Long. and 25 Deg. Lat. This laſt I take to be the ſame with *Sienna*. *Sienna.*

Mequellat Cays. Upon the Weſt Bank of the *Nile* the Succeſſours of *Mahomet* built a City call'd *Mequellat Cays*, which ſtands ſo high, that the *Nile* does not overflow the adjacent Grounds, and for that reaſon they are all planted with Vines, which ſupply *Cairo* with Grapes one part of the Year.

Memphis. The ancient *Memphis* where the *Pharaoh's* kept their Court in *Moſes*'s time, is now deſtroy'd. It ſtood 17 Leagues South of *Cairo*, and ſome Pyramids are ſtill to be ſeen near the place where it ſtood. The two Branches of the *Nile* rejoin in the Nighbourhood of this place, and upon their Confluence there ſtands an old Building, which is ſaid to be *Joſeph*'s Tomb; and the *Grecians* aſſure us, that *Memphis* was built in the time of *Joſeph*. As for *Pompey*'s Tomb, it ſtood ſix Leagues to the Weſt of *Alexandria*, where the high Steeple is, and 'tis ſaid, the Emperour *Adrian* imbelliſh'd it.

Flium. Others ſay *Joſeph*'s Sepulchre was at *Flium*, an ancient City, built by the *Pharaoh's* upon a ſmall Branch of the *Nile*, in the building of which, 'tis ſaid, the Children of *Iſrael* were imploy'd.

Menfloth. Near *Menfloth* there ſtood a Temple, of which an *Arabian* Hiſtorian ſays, that in the time of the *Califa's* of *Babylon*, in digging up its Foundation, they found a Crocodile of Lead with *Egyptian* Letters upon it, importing, that this Statue was made under certain Conſtellations, to prevent the Crocodile's devouring of Men; he adds further, that now the Statue is broken, the Crocodiles are pernicious to Mankind.

Among the Cities of *Egypt* that are ſituate upon the *Red Sea*, we meet with *Suaguin*, a Frontier upon the *Æthiopian* ſide, which has the beſt Harbour in the *Red Sea*, for its Mouth is very narrow, and afterwards opens into a great Lake which has a ſmall Iſland upon it. This place was formerly govern'd by a King of its own, but at preſent 'tis ſubject to the *Baſſa* of *Cairo*, under the *Turk*. *Suaguin.*

Coſſir, a ſmall Town upon the ſame Coaſt, inhabited by poor miſerable *Arabians*, is the Port from whence the *Egyptian* Corn is tranſported to *Arabia*, and where moſt of the *Mooriſh* Pilgrims imbarque for *Mecca* or *Medina*. *Coſſir.*

At the furthermoſt Point of the *Red Sea*, we meet with *Sues*, ſtanding upon a ſandy Ground, that affords neither Spring nor Fountain, inſomuch that the Inhabitants have no Water but what is brought upon Camels from ſome ſalt Wells two Leagues off. Formerly they had a Canal that convey'd the *Nile* Water into their Ciſterns, but the *Arabians* have fill'd it up with Earth. It ſhews the Reliques of ancient Walls and an old Caſtle, and the Natives ſay 'twas once a great City, and was ruin'd by the Succeſſors of *Mahomet*. At preſent no body lives in it, but ſome Work-men that are imploy'd in building the *Grand Seignior*'s Ships, the Wood and other Materials being brought from *Turky*. This Port lies at the diſtance of 22 Leagues Eaſt from *Cairo*. *Sues.*

Paſſing a League further we come to *Pharaoh's Point*, and ſeven Leagues beyond that to the *Wells of Moſes*, which they ſay he digg'd upon his paſſing the *Red Sea*, and for which the *Arabs* have a great Veneration; and 20 Leagues yet farther to *Corondolo*, where 'tis ſaid the Children of *Iſrael* paſs'd. *Corondolo.*

The utmoſt Limit of *Egypt* upon the *Arabian* ſide is *Tor*, a ſmall Town, that goes beyond all the reſt upon this Coaſt in Commerce, Buildings, and Politeneſs. 'Tis inhabited by *Jacobites*, and maintains ſome Prieſts in a Monaſtery of St. *Catherine*, in order to keep up a Correſpondence with that of *Sinay*, where that Saint was inter'd. The People of that Country ſay, *Moſes* croſs'd over at this place when he fled before *Pharaoh*. Some are of the opinion that *Tor* is the ancient *Elam*, that all the Geoprophers mention, upon the Plea, that the Gulf before it bears the name of *Elamitick*. *Tor.*

CHAP. IX.

Containing John Leo's *Account of the remarkable Animals, Minerals, and Plants in* Africa.

The Elephant THE Forreſt of *Negroland* nouriſh great numbers of Elephants, which keep together in Companies, and either ſhun or give the way to a Man when they meet him by chance, but if they mean him harm, they knock him down with their Trunk, and trample upon him till he's dead. The *Ethiopian* Hunters catch 'em after this manner: They make a ſtrong Encloſure with Stakes and great Boughs in that part of the Woods which they frequent, leaving an open Entry, with a Door lying flat upon the Ground, which may be pulled up with Ropes ſo as to ſtop the Paſſage. When the Elephant comes to reſt under the ſhady Boughs of the Encloſure, the Hunters skulking upon the Trees, draw up the Door, and having thus impriſon'd him, kill him with their Arrows, in order to get his Teeth. In *Upper Æthiopia* and *India*, they decoy them by a tame Female to an Encloſure, or ſet a tame Male to fight with a wild one in the Wood, which gives them an opportunity of cramping his hinder Legs with Ropes.

The Giraffa. The *Giraffa*, a Beaſt headed like a Camel and ear'd like an Ox, frequents the Deſarts and Woods where no other Beaſts reſort, and always flies from Men, ſo that the Hunters ſeldom catch 'em, and indeed 'tis a rarity to ſee 'em.

Camels are very numerous in *Africa*, eſpecially in the Deſarts of *Libya*, *Numidia* and *Barbary*; and 'tis by the number of them that the *Arabians* meaſure their Riches and Strength; for he who poſſeſſes many Camels, can reſide in barren Deſarts, where no other Prince can reach him. The *African* Camels are very gentle and tame, and will travel much longer without Corn or Barley than thoſe of *Aſia*, who always carry their own Provender along with them. I have ſeen (ſays our Author) an *African* Camel travel 50 Days without any Grain, only at Night 'twas turn'd looſe to feed upon Graſs, Brambles, and the Boughs of Trees; which an Aſiatick Camel could never have born. I have ſeen them travel in this condition till they've waſted, firſt the Fleſh of their Bunches, then their Bellies, and at laſt their Hips, inſomuch that they have ſcarce been able to carry 100 pound weight. Now there are three kinds of Camels; the firſt call'd *Hugium*, are thick and tall, and the fitteſt for carrying Burthens, but for four Years they are uſeleſs, after which, the leaſt of 'em will carry 1000 pound of *Italian* weight. When they mean to load any of theſe Camels, they give him a ſwitch upon the Neck and Knees, upon which he kneels down, and when he finds himſelf ſufficiently loaded, riſes up again. The *The Camel.*

Africans

Camels very ſwift, *alias* Dromedaries

Africans uſe to geld moſt of them, and leave only one he Camel for ten Females. The ſecond kind call'd *Becheti*, have a double Bunch, which renders 'em fit both for carriage and for riding, but theſe are only bred in *Aſia*. The third call'd *Ragnahill*, being of a ſlender low ſtature, are unqualified for carriage, but go beyond the other two in ſwiftneſs, for they'll travel 100 Miles a day for ten days together with little or no Provender. Theſe the *Numidian Arabs* and the *Libyan Mores* commonly ride upon. Oftentimes the King of *Tombuto* ſends Expreſſes upon one of theſe Camels from his Seat to *Segelmes*, which is 900 Miles off; and commonly they perform the Journey in eight Days at moſt, only he that rides it muſt be well acquainted with the Deſarts, and his Reward is never leſs than 500 Ducats. About the beginning of the Spring theſe Camels fall a rutting, and not only hurt one another, but attack all Perſons that have done them the leaſt injury, while the Venereal Paſſion continues, *i. e.* for 40 days. When they aſſault a Man, they lay hold on him with their Teeth, and after toſſing him up, throw him down again and trample him under foot. They cannot endure Hunger ſo well as Thirſt, for they can abſtain from drinking for 15 Days without any inconvenience, nay, if they are water'd oftner than once in ſix or nine Days, it does them a great deal of injury. When their Maſters ride 'em beyond their wonted rate, they turn teſty and diſobey the Whip, till their Maſters ſing them certain Songs, with which they are ſo pleas'd, that they perform their Journey with unwonted celerity. This (ſays our Author) is an Argument that this Creature is poſſeſs'd of a kind of human Reaſon. At *Cairo* they are taught to dance, by accuſtoming a young Camel to tread upon a red hot Floor, while a Drum beats by him, for the heat makes him lift up his Legs alternately; and afterwards when he hears a Drum beat, he calls to mind the hot Floor that annoy'd him under the noiſe of the Drum, and ſo lifts his Feet as if he were actually upon it.

Barbary or Arabian Horſes.

The Horſes of *Barbary* are the ſame in every Reſpect with other Horſes, only they are incredibly ſwift; in *Egypt*, *Syria*, *Aſia* and *Arabia*, they are call'd *Arabian* Horſes; for 'tis ſaid, that the *Arabian* Deſarts being frequented by wild Horſes, the *Arabs* broke and manag'd them ever ſince the time of *Iſmael*, and theſe have multiply'd ſo prodigiouſly, that moſt of *Africa* is ſtock'd with them: And indeed 'tis certain, that both the *African* and *Arabian* Deſarts are to this day ſtock'd with great numbers of wild Horſes. However, few of theſe Horſes are bred in *Barbary*; but the *Arabians* that range in the Deſarts, and the *Libyans* breed great numbers of them, not for travel or warfare, but for hunting; and to render 'em clean and cliver, feed them only with Camels Milk twice a day, allowing them Paſture in the Graſs Seaſon, during which time they do not ride them. They are incredibly nimble, and if they can outrun a Dant or an Oſtich, are reckon'd to be worth 1000 Ducats or 100 Camels. As for the wild Horſes, they are ſeldom ſeen, and can hardly be catch'd, either by Horſes or Dogs. The *Arabians* of the Deſarts eat their Fleſh, reckoning the youngeſt the ſweeteſt. They catch them by laying a Gin cover'd with Sand in the Waters where they uſe to drink, for the Horſe's Foot is apt to be entangled in the Snare.

Wild Horſes.

The Lant.

The *Lant* or *Dant* reſembles an Ox, only his Legs are ſmaller, and his Horns prettier. His Hair is white, and his Hoofs as black as jet. He outruns all Beaſts except the *Barbary* Horſes, and is catch'd more eaſily in Summer than in Winter, for then his Swiftneſs is abated by the ſcorching heat of the Sand, which hurts and cracks his Hoofs. Shields and Targets are made of his Hide, which are Proofs againſt any thing but a Bullet-ſhot, and are extream dear.

The Wild Ox

Highland Oxen.

The wild Ox is leſs in Stature than a tame one, being of an Aſh colour and extream ſwift. It haunts the Deſarts or their Borders, and its Fleſh is very ſavoury. The tame Oxen upon the Mountains of *Africa*, are no bigger than a Hiefer in other places, but they are ſtrong and hardy, and innur'd to the Plow.

The Wild Aſs.

The wild Aſs is of an Aſh colour, and frequents the Deſarts. When it ſees a Man at a diſtance, it brays, kicks and winces till he comes up, and then ſcowrs away, being ſwifter than any other Beaſt excepting a *Barbary* Horſe. They feed in Troops, and the *Arabians* catch 'em by Snares. Their Fleſh has a rank unſavoury taſte, but becomes pleaſanter by ſtanding two days after 'tis boyl'd.

The Adimmain.

The *Adimmane* is a tame Creature with long dangle Ears; 'tis ſhap'd like a Ram and as big as an Aſs. The *Libyans* uſe 'em inſtead of Cows, and make a great deal of Butter and Cheeſe of their Milk; for they are very numerous in *Libye*, and ſcarce to be ſeen elſewhere; they have ſome Wool upon them, but 'tis very ſhort. For a Frolick (ſays our Author) I once rode a quarter of a Mile upon the Back of one of them.

The African Ram has a huge Tail.

The *African* Rams differ from the other only in their Tails, which are very large, eſpecially if the Rams are fat; ſome of them weigh ten Pounds, even when they feed upon the Mountains; but in *Egypt* they are fed with Bran and Barley till their Tails are ſo overgrown, that they cannot ſtir without little Carts under their Tails to bear them up. I ſaw one (ſays our Author) that weigh'd 80 Pound, and heard of ſome that weigh'd 150 Pound. In fine, all the fat of this Creature lies in its Tail, and they are only to be found in *Tunis* and *Egypt*.

The Lion.

The *African* Lions exceed all other Beaſts in ſtrength and cruelty, and ſpares neither Man not Beaſt. In ſome places one Lion will encounter 200 Horſemen. They are fierceſt in hot places, ſuch as the Frontiers of *Telemeſne* and *Fez*, the Deſart of *Angad*, &c. for thoſe which frequent cold Mountains are not ſo cruel. In the Spring, when the Lioneſſes are hot, they have bloody Conflicts one with another, eight or ten Lions courting the ſame Miſtreſs. I know not what Truth is in the common Report, that if a Woman ſhews a Lion her Privities, he will cry and roar and run away; but this I am ſure of, that whatever a Lion gets in his Paw, if it were a Camel, he will carry it off.

The Leopard.

The Leopard does not diſturb the tame Cattle, and offers no Injury to Men, unleſs he be provok'd or meets a Man in a narrow Paſſage ſo that he cannot avoid him, in which caſe he flies at his Face, with his Paws, and ſometimes cruſhes his Skull in pieces. He ſpares no Dogs, but devours them wherever he can come at them. In the Region of *Conſtantina* the Mountaineers hunt the Leopard upon Horſeback, and plant Horſemen at all the Avenues to hinder him to get out, upon which he winds and turns within the Circle, till the Horſemen ſhoot him with their Arrows: and if he happens to make his eſcape, the Man that lets him paſs is oblig'd by cuſtom to treat all the Company.

The Dabuh.

The *Dabuh*, call'd by the *Africans Jeſef*, reſembles a Wolf in bulk and ſhape, only his Legs and Feet are like a Man's. It injures no other Beaſt, being an abject ſilly creature; but 'twill rake the Corps of Men out of their Graves and devour them. The Huntſmen acquainted with his Den, beat Drums and ſing before it, by which means he is ſo tranſported that he lies ſtill, and in the mean time they entangle his Legs, and ſo he is drawn out and kill'd.

Civet Cats.

The Civet Cats frequent the Woods of *Æthiopia*, being naturally wild: but the Merchants take their young Kitles and put them into Grates or Cages, where they feed them upon Milk, Bran and Fleſh, and twice or thrice a day make them run up and down the Cages till they ſweat, upon which they gather the odoriferous Sweat from their Groins, Shoulders, Necks and Tails, and reſerve it under the name of Civet.

Apes Monkeys, Baboons.

The Apes are found in the Woods of *Mauritania*, and upon the Mountains of *Bugia* and *Conſtantina*. Thoſe which have Tails are call'd the by *Africans Monne*, and thoſe without Tails *Babuini*. They feed upon Graſs and Corn in great Companies, leaving one to ſtand Centinal to give the Alarm when the Husbandman comes, and when that happens he cries out, upon which, the whole Flock flies to the next Woods, and gets upon the Trees, the She-Apes taking their Whelps upon their Shoulders, and ſo leaping from one Tree to another.

The Sea Horſe.

The Sea-horſe is altogether deſtitute of Hair, reſembling a Horſe in ſhape and an Aſs in Stature: He is found in the Rivers of *Niger* and *Nilus*, where he lives all day, tho' he ſwims to the Shoar at night: He frequently ſinks Boats upon the *Niger*.

The Sea Ox.

The Sea-Ox has a very hard Hide, and is not bigger than a Calf of ſix Months old: He is ſhap'd like a Land-Ox, and is found in the *Nile* and the *Niger*; but when the Fiſhermen take him he will live a great while upon Land.

Tortoiſes.

A great many Tortoiſes as big as ſo many Tuns are found in the *Libyan* Deſarts: They lie ſtill all day, and creep up and down in the Night time in queſt of Food, but ſo ſlowly, that their Pace can hardly be perceiv'd. *Briri* in his Account of *Africa*, tells us of a Traveller that ſlept all Night upon a Tortoiſe, taking it to be a Stone, and next Morning found himſelf three Miles off the place where he lay down.

Crocodiles.

The *Niger* and the *Nile* are famous for Crocodiles, ſome of which are above 12 Cubits long, the Tail being equal in length to the Body. They go upon four Legs like a Lizard, and are not above a Cubit and a half high:

Their Tail is full of Knots, and their Skin ſo hard, that no Croſs-bow will pierce it. Some prey only upon Fiſh, others upon Men and Beaſts, by wrapping their Tails round them as they paſs by the River ſide, or as they ſtand careleſly in a Boat, and ſo pulling them into the Water where they devour them. In eating they move only the upper Jaw, the nether Jaw being fix'd to the Breaſt Bone. Upon the Banks of the Iſland they bask themſelves in the Sun with their Jaws wide open, and I ſaw (ſays our Author) little Birds about the bigneſs of a Thruſh fly into their Mouths and come preſently out again. Now to ſolve this 'tis alledg'd, that the Crocodiles feeding continually upon Beaſts and Fiſhes, are toubled with pieces of Fleſh ſticking between their Teeth, which turn to Worms, and theſe Worms the Birds pick out for their own Food, the Crocodile being ſcar'd from ſhutting his Jaws upon 'em by a prick upon the Bird's Head. The ſhe Crocodile lays her Eggs upon the Shore, and covers them with Sand; and as ſoon as the young Crocodiles are hatch'd, they crawl into the River. Thoſe which continue in the *Nile* are not venomous, but thoſe which ſhift their Reſidence from the River to the Deſarts, aſſume a poiſonous nature. I ſaw (ſays our Author) above 300 Crocodiles Heads plac'd upon the Walls of *Cana*, with their Jaws wide open, that they might have ſwallow'd a Cow at once, and ſet round with huge ſharp Teeth.

Dragons.

In the Caverns of *Atlas* there are many monſtrous Dragons, which are thick about the middle, but have ſlender Necks and Tails, ſo that their Motion is but ſlow. They are ſo venomous, that whatever they bite or touch, certain death inſues.

Hydra's.

In the *Libyan* Deſarts we find the *Hydra*, which has a ſlender Tail and Neck, and a ſhort Body. If a Man is bit by this Creature, he cannot eſcape death otherwiſe, than by cutting off the wounded part, before the mortal Poyſon infects the whole.

The *Dub.*

In theſe Deſarts we meet with another Creature call'd *Dub*, which is ſhap'd like a Lizard but is ſomewhat bigger, being a Cubit long and four Fingers broad. It drinks none, for Water pour'd down its Throat kills it immediately. It lays its Eggs as a Tortoiſe does, and is not at all venomous. It equals a Lizard in ſwiftneſs, and when 'tis hunted, if it thruſts its Head into a hole, no force whatſoever can pull it out without enlarging the hole. The *Arabians* take many of them in the Deſarts, and when their Throat is cut they bleed but very little. After they are three days dead, if you put them to the fire, they'll ſtir as if life were not quite gone. When they are flea'd and roaſted they taſte ſomewhat like a Frog.

The *Guarel*

The *Guarel* is bigger than a *Dub*, tho' it reſembles it in ſhape, and has Poyſon in its Head and Tail; but when theſe are cut off, the *Arabians* eat it notwithſtanding its ugly ſhape and colour.

The *Camelion.*

The *Camelion* has the ſhape and bulk of a Lizard, being an ugly, crooked, meager Creature, with a long ſmall Tail like a Mouſe: 'Tis ſlow pac'd, and feeds upon Air and the Sun Beams, for at the riſing of the Sun it gapes and turns it ſelf up and down. Its colour is ſometimes black and ſometimes green, for it has no Hair, but only ſpots which undergo an alteration, according to the place where 'tis. When it ſpies a venomous Serpent ſleeping under a Tree, it climbs up the Tree, and ſqueezes out of its Mouth a long thread of Spittle, with a round drop like a Pearl hanging at the end, conducting it ſo that it falls exactly upon the Serpents Head and kills him immediately.

The *Oſtrich.*

The *Oſtrich* is ſhap'd like a Gooſe, only its Neck and Legs are longer, for ſome of 'em are not above two Cubits long. It has a large Body, with Wings full of black and white Feathers, which are not calculated for flying, but contribute with the Motion of her Train, to accelerate her Pace together. 'Tis a ſilly deaf Creature, and feeds upon whatever it finds, tho' it be as hard as Iron. It lives in dry Deſarts, and lays ten or twelve Eggs in the Sand, which are not bigger than a great Bullet, and yet weighs 15 pound a piece; however 'tis ſuch a heedleſs forgetful thing, that it quickly forgets where it laid its Eggs, and if another Oſtrich finds them, ſhe faſtens them as her own. The Chickens prowle up and down the Deſarts for their Food as ſoon as they creep out of the Shell; and before their Feathers are grown they are ſo ſwift pac'd, that a Man can ſcarce overtake 'em. The *Numidians* take up the young Oſtriches and fatten them for food, tho' their Fleſh, eſpecially that of their Legs, has a ſlimy rank taſte. The Oſtriches wander up and down the Deſarts in regular Troops, and appear at a diſtance like ſo many Horſemen, which has oftentimes alarm'd whole Caravans.

Eagles.

We come now to give ſome account of the moſt remarkable Fowls in *Africa*. The *Africans* teach their Eagles to attack Foxes and Wolves, which they do, by fixing their Bills upon their Heads, and their Talons on their Backs to avoid the danger of biting; and if the Fox or Wolf thus attack'd turns their Belly upwards, the Eagle will not quit 'em till it has peck'd out their Eyes or kill'd 'em. Many *African* Writers affirm, that an Eagle ingendring with a She-Wolf, begets a Dragon, which has the Beak and Wings of a Bird, the Feet of a Wolf, a Serpent's Tail, and a Skin ſpeckled and parti-colour'd like a Serpent's, and lives in Caves, for that it cannot open its Eye-lids.

The *Neſir.*

The *Neſir* is the largeſt Fowl in all *Africa*, and exceeds a Crane in bigneſs, tho' its Bill, Neck and Legs are ſomewhat ſhorter. In flying up it mounts out of ſight, but deſcends with a jirk when it ſpies a dead Carcaſe. It lives very long; nay, many of this kind live till Age bereaves them of all their Feathers, upon which, they return to their Neſt and are nouriſh'd by the younger Fowls. They neſtle upon high Rocks, and the top of unfrequented Mountains, eſpecially upon Mount *Atlas*, where thoſe who are acquainted with ſuch places come and take 'em. The *Italians* take it for a Vulture, but I am of another mind.

Hawks.

Upon certain Mountains of the *Numidian* Deſart, the *Africans* take excellent white Hawks, with which they purſue the Crane. Some of theſe Hawks flie at Partridges and Quails, and others at Hares, according to the diverſity of their kind.

Parrots.

They have likewiſe Parrots as big as Doves, ſome red, ſome black, ſome Aſh colour'd, which have ſweet ſhrill Voices, tho' indeed they cannot imitate Man's Speech ſo naturally.

Locuſts.

Sometimes they have ſuch ſwarms of Locuſts as obſcure the Sun, which devour Leaves, Fruits, and all ſorts of Greens. At their departure they leave Eggs behind 'em, out of which young Locuſts ſpring, that conſume all things, and even the very Barks of Trees, and occaſion a great ſcarcity of Corn, eſpecially in *Mauritana*; but the Inhabitants of *Libya* and *Arabia Deſerta* welcome the Locuſts when they come, for they dry them in the Sun, and pulveriſe them for Food.

Minerals, Salt.

As for the Minerals of *Africa*. All their Salt is digg'd out of Quarries and Mines, like Stone; 'tis either red, white or Grey. *Barbary* has great plenty of Salt, and *Numidia* does not want; but in *Negroland* and the inner part of *Æthiopia*, 'tis ſo ſcarce, that a Pound is worth half a Ducat. The *Africans* do not ſet Salt upon the Table, but hold it in their Hands and lick of it at every morſel. There are ſome Lakes in the Neighbourhood of *Fez*, where good white Salt congeals in the Summer time.

Antimony, Sulphur.

They find *Antimony* in their Lead-Mines, and purify it with Brimſtone, of which they have great quantities. That part of the *Atlas* that makes the Frontiers of *Numidia* and *Fez*, affords a large Product of this Mineral.

Euphorbium.

Among their Vegetables, the moſt noted is *Euphorbium*, which is the Juice or Gum of an Herb, full of ſharp Prickles, that grows like the Head of a wild Thiſtle, and ſhews between its Branches, a Fruit as big as a Cucumber, and an Ell long or more. This Fruit does not ſpring out of the Branches of the Herb, but from the firm Ground, and ſometimes one Stalk bears 20 or 30 of 'em. When the Fruit is ripe, the Inhabitants prick it with their Knives, upon which a white Juice iſſues forth, that congeals by degrees, and then they put it into Bladders and dry it.

Pitch.

Their Pitch is either natural or artificial. The former is taken out of certain Stones in Fountains, that retain its taſte and ſmell; the latter iſſues out of the Juniper or Pine Trees in Mount *Atlas* in this manner. They cut the Boughs of the Tree into ſmall pieces, and put them into a Furnace cover'd above, which has a fire underneath, and a hole at the bottom, thro' which the Pitch diſtills into a hollow place made to receive it, and then they take it out and put it in Bladders.

Muſa or Mau

Among their Fruits *Muſa* deſerves our notice; 'Tis a delicious Fruit, as big as a ſmall Cucumber, and grows upon a ſmall Tree that has large broad Leaves of a Cubits length. The *Mahometan* Doctors affirm, that this was the Forbidden Fruit, and that our firſt Parents cover'd their Nakedneſs with theſe Leaves, as being the fitteſt for that Purpoſe. It grows plentifully at *Sela* in *Fez*, but yet more in *Damiata* in *Egypt*.

Caſſia.

The *Caſſia* Tree grows only in *Egypt*, being a very big Tree, with Leaves reſembling thoſe of a Mulberry Tree. It has a broad white Bloſſom, and is ſo overcharg'd with

Fruit, that they are forc'd to pull 'em off before they are ripe, leſt their weight ſhould break the Tree.

Tauzarghente a Root.

The Weſtern part of *Africa*, bordering upon the Ocean, bears a fragrant odoriferous Root, call'd *Tauzarghente*: It gives an excellent perfume without fire or burning. The Merchants of *Mauritania* buy it at home for half a Ducat the Bunch, and ſell it in *Negroland* for 80 or 100 Ducats.

Addad

Addad, the Root of a bitter Herb that's very common in *Africa*, is ſo venomous, that one drop of the Water diſtill'd from it, will kill a Man in an hour's time: This the very Women know.

The Root call'd *Surnag*.

Another Root call'd *Surnag*, which grows in the Weſt Parts of Mount *Atlas*, is ſaid to be a great Incentive to Venery, and preſervative of the Inſtruments of Generation. The Inhabitants of thoſe Mountains have a common Saying, that moſt of their Girls loſe their Maidenheads by piſſing upon this Root, and ſometimes are ſo infected by it, that it ſwells their Body.

Additions to CHAP. IX.

Collected from Marmol.

Camels.

Camels are call'd by the *Arabians Gimel*, i. e. *The Riches of Heaven.* They are us'd for Carriage both in *Europe*, *Turky*, and *Aſia*, as well as in *Africa*. The *Africa* Camels that travel without Oats or Grain, ſhould be very fat before they begin a Journey; for they melt away upon a long Journey, ſince they only chew their Cud all day upon the Greens that they ate over night: 'Tis true, the Caravans that go to *Æthiopia*, commonly chooſe meagre Cammels, becauſe they bring no heavy Commodity back with them; but the *Aſiatick* Camels that carry their Provender along with them, will go and return loaded without loſing their Fat. The beſt Camels for carrying are the gelded ones. When the Stallions rage with Luſt, they call to mind the leaſt Injury received before, and reſent it, and ſometimes encounter Lions. The *Arabians* feed, for the greateſt part of the Year, upon Camels Milk and Dates. As for their Fleſh 'tis lank and inſipid, eſpecially that of the Bunch, which taſtes like a fat Cow's Udder, and both the *Africans* and *Arabians* fry it with fat, and ſo keep it in Tubs and Pots all the Year for their ordinary Victuals. In fine, of all Creatures, a Camel gives leaſt trouble to its Maſter, and brings him moſt Profit. They thrive mightily in hot Countries, but die in cold Countries when it ſnows, or when they are conſtrain'd to winter there. Several Camels have been ſent to *Spain* by the Governours of the Frontiers, but the cold Climate quickly kills them. For this Reaſon they are always kept in the hot Plains and ſandy Places, unleſs it be when they come loaded from *Numidia* to *Barbary*, in which Journey they ſpend two or three days in croſſing the Mountains of the *Great Atlas*.

Barbary-horſes.

The *Barbary*-Horſes bred in *Barbary*, are not ſo good Courſers as thoſe brought up by the *Arabians* in the Deſarts, but they are handſomer, by reaſon that they are better treated with Oats. The Princes of *Barbary* have always a Breed of 'em, to make their eſcape upon 'em in caſe of neceſſity. When the *Xeriff Mahamet* was King of *Morocco*, he had one, that by his ſurpaſſing ſwiftneſs, reſcu'd him from great dangers, when his own Brother rebell'd againſt him. He was a bay-brown, till Age made him perfectly white; and that Prince ſaid he would erect a Tomb for him, as *Alexander the Great* had done for his Horſe.

Wild-horſes.

The Wild-horſes are leſs than other Horſes, and for the moſt part of an Aſh-colour, tho' ſome of 'em are white. Their Manes and Tails are very ſhort, and ſtand up like Briſtles.

Sea horſes.

The Sea-horſes are of the ſame Colour with a Panther: They have ſome ſhort Hair upon the Mane and Tail, tho' not upon the reſt of their Body. They are large Animals, and have very large Teeth, which the *Portugueze* buy of the *Negroes*, and import to *Portugal*, in order to make Rings of 'em, which are ſaid to be good againſt the Piles. Upon the Land they run like the Wind. Some of the Negroes catch the young ones and tame 'em; but they dare not let 'em come near any deep Water, for they preſently jump in. They catch 'em by making large and deep Ditches upon the ſides of the Corn-Fields or Meads where they come out to feed, and cover 'em with green Turf and Boughs, upon which, the Horſes running that way, are ſtop'd, and the Men have an opportunity to ſhoot 'em. The Females and Colts indeed they take alive. Their Fleſh eats well, and their Hides are very ſerviceable, being as thick and hard as a Buffle's.

Dente.

The *Dente*, call'd by the *Africans Lampt*, has ſhorter Legs and a longer Neck than an Ox: His Ears are like a Goat's, and he has a black Horn in the middle of his Head, which turns round like a Ring. The Fleſh of it eats like Beef, only 'tis ſweeter; and the *Moors* fill their Poudering Tubs with it. The Deſarts of *Numidia* and *Libya* are the Places which this Creature frequents.

Guabex.

The *Guabex*, call'd by the *African Chriſtians* a Wild-Cow, is of a Cheſnut Colour, having black and very ſharp Horns: 'Tis ſomewhat leſs than a ſmall Ox. In *Barbary* you may ſee 100 or 200 of 'em together, running up and down like Harts. Their Fleſh eats very well, and their Hide when curry'd, makes good Shoes.

Gazelle.

A *Gazelle* has the ſize and colour of a fallow Deer, with black Horns, turn'd like a Goat's, excepting that they are round and very ſharp. They frequent the ſame places with wild Cows, and have white Bellies; and never lie down but where the Ground is very clean. They are very ſwift, and cautious of coming near a Man; for they betake themſelves to flight as ſoon as they ſpy him: However, the *Arabians* make a ſhift to kill a great many of 'em.

Sea-Ox.

The Sea-Ox, call'd by the *Arabians Taurbahavi*, is much valued, becauſe its Fleſh taſtes very well.

Sea-Aſs.

The Sea-Aſſes are very common in *Numidia*, *Libya*, and the Neighbouring Countries.

Lions.

The Lions, call'd by the *Arabians Aced*, are ſometimes hunted by the *Arabians*, and the Grandees of Countries, mounted upon Horſe-back, with Drums and Trumpets. When the *Arabians* hear of a furious Lion in the Country, they march out in this manner to his Den, for he never comes abroad in the Day-time, the Night being the Seaſon in which he forrages for Prey. Having ſurrounded his Den, they ſhoot their Darts and Arrows upon him at a diſtance; and when he finds himſelf wounded, he comes out roaring, and falls upon the Men and Horſes. Upon that they make a noiſe with their Inſtruments to fright him, and if it were not for the danger they encounter, have the beſt hunting in the World. However, he always kills a great many Horſes, if not Men. In *Fez* the Kings divert themſelves with Lion-baiting, as the *Spaniards* do with Bull-baiting, as I intimated in the Deſcription of that Country. This fierce Animal ſteals in among Flocks of Sheep, and carries off what he pleaſes, ſometimes to the Mountains, and ſometimes to the Caverns, where his little ones are lodg'd. Oftentimes he enters the Shepherds Huts, and if he finds any one aſleep, he gives him the ſame uſage; but if they make head againſt him, he ſcours off. The Captives that make their eſcape out of *Barbary*, and flie acroſs the Mountains to the Coaſt where Chriſtians reſide, affirm, that if one meets a Lion in the Night-time, and continues his pace without altering his countenance, the Lion will not attack him, but on the contrary looks down when he meets him; but if he ſhews the leaſt ſign of fear, the Lion preſently flies at him, and pulls him in pieces. Oftentimes he follows the Captives that he finds thus undaunted, expecting to ſurprize 'em aſleep. 'Tis very hazardous for a Man to meet a Lion in Winter, when their Luſt is aloft; for then they are always ten or twelve in a Company. But after all, the Lion, as bold as he is, is afraid of Fire; and for that reaſon, when the *Arabians* paſs the Night in any open place, they kindle a great fire to hinder his approach; and if they perceive one drawing near, ſtop him by throwing hot Fire-brands in his way. He ſeldom approaches without being perceiv'd, becauſe he is follow'd by certain Animals little bigger than Foxes, and of the ſame colour, which eat up his Orts, and howl like Dogs, and ſo give the alarm. The Lion hates theſe Creatures mortally, and tears 'em in pieces when he meets 'em; but they are ſo cunning as to keep out of his way, and never come near him till he has fill'd his Paunch, and left his Prey.

The *Dabah.*

The *Dabah* has an eaſy Opportunity of turning up the Corps of dead Men, becauſe the *Moors* bury all in the Fields: Beſides, that its Fleſh is good for nothing, the *Moors* abhor it.

Civet-Cats.

The Civet-Cats are of a greyiſh white colour, interlac'd with black Stripes like the *Roman* Cats; but they are larger and ſtronger.

Apes.

Apes have the Feet, Hands and Face (ſo to ſpeak) of a Man. They are full of active Vigour and Malice. They are very pernicious to all ſorts of Fruit, for they pull and throw down much more than they eat or carry off. The wild ones will bite, but they are eaſily tam'd.

Elephants.

The Elephants, call'd by the *Africans Elſil*, is a wild Animal, of an over-grown ſize. He is ten Foot high, and has no Neck (properly ſpeaking) for his Head, which is very big, is faſtened to his Shoulders: His Ears are like two Targets; his Mouth is plac'd in his Throat, and cover'd with a Trunk, with which he feeds himſelf, and lifts whatever he takes up. Sometimes when he goes into the Water, he'll ſuck up 150 Pints of Water in his Trunk, and ſpout it above a Pike's length high into the Air. He goes very ſwift, and if he be put to it, will go ſix days Journey in one. In *India* and *Upper Æthiopia*, they are taken up when they're young, and bred up tame, and are ſo wiſe as to underſtand every thing that's ſaid to 'em. Some of the ſmaller ſort have been brought into *Europe*; but there are others ſo large, that they cannot be embark'd. When the *Ethiopians* are at War, they ſet ten or twelve Men on the Back of an Elephant, where they ſhoot Arrows and Darts, and ſling Stones. The Ivory made of its Teeth and Tuſks, is the chief Commodity that the *Portugueze* deal in with the Negroes.

Tortoiſes.

As for *Tortoiſes*, the *Africans* ſay their Fleſh is of ſoveraign uſe againſt a Leproſy, if it be eaten ſeven Days together, and if the Tortoiſe be not above ſeven Years old. The *Barbary* Merchants trade much in their Shells, which are as big as a Target, and ſo ſtrong, that the Shot of a Croſs-bow cannot pierce 'em.

Addimain.

Of the *Addimain*, 'tis obſervable, that the Males have no Horns, but the Females have. 'Tis a Rarity, and expos'd for a Shew in *Numidia* and *Barbary*.

Rams.

The *African* Rams have five or ſix Horns, ſome bending upwards and ſome downwards.

Crocodiles.

The Crocodile moves only the upper Jaw, which is ſo provided by nature, becauſe its Feet being very ſhort, the motion of the under Jaw wou'd incommode it. It has very ſharp Teeth, and a Throat ſo wide, as to receive a whole Cow. Several of the *Egyptians* eat the Fleſh of a Crocodile, and find it very good; and its Fat is ſold at a great rate, upon the account of its being a ſoveraign Remedy for Ulcers and Cancers. The Fiſhermen take the Crocodiles by this Stratagem: They faſten a big Rope about 25 or 30 Fathom long, to a large Tree, or to ſome Pillars ſet up on purpoſe on the River ſide; on the other end of the Rope they faſten a great Hook as big as one's Finger, and a Foot and a half long, with a Ram or a Goat ſticking upon it: When the Goat or Ram bleats and makes a noiſe, the Crocodile comes out of the River, and ſwallows it, and ſo is hook'd; upon that he leaps and works till he falls down as 't were dead thro' fatigue and torment; and then the Fiſher-men come up, and wound him in the Throat and Belly, and between the Legs, where the Skin is tender; for upon the Back 'tis almoſt proof againſt a Muſket ſhot. The Head of the Crocodile thus kill'd, is put up upon the Walls of the Town, as a Trophy. 'Tis remarkable, that the Crocodiles between *Cairo* and the Sea hurt no body; whereas thoſe above the City devour every thing they can come at. I found, that thoſe which are neareſt the Sea, meet with a ſufficient quantity of Fiſh to ſatisfy 'em; whereas thoſe which lie upon the Country get but few.

The Oſtrich.

When the *Oſtrich* runs, it whips and ſpurs its ſelf on with its large Feathers. The *Arabians* ſell theſe Feathers to the *European* Merchants, who dye 'em into all ſorts of colours, and then ſell 'em to the Beaux, as Ornaments for their Heads.

The Unicorn.

The Unicorn is found in the Mountains of *High Ethiopia*: 'Tis of an Aſh colour, and reſembles a Colt of two Years old, excepting that it has the Beard of a Goat, and in the middle of its Forehead a Horn three Foot long, which is ſmooth and white like Ivory, and has yellow ſtreaks running along from top to bottom. This Horn is an Antidote againſt Poyſon; and 'tis reported, that other Animals delay drinking till it has ſoak'd its Horn in the Water to purify it. This Animal is ſo nimble, that it can neither be kill'd nor taken; but it caſts its Horn like a Stag, and the Hunters find it in the Deſarts. But the Truth of this is call'd in queſtion by ſome Authors.

Wild-Goats.

In the Country of the *Abyſſines* there are great numbers of Wild-goats, among which, the He-goats are as big as a large Calf, and their Hair is ſo long, that it trails upon the Ground, being as thick and groſs as Horſe-hair. The valuable Leather call'd *Charequiez*, is made of its Skin, curried with the Root of *Albegna*, which grows plentifully in that Country. *Abengezar* ſays, ſix Men may be plac'd in the Branches of that Tree, ſo that they cannot touch one another with their Hands.

Albegna Root.

Strange Cows.

In the ſame Country we meet with large Cows, which have no Hair, but have a long Tail trailing upon the Ground, and a parti-colour'd Neck. The *Egyptians* give 'em the Title of *Demniet*, i. e. *Fertile*.

Colophonis.

That Country affords likewiſe a Drug of great Medicinal Vertues, which reſembles the *Grecian* Pitch.

Pitch turn'd to Balm.

There is a part of *Geneova* call'd *Limes*, which turns Pitch or *Bitumen* into Balm in a few days time after 'tis brought thither. In the ſame Country there are ſeveral Lottery Stones reſembling the Members of a Man, ſome his Feet, ſome his Arm, ſome his Head, &c. which Men carry about with 'em as Inſtruments of good fortune. And 'tis ſaid, that whoever lights upon an entire Stone that reſembles the full proportion of a Man, may by vertue of that, ſecure the Favour of Kings or Princes, or any Perſon he converſes with. Such are the Fables that Authors hand down to Poſterity, together with a great many more of the ſame nature, which we chooſe to paſs over in ſilence.

The Root *Surnag.*

In the Weſt part of Mount *Atlas*, we find a Root call'd *Surnag*, which proves an Incentive to Venery, not only when 'tis ate, but when one makes water over it.

The Fruit *Camba.*

In *Numidia* a certain Fruit, or rather a Root is found among the Sands, which the Phyſicians call *Camba*, and entitle to a cooling Vertue. It has a white Rind, but no Stalk; and ſome of the ſort are as big as Oranges. The *Arabians* roaſt 'em upon the Gridiron, or boil 'em in Water or Milk, and find 'em a very delicious Food.

Ebalca.

In *Numidia*, *Libya*, and part of *Negroland*, there are large thorny Trees, which have Leaves reſembling thoſe of the Juniper-tree, and from which a Gum iſſues, that has the ſame colour and ſmell with Maſtick, and is oftentimes made uſe of to adulterate it. The Trees of this kind that grow in *Numidia*, have white ſtreaks like Olive-trees; whereas thoſe of *Libya* have ſtreaks of an Azure colour, and thoſe of *Negroland* perfectly black. Thoſe of *Negroland* are call'd *Sangu*; and the Wood is made uſe of in the making of Inſtruments, or any poliſh'd work. The Wood of the *Libyan* ſort is tranſported all over *Africa* for the cure of the Pox, and is call'd by the Natives *Ebalca*.

CHAP.

CHAP. X.

The Riſe and Progreſs of the Xeriffian *Family in* Barbary; *with ſome Remarks upon the Policy and Trade of that Kingdom: Collected from the Writings of* Ro. C.

The Original of the *Xeriffian* Family and the fall of the *Marines.*

THE Family of the *Mareines* poſſeſs'd the Kingdom of *Barbary* for a long time, till *Muley Hamet Xariff* came out of the Country of *Dara*, and with his Mountaineers ſubdued the Countries of *Sus*, *Morocco*, and *Fez*, ſpreading his Conqueſt from the Mountains of *Atlas* to the Streights of *Gibraltar*. Having made ſuch Advances, his next Ambition was to prove himſelf a *Xariff*, *i. e.* one of *Mahomet*'s Family. But after all, he injoy'd not his new Acquiſitions long; for ſoon after *Sus* rebell'd: and while the *Xariff*, at the Head of ſome *Turkiſh* Troops, attempted to reduce the Rebels, theſe Auxiliaries mutined, and after beheading him, pillag'd *Taradant*, and ravag'd the whole Country. Having ſpent two Months in laying the Country deſolate, they begun their March back to *Tremeſne*, and indeavouring to take the ſhorteſt cut over the Mountains, were attack'd by the Inhabitants, whom, either Revenge, or a Proſpect of Spoil, had animated to that degree, that few or none of the *Turks* eſcap'd.

The Conduct of *Muley Abdela* and his Sons. The eldeſt Son kills ten of his Brethren.

This *Hamet Xariff* was ſucceeded, after a Reign of eight Years, by his Brother *Muley Abdela*, who wag'd war with the *Mareines* all his life time. He reign'd fifteen Years, and left behind him thirteen Sons. *Muley Abdela* the eldeſt, ſucceeded his Father, and immediately order'd ten of his Brethren to be put to death in one day at *Taradant* in *Suz*. The ſecond Brother *Abdel Melech*, eſcap'd into *Turky*. The third, namely, *Muley Hamet Xariff*, was ſpar'd, as being not fear'd; for he was fonder of Books than of Arms. *Abdela* reign'd forty Years, and left three Sons, namely, *Muley Mehamet*, *Muley Sheck*, and *Muley Naſſar*. The two laſt fled into *Spain*, where the eldeſt of the two turn'd Chriſtian. The youngeſt return'd to *Barbary* in the 14th Year of *Muley Mehamet*'s Reign, and at his landing 2000 of the King's Souldiers revolted to him: But their *Lent* approaching, and the Souldiers being reſolv'd to keep their *Eaſter* at home, *Naſſar* miſtruſting their return, was conſtrain'd to give battel to the King's Army, in which he loſt his life.

Abdelmelech dethrones his Nephew.

Abdelmelech, ſecond Brother to *Abdela*, obtain'd of the *Turk* 2000 Souldiers, by whoſe help he dethron'd his Nephew *Mehamet*, *Abdela*'s eldeſt Son, and wore the Crown of *Barbary* two Years. *Muley Mehamet*, thus diſpoſſeſs'd of his Kingdom, fled to *Portugal*, and made his Addreſs to *Sebaſtian* King of that Country, who went to *Barbary* in Perſon with 30000 Men, and gave battel to *Abdelmelech*. In the beginning of the Fight the *Moors* fled, and the *Chriſtians* to draw 'em into a Snare, retir'd too: upon which the *Moors* advanc'd a ſecond time, and the Van of their Horſe was put into diſorder; but the Rear of their Horſe being ſo numerous, that the advanc'd Troops had not Field-room to fly, they were forc'd to fight it out, and thereupon a bloody Battel enſued, in which the three Kings, *Muley Mehamet*, *Abdelmelech*, and *Sebaſtian* King of *Portugal* were all kill'd.

Three Kings ſlain in one Battel.

Muley Hamet his wiſe Regulations.

After the death of *Mehamet* and *Abdelmelech*, *Muley Hamet Xariff*, third Brother to *Abdela*, reign'd in great peace 27 Years. Having ſecur'd the Quiet of the Kingdom by ſeveral advantagious Regulations, his next Care was to provide himſelf with able Counſellors and experienc'd Souldiers. His Subjects being divided into two Claſſes, namely, the *Larbies* and the *Brebers*: The firſt minding only Tillage and Agriculture, were of a peaceable Diſpoſition, and over them he ſet Officers to adminiſter Juſtice, and determine Controverſies of Civil Rights; and at the ſame time poſted Guards to ſecure 'em from the Robberies of the Mountaineers. This Rank of People (I mean the *Larbies*) pay'd to the Crown the fifth Penny yearly. The *Brebers* or *Mountaineers*, being of a fiercer and more undaunted temper, he divided 'em into Cantons or Diſtricts, placing o're each Canton an Officer, with Souldiers, to ſuppreſs any ſudden Tumult; and, for a Pledge to their Loyalty, he took care to have the chief Men's Sons at his Court, under pretence of Education: From this Rank he drew but a ſmall Revenue. He always kept peace with *Chriſtendom*, and particularly with *Spain* his powerful Neighbour: But ſtill he had the greateſt regard for *England*, as appears from the many Letters he wrote to Queen *Elizabeth*, the Incouragement he gave to *Engliſh* Merchants, and the ſplendid Embaſſy he ſent to that Queen *An. Cr.* 1601. This Prince was alſo a great Favourer of Mathematicians.

His reſpect to the Queen and Kingdom of *England*.

His vertuous and manly Qualities.

Towards his Subjects his Carriage could not be call'd tyrannical: The abſolute Power he had over them, he ſweeten'd with an obliging Clemency. He was careful to fill his Treaſury, and for that end he always had his Duties exactly paid him by the *Larbies*. He trafficked much with the *Negroes*, buying Salt at *Tegazze*, and ſelling it at *Gago*, whence his Profits were return'd him in Gold. His *Maſerawes* or *Ingenews* where his Sugar-Canes grew, were husbanded with great Induſtry; ſo that ſuch of them as lay about *Moruecos*, *Taradant*, and *Magador*, were computed to yield him yearly 600000 Ounces. He admir'd any thing that was magnificent, as appear'd by his buying the richeſt *Italian* Marbles, and hiring *Italian* Workmen at exceſſive Rates, to rebuild his Houſe at *Moruecos*, and by the numerous train of Women he kept, not for Luſt but State, according to the faſhion of the Country. The Pleaſures which ſuited beſt with his own temper, were the Menage of Horſes, Hawking, and ſuch like manly Exerciſes.

His Sons.

He had five Sons, namely, *Muley Mehamet*, commonly called *Muley Sheck*, the Title always given to the King's eldeſt Son: The ſecond *Muley Boferes*: theſe two he had by one Woman, a Negro Concubine. The third *Muley Sidan*, by a lawful Wife; the fourth *Muley Naſſar*; the fifth *Muley Abdela*: theſe two by a Concubine, the firſt being nineteen and the laſt fourteen Years of Age, at the time of their Father's death. The eldeſt of theſe five he made Governour of *Fez*, the ſecond of *Sus*, and the third of the Province of *Tedula*. *Muley Sheck* govern'd with great appaluſe by virtue of the Advice and Counſel of *Baſha Muſtapha*, a *Spaniſh Renegado*, who grew ſo much in favour with him, that the whole Government was intruſted in his Hands. The Officers of the Country, who were native *Moors*, being diſobliged by the diſtinguiſhing Reſpect ſhewn to this Favourite, made their Application to the old King, repreſenting that this *Renegado* debauch'd *Muley Sheck*, teaching him to drink Wine, contrary to the Doctrine of *Mahomet*, and that he intended upon the firſt opportunity to ſeize the Treaſure of their Country, and fly with it to ſome part of *Chriſtendom*: At laſt they prevail'd with him to ſend to his Son for the Head of that *Baſha*, who after ſome Delays, was conſtrain'd to obey his Orders, tho' with great Reluctance.

Muley Sheck Governour of *Fez.*

He is forced to behead a great Favourite.

While this *Spaniard* liv'd, none of the King's Sons govern'd ſo much to their Father's ſatisfaction as *Muley Sheck*; ſo that the old King pleaſed with his Behaviour, made all the *Alkeids* or Officers in the Kingdom, to take an Oath of Allegiance to his Son commencing after his death. About that time the Plague raging at *Sus*, oblig'd *Muley Boferes* to return home to his Father. *Muley Sidan* govern'd his Province in great peace, even in the time of the greateſt Troubles in his Brother *Sheck*'s Kingdom, of which hereafter. He was ſevere upon all Offenders, eſpecially Thieves, without diſtinction of Perſons. His Temper was ambitious, and being the eldeſt Son by a lawful Wife, he never could be brought to reſpect either of his Brethren, looking upon the Right of the Crown after his Father to belong to him, contrary to the Law of the *Moors*, which prefers the eldeſt Son, whether by Wife or Concubine, to the Succeſſion.

Mahomet's Law as to Succeſſion.

Muley Sheck proves at laſt a careleſs Governour.

To return to *Muley Sheck*. After the death of his Favourite, he abandoned himſelf to Drunkenneſs, and other Vices, neglected his Government, and ſuffered his Souldiers and other Followers to plunder his honeſt Subjects. By this careleſneſs the Country became ſo infeſted by Robbers, that there was no ſafe travelling but in Companies of three or four hundred at a time. The *Larbies* not being able to bring home the Corn and Fruits of the Ground, refuſed to pay the King's Taxes, and not finding any other way to ſubſiſt, practis'd in the Plains what the others did in the Towns; in fine, they robb'd all that came near them. Beſides, he grew ſo prodigal of his Treaſure, that to give you one Inſtance, a *Jewiſh* Muſician that pleas'd him in his drunken Fits, got under him 400000 Ducats, which is about 40000 Pounds Sterling.

Muly Sheck depos'd.

This Alteration was no ſmall trouble to the King his Father, ſo that finding Advice by Letters and all other fair means to be uncapable to reclaim him, he took the Field with 8000 Foot and 5000 Horſe, leaving his ſecond Son to govern in his abſence, and made ſuch long Marches, that he was within a Day's Journey of *Fez* before his Son receiv'd Advice of his March. *Muley Sheck* being unprovided, would thereupon have fled to *Tafilet*, but was purſued ſo cloſe, that he was forced to take ſanctuary with 500 Men. This done, his Father required him to come forth, and ſubmit to his mercy; but he refuſing, the place was taken by force, and *Sheck* made Priſoner, and carried to *Mickanez*, a ſtrong Town, where he remain'd till his Father's death.

The King his Father dies.

In his way to *Fez*, the old Man had taken with him his third Son, intending he ſhould ſucceed *Muley Sheck*; but this was prevented by the Father's death; for pitching his Tent without the Gates of *Fez*, with a Deſign to return home, he was taken ill on *Thurſday* the 11th day of *Auguſt*, and died on *Sunday* the 14th following, *Anno* 1603.

The Condition of the four Brethren after the Father's death.

Muley Sidan's Mother govern'd the King's Family, by which means her Son had immediate notice of his death, and removing all the Jewels and Treaſure in his Father's Tents, he was proclaim'd King in *Fez*. *Muley Boferes* had likewiſe ſpeedy Advice ſent to him, who immediately ſeized what Treaſure was in his Father's Houſe at *Moruecos*: As ſoon as he had done that, he proclaim'd himſelf there, and by his order the ſame was done at *Taradant* in *Suz*.

Naſſar the fourth, Son of the deceas'd King, fled into the Mountains to his Mother's Relations, and raiſing 800 or 1000 Men, march'd into the Plains of *Suz*, and order'd himſelf to be proclaim'd in *Taradant*: but his Order being diſobey'd, and he wanting Money to pay his Men, he was forſaken by all, and died of the Plague, or, as ſome ſay, was poiſoned. *Muley Abdela*, eldeſt Son to *Muley Sheck*, choſe rather to depend upon his Uncle *Muley Sidan*, than to add to the Diſturbances of his Country.

The Father's Army joins *Muley Boferes.*

The Army that was left at *Fez*, began to mutiny both for Arrears of Pay, and for want of returning to *Moruecos* to their Families. Thereupon *Muley Sidan* ſent them large Promiſes by the General that commanded them in the King his Father's time; but this General inſtead of pacifying them, adviſ'd them to ſtrike up their Tents, and march home: Accordingly they march'd, and by the way were join'd by the *Baſha*, who had the cuſtody of *Muley Sheck*: This *Baſha* deliver'd up the Priſoner, and the united Forces join'd *Muley Boferes* in *Moruecos*. *Muley Sidan* thus diſappointed, ſent a ſtrong Force to the Province of *Tedula*, to raiſe the Arrears of Taxes owing from the *Larbies* to the late King, and to ſtop the Communication between *Fez* and *Moruecos*, and made all Preparations to take the Field.

Boferes oppoſes *Sidan.*

On the other Hand *Muley Boferes* loſt no time, but diſpatch'd a *Baſha* to provide all neceſſary Proviſions among the *Larbies*, and afterwards ſent 5000 choice Men with four Pieces of Artillery to *Tedula*; upon whoſe approach *Muley Sidan*'s Forces retir'd, leaving the Country expos'd to the Enemy, who plundered and pillag'd all ſuch as would not own *Boferes* for King: Upon this *Muley Sidan* took the Field with 9000 Foot and 12000 Horſe, and 22 Pieces of Artillery. He committed the Charge of his Artillery to two *Engliſh* Gunners; but the Rains were ſo great, that the Artillery came not up till twas too late.

Sheck at the Head of *Boferez*, his Army defeats *Sidan.*

Boferes to cover his Preparations amuſed *Muley Sidan* with a Treaty of Peace; but thoſe Offers being refuſed, to pleaſe ſuch of his Souldiers as were Natives of *Fez*, and to give the greater Life to his whole Army, he made a ſeeming Agreement with his Brother *Sheck*, to whom he committed the Command, but with ſuch a Limitation and Dependance upon another Commander in the Army, as to keep himſelf ſafe. *Muley Sheck* had Directions, if victorious, to proclaim *Boferes* in *Fez*; and *Boferes* promiſed *Sheck* the Vice-royalty of that Kingdom. *Muley Sidan* to prevent the ill Effects of this piece of Policy, got together in haſte 2000 Mules and Horſes, and mounted two Souldiers with their Accoutrements upon each Mule and Horſe. The 4000 Men thus mounted, leaving their Artillery and Baggage behind them, joined the reſt of his Army which lay encamped, over againſt the Enemy, with a River only between them. *Sidan* followed in Perſon with 7 or 8000 Men, deſigning to give Battel to the Forces of *Boferes* before *Sheck*'s arrival; but the other was too nimble for them, ſo that fearing *Sheck*'s Preſence on the oppoſite ſide might ſhock the Loyalty of his own Men, moſt of whom had formerly ſerved *Sheck*, he reſolved upon an Engagement before his Souldiers could know of his Arrival. The Fight happen'd on the 6th of *January*, 1604, and upon the Diſcharging of three or four Pieces of Artillery three or four times, moſt of *Muley Sidan*'s Men left the Field, except thoſe commanded by the *Muley* in Perſon; but his Canopy being ſhot down, himſelf and all his Followers fled. On *Sheck*'s ſide, few or none were ſlain, and *Sidan* loſt but 600 Men. *Sidan* was cenſured for an Over-ſight in having ſurprized the Enemy with his ſudden coming, and giving them two Hours afterwards to put themſelves in array, whereas he ſhould have attack'd them immediately.

Great Diſorders in the Country.

The Effect of this Contention was, that Robberies increas'd, inſomuch that after the Battle, all Trade was interrupted, and old Quarrels between Families came to be decided by the Sword. Beſides, *Muley Boferes* was not ſo fit for Action as he that loſt the day, which the Kindred or Chan, called *Weled Entid*, taking advantage of, robb'd as far as the very Gates of *Moruecos*, ſtop'd all Travellers, and made Prize of Merchants Goods; whereas the Exemplary Puniſhment for ſuch Offences in *Muley Sidan*'s time, kept them in aw. *Muley Sidan* now ſends to treat for Peace, and in the mean time was indeavouring to make Head againſt the Purſuers, when the unwelcome news was brought him that his Brother *Sheck* was at hand with the Light Horſe, and the whole Army not far behind: Now there was no conſulting of any thing but Flight; but having put 900000 Ducats in *Allarocha*, he thought it the beſt way to take that with him: However, they purſued him ſo cloſe, that he was forced to fly directly to *Tremeſine*, and ſo that Treaſure fell into the Hands of *Muley Sheck*.

In theſe his frowning Misfortunes, all the Men of note left him, but two, who had ſerved him in his Father's time, and now ſtuck cloſe by him. His Bravery was ſo great, that tho' he had but 20 Horſe with him, he turn'd and ſkirmiſh'd very often with the Purſuers. *Alkeid Umbilie*, a Commander of *Boferez*'s Forces, admiring his Reſolution, requeſted him to keep on his way, with aſſurance that he would purſue him no further; ſo he continued his Journey to *Tremeſine*, and the *Alkeid* return'd to *Fez*.

Sheck proclaim'd King in *Fez*.

Muley Sidan thus expell'd, *Sheck* proclaim'd himſelf King in *Fez*, not Vice-roy to his Brother. It being *Lent* time, the chief Officers of *Moruecos* went home, from whence they were afterwards ſent againſt the *Larbies*, who in this confuſion, refuſed to pay to any of the three contending Princes, and were ſplit into inteſtine Diviſions among themſelves. The Souldiers that went to ſuppreſs theſe Diſorders, ſuffered exceedingly by the Plague then raging at *Suz*; ſo that they were obliged to return home. In the beginning of *June* News coming that *Muley Sidan* was return'd from *Tremaſine* to *Tafilet*, all the Commanders who were diſper'd about the Country, were ſummoned a ſecond time to join againſt him. *Sidan* had lived a few Months near *Tremaſine*, with about fifty Horſe, and advancing to *Tafilet*, was join'd by 1200 more. In this place he got a perfect Account of the State of the Country, by which he perceiv'd there were great Diſcontents in ſeveral Parts againſt the preſent Government, and that many wiſh'd his Return. *Muley Boferez*, to ſtop his Progreſs, ſent four thouſand Foot and ſome Horſe to prevent his marching to *Suz*; but *Sidan* having Intelligence of it, haſtened his Journey, and paſſing by *Alcatouy*, the Horſe on each ſide ſkirmiſhed, but no Man of note fell, one *Alkeid* excepted. *Sidan*'s Forces being too few to encounter the Enemies in a pitch'd Battel, he was oblig'd to enter *Sus* by the way of *Sahara*. In the Sands of this Country his Troops endured much miſery. At *Aca* he met with *Sidie Abdela Imbak*, the great *Foker*, whoſe Friendſhip he courted; for theſe Church Men have ſuch an Influence over the People, that they will obey none but by their direction; ſo that he knew all his Brother's Forces could not beat him out of *Sus*, if this Prieſt were hearty in his Cauſe.

Sidan returns

He gains friendſhip of the great *Foker*,

which procures a Peace between the two Brethren

The *Foker* was ſo far prevailed with, that he ſent to *Boferes* to deſire that a Treaty might be commenc'd between the Brethren; which ſucceeded ſo well, that a Peace was concluded, by which *Sidan* was to enjoy the Kingdom of *Sus*, and *Boferes* the Reſidue of the Empire. By *Sidan*'s prudent Government, *Sus*, which till then was the moſt unſettled place in *Barbary*, was formed into the moſt orderly quiet Country of the Empire. He was blamed for impoſing heavy Taxes, a fault which the *Foker*, by whoſe means he obtained the Kingdom, charged him with. The Mountaineers refuſed to pay them, and their Habitations being ſtrong by nature, and the Men accuſtomed to fighting, they ſlighted him and his Power: Beſides, they were under-hand encouraged by *Boferes*. The *Larbies* had not this advantage, and ſo knowing their Throats lay at his mercy, they paid quietly.

Abdela eſcapes his Father *Sheck*, who endeavours to diſpoſſeſs *Boferes*

Boferes was now buſy in contriving to get *Muley Sheck* into his power again, who was arming himſelf with his Friends to fix him in his Government, reſolving rather than fail, to call in the *Chriſtians* to his aſſiſtance, at leaſt by theſe means he thought to ſecure a Retreat in caſe of a Diſaſter. To keep *Muley Sheck* the more in aw, *Boferes* took care to have *Sheck*'s eldeſt Son, *Abdela*, very carefully watch'd: but the Plague raging in *Moruecos*, the King order'd his Son *Abdelmelech* to pitch his Tents at the diſtance of five Miles from the City, and to take *Abdela* with him, who took an opportunity one Night, to make his eſcape out of the Camp, and fly to his Father.

Sidan's Policy

This oblig'd *Boferes* to court the Friendſhip of *Sidan*, and intreat him to bring his Forces to *Moruecas*, to join with his againſt the Father and Son: *Sidan* came within half a Day's Journey of the place, but was loth to hazard his Perſon in the Hands of his Brother till the following Stratagem was tried. He counterfeited a Lie from a principal Perſon in the Country, offering *Boferes* to ſend him his Brother's Head, who received the Meſſage very joyfully, with Promiſes of great Reward upon the Execution of the Deſign. Upon this *Sidan* ſtruck up his Tents, and march'd back to the Country of *Dara*. *Boferes* then committed the whole Command of his Army to *Abdelmelech* his Son: but here Fate frown'd upon him too; for when the Army came within a Day's Journey of *Fez*, which is twenty Day's journey off *Moruecos*, three thouſand of the Souldiers revolted to *Sheck*, and the reſt were ſo diſaffected to *Boferes*, that *Abdelmelech* returned home without attempting any thing.

Abdelmelech's Army mutinies.

Sally beſieg'd

and taken.

Sir Anthony Shirly's Embaſſage.

Encouraged by this Addition to his Forces, the King of *Fez* laid ſiege to *Sally*, a Sea-port in *Moruecos*. The Town he won, but the Caſtle ſtill held out; and the *Alkeid* or Governour ſent to his Maſter, to aſſure him that he could maintain the place, if he had ſufficient ſtore of Corn. Sir *Anthony Shirly*, an *Engliſh-man*, Ambaſſador at that time from the Emperour of *Germany* to *Moruecos*, a Perſon of great worth, and wonderfully beloved by the Merchants of all Nations trading to theſe Countries, took care to ſend to *Sally* in an *Engliſh* Bottom, ſome Corn himſelf had bought up at *Saplus*, another Port in this Country; but before they arrived the Caſtle ſurrendred. Great Matters were expected from this great Man, towards a Reconciliation of the Differences in *Barbary*, by reaſon of the vaſt Credit he had with all the foreign Merchants in the Country, and the reſpect *Boferes* had for him, but I don't find it came to any thing.

Abdela marches againſt *Boferes*.

Sheck had got ſuch a Surfeit of Confinement in his late Troubles, that he car'd not much for hazarding his Perſon again: With that view he ſent his Son *Abdela* with the Army towards *Moruecos*, to try the fate of a deciſive Battel: He provided him with 27 Pieces of Ordnance, to make up which number, he diſarm'd all the Ships in *Allaroca*, *Sally*, or *Laratch*; and oblig'd all the Mariners, as well Officers as common Sea-men, to go into the Army, which together made 10000 Men. In the mean time *Sheck* provided himſelf with three *Italian* Ships, to convey him to *Florence* if his Son loſt the Battel. The Fight happened ſix Miles South-eaſt of *Moruecos* on the eighth of *December* 1606, and the *Chriſtian* Mariners being better acquanited with the uſe of Fire-arms than the *Moors*, and furniſhed with a Train of Artillery, ſo unuſual in that part of the World, won the day. *Boferes* loſt 600 Men in the Fight, and fled to *Moruecos* to ſecure his Treaſure and his Women; but for fear of a Surpriſe, left the Management of both to his *Alkeids*, and went poſt himſelf to the Mountains. However the Treaſure fell into the Hands of the *Larbies*, who to the number of 500, ſet upon the Guard, pillaged the Carriages, and diſhonour'd the Women, not ſparing the King's own Daughter. Upon this the *Alkeids* return'd to *Moruecos*, and took Sanctuary, and *Abdela* pardoned them upon their ſubmiſſion; but after they came out, he put 'em all to death, and that ſo ſecretly, that ſending their Heads in a Sack as a Preſent to his Father in *Moruecos*, none knew they were dead, till the News came that their Heads were upon *Fez* Gates.

The *Italian* Ships that *Sheck* had hir'd in caſe of neceſſity, finding themſelves neglected upon this Succeſs, ſail'd home, and ſecur'd for their Pay what Treaſure had been already ſhip'd.

The Slaughter of the *Alkeids* by *Abdela*, and the horrid Outrages committed by his Souldiers, gave great Diſcontents; ſo that many fled to *Muley Sidan* who had ſtaid till now at *Dara*, half way to *Fez*.

Sidan marches to *Moruecos*

He at the firſt news of theſe Diſorders, march'd directly to *Moruecos*, deſigning to give preſent Battel. The firſt Night of his Arrival, there was a great uproar in the City, in which Confuſion ſome of *Sidan*'s Souldiers got into the Town, and ſurprized the Artillery: but the *Chriſtians* fought ſo ſtoutly to regain it, that they beat 'em out of the Town. Next day was a general Fight; *Sidan*'s Horſe began with a very gallant Onſet, but the Canon oblig'd them to retire in diſorder, which *Abdela*'s Men obſerving, gallop'd too raſhly before their own Ordnance; but *Sidan* taking the Advantage of their forwardneſs, drove them upon their Guns. The *Chriſtians* would have fired upon their own Men to prevent the Diſorders going further; but this being denied, *Sidan*'s Men purſued in good order, ſurpriz'd the Artillery, and ſlew thoſe who oppoſed them. The Slaughter was both great and cruel, no leſs than ſeven or eight thouſand being ſlain in the Field, and the ſcatter'd Remains moſtly maſſacred by the Citizens in revenge of their paſt Diſorders. What was left of the poor Chriſtians afterwards, had their Throats cut, a juſt Puniſhment; for moſt of them had lived upon Piracy, Rapine and Plunder.

Sidan's Perfidy.

Muley Sidan being thus Maſter of the whole Field, *Abdela* fled to *Fez*, there being not 100 Men left alive of his whole Army to accompany him. The Caſtle of *Moruecos* was garriſon'd by *Abdela* before the Fight, and refus'd to ſubmit to the Conquerour: but *Sidan*'s Men, having got upon the top of the Wall, by ſome Houſes that join'd to it, the Garriſon took ſanctuary: After that, upon promiſe of their Lives, they laid down their Arms and came forth; but were all immediately butcher'd by *Sidan*'s command, to the number of 3000.

Sidan ſent an Army to reduce *Fez*, but the Souldiers finding neither their King, nor any of the Blood Royal with them, when *Abdela* approach'd, they ſubmitted upon condition of Pardon, which was granted; but diſtruſting the Performance, they all drew away afterwards, except three thouſand, who were butcher'd in revenge of *Sidan*'s cruelty to the Garriſon of the Caſtle of *Moruecos*.

The *Shraceis* mutiny.

Sidan had in pay ſix hundred *Shraceis*, Subjects to the King of *Congo*, and excellent Souldiers; theſe with ſome others he ſent to retrieve his late Loſſes, by raiſing a freſh Supply of Men and Money from the *Larbies*; but they in their way mutined, and cut off their Commander's Head, thinking it a welcome Preſent to *Abdela*. Upon this *Sidan* iſſued Orders, that any *Shracei* whatever that ſhould be found in his Dominions, ſhould be put to death.

Abdela defeats *Sidan*.

Sidan flies.

The valour of the *Engliſh*

The *Shraceis* irritated by this inequal Method of Puniſhing, prevail'd with *Abdela* once more to try a Battle with *Sidan*, who was join'd by 200 *Engliſh*, with ſixty Field Pieces, and ſome good *Engliſh* Commanders. Before *Sidan* took the Field, the Fortune-tellers told him he ſhould looſe the Fight, which poſſeſs'd him with ſuch fear, tho' he was ſo ſtrong, and had no reaſon to doubt Succeſs, that he did not exert his uſual courage. His Canoniers alſo diſcharg'd before *Abdela*'s Men were in reach, and the Enemy were up with them before they could charge again. The *Shraceis* never diſcharged a Piece till they came cloſe up, and then fell on ſo fiercely, that they diſordered the *Moors*, and the King thereupon fled, ſending advice to the *Engliſh* to ſave themſelves, and a good Horſe to Captain *Giffard* their Commander. The *Engliſh* returned anſwer, that they came not thither to run, and accordingly they ſtood very firm, not above 30 being left alive.

Abdela continued not long Maſter of *Moruecos*; for being in want of every thing, he had much ado to keep his Army together, and moſt of the *Shracies* went home.

Hamet Beſonne pretends to the Empire.

To the ſurprize of the three Rival Princes, a Couſin of theirs, *Muley Hamet Beſonne*, who had been all this time hoarding up of Treaſure, having watched his opportunity, went to his Mother's Kindred in the Mountains, where he muſtered up 20000 able Men. His Pay was good, and all being in readineſs, he began his March from the *Teſſeven* Mountains to *Moruecos*. This was bad News to *Abdela*: His *Shracies* were then gone home, and the *Moruecans* deſerted in great numbers to *Hamet Beſonne*, ſo that he reſolved to take the uſual Courſe to *Fez*, which he did in haſte, believing his Couſin to be much nearer than he really was. *Muley Sidan*'s Mother hoping this new Stir was in

favour

His Succeſs.

favour of her Son's Title, ſent *Boſonne* a conſiderable aſſiſtance: but upon his arrival at *Moruecas*, he proclaim'd himſelf King, and diſmiſt all the Favourers of *Sidan*. His Treaſury he diſpers'd largely among his Followers; he compell'd no Man into his Service; nay, ſome Chriſtians who deſir'd leave to be gone, he ſent home at his own charge. *Boſonne*'s Mother hearing of this Succeſs, brought him ſome more Forces, and in her way beſieg'd the place where *Boſeres* was; but he made a ſhift to eſcape to *Sally*, and when ſhe miſs'd him in the Morning, ſhe cut off the Governour's Head out of revenge.

His Mother's Zeal and Activity.

Boſonne ſhamefully beaten.

Boſonne poiſoned.

The Mother of *Muley Sidan* was no leſs zealous for the reſettling her Son in the Throne: to furniſh him with the neceſſary Charges of an Army, ſhe ſold all her Place and Jewels. *Hamet Boſonne* march'd againſt him; both Armies met near *Moruccos*, and a principal Perſon in *Suz* at the Head of his whole Family, conſiſting of five hundred Men, charged *Boſonne* alone with great valour; to prevent their being maſter'd with numbers, *Sidan* ſent five hundred more to his aſſiſtance, and with this thouſand he chaſed *Boſonne* out of the Field. *Sidan* entred *Moruecos*, and continued there in peace three Months, till *Boſonne* ſaw fit to tempt his Fortune once more by preſenting himſelf before the City; but upon the failure of the expected help from the Townſ-men, who he thought loved him, he was routed a ſecond time, and fled into the Mountains, and in four days after was poiſoned by the procurement of *Alkeid Azus*, a Man that had been of great note in the Reign of *Muley Hamet Xariff*, but in the preſent Diſtractions of the Kingdom, was retir'd to a Caſtle of his own in the Mountains.

Propoſals to the *Spaniards*.

The Galleys return home.

By this time *Muley Sheck* grew apprehenſive of *Sidan*, and therefore diſpatch'd an *Italian* Merchant, one *John Elina*, to the King of *Spain*, offering him the Ports of *Allaroche*, *Sally*, *Alcaſar*, and other Places, if he would aſſiſt him to recover his Right. This Propoſal ſucceeded: but when the Galeons and Gallies of *Naples*, being in all 100 Sail, came to take Poſſeſſion of *Allaroche*, with Pioneers, and all things neceſſary for raiſing Forts, 30000 Larbies came down and oppoſed their landing, which Diſappointment obliged the *Spaniards* to return home.

The Degrees of Men in this Country.

The Degrees of Men in this Kingdom are *Muleys*, *i. e.* the Kings Sons or Blood Royal: *Baſha's* or Captain Generals over Armies: *Alkeids*, or Governours, as well of Garriſons as of Provinces: *Ferres*, Gentlemen retaining to the Sword, but of leſs Command than the *Alkeid*: *Babaia*, the *Alkeid*'s Lieutenant: *Brakbaſhi*, a Sergeant: *Debuſhi*, a Captain over thirty: *Remie*, the common Souldier. In the time of *Hamet Xariff*, there were fifty thouſand Horſe kept in pay, ſome of which ſerved with the Lance, others with the Spear, called *Spahaias*; ſome, particularly thoſe of *Fez*, on Horſeback, with the Croſs-bow; and ſixteen thouſand Foot. The *Larbies* are the beſt Horſe, and the *Brebies* fitteſt for Foot.

Beſides theſe, there is the name *Sheck*, ſignifying the prime and beſt Blood of the Kindred: this is commonly given to the Eldeſt Son of a Family, or Clan, and they are ſo powerful, that ſome of them are able to bring 10000 Horſe of their own *Clan* into the Field; the Humour of theſe People inclining to a profound Veneration for the Head of their Family. The King's eldeſt Son does not diſclaim to make uſe of this Title.

Execution of Juſtice.

Once a Month on *Fridays* after Prayers, the King hears Appeals from inferiour Judges, and a Stranger has eaſier Acceſs to plead his Cauſe, when the King ſits, than a natural born Subject. The inferiour Judges are all Church-men, and ſuch as are the ſtricteſt Livers, and leaſt inclinable to Avarice, or other Sins which byaſs Judges are the firſt preferred. Next the King is the *Mufti*, to whom Appeals ly from the lower Courts. There are three *Mufti's*, one in *Moruecos*, another in *Fez*, and a third at *Taradant* in *Sus*. He at *Moruecos* ſits with the King, and every *Friday* in the Afternoon by himſelf. Tho' this be an eminent place, yet he is but poor in reſpect of what he might be if he ſtrain'd Juſtice.

The ordinary Judge.

The common Judge ſits every day two hours before Noon and two after: Every large Town has a Judge, who determines the Cauſes of the Town and adjacent Country. Every Man pleads for himſelf, and when both Parties have done, the Judge proceeds to ſentence; ſo that a Cauſe may be ended in a Day. If either Party deſires to call Witneſſes, three Days are allow'd him to do it, and the oppoſite Party has the ſame time to diſprove what they depoſe: But if a Witneſs be infamous in his Morals, or given to Drunkenneſs, Adultery or the like, or if it can be proved that the Evidence does not ſay his Prayers ſix times in 24 Hours, he is not capable of being a legal Witneſs. Thus ſeven Days put a Concluſion to the moſt tedious Law-Suite. If an Obligation be brought into Court, he that is bound, muſt either pay the Debt, go to Priſon, or give a Pawn to the value of the Debt or more, and nine Days are allowed for the redeeming of his Pawn; but if 'tis not redeemed in that time, the thing pawned is ſold.

The *Scrivano's*.

The *Scrivano's* are aſſiſtant to theſe Judges, and generally ſucceed them. Their Buſineſs is to draw Writings, which are plain, and ſo ſhort, that if you bargain for 10000 Pounds, your Contract ſhall be compriſed in ten Lines; and this Price is ſo low, that for drawing an Obligation, they have but two Pence *Engliſh*.

The *Steryes*.

Next are the *Steryes* (like our Sheriff's Officers) who execute the Sentence of the Judge, and call upon People to anſwer the Writs againſt them, and always attend in the Houſe of the Judge to be ready upon occaſion.

The *Muffiteb*.

The *Muffiteb*'s Office is to examine Weights and Meaſures: If they catch any faulty, all the Wares in the Shop are given to the Poor, the Party proclaim'd an unjuſt Man, and ſeverely whip't.

The *Hackam*.

The *Hackam* is Judge of Life and Death: The manner of Execution, is by cutting the Throat of the Offender, which is done immediately after Sentence. Murder, Theft, and Adultery are Death, and by Proclamation the King can make what he pleaſes Capital, which the *Hackam* muſt ſee executed on pain of looſing his Head.

Muckadens.

The *Muckadens* are the *Hackams* Deputies, and in his Abſence are inveſted with his Authority.

Fokers.

The *Fokers* or Saints live in the beſt places of the Country, and obſerve great hoſpitality towards Strangers. Theſe Men do much good by their Example, their Liberality to the Poor, their Readineſs to compoſe Differences, and their good Offices in quieting Diſorders: By this they gain ſuch Love and Reſpect, that their Houſes are reputed Sanctuaries; nay, the King himſelf will not violate them but upon great neceſſity.

The ſtrength of *Barbary*.

The Force of this Kingdom is chiefly Horſe; for in all their Armies you ſhall have three Horſe-men to one Foot. Their Armour is a Buff Jerkin for the better ſort, and tann'd Leather for the reſt: ſome have Coats of Mail. Their Weapons are a Horſe-men's Staff, Target, and Sword, or a Horſe-man's Piece and Sword. The Succeſs of a Battel depends generally on the Advantage of the firſt Onſet, for they ſeldom hold it long. The *Larbies* will ſtand more firmly in a Fight occaſioned by ſome Fewd between their Families, than in the Service of their King; for upon ſuch an Account ſometimes 10000 Men have fallen at a time. Their way is, when the Affront is given, to mount the faireſt Virgin they have on Horſe-back, with a Flag in her Hand to ſollicite her Kindred to revenge. She goes foremoſt to the Fight, which emboldens her Party; for if the Enemy wins her, 'tis counted a Diſgrace to the Aggreſſors to the ſeventh Generation.

If one of a Tribe is kill'd, the firſt Man of the Tribe that ſlew him, they ſet upon, and that ſatisfies the Loſs.

The *Brebers* maintain theſe Quarrels too: when they go to fight, their Women keep cloſe behind, with a ſtaining colour in their Hands call'd *Hanna*, with which they daub any of their Men that they obſerve to give ground; and this Policy makes 'em fight to the laſt.

Their Trade.

When the old King (*Muley Hamet*) was quitly fixed on the Throne, he warr'd againſt the *Negroes*, deſigning when he had conquer'd 'em, to eſtabliſh a Trade between that Country and his own, in ſending Salt and other land Commodities for their Gold, which he rather chooſed to import than to dig the Mines in his own Kingdom; taking care at the ſame time to cut the Throats of the Diſcoverers, leſt the Secret ſpreading, ſhould tempt his Enemies to an Invaſion.

The much difficulty in their Journey to *Gago*.

His Souldiers took *Gago* from the *Negroes*, a conſiderable Town, ſituate on the River *Synega*, 300 Leagues up the Continent, and built there a Place for *Barbarian* Merchants, and a Cuſtom-houſe for the King. The Merchants to that Country make it ſix Months Journey from *Moruecos*, two of which they travel thro' uninhabited ſandy Deſarts. Their Guides ſteer their Courſe by the Sun, Moon, and Stars. If they miſs their way, they ſeldom get thro' alive, in which caſe their Carcaſſes conſume not, but turn into *Mummi*, in all reſpects as phyſical as that which comes from *Alexandria*. They go in Companies of two or three hundred at a time: their Water is carried upon Camels both for themſelves and Beaſts; and if it fails, they kill their Beaſts and drink their Blood rather than periſh. If the Wind blows at North-eaſt, they cannot unlade their Camels, leſt the Sands ſhould cover them. The Commodities they carry are great quantities of Cloth, Amber-beads, and Coral; but the chief Commodity is Salt, which is bought at *Tegazza* and other places, for four Shillings a Camel's

Load,

The Negroes way of Trade

Load, *i. e.* 600 weight, and pays to the Cuſtom-houſe at *Gago* five Pounds; then they ſell it far up in the Country to a deform'd ſort of *Negroes*, who never ſuffer themſelves to be ſeen in Negotiating Commerce with a Stranger; ſo they take this Courſe; they leave their Salt in the Field, after they are gone, comes the *Negroe*, and againſt each Parcel lays as much Gold as he thinks 'tis worth, and leaves the Gold with the Salt. The *Moor* at his return, if he likes the Price, takes away the Gold, if not, he takes away as much from his Heap as hee'l ſell for the Gold. When the *Negroe* ſees it, he either adds more Gold, or takes away his own Gold, and there's an end of the Bargain. But they ſeldom diſagree; for in moſt Bargains the *Moors* makes a rich Return, and the King a full Treaſure. The Gold theſe *Negroes* have, is not coined, but reſembles ſmall Gravel or Sand after a Glut of Rain, on the dry Banks of Mountains and Rivers.

CHAP. XI.

An Account of the Places in Africa, *poſſeſs'd by the King of* Spain *and the* Great Turk.

THE King of *Spain* is Maſter of *Oran*, *Merſalquibri*, *Mililla*, and *Pennon*, within the Streights; *Ceuta*, *Tanger*, and *Arzil*, near the Streights Mouth; theſe laſt he claims by the Title of *Portugal*, as alſo *Mazagan* 20 Miles South of *Arzil*, without the Streights. The Iſlands of *Madera*, *Puerto Santo*, the *Canaries*, the Iſles of *Arguin*, *Cabo Verde*, the Iſle *del Principe*, and St. *Thomas*, from *Cape de Guerre* to *Guardafu*, along the Coaſt of *Africk*: Theſe with ſome ſmall Iſles adjoining belong to *Spain*. They are maintain'd chiefly with their own Proviſions. Sugar, Fruits, and Wine, the *Madera's* abound with: There are good ſtore of Sugars likewiſe in St. *Thomas*'s Iſle.

Theſe Iſles receive no diſturbance but from the *Engliſh* and *French*: In the Iſles of *Arguin* and St. *George de la Mina*, the *Portugueſe* Factories are built like Fortreſſes, and from thence they trade with *Guiny* and *Libya*, and carry from thence the Gold of *Mandinga*, and the Neighbouring places. The richeſt Prince hereabouts is the King of *Congo*, the moſt flouriſhing Country in *Ethiopia*. The *Portugueſe* have two Colonies there, one in the City of S. *Salvador*, the other in the Iſland *Loanda*. They receive great Profit from theſe places, particularly 5000 Slaves, which they tranſport from thence every Year, and ſell them at good advantage in the *Weſt-Indies*, the Crown of *Portugal* receiving a certain Tax for every Slave ſo tranſported.

From this Country 'twould be no difficult matter to go to *Preſter John*'s Dominions, which are thought not to be far off, and abound with Elephants, and all Neceſſaries for Travellers. *Angola* borders upon *Congo*; and not long ſince *Paulo Dios*, a *Portugueze* Captain, maintain'd a War with the Prince of *Angola*. The Occaſion of it was, to gain ſome Silver Mines in the Mountains of *Cebambe*, which are ſaid to afford better Silver than thoſe of *Potoſi*, and as large a quantity. If the *Portugueſe* had followed this Deſign, they might have found more Riches probably than in their more diſtant and chargeable Conqueſt of *India*, *Malacca*, and the *Maluccoes*. No Countries in the World abound more in Gold and Silver, than *Mandinga*, *Ethiopia*, *Congo*, *Angola*, *Butua*, *Toroa*, *Maticuo*, *Bore*, *Quiticui*, *Monomotapa*, *Caſati*, and *Bobenemugi*.

An Error of the Portugueſe.

The Portugueſe poſſeſſion along the Coaſt.

Between the Capes of *Good Hope* and *Guardafu*, the *Portugueſe* have the Fortreſſes of *Sena*, *Cephala*, and *Mozambique*; by theſe they maintain their Trade with thoſe rich Countries, and there their Ships may put in and refit. The King of *Melinde* is their great Friend, and *Quiloa* and the adjoining Iſles pay tribute to them. The *Portugueſe* want nothing but Men to cultivate theſe Iſlands. They uſed formerly to fear no Sea Force but the *Turks*, for whom they were hard enough: But ſince the *Engliſh* and *Dutch* begun to trade this way, their Intereſt is much decayed in theſe parts.

The Turks Poſſeſſions in this part of the World.

The *Turks* are poſſeſs'd of all the Coaſt from *Velez de Gumera* to the *Red Sea*, except *Oran*, *Merſalquibir*, *Mililla* and *Pennon*, before-mention'd. Upon this Coaſt belonging to the *Turks*, are ſituated *Tremaſine*, *Algier*, *Tenez*, *Bugia*, *Conſtantina*, *Tunis*, *Tripolis*, and all *Egypt*, from *Alexandria* to the City of *Aſna*, with part of *Arabia Trogloditica*, from *Suez* to *Suachen*. At *Algier*, *Tunis* and *Tripolis*, the *Grand Seignior* has Governours call'd *Beglerbeys* or *Baſſa's*. He has alſo one at *Miſſir* for *Egypt*, and another at *Suachen* for the Country adjoining At *Suez* is his chief Arſenal for building or refitting his Galleys, where 25 of 'em may lie cover'd.

CHAP. XII.

The Deſcription of Algier, *with the Hiſtory of its falling into the Hands of* Barbaroſſa; *and a ſhort Account of* Malta *and* Tripoli: *Taken from* Nicolas Nicolay.

Situation.

ALgier is an ancient City, ſituate upon the Mediterranean, on the Brow of a Hill, encompaſs'd with ſtrong Walls, Ramparts, and Ditches; its Form almoſt triangular: 'Tis broad towards the Sea, and extends it ſelf up the Mountain to a very narrow Point: At the top of the Hill ſtands a Fort to command the Town and the Entry into the Haven. The Buildings (which exceed the Palace Royal) are handſome enough. Here are a great many Baths and Cook's Shops. The Streets are ſo contriv'd, that every Occupation has its particular place aſſign'd for it. At the Foot of the City, which is towards the North, joining to the Walls, which are waſh'd by the Sea, is their principal *Moſque*, a piece of good Architecture. A little below that ſtands the *Arſenal*, into which they haul up the Galleys and other Veſſels to refit. This place is wonderfully peopled, conſidering the bigneſs of it; 'tis inhabited by *Turks*, *Moors*, and *Jews* in great number, who merchandiſe very cunningly, and lend Money at Uſury. They have two Market-Days in a Week, to which all the Country People flock from the Mountains, Plains, and Valleys. Every thing is cheap here: I have ſeen a Partridge ſold for a *Judit*, which is worth about four pence farthing. They have Hot-houſes, where Eggs are hatch'd without the help of the Hen, and this makes Fowl very plentiful. They ſhoe their Camels and Oxen, and ride about the Streets on them, as upon 'em, calling aloud to every one to have a care, becauſe of the Crowd of People. Some *Moors* get on Horſe-back without Bridle or Saddle, only a String in the Horſe's Mouth to guide them.

Moſque.

Arſenal.

Number of Inhabitants.

Market.

Habit of the People.

The *Moors* are generally naked, except about their Privities, and a Linnen Cloth rolled about their Heads, and ty'd under the Chin.

Weapons.

Their Weapons are three Darts, which they throw with great ſkill; to their Left-hand is faſtened a crooked ſort of Dagger, which they uſe in a cloſe Engagement. Moſt of the *Turks* of *Algier* are *Renegado Chriſtians*, given to all beaſtly Vices, as Sodomy and the like: They get moſt by pirating. They ſell their *Chriſtian* Captives to the *Moors* for Slaves, who either ſell them again, or imploy them in their own work, and give 'em very hard uſage.

Gardens.

Without the City on the Weſt, are pleaſant Gardens, the Ground hereabouts being very fruitful. On the Eaſt runs the River *Savo*, which drives ſome Mills, and is fit to drink. The *Mooriſh* Women, Maids, and Slaves, waſh their Linnen in the Sea, being quite naked, except a ſmall matter to cover the Privities, which you may view for a Trifle if you be diſpos'd. Their Ornaments about the Neck and Arms, are great Bracelets of Latten ſet with falſe Stones. But the *Turks* or *Moors* Wives are covered from Head to Foot with a large black, white, or violet coloured *Barnuche*, which is made of a Blanket.

The Tower near the City

The ſecond Day after I got to *Algier*, I hired a *Renegado Spaniard* to ſhew me the Town: He carried me to an high Mountain a Mile diſtant from the Town, to view the Situation of a ſtrong Tower built upon another Mountain near it. Upon enquiry, he told me the Ditches about that Tower were two Spear's length deep, and ſeventeen Fathom broad, except towards the North, where 'twas only ſeven Fathoms. He ſaid there were in that Tower nine great caſt Pieces, and eighteen others. In the middle of the Tower is a Well of good Water; near that ſtands a Wind-mill, beſides another without the Gates. The uſual Garriſon is 30 Souldiers. This Tower defends the Heads of the Fountains that ſupply the Town with Water, the City being ſupplied from this place.

The Revolutions in this Government

Barbaroſſa choſen Captain.

Algier was a long time ſubject to the King of *Telenſin*, till the Men of *Bugie* elected a new King, to whom this place ſubmitted, as being nearer at Hand to protect them than *Telenſin*. At laſt finding themſelves undiſturb'd and free, they fitted out Ships and turn'd Pyrates. *Ferdinand* King of *Spain*, to curb the growing Miſchief, beſieged them with a great Army, and built a Fort in a little Iſland that lies againſt the Town, which obliged them to ſue for a Truce of ten Years, they being oblig'd to pay *Ferdinand* a certain yearly Tribute, which was perform'd during his Life. Afterwards taking their Opportunity, they broke the Truce, choſing *Cairadin Barbaroſſa* their Captain, who after the Siege of *Bone*, retir'd to the Caſtle of *Gegill*, ſituate on the Coaſt of the Mediterranean, on the top of an high Rock, at the diſtance of 70 Miles from *Bugie*. He drove the *Spaniards* out of the Fort, and demoliſh'd it, and puffed up with his Succeſs, treacherouſly ſlew *Selim*, a Prince of *Arabia*, in a Bath, becauſe he had declar'd himſelf Lord of the City. After this, he aſſum'd the Title of King, coined Money, and managed ſo well, that moſt of his Nighbours became tributary to him; and this was the beginning of the great Power of *Barbaroſſa*. To him ſucceeded his Brother *Hariadine*, who left it to his Son *Caſſam*, that reign'd when we were there.

A venomous ſort of Mice.

To purſue our Voyage, when we left Cape *Matefuz*, we were oblig'd by contrary Winds to caſt Anchor at Cape *Teddel*, at which place we ſaw a deep Inlet by a great Rock, the Bottom of which is waſh'd by the Sea: We entered with our Skiff half way, but were forced to return, by reaſon of multitudes of ſtrange Mice, whoſe Piſs is venomous; ſo we were glad to return ſafe, covering our ſelves in our Cloaks, for fear of any hurt of that kind. This part of the Sea is full of Rocks and Mountains.

Teddel.

Teddel is a City containing 2000 Houſes; it lies on the ſame Coaſt at the bottom of a Mountain and a great Rock. On the Mountain is built a Caſtle, which has a Wall ſtretching to the Town-Wall, to ſecure a Communication with the Town. The *Africans* firſt built it: The Inhabitants live chiefly by Fiſhing, and dying Wool and Cloth. Theſe People are very muſical, moſt of them delighting in the Harp and Lute. Their Government is the ſame as that of *Algier*. We had a quick Paſſage from hence to *Gigeri*: Near that place we met with a *Boraſque* or *Flaa*, which had drown'd us all, if the Sailors had not beſtir'd themſelves nimbly to take in the Sails. Our Frigat was loſt by it, but moſt of the Men ſav'd. Theſe Whirl-winds are very frequent and dangerous along the Coaſt of *Barbary*, but they are ſoon over.

Bone.

The 25th in the Evening, we arrived at Port *Bone*, and a Compliment was ſent to the *Caddy* or Governour of the place for the King of *Algier*. He was a *Renegado Chriſtian*, but behaved himſelf very courteouſly to us, and ſent us very handſome Refreſhments.

St. Auſtin's Biſhoprick.

The Caſtle.

The Spaniards beaten.

This Place was founded by the *Romans*, and called then *Hippon*; St. *Auſtin* was Biſhop of it formerly. It ſtands upon high and ragged Rocks. It has a very ſumptuous *Moſque*, to which the Houſe of the *Caddy* joins. The South part of the Town is ſituate much lower, and well accommodated with Wells and Fountains. This place has been twice pillaged by the *Spaniards*, ſo that its Buildings are mean, and it contains not above 300 Hearths. *Charles* V. when he had taken the Town, built a Caſtle upon an Eminence on the Weſt ſide, which commanded all round, and provided it well with Water, which is ſcarce here upon ſuch high Grounds: but the *Turks* and *Moors* chas'd and diſpoſſeſs'd the *Spaniards* ſhortly after, and raſed the Works. To the Eaſt of the Town you have a fine Champion Country, abounding in Corn Fields and Paſtures, which feed ſuch numbers of Cattle, that not only *Bone*, but *Tunis* and the Iſle of *Gertes*, is furniſh'd with Butter and Milk from hence. There are very pleaſant Gardens hereabouts. A little from this Town is a Church between two Rocks, ſaid to have been the Church of St. *Auſtin*. The Country hereabout is peſtered with thieves, called *Alerbes*: I ſaw from a Hill a little Troop of them ſtark naked, mounted on Horſe-back with their Darts in their Hands. Great quantities of good Coral are found in the Road before the Fortreſs.

A flying Fiſh.

The 26th we left *Bone*, and having paſs'd the Cape of *Roſe*, we came in ſight of the Iſles *De la Galite*, and *Des Symboles*, where a Fiſh flew into our Galley of the Length, Colour, and Bigneſs of a great *Sardin*; it had two Wings before and two behind: this Fiſh the *Moors* call *Indole*. The 28th we arrived at *Pantalaree*.

Pantalare. Ins.

This Iſland is hilly and full of Rocks: It produces Cotton, Capers, Figs, Melons, and Raiſins, and is well ſtor'd with Ciſternes. Here are ſeveral Houſes built under Ground, like Caves, which was done by the *Moors* when they poſſeſs'd it. Along the Shoar there are black Stones, glittering like fine Jet. They have no Horſes, but Oxen enough. They fetch their Corn from *Sicily*, to which they are ſubject. Here grows a Tree like *Nerte*, which produces a Fruit that's red at firſt, and turns black when it is ripe. The Inhabitants make Oil of it, which they uſe both for Victuals, and for their Lamps, and the Women anoint their Hair with it to make it long and fair. Both the Men and Women are dexterous Swimmers. I have known a Woman ſwim aboard our Gally with a Baſket of Fruit to ſell. This Iſland is 30 Miles long, and about ten broad: the People that live in it are very poor.

The Barbarity of the Turks.

We went from hence with a fair Wind to *Malta*, where we met with the melancholly Stories of what the *Turks* had done there, in raviſhing the Women, plundering, burning, and deſtroying all they met with. Thus had they ſerved *Auguſta* a Town in *Sicily*, *Michetto* in *Malta*, and deſtroy'd the Suburbs of St. *Paul*, the City being too hard for them. They took alſo the Caſtle in the Iſle of *Goze*, carrying from that place, of Men, Women, and Children 6300 Slaves.

The Siege of Tripoli.

The ſixth of *Auguſt*, we came to *Tripoli*, a City which *Charles* V. gave to the Knights of *Malta*. I ſaw the Market where the poor Captives of *Sicily*, *Malta*, and *Goze*, were afterwards ſold to the higheſt Bidders. The laſt Bidder having leave to ſtrip them quite naked to ſee if they have any Infirmity, upon which Occaſion they inſpect their Mouth, and look at their Eyes as if they were Horſes. The next day the *Turks* (who had ſate down before this place after their late Ravages) began to fire upon the Caſtle with great fury. The Beſieged made Offers to capitulate, but the *Turks* having inveigled the Governour of that Place into their Hands, by a ſeeming Conſent to moſt of the Articles demanded, and aſſuring the Governour of Safety, only deſiring to diſcourſe with him upon ſome Particulars of the Treaty between them; tho' I ſay they had firſt broke their Faith with him, the credulous Defenders were notwithſtanding deluded into a Capitulation; but the Town was no ſooner deliver'd than the Agreement was violated, all the Knights and others being made Slaves, and 200 *Moors*, who ſerved them, cut in pieces.

Tho' the Buildings, within this Town are moſtly ruined, it has ſtill very fair and ſtrong Walls, with many Turrets, double Ditches, and falſe Breaches, environed on three parts with the Sea: Within the Walls are plenty of Wells and Fountains. In the middle of the Town

Antiquities.

is a Triumphal Arch of white Marble, with four Faces upon four Pillars, of the *Corinthian* Order. In the Front on the Eaſt, is a Chariot drawn by two great Griffins, and within it Victory with two Wings. On the Weſt another Chariot, with *Pallas* ſitting in it, and a *Roman* Inſcription round it, but now not legible; only thus much may be learnt, that it was made in the time of *Lentulus*. The Inſide of the Arch was full of Ornaments, and above, it had the form of a ſquare Turret. The two other Faces looking North and South, were cut in the Form of the upper part of the Body down to the Waſte, without Heads: The reſt was adorned with Trophy Work. Not far from hence is a ſquare place ſurrounded with Pillars in two Rows like a Porch, and near it are the Ruins of an high Tower, which is ſaid to have been the great Moſque of the City: There are many other ruinous Antiquities.

The Cruelty of the *Turks*.

The *Turks* repair'd the Caſtle, and ſtored it with all ſorts of Ammunition and Ordnance. There were, of Knights and Souldiers, 600 in the Caſtle when it was taken; a great ſhame to ſurrender ſo tamely, without any apparent reaſon of War for it. The *Turkiſh* General deliver'd at laſt 200 of his Priſoners, and 20 more in exchange for 30 *Turks* taken at *Malta*. The *Turks* made monſtrous Rejoicings for their Conqueſt; and to crown the Triumph, they put to death, in a barbarous manner, a Gunner of the Caſtle, becauſe he happened, during the Siege, to ſhoot off the Hand of the Clerk-General of the Army. They cut off his Hands and Noſe, and ſet him alive in the Ground up to the Waſte; and after they had tormented him with ſhooting Arrows at him, they put an end to his wretched Life by cutting his Throat.

CHAP. XIII.

An Account of the moſt remarkable Occurrences in the Voyage of the Engliſh *Fleet, ſent againſt the* Algerines *and Others, under the Command of Sir* Robert Manſel, *Knight.*

THE Force and Burthen of the Ships was as follows.

The Admiral's Ship, the *Lyon*, 600 Tuns, 250 Men, 40 Guns.

Sir *Thomas Button*, Rear-admiral, his Ship the *Rainbow*, 660 Tuns, 250 Men, 40 Guns.

Sir *Richard Hawkins*, Vice-Admiral in the *Vanguard*, 660 Tuns, 250 Men, 40 Guns.

In the *Conſtant Reformation*, *Manwaring* Capt. 660 Tuns, 250 Men, 40 Guns.

In the *Antilope*, Sir *Henry Palmer* Capt. 400 Tuns, 160 Men, 34 Guns.

In the *Convertine*, *Love* Capt. 500 Tuns, 220 Men, 36 Guns.

All theſe Ordnance were Braſs: Beſides the King's Ships, there were ten Merchant-Ships, whoſe Force was as follows.

The *Golden Phenix* 300 Tuns, 120 Men, 24 Guns.
The *Samuel* 300 Tuns, 120 Men, 22 Guns.
The *Marygold* 260 Tuns, 100 Men, 21 Guns.
The *Zouch Phenix* 280 Tuns, 120 Men, 26 Guns.
The *Barbary* 200 Tuns, 80 Men, 18 Guns.
The *Centurion* 200 Tuns, 100 Men, 22 Guns.
The *Primroſe* 180 Tuns, 80 Men, 18 Guns.
The *Hercules* 300 Tuns, 120 Men, 24 Guns.
The *Neptune* 280 Tuns, 120 Men, 21 Guns.
The *Merchant Bonaventure* 260 Tuns, 110 Men, 23 Guns.
The *Reſtore* 130 Tuns, 50 Men, 12 Guns.
The *Marmaduke* 100 Tuns, 50 Men, 12 Guns.

The Civility of the *Spaniards* to our Fleet.

The Ordnance of the Merchant-Ships were all Iron: The Fleet thus equip'd, ſet ſail from *Plymouth* the 12th of *October*, 1620. The 31ſt in the Morning, we entred the Streights of *Gibraltar*, where two of the King of *Spain*'s Ships of War lay at anchor. When they ſaw us, they weighed Anchor, ſteer'd to the Leeward of the Admiral, ſtruck their Flag, and ſaluted us with their Guns, which Ceremony was returned by all our Fleet in good order. Next we ſaluted the Town, which returned it to us. The *Spaniſh* Captain came on board us, and told us there were a great many Pirates abroad; that two of them had fought ſeven *Spaniſh* Galleys, and kill'd them 400 Men: that they had been at a Town call'd *Sceria*, with 30 Ships and ten Galleys, had took it, and carried off many Priſoners, and that they threatned *Gibralter*. The ſecond, the Wind at North-eaſt, we weighed Anchor, and kept our Courſe North-eaſt and by Eaſt, and the third we came into the Road of *Malaga*. The ſixth we weighed anchor again, the Wind at North-weſt. Before we ſail'd, the Fleet divided into three Squadrons; the Admiral kept ſix Leagues from the Shoar, the Vice-admiral three Leagues without him, and the Rear-admiral three Leagues within him.

Our Arrival at *Algier*.

The 27th we caſt Anchor in *Algier*-road, at 27 Fathom Water, out of the reach of the Guns of the Town or Caſtle. We ſaluted them with our Ordnance, but they return'd us not one ſhot. Next Day the Admiral ſent a Gentleman aſhoar with a white Flag, to let the Vice-roy know the Cauſe of our coming, who returned us anſwer, by four Men with a white Flag, that he had Orders from the *Grand Signior* to uſe us with all reſpect; that our Men might have the free liberty of the Shoar, to buy what Proviſions they wanted; Promiſing withal, that if the Admiral would ſend any Gentleman of Quality aſhoar with the King's Letters, that upon the diſcharging of a Piece of Ordnance, he ſhould have ſufficient Hoſtages ſent aboard them. This Night the Pirates brought in three Prizes, one *Fleming*, and two *Engliſh*.

The Admiral diſpleas'd with the management of the *Algerines*.

The 6th of *December*, after many Debates, they ſent us 40 Captives, pretending they had no more in the Town. The next day the Admiral ſent a Letter to the *Baſhaw* to complain of this treacherous management. The eighth we ſet ſail, and the 14th we came to an Anchor in the Road of *Alcotha*, on the North ſide of the Iſland: Here we provided our ſelves with Wood, Water and Ballaſt. The People were very civil, bringing us all manner of Proviſions at eaſy Rates. The 24th we ſail'd: the 29th we put into *Majorca* to take in freſh Water.

Majorca.

The Town of *Majorca* is large, and well fortified, and the People are induſtrious, both Men, Women, and Children, being given to Labour. They are extreamly civil to Strangers, and have all manner of Victuals in plenty, and at eaſy Rates. Their Commodities are Oil, Wood, and Cheeſe, of which they have great plenty.

Return to *Algiers*.

Preparations to fire the Ships in the Mould.

The 21ſt of *May*, we came to an Anchor in *Algier*, and ſoon after the Admiral order'd ſix of the Merchant Ships to ply to and again to the Weſtward near the Shoar, to prevent any Pirates from getting in; and Preparations were made for executing a Deſign of firing the Ships in the Mould. Two Ships we had taken from the *Turks*, were to go on this Enterpriſe. They were fill'd with all combuſtible matter, and provided with Chains and Grapling-Irons, and Boats to bring them off; next them three *Brigandines* followed, with Fire-balls, Buckets of Wild-fire, and Fire-pikes to faſten their Fire-works to the Enemies Ships. They had alſo a *Gunlod* fitted up with Fire-works, Chains and Grapling-Irons: The *Gunlod* was to be fired in the midſt of the Ships in the Mould. There was alſo ſeven Boats, mann'd with arm'd Men, to reſcue the Boats of the Fire-ſhips if purſued: They had ſome Fire-works too, to fire the Ships without the Mould. The Wind not offering, the Attempt was put off till the 24th, the Wind being then at S. S. W. the Ships advanc'd to the Mould, but when they were within a Muſket-ſhot of it, the Weather grew ſo calm, they could not enter: However the Boats and Brigandines went on, as being inform'd by a Chriſtian Slave, who ſwam aboard of them, that the *Turks* not expecting ſuch an Attempt, had left no guard in any of their Ships, except one or two; but wanting Wind to nouriſh and diſperſe the Fire, the Fire-works took no effect. The Attempt was made under the Walls of the Town, from whence they fired furiouſly upon our Men, both with great and ſmall Guns. All the damage we ſuſtain'd was in coming off; for our Men were got into the Mould before the Town was alarm'd; and when there, they kept the Enemies Ships between them and the Town. In this Adventure we loſt only ſix Men, beſides four or five dangerouſly wounded, who died ſhortly after, and 13 ſlightly hurt.

The 25th, four Sail of Pyrates got into *Algier*, notwithſtanding the Merchant-Ships that cruiz'd near the Shoar to prevent them; for the Wind being Weſtward, and a ſtrong Current to the Eaſt, drove our Ships ſo far to the Leeward, that they could not cut them off from the Port; tho' one of our Ships came ſo near as to exchange ſome Shot, but without doing any damage: That ſame Night we weigh'd Anchor, and ſtood off to Sea.

A Pirate run aſhoar.

The 28th, the *Bonadventure* run a Pirate aſhoar, who had 130 *Turks* aboard, and 12 *Chriſtian* Captives: They were all drown'd but 12 *Turks*, who ſav'd themſelves by ſwimming. The 31ſt our Boats took up two *Genoueſe* Slaves, who had the Courage to ſwim from the Town to our Ships. They told us, that the Night we weighed Anchor, ſeven of the beſt Ships belonging to *Algier*, came in, and if we had ſtaid, it had been impoſſible for them to eſcape: That the *Turks* had boom'd up the Mould; that all the Ships were full of armed Men, and three Gallies and fifteen Boats lay continually before the Boom for a Guard.

CHAP. XIV.

A Relation of the Taking and Recovering the Jacob *of* Briſtow, *and ſome other* Adventurers *of* Engliſh *Ships.*

The Ship taken by the Pirates.

NEar the latter end of *October*, 1621, the *Jacob* of *Briſtow*, Burthen 120 Tuns, was, after a ſharp Fight, over-power'd and taken, by a *Corſair* of *Algier*. The *Turks* took all the Men out of the Ship but four, and ſent thirteen of their own aboard, to bring the Priſe to *Algier*, appointing one of the Number Captain over the reſt.

They redeem themſelves in a Storm.

The wretched Captives that were left aboard the *Engliſh* Ship, were under diſmal Apprehenſions of what they muſt ſuffer in caſe they were carried to *Algier*. This put their Invention upon the ſtretch how to free themſelves from ſo terrible a Slavery: And Providence favoured them with an Opportunity in the following manner. The fifth Night after their being taken, they had a great Storm; the Captain in the Diſtreſs lending his Hand to ſtrike the Sails, two of the *Engliſh* gave him a toſs over-board: He had almoſt got in again, by the help of a Rope he catch'd hold of, but was knock'd down again with the Handle of the Pump. In the confuſion of the Storm the reſt of the *Turks* did not mind it. This done, one of them ſtep'd to the Maſter's Cabin, paſſing by ſix or ſeven *Turks*, and fetch'd two Curtlaxes, with which ſurprizing the Pirates, they drove them from one part of the Ship to another, kill'd two, and made a third leap over-board, the other nine they drove betwixt Decks. All the Miſchief the *Turks* did them, was the unſhipping the Whipſtaff, which they got again, and putting the *Turks* (many of which were wounded) under Hatches, making uſe of them by twos and threes at a time, as they had occaſion, they brought the Ship into St. *Lucas* in *Spain*, where they ſold the *Turks* for Slaves.

John Fox's eſcape.

One *John Fox* was alſo ſtrangely delivered after a Captivity of eighteen Years: for taking his Opportunity, he ſlew his Keeper, and fled to the Sea-ſide, where he found a Galley with 150 Chriſtian Slaves, and all being of one mind, they weigh'd Anchor, and arriv'd ſafe in *Spain*. He afterwards came to *England*, and Queen *Elizabeth* to reward ſo daring an Action, allowed him a Penſion.

Capt. Nic's Valour.

Capt. *Nichols*, with the *Dolphin* of *London*, fought ſeveral *Turkiſh* Men of War at once: He ſunk ſome of them, and kill'd a great many Men; and tho' his Ship was much ſhatter'd, he made a ſhift to get off.

Malam's Adventure.

William Malam of *Rotherhith*, maintain'd a ſmart Fight with theſe Rovers; the Night putting an end to it, the Commadore of the *Turks* paſs'd his word, and bound it with an Oath, that if *Malam* would come and ſtay aboard his Ship all Night, he ſhould go and come freely next Morning. *Malam* went accordingly, firſt ordering his Mate to make all the Sail he could to get out of the reach of the *Turks*; which when the *Turks* perceiv'd next Morning, they would have put *Malam* to death; but he urging their ſolemn Promiſe and Oath, and a *Scotch* Ship appearing in ſight, after they had took that, they put *Malam* and a Merchant that was with him, aboard of her to ſink or ſwim, having pillag'd the Ship of Cables, Sails, Anchors, and all things neceſſary; but it pleaſed God to bring them ſafe to the Weſt of *England*. The Ship under his Mate's Command, came likewiſe ſafe into the *Thames*.

CHAP. XV.

The Particulars of the Recovery of the Exchange *of* Briſtow: *Publiſhed by* John Rawlins.

ON the firſt of *November*, 1621, the *Nicholas* of *Plymouth*, Burthen 40 Tuns, *John Rawlins* Maſter, ſet ſail from that place for the *Straits*, in company with the *Bonaventure*, of the ſame Port, burthen 70 Tuns.

Two Ships taken by Pirates.

The 18th of the ſame Month we came in ſight of *Gibraltar*, where the Watch diſcover'd five Ships making all the Sail they could towards us, for which reaſon we endeavour'd to keep off from them: At laſt our Suſpicion increaſing, we made the beſt of our way for *Tirriff* or *Gibraltar*, but to no purpoſe, for ere half the day was ſpent, the Admiral of the Pirates came up with the *Bonaventure* and took her, and the Vice-admiral a little after oblig'd *Rawlins* to ſtrike. The ſame day the Admiral put aſhoar twelve of the *Bonaventure*'s Crew, with ſome other *Engliſh* Captives taken before. The Vice-admiral knew better how to diſpoſe of his Priſoners, ſo he order'd *Rawlins* and five more to be brought aboard him, leaving three Men and a Boy, with thirteen *Turks* aboard the Prize. The Night after we had a Storm, in which we loſt ſight of the *Engliſh* Prize the *Nicholas*. On the 22d we arrived at *Algier*, but heard no news of the Bark. Here we learn'd the moſt dreadful Sufferings which we were to paſs thro'; how many Chriſtians had been forced to turn *Turks*, and others to proſtitute their Bodies to the moſt beaſtly Pollutions.

The Barbarity of the *Turks*.

The *Baſhaw* had the firſt view of the Priſoners, and choſe every eighth Man for himſelf; the reſt were ſent to Market, and if any ſeem'd backward, the Officers either beat them, or a prick'd them with Gords. To force them to turn *Turk*, or ſubmit to their Filthineſs, they diſplay'd their Cruelty after this manner: They laid them upon their Backs and Bellies, and beat them in that poſture till they bled at Noſe and Mouth; and if they ſtill prov'd conſtant, they beat out their Teeth, prick'd 'em by the Tongue, and try'd many other Tortures. Sometimes they laid them at full length in the Ground, as in a Grave, threatning to ſtarve them if they did not turn.

The 26th, *Rawlins*'s Bark came into the Mould, and the Priſoners were carried all together before the *Baſhaw*, except one Man and the Cabin-boy, who were perſwaded to turn. The *Baſhaw* choſe one of 'em for himſelf, and went to Market, where after a great deal of bartering, we were all ſold.

Rawlins threatned.

John Rawlins and his Carpenter were bought by the Captain that took him; *Rawlins*, by reaſon of his lame Hand, came very cheap, *viz.* 150 Doublets, that is, about ſeven Pounds ten Shillings; but perceiving that *Rawlins* could not work well, they told him that if he could not procure 15 Pounds of the *Engliſh* there for his Ranſome, he muſt be ſold high up into the Country, beyond all poſſibility of ever ſeeing *Chriſtendome* again. When theſe diſmal Tidings were brought to him, this happy Accident wrought his Eſcape: One *John Goodal* an *Engliſh Turk*, with his Partners, had bought the *Exchange* of *Briſtow*, a Ship formerly taken by the Pirates, which at this time lay unrigg'd in the Mould, and for which, they wanted ſome ſkilful Sailers; ſo underſtanding *Rawlings* was to be ſold, they ſought for him, and purchaſed him with two of his Men.

Is ſold again to an *Engliſh Renegado*.

They put to Sea.

The ſeventh of *January* the Ship was fitted up, and the ſame day haled out of the Mould; they had 12 caſt Guns, 63 *Moors* or *Turks*, nine *Engliſh* Slaves, one *French-man*, and four *Hollanders*, that were free Men; for their Gunners they had two of our Souldiers, one an *Engliſh*, and the other a *Dutch Renegado*. *John Rawlins* brook'd his working under Hatches, and other Symptoms of Slavery, ſo ill, that he ſpoke ſo publickly of attempting his Liberty, as put him and the whole Company of his fellow Slaves in danger; however no great notice was taken of it at firſt.

They take a *Chriſtian*.

The 15th of *January* we came up with a *Pollack*, which run her ſelf aſhoar to avoid us; upon that we ſent out our Boats, which lightning the Ship by throwing overboard her Ordnance, got her off. A *Turkiſh* Man of War had bore us company moſt of the time we were out; but our Men and they quarrell'd ſo about the dividing the Spoil of this Ship, that the Man of War returned to *Algier*, and we went out of the Strait's Mouth. We put nine *Turks*, and one *Engliſh* Slave out of our Ship aboard the Prize; and here the *Turks* mutined, as unwilling to go into the *Mar Granada*, as they call the Ocean; but in the concluſion they referr'd it to their *Hoſhea*, or *Prophet*, a ſort of Men much eſteem'd among them; for no large Veſſel goes to Sea without one; and when they are in the Ocean, he Divines every ſecond or third Night; the Ceremony he uſed when I ſaw him at his Conjuration was thus. Upon the ſight of two great Ships, fear'd to be two *Spaniſh* Men of War, a deep ſilence is commanded in the Ship, after that, all the Company gives a great Shriek; ſometimes the Sails are all taken in, and perhaps preſently after hoiſed out again, as the Conjurer preſages: There are alſo a Cutlas and two Arrows laid on a Cuſhion, one for the *Turks*, and the other for the Chriſtians, and a Curtlaxe: then this wiſe Man reads, and ſome one or other takes the two Arrows in his Hand by their Heads; if the Arrow for the *Chriſtians* comes over the Head of the Arrow for the *Turks*, it foretels they'll be taken; if the Arrow for the *Turks* comes over the Head of the Arrow for the *Chriſtian*, then they think themſelves ſure of ſucceſs. The Curtlaxe is taken up by a Child or ſome Perſon that is a Stranger to the matter, and 'tis much minded if it lie upon the ſame ſide or no. They obſerve Lunaticks too; for the Conjurer writes down their Sayings in a Book, groveling upon the Ground as if he whiſper'd to the Devil.

The Turkiſh Prophecying.

He had ſcarce done when we diſcover'd a Sail, which prov'd to be a *Turkiſh* Man of War: Our Commander made his Complaint to the Captain, of the Backwardneſs of the *Turks* to proceed in the Voyage; and he perſwaded them 'twas for their Honour rather to do it, than go home; ſo they were all well ſatisfied.

John Rawlins brings over many of the Crew to aſſiſt to reſcue themſelves.

John Rawlins in the mean time was providing himſelf with Ropes with broad Specks of Iron, and Iron Crows, to tie faſt the Scuttels, Gratings and Cabbins, and even to ſhut up the Captain himſelf, and all his Company, and ſo to manage the matter, that upon the Watch-word given, the *Engliſh* being Maſters of the Gun-room, Ordnance, and Powder, they might either blow them up, or kill them as they came out of their Cabbins. He diſcover'd this Plot by degrees to the four *Hollanders*, who offered to join with him; the *Hollanders* brought over the *Dutch Renegadoes*, and the *Engliſh Renegado* came in ſoon after. All this time *Rawlins* perſwaded the Captain ſtill to bear Northward, aſſuring him he could not miſs Prize, which happened accordingly; for on the ſixth of *February* we took a Bark of *Torbay*, that came from *Averare*, laden with Salt: We took out all their Men, the Mate, and two more, and put ten *Turks*, and the two *Dutch Renegadoes*, and the *Engliſh Renegade*, who were in the Confederacy, aboard the Prize; but before they went aboard, *Rawlins* aſſur'd them, that he would attempt it that very Night or the next, and they ſhould ſee a light on a certain part of the Ship if it went forward, and adviſ'd them to acquaint the *Engliſh* in the Bark with the Deſign, and to ſteer towards the *Engliſh* Coaſt; for the *Turks* being Souldiers, and unacquainted with Sea Affairs, 'twas no hard matter to put that Trick upon them. The Maſter of the Bark, and the reſt of the new made Slaves, were ſoon made acquainted with the Deſign, and reſolv'd to aſſiſt in it.

Next Morning the Prize was out of ſight, which made the Captain ſtorm and ſwear; ſo *Rawlins* being afraid he might return in that humour to *Algier*, went down into the Hold, and brought the Captain word that there was a great deal of Water below, and that it did not come to the Pump, becauſe the Ship was too far after the Head; ſo Orders were given for quitting the Cables, and bringing four Guns aſtern: Accordingly we brought two of them, with their Mouths right before the Biticle, and 'twas concluded, that we that did belong to the Gun-room, ſhould be all there, and break up the lower Deck; the *Engliſh* Slaves in the middle Deck ſhould do the ſame, and watch the Scuttels. *Rawlins* got as much Powder of the Gunner as would prime the Pieces; and pretended to the Captain, that to put the Ship in order, all Hands muſt work at the Pump; while this was doing, two Matches were brought, one between two Spoons, the other in a Can, for Secrecy, and immediately one of the Guns was diſcharg'd, which broke in pieces the Biticle; this noiſe gathered all our Men together, who clear'd the Hold of what *Moors* and *Turks* had been left below: The *Turks* at the Poop were ſtrangely ſurpriz'd at it, and endeavour'd what they could to break in upon us; but we having ſeiz'd the Powder, ſlew many of them thro' little ſcout-holes with their own Muſkets; ſo that at laſt they cried for mercy, and were order'd to come down one by one; but the Rage of our Men was ſo great, they kill'd ſome of them after they came down, which made a great many others leap into the Sea; ſo that of 45, we brought but the Captain and five more into *England*: Our Company conſiſted of 24 and a Boy. The Captain and moſt of the *Renegadoes* were afterwards reconcil'd to the Chriſtian Faith. As ſoon as all was over, *John Rawlins* got all his Men together, and gave praiſe to God for their wonderful Deliverance: the thirteenth of *February* we got ſafe to *Plymouth*.

The Succeſs of their Deſign.

Another Engliſh Ship eſcapes by their Advice.

The Bark of *Torbay* (above-mentioned) arrived at *Penſance* in *Cornwall*: They had all along perſwaded the *Turks* that they were going to *Algier*, till they came in ſight of *England*, which one of the *Turks* ſaid, he was ſure was not *Cabe S. Vincent*; but they bid him go down and trim the Salt to Windward, and they ſhould know more to Morrow, and as ſoon as he and his Companions were gone down, they nailed down the Hatches. The *Turks* that were thus made Priſoners in the Bark, were brought to *Exeter*.

Chap. XVI.

A Collection of what relates to Africa, *in Mr.* George Sandys *his Hiſtory of the preſent State of the* Turkiſh *Empire.*

Rhodes.

RHodes is now inhabited by *Turks*, or *Jews*, only; the few *Chriſtians* that remain, who are *Greeks*, not being permitted to ſtay in the City after Sun-ſet: The Suburbs are utterly raz'd. I've heard that the Monuments, Statues, and Inſcriptions formerly belonging to the Knights of the Order, are all preſerv'd entire by the *Turks*, thoſe excepted which the War deſtroy'd: The *Grand Signior* maintains five Gallies here.

Alexandria.

We ſaw no Land till the third Night after we left *Rhodes*, when we diſcover'd the Coaſt of *Egypt*, but durſt not come nigh the Shoar that Night; next day we entred the Haven of *Alexandria*, where we ſaw a fatal Inſtance of the Unſafeneſs of the Harbour; for not two Nights before the North Winds beating full upon the Mouth of the Port, drove the foremoſt Ships from their Anchors, which daſhing againſt the reſt, ſunk all for company, being 22 in number.

The Commodities of Egypt.

The Soil of *Egypt* is incredibly fruitful, being formerly reputed the Granary of the World; nay, 'tis ſaid, that the *Roman* Empire could not have ſubſiſted, if not aſſiſted by the Plenty of *Egypt*. The chief Commodities of the Country are Sugar, Flax, Rice, and all ſorts of Grain, Linnen-cloath, Hides, Salt, Buttargo, and Caſſia.

The Courſe of the *Nile*.

All the Riches of this plentiful Country are owing to the *Nile*: Four Miles below *Cairon* that River divides into two Navigable Branches; the Eaſt Branch runs into the *Mediterranean* by *Damiata*; the other called *Canopus*, falls into the ſame Sea a little below *Roſetta*, making of the beſt part of the Land a triangular Iſland, call'd from its ſhape *Delta*: The freſh Water keeping together, and changing the colour of the Salt for a greater diſtance from the Shoar than can be diſcerned. Two other Branches, which are very ſhallow, run between theſe, beſides ſeveral Canals cut artificially, which are no ſmall advantage to the Country. Of the ſeven Branches mentioned by *Herodotus*, and nine by *Ptolemy*, theſe are all I could hear of. Nor is it a thing ſtrange, that the Channel of a River ſhould be choak'd up by great quantities of Gravel or the like. The moſt unaccountable thing is the ſwelling of this River, conſidering that Rain never falleth here but in Winter, and even then but ſeldom.

The ſwelling of the *Nile*.

The overflowing of this Stream and Waters, inriches the Ground, ſo that they do not find the want of Rain; and it conſtantly obſerves the ſame Seaſon, beginning to riſe on the ſeventeenth of *June* every Year, and mounting by degrees ſometimes 24 Cubits, which is the very higheſt: It ſwell'd this Year at *Cairo* 23.

What good it does the Country.

About two Miles above the City, at the end of *Old Cairo*, in the beginning of *Auguſt*, they cut the Banks to let it out. The *Baſhaw* is always preſent at this Ceremony, and gives the firſt ſtroke, accompanied with great numbers of People in Galleys and Barges, rejoicing and feaſting for ſeveral days. At their return they are met by the People out of the City, who ſtrew their Heads with Flowers, as the welcome Fore-runners of what they have long wiſh'd. The Plenty or Scarcity of every thing bears proportion to the greater or leſſer ſwelling of the River; for the Country is ſandy, and of it ſelf not fit to produce any thing; and 'tis by this Inundation that it is manured as well as watered, the Water leaving a great deal of Slime and other Stuff behind it, which fattens the Ground. 'Tis remarkable too, that if the Plague rage in *Cairo*, it ceaſes the firſt day of the Flood, even tho' 500 died of it but the day before. 'Tis no wonder then, that an ignorant ſuperſtitious People formerly ador'd this River under the name of *Oſiris*, ſince they received ſo many Benefits from it. Its a pretty ſight when the Water's up, to ſee the Towns look like ſo many Iſlands, and Boats paſſing and repaſſing between them.

Their way of Sowing.

When the River is retir'd within its bounds, their Sowing follows, which is done without Tilling, only throwing the Grain on the Mud, and Rice on the Water. This Experiment has been tried there; take ſome of the Earth near the River, and it will neither increaſe nor leſſen in weight till the 17th of *June*, when it grows heavier as the River ſwells, and lighter again when it decreaſes: By this they have an infallible knowledge of the State of the Deluge, proceeding no doubt from the moiſtneſs of the Air, which increaſes every thing as it increaſes in humidity.

The *Nile* failed to riſe.

In the 10th and 11th Years of *Cleopatra*, the Hiſtorians of thoſe times ſay the *Nile* ſwell'd not, which Deficiency for two Years together, is ſaid to have preſaged the fall of two great Potentates, *Anthony* and *Cleopatra*. It alſo produces abundance of Fiſh, of a different ſhape and quality from ours, which are neither ſo ſavoury nor wholſome.

Palm-trees.

What they make of them.

There is no Wine in this Country, nor do the Inhabitants deſire any. Trees are very rare too, unleſs it be in Orchards, and abating for the Palm-trees which grow in Deſerts, and which are very ſerviceable to them. Of theſe there are Male and Female, the Female inclining her top to the Male, and mixing his Seeds with hers, both being contain'd in little Cods. The *Egyptians* are very careful to ſow theſe Seeds in the Spring. The Female only is fruitful, and not ſo unleſs it grows by a Male. Their Dates are not ripe till about the end of *December*. They open the tops of ſuch as are barren, and take from thence the white Pith, which they ſell, and it reſembles in taſte, but far exceeds an Artichoke. Of the Branches they make Bedſteads, Lattices; and of the Web of the Leaves, Mats, Fans, Baſkets, &c. of the outward Huſk of the Cod, good Cordage; of the inner, Bruſhes, &c. all which they take off yearly, without damage to the Tree. By this Tree they always repreſented a Man; for that it fructifies by Coition, has a Brain like Pith in the upper part, Strings like Hairs on the top, Branches extended like Hands, and Dates like Fingers.

The Diet of the Egyptians

Paper.

They have no great quantity of Wood, but yet enough for their uſe, for they eat little Fleſh. Freſh Cheeſe, ſoure Milk made ſolid, Roots, Fruits, and Herbs, eſpecially *Colocaſia*, formerly called the *Egyptian Bean*, being their chief ſuſtenance. They bake their Bread on the Hearth, mixing *Coriander* Seeds with it. Gold they're Strangers to, the Refuſe of Palm-trees, Sugar-Canes, and the like, furniſhing ſufficient Fuel for their Occaſions. Foreigners that have more uſe for Fewel, buy Wood by weight, as it is brought hither by Sea, and the Galeons of *Conſtantinople* go to the black Sea for Timber before they begin their Voyage to *Cairo*. I muſt not paſs by the *Sedgy* Reeds, which grow in the Marſhes of *Egypt*, which they made Paper of; theſe were call'd *Papyrus*, whence the Word Paper took its riſe. They divide it into Flakes, into which it naturally parts, then laying them on a Table, moiſten them with the Glutinous Water of the River, ſo preſs them together, and dry them in the Sun.

The Government of Egypt. The Revenues.

Egypt is now govern'd by a *Baſhaw*, who has his Reſidence at *Cairo*; under him are 16 *Sanziacks*, and 100000 *Spahes*. The Revenue of this Country amounting to 3000000 of *Shariffes*, the *Grand Signior* has out of that 1000000; 400000 of which is laid out in Sugar and Rice, and ſent to *Conſtantinople*, the reſt being ſent over Land with a Guard of 600 Souldiers: The ſecond Million is ſpent in paying of Officers Civil and Military, and the like, as alſo in fitting out the yearly Caravan to *Mecca*: The third Million is for the Support of himſelf and his Attendants: But this is ſhort of what it was in the Reign of *Auletes*, who 'tis ſaid raiſed ſeven Millions and a half of Crowns; and the Provident *Romans* perhaps made yet more of it.

The *Baſſa's* rigorous Juſtice.

The preſent *Baſſa* is call'd *Mahomet*; he is a pretty Man, well ſtricken in Years, and of a ſtiff inexorable temper. At his firſt coming, he cut off the Heads of 4000 *Spahes*, for having committed great Outrages; ſuch as bore too much ſway, he ſent to *Conſtantinople*; and ſuch as would not go, he ſtrangled, making uſe of the *Arabians* (who juſtly hated the others) in all his Executions. If a Thief eſcapes, they that were appointed to guard that quarter when the Crime was committed, ſuffer for him; for this Reaſon they often ſeize the Innocent to deliver themſelves. Their Puniſhment is thus: They

ſtretch

Their dreadful way of executing Offenders.

ſtretch out the condemn'd Criminal's Arms upon Staves, and bore Holes in their Arms, in which Candles are put, that burn down to the Fleſh, and in this manner are they led thro' the City to the place of Execution. Others are flea'd alive, and continue living for ſome time, unleſs the Executioner takes off the Skin of the Navel. Drunkenneſs is death, and all other Diſorders are ſo narrowly looked into, that I think I never ſaw ſo few in ſuch a multitude of People. His Severity has got him ſuch ill-will, that for a Year before we came to *Cairo*, he had ſhut himſelf up in the Caſtle: However, the *Grand Signior* likes his Conduct ſo well, that to do him the more Honour, he gave him his Daughter (a Child of about four Years of age) in marriage, which was perform'd with a great deal of Ceremony. Another thing to be commended, is, he will ſcarce ſuffer a *Chriſtian* to turn *Mahometan*, which proceeds either out of diſlike to his own Religion, or ſuſpicion that ſuch Converts generally change out of a ſiniſter worldly Deſign, rather than any real Conviction.

The Inhabitants.

The *Moors* make up the greateſt part of the Inhabitants of *Egypt*: The *Turks* and *Jews* live only in Cities. Here are *Arabians* enough, and not a few *Negroes*: Of *Chriſtians* the Native *Copties* are the moſt; there are alſo ſome *Greeks*, and a few *Armenians*.

The Moors.

The *Egyptian Moors* are deſcended of the *Arabians*, and ſpeak the ſame Language: They are Men of a mean ſtature, and tawny Complexion, very lean, ſhrill tongued, ſwift footed, and very induſtrious: tho' they are not riotous, they are none of the beſt Huſbands of their Mony. As for their Religion, they are more devout *Mahometans* than the *Turks* themſelves: Learning they have none. They have no ſuch thing as Nobility, few of them being admitted either to the Magiſtracy, or ſo much as to be Souldiers, or even to wear a Weapon in a Town. Their Merchants were rich formerly, when the *Indian* Wares paſs'd thro' this Country. Their Habit is much the ſame with the *Turks*, ſome few excepted, who retain the old Garb, *viz.* a ſide Coat of Linnen girt to their Waſtes, and a Towel of the ſame Cloth thrown over their Necks: Some of the *Negroes* wear Veſts like Surplices: the pooreſt of them wear Garments of Hair ſtreak'd black and white, and in the Winter ſide-Coats of Cotton. The Beggars do by ſinging and drumming, both get Charity, and make themſelves merry.

Their Diſtempers.

Great numbers of them are afflicted with ſore Eyes, occaſioned either by the Reflection of the Heat, the ſalt duſt of the Soil, or exceſs of Venery. The Pox is a common Diſtemper among them. The Women when they go abroad, are wrapt from Head to Foot in Linnen, ſpreading their Arms underneath to ſeem the more bulky; and moſt of them are pretty fat, which they ſeek to promote by frequenting the *Bagnios*, and uſing a particular Diet for that purpoſe: They cover their Faces with black Cypreſs, with red Spots: their under Garments are of lighter Staff than thoſe of the *Turks*, but of the ſame faſhion. The better ſort wear Hoops of Gold and Silver about their Arms and Ancles; the others have Copper Hoops, with pieces of Coin covering half their Foreheads, and Plates about their Necks, &c. They colour themſelves, pricking the Skin, and rubbing it with Ink, and the Juice of an Herb which never wears out, and ſuch like Spots. They have quick and eaſy Labour, and formerly us'd to have two or three at a birth; their Children live, tho' born in the eighth Month. They have a Plant near *Macario*, which if put in Water in a Corner of the Room, they fancy procures eaſy Deliveries. The Country People follow Huſbandry; their Dreſs is only a Ruſſet Mantle: the Women have little more, and hide their Faces with naſty Clouts, with Peep-holes for the Eyes, which is a little too much to be ſeen unleſs they were cleanlier: the Men have ſome what upon their Heads to defend their Brains from the Heat.

Naſty People.

This People is certainly matchleſs for Naſtineſs, as being cruſted with dirt, and ſtinking with ſmoak; for their Houſes generally have no Chimneys.

The Copties.

The *Copties* are the true *Egyptians*, ſo call'd from *Coptus*, an ancient City a little below, on that ſide of the River where *Thebes* ſtood againſt the Iſland *Tenterites*. Theſe are *Chriſtians*, tho' Circumciſ'd, which they are now aſham'd of, pretending for their excuſe, that the *Moors* force them to it in the Country; and indeed in Towns 'tis not uſed by them.

Ceremonies of their Religion.

Tho' in ſeveral things they are Heretical, yet they own the Divinity of our Saviour, notwithſtanding their odd Tenets about his having but one Nature, &c. Their Children are not baptized till they are forty days old. After Mid-night on *Saturdays*, they go to Church, and ſtay there till *Sunday* at Noon, ſupporting themſelves all the time with Crutches. The Prieſt is veil'd in Linnen, and has two or three Boys ſeparated from the reſt of the People, in the ſame habit. They ſing moſt of the Pſalms of *David* at every Meeting, with ſeveral Portions of the Old and New Teſtament, the latter as written by *Nicomedes*, part in the *Coptick* Language, which few of them underſtand, but moſt of it in the *Moreſco*. The Prieſt and People often join in a ſtrange Savage noiſe, which to me ſeem'd not to be Articulate; and now and then the Prieſt lifts up a red Cloth, under which I ſuppoſe was the Sacrament, which they adminiſter in both kinds, and give it to Infants as ſoon as they are baptiz'd. They have our Saviour and the bleſſed Virgin pictur'd in their Churches, but not over their Altars, nor could I perceive that they worſhipped him in the leaſt.

They preſerve in Cheſts, the Aſhes of ſuch as have turn'd *Mahometans*, and for recanting again, have ſuffer'd Martyrdome; at their Entrance they kiſs their Hands, and lay 'em over one another: The Women ſit in grated Galleries, diſtinct from the Men: Extream Unction, Prayers for the Dead, and Purgatory, they diſallow, and hold the *Roman* Church to be Heretical; they reject all general Councils ſince that at *Epheſus*. Yet the Induſtry of the Friars has ſeduc'd many of them to Popery, having their Service and Bible ſent them in the *Arabick* Tongue. Their Patriarch, tho' call'd the Patriarch of *Alexandria*, reſides in *Cairo*. Six days journey up the River above *Cairo*, they have a great City call'd *Saiet*, where *Chriſt* and his Mother are ſaid to have ſtaid till the death of *Herod*.

The place where our Saviour fled from *Herod*.

When they grow old, they generally have a Fancy to go there to lay their Bones. There's a handſome Church there, built by *Helen*, the Mother of *Conſtantine*. In *Lent* they never eat by day, except *Saturdays* and *Sundays*. They wear round Caps, Towels about their Necks and Gowns with wide Sleeves of Cloath, and lighter Stuffs. They live in more ſubjection than the *Moors*, and pay yearly a certain tribute by way of Poll, to the *Baſſa*: They retain the Vices of their Anceſtors, tho' unacquainted with their Excellencies: thoſe that profeſs Magick now are but Juglers to them of old.

Alexandria.

The Lake *Mareotis*, made formerly another Haven to *Alexandria*, by which the *Indian* Commodities, and thoſe of *Arabia*, and the up-land Parts of *Egypt*, were brought down by the help of Channels, now quite ruined: It was join'd alſo by a narrow Cut to another leſſer Lake nearer the Sea, which at this time affords plenty of Salt-petre. Between the leſſer Lake and the City, is a Channel, from whence during the Deluge of the *Nile*, Water is convey'd by Conduits into large Ciſterns, and preſerv'd till the next Deluge: this is an occaſion of much Sickneſs in Summer-time. This City is all built upon Vaults, ſupported with carved Pillars, lined with Stone: But at preſent 'tis very ruinous, only the Walls are ſtill ſtanding, which 'tis ſaid *Ptolemy* founded, and adorn'd with 68 Turrets, which are rather ſtately than ſtrong, if compar'd with the modern Fortifications. After this Town was deſtroyed by the *Saracens*, it lay waſte a long time, till a *Mahometan* Prieſt prophecying great advantages to ſuch as ſhould rebuild and inhabit it, People flock'd to it. It was afterwards deſtroyed by the *Cypriots*, *French*, and *Venetians*, who about the time that *Lewis* the fourth was enlarged by the *Sultan*, ſurpriz'd and made a great ſlaughter in it; but hearing of the *Sultan*'s Approach to relieve it, they burnt and left it. The *Sultan* repair'd the Walls, and built the Caſtle that ſtands on the *Pharus* to defend the Haven, and brought it to the condition it is now in. Several high Hills are made of the Ruins, but no *Chriſtian* is ſuffer'd to mount them, leſt they ſhould take an exact Survey of the Town; in theſe places, eſpecially after a Shower of Rain, are frequently found rich Stones and Medals, engraven with the Figure of their Gods and Men, cut with ſuch art, that what is now done of that kind, looks like bungling Counterfeits to them. On the top of one of them, ſtands a Watch-tower, where there is a conſtant Sentry to give notice of Ships when they appear in ſight. Here are not many Antiquities left, only a Hieroglyphical Obeliſk of *Theban* Marble, almoſt as hard as *Porphyry*, but of a deeper red, and ſpeckled alike: they call it *Pharo*'s Needle, and it ſtands where the Palace of *Alexandria* once ſtood:

Pharo's Needle.

There is another hard by it, and like it, half buried in Rubbiſh. Without the Walls on the South-weſt ſide of the City ſtands a Column of the ſame Marble, all of one Stone, 86 Palms high, and 36 round, a Palm being nine Inches and a half, according to the *Genoueſe* Meaſure: I mention that Meaſure, becauſe the Dimenſions were taken by one of that Country for *Zigal Baſſa*. It is placed upon a ſquare Cube, and which is very odd, not half ſo large as the Foot of the Pillar, call'd by the *Arabians Hemadeſſeror*, that is, *The Column of the Arabians.* They tell you this Fable of it; that one of the *Ptolemies* erected this Pillar at the moſt extream Point of the Haven, to defend this City from being inſulted by Sea, having put a Magical Glaſs of Steel at the top, which if uncover'd, would fire any Ship that paſs'd by it; but being thrown down by them, it loſt its Power, and thereupon they erected the Column in this place. Among the Weſtern *Chriſtians*, it bears rhe Name of the Pillar of *Pompey*, ſaid to be ſet up here by *Cæſar* in memory of his Succeſs againſt *Pompey*. The Patriarch of *Alexandria* has a Houſe here, joining to a Church, where they ſay St. *Mark* their firſt Biſhop and Martyr was buried, who in the days of *Trajan*, was dragg'd along with a Rope about his Neck, to the place call'd *Angeles*, and there burned. His Bones were afterwards removed to *Venice*, he being the Saint and Patron of that City. There are now two Patriarchs, one of the *Greeks*, the other of the *Circumciſed*, who is the univerſal Patriarch of the *Cofties* and *Abaſſines*. The Name of the preſent Patriarch of the *Greeks*, is *Cyril*, a Man of approved Virtue and Learning, and a Friend to the reformed Religion: He uſed to ſay that the Differences between us and the *Greeks* are but Shells, but thoſe are Kernels betwixt them and the Papiſts. The Buildings now ſtanding are but mean and few, erected on the Ruins of the former; that part of the City which is upon the Shoar, is inhabited; the reſt is deſolate: the Walls are almoſt quadrangular. They have four Gates, one of which leads to the *Nile*, another to *Mareotis*, the third to the Deſarts of *Baccha*, and the fourth opens to the Haven.

The Pillar of *Pompey.*

Two Patriarchs.

The Inhabitants.

This Port is inhabited by *Moors*, *Turks*, *Jews*, *Cofties*, and *Grecians*, more for Merchandize (for 'tis a free Port for Friend and Enemy) than for the Conveniency of the place: 'tis ſeated on a Deſart, where you have neither Tillage nor Paſturage, except what borders on the Lake, and that's but little, and not well Huſbanded; yet they have good ſtore of Goats, which feed among the Ruins, and have Ears hanging down to the Ground.

Iſle of *Pharus*

On the Iſle of *Pharus*, which is now become firm Land, ſtands the Caſtle before-mentioned, for the defence of the Haven. They have no Water in it, but what is brought upon Camel's Backs out of the City: All Ships ſalute this Tower with their Guns. As many of us as came aſhoar, were brought to the Cuſtom-houſe, to have our ſelves and our Portmanteau's ſearched: ten *per Cent.* is paid for all Commodities, and that in kind, not Money: what Money you bring, pays only one and a half *per Cent.* They take an exact account of it, that they may thereby gueſs at the Value of the Commodities returned for them: then you pay eleven *per Cent.* more for ſuch Goods, as are not ſo much as alter'd in property: At ſo dear a rate is this free Trade purchaſed: the *Mahometan* pays as much here as the *Chriſtian*: The *Jews* farm the Cuſtoms, paying to the *Baſſa* twenty thouſand *Madeins* a day, thirty *Madeins* making a Rial of Eight. We lodg'd in the *French* Conſul's Houſe, who undertakes the Protection of all Strangers. The Cane is lock'd up at Noons and Nights, leſt the *Franks* ſhould attempt any diſturbance. The Vice-Conſul keeps a Table for Merchants, and tho' he expects great Reſpect to be paid to him, and is very ſhy in granting his Company, yet he has the good-will of moſt. He provided us with a Janizary to guard us to *Caire*, whoſe Hire was five Pieces of Gold, beſides his Diet, and his Mens, and a Proviſion of Powder. Aſſes in this Country are not inferiour to Horſes for travelling: We paid half a *Shariff* a piece for them, and a whole one for our Camels. At the Gate they took a *Madein* a Head for our ſelves and Aſſes, thro' which we could not paſs without a *Geſcaria* from the *Cadee*, the chief Officer of the City.

The exceſſive Cuſtoms paid here.

The *Jews* farm them.

'Twas on the ſecond of *February* that we began our Journey, paſſing thro' a Deſart which produces here and there a few uncultivated Palms, Capers, and a Weed call'd *Kall* by the *Arabians*: they uſe it for Fewel, and ſell the Aſhes to the *Venetians*, who make their Chrystal Glaſſes of theſe Aſhes mix'd with the Stones they fetch from *Pavia*. On the Left we ſaw many ruinous Buildings, one of which is ſaid to be the Royal Manſion of *Cleopatra*. Beyond theſe is *Bucharis*, once a little City, but now only the Foundation left: Many Palms grow hereabouts, which ſubſiſt the wretched Inhabitants of the beggarly Villages. A Tower is built here upon a Rock to give Light to the Sailers, by reaſon of the danger of the Coaſt. Soon after we paſs'd by a Guard of Souldiers, plac'd here for the Security of the Paſſage, who made us pay a *Madein* a Head. Seven or eight Miles beyond, we ferried over a Creek of the Sea. On the other ſide ſtands a handſome Cave, built not long ago by a *Moor* of *Cairo*, for the Relief of Travellers, containing a quadrangle within, and arch'd underneath. Under one of theſe we reſted, making our Fardels ſerve for Bolſters, the Stones being our Beds. In ſuch places as theſe 'tis uſual to unload the Camels, and to refreſh both Men and Beaſts, as being there ſecur'd from Thieves and Violence. Giving a Trifle for Oil, we ſet forward again about Midnight, having met here with a great deal of Company, who were bold and reſolute, travelling with their Matches lighted, in a poſture to receive any Onſet. The *Moors* to keep themſelves awake, would tell you a Story a hundred times over. By the way again, we ſhould have paid the *Caphar*, but the darkneſs of the Night excus'd us.

Keeping along the Shoar, and turning a little to the Right-hand, before day we entred *Roſetta*, repairing to a Cave belonging to the *Franks*, where the beſt Entertainment we could get, was a muſty and dark Ground-Room, and the unwholſome Floor to ly upon.

Roſetta.

Its ſituation.

This City ſtands upon the principal Branch of the *Nile*, formerly call'd *Canopbus*; it diſcharges it ſelf into the Sea about three Miles lower. The Entrance is croſs'd with a Bar of Sand, which ſhifts according to the Winds, and beating of the Surges; for which reaſon the *Jerbies* that paſs over, are made without Keels, being round and flat bottom'd. A Pilot of the Town continues ſounding there all day, by whoſe Directions they enter, and that ſo near him, that one leaps out of the Pilot's Boat into the other, to receive Pilotage, and ſwims back again. The *Jerbies* that can paſs over this Bar, might, if well directed, go up as far as *Cairo*. *Roſetta* was built by the Slave of an *Egyptian Caliph*. The *Egyptians* call it *Raſid*, derived perhaps from *Roos*, which ſignifies Rice in the *Turkiſh* Language; for this Country abounds in Rice, and affords no leſs than 300 Quarters every Year. The Houſes are all of Board, not old, tho' they ſeem ſo, but flat Roof'd, as all are in thoſe hot Countries: for the *Moors* ly often on the tops of their Houſes: they jet over like the Poop of a Ship, to ſhadow the Street from the Reflection of the Sun. *Roſetta* has no manner of Fortification about it; 'tis no very little Town, and I believe the beſt furniſh'd of any place in the World, with Grain, Fleſh, Fiſh, Sugar, Roots, Fruits, *&c.* they vend a great many of raw Hides to *Italy*.

They ſet forward to *Cairo.*

Next day but one we embark'd in a *Jerby* for *Cairo*, having hired our *Jerby*, with ſeven Water-men, for twelve Dollars. This Arm of the *Nile* is as broad as the *Thames* at *Tilbury-Fort*, growing narrower by degrees, and in many places ſo ſhallow, that we were often in danger of ſticking faſt on the Flats: the Water is as thick as if it had been lately diſturb'd, and glides along with a huſh, ſlow Current. Ten Miles above *Roſetta* is that Cut of the River which runs to *Alexandria*. In our way we bought oftentimes as much Fiſh for Six Pence, as would ſerve twenty reaſonable Men. On each ſide of the River, there are ſeveral Towns generally oppoſite to each other; built of part Brick, part Mud. Many of the meaner Houſes appear like Bee-hives, caſt up to preſerve the Inhabitant and his Cattle, during the Deluge of the *Nile*. All along the Banks are infinite numbers of deep and ſpacious Vaults, into which they let the River, drawing the Water up into large Ciſterns, with Wheels ſet round with Pitchers, and turn'd about by *Buffaloes*, from whence it runs along little Trenches made on the Ridge of the Banks, and ſo is conveyed into each Man's Ground, the Country lying all on a level. We had the Winds favourable ſo ſeldom, that the poor *Moors* were forc'd, moſt part of the way, to hale along the Boat, ſometimes wading up to their middle, to ſet it over the Shallows, and crying at every tug *Elough*, as much as to ſay *In God's Name*: this Exclamation in their Opinion, leſſens all Difficulties, procures God's Aſſiſtance, and conjures the Devil away. The Labour of theſe People is ſo hard, and their Food ſo mean and heartleſs, that they abound with decrepit Perſons. The Shoar furniſh'd us with pleaſant Walks, which made our Paſſage ſeem leſs tedious. The wonderful fruitfulneſs of the Soil ſurpriz'd us, as did the early maturity of things, Matters being as forward with them at that time, as with us in *June*: their Reaping begins at the end of *March*.

Their way of watering their Ground

The Sugar-canes afforded us both Walking-ſtaves, and a very refreſhing Liquor. We met in our way ſeveral Troops of Horſe, appointed to ſecure the Roads from Thieves, who are very numerous hereabouts: they rob ſometimes upon the Water too in little Frigates: this made our Janizaries very vigilant, they being aſſiſted by two others to whom we gave their Paſſage to keep watch every Night by turns, diſcharging their Harquebuſſes in the Evening, and hanging out kindled Matches to terrify the Rogues. Theſe Janizaries are generally very careful of the Charge they undertake. Five days after our firſt imbarking a little before Sun-ſet, we ſail'd by the Southern Angle of the Iſle of *Delta*, where the River divides into another Branch, not much inferiour to this, which enters the Sea, as has been ſaid before, at *Damiata*. Geographers are not agreed among themſelves whether this Iſland belongs to *Aſia* or *Africa*.

Bolac.

About twilight we arrived at *Bolac*, the Port Town to *Cairo*, and not two Miles diſtant from it: Every *Frank* at his landing here, pays a Dollar.

They arrive at Cairo.

Leaving our Carriages in the Boat, we hired ſix Aſſes with their Drivers for Six Pence, to conduct us to *Cairo*, where an *Engliſh* Merchant entertain'd us *gratis* in his Houſe very kindly.

Cairo deſcrib'd.

This City is ſeated on the Eaſt ſide of the River, at the Foot of the Rocky Mountain *Muctac*: It winds along with the Hill in the ſhape of a Half-Moon, ſtretching from North to South, the Suburbs being reckoned five *Italian* Miles in length, and where broadeſt, not above a Mile and a half. The Walls, if there be any, look as tho' they belong'd to private Houſes, rather than otherwiſe: Yet the City is very ſtrong, as appears by the three Days Fight continued within it by *Selymus*, and maintain'd by the poor Remainder of the *Mamalucks*; for the Streets are narrow, and the Houſes high built: At the End of almoſt all of them is a Gate, which being ſhut every Night (as they are) makes each Street as ſtrong almoſt as a Caſtle. The Houſes are more beautiful on the out-ſide, than convenient within, the Entrance to them being generally troubleſome; yet the Roofs are high: the uppermoſt is a little open to let in the Air; they're flat, and plaiſter'd above. The Walls mounted higher than the Roof, and being at top often but ſingle Brick, they're a little ruinous at the upper part: this makes the Proſpect a little confus'd: I think it's beſt compar'd to a Grove of flouriſhing Trees, with periſh'd Crowns. Their Locks and Keys are of Wood, even to Doors that are plated with Iron. But the private Buildings are not to be compair'd with the publick ones, of which the Moſques are the moſt remarkable for Magnificence; the Stones of many of them are very curiouſly carved on the out-ſide, ſupported with Marble Pillars adorn'd with what Art can contrive, or their Religion tolerate. They differ in form from thoſe at *Conſtantinople*; ſome being ſquare, with open Roofs in the middle, of a huge bulk, the cover'd Circle tarraſt above; others ſtretching out in length, and many of them are ſuited to the place where they're built. The greateſt was built by *Gebor*, and called *Gemiſh Haſhaw*, the *Caliph* having given him the name of *Haſhare*, as much as to ſay *Noble*. Of theſe in this City, 'tis ſaid there is ſuch a number as is incredible, ſo I ſhall not mention it.

The private Buildings.

The Moſques.

The Lodgings of the Santons.

Joining to them are Lodgings for the *Santons*, that is, Fools and Madmen; when one of them dies, they carry about his Body in proceſſion, with great rejoicing; for they ſuppoſe his Soul to be without doubt gone to Paradiſe. Here are ſeveral very good Hoſpitals, both for Building, Revenue, and for Attendance.

Seraglio's.

Next to theſe for beauty, are the *Seraglio's* of the great Men: If a Chriſtian ride by one of them, they'll pull him from his Aſs with great contempt; you muſt know they prohibit us Horſes, as unworthy to ride them. The Streets are unpav'd, and exceeding dirty after a Shower; for it rains here ſometimes in Winter, and then 'tis moſt liable to the Plague. Croſs the Streets upon the tops of the Houſes, are laid Beams covered with Mats, to ſhelter them from the Sun. There is the ſame Covering between two high Moſques in the chief Street of the City; when the *Baſhaw* or others of Quality paſſes under it; they ſhoot up Arrows, moſt of which will ſtick above: the Occaſion of that Cuſtom I cannot tell.

Little Byram.

While we were here, the Feaſt of the little *Byram* was ſolemnized; at this time they kill great numbers of Sheep in their Houſes, which cut in pieces, are diſtributed among their Slaves and poorer ſort of People. They daub their Doors with the Blood, perhaps in imitation of the Paſſover.

The *Nile*, which is a Mile off, during the Overflow, comes into the City by ſeveral Channels: When the Conduit is empty, or the Water corrupted, they have it brought on Camels from the River. They have many Wells, but the Water is good for nothing but to cool the Streets or waſh the Houſes.

In the middle of the Town ſtands a large Cave, which they call *Beſeſtan*, in which, as in thoſe at *Conſtantinople*, are ſold all your finer ſorts of Wares; they ſell 'em by the Cry of *Who gives more*, like the *Venetians*.

The Gates.

This City has three chief Gates: *Bebe Nanſre*, or the Gate of *Victory*, opening towards the *Red Sea*: *Bab Zueila*, leading to the *Nile* and the old Town; between theſe two lies the chief Street of the City: the third is *Bebel Futuli*, or the *Port of Triumph*, on the North of the City towards the Lake *Eſbykie*. Three ſides of the Lake are incloſed with handſome Buildings and Galleries for Pleaſure, ſupported by Pillars, and jetting over. On the other ſide, now nought but Ruins, ſtood the ſtately Palace of *Dultibe*, Wife to the *Sultan Caitbeus*, in which were Doors and Jaums of Ivory, the Walls and Pavements checquer'd with diſcolour'd Marble, Colums of Porphyr, Alabaſter, and Serpentine; the Cielings flouriſh'd with Gold and Azure, and inlay'd with *Indian* Ebony, a Tree which when cut, equals a Stone almoſt in hardneſs: In a Word, it was as magnificent as a Woman's Curioſity could deſire, or the Purſe of a Monarch afford; 'twas levelled with the Ground by *Selymus*, the Stones and other Ornaments being remov'd to *Conſtantinople*.

The Lake.

The Lake is ſquare, and pretty large, but has no Water in it, except when the River ſwells; 'tis joined to the River by a Channel, in which the *Moors* are rowed to and again in the Evening in Barges for Pleaſure; at ſuch times they ſhade themſelves with Damaſks, and *Indian* Stuffs. When the Water's gone, the place changes, but does not loſe its Pleaſure nor Company; 'tis frequented then very much in the cool of the Day, and for Profit, it yields five Harveſts every Year. We were abuſed here by a Beggarly *Moor* (the others are generally pretty civil) we had no remedy but to addreſs our ſelves to another, who ſeem'd to make a Figure, and by kiſſing his Garment, we inſinuated into his Favour, ſo that he reproved the unmannerly *Moor* for his Rudeneſs; but we were not gone far till he became much more Affrontive than before, making us the Jeſt of all the Company, who account of Chriſtians no better than Dogs, and interpos'd between us and the other to prevent a ſecond Complaint; at laſt we got to him that had befriended us, who in a great paſſion ſent his Slaves after him that had affronted us, and they beat him in a moſt mercileſs manner all along the Level, the Maſter of them calling upon us to ſee the Juſtice done us; afterwards they carried him to the place of Correction, where I ſuppoſe he might receive a hundred good Stripes on the Soles of his Feet for his Frolicks. Beyond this are a great many ſtraggling Houſes, reaching almoſt as far as *Bolac*, which is the Key to *Cairo*, a large Town, ſtretching along the River; in ſome part the Buildings are not inferiour to thoſe of *Cairo*.

Five Harveſts in a Year.

Severity upon a Moor for abuſing us.

Excellent Orchards.

Within and without this City are great numbers of delicate Orchards, abounding with all variety of Fruits, as Oranges, Limons, Pomegranates, Apples of Paradiſe, Sicamore-Figs, and others; the Barks of theſe they bore full of holes, the Trees being as large as the greateſt Oaks: the Fruit grows not out of the Leaves, but out of the Bole and Branches: they have alſo Dates, Almonds, *Caſſia fiſtula*, leafed like an Aſh; the Fruit hangs down like Sauſages; Locuſts flat, in the ſhape of a Cycle; Galls growing upon Tamerix; Apples no bigger than Berries; Plantanes there have a broad flaggy Leaf, growing in cluſters, and ſhaped like Cucumbers, the Rind like a Peſcod, ſolid within, having no Stones or Kernels, of a moſt delicious taſte: this the *Mahometans* ſay was the Forbidden-Fruit, and that after the Fall, our firſt Parents made their Aprons of the Leaves of it. There are many other ſorts, which I never ſaw elſewhere, nor knew their Names; ſome of theſe Trees bear Fruit all the Year, and moſt of them keep their Leaves.

Cameleons.

There are abundance of Cameleons in theſe Orchards, but not eaſily found, becauſe they generally ſeat themſelves upon ſomewhat of their Colour: They're about the bigneſs of an ordinary Lizard: the Head unproportionably big, great Eyes, his Neck is inflexible, he cannot turn without moving his whole Body; his Back is crooked, his Skin ſpotted with little Tumors, not ſo obſervable upon the Belly as elſewhere; his Tail is ſlender and long; on each Foot he has five Fingers, three on the outſide and two on the inſide; his pace is ſlow, but he's very nimble with his Tongue, which is of a wonderful length, conſidering the proportion of his Body; with this he catches Flies, the End of his Tongue being hollowed by nature for that purpoſe; ſo that 'tis a Miſtake that they feed only upon Air; yet it is obſerved, that when they ſuck in the Air, their Bellies will ſwell with it, which ſeems as tho' it were part of their Food, and ſome that have kept them for a Year together, could not perceive that they had any thing but Air to ſubſiſt upon. They're of a green and duſky yellow colour, brighter and

white:

Their Enmity to Serpents.

whiter towards the Belly, yet ſpotted with blew, white, and red: they change not into all Colours, as is reported; laid upon Green, the Green is moſt bright; if upon yellow, the yellow appears moſt lively; laid upon red blew, *&c.* the Green retains its colour, but the ſpots of the ſame dy, with what it is laid upon will receive ſomething of a brighter colour: they are not colour'd alike in all places. They are ſaid to have ſo great an Enmity to the Serpent, that when they ſpy one baſking in the Sun, they'll from the Branches that hang over him, let fall a Thread like a Spinſters, having at the End a little round drop, which ſhines like Quickſilver: this drop falling upon the Head of the Serpent, kills him; and if the Bough hangs ſo that this Thread cannot fall perpendicular on the Serpent's Head, they'll direct it ſo with their Forefeet that it ſhall not miſs.

The Caſtle.

On the top of the Hill againſt the South ſide of the City, ſtands the Caſtle, once the ſtately Manſion of the *Mamaluck Sultan*'s, deſtroy'd by *Selymus*, acceſſible only one way, and that hewn out of the Rocks; but the Aſcent is ſo eaſy, that a Man may ride up. From the top the City yields a moſt beautiful Proſpect, by reaſon of the Palms here and there in it: the Caſtle is ſo large, it ſeems a City it ſelf; the Walls are very high; 'tis divided into ſeveral parts; the Gates are of Iron; the Courts ſpacious, formerly places of Exerciſe: the ancient Buildings only ſhow that they have been ſtately; there are ſome Pillars of Marble ſtill ſtanding, of ſo monſtrous a ſize, that 'tis to be wondred how they got them hither. Here the *Baſſa* keeps his Reſidence; the Divan is kept here on *Sundays*, *Mundays*, and *Tueſdays*; the *Chiauſes* as Advocates on thoſe Days, preferring the Suits of their Clients: He has forty Janizaries for a Guard, in the ſame Habit as they at *Conſtantinople*: the other Janizaries are imploy'd about the Country, and few of them are the Sons of *Chriſtians*: they are very faithful to their Charge; if they ſhould happen to trip, they'd not only looſe their Lives, but all the pay due to their Poſterity.

The Court of Juſtice.

The Inhabitants of *Cairo*.

This is one of the faireſt Cities in *Turky*; 'tis now inhabited by *Moors*, *Turks*, *Negroes*, *Jews*, *Copties*, *Greeks*, and *Armenians*, who are here the Pooreſt, and every where the Honeſteſt; they labour hard, and live ſparingly; they are not ſubject to the *Turk*, and if taken in War, are freed from Slavery; they live freely, and pay no Tribute of Children, as other *Chriſtians* are compell'd to do; they are allowed this Priviledge, becauſe an *Armenian* foretold the Greatneſs of *Mahomet*; they were once under the Patriarch of *Conſtantinople*, but about the Hereſy of *Eutyches*, fell from his Government, and now abhor the *Grecians* above all others, rebaptizing ſuch of them as turn to their Sect; they believe but one Nature in *Chriſt*, that it is not mingled with the Divine Nature, according to *Eutyches*, but join'd to it as the Soul is to the Body; they deny the real Preſence in the Sacrament, and adminiſter it as the *Copties* do, with whom alſo they agree as to Purgatory and Prayers for the Dead; but they hold with the *Greeks* that the Holy Ghoſt proceeds only from the Father, and that the Dead ſhall neither feel Joy nor Torment till the Day of Judgment.

The *Armenians*.

Their Opinion in Religion.

Their Patriarch reſides at *Tyberis* in *Perſia*, in which Country they are rich, and live in good eſteem: there are 300 Biſhops of that Nation: The Prieſts are not allow'd to marry twice; and eat Fleſh but five times a Year, and then they only eat to prevent the People's miſtaking the eating of Fleſh to be a Sin, the true dieting upon it ſo ſeldom being for Temperance ſake; 'tis an Error that they abſtain from all Meats prohibited by the Moſaical Law; for they ſcruple not to feed upon Hog's Fleſh, where it is to be had, without offending the *Mahometans*. They keep *Lent* very ſtrictly; but between *Eaſter* and *Whitſontide*, they allow Fleſh upon *Fridays*: Images they do not worſhip. Their Meetings are in obſcure Chambers; when we went in on *Sunday* at Forenoon, there was one reading the Bible in the *Chaldean* Tongue: he differ'd not in Habit from the reſt: A little after the Biſhop came in, with a Hood and Veſt of black, and a Staff in his Hand, to which they aſcrib'd much Holineſs. Firſt, he pray'd; then aſſiſted by two or three, ſung ſome Pſalms; then the whole Aſſembly ſung together, at times praying to themſelves; the Poſture of their Bodies, and frequent proſtrating themſelves in, they reſemble the *Turks*, the Biſhop excepted, who all the while ſtood with his Hands lifted up, and his Face towards the Altar. When Service was over, they all one after another, kiſs'd his Hand, and beſtow'd Alms, he laying t'other Hand upon their Heads, and bleſſing them; then he appoints the ſucceeding Feaſts and Faſts; and 'tis to be obſerved, that upon the Day of our Saviour's Nativity they faſt.

A ſtrong Monaſtery.

Here is alſo a Monaſtery of *Greek* Coloyers belonging to the Capital Monaſtry of Mount St. *Katherine* of *Siena*, eight Days Journey from *Cairo*, over the Deſarts; ſhe is reported to have been the Daughter of *Coſta*, King of *Cyprus*, and to have converted many to the Chriſtian Religion in the time of *Maxentius*: She was put upon the Wheel, and at laſt beheaded at *Alexandria*. Two handſome Pillars of *Theban* Marble, now almoſt ſwallowed in the Ruins, preſerve the Memory of the Place: they tell you an Angel convey'd her to Mount *Sina*. It has three very high Tops; that on the Weſt ſide called in old times Mount *Horeb*, where God appear'd to *Moſes* in a Buſh: this affords good Paſturage: That where the Law was given to *Moſes*, is much lower, and ſhadowed when the Sun riſes by the middlemoſt of the three. The Monaſtery ſtands at the Foot of the Mountain; it looks like a Caſtle, with Iron-Gates, where they ſhow the Tomb of the Saint, which is much viſited by Pilgrims: From this you mount to the top by fourteen thouſand Steps of Stone, where ſtands a ruin'd Chappel. A plentiful Spring falls from the top of this Hill, and after it has watered the Valley, is drank up by the Sand. This ſtrong Monaſtery is deſigned for the entertainment of Pilgrims, there being no other near it: It has a yearly Revenue of 60000 Dollars from Chriſtian Princes; 26 more depend on this Foundation, diſpers'd in other Countries: They give Alms every Day to the *Arabs*, to ſecure themſelves from violence: they let it down to them from the Battlements, not daring to admit them within the Gate. Their Orchard is full of excellent Fruits; one Rarity is Apples, which are ſcarce in theſe Countries: they fetch the Trees from *Damaſco*, and are ſubject neither to the Pope nor Patriarch, but have a Superintendant of their own now in *Cairo*. They made us a Collation of Wine, and I could not but obſerve their glutting down of Wine with greedineſs: It is imported from *Candy*.

Mount *Sina*.

A ſtrong Monaſtery.

Their love of Wine.

The Caravan.

While we were here a Caravan went out with great ſolemnity, to meet and relieve the great Caravan now coming from *Mecca*, which conſiſts of many thouſands of Pilgrims, which travel there every Year for Devotion and Merchandize: every one with his Band roll in his Hand, and their Camels nicely trim'd: the Alcoran is carried upon one in a precious caſe, covered with Needle-work, and laid on a rich Pillow, ſurrounded with a parcel of chanting Prieſts. The Caravan is guarded by ſeveral Companies of Souldiers, and ſome Field-pieces. *Mecca* is forty eaſy days Journey from this place; part of the way lies thro' a ſandy Deſart, which lies in drifts, and ſometimes the Wind moves it very dangerouſly; in many parts of it they have no Guide but the Stars, like Sailers at Sea.

No City can be more populous than *Cairo*, nor better ſerved with all ſorts of Proviſion. They hatch Eggs by artificial heat here in great numbers; ſometimes no leſs than ſix thouſand in an Oven made for that purpoſe. About eight Days after they're put in, (during which time they are very careful to turn them often) they diſtinguiſh between the good and the bad, the bad generally makes two parts in three; but this is a Demonſtration that the Imitation of Nature never equals the Original; for the Chickens are moſtly defective in ſome part, or monſtrous.

The Pride of their Women.

Moſt of the People of *Cairo* are Merchants or Atificers, but the Merchants frequent no foreign Marts. All of a Trade keep their Shops in one place, which they ſhut up about five in the Evening, and enjoy themſelves afterwards, Cooks excepted, who keep theirs open till pretty late; for few but ſuch as have great Families, dreſs their Meat in their Houſes. The Men buy the Meat; the Women are too proud and nice to meddle with Houſwifry; they ride abroad a pleaſuring upon eaſy-going Aſſes, yet ſee fit to exact the full Meaſure of Family-Duty from their Huſbands; if they neglect it, they're not aſham'd to complain to the Magiſtracy in hopes of procuring a Divorc. There are many Practiſers of Phyſick here, occaſioned by the great variety of Simples growing in the Neighbourhood, and brought hither, the *Egyptians* all along excelled in the Art of Simpling.

Rue.

A ſort of Rue is much eſteemed here: they perfume themſelves with it in a Morning, as a Preſervative againſt Infection, and think it chaſes away evil Spirits too; ſo the *Barbarians* uſed to do with the Root of wild *Galingal*.

Tricks with Beaſts.

Some Men in this City get their Living by ſhowing tricks with Birds and Beaſts, exceeding any thing I ever ſaw elſe-where. I have heard a Raven ſpeak ſo perfectly, that it has amazed me; they uſe both Throats and Tongues in ſpeaking, which other Birds do not, and conſequently more fit for the Buſineſs. *Scaliger* the

Elder ſays, he knew one kept in a Monaſtery, which would, when hungry, call ſo plainly upon *Conrade* the *Cook*, that it has been often miſtook for a Man. I have ſeen them make both Dogs and Goats ſet their four Feet upon a little turn'd Pillar of Wood, about a Foot high, and no broader at the end than the Palm of your Hand, and climb from one to two, plac'd one upon t'other, and ſo to the third or fourth; and there turn about as often as their Maſters bid them. They teach Camels to dance by putting them when they're young, on a hot Hearth, and playing on a Fiddle or other Inſtrument at the ſame time: the pain makes the poor Creature lift his Feet one after another: this is practis'd for ſome Months, and at any time after, upon the ſtriking up of the Inſtruments, he falls a dancing. Likewiſe they make Aſſes do ſuch odd tricks; you'd fancy them endued with reaſon.

Matarea.

We put off our departure ſome time longer, and went to *Matarea*, five Miles North-eaſt of the City: As we paſs'd along, we ſaw Sand caſt upon the Earth to moderate its fruitfulneſs. Here they ſay our Saviour and the Bleſſed Virgin, with *Joſeph*, reſted themſelves in their Flight from *Herod*, and being afflicted with thirſt, a Fountain burſt out at their Feet, very ſeaſonably to relieve them. We ſaw a Well ſurrounded with a pitiful Mud-wall; the Water is drawn up by *Buffolo's* into a little Ciſtern; from whence it ran into a Laver of Marble, within a ſmall Chappel, by the *Moors*, in contempt of *Chriſtians*, ſpitefully defiled. In the Wall there is a Concave lined with Sweet-wood, pieces of which are carried away by ſuch as are fond of Relicks; 'tis ſmoaked with Incenſe; at the bottom is a Stone of *Porphyry*, on which they tell you ſhe ſet our Saviour. Of ſo many thouſand Wells as this Country affords, 'tis very ſtrange that this only is fit for drinking; and 'tis ſo excellent, that the *Baſſa* will not taſte any other: when they forbear drawing much of it for ſome time, it ſends forth a Stream plentiful enough to drive a Mill; after it has paſt the Chappel, it waters an Orchard, where is a large Fig-tree, which, as the Report goes, opened to receive our Saviour and his Mother, when in danger of being taken by the Purſuers, cloſing upon them till their Enemies were paſt, and then dividing again to let them out, and ſo remaining. There's a large Hole in the leaning part of it, which no Baſtard, if you'l believe them, can tread, but ſhall ſtick faſt by the middle. The Tree is all to be cut for the Wood, which is ſuppoſed to be of ſoveraign vertue.

A Tree opens to receive our Saviour flying from *Herod*.

Balm.

In an Incloſure adjoining, they ſhow a Plant of Balm, the whole Remainder of the Store this Orchard produc'd: It was deſtroy'd by the *Turks*, or, as they to excuſe themſelves ſay, by the *Jews* out of Envy: 'twas tranſported from *Jewry* in the time of *Herod the Great*, by *Antonius*'s Command, at *Cleopatra*'s deſire. Others ſay 'twas brought hither out of *Arabia Felix*, at the coſt of a *Saracen Sultan*.

A Wonder upon *Good Fridays*.

Within a day or two after we paſs'd the *Nile*, we left three Miles to the Left-hand, the place where upon *Good Fridays*, the Arms and Legs of a great many People appear ſtrech'd forth, to the wonder of the People that flock hither to ſee them. I have heard this confirm'd by *Jews*, *Chriſtians*, and *Mahometans*, as having ſeen it themſelves: but 'tis not impoſſible that it may be a Contrivance of the Watermen to get Money by ferrying over Paſſengers, of which, thouſands come to ſee this ſuppoſed Miracle; for there are an infinite number of *Mummies* Limbs, of which they may fetch and ſtick over Night in the Sand. Three or four Miles farther, on the Right-hand croſs the Plain, ſtands a Cauſey ſupported with Arches, five Furlongs Long, ten Paces high, and five in breadth, of ſmooth and figured Stone, built by the ſame Perſon that erected the Pyramids, for a Paſſage with heavy Carriages over the ſoft and ſinking Grounds; and now having rode thro' a pleaſant Plain about twelve Miles over, we came to the Foot of the *Libyan* Deſarts.

The Pyramids

Directly Weſt of the City, hard by theſe Deſarts, on a high rocky Ground, ſtands the three Pyramids, the Monuments of Prodigality and Vanity, ſo univerally famed. Their Name is taken from the Shape, intimating a Flame of Fire, broad at the bottom, and drawing to a Point at top. This Figure was much uſed by the Ancients, for by this they thought the Divinity well repreſented; for as a Pyramid from a narrow Point ſpreads it ſelf in a great Extent downwards, ſo the Divine Nature, being of it ſelf an undivided Subſtance, communicates Being to ſeveral multitudes of Beings and Forms; all which deſcend from the original ſingle Fountain of Life.

'Tis plain, that theſe, as well as the other Pyramids, were the Royal Sepulchres of the Kings of *Egypt*; the greateſt of the three, and chief of what we generally call the Seven Wonders of the World, is ſquare at the bottom, and ſuppoſed to take up eight Acres of Ground, every ſide of the Square being 300 ſingle Paces in length: the Square at the top conſiſts but of three Stones, but large enough for three ſcore Men to ſtand upon. You aſcend it by 255 Steps, each Step three Foot high, and proportionable breadth: No Stone of the whole Fabrick is little enough to be drawn by one of our Carriages, yet theſe were hewn out of the *Trojan* Mountain, a great way off in *Arabia*; which Name was given them upon account of the *Trojans* brought by *Menelaus* into *Egypt*, and there planted. 'Tis wonderful how they could bring them ſo far, and more ſtrange how they could erect them. Twenty Years was ſpent in the Building, all which time 366000 Men were continually employed about it, who in Radiſhes, Garlick, and Onions, are reported to have conſumed 1800 Talents. In ſuch like Fancies they waſted their Treaſure, and employed the People, leſt too great ſtore of Money might corrupt their Succeſſors, and an unreſtrain'd Idleneſs make the Subjects wanton and mutinous.

Time, which devours the proudeſt Structures, has not humbled this lofty Edifice, tho' 'tis conjectur'd very probably to have ſtood there 3200 Years, and now it is rather old than ruinous; the North ſide is moſt worn, becauſe of the moiſtneſs of the Northern Winds. With much difficulty we made a ſhift to reach the top, where we had the pleaſant Proſpect of this moſt excellent Country, and the noble Stream to which it owes its Riches. Southward, and near the *Mummes*, we could ſee other large Pyramids, which any where elſe might paſs for Wonders. This Pyramid caſts no ſhadow for a great part of the Day, but is at once illuminated on all ſides. On the Eaſt ſide, deſcending again, we came near the Entrance, which ſeems to have been formerly cloſ'd up: Into this our Janizaries diſcharg'd their Pieces, leſt any ſhould have ſculkt there to do us a miſchief, and guarded the Mouth while we entred, for fear of the wild *Arabs*. To have the better footing, we put off our Shoes and moſt of our Cloaths, becauſe of the heat within, which we were told was not much ſhort of a Stove. Our Guide, a *Moor*, led the way, every one of us with Lights in our Hands: 'tis a dreadful Paſſage, and very troubleſome, not above a Yard broad, and four Feet high, each Stone containing that meaſure; ſo that we were forc'd to ſtoop always, and ſometimes to creep, becauſe of the Rubbage, our Deſcent being not by Stairs, but as down the brow of a Hill, for an hundred Feet, where the ugly Deſcent continues, but the way is a little larger: they ſay none durſt ever attempt any further; but that a *Baſſa* of *Cairo* to ſatisfy his Curioſity, made ſeveral condemn'd Perſons undertake it, and ſtock'd them well with Lights and Proviſions; and that ſome of them came up again near thirty Miles off in the Deſarts: this I take to be a meer Fable. Others tell you, that at the bottom there is a large Pit, eighty ſix Cubits deep, fill'd at the time of the *Nile*'s Overflowing by ſeveral Conduits: In the middle of it is a little Iſland, and on that the Tomb of *Cheops* King of *Egypt*, and Founder of this Pyramid, which is the liklier Story of the two; for I have been told ſince by one that ſaid he ſaw it, that at the bottom of all there is a large ſquare place (tho' without Water) into which he was led by an Entry opening to the South, known to few, being ſhut up ſince by ſome order. A Turning on the Right-hand carries you to a little Room, which we would not go into there was ſuch a noiſome ſmell in it. Climbing over the above-mentioned Dungeon, we mounted about 120 Feet, as tho' upon the bow of an Arch, the Way no larger than the former: Here we paſs'd thro' a long Entry, which led directly forwards, much lower than the others; this brought us to a little Room, with a compact Roof, more long than broad, of poliſh'd Marble; but its Grave-like ſmell obliged us to return quickly. We went over this Entrance about 120 Feet higher. This laſt was exceeding high, yet ſo narrow, a Man might fathom it, bench'd on both ſides, and cloſ'd at top with admirable Architecture: the Marble is ſo great, and ſo artfully join'd, it looks as tho' it were hewn out of the Rock. At the top we entred a large Room, twenty Foot wide, and 40 in length; the Roof is of a wonderful height, and the Stones are ſo large, that eight ſerves for the Floor, eight for the Roof, eight Flags the Ends, and ſixteen the ſides; all of well wrought *Theban* Marble. Croſs the Room at the upper end, ſtands a Tomb, uncover'd and empty, all made of one Stone; 'tis Breaſt high, ſeven Foot long, and not four broad, and ſounds like a Bell: In this, no doubt, lay the Body of the Builder. Vain glory was not the ſole end of ſuch laſting Monuments; but their opinion was, that after 36000 Years, the Soul would be rejoin'd to the ſame Body, which would be reſtored to its former condition: this they collected from their Aſtronomy; ſo they would preſerve the Body altogether, to receive the Soul at its return. Againſt one End of the Tomb, cloſe to the Wall, opens a Pit, with a long and narrow Mouth, which leads into an Under-Chamber. In the Walls on each ſide of the Upper-Room, are two holes oppoſite to each other, their Ends not diſcernable, nor are they large enough to creep into, ſooty within, and they ſay were made by a Flame of Fire which darted thro' them. This is the Subſtance of what we could diſcover within this dark Fabrick.

The Effects of this piece of Vanity.

Herodotus ſays, that King *Cheops* became ſo poor by the Building of this, that neceſſity oblig'd him to proſtitute his Daughter, with a Charge to refuſe nothing ſhe could get; ſhe being ſomewhat of her Father's humour, demanded Stones of every one of her Cuſtomers, with which ſhe built the other Pyramid, much leſs than the former; 'tis ſmooth without, but has no Entrance. The third, which ſtands on the higheſt Ground, is the leaſt; but *Herodotus* and *Strabo* ſay, not inferiour in beauty nor coſt, being all built of Touch-ſtone, hard to be wrought upon, and brought from the fartheſt *Ethiopian* Mountains; but that I cannot believe: they deſign'd to have cover'd it with *Theban* Marble; there's a great quantity lies by it. This was made by *Mycerinus*, the Son of *Cheops*: Some ſay by a Curtezan of *Naucratis*, call'd *Dorica* by *Sapho* the Poetreſs, much loved by her Brother *Caraxus*, who uſed to ſail hither with Wine from *Lesbos*. Others ſay 'twas done by *Rhodope*, another of that chaſt Calling, who was at firſt, fellow Slave with *Æſop*, the Author of the Fables, and lived here after ſhe obtain'd her liberty; but if ſhe got ſuch a Treaſure by whoring, the Trade was then more profitable than ever it was ſince.

Another Story goes, that when ſhe was waſhing her ſelf, an Eagle ſnatch'd away her Shoe, and bearing it to *Memphis*, let it drop into the King's Lap, who ſurpriz'd with the Accident, and the beautiful Shape of the Foot, order'd ſearch to be made thro' all his Territories for the Owner, and having found her in *Naucratis*, he made her his Queen, and after her death, interr'd her here. She lived in the time of *Amaſis*.

A more exact Deſcription of the Pyramids in *Egypt*, taken from the Learned Mr. *Greaves*.

This learned Man tells us in his Preface, that he went twice from *Alexandria* to *Grand Cairo*, and from thence into the Deſarts, to view theſe Pyramids, *viz*. in 1638 and 1639, and carried with him ſeveral Inſtruments for the more exact diſcovery of the Truth.

1 The ſituation of the three great Pyramids now extant.

The three great Pyramids which are now extant, are ſeated on *Africa* ſide, upon a rocky and barren Hill, between the City *Memphis* and that place which is call'd *Delta*, from the *Nile* leſs than four Miles, from *Memphis* ſix, near to *Buſiris*, a Village from which they uſe to aſcend up to them. *Plin*. L. 36. C. 12.

2 The Authors and Founders of them.

Theſe three Pyramids were not erected by the *Iſraelites*, under the Tyranny of the *Pharaoh's*, as *Joſephus* and ſome modern Writers affirm; for the Scripture ſays expreſly, that the Slavery of the *Jews* conſiſted in makeing and burning of Brick, whereas all theſe Pyramids conſiſt of Stone. The firſt and greateſt of theſe Pyramids was built, ſays *Herodotus*, by *Cheops* (ſtil'd by *Diodorus Siculus Chemmis*) who ſucceeded *Rhampſinitus* in the Kingdom of *Egypt*. He adds, that the Stones were dug out of the Quarries of an *Arabian* Mountain, and from thence carried to the *Nile*: That there were employ'd in the Work ten Myriads of Men, every three Months a Myriad: That the whole Pyramid was finiſh'd in 20 Years, whereof ten were ſpent in conveying the Stones to the place of Building. *Herodot*. L. 2.

The ſecond Pyramid like to the firſt in reſpect of the Workmanſhip, but far inferiour in reſpect of Magnitude, was built by the Succeſſor to *Cheops*, who was *Cephren* his Brother, as *Herodotus* and *Diodorus Siculus* agree.

The third Pyramid, leſs than either of the former two, was built by *Mycerinus*, the Son of *Cheops*, or *Chemmis*, ſays *Herod*. Other Writers give different Names to the Founders of theſe Pyramids; but this is what is moſt probable among their various Opinions, according to Mr. *Greaves*.

Beſides theſe three which are now extant, *Herodotus* mentions a fourth built of Brick by *Aſychis*, who ſucceeded *Mycerinus*, and another in which *Imarides* was buried, at the end of the Labyrinth built by the twelve Kings of *Egypt*. And long before any of theſe, *Meris* in his admirable Lake, erected two Pyramids, one for himſelf, and another for his Wife; all which are long ſince ruined by time: But there are many now ſtanding in the *Lybian* Deſart, whoſe Founders none of the ancient Writers have nam'd.

3 Of the time in which the Pyramids were built.

As to the time when the Pyramids were erected, Mr. *Greaves* finds it o'reſpread with *Egyptian* darkneſs, becauſe he cannot find in any ancient Authors when the aforeſaid Founders liv'd, and therefore he endeavours to fix the Epocha of the Migration of the *Iſraelites* out of *Egypt*, which he thinks happen'd in the Reign of *Amenophis*, coetaneous with *Moſes*, being the laſt King of the 18th *Dynaſty*, and the Epocha of the Deſtruction of the 1ſt Temple, in the time of *Hezekiah*, which he thinks happen'd in the Reign of *Apries*, being the eighth King of the 26 *Dynaſty* (as *Euſebius* out of *Manethos* reckons theſe Kings). And between theſe two Epocha's, amounting to the ſpace of 904 Years, he fixes the time when the aforeſaid Founders liv'd, by having recourſe to thoſe Dynaſties of *Manethos*, as they are preſerv'd by *Africanus* and *Euſebius*; where finding that all the intermediate *Dynaſties* have their peculiar Kings, except the 20th, he places them in that vacant ſpace of 178 Years, which that *Dynaſty* contain'd according to *Euſebius*: and ſo *Cheops* the Founder of the firſt Pyramid, began his Reign in the Year 3447, of the *Julian* Period, and 1266, before the Birth of *Chriſt*; he reign'd 50 Years, ſays *Herodotus*. After him ſucceeded *Cephren*, the Builder of the ſecond, who reign'd 56 Years; and then *Mycerinus* the Erector of the third, who reign'd ſeven Years, making in all 113; and the Remainder of the *Dynaſty* may be divided among the three next Kings, who were *Aſychis*, *Anyſis*, and *Sabachus*, who reign'd 50 Years ſays *Herodotus*. This is the beſt Account of the time Mr. *Greaves* could diſcover, which the Curious may read at large in his own Book about the Pyramids.

3 For what end or intention the Pyramids were erected.

That theſe Monuments wree intended for Sepulchres and Monuments of the Dead, is the conſtant opinion of moſt Authors, and is plainly prov'd from the Tomb that is found in the Pyramid of *Cheops* to this day, and from the Teſtimony of an *Arabian* Writer, who relates, that this Pyramid being opened about 850 Years ago, there was found in it a hollow Stone, in which there was a Statue like a Man, and within it a Man, having a Breaſt-Plate of Gold ſet with Jewels, and upon it a Sword of a very great Price, and at his Head a Carbuncle of the bigneſs of an Egg, ſhining like the Light of the Day. *Almac. Hiſt. Arab. ex edit. Erp.* But the true reaſon why they built ſuch ſtately Monuments, was not meerly Oſtentation, or State-Policy, but the Religious Belief of the *Egyptians*, that as long as the Body endur'd, ſo long the Soul continued with it, as an Attendant, without going into any other Body, as otherwiſe it would; upon which account they did not only ſalt and embalm their Dead after the manner deſcrib'd by *Diodorus Siculus*, *Lib*. 1. to preſerve them from putrefaction, and make them durable as Braſs, but alſo entomb them in ſtately Monuments. Such were at firſt their Mercurial Sepulchres, made of hard Marble of a Spherical Figure. Such were the Dormitories cut out in the *Lybian* Deſarts by the *Egyptians* of lower quality, which are now call'd the *Mummies*: And of the ſame nature are the ſtately Pyramids built by their Kings, all which are deſign'd to ſecure their dead Bodies after they are embalm'd, from the Injuries of Men, or the Weather, that ſo the Soul may be ſtill oblig'd to attend them. But beſides this general Reaſon why theſe Reconditories were built, which was to preſerve their Bodies dead from all external Violence, there were two ſpecial Reaſons why they were made in a Pyramidal Form. Firſt, becauſe this Figure appears to be moſt permanent and durable, as being neither ſo liable to be overpreſs'd with its own weight at top, nor to be undermin'd by the ſinking in of Rain at bottom, as other Buildings are. Secondly, Becauſe theſe Structures were intended to repreſent ſome of the Gods of the *Egyptians*; for in the moſt ancient times, Pyramidal Columns or Obeliſks, were worſhipp'd as Images of the Gods, before the exact Art of making Statues was found out; and ſo as *Iſis Cornigera* repreſented the Horns of the Moon, ſo theſe Pyramids might repreſent the Rays of the Sun, which they worſhipp'd under the name of *Oſiris*. Other Nations were wont to erect Pillars over their Dead; but we find no ſuch ſtately Pyramids out of *Egypt*, unleſs it be the Sepulchre of *Perſenna*, King of *Etruria*, which yet was far inferiour to them in magnitude, tho' it was admirable for the number and contrivance of the Pyramids, as it is deſcrib'd by *Plin*. *l*. 36. *c*. 13.

4 A Deſcription of the firſt and greateſt Pyramid

The firſt of the three great Pyramids is ſituated on the top of a rocky Hill in the ſandy Deſart of *Libya*, about one fourth of a Mile from the Plains of *Egypt*, the height

of the ſituation giving beauty, as the Solidity of the Rock does firmneſs to the Superſtructure. The Baſis is exactly four-ſquar'd, and the North ſide of it being meaſur'd by Mr. *Greaves* with a *Radius* of 10 Feet, was found to be 693 *Engliſh* Feet, and the Altitude being meaſur'd by its Perpendicular, was found to be 481 Feet: but if it be taken as it aſcends inclining, then it is equal to the Latitude of the Baſis, which is 693 Feet. To give a true notion of the juſt Dimenſions of this Pyramid, we muſt imagine upon the ſides of the Baſis, which is perfectly ſquare, four equilateral triangles mutually propending, till they all met at the top, as it were in a Point; for ſo the Perimeter of each Triangle comprehending 2079 Feet, and the Perimeter of the Baſis 2772 Feet, the whole Area of the Baſis will contain 480249 ſquare Feet, or about eleven *Engliſh* Acres of Ground, which is a Proportion ſo monſtrous, that it might ſeem incredible, but that it is atteſted by the Ancients to be as much, and by ſome of them to be more. The aſcent to the top of the Pyramid from all the ſides without, is by degrees or Steps; the lowermoſt Degree is near four Foot in height, and 3 in breadth, which goes about the Pyramid in a level: the ſecond Degree is like the firſt, only it retires inward from the firſt near three Feet: after the ſame manner is the third row, and ſo the reſt, riſing like ſo many Stairs one above another to the top, which ends not in a Point, but in a little Flat, which is about 13 Feet broad, being cover'd with nine Stones, beſides two which are wanting at the Angles. The Degrees by which we aſcend, are not of an equal depth; for ſome are near four Feet, others want of three, and the higher we aſcend, the depth grows the leſs; and ſo in proportion does the breadth alſo decreaſe. Theſe Rows of Stones are much impair'd by rhe Weather; yet every Step, which is but one ſingle Stone, is at leaſt 30 cubical Feet. The number of Degrees from the bottom to the top, is 207 or 208. Some of the Ancients have reported, that this Pyramid caſts no ſhadow, which muſt be meant in the Summer-time, and at midday; for in the Winter Mr. *Greaves* ſaw it caſt a ſhadow at Noon.

After Mr. *Greaves* has taken a view of the Out-ſide of this Pyramid with its Figure and Dimenſions, he gives a particular Account of what he found within it, of which the Ancients were ſilent, out of a ſuperſtitious regard to the Sacredneſs of the Place, and the *Arabians* have given us romantick Deſcriptions. And firſt, He tells us how he aſcended on the North ſide 38 Feet, and there he and his Company enter'd into it with Tapers in their Hands, thro' a ſquare narrow Paſſage, three Feet broad and 92 long, the Declivity of which was gradually ſo ſtraitned, that they were forc'd, at the further end of it, to creep upon their Bellies. After this, having paſs'd thro' a place in which they found ugly large Bats above a Foot long, they entred thro' intricate Windings into many ſpacious Galleries, built with poliſh'd Marble, white ſpeckled. At the end of one they found the Well mention'd by *Pliny*, which is circular, being three Foot broad, and at that time 20 deep; the ſides of it are lin'd with white Marble, and the Deſcent into it is by faſtening the Hands and Feet in little open Spaces, cut in the ſides within. After we had paſs'd, ſays he, thro' ſeveral Galleries, which lie in the ſame continu'd Line, and lead to the middle of the Pyramid, we obſerved the ſtrange Eccho mentioned by *Plutarch*, by diſcharging a Gun; for the Sound being carried in thoſe ſmooth Paſſages, and finding no vent outwards, reflects upon it ſelf, and cauſes a confus'd noiſe, which by degrees vaniſhes. But that which is moſt admirable, is the rich and ſpacious Chamber, which lies about the Center of the Pyramid, in which Art may ſeem to have contended with Nature, the curious Work being not inferiour to the rich Materials; for the Floor, the Roof, and the Sides of it, are all made of vaſt Tables of *Thebaick* Marble, very gracefully ſiz'd and plac'd. The nine Stones which cover the Roof, are of a prodigious length, like ſo many huge Beams traverſing the Room, and ſupporting the infinite Maſs of the Pyramid above. The length of it is about 34 *Engliſh* Feet, the breadth about 17, and the heighth 19 and a half. Within this glorious Room ſtands the Monument of *Cheops* or *Chemmus*, of one piece of Marble, hollow within, uncover'd at the top, and ſounding like a Bell, without any Sculpture or Emboſſment. But it is the common opinion, after *Diodorus*, that neither *Chemmis* nor his Succeſſor *Cephren* were buried in their Pyramids, becauſe, ſays he, the People being overpreſs'd by them with hard labour, threaten'd to tear their dead Bodies in pieces, and throw them out of theſe Sepulchres. *Diod. l.* 1. This Monument is of the ſame *Thebaick* Marble with the whole Room, being ſpeckled with black, white, and red Spots, and reſembles two Cubes finely ſet together, and hollow'd within. It is ſeven Feet three Inches and a half long, in breadth and depth three Feet three Inches and three quarters on the out-ſide, but within it is ſomething leſs, which ſhows that the Men of this Age are of the ſame Stature with thoſe that liv'd near 3000 Years ago, tho' ſome famous Men have thought the contrary. If any aſk how this Monument could be convey'd into this Chamber, ſince it is impoſſible for it to enter by thoſe narrow Paſſages in the Pyramid which lead to it? I anſwer, that it muſt have been rais'd and convey'd without up by ſome Engine, before the Chamber was finiſh'd and the Roof clos'd.

5 The ſecond Pyramid deſcrib'd.

The ſecond Pyramid is ſcarce diſtant the flight of an Arrow from the firſt, and is all built of Stones of a white colour, nothing ſo great as thoſe of the firſt; the ſides riſe not with Degrees or Steps like that, but are ſmooth and equal, and the whole Fabrick ſeems to be very entire, except on the South ſide. Tho' it is generally thought to be inferiour to the firſt in magnitude, yet by Mr. *Greaves*'s Obſervation, the Heighth and the Sides of the Baſis in both are equal. There is no Entrance into it, and therefore none can tell what Chambers are within. It is bounded on the North and Weſt ſides with two very ſtately and eleborate Structures, being 30 Foot deep, and more than 1400 long, cut out of the hard Rock, and ſquar'd by a Chizzel, which are ſuppos'd to be the Lodgings of the Prieſts.

6 The third Pyramid deſcrib'd.

The third Pyramid is diſtant from the ſecond about a Furlong, and tho' it appears at a diſtance to be of an equal height with the two former, becauſe of the advantage of its Situation upon a higher Riſe of the Hill, yet it is really much lower, each ſide of the Baſis being only 300 Feet long, which wants near 400 Feet of the two former. All the Ancient and Modern Writers generally agree that it was made of black *Ethiopic* Marble, whereas Mr. *Greaves* aſſures us upon his own Inſpection, that the whole Pyramid ſeems to be of a clear and white Stone, ſomewhat choicer and brighter than that in either of the other two Pyramids: but what the Stone within may be, no body can tell, ſince there is no Entrance into it.

Among the reſt of the Pyramids in the *Libyan* Deſart, which be about 18, there is one no leſs worthy of memory than any of the three former, which ſtands about 20 Miles diſtant from them, more within the Sandy Deſart, which appears to have the ſame Dimenſions, the ſame Steps without as the firſt: It appears alſo to be of the ſame colour, and to have an Entrance like that on the North ſide, which is barr'd up within; and ſo whatever is ſaid of the firſt in reſpect of the Out-ſide, is applicable to this.

As to the manner of erecting theſe ſtupendious Structures, Mr. *Greaves* diſliking what is ſaid about it by *Herodotus*, *Diodorus*, and *Pliny*, is of opinion, That the Builders firſt made a large and ſpacious Tower in the midſt, reaching to the top, and that to the Sides of this Tower the reſt of the Building was applied, piece after piece, like ſo many Buttreſſes and Supporters, ſtill leſſening in heighth till they came to the lowermoſt Degree, which is a difficult Work, but very laſting.

The *Coloſſus*.

Not far from theſe ſtands the *Coloſſus*; up to the Mouth is all natural Rock, as if nature had form'd it ſo on purpoſe; the reſt is compos'd of huge flat Stones laid upon it, and wrought to repreſent an *Ethiopian* Woman, adored formerly by the Country People: Under this they ſay lies the Body of *Amaſis*. The ſize is not ſo monſtrous as reported by *Pliny*, who makes the Head 102 Feet in compaſs, whereas the whole is but 60 Feet high: the Face is ſomewhat disfigur'd by time, or the ſpite of the *Moors*, who abominate Images. *Pliny* and others call it *Sphinx*. The upper part of the *Sphinx* reſembled a Maiden, the lower a Lion: by this Figure the ——————— *Egyptians* meant the Increaſe of their River, and conſequently of ——— their Riches, which happens when the Sun is in the Signs of *Leo* and *Virgo* ———. This is but from the Shoulders upward, tho' *Pliny* gives it a Belly, which could never be, unleſs the Belly be now covered with the Sand. By a *Sphinx* in their *Hieroglyphicks*, they repreſented an Harlot alſo, having an amiable, and an alluring Face, but withal the Tyranny and Danger of a Lion, which ſhe makes uſe of over the willingly ſeduced Cully. Such ſort of Figures they erected alſo before their Temples, thinking that the Myſteries of Religion and Philoſophy ought to be contained in Ænigmatical Expreſſions, that they might be kept from the Knowledge of the giddy Multitude.

Memphis.

Five Miles South-eaſt of theſe, and two Weſt of the River, towards which the Brow of the Mountain leans a little, ſtood the Royal City of *Memphis*, the Strength and Glory of old *Egypt*, built by *Ogdoo*, and call'd ſo after his Daughter, whom they fable *Nilus* lay with in the ſhape of a Bull. In this was the Temple of *Apis*, the ſame with *Oſiris*; and *Nilus*, *Bacchus*, *Apollo*, &c. are all the ſame. There is ſcarce enough of Ruins left to teſtify that *Memphis*, once ſo famous, ſtood here; yet ſome few Remains are to be ſeen ſtill, and ſome Statues of monſtrous Reſemblances, which ly in a ruinous condition.

This has made ſome miſtake old *Memphis* for the preſent *Cairo*: But ſuch as have both ſeen and wrote of the former, ſay it ſtood eight Scenes above the Southern Angle of *Delta*, each Scene containing five Miles, and ſometimes ſeven and a half, according to the differing Cuſtoms; this South Angle of *Delta* is four Miles diſtant from *Cairo*. Beſides, theſe Pyramids belonging to *Memphis*, ſaid to have ſtood five Miles North-weſt of the City, ſtanding directly Weſt, and full twelve from this. But the moſt convincing Proof is, the *Mummies* lying in a place, where many Generations have had their Burying Places, not far above *Memphis*, on the Skirts of the *Libyan* Deſarts, and ſtreightning of the Mountains almoſt 20 Miles from *Cairo*: ſo that it would be very odd that they ſhould carry their dead ſo far, if they had ſo convenient a place of Interment near the City.

Mummies.

We would gladly have ſeen theſe; but the chargeable Guard, and the fear of the *Arabs*, who were then ſolemnizing their Feaſt there, and the Inconvenience of lying out all Night, made us be ſatisfied with what we had heard, having ſeen before ſeveral of the embalmed Bodies, and ſome broken up to be bought for a Dollor a piece at the City. In that place are ſome pretty large, and many little Pyramids, with Tombs of ſeveral faſhions, ſeveral ruin'd, and as many violated by the *Moors* and *Arabs*, who make Money of the dead Bodies. Here the ancient *Egyptians* were uſed to be interr'd, and were fond to be buried there, as ſuppoſing it to contain the Body of *Oſiris*. Under every one, or whereſoever Stones lie which are not natural to the place, if you remove them, are diſcover'd Deſcents like the narrow Mouths of Wells, having holes in each ſide of the Walls to go down by inſtead of Steps, yet ſo troubleſome, that many refuſe to go down that came there on purpoſe; ſome of them are near ten Fathom deep, leading into long Vaults, belonging, as it ſhould ſeem, to particular Families, hewn out of the Rock, with Pillars for it. Between each Arch the Corps ly rank'd one by another, ſhrowded in folds of Linnen, ſwath'd with Bands of the ſame, the Breaſts of ſeveral being ſtain'd with Hieroglyphical Characters; in their Bellies are painted Papers, and their Gods incloſed in little Medals of Stone or Metal, ſome of the ſhape of Men in Coat Armours, with the Heads of Sheep, Hawks, Dogs, *&c.* others of Cats, Beetles, Monkeys, and ſuch like: I brought ſeveral of theſe with me: the Linnen pull'd off (which for Colour and Subſtance reſembles the inward Film between the Bark and the Bole, when long dried, and brittle) the Body appears ſolid, uncorrupted, and perfect in all its Dimenſions; whereof the Maſculous Parts are moſt brown, ſome black, hard as Stone-Pitch, and in Phyſick works ſomewhat alike, tho' accounted more ſoveraign.

The manner of preſerving dead Bodies.

When they prepare theſe to keep them from Putrefaction, they draw out the Brains at the Noſtrils with an Iron Inſtrument, filling the ſame with preſervative Spices; then cutting up the Belly with an *Ethiopian* Stone, and taking out the Bowels, they cleanſe the Inſide with Wine, and ſtuffing the ſame with a Compoſition of Caſſia, Myrrhe, and other Odours, cloſe it again. The ſame the poorer ſort of People did with Bitumen, as the Inſide of their Skulls and Bellies ſtill teſtify, fetcht from the Lake of *Aſphaltites* in *Jewry*: So did they alſo with the Juice of Cedars; which by the extream bitterneſs and drying faculty, not only forthwith removed the Cauſe of interiour Corruption, but to this day, which is about 3000 Years, has preſerved them uncorrupted: So different is the quality of that Tree, procuring Life to the Dead, and being very dangerous to the Living. After this they wrap the Body in a great many Folds of Linnen, beſmear'd with Gum like Sear-cloath. When they had performed their Ceremonies, which were very numerous, they put the Corpſe in a Boat, to be wafted over *Acheruſia*, a Lake on the South of the City, by one certain Perſon only, whom they called *Charon*; this gave *Orpheus* the hint of his Infernal Ferryman. Near this Lake ſtood the ſhady Temple of *Hecate*, with the Ports of *Cocytus* and *Oblivion*, ſeparated by Bars of Braſs, which became the Original of the Fables of that nature. When the dead Body was conveyed to the other ſide, 'twas brought before certain Judges, where if the Deceas'd was convicted of an evil Life, they refuſed it Burial, otherwiſe 'twas interr'd as aforeſaid. Thus did theſe People endeavour to ſecure an uſeleſs miſtaken Eternity to their Names and Bodies.

Babylon.

Returning the ſame way we came, and having repaſt the *Nile*, we turn'd a little to the right to view the Ruins of the old City, call'd formerly *Babylon*, joining to the South part of *Cairo*. It had its name from ſome *Babylonians*, whom the old *Egyptian* Kings ſuffer'd to live there, who built a Caſtle in the ſame place where this now ſtands, deſcribed before, which was a great while after a Garriſon Town of the three Legions, poſted here to defend this Country in the time of the *Romans*, and anciently gave the name to the City below, formerly call'd *Miſrubbetick* by the *Arabians*, ſaid to have been built by *Omar*, Succeſſor to *Mahomet*; but it muſt be certainly rather re-edified than founded by him, having had in it ſo many Chriſtian Churches, as the Ruins Witneſs.

A Ciſtern rais'd by the *Jews.*

We paſs'd by a mighty Ciſtern within a Tower, and ſtanding upon a place where the River comes in, rais'd as is ſaid by the *Jews* to moderate the Anger of the King, whom they provoked to fall out with the innocent Chriſtians, and they by removing a Mountain (which taſk the Prince impos'd upon them as a Tryal of their Faith) converted him to their Religion, and turn'd his Diſpleaſure upon their Accuſers. This runs along an Aqueduct, ſupported by 300 Arches, and ſupplies the Caſtle with Water. The Ruins of the City are great, and ſo are the Buildings, among which are many Chriſtian Monaſteries and Temples; the laſt that was left was thrown down by the *Baſſa*, becauſe as it ſhould ſeem it ſpoiled his proſpect; but then I ſhould think he would ſcarce have given the Patriarch leave to rebuild it; the *Moors* abus'd him with their Tongues for it, and threw down what that worthy Man begun. Upon this *Cyril* made a Voyage to *Conſtantinople*, to procure the *Grand Signior*'s Order for doing it; when he was upon this Buſineſs, he was, but not thro' his own ſeeking, choſen Patriarch of the *Greeks*, and a little after, by the Briberies of another, being diſplac'd, he return'd to *Cairo*. Here is a little Chappel ſtill ſtanding, dedicated to the *Virgin Mary*, under which is a Grotto, where they ſay ſhe hid her ſelf when *Herod* purſued her. 'Tis much frequented by the Chriſtians, and ſo is the Tomb of *Naſiſſa* in this place by the *Mahometans*.

Joſeph's Granaries.

The few Inhabitants that are here are *Greeks* and *Armenians*; we ſaw great *Seraglio's*, very high, and propt up by Buttreſſes: Theſe are reported to be the Granaries of *Joſeph*, where he hoarded Corn in the Year of Plenty to provide againſt want in the approaching Famine: they are ſeven in all, three ſtanding and employed to the ſame uſe, the reſt ruined. From hence up the River is nothing to be ſeen but Ruins for twenty Miles together; and thereabouts we ended our Day's Journey.

On the fourth of *March* we left *Cairo* in the diſguiſe of Pilgrims, four of us *Engliſh* and three *Italians*, of whom one was a Prieſt, and another a Phyſician: For our ſelves we hired three Camels, and their Keepers two to carry us, the third for our Proviſions: the Price is to be known at *Gaza* upon the dividing the great Profit of the Caravan, anſwerable to the ſucceſs of the Journey. We had alſo a *Coptie* for half a Dollar a Day, to be our Interpreter, and to wait upon us: We ſtock'd our ſelves with Proviſion for ſo long a Voyage, as Biſcuit, Rice, Raiſins, Figs, Dates, Almonds, Olives, Oyl, Sherbet, *&c.* and bought Pewter, Braſs, and ſuch like Conveniencies, as if we intended to ſet up Houſe-keeping: Our Water we carried in Goat-ſkins. We rode in ſhallow things like Cradles, which we were forced to buy too: We were two on a Camel, which was ſecur'd above, and cover'd with Linnen, a Poſture extreamly uneaſy, but the Inhabitants that are uſed to it, ſit croſs-legg'd naturally. That Night we pitch'd near *Hangia*, 14 Miles from the City: In the Evening the Captain came, a *Turk*, well mounted, and with a good Attendance. Here we ſtaid the next day for the gathering together of the Caravan, paying to the People of the Village four *Madeins* for every Camel, for which they guard us at Night, and make good whatever is ſtolen: they do the ſame in other places. One of them often calling out *Waſhed*, which is anſwered by *Elaugh*, which together ſignifies *One God*; this Watch-word paſſing round the Caravan, is ſufficient Aſſurance that all's ſafe. Among us were ſeveral *Jewiſh* Women, extreamly old, who undertook the Journey only to die at *Jeruſalem*, carrying with them the Bones of their Parents, Huſbands, Children and other Kindred; the ſame Whim carries them from all other parts, where they can conveniently. The Merchants had with them many *Negroes*, a good Commodity: They buy them of their Parents, 30 Miles higher on the Weſt ſide of the River, who part with them without any concern; for as others look upon their Riches to conſiſt in the Multitude of their Cattle, ſo theſe count their Wealth by the number of their Children.

Alchan a great Die among the Turks.

About ten at Night we ſet out, and arrived the next Morning at *Billbeſk*, in the Land of *Geſhen*, from thence continuing our Journey, we arrived in the Neighbourhood of *Catara*, where we met with Cotton-trees, and a Tree call'd by the *Arabs*, *Alchan*; the Powder of its dried Leaves, being a Die for a reddiſh-yellow. With this Die the Women in the *Turkiſh* Empire colour their Hair and Nails, and ſometimes their Hands and Feet, and the other parts of their Body, tempering it with Gum, and laying it on in the Bagnio, that it may penetrate the deeper. Some *Chriſtians* uſe it as well as *Mahometans*, and indeed the Conſumption is ſo univerſal throughout the *Turkiſh* Empire, that the Value of what is uſed, amounts to 80000 Sultanics.

The Lake Sirbonis or Barathrum.

Next day we came to *Salbia*: A little lower is a Lake call'd anciently *Sirbonis* and now *Bayrena*, which divides *Egypt* from *Syria*. In former times 'twas called *Barathrum*, from its ſucking in, and ſwallowing up whole Armies; for it had then a Paſſage into the Sea (which is now choaked up) and run out to the length of 200 Furlongs, in a narrow Trough, guarded on each Hand with Hills of Sand; which being driven by the Wind into the Water, ſo as to thicken it to the ſeeming conſiſtency of Earth; ſo that when People came upon it unawares, the firſt Sand they trode on ſeem'd firm enough, but after a further Progreſs the Sand gave way, and ſliding ſtill further into the Body of the Lake, made it impoſſible for the Traveller to retreat. Now 'tis only a little Lake, and grows daily leſs.

Mount Caſſius. Pompey's Tomb.

Near this Lake is the Mountain *Caſſius*, or a huge Mole of Sand, famous for the Temple of *Jupiter*, and the Tomb of *Pompey*, which was nobly repair'd by the Emperour *Adrian*. The North ſide of the Lake is border'd by *Idumea* (or *Edom*) ſo call'd from the *Idumeans*, a People of *Arabia Fœlix*, who abdicated their own Country, and here incorporated by the *Hebrews*.

The *Subaſſee* of *Salbia* invited himſelf to our Tent, and after feeding upon our Proviſions, would have fallen upon our Perſons, if we had not been fortified by a Paſſport from the *Baſſa* of *Cairo*, and our Captain's Intereſt. Here our whole Caravan aſſembled, conſiſting of 1000 Horſes, Mules and Aſſes, and 500 Camels, a Camel being a Beaſt created for, is not only uſeful but neceſſary in the *Arabian* Deſarts: He'll carry 1000 weight, tho' 600 be the ordinary Load. In loading or unloading he lies on his Belly, and when he is loaded proportionably to his Strength, will (as is ſaid) riſe up and refuſe to take more. He'll travel for four Days (or fourteen upon a Pinch) without Water: for in his frequent Belchings, he thruſts up a Bladder, which moiſtens his Throat and Mouth, and commonly upon a Journey he is cram'd with Barly-dough. Some ſay the Camels are the only Creatures that ingender backwards. Their Pace is ſlow and unſufferable hard; and upon the leaſt uneven or ſlippery Ground they are apt to ſtumble. They are very mild and tractable, abating for the time of their Venery, which laſts 40 days, and which is ſo furious, that they bite and ſcratch their Keepers. About their Necks they have certain Charms writ by the *Derviſes*, and incloſ'd in Leather, to preſerve from Miſchance and the Poyſon of ill Eyes.

A Deſcription of the Arabian Camels.

On the tenth of *March* we entred *Arabia Petræa*, a barren deſolate Country, which bears nothing but a few ſcatter'd Palms, and a little wild Hyſſop, with which the Inhabitants feed their Camels, the Milk and Fleſh of Camels being their principal Suſtenance. The whole Country is a Wilderneſs of Sand heap'd up in Mountains, according as the Wind blows.

The Particulars of the Author's Journey thro' this Country, the Holy Land, *&c.* are referr'd to another Province; only 'tis thought not improper to take in here his Obſervations upon *Malta*.

Arrival at Malta.

On the 2d of *June* being *Sunday*, we enter'd the Haven, which lies on the Eaſt ſide of the City of *Valitta* in the Iſle of *Malta*, which we ſaluted with 18 eighteen Guns, but we were not allowed to enter, tho' we had a Patent to ſhew that we were free from the Plague, nor ſuffer'd to depart when the Wind ſerved, which was within two days after; for the Gallies were then ſetting out upon ſome Enterprize on *Barbary*; for which reaſon they would not let us go, leſt if we were taken, we ſhould make ſome diſcovery; nay, they were ſo cautious, as to hinder any of their own Ships to put out, till ſometime after the Gallies were gone, for fear of a Surprizal; but a large *Dutch* Ship putting in to ſee for Company, and the *Engliſh* being already ſo ſtrong, they were licenced to ſail the ſixth of *June*, the Maſters having the Night before in their Long-boats, waited the Return of the Great Maſter, from viewing a Fort, which was then building, and welcomed him home with 21 Guns.

The Author ſtays behind.

I who never could be reconciled to the Sea, choſe rather to ſtay behind alone, and undergo all poſſible Difficulties than entertain the Thoughts of ſo tedious a Voyage; ſo I was left upon a naked Promontory, right againſt the City, remote from the Concourſe of People, and at a loſs how to diſpoſe of my ſelf: At laſt a little Boat made towards me, rowed by an Officer, whoſe buſineſs it is to attend on Strangers that have not *Pratticke* to prevent any Infection by Companies going near them. This Man carried me to the hollow hanging of a Rock, where for that Night I was to take up my Quarters, and the next day he was to carry me to the *Lazaretta*, and there I was to ſtay 30 or 40 Days before I could be admitted into the City. In this melancholly condition was I, muſing on my Hardſhips, while my Guardian was gone for ſome Victuals for me; but in the mean time this lucky Accident offer'd, A *Phelucco* came to the place with two old Women in it, who ſpread a *Turky* Carpet upon the Rock, and upon that a Table-cloath, which they furniſhed with variety of the choiceſt Meats: A little after came another *Phelucco*, which ſet a Gallant aſhoar with his two Miſtreſſes, dreſs'd like Nymphs, with Lutes in their Hands, full of fondling tricks, ſcarce giving the Spark leave to eat a bit, but what they put into his Mouth: Sometimes the one would play upon the Lute, whilſt 'tother ſung, and laid his Head in her Lap, thus aping the Paſſions of Lovers. The old Hags had no ſmall ſhare in the Comedy, with their ridiculous Moppings. Theſe, as I heard afterwards, were the young Women's Mothers, who had brought them from *Greece*, to trade with the unmarried Knighthood: at laſt the Gentleman, who was a *French* Captain, invited me to take part with them, which I wanted not to be much intreated to, and he ſpoke to them to make much of the *Foreſtier*: but they needed not to be ſpurr'd; for they grew preſently ſo familiar, as was loathſome to us both: both he and they, in pity of my hard lodging, offered to convey me into the City by Night and bring me back in the Morning; a Crime, which if diſcovered, is puniſhable with death: While they were perſwading me to it, my Guardian returned, and a *Malteſe* with him, whoſe Father was an *Engliſh*-man: As ſoon as he underſtood what they had propoſed to me, he diſſwaded them; ſo the Captain having promiſed me his good Offices, departed. When they were got a pretty way from the Shoar, the Whores ſtript and leapt into the Sea, where they violated all the Bounds of Modeſty. The Captain did not forget his Promiſe, and having ſollicited the *Great Maſter* on my behalf, as he ſate in Council, *Pratticke* was granted me, by the conſent of the great Croſſes; ſo I came into the City, and was kindly entertained in the Houſe of the *Malteſe* laſt mentioned, where I ſtaid three Weeks.

Malta Deſcribed.

Malta lies in the *Libyan* Sea, exactly between *Tripolis* in *Barbary* and the South-eaſt Angle of *Sicily*, an hundred and fourſcore Miles diſtant from the one, and ſixty from the other; it contains three ſcore Miles in circuit, and was formerly called *Melite*, upon the account of the plenty of Honey there. The Country is all over Champion, being no other than a Rock covered with Earth, not exceeding two Foot where deepeſt. There are few Trees here but ſuch as bear Fruit, which they are well provided with of all ſorts; Wood for their Fuel they fetch from *Sicily*, except what is uſed by the meaner ſort of People, which is a kind of great Thiſtle and Cow-dung: but they conſume not much, the Climate is ſo exceſſive hot; for tho' it is ſometimes moderated by the Winds, to which it is expoſed from the Sea, 'tis hotter than any place in the ſame Parallel. Here are no Rivers, but ſeveral Fountains. The Soil produces no Grain but Barley; the Bread made of that and Olives is the ordinary Diet of the Villagers, and the Straw ſuſtains their Cattle: They have plenty enough of Cumin-Seed, Annis-Seed, and Honey, which they merchandize with; beſides, they have ſome Cotton-Wool, which exceeds all others. The Inhabitants dy rather of Age than Diſeaſes, and had formerly the name of Fortunate, becauſe of their excelling in Arts and nice Weavings. They were originally a Colony of the *Phœnicians*, who trading as far as the main Ocean, ſettled upon this Iſland, and by the Conveniency of the Haven, got great Eſtates; in the midſt of it is built the City of *Malta*, now called *Old Malta*, either giving a name to the whole place, or borrowing one from it.

Their Language.

Their Language differs not much from the *Moreſco*, tho' it retains ſome Print ſtill of the *Punick* Tongue. I cannot decide, whether it came into the Poſſeſſion of *Spain*, together with the Kingdom of *Sicily*, or the *Spaniards* conquer'd it from the *Moors*, which is likely, both by the Reſemblance of Languages, and becauſe 'tis accounted to belong to *Africa*: however that be, *Spain* had it in the time of *Charles* the firſt, who beſtowed it on the Knights of *Rhodes*.

The begining of the Order.

This Order of Knighthood looks upon St. *John Baptiſt* as their Patron, but was firſt inſtituted by *John* the Charitable Patriarch of *Alexandria*. Their firſt Seat was the Hoſpital of St. *John* in *Jeruſalem*, which gave them the Name of Knights Hoſpitallers: That place was built by one *Gerrard*, about the time when the ſucceſsful Expeditions of the Chriſtians againſt the Holy Land, were ſo famous: The Renown of thoſe Adventures won many worthy Perſons in that Society approved by Pope *Gelaſius* the ſecond. By the Allowance of *Honorius* the ſecond, they wore Garments of black, ſign'd with a white Croſs; *Raymond* firſt Maſter of the Order, enlarged their Canons; his Stile was, *The poor Servant of Chriſt, and Guardian of the Hoſpital in* Jeruſalem. In every Country in *Chriſtendom* they had Hoſpitals and Revenues aſſign'd them. with Contributions from Pope *Innocent* the ſecond. Their Vows tied them to entertain all Pilgrims with ſingular Humility, to guard their Roads from Thieves and Incurſions, and valiantly to defend their Lives in defence of that Country. When the Chriſtians were beaten out of *Syria*, the *Greek* Emperour gave them *Rhodes* for their Settlement: Others ſay *Clement* the fifth did. They conquer'd it from the *Turks*, but as aforeſaid, loſt it again, and then fix'd in *Malta*. There are here ſeven *Alberges* or Seminaries; one of *France* in general, one of *Averne*, one of *Provence*, one of *Caſtile*, one of *Arragon*, one of *Italy*, one of *Germany*, and an eighth there was of *England*, till diſſolved by *Henry* the eighth: Yet there is one ſtill that ſupplies his place, in the Election of the great Maſter. Of every one of theſe Countries there is a Grand Prior, who regulates the Affairs of the Order, and lives in great Reputation in his Country.

Seven Seminaries.

St. *Johns* near *Smithfield*, was the Reſidence of the Grand Prior of *England*; and an *Iriſh*-man now living in *Naples*, bears the Title, and receives a large Penſion from *Spain*. Such as are Candidates for this Dignity, ſtay here a Year for Probation, and muſt prove their Gentility for ſix Deſcents, which is tried by the Knights of the Country. Women are not incapable of this Honour, as appears by a Statute made in the Maſter-ſhip of *Hugo Revelus*; perhaps becauſe one *Agnis*, a noble Lady, was Author of the Order, as they affirm; but I could not hear of any now that are Members of it. The Ceremonies uſed in Knighting are theſe: Firſt, The Knight carries a Waxen Taper in his Hand, and kneels before the Altar, cloathed in a long looſe Garment, and requeſts the Ordinary to inveſt him with the Order: then he receives a Sword in the *Name of the Father, Son, and Holy Ghoſt*, to defend the Catholick Faith with it, to repel and vanquiſh the Enemy, to relieve the Oppreſſed, and, if occaſion be, to expoſe himſelf to death for the Faith, and all by the Power of the Croſs, which is ſignified by the Croſs-hilt of the Sword. Next, They put a Belt about him, and ſtrike him three times on the Shoulder with a Sword, which is to inſtruct him, that for the Honour of Chriſt he muſt chearfully undergo any Hardſhip: As ſoon as he has received it, he flouriſhes it thrice over his Head, as a challenge to the Adverſary, and then ſheaths it again, wiping the Sword firſt upon his Arm, as an Emblem of the undefiled Life he intends to lead for the future: Then the Perſon that performs the Ceremony of giving him the Knight-hood, lays his Hand on his Shoulder, and exhorts him to be vigilant in the Faith, to aſpire to Honour by couragious and praiſe-worthy Actions, *&c.* When that's done, two Knights put on his Spurs, gilt, to ſignify that he ought to ſpurn and contemn Gold like Dirt, and never be corrupted with it: Then he proceeds to Maſs with the Taper in his Hand, the Works of Piety, Hoſpitality, and Redemption of Captives, being commended to him, and the Queſtions are put to him, If he be married or a Batchelor, if he never vowed to another Order, if he be of any other Profeſſion, if he deſign to live among them to revenge their Injuries, and quit the Authority of ſecular Magiſtracy. His Anſwers being given, upon receiving the Sacrament, he vows as follows: *I vow to the Almighty God, to the Virgin* Mary *his immaculate Mother, and to St.* John Baptiſt, *perpetually, by the help of God, to be truly obedient to all my Superiours, appointed by God and this Order, to live without any thing of my own, and withal to live chaſtly.* Upon this he is made a Partaker of their Priviledges and Indulgencies, granted them by the See of *Rome*. Beſides other Prayers they are commanded to ſay 150 *Pater-Noſters* every day, for ſuch as have been ſlain in their Wars. They wear Ribbands about their Necks, with Branches of the Croſs, and black Cloaks, with large white Croſſes of fine Linnen, ſet in the Shoulder of them: In time of War, they wear Crimſon Mandilions croſs'd the ſame way, behind and before over their Armour.

Women capable.

The Ceremonies of Inſtitution.

The Vow every Knight makes at his Admiſſion.

They come here very young, that they may the ſooner get a *Commendam* at home, many of which are of great value, not got by Favour, but by Seigniority: They are obliged to live here five Years (but that need not be all together) and to go on four Expeditions. If one of them be convicted of a Capital Crime, he is firſt publickly degraded in the Church of St. *John*, where he receiv'd his Knighthood; then ſtrangled, and thrown into the Sea by Night. Every Nation feeds by themſelves in their ſeveral *Alberges*, and ſit at Table like Fryars; but ſuch as upon petition, have leave to eat alone, have 60 Crowns allowed them by the Religion yearly; all of them receive 25 for their Cloaths.

There are 500 reſiding here, and as many diſpers'd throughout Chriſtendom, who repair hither upon any Summons, or the News of an Invaſion; where they will, the Religion is the univerſal Heir, only one fifth part of their Subſtance, each Knight may diſpoſe of: Sixteen of them are Counſellors of State, and of chief Authority called the *Great Croſſes.* Theſe wear Tippets and Coats under their Cloaks ſigned with them. In the number of theſe are the Marſhal, the Maſter of the Hoſpital, the Admiral, the Chancellor, *&c.* When one dies, another is choſen by the Great Maſter and his Knights, who give their Votes (if I remember right) by Ballots, as the *Venetians* do, by which means they avoid both Envy and Faction. If the Great Maſter fall ſick, they ſuffer no Veſſel to go out of the Haven, till he is either recovered, or dead, and another choſen in his Room, leſt the Pope ſhould intrude into the Election, which they ſay only belongs to themſelves: The Election is performed thus.

The manner of chooſing the Great Maſter.

Every Nation chooſes two Knights of their own, two being choſen for the *Engliſh* alſo: theſe ſixteen out of their own number name eight; thoſe eight appoint a Knight, a Prieſt, and a Fryar Servant, who wears Arms too; and theſe three chooſe the Great Maſter out of the ſixteen great Croſſes. The preſent Maſter is a *Picard* born, about 60 Years old, and has governed eight Years. His Title is, *The Illuſtrious and moſt Reverend Prince, my Lord Fryar* Aloſius *of* Wignian Court, *Great Maſter of the Hoſpital of St.* John'*s of* Jeruſalem, *Prince of* Malta *and* Goza. For tho' he is no more than a Fryar, as the other Knights are, he is an abſolute Soveraign, and has a brave Attendance of gallant young Gentlemen. The Clergy wear the Badge of the Order, and are ſubject to the ſame Laws, except in Military Affairs.

There are 60 Villages in this Iſland, under the Command of ten Captains; and four Cities; *Old Malta*, as was ſaid before, is ſeated in the Center of the Iſland upon an Hill; 'tis ſhaped like a Scutcheon. They do not eſteem it to be of great Importance; however there is a Garriſon kept in it. They ſhow a Grotto here, in which they ſay St. *Paul* lay after he was ſhipwrack'd, reverenced by them with great Devotion. The Refin'd Stone of it they caſt into Medals, with the Effigies of St. *Paul* on one ſide, and a Viper on the other, or an *Agnus Dei*, and the like, which they ſell in great numbers to Foreigners. They report, that when 'tis drunk in Wine, it cures the Venome of Serpents; and tho' there are many Serpents in this place, they give it out, that tho' you handle or vex them, they have no Power to hurt you, having loſt their Venome ever ſince the Apoſtle was here. The other three Cities, if they may be ſo called, are about eight Miles diſtant, and not above a Muſquet-ſhot from each other, near the Eaſt end; and on the North ſide of the Iſland you have the double Haven, divided by a Tongue of Rock, which reaches no farther than the Entrance, whoſe largeneſs makes it convenient. The Eaſt Haven reſembles a Stag's Horn; the firſt Branch affords an excellent Harbour for the talleſt Ships, the Second for Gallies, the reſt are ſhallow. Cloſe to the uppermoſt top is a Fountain of freſh Water, which plentifully ſupplies all Veſſels. On the tip of the Tongue (as one may call it) ſtood the ſtrong Caſtle of St. *Hermes*, the firſt that the *Turk* beſieged, which after many deſperate Aſſaults, and 20000 Cannon-ſhot ſpent, the noiſe of which was heard as far as *Meſſina*, they took in *June*, 1505, after they

The C
St.

they had loſt ten thouſand Men before it, to the great honour of the Conquer'd to have made ſo ſtout a defence.

St. *Angelo.*

On the Point of the Promontory, which lies between thoſe two Branches of the Haven where the Ships and Gallies have their Station, ſtands the Caſtle of St. *Angelo*, on a ſteep Rock; this Fortreſs gave a ſufficient Proof of its ſtrength, by obliging the *Turks* to raiſe the Siege, this being the next, after St. *Hermes*, which was attack'd; it retains ſtill the Scars or Marks of the Shot. At the Foot of the Rock ſome Cannon are planted, which command the Entry into the Haven. A *Mahometan*, deſcended, as 'twas thought, of Chriſtian Parents, leap'd into the Sea here, in the height of the Siege, and in ſpite of the great Fire that was made at him, ſwam to the Caſtle, received Baptiſm, and was of no ſmall uſe to the Beſieged, diſcovering moſt of the Deſigns of the *Turks*, and puſht bravely forward in all Actions. The gallant Behaviour of the Knights, and the Report which was ſpread about of a Chriſtian Army coming to their Relief, diſcouraged the *Turks* ſo much, that they ſaw fit to draw off; however, all the Iſland but *Burgo* and St. *Angelo*, being reduced to Aſhes, the Knights conſulted about leaving it, rather than repair the lamentable Ruins to reſiſt againſt an unequal Enemy, eſpecially conſidering the backwardneſs of the Chriſtian Princes to aſſiſt them, the laſt Succours being by the Circumſpect Viceroy of *Sicily*, unreaſonably delayed: But it lay too convenient for the *Turk* to annoy the Neighbouring States of *Chriſtendom*; for which reaſon the Pope, the *Florentine*, and the reſt of the *Italian* Princes, encouraged them to continue there, ſupplying them with Money and neceſſary Proviſions; but more eſpecially the King of *Spain*, who ſent them 3000 Pioneers from *Naples* and *Sicily*, by whoſe help they repair'd their old Works, and began a new City upon that Tongue of Land, which divides the two Havens: This City is now almoſt finiſhed.

Valetta.

It bears the Name of *Valetta* in honour of *John de Valetta*, then Great Maſter; 'tis not very large, but handſome, well contriv'd, and the ſtrongeſt of all the Fortreſſes, being ſituated on an high Ground, and not capable of being attack'd from the Land, any where but at the South End: The Walls of the other Parts of the City, join to the Rock as tho' they were of a piece with it, and are waſh'd by the Sea. It is join'd to the Land by a narrow Iſthmus, where the Rock does riſe naturally; the Ditch on the out-ſide is cut exceeding deep and broad; 'tis ſtrongly flank'd and wants nothing that Fortification can give: The only Gate of the City opens this way, and immediately upon your Entrance, you face two great Bulwarks, mounted with Cannon: The two Gates which lead, one to St. *Hermes*, and the other to the Haven, are but little poſterns: At the other end, but without the Wall, ſtands St. *Hermes*, which is now ſtronger than ever. Of that of St. *Angelo*, no *Frenchman* is allow'd to be Governour. Almoſt every where there are Platforms of Guns on the Walls. On the inſide the Walls are not above ſix Foot high, being unfenc'd and ſhelving on the out-ſide: The Buildings all along are at a good diſtance from the Walls, to leave room for the Souldiers, and ſecure them from Battery.

On the Weſt ſide near the South end, is a great Pit hewen into a Rock, without which a Port is cut under the Wall into the Weſt Haven; 'tis not yet finiſh'd, but deſign'd for an Arſenal to receive their Gallies, being a Work of great difficulty: This Harbour is too ſhallow for Ships of Burden. The Market-place is large, and from it the Streets point directly to the Walls. The Buildings are moſtly uniform, of Free-Stone, two Stories high, and flat at the top: The Upper-Rooms generally have Tarraſſes outwards. The Great Maſter's Palace is a noble Structure, adorn'd with a Tower, which over-looks the whole Iſland. The Council-Chamber is curiouſly painted with their Fights by Sea and Land, both abroad, and in defence of their own Territories.

Alberges.

The ſeven *Alberges* of the Knights are not contemptible Buildings, and among them the City is quartered. The Churches of St. *Paul* and St. *John* are magnificent Edifices; the one is the Seat of a Biſhop, the other of a Prior.

St. *John's* Hoſpital.

St. *John's* Hoſpital is worthy taking notice of, both for the Building and Attendance: All that fall ſick are admitted to it: the Knights themſelves lodge there when diſtemper'd; for they're provided here with Phyſick for Body and Soul too (ſuch as it is). Attendants they do not want for, being ſerv'd conſtantly by the *Junior* Knights in Silver, and every *Friday* by the Grand Maſter and the great Croſſes; to this the Rules of their Conſtitution oblige them, and hence they derive the Title of Knight-Hoſpitallers: The Beds in this Hoſpital are covered with handſome Carpets: Their Linnen alſo is chang'd once a Fortnight: The Jeſuits have a Colledge now building here: There are three Nunneries to, one for Virgins, one for Penitent Whores, and the other for their Baſtards.

Their Proviſions from whence fetch'd.

The Barrenneſs of *Malta* is ſufficiently recompens'd by the Neighbourhood of *Sicily*, from whence their Supplies come: The City is provided always with three Years Stores; and as the Old conſumes, they import more to make good the Deficiency. What their freſh Water-Fountains fall ſhort of, is ſupplied with the Rain-Water preſerv'd in Ciſterns.

The number of Men.

The Forces of this Iſland, Knights and their Dependants, Citizens, &c. (which are included in the Muſter) amounts to about 20000 Men. They are almoſt conſtantly tolling the Bell, which is anſwer'd from the next Forts in order. The Religious have five Gallies, to which number ('tis ſaid they are confin'd, and but one Ship: what there are beſides, belong to private Men. Their Expeditions are generally for Plunder, either to ſurprize ſome Village on the Coaſt of *Africa*, or if they meet a ſmall Ship they rifle it, bring the Men away for Slaves, and ſet the Ship a drift. They make advantage of the Slaves, either by their work, or by admitting them to Ranſome, which brings hither frequently Boats from *Africa*, with Flags of Treaty. While I was there, a Bark was brought in by eight *Engliſh-men*, who had long ſerv'd the *Turks*, but in this laſt Voyage, ſeizing Weapons, they drove the Pirates, who were double their number, into the Stern, where two kept guard upon them, and the others dreſs'd the Sails for *Malta*. The Inquſition is of little Authority here, not being allowed to come into the City: They reſide at *Burgo*.

Engliſh courage

The Complexion of the *Malteſe*.

The *Malteſe* are almoſt as tawny as the *Moors*, the Peaſants eſpecially, who go half cloath'd, and are a miſerable People. The City obſerves your *French* Modes, the preſent Grand Maſter and moſt of the Knights being *French-men*. The Women cover their Faces, converſe not with Men, and are as jealouſly guarded as in *Italy*; but thoſe that are afraid to marry, may ſerve their turns without the pain of Jealouſy; for here are Curtiſans in abundance, moſt of them being *Grecians*.

The Patron's Feſtival.

Now were the Gallies returned, but the Feſtival of their Patron ſtopt my Voyage, no Boat, while it laſts, being ſuffered to put to Sea. The Night before, the Palace, Temples, Alberges, and other chief Buildings, were illuminated; and next day all the Artillery was diſcharg'd; the Forts hung out their Banners; each Alberge the Enſign of their reſpective Nations, and at Night Bonfires before them; in a word, they made as pompous a Show as they could. The Fires before the Palace, and Habitations of the chief Men, were for greater State ſet fire to by the great Perſons themſelves.

On the 24th of *June* I left *Malta* in a *Phalucco* of *Naples*, a Veſſel about as big as a Wherry, row'd by five Men. They ſet forward generally two Hours before Sunſet, and if they diſcover not a ſuſpected Sail, they reach the Coaſt of *Sicily* next Morning.

CHAP.

CHAP. XVII.

An Abſtract of Mr. Richard Jobſon's *Voyage for the Diſcovery of* Gambra, *and the Golden Trade of the* Ethiopians.

THE *Engliſh-Barbary* Merchants having enquir'd of the *Moors* from whence they had that Gold of which they made their *Chequins*, and being aſſur'd that there was no Gold to be found in *Morocco* or *Fez*, but that it was brought by the Natives over great Deſarts of Sand by Land, concluded from the Information given, that it muſt come from *Ethiopia*, and therefore reſolved to fit out ſome Ships to ſeek for this Golden Trade, in ſome of thoſe Rivers that fall into the Ocean on the South-weſt ſide.

To this purpoſe in *September* 1618, they ſent one *George Thomſon* in a Ship to enter into the River *Gambra*, and to ſail up that River with ſuch Shallops as he had; which he did, and in his abſence the Ship was taken by ſome vagrant *Portugueſe*, who were admitted freely to come aboard, and all the *Engliſh-men* left in her were kill'd; and *Thomſon* himſelf, having got up the River as far as *Tinda*, and being full of Golden Hopes, was kill'd in a Quarrel by one of his own Company.

Thomſon being kill'd in *March*, whereby all his Labour was loſt, the Adventurers in *October* next ſent out a Ship of 200, and a Pinnace of 50 Tun, with Mr. *Jobſon*, who ran in 20 Days from *Dartmouth* to the River *Gambra*, and caſt Anchor four Leagues within the Mouth of it, where it ſpreads it ſelf into ſo many Rivers, Bays, and Creeks, that for 30 Leagues up to *Tancrovally* it is very intricate, but elſewhere the main Channel is eaſily diſcern'd. It flows from the Mouth to *Baraconda*, which is near 200 Leagues in the loweſt Seaſon: But this Tide is abated by the Land-Floods, caus'd by the great Rains, which fall with great Winds, Thunder, and Lightning, from the latter end of *May* to the latter end of *Auguſt*; after which they have no Rain till *May* comes again.

From *Baraconda* forward we ſaw no Town nor Plantation, but we found in the River many River-horſes, Crocodiles, or Allegators, one of which we found, by the Impreſſion made on the Sand, to be 33 Foot long. The Natives are much afraid of the Crocodiles, which they call *Bumbo's*, and think they have devour'd many of their Friends; yet I never found any of them aſſault us; but their muſky ſcent ſpoils both the taſte of the Water and the Fiſh. The River-horſe in the Shape of his Body and Head, is exactly like a Horſe, but he hath four ſhort Legs, and his Foot is divided into five parts, and ſometimes is 20 Inches over; he ſnorts and neighs in the Water by day, but at Night feeds in the Marſhes.

In the River is ſtore of Mallet and other Fiſh, and one of them like an *Engliſh* Breme, being touch'd by a Sailor, he preſently loſt the uſe of his Hands and Arms, and another the uſe of his Legs, but their Senſe came to them again; and we were told he benums all the Fiſh he touches, and then devours them, but being dead, he was very good Meat.

There is ſtore of Fowl, ſuch as Geeſe, Duck, Mallard, Herns, Curlews, Storks, Plover, &c. which dare not come into the River for fear of the Crocodile, but ſit on the Banks of it, and feed on the Marſhes. All the Men of a Town go together and fiſh the Ponds and Lakes, each with a Baſket holding the open Mouth downwards; for by going into the Water they ſtir the Fiſh, and ſo catch them in their Baſkets.

At the Mouth of this River dwell the *Mandingo's* who brought us *Bonano's*, with Beeves, Goats, Hens, and Grain: They are very civil and kind to the *Engliſh*, but hate the *Portugueſe* that live among them, for their treachery and cruelty to the *Engliſh*, in ſiezing their Ship and killing the Men, for which they baniſh'd them.

Beſides theſe fugitive *Portugueſe*, there live, among the *Mandingo's*, a ſort of People call'd *Fulbies*, who wander up and down, keeping their Herds of Goats and Beeves where there is good Paſture, as they agree with the King, and removing to the Mountains when the Rains fall. They conſtantly watch their Herds to keep them from ſtraying and the Crocodiles Haunts, and are ſuch Slaves to the *Mandingo's*, who will ſhare with them in their Beef, and their other Commodities, if they know when they are ſold: But higher up the River they are Lords of the Country, excluding the Blacks, with whom for the moſt part they are at war.

The *Mandingo's* lead an idle life, except two Months in the Year, which are Seed-time and Harveſt: They know not how to catch Fleſh or Fiſh, and ſpare their Cocks and Hens to barter with us; and ſo they commonly feed after day-light upon Rice or ſome other Grain boil'd: And in thoſe parts 'tis moſt wholſome to eat early in the Morning and after Sun-ſet.

They uſually drink Water, tho' they have Wine of Trees, and *Dullo* made of Grain like our Ale. Their Houſes in meaner Towns are made of Reeds, or of Loome, a reddiſh hard Earth; but *Caſſan* and other Cities are ſtrongly fortified with Turrets and a Ditch, and compaſs'd about with Poſts faſtened in the Ground five Foot high. They have ſtrange Ant-hills, ſome of them 20 Foot high, and will contain 12 Men. Their Arms are a Javelyn, being a Reed of ſix Foot, with an Iron-Pike, and Bows and Arrows.

I did eat and drink with ſix of their Kings, who are ſubject to the Kings of *Cantore*, *Burſale*, or *Woolley*; but theſe do not appear abroad but in Pomp. When the People come before their King they kneel, and throw duſt on their Head two or three times, and then having laid their Hand on the King's Thigh, they retire: And if a *Marybuck* be preſent, they kneel and he prays for him, to which he often anſwers, *Amena*, i. e. *Amen*. The King anſwers the People with nodding, and wears Cloaths of Cotton, whereof they plant great Fields like Roſe-buſhes. They are for the moſt part bare headed, except when they are bedeck'd with *Gregories*, which are made of Leather, ſeeming hollow, with Writings in them, receiv'd from the *Mary-bucks*, which are reputed ſo holy, that no evil can betide them while they wear them. Both King and People, Men and Women, wear them on their Heads in the form of a Croſs, from the Forehead to the Neck, and from Ear to Ear; about their Necks, Shoulders, Arms, and Middles, &c. that each Member may have a Bleſſing; and if they have any Sickneſs or Sore, they apply theſe Gregories, and never uſe any other Phyſick that I could perceive. Their Horſes are ſometimes thus bleſt, wearing them about their Necks.

The King hath ſeven Wives allow'd, beſides Concubines; but cannot carnally know one of them after Conception, nor after delivery, till the Child is wean'd. None are put to death for any Crimes, but in the Caſe of Adultery; Men and Women are both ſold and tranſported to the *Weſt-Indies*. Other Men have plurality of Wives, if they agree with the King and the Woman's Friends, and their Money is kept for her to buy a Huſband: for as the Maid is bought, the Widow buyeth.

The Women live in great bondage, who dreſs Meat for their Huſbands, but never eat with them: They go bare from their Waſte upward, to ſhow their painted Skins.

Their way of Marrying is very comical: The young Man with his Friends comes to the Maid by Moon-light, and carries her away ſhrieking, being aſſiſted by the young Maids of the place: And when ſome young Men of the Town endeavour to reſcue her, others carry her off with great Shouts to the Bridegroom's Houſe.

The Succeſſion to a Kingdom here, is not to the Son of the deceas'd, but to his Brethren in courſe, and then to the Son of the eldeſt, the other Brethren holding ſome place in the Government, whereof the youngeſt is call'd *Bo-john*, the ſecond *Ferran*, the third *Ferambra*, and the eldeſt is *Manſa* or King. Their greateſt Riches is the number of their Slaves, and from the King to the Slave they all begg'd of us; but a ſmall matter ſerv'd them, except of *Aqua Vitæ*, for which they would ſell all, and with which their Kings would be drunk: And indeed the Life of a King with them is to eat, drink, ſleep, and keep company with his Women.

The Mary-bucks or Baſſarens are their Prieſts, ſeparated from others in their Habitations and Courſe of Life. They talk much of *Adam*, *Eve*, *Noah*'s Flood, and other things mention'd in the Old Teſtament. Like the Levitical Tribes, they have their Towns and Lands proper to themſelves, where no ſecular Perſons live but their Slaves, whoſe Iſſue is their Inheritance. They marry in their own Tribe, and breed all their Children to their own Profeſſion; for they have as many Wives as the reſt, according to their degree. By their Habit and Work they are not diſtinguiſh'd from the Vulgar; for they are hir'd to do ſervice, and we agreed with them by the Moon. They worſhip one God, whom they call *Alle*; acknowledge *Mahomet*, are circumcis'd, have no Churches for Worſhip; *Friday* is their Sabbath, on which they follow their Occaſions. They have no Paper, but teach their Children to write on a ſmooth Board, with a Pencil; and their Law is written in a Language different from the Vulgar.

My Mary-buck, *Fodee Carder*, told me when we came into the Port of *Setico*, that their High-Prieſt, *Fodee Bram*, lay ſick in the Town, whom I viſited, and found him ſitting on his Mat, ſupported by three Wives, to each of which I gave a Pewter-ring, which he took ſo kindly, that he treated me with a Dinner, and preſented me with a Hide and an Elephant's Tooth. After he was dead, he was laid in a Houſe, where a Grave was digg'd for him; and after much crying, the Women running about like mad People, he was laid in the Ground. The Mary-bucks aſſembled near the Grave, where the People ſitting in a Ring, one Mary-buck ſtood in the middle after another, and ſung his Praiſes in Verſe, the People ſhouting and clapping their Hands, made a Preſent to the beſt Poet, who mingling ſome of the Earth dug for his Grave, in a Water-pot ſtanding in the Room, made thereof a Relique-ball: And then his Son was ſolemnly inſtall'd his Succeſſor.

They have great Books, and MSS. wherewith we have ſeen ſome of them laden. The Vulgar are much given to ſtrong Liquors, but theſe drink nothing but Water, and neither they nor their Wives or Children will taſte any hot Liquor or ſweet things, but chuſe rather to die than do it.

They travel with their Families, Books, and Boys, thro' all Countries, however at War with one another: And when they beg of us, a Quire of Paper, is a great Gift to a whole Company, on which they write their Gregories. All the Inhabitants of *Setico* are Mary-bucks, and carry Slaves to the King of *Burſal*, to buy Salt, which is there by the Sea-ſide, like Sea-coal Aſhes, which they uſe but little among themſelves, but carry it far up into the Country, where they barter it for Gold and Cola-nuts: But their Gold is ſaid to be buried with them, or hid in the Ground by themſelves for their uſe in the next World. They buy alſo Blood-ſtones of the *Portugueſe*, which their Women wear about their Middles to prevent Bloody-iſſues.

After we arriv'd from *Baraconde* at *Tinda*, we ſent three *Moors* aſhoar with a Preſent to the King, and to *Buckor Sano*, a famous black Merchant, entreating him to come aboard with Proviſions. In the mean time we kill'd an Antelope, which was bigger than a Stag, and a Fowl call'd Staller, higher than a Man. In a few Days *Bucker Sano* came to us with 40 Men, and he brought us a Beef, and the other People Goats and Corn, Cocks and Hens. After we had treated him, we ſhewed him our Commodities, which he lik'd very well except Iron, which they can have nearer hand: But above all the reſt they valued our Bay-ſalt. After we had refus'd to buy their Women-ſlaves, a Market-houſe being built aſhoar, we barter'd with them Salt for their Elephants Teeth, Cotton, and Negroes Cloaths, which was made the Staple by which to value other things. We ſaid nothing of Gold, but *Buckor Sano* taking notice of our guilt Swords, told us that he could bring us ſuch a quantity of Gold as would buy all our Commodities; and that in a great Town above, diſtant about two Moons travel, the Houſes were cover'd only with Gold. After this, when I took notice of the Blade of his Sword and the Braſs Bracelets upon one of his Wive's Arms, and aſk'd him whence he had them: He told me, That a People call'd *Arabecks*, brought them theſe and ſeveral other Commodities, whom he deſcrib'd as Tawny-Moors, that came in great Companies with Camels: That the next Moon they would come to a Town call'd *Mumbar*, within ſix Days Journey of the place where we were, and bring with them Salt and other things, which they would exchange for nothing but Gold: This People we took to be the *Moors* of *Barbary*.

On the other ſide of the River, upon notice given by one of our Blacks, came 500 Men and Women to trade with us, who had never ſeen white Men before: The Men wore raw Hides, with the Tayls of the Beaſt hanging down behind; but the beſt of the Women wore Ear-rings of Gold, who aſk'd for ſeveral Commodities, but the Men chiefly for Salt: Among the reſt came a Mary-buck of Mr. *Thomſon*'s acquaintance, born in *Jay*, where he ſaid there was great ſtore of Gold, which the *Arabecks* came for, about nine days Journey up the River; and that he could carry us thither, and to *Mombar*, whence many People would bring us Gold, if we would leave theſe People, *&c.* and go higher up the River, and carry up ſtore of Salt with us: But we made haſt to be gone, the Water being ſunk ſix Inches, hoping to return in *May*.

Buckor Sano would needs be ſtyl'd the white Man's *Alcaide*, whereupon I gave him a ſtring of Chryſtal and a double ſtring of Coral, and another gave him a Silver Chain; and ſo he was proclaim'd *Alcaide* with ſhooting off Muſkets, his Fidlers attending with Muſick. This he took for ſo great an Honour, that he went with me to the King, and pray'd him to uſe us kindly, preſenting him with the Coral and Chriſtal; Whereupon the King did not only give us leave to ſhoot any thing by Land, but gave that Land where we were to us for ever; of which we took poſſeſſion according to the Ceremonies us'd in that Country.

When we came to *Butto*, and heard Shouts, Drums, and Country-Muſick, our black Boys told us it was for *cutting of Pricks*, a World of People being gathered together as at an *Engliſh* Fair. Under every great Tree, and beſides the Doors of their Houſes, there were Fires, and in ſome places there was dancing with Muſical Inſtruments, the chief of which are call'd *Ballards*, and contain ſeventeen Keys, like to Virginals; whereupon one plays with two ſticks, which have round Balls of Leather at the end. We ſaw our black Boy circumcis'd, not by a Mary-buck, but an ordinary Fellow, and our Surgeon was not ſuffer'd to heal the Wound.

At ſome diſtance from the place of cutting, we heard a great roaring noiſe, which they ſaid was the Voice of *Hore*, i. e. a Spirit that comes to great Feaſts, for whom they provide ſtore of Rice, Corn, Beef, and other Fleſh ready dreſs'd, which is inſtantly devour'd: And if he be not ſatisfied, he gets into a Boy's Belly for nine days, and then the Boy muſt be redeem'd with a Beef, and continue mute ſo many days after. This is a Trick of the Prieſts, who were hoarſe with roaring at that time, which continued all that Night to fright the People to Circumciſion.

They have three principal Trades, the Smith, which of Iron brought to them, makes their Swords, Darts, and barbed Arrows, and Inſtruments of Husbandry.

The next Trade is the *Sepatero*, or *Gregory-Maker*, which he makes in all ſhapes: They make alſo Bridles and Saddles very neat, by dreſſing their Deers and Goats Skins.

The third Trade is of thoſe who temper the Earth for the Walls of their Houſes, and Pots to boyl Meat in, uſing for other Services the Gourd: They make alſo Tobacco Pipes, about two Inches long, neatly glaz'd, with which Men and Women continually ſmoak. Mats to eat and ſleep on are their ſtaple Commodity, by which other things are bought and ſold; for they have no Coin, and ſo at Market they ſay *How many Mats ſhall I give you.*

The general Trade of all but the King and great Men is Huſbandry, and not knowing how to ſerve themſelves of Beaſts, they make Furrows with a Stick about a yard long, having a broad Iron at the end like our Paddle Staves, with which Iron ſet in the Ground, one leads the way, cutting the Earth before him, while others follow in the ſame Tract with their ſeveral Irons, ſo as to make a ſufficient Furrow.

They have ſix ſeveral Grains for Food, of which we know none by name but Rice, which they boyl and eat warm; the other are like Seeds, which they boil and roll up in Balls, and eat inſtead of Bread. They plant Tobacco, and whole Fields of Cotton.

Near the River's Mouth they have *Bonano's*, as delicious as any in the *Weſt-Indies*, and likewiſe ſtore of Lemons and Oranges. They have whole Groves of Palmita-Trees, whence they draw a pleaſant and wholſome Wine, by cutting ſloping holes into the Body of the Tree, into which they put a Cane which receives the Sap, and conveys it into Gourds. It taſtes like White-wine when it is firſt drawn, but will not laſt above 24 Hours. Their *Dullo-ai* is kept in great Gourds, and when the King makes a Feaſt, they never part till they have made an end of it. The Gourds grow like our Pompions, from the bigneſs of an Egg to that of a Buſhel, of which they make ſeveral ſorts of Veſſels to eat, drink, and waſh Cloaths in. They have great ſtore of Locuſt-Trees and Wild-Honey: The Cola is like our bigger ſort of Cheſnut, flat on both ſides, yet without a hard Shell, the taſte is very bitter, yet cauſes that which is taken next after it to taſte very ſweet; for ſo I found it made Water taſte like White-wine and Sugar: 50 of them will buy a Wife. They have a ſenſitive Plant, like our great Bramble-Buſh, on the River's Bank.

They have many Lions, which are eaſily known at Night by the Cries of the Jackal, when he hunts for his Prey, and Ounces and Leopards, whoſe Foot-ſteps we have ſeen at the Mouth of their Dens, and Civet-Cats and Porcupines, that hunt their Poultry.

They have Elephants, who ſhed not their Teeth as Stags their Horns; wild Bulls and Boars, Antelopes and Deer; and alſo Monkeys and Baboons in great Herds, and ſome very big.

They have alſo ſtore of Land Fowl, as the Stalker, who has more Fleſh than a Lamb; the Wake, which makes a great noiſe when he flies; the Guinney-Hens, like our Pheaſant for Beauty and Bigneſs, excellent meat; Partridges, which continue near the Houſes for fear of the Monkeys; Quails as big as Wood-cocks; Pigeons, Parrots, and Parakites. One ſtrange Bird there is which hath no Legs, but two Strings by which he hangs with his Head downward, reſembling a dead Leaf hanging on the Tree, and is of the ſame colour.

CHAP. XVIII.

An Account of a Voyage made to Cape Verd *and the Coaſt of* Guinea, ; *by* James Lange: *done from the* Low-Dutch.

THE twelve Years Truce betwixt the *Spaniards* and the *United Provinces* being expired, I, with the reſt of the *Dutch*, was obliged to leave *Sevil* in *Spain*, and to return into *Holland*. In the Bay of *Biſcay* we met with an *Algerine*, who having taken a *French* Prize, threw all the Sea-men belonging to that Ship over-board, and among the reſt a certain young *Frenck-man*, who having certain Jewels to a conſiderable value, ty'd in a Bag betwixt his Legs, had his Life offered to him by the *Algerines*, after he was thrown into the Sea, provided he would ſurrender the Jewels; but he choſe rather to be drown'd, than to redeem his Life by ſo conſiderable a Preſent.

After I had refreſh'd my ſelf for ſome Months at *Amſterdam*, being curious to take a view of Cape *Verd* and the Coaſt of *Guinea*, of which I had heard wonders, I agreed with Mr. *Martin Papenbroeck* the elder, to go in the Quality of a *Super Cargo*, firſt to Cape *Verde*, and ſo further to *Guinea*. Accordingly, being provided with what was thought neceſſary for ſo long a Voyage, I embark'd in the *Texel* aboard the Ship call'd the *Moor*, *Nicholas Hendricks* Maſter, and in company of another Veſſel, commanded by Mr. *Nicholas Ketel*, I ſet ſail the 20th of *November*, 1621. We had not ſaill'd many Days in the *Spaniſh* Sea, ſteering our Courſe towards the *Canary* Iſlands, when a violent Tempeſt did ſo unmercifully ſhake our old Veſſel, that we expected every moment to be ſwallow'd up by the Waves, which took away one of our Sailers from the Deck.

Cape *Verd*.

At laſt we came in ſight of the *Salt Iſlands*, and afterwards arrived ſafely at Cape *Verd*, at 14 Deg. 40 Min. Latitude; which Cape is a neck of Land jutting out from the Continent of *Africk* into the Sea, betwixt the Rivers of *Gumbea* and *Sanaga*. We had no ſooner caſt anchor in the Road of *Portendaclia*, but ſeveral *French* Ships, and among the reſt two Privateers, hoiſted their Sails, and were purſued by *Nicholas Ketel*, but he could not overtake them.

The Inhabitants.

Soon after our arrival we ſaw many of the *Moors* coming in their *Canoes* or Boats, made of the Trunk of a Tree, hollowed out, upon which they had put two or three Sails, one above the other, aboard our Ship, unto whom we were forced to pay a certain acknowledgment, before they would permit us to come aſhoar, and traffick there, which for the moſt part conſiſts in Hides and Elephants Teeth. We met thereabouts with divers *Portugueſe* and *Moors*, whoſe Anceſtors had been baniſh'd *Spain*, and ſome *Jews*, who had their own Prieſts. Their Women, of whom they marry ſeveral at a time, go half naked, having only a piece of Stuff hanging down before, from the Waſt to the Knees: the Men wear it wrapt round about their Middle; and the Boys and Girls, even to the 15th or 16th year of age, go quite naked. The Ornaments of the Women are certain Chains of Chryſtal Beads or Corals, which they wear about the Waſte; and their Foreheads are mark'd by ſeveral Inciſions, as their Arms, Legs, and Bellies are with the Figures of Serpents and ſuch like Creatures: they anoint themſelves every Morning as ſoon as they riſe, with greaſe, to make their Skin ſhine: The Men wear a piece of red Leather hanging about their Necks, which they call *Phetitie*, and has certain Characters engraven upon it: theſe they make chiefly uſe in their Wars, as believing that they contain a ſecret Virtue of making them invulnerable. As they are often jarring with their Neighbours, ſo they are very expert in the management of their Arms, which are the Bow and Arrows, and a Lance or half Pike.

A Deſcription of Cape *Verde* and its Inhabitants.

Their Wives they keep like Slaves, who are forced to do all the druggery both at home and in the Field, the Men being generally intent upon their Arms only, and Hunting.

They have no other Beds than Mats ſpread upon the Ground. The firſt thing they do in the Morning is to ſmoak Tobacco, both Men and Women having conſtantly two or three Tobacco-Pipes hanging down from about their Necks: Tobacco is their Breakfaſt, beſides which, they eat twice a day, but very moderately; and they are ſo enured to hardſhip, that upon a pinch they can live three days without drinking, tho' elſe the Men are great Drunkards, which is chiefly to be obſerved at the Funerals of their Friends, when they commonly ſpend five or ſix days in drinking and weeping by Intervals.

Their Drink.

Their common drink is fair Water, or a kind of Beer made of Millet and Palmerine: This Wine is drawn from the Coco-Trees, in the uppermoſt Branches of which they hang (an Inciſion being firſt made) Mornings and Evenings, certain Pitchers, which being fill'd with Liquor which iſſues thence, they take down again and ſell it, before it turns eager; being otherwiſe ſweet of taſte, and of a whitiſh Colour like Whey. They have a way of adulterating it with fair Water. We were introduced to one of their Princes, bordering upon the Sea-ſhoar, where they entertain'd us with ſeveral Fooleries; but their Wine being very ſtrong, their main aim was to make us drunk, which we avoided as much as poſſibly we could, being forewarned by the *Portugueſe* of the Exceſſes they commit in their Debaucheries.

Cuſtoms.

They have a certain ſuperſtitious Cuſtom, that if any one, whether Foreigner or Native, it matters not, ſwears by the King's Head, his Eſtate is forfeited, and he condemn'd to Baniſhment; of which they gave us an Inſtance in a certain *Portugueſe*, who had lately been forced to fly the Country upon that account. After the King's Death, none of his Children can inherit the Crown, but his Brother's or Siſter's Sons; and his Wives are regarded no more than private Perſons in their Widowhood, but their Children are educated in the Royal Palace, and numbred among the *Fidalgo's*, which is the Nobility of the Country.

Religion.

Near the Sea-ſhoar they pay their Devotions to the Trees and Rocks, but I have ſeen certain Negro's there, who, as they told me, came deeper out of the Country, and uſed a quite different Language from the reſt, who, before they laid themſelves aſleep, or juſt before Sun-ſet, would adore the Sun upon their Knees, bending their Faces to the very Ground, and ſtrewing Sand upon their Heads. In their Huts, where they uſed to ſleep, they had made a kind of a Trench about three Foot high, which ſerved inſtead of an Altar, and before which they ſaid their Prayers for half an Hour together upon their Knees, turning their Heads in the Evening towards the Weſt, where the Sun ſets, and in the Morning to the Eaſt, where it riſes. I was very curious to learn from what Country they came; but as the Inhabitants did not in the leaſt underſtand their Language, I could get no certain account of them. I ſaw alſo divers *Jewiſh* Prieſts here, who had married Negro Women: They abſtain from Wine, and Adultery is a capital Crime with them as well as Theft. Moſt of the Negroes near the Sea-ſhoar, they adore the Devil, not but that they are ſenſible there is a God; but ſay they, he being very good, and conſequently not inclined to do harm to Mankind, there is no occaſion to pay him any Devotions; whereas the Devil being naturally inclined to miſchief, muſt be appeaſed by Sacrifices: This is the reaſon they never venture at Sea in their Canoes, unleſs they have firſt ſacrificed to the Devil ſome Branches of Trees, Horns, or Shells painted red, which they lay upon a kind of an Altar, and kneeling before it bareheaded, kill a Fowl, which whilſt it is a bleeding and ſtruggling for life, one of their *Papa's*, or Prieſts, mutters out certain Words till the Fowl be expired, whilſt he that performs the Sacrifice, proſtrating himſelf upon the Ground, beſprinkles the Altar with the Blood, and lays the two Wings upon it. They believe the Immorallity of the Soul, and that the dead Bodies ſhall riſe again, but white, like the *Europeans*.

Its Products.

The *Cape Verde* produces Ambergreaſe, tho' the Country near the River *Senegal* affords it in greater quantity; as alſo Civet Cats. There are here divers ſorts of Birds; thoſe they call *Aphiaprappen*, are very large, of a bright blackiſh Colour, their Heads being adorned with a very fine Tuft, on each ſide of which is a Crimſon colour'd ſpot mix'd with white: they make no noiſe. They have alſo a kind of Bird not unlike the Pellicans, and of ſmall Birds vaſt quantities; eſpecially of Turtles. Proviſions are very cheap here; you may buy a good Sheep for a String of Coral, and an Ox for two quarts of Brandy. Among other Fiſhes which are found in great quantities on this Coaſt, the Sword-fiſh is none of the leaſt: I ſaw once one of them engaged with a Whale in a Moon-light Night, and he purſued ſo cloſely, that at laſt he got under him, and rip'd up his Belly with the Teeth which are on both ſides of the Sword, which iſſues from his Snout, and is moveable on which ſide he pleaſes. The Whale was no ſooner kill'd, but he ſwam upon the Surface of the Water, and the Negroes at laſt catch'd alſo the Sword-fiſh, and preſented me with the Sword, which I brought along with me to *Amſterdam*.

A Whale kill'd by a Sword-fiſh.

Their way of Fiſhing.

The Negroes hereabouts are very dextrous at Fiſhing, which is their chief livelyhood: Twenty or thirty *Canoes* go commonly abroad towards the Evening, and having ranged themſelves together in a Line, they ſet fire to ſuch combuſtible matters as they have brought along with them, in the Night time: this done, they hang a thin Cord about their Necks, on which being faſtened many Lines with Hooks, they are ſenſible as ſoon as any Fiſh which are drawn thither by the Fire, do touch the Bait, when they pull them up. There are abundance of *Hacyens* (Schars) on this Coaſt, of an exceſſive bigneſs, which prove often miſchievous both to Men and Beaſts, as one of our Ship's Crew found by woful experience, who, whilſt he was a ſwimming, had his Legs bit off by one of them, above the Knee, which coſt him his Life: When they intend to ſnap at any thing, they lay themſelves upon their Backs, becauſe the upper part of their Mouth is longer than the undermoſt. I narrowly eſcaped once my ſelf the ſame danger; for I was no ſooner got into our Boat, but I ſaw one of that kind, call'd the *Kruys haye* (*Croſs Schar*) paſſing under it: This Fiſh had upon his Snout a kind of a Croſs, above ſeven or eight Foot long, which had an Eye at each of the two Extremities, the Bulk of his Body being proportionable to the bigneſs of the Croſs; we obſerved a ſmall Fiſh to ſwim conſtantly before him as if he had been his Pilot. Theſe Seas produce alſo a certain kind of Fiſh, call'd *Suckers*, with very flat Heads; and *Dorades* not unlike the Dolphins, appearing with various Colours under water, ſuch as yellow, green, blew, and white. They catch them with Hooks, on which they faſten ſome ſmall Shreds of white Linnen, which the *Dorades* miſtaking for the Flying-fiſh, they are catch'd by the Bait.

After I had diſpatch'd my buſineſs at *Sunlen* and *Porrendatia*, I embark'd aboard a ſmall Veſſel, *Drunken Claaſic* Maſter, in order to proſecute my Voyage to the Coaſt of *Guinea*. After we had ſailed about 300 Leagues, we loſt our Compaſs by ſtreſs of weather, and being frequently ſurpriz'd by *Travado's*, or Whirl-winds, we were reduced to the greateſt extremity, not knowing what courſe to ſteer: Theſe *Travado's* ariſe from a Cloud, which is diſcovered ſometime before, and breaking out of a ſudden into a moſt furious Tempeſt, with horrible Winds, and Thundring and Lightning, are very dreadful to thoſe that frequent thoſe Seas. We had at laſt the good luck to find an old Compaſs in one of the Corners of the Ship, but it being not a true one, we ſail'd up and down the main Sea, without any ſure Guide, without diſcovering any Land or Sail in three Months time, which according to the true Courſe, we might have ſail'd in three Weeks time. The worſt of all was, that all our Candles and Oil being conſumed, we wanted light in the Night-time; and after we had thus rowled up and down for two Months, all our Water was gone, ſo that for ſeveral Days we were forced to drink the muddy ſettlement of the Caſks, which we ſtrain'd thro' a Linen Cloth, and had ſuch a nauſeous Sent, that we were forced to ſtop our Noſtrils when we drunk it; ſo that ſome of our Crew choſe rather to drink their own Water than this. In this extremity God's Mercy relieved us with an agreeable Rain, which made us ſpread our Sail over the Ship's Deck, and throwing a good piece of Lead in the middle of it, ſet a Tun under it to receive the Water, which ſerved us for ſome time after; and as we were juſt beginning to want again, one of our Ship's Crew cry'd out *Land, Land*, which proved true to our great ſatisfaction; for ſteering our Courſe that way, we found our ſelves near a ſmall Iſle call'd *Criſquen*, which being not above a League in Compaſs, lies at about three Leagues diſtance from the Continent. It is uninhabited, nothing being to be ſeen hete but Rocks, Forreſts, wild Beaſts, and Serpents, which made a very doleful noiſe.

The Author expoſed to great danger at Sea.

Comes to the Iſle of Criſquen.

We had no ſooner ſet foot aſhoar, but we made a ſtrict ſearch after freſh Water, among the Rocks, and having found ſome that was very good, we fill'd all our Veſſels, and whilſt they were carrying aſhoar, we ventured ſomething deeper into the Iſle, but could ſee nothing but an old black Hat, and not far from thence ſome Maſts, the Remnants of a Shipwrack'd Veſſel, and the dead Carcaſs of an Elephant, ſtuck in the Mud, who had queſtionleſs periſh'd there, as he was ſwimming from the Continent over to this Iſland. As we were making all the Sail we could towards the Continent, a ſudden Travado overturned our Ship, which ſunk inſtantly before our Eyes, ſo that we had ſcarce time enough to ſave our ſelves in our Boats, wherewith we at laſt reach'd the Shoar, after having been expos'd to the danger of the mercileſs Waves for 24 Hours without eating or drinking, all our Proviſions being loſt in the Ship. We were no ſooner got aſhoar, but one Mr. *Mols*, belonging to our Ship, told us that the Inhabitants were Man-eaters, but as he had traded in thoſe parts, and underſtood ſomething of the Language, he hoped to have ſo much Influence over them as to ſave our Lives, which he did in effect, but could not prevent our being ſtrip'd quite naked. Among the reſt there was one *Nicholas Kan*, who ſeeing one of the *Negroes*, who held him by the Arm, ſharpening his Knife upon a Tree, he pointed to his Throat, intimating thereby, whether he intended to cut his Throat? The *Negroe* apprehending his meaning, reply'd *no no*, and at the ſame time pointing with the Knife towards his Breaſt, *Nicholas Kan* ſtruck the *Negroe* down to the Ground, being reſolved to ſell his Life at the deareſt rate he could: But Mr. *Mols* better underſtanding the *Negroe*'s meaning, prevented the danger which was likely to befal us upon this account; for having unbuttoned his Waſcoat, he pull'd it off, which the *Negroes* perceiving, were well ſatisfied, to ſave themſelves the labour of cutting them, which they thought they muſt infallibly have done, as being not apprehenſive of the way of looſing them by the Buttons. Thus they diveſted us of all our Cloaths, leaving us as naked as we were come from our Mother's Womb; and what was the worſt of all, being come aſhoar, near a poor Village call'd *Rio Reael*, where they had neither Rice nor Millet, we were all in danger of being ſtarved, half our Company being periſh'd for hunger already. The before-mentioned *Nicholas Kan* roaving up and down in ſearch after ſome Victuals, happened to light upon a piece of Carrion, which he brought to us, of which the Maſter of the Ship, who was very hungry, made a good meal, but ſoon after paid for it with his Life: Being reduced to this extremity, we were preparing for death, when certain *Negroes* having diſcovered at a great diſtance a Veſſel, put us in ſome hopes of relief: You may believe we were all eager to go to the Shoar, where

Is Shipwrack'd near the Continent.

Strip'd naked.

Likely to periſh for Hunger.

having deſcry'd the Veſſel at a vaſt diſtance, we were not a little ſurpriz'd at one of the *Negroes*, when he told us that he would make the Veſſel come near the Shoar; ſo, that looking upon him as a mad Man, we retired from the Shoar; but word being brought us within an hour after by the ſame Negroe, that the Ship was advancing towards the Continent, we did run with full ſpeed, and finding his Words true, look'd upon him no otherwiſe than a Sorcerer, till we were convinced of the truth of the matter, by their ſhewing us a great heap of dry Wood, which they had ſet on fire upon one of the Rocks near the Sea-ſide, the Smoak of which is an infallible Signal to Ships that come that way of the willingneſs of the Inhabitants to traffick with them: Nothing could be more joyful to us than to ſee (after the miſery and danger we had undergone for above three Months) the Ship advance with full ſail to the Shoar, which proved one of our own Country Veſſels, belonging to *Amſterdam*, bound to the Coaſt of *Guinea*: we appeared ſtark naked on the Shoar, imploring the aſſiſtance of our Country-men to relieve us in this utmoſt extremity. The Maſter of the Ship having ordered the Ship to caſt Anchor in the Road, went into the Long-boat himſelf, and as he was coming near the Shoar, aſk'd us what Ship we belong'd to, which we having told him, he gave for anſwer, that it was impoſſible for him to take us aboard, he having ſcarce Proviſion enough for his Voyage; but having remonſtrated to him, how unchriſtian-like it would be for him to leave us in this miſery, he was at laſt prevail'd upon to take us aboard, after having pay'd ſome ſmall quantity of Coral, ſome Knives and Braſs Baſins to the Negroes for our Ranſome.

They come to *Quaqua*.

Its Inhabitants.

Thus we ſet ſail again, and chooſing the main Sea, I was much ſurpriz'd that we ſhould not diſcover Land in a whole Fortnight, till finding that our Maſter was miſtaken in his Obſervations and Calculations of the Declinations, I corrected his Error, and in four days after diſcovered Land, but inſtead of the *Guinea* Coaſt, found our ſelves near *Angola*, which is 600 Leagues beyond it: Having provided our ſelves with freſh Water, ſome Frait, Oiſters, and other Refreſhments, we ſet ſail again for the *Guinea* Coaſt, taking our Courſe betwixt the Iſle of *Anaabon* and *Iſla de Principe*; but by the unſkilfulneſs of our Maſter of the Ship, came unexpectedly to the Coaſt of *Quaqua*, not far from *Cape Verd*. We had no ſooner caſt Anchor in the Road, but the Negroes came in great numbers in their Canoes all about our Veſſel, but would not venture aboard, till by the advice of our Maſter, I having taken ſome Sea-water in a Baſin, and let ſome Drops of it fall three times into my Eyes, crying every time *Quaqua*, they freely came aboard us; but ſeeing our Guns ready mounted, and ſome Muſquets at hand, they would enter no further than the ſides of the Ship; where being ſet down, I preſented them with ſome Bread, which they thankfully accepted of. Theſe Negroes had many Inciſions made in their Faces, and thro' their Noſes a large Ivory Ring, which reach'd below the Chin; ſo that whatever they put in their Mouths, went thro' this Ring. Their way of Eating was, to make up the Millet or Rice into a Paſte, which being form'd into ſmall Balls, they throw them at a good diſtance thro' the Ring into the Mouth. Their Hair was of ſuch a length, that it reach'd to the very Ground; for which reaſon they have a way of twiſting it round their Heads, as the *Turks* do their Turbants. They brought us ſome Elephants Teeth to ſell, and a young Wench of about fourteen or fifteen years of Age, but we would not buy the laſt.

We left the Coaſt of *Quaqua* after a ſtay of a few days, to go once more in ſearch of the *Guinea* Coaſt; but either by the neglect or ignorance of our Maſter of the Veſſel, we once more paſs'd by that Coaſt unperceiv'd, and found our ſelves beyond our hopes at *Benrin*: There being not one Man in the Ship who did not find himſelf almoſt worn out with theſe needleſs Fatigues, it was reſolved to keep within ſight of the Land all the day time, and to caſt anchor at Night, till we ſhould come to the ſo-much wiſh'd for *Guinea* Coaſt, which being done accordingly, after ſome days ſail, as I was coming one Morning early upon the Deck, I found a Ship not far from ours at Anchor, and ſuſpecting her to be a *Portugueſe*, gave the alarm to the reſt, who began to clear the Deck, and prepare every thing for a Combat: But before we went to work, it was thought fit to aſk one of their Ship's Crew who they were; he anſwer'd, to our no ſmall ſurprize, that the Maſter of the Veſſel's name was *James Ruychaver*, a Native of *Harlem*; ſo that our Martial Preparations were ſoon changed into Demonſtrations of Joy, and it was reſolved, that we ſhould together ſet ſail for *Acara*, another Coaſt of *Guinea*: But his Ship being heavier than ours, we out-ſail'd him, and as we were paſſing along the Coaſt, a Negroe came aboard of us to enchange a Civet-Cat for ſome Coral, which done, he offered me to carry me to *Guinea* in his Boat, which I not thinking fit to accept of, I gave him however a Letter to Mr. *Martin Stuurboat*, the chief Director in thoſe parts, who being rejoiced at our arrival, came aboard our Veſſel as ſoon as we had caſt Anchor in the Road, where he was entertained with what the Ship afforded, and gave us a ſplendid Treat aboard his Veſſel the next day. Some days after I went aſhoar to *Carmentiin*, and thence to *Morce*, where the *Hollanders* have a conſiderable Fort, of which Mr. *Arent Jacobſon* was Governour at that time; who treated us very handſomely at Dinner. Afterwards Mr. *Stuurbout* invited me to his Ship, where he entertained me with more than ordinary Civility for eight days together, at the Expiration of which, he propos'd to me to go along with a Ship which was ready freighted to *Beniin*; which I refuſing to do by reaſon of the unhealthfulneſs of the place, he ſent four young Factors in my ſtead, but no more than one returned of the four, tho' he did not ſtay above ſix Months.

They come to the Guinea Coaſt.

Beniin.

This Settlement, call'd *Beniin*, lies upon a River, which exonerates it ſelf into the Bay of *Guinea*, where the *Dutch* Factors are obliged to ſtay ſix Months; but few return from thence, by reaſon of the unwholſomneſs of the Air, without which, the place would be pleaſant enough. I was credibly informed by a certain Factor who had reſided there, that the Negroes of the place had aſſur'd him, that, if he would tarry only ſix Weeks longer with them, he would ſee certain Negroes who come out of the Inland Countries, and have no more than one Eye in the Front; which we muſt leave to the credit of thoſe who gave the relation of it. Mr. *Stuurbout* finding me reſolute not to go to *Beniin*, ſent me aboard another Veſſel to *Acara*, where we were forced to ſell our Iron Barrs, which was our chief Cargo, in the Night-time, their King having prohibited the Importation of Iron there. After I had diſpoſed of my loading there, I returned to Mr. *Stuurbout*, who then lay at anchor in the Road of *Morce*, not far from *Maurice*'s Fort; but this being a dangerous Station, he went with his Ship, tho' much bigger of the two, before *Carmontiin*, leaving us expos'd to the danger of the *Negroes*, who are very miſchievous here; for ſome of theſe *Negroes* belonging to the Caſtle of *Demina*, having not long ago ſurpriſed one of our Chaloops, delivered up the Men to the *Portugueſes*, who had clapp'd them in Irons, and threatned them every day with death; and, as I was credibly informed, had promiſed a reward of 64 Guilders to any of the Negroes who could bring them my Head. Being forewarned of this danger, I without more adoe followed Mr. *Stuurbout*, and came to an Anchor juſt by him; and being aſk'd what made me come there, I anſwer'd, That if that Station was too dangerous for his great Ship, it muſt needs be ſo for mine, unleſs he would provide me more Men, to defend the Ship againſt any ſurprize; which he having done accordingly, I returned to the Shoar of *Morce*, and caſt anchor as near the Shoar as I could; but was adviſed by Mr. *Arent Jacobſon*, the Governour of the Fort, to be conſtantly upon my Guard, eſpecially in the Night-time; and that if neceſſity required, I ſhould give a Signal by the Diſcharge of a Muſquet, when he would be ſure to aſſiſt me with ſome Souldiers from the Fort, which was the reaſon I ſtrictly forbid the diſcharging of any Gun aboard us, for fear of raiſing a falſe alarum. Whilſt we were here at anchor, a *Portugueſe* Bark coming from the Iſle of St. *Omar* bound to the Caſtle of *Mina*, being diſcovered by ſome of our People then at anchor near *Carmentiin*, a ſmall *Dutch* Frigat was ſent in purſuit of her, which was no ſooner come up with the *Portugueſe*, but they cry'd for quarter, tho' they had 14 *Portugueſes* and 150 Negroes aboard her, whereas ours was mann'd with no more than 25 Sea-men in all. This happy Encounter proved very lucky for, our Priſoners detained in the Caſtle of *Mina*; for the *Portugueſes* who were in our Hands having ſent the Governour word that they muſt expect the ſame Treatment here, the *Dutch* Priſoners received at *Mina*, he began to be a little cooler, and ſoon after agreed upon an exchange of the Priſoners on both ſides, and as ſoon as our Men were come aboard, we ſent back the *Portugueſes* in an old Chaloop, we preſented them with.

As I went frequently aſhoar whilſt our Ship lay in the Road of *Morce*, ſo being curious to ſee the King that rules hereabouts, I, Mr. *Ruychaver*, *James Lien*, a Serjeant of the Fort, and his Brother being a Lieutenant, and *James Hawaert*, reſolved to go to *Salve* and *Biemba*, which we did accordingly, taking along with us for our Guide a certain *Negroe*, who had been in the Quality of the King of the Country.

Is entertain'd at Dinner.

Outrages committed by the Dutch.

a Deputy from that King in the *Hague*; two Carabins for our Defence, and two Bottles of Brandy for a Preſent to the King. Coming near the Town, or rather Village, which is the King's Reſidence, we ſent our Negroe before, to give notice of our arrival, and to tell the King, that there were ſeveral *Europeans* come to ſee him; and after his return, went to the Court, where finding the King ſitting with about twelve of his *Fidalgo's*, or Nobles, we did not pay him the leaſt reſpect, which he perceiving, aroſe and ask'd us who was our Captain or Leader, and having been told that it was I, he deſired me to ſit down, and the reſt after me, upon very low Benches. I preſented him the two Bottles of Brandy, which he accepted very courteouſly, and ask'd us what had brought us thither, unto which I having anſwered him, that we came on purpoſe to be merry with him, he took one of the Bottles of Brandy and took a good draught, but being told that it would make his Head ake, he ſet it down aſide, and call'd for ſome of the beſt Palmerine: whilſt we were buſie in letting the Cup go round, we ſaw a Negroe coming with his naked Cymetar in one, and a Man's Head in the other Hand, which he lay'd at my Feet, kneeling, deſiring me to ſtamp with my right Foot three times upon it, and my Comerades were obliged to do the ſame, which done, the King ordered it to be boil'd. Upon enquiry what could be the meaning of it, we were told, that this was the Head of a Traytor, who having the day before endeavour'd to kill the King as he was a going to do his Needs (which they do behind the Houſe in a Field) had miſtaken his Perſon twice, and kill'd two others with his Dart, in his ſtead, and being taken in the Fact by one of the King's Guards, who had cut off his Head. Whilſt Dinner was getting ready, the King gave us leave to kill as many Deer and Bouflers as we would, but no other Veniſon; and at our return welcom'd us with a Cup of Wine mix'd with Eggs. By this time the boil'd Negro's Head being brought to the Table, the King urged us to take part of it, but finding us unwilling, he laugh'd, telling us that there was no greater Dainty than ones Enemies Fleſh; however, we had ſeveral Diſhes of Mutton and Veniſon ſerved up, upon which we did feed with a very good appetite, and drank ſo plentifully, that the Lieutenant, and his Brother, the Serjeant, with one or two more belonging to the Fort, committed divers Out-rages, for which they pay'd dear in the end. The Lieutenant going croſs the Market-place, cut down a certain Tree of above 100 Years ſtanding, dedicated to their idolatrous Worſhip, being a kind of a *Bananas* Tree, and conſequently eaſie to be cut thro' with a good Cymetar. His Brother the Serjeant coming into a Houſe, and finding the Man and his Wife together in Bed, would needs force him thence in order to take his place; which the other refuſing, he run him thro', and the Woman crying out murder, a Neighbour that came to her aſſiſtance, underwent the ſame fate. But not ſatisfied thus, both he and his Brother coming to the King's Apartment, the firſt preſented his Carabine ready cock'd againſt the King, which *James Huwaert* perceiving, ſtruck the Carabin with his Hat out of his Hands, which fired juſt as it was falling upon the Ground, but, as good Fortune would have it, without the leaſt damage, tho' the whole Apartment was fill'd with People. The whole Village being put into an alarum by theſe Outrages committed againſt their Idol, and the murder of their Companions, the King thought it beſt to keep Mr. *Huawart*, Mr. *Ruychaver*, and my ſelf at Court, till the Fury of the Negroes ſhould be aſſwaged, who followed the others out of the Village, and having wounded the Serjeant with a Dart in the Hip, they follow'd the Tract of the Blood, which led them into an adjacent Wood, where he had hid himſelf among the Bryars: they cut off his Head without any further Ceremony, and his Comerade a Leg and an Arm. His Brother the Lieutenant being aſſiſted by the Negroe, made ſhift to get away to the Fort, where he was clap'd in Irons, but the poor Negroe, who had no other ſhare in this Diſorder than to have protected and aſſiſted the others in their Flight, was alſo overtaken and aſſaulted, and, after having kill'd one with his Carabin, was cut to pieces, which with the reſt were brought to the King, who ordered them to be broil'd and eaten. The Negroes being ſomewhat appeaſed, the King ſent us three under a ſtrong Guard to the Fort.

An Enterrment of the Negroes.

Not long after, we had the opportunity of ſeeing the Ceremony of one of their Interments; for a certain *Negroe* named *John Grootendief*, who was a great Dealer in Gold, came aboard our Veſſel, but being broken bellied, was ſeized with ſo violent a pain, that not able to endure it longer, he ripp'd up his Belly with a Knife, and dy'd the next day. He was ſow'd up in a piece of Stuff, the Head, Arms, and Legs being covered with the ſame, and adorned with Golden Medals, repreſenting their *Fietiesjes*, or Idols. About a League from the Village, they had dug a Grave, round about which were ſtuck into the Ground, ſeveral Green Branches of Trees: The dead Corps was carried upon the Shoulders of ſix Men, who run at full ſpeed with it for a little time, and then ſtopping on a ſudden, a Horn was blown, which ſet the Women and Children that aſſiſted at the Ceremony, a howling and crying, making a doleful noiſe with the Bells that were faſtened to their Feet. Thus after a while, the Bearers began to fetch their long Steps a ſecond time, and were followed by the reſt, and ſo after ſeveral Stops, Blowings of the Horn, and Howlings, came at laſt to the Grave, into which they put the Corps, and the Bearers leaping in after it, took this opportunity to take away the Golden Medals, (of which I was an Eye-Witneſs, as ſtanding very near it) tho' they made the People believe they were buried with the Corps. In ſhort, after they had laid a quarter of an Hour aſleep, at the Head of the deceas'd Perſon, they laid over the Grave Branches of Trees, which they covered with Earth to a Man's height; upon which they ſet a large Flaggon full of Palmarine. I ſaw ſome of their Tombs made of Earth like this, which exceeded in height their ordinary Houſes; and the Relations, eſpecially of the Female Sex, come at certain times every Year there, to bewail the death of their deceas'd Friends.

Their Religion.

Sorcery.

The Inhabitants hereabouts are docile enough, but involved in groſs Idolatry, worſhipping almoſt every thing they ſee, even to the Rocks and Whale-bones; and the Trees dedicated to their Idols, are worſhipped with a great deal of Ceremony at certain days, and ſerved with Water and Meat by their Prieſts. But among all their ſuperſtitious Worſhip, nothing is ſo abominable as the peculiar reſpect they ſhew to the Devil; which makes Sorcerers and Sorcery to be in great requeſt among them. Of this I ſaw an Inſtance in one *Direck Serpent*, who was a very wealthy Perſon in thoſe Parts, and having invited me to his Houſe, I found him lying upon a Mat all lame on one ſide from Head to Foot; after we had taken a Cup two or three of Palm Wine, I ask'd him the occaſion of his Illneſs, of which he gave me the following Account. Having plow'd up a piece of Ground belonging to the *Fitiesje* or Idol, and ſow'd it with Corn, it produced a very good Crop; but Harveſt-time approaching, one day a great Fiery Serpent was ſeen to come about Noon into the Field, which ſet all the Corn on fire, and thence coming to my Houſe, got upon the top of it, which was covered with Straw (as all Houſes are in this Country) and ſet it on fire alſo in the ſight of ſeveral of my Neighbours; and as I was going to ſave my ſelf, I was ſtruck with a Palſie on one ſide of my Body, which continues to this day. They had given him the name of *Serpent* from this odd accident, and I found the Houſe to have been but lately built.

Returns to *Holland*.

Cape de Loop

After a ſtay of three Years on this Coaſt, having received orders to return home, we ſet ſail from *Morce*, and ſteering our Courſe betwixt the two Iſlands of *Aenabon* and St. *Thomas*, made a little ſtop at the *Cape de Loop*, to take in ſome Refreſhments: We ſaw nothing remarkable on this Coaſt, but that the *Papa* or Prieſt every day at Mid-night uſed to go into an adjacent Wood, with a crooked Stick, with a Bell faſtened to the end of it, to conſult, as he ſaid, the Devil about ſecret matters, tho' the poor Fool at the ſame time was ignorant of what paſs'd at home; for we uſed to make his Wife drunk. The River of *Olibatte* produces abundance of Sea-horſes, which is an amphibious Creature, with Feet like thoſe of the Swans, being chiefly eſteem'd for its two long Teeth, which in beauty exceeds Ivory it ſelf. The Country near the Coaſt abounds in Camels, Tygers, Lions, Bouffiers, Civet-Cats, Monkeys, and Parrots. After a ſtay of ſome days here, we purſued our Voyage, and coming under the Equinoctial Line, directed our Courſe to the *Salt-Iſlands*, and thence to the *Canary-Iſles*, and ſo making the beſt of our way, came without any ſiniſter Accident to the Coaſt of *England*, where, when we thought our ſelves paſt all dangers, an unexpected blaſt of Wind forced our Ship in the Night-time betwixt two Rocks, where we was ſtaved to pieces: However, we had the good fortune to ſave all our Men, and the next day a Cheſt full of Gold, valued at 260000 Gilders, and a good quantity of Elephants Teeth. The Freighters of our Veſſel being extreamly ſatisfied with our Induſtry in having ſaved ſo much of her Cargo, invited us up to *London*, where being employed in viewing all what was worth a Traveller's obſervation in ſo great a City, I once more narrowly eſcaped death; for being willing to go into the *French* Ambaſſador's Chappel, where they were then at High Maſs, I was kept back by the Guards that were placed there, to my ſingular good Fortune; for before Maſs was ended, a Pillar which ſuſtain'd the Roof of the Chappel, giving way, the whole Structure fell and buried 90 Perſons in its Ruins.

Arrives in *Zealand.*

From *London* I went to *Graveſend*, where I embark'd aboard a *Dutch* Veſſel, which carried me with a proſperous Gale to *Middleburgh* in *Zealand*.

CHAP. XIX.

An Abſtract of the Hiſtory of Ethiopia, *or the* Kingdom *of* Abeſſines: *Written by Mr.* Job Ludolphus, *with what is obſervable from the Authors of that Country in* Purchas.

IN compoſing this Hiſtory, the Author declares, that he was chiefly aſſiſted by *Gregory* an *Abeſſin*, who came into *Germany*, and was honourably entertain'd by the Duke of *Saxony*, from whom he did not only receive Information as to the Country, but alſo the knowledge of the *Ethiopick* Language: That as to Authors, he depended upon the *Ethiopian* Hiſtory of *Balthazar Tellez*, written in the *Portugal* Language, and collected out of the Acts and Inſtructions of the Jeſuits, to whom he was provincial; with a Commentary of *Emmanuel Almeyda*, written in *Ethiopia*, and a M. S. Hiſtory of *Alphonſus Mendoza*, the *Latin Ethiopian* Patriarch, atteſted by *Jerom Lupus*, a ſworn Witneſs; and that he the rather gave credit to theſe Writers, becauſe he found all things in them to agree with the Relations of *Gregory* the *Abeſſine*.

The Names of the *Abeſſines*, and the Original of the Nation

The People are now generally call'd *Habeſſines*, or *Abeſſines*, from the *Arabick Habeſh*, which ſignifies a mixture of People; but the Natives chooſe rather to call themſelves *Ethiopians*, from the *Greeks*, tho' that name was formerly common to all the ſwarthy People in *Aſia*, as well as them. Their ſpecial name is the Country of *Ag-azi*, or Free-men, as the *Germans* of old having paſt the *Rhine*, call'd themſelves *Franks*: For that they came at firſt from *Arabia the Happy*, adjoining to the *Red-Sea*, appears from their Language, which is very near a-kin to the *Arabick*; from their Circumciſion and other Cuſtoms common to them with the *Arabians*; from the Name of *Abaſſenes* engraven by *Severus* on his Coyn, among the conquer'd People of *Arabia*.

The Situation and Bounds of *Abeſſinia*.

In *Africa* beyond *Nubia*, lies *Habaſſia*, very near between the 18th and 16th Deg. of North Latitude, and is call'd by ſome *Upper-Ethiopia*: It does not extend to the Equinoctial Line, much leſs does that Line croſs it, as has been generally affirmed by Geographers and Hiſtorians. The *Portugueze* reckon this Kingdom where it is broadeſt, 140 Leagues, i. e. From the *Red-Sea* to the fartheſt Limits of *Dembea*; for after that, the bounds of it from South to Weſt do conically leſſen. Towards the North upon the Kingdom of *Fund* or *Fungi*. Towards the Eaſt it was formerly bounded by the *Red-Sea*, but now the Port of *Arkiko* and the Iſle of *Matzua* are ſubject to the *Turk*, who is Maſter of that Sea; toward the South, *Alaba* and *Jendero*, Kingdoms of the *Gentiles*, bound *Abeſſinia*; and laſtly the River *Maleg*, and *Nilus* it ſelf rowling along thro' the ſeveral vaſt Deſarts, cloſe up the Weſtern Limits.

The Diviſion of *Abeſſinia* into Kingdoms and Provinces.

The Kingdoms of *Ethiopia* are variouſly reckon'd up by *Paulus Jovius*, *Telezius*, and others, by confounding their Præfectures, which are under peculiar Governours with the Kingdoms. *Gregory* the *Abeſſine* afore-mentioned, reckoned 30 Kingdoms belonging to it by ancient Right, and we may ſafely reckon 20, including thoſe which the *Gallans* have ſubdu'd. The names of the Principal are theſe. *Ambara* is the nobleſt Kingdom of all *Ethiopia*, upon the account of thoſe inacceſſible fortified Rocks, *Gheſen* and *Ambaccel*, where formerly the King's Sons being excluded from the Kingdom, were ſecur'd, and is therefore accounted the Native Country of the preſent Kings and all the Nobility: It has 36 Provinces belonging to it. *Bagembder* or *Bagamidri*, is a large fertile Kingdom, watered with many Rivers: It is diſtinguiſh'd into 13 Territories. *Cambata*, whoſe Inhabitants are call'd *Hadiens*, is the laſt Kingdom towards the South, not far from *Enarrea*: The Inhabitants are for the moſt part *Chriſtians*, but mix'd with *Pagans* and *Mahometans*. *Dembea* is a Kingdom now famous for the Royal Camp continually pitch'd there, and has 14 Prefectures belonging to it. *Enarrea* is inhabited both by *Chriſtians* and *Gentiles*, and was ſubdued by *Melech Saghed*, who converted the Governour to the Chriſtian Faith. *Gregory* aforeſaid very much commended the Inhabitants for their Probity and Integrity, and ſaid it was a fertile Soil, and abounded in Gold. *Gojam* is a Kingdom wonderful for its ſituation, and famous for the Fountains of *Nile* now diſcover'd in it; for the River *Nile* almoſt ſurrounds it in manner of a Peninſula. *Sewa*, or, as the *Portugueze* call it, *Xee*, is a very large and rich Kingdom, formerly much frequented by the *Abeſſine* Kings, and then more famous than *Ambara*. *Tegre* or *Tigra*, is one of the principal Kingdoms, and the firſt as you enter into *Ethiopia*: the Native Country of the former Kings, who kept their Courts at *Axuma*, from which City all the Natives were call'd by the *Grecians Axumites*. The Prefecturers belonging to it are 27, all which are inhabited by ſeveral Nations; but there are not ſo many Governours as Prefectures, for ſometimes two or three of them are under one Governour.

Of the 30 Kingdoms reckoned by Mr. *Gregory*, the preſent King of the *Abeſſines* enjoys at preſent only nine, which are *Ambara*, *Bajemdra*, *Cambata*, *Damote*, *Dembea*, *Enarrea*, *Gojam*, *Samen*, and part of *Sewa*, with other Kingdoms of leſs note. And of the Provinces he has only five, *Emfras*, *Maraga*, *Tragade*, *Wagara*, *Walkajit*; which Kingdoms and Provinces comprehend the beſt part indeed, but not the half of the ancient *Abeſſia*, the reſt being by the *Galans* either ſubdu'd or utterly laid waſt.

Of the nature of the Soil, Temper of the Air, Winds and Tempeſts, &c.

In ſo many various Regions, the Conſtitution of the Air is as various; for in low and open places the heat of the Sun is intolerable, as in both the Coaſts of the *Red-Sea*, as alſo in the Iſles, eſpecially *Suaquena*; but then the higher you aſcend the Mountains of *Ethiopia* from the Coaſts of the *Red-Sea*, the more temperate is the Air; Nay, in ſome Mountainous Countries the cold is more dreaded than the heat, tho' there is very ſeldom any Snow there, but only a little ſmall Hail; which temper of the Air makes the Country ſo healthy, that ſome live to a 100 Years of Age.

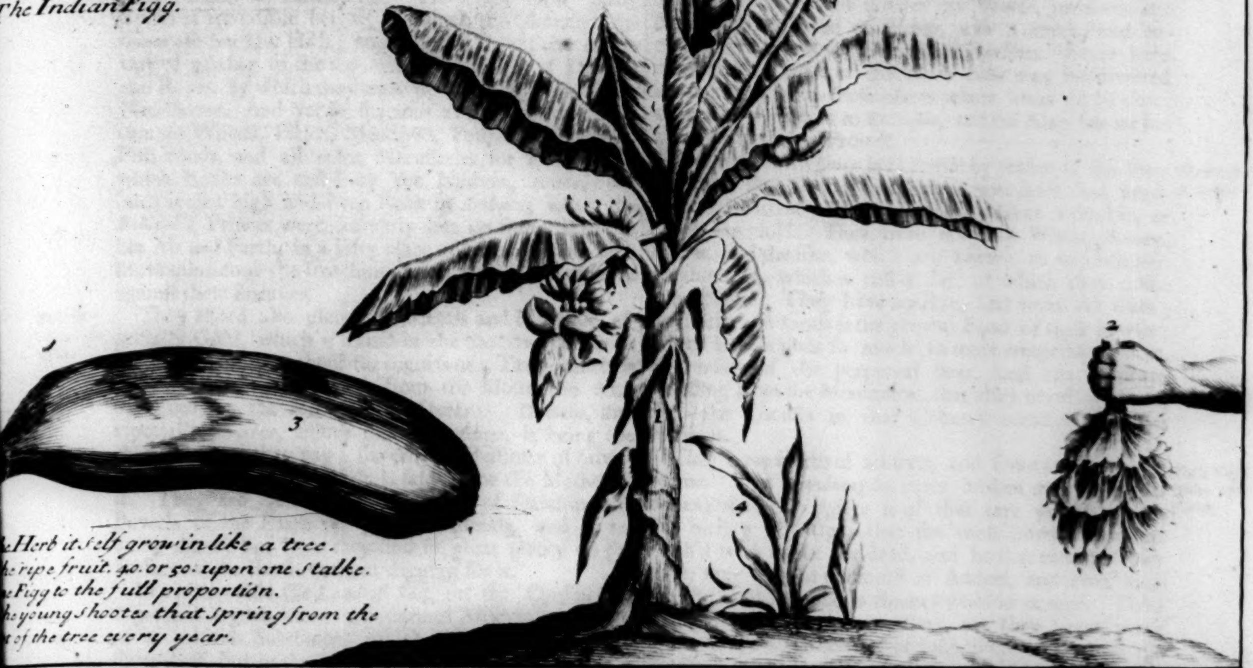
However, this variety of Air is the cauſe of moſt dreadful Thunder and Lightning, with violent Rains pour'd down like Streams, which make the Torrents ſwell, and the Rivers overflow; which are encreas'd alſo by the Earth, which vomits up Water; for there is a Fountain in every Man's Houſe if it ſtands low: And their Winter-weather, which is very unpleaſant, laſts for three Months.

There are but three Seaſons of the Year, properly ſpeaking, among the *Abeſſines*: Firſt, the Spring, which begins on the 25th of *September*: Then the Summer, which may be divided into two parts, the firſt and beſt call'd *Tzadai*, which begins the 25th of *December*; and the laſt and worſt call'd *Hagai*, which begins on the 25th of *June*, and ends upon the ſucceeding Winter, which is the third part of the *Ethiopick* Year.

But tho' the Winds upon the Mountains do frequently render the Air healthful and temperate, yet all are not equally grateful; for there is ſometimes a Whirlwind, call'd *Sendo*, i. e. a Smoak ſo furious, that it throws down all before it, as Houſes, &c.

As ſoon as you have travell'd two days Journey from the *Red-Sea*, you muſt climb over the high Mountains of *Tigra*; among which, *Lamalmona* is the moſt lofty, whoſe Steps are ſo dangerous, and the Path ſo narrow, that if company meet, Men and Horſes giving way, fall headlong into a bottomleſs Abyſs. And not only this Region, *The Herb and Fruite Called in Hebrew Dudaim. Gen. 30. 14. and Cant. 7. 13. in the Arabic language Mauz or Muza The Indian Figg.*

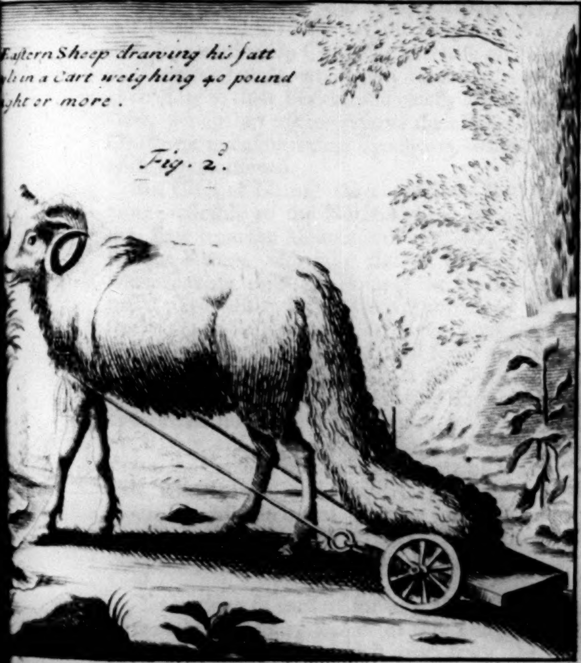
Fig. 1.



e Herb it ſelf growin like a tree.
he ripe fruit. 40. or 50. upon one ſtalke.
e Figg to the full proportion.
he young ſhootes that ſpring from the
t of the tree every year.

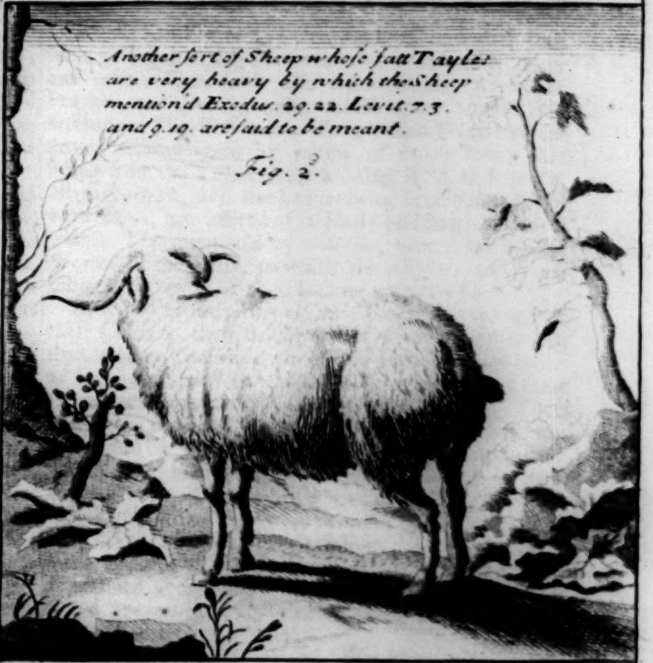
Eaſtern Sheep drawing his fatt
le in a Cart weighing 40 pound
ght or more.

Fig. 2d.



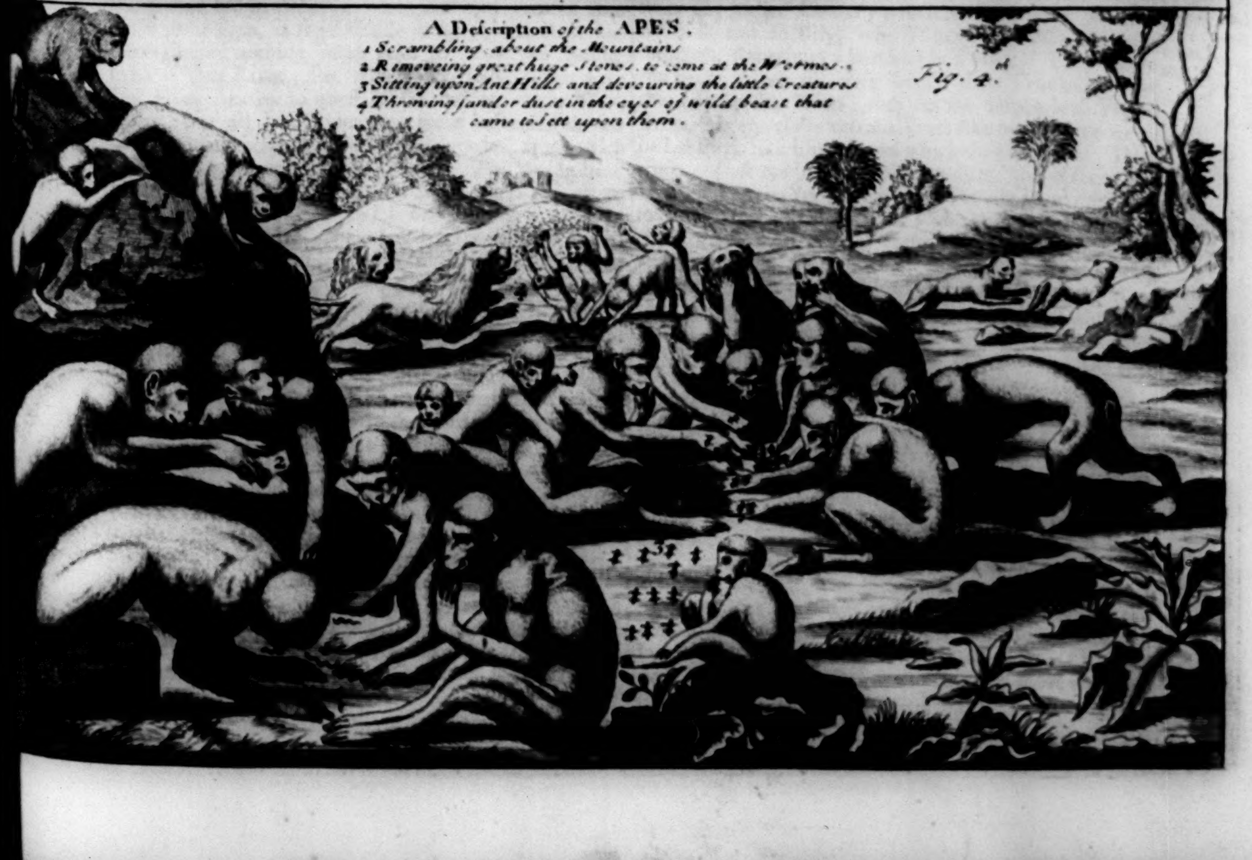
Another ſort of Sheep whoſe fatt Tayles are very heavy by which the Sheep mention'd Exodus. 29. 22. Levit. 7. 3. and 9. 19. are ſaid to be meant.

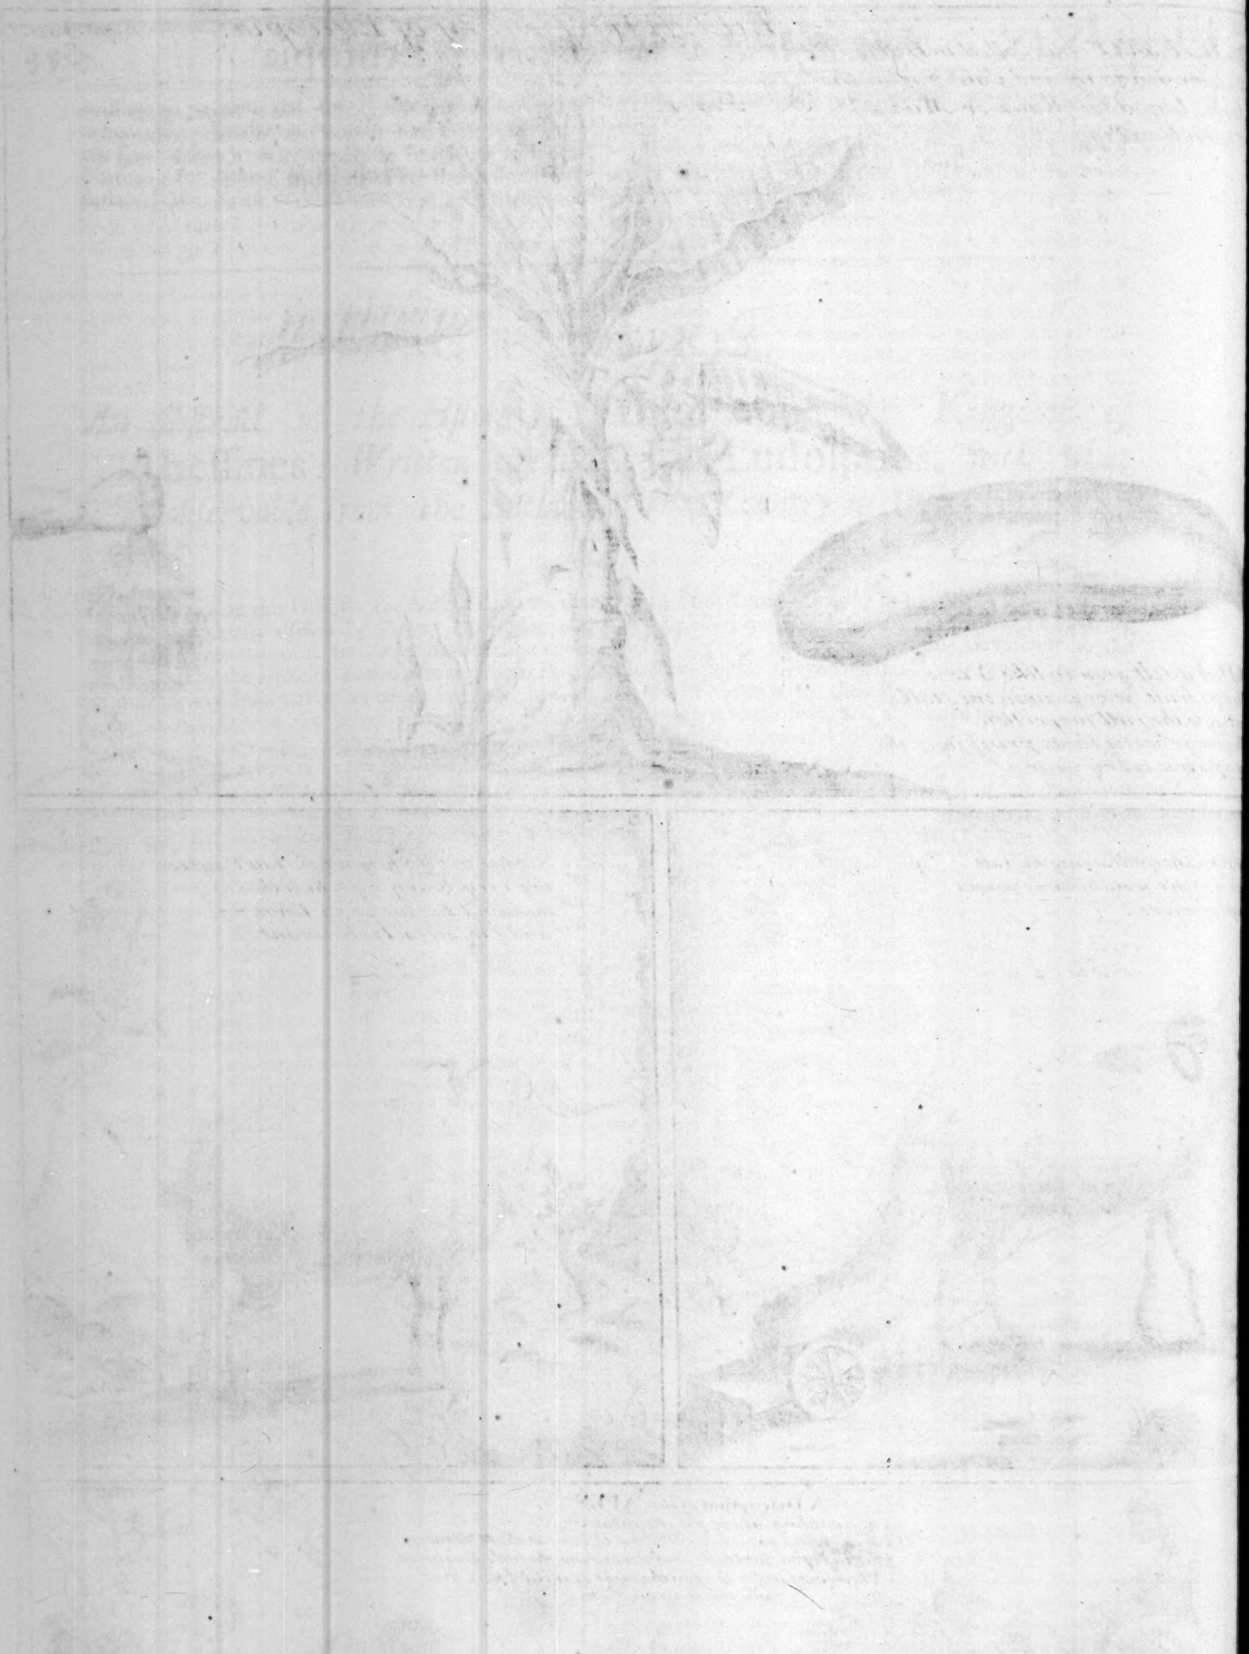
Fig. 2d.



A Deſcription *of the* APES.
1 *Scrambling about the Mountains*
2 *Removeing great huge Stones. to come at the Wormes.*
3 *Sitting upon Ant Hills and devouring the little Creatures*
4 *Throwing ſand or dust in the eyes of wild beast that came to ſett upon them.*

Fig. 4th.





Region, but all the reſt except *Dombea*, are but one continued Chain of Mountains. Here are alſo many Rocks of incredible height, to which the *Alps* and *Pyrenees* are but low Hills; and ſo ſteep, that there is no way of getting to the top without the help of Ladders and Ropes, by which they crane up their Cattle and other Neceſſaries: And yet ſo ſpacious at the top, that they contain Woods, Fields, Meadows, Fountains, and even Fiſh-Ponds, and all other Neceſſaries for human life, which Rocks are call'd by the Natives, *Amba*, &c. Such is that high and ſteep Rock in *Ambara*, where the *Ethiopick* Princes were formerly ſhut up from all things but Air and Earth, in a lofty place of Exile. Theſe high Mountains cool the ſcorching heat, and are a defence againſt their Enemies.

Their Metals and Minerals.

They afford alſo plenty of Metals and Minerals, eſpecially Gold, which is found in the Shallows of Rivers in great quantities, about the bigneſs of a Tare, which is carry'd down, as is believ'd, from the Mountains with the Sand, by the force of the Stream. *Damota*, and eſpecially *Enarrea*, enjoys this Advantage, it being the chiefeſt tribute they pay; for they are deſtitute of Silver, tho' they have Lead, which is ſaid to be the Mother of it. They are ignorant of the ways of ſearching the Bowels of the Earth for precious Metals, and of refining them; but Iron they find in great plenty on the Surface of the Earth without digging for it.

In a place call'd the *Land of Salt*, on the Confines of *Tigra* and *Angora*, there are natural Mountains of Salt, of a whitiſh Subſtance, which being ſoft, is eaſily ſliver'd off, but in the Air it hardens. From thence it is fetch'd by Merchants, who convey it away in Caravans, call'd *Caſila*, and ſell it thro' all the Neighbour Nations, and with it, as with ready Coin, they purchaſe all Neceſſaries; not Gems or Jewels, which they value not, but ſuch things as conduce to their health, and chiefly Black-lead, call'd *Cohol*, which they uſe to preſerve their ſight, and for an Ornament to beſmear their Eye-brows, when it is mix'd with Soot moiſtened.

The Rivers of *Habeſſinia*, eſpecially of the *Nile*, its Fountains and Courſe.

But Gifts of Nature more precious than Gold, and more profitable to the Natives of the Neighbour-Nations, flow from the Mountains of *Abeſſinia*, which are its famous Rivers, eſpecially that of *Nile*; for the Rain-water ſoaking thro' the Pores of the Earth, after it has paſs'd thro' many ſecret Conveyances, at laſt breaks forth at ſome hollow place, or being preſs'd by its own weight, is forc'd to reaſcend, and ſeek a Paſſage at the tops of the Mountains, which is the Reaſon, that in Countries where there is little or no Rain, there are few or no Fountains; but where there are frequent Rains, the Rivers are large and ſwelling; the Effect demonſtrates the Cauſe. But *Nilus* for plenty of Water, ſweetneſs, wholſomneſs, and fertility, excels all other Rivers in the World. In ſacred Writ 'tis call'd *Shichor*, and by the *Greeks Niger*, becauſe it runs with a black and muddy Stream; by the Natives *Abawi*, by the *Egyptians* their God.

'Tis a thing ſo unuſual for any other Rivers to overflow in the moſt ſultry Seaſon of the Year, and this Inundation of the *Nile*, which ariſes from the exceſſive Rains that fall in *Ethiopia*, when the Sun returns into the Winter-ſigns, is ſo profitable to *Egypt*, that the Ancients deſired nothing more than to know the Spring-head of that River; for which end ſome Kings have ſent great Armies in queſt of ſatisfaction to their Curioſity; but all their Endeavours were unſucceſsful, until it was diſcover'd by the *Portugueze*, who agree with the following account of Mr. *Gregory*. The Spring-head of *Nile* is in a certain Land call'd *Secut*, upon the top of *Dengla* near *Gojam*. He ſaid it had five Spring-heads, reckoning in the Heads of other Rivers which have no particular Name, and ſo are taken for the *Nile*. But it paſſes thro' the Lake *Tzanicum*, preſerving the colour of its own Waters, like the *Rhoſne* thro' the Lake *Lemane*. Then winding to the South, it waſhes on the Left-hand the principal Kingdoms of *Habeſſinia*, and takes along with it the Rivers of thoſe Countries: and on the Right-hand encompaſſing *Gojam*, and ſwell'd with the Rivers of that Region, it turns again to the Weſt, and with a prodigious maſs of adventitious Rivers, leaving *Abeſſinia*, on the Right-hand, it rowls to the North thro' ſeveral thirſty Nations and ſandy Deſarts, to make *Egypt* fertile with its Inundations, and there makes its way thro' ſeveral Mouths into the Sea. But the River *Nile* does not flow entirely into *Egypt*, but after it has paſs'd by *Sennar* in the Country of *Dengula*, before it arrives in *Nubia*, it is parted into two Streams; the left and leaſt whereof is called the River *Niger*, which deſcends towards the Country of *Elwah*, and ſo diſembogues it ſelf into the Weſtern Ocean: For beſides, that *Nilus* is called *Niger* by the *Hebrews* and *Greeks*, the River *Niger* agrees with it in the colour and taſte of its Water, produces the ſame ſort of Reed of Paper, and Animals, and encreaſes and overflows at the ſame Seaſons. Some have thought the Courſe of the River *Nile* may be diverted another way; but thoſe places where 'twas to be done, are not now ſubject to *Ethiopia*, and the King has no Inclination to ſuch a Project.

The Fertility of the Soil.

The Soil in *Abeſſinia* is ſo fertile by reaſon of the long Summer, that in the ſame place you ſhall find Seed-time and Harveſt, which in ſome places is double, in others threefold. They have not only Wheat, Barley, Millet, and the like, which are known to us, but alſo another ſort, which is call'd *Tef*, of which they make good Bread. They have no Rye, and value not Oats; for Barly and Graſs is the general Food of their Horſes; which laſt abounds ſo much in more temperate places, by reaſon of the perpetual heat, and the moiſture diſtilling from the Mountains, that they never Mow it, tho' the Locuſts in that Country occaſion frequent Famines.

Their Vegetables and Plants.

They have Herbs of all ſorts, and ſome of admirable vertue. The *Amadmagda* cures broken and disjointed Bones; the Herb *Aſſizoe* is of that rare vertue againſt the bitting of Aſps, that the moſt hurtful Serpents touch'd with it, lie for dead, and he that eats the Root of it, may walk in the midſt of Adders, and even handle the moſt venomous Snakes without danger. Their Vine and Grapes are excellent, yet they never make Wine of them, either out of ignorance, or becauſe the exceſſive heat ſowres the Liquor before the Lee is ſettled.

Indian Fig. Fig. 1.
